Focuses on applications of mathematical and computational methods with particular emphasis on advanced methods applying to organismal biology or resource management. Students read current literature, prepare critiques, and conduct projects. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *M. Mangel*

290B. Advanced Topics in the Numerical Solution of PDEs. W

Modern practical methods for the numerical solution of partial differential equations. Methods considered depend on the expertise of the instructor, but are covered in-depth and up to the

cutting-edge of practical contemporary implementation. Content could be method-based (e.g., spectral methods, finite-element methods) or topic-based (e.g., simulations of turbulence). Some programming and numerical analysis (e.g., course 213) highly recommended. Enrollment restricted to graduate students and undergraduates with permission of the instructor. *H. Wang, N. Brummell, P. Garaud*

291. Advanced Topics in Bayesian Statistics (3 credits). *

Advanced study of research topics in the theory, methods, or applications of Bayesian statistics. The specific subject depends on the instructor. Enrollment restricted to graduate students and by permission of instructor. May be repeated for credit. *E. Anderson, The Staff*

296. Masters Project (2 credits). F,W,S

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

297F. Independent Study (2 credits). F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

*Not offered in 2011-12

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#)

Program Description

Bioengineering focuses on the application of engineering tools and techniques to problems in medicine and the biological sciences. The UC Santa Cruz (UCSC) program in bioengineering, through its participating faculty and departments, provides students with inspiration and quality education in the theory and practice of bioengineering.

The UCSC bachelor of science (B.S.) degree in bioengineering prepares graduates for a career that combines engineering, medicine, and biology. UCSC bioengineering graduates will be trained in the principles and practices of bioengineering and in the scientific and mathematical principles upon which these principles and practices are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

Bioengineering is a broad discipline. To guide students in their study, the faculty have developed three concentrations: bioelectronics, biomolecular engineering, and rehabilitation. The bioelectronics concentration is designed for students interested in the interface between organisms and electronic instrumentation or implants. The biomolecular engineering concentration is designed for students interested in drug design or biomolecular sensors. The rehabilitation concentration is designed for students interested in developing technology to aid disabled individuals.

In the UCSC bioengineering B.S. program, many undergraduates work on faculty research projects, analyzing ideas, developing technologies, and discovering new approaches. Areas include biomolecular sensors and systems, nanoelectronic implants, assistive technologies for the elderly and disabled, bioinformatics, microfluidics, nano-scale biotechnology, and other areas at the junction between engineering, medicine, and the life sciences. More information about bioengineering research and undergraduate research opportunities can be found on the web at beng.soe.ucsc.edu, cbse.ucsc.edu, biomedical.ucsc.edu, marcmbrs.ucsc.edu, surf-it.soe.ucsc.edu, and graddiv.ucsc.edu/ucleads.

The program is sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental Biology, with additional participating faculty in the Departments of Applied Mathematics and Statistics, Community Studies, Chemistry and Biochemistry, Philosophy, Physics, and Psychology.

The program has course requirements in mathematics, science, and engineering. Students interested in bioengineering as a major should contact the School of Engineering advising office (advising@soe.ucsc.edu) before enrolling in any courses at UCSC.

Bioengineering students may continue their research and studies at UCSC in the graduate programs of the collaborating department and other departments. Programs and application information may be found at <http://www.graddiv.ucsc.edu>.

Courses for Nonmajors

The following courses are recommended for nonmajors interested in bioengineering. Computer Engineering 80A, Universal Access: Disability, Technology, and Society; Biomolecular Engineering 80G, Bioethics in the 21st Century: Science, Business, and Society; and Biomolecular Engineering 5, Introduction to Biotechnology. Students are also advised to consult the program discussions of the collaborating departments for additional possibilities related to bioengineering.

Admissions Policy

Admission to the major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioengineering major after a student has entered UCSC is based on performance in courses offered by the School of Engineering (SoE) and the Division of Physical and Biological Sciences (the SoE grade point average [GPA]). Students are required to have an SoE GPA of 2.7 or

better at the time of major declaration. Progress in the major and ability to complete the major within campus limits will also be considered.

After the first year, at least six courses required for the major, and any associated laboratories, must be completed prior to declaration. Required courses are listed below.

Transfer Students

Admission of transfer students will be based on GPA and whether lower-division course requirements have been satisfied. Most importantly, transfer students should have completed required courses in calculus and differential equations, as well as required courses in at least three of the four other introductory areas (programming, biology, chemistry, and physics). Students may satisfy the bioethics requirement if they have completed a suitable ethics course at their community college.

Honors in the Major

Bioengineering majors are awarded "Honors in the Major" and "Highest Honors in the Major" based on GPA and on results of undergraduate research. Students with an SoE GPA of 3.7 in most cases receive highest honors. Students with an SoE GPA of 3.3 in most cases receive honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SoE GPA.

Letter Grade Policy

The bioengineering program requires letter grades for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass.

Major Disqualification

Success in bioengineering requires achievement in many areas. Pursuit of a related disciplinary major is a good choice for students whose interests or enthusiasm do not span bioengineering's full interdisciplinary range. The faculty have established the following requirements to remain in good standing in the major.

Bioengineering majors must maintain a cumulative SOE GPA of 2.5 up to the first quarter of senior standing, and not fall below 2.0 thereafter. Majors who do not meet the cumulative GPA requirement for two successive quarters are subject to disqualification from the major, as are students whose term SOE GPA falls below 1.5 in any quarter. Please see the Baskin School of Engineering section of the catalog for additional information. Students may appeal major disqualification through the Baskin School of Engineering Office of Undergraduate Affairs.

Baskin School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all Baskin School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees in the School of Engineering section.

Major Requirements

Advising and Elective Approval

Every major must have a bioengineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office. With assistance from the adviser, students must formulate a program of proposed course work that meets the major requirements. All electives must be pre-approved by the bioengineering undergraduate director.

Optional Courses for Majors

Students desiring or needing an early introduction to the use of mathematics in engineering may wish to take Computer Engineering 8, Robot Automation, in their first quarter. Students pursuing the rehabilitation concentration may wish to include one or more psychology courses in their study plan.

Introductory Requirements for All Concentrations, 16 Courses

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Applied Mathematics and Statistics 7/L, *Statistical Methods for the Biological and Environmental Sciences/Laboratory*

Applied Mathematics and Statistics 10A and 20A, *Basic Mathematical Methods for Engineers I & II* (3 credits each); or Applied Mathematics and Statistics 10 and 20, *Mathematical Methods for Engineers I and II*; or Mathematics 24, *Ordinary Differential Equations*

Biomolecular Engineering 80G, *Bioethics in the 21st Century: Science, Business, and Society*

Chemistry and Biochemistry 1A, 1B/M, and 1C/N, *General Chemistry*, or (with preapproval) courses completed elsewhere that enable enrollment in 108A/L

Chemistry and Biochemistry 108A/L or 112A/L, *Organic Chemistry/Laboratory*

Biology (BIOL) 20A, *Cell and Molecular Biology*

Biology (BIOE) 20B, *Development and Physiology*

Physics 5A/L or 6A/L, *Introduction to Physics I/Laboratory*

Physics 5C/N or 6C/N, *Introduction to Physics II/Laboratory*

Two (the rehabilitation concentration requires one more, see below) of:

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*; or

Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory*; or

Computer Science 12A/L, *Introduction to Programming/Laboratory*; or

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*; or

Biomolecular Engineering 160/L, *Research Programming for Biologists and Biochemists/Laboratory*

Advanced Requirements for All Concentrations, 5-6 Courses

Either Biology (BIOL) 100/K, *Biochemistry/Laboratory*, or Biochemistry and Molecular Biology 100A-B, *Biochemistry*

Biomolecular Engineering 150/L, *Molecular Biomechanics/Laboratory*

Electrical Engineering 101/L, *Introduction to Electronic Circuits/Laboratory*

Computer Engineering 9, *Introduction to Statics, Dynamics, and Biomechanics*

Computer Engineering 185, *Technical Writing for Computer Engineers*

Bioelectronics Engineering Concentration, 6 Courses

Electrical Engineering 103, *Signals and Systems*

Electrical Engineering 104/L, *Measurement and Instrumentation in Physiology*; or

Electrical Engineering 171/L, *Analog Electronics*

One design elective, from the approved list

Two upper-division Baskin School of Engineering electives

One upper-division Baskin School of Engineering or Division of Physical and Biological Sciences elective

Electives must be selected and pre-approved in consultation with your faculty adviser. Suggested electives include Electrical Engineering 154, *Feedback Control Systems*; 212, *Introduction to Biomems*; and 270, *Neural Implant Engineering*.

Biomolecular Engineering Concentration, 6 Courses

Biomolecular Engineering 5, *Introduction to Biotechnology*

Biomolecular Engineering 105, *Genetics*

One design elective, from the approved list

Two upper-division Baskin School of Engineering electives

One upper-division Baskin School of Engineering or Division of Physical and Biological Sciences elective

Electives must be selected and pre-approved in consultation with your faculty adviser. Suggested electives include Biomolecular Engineering 140, *Bioinstrumentation*; 155, *Biotechnology and Drug Development*; 128, *Protein Engineering*; 178, *Stem Cell Biology*; and 110, *Computational Biology Tools*.

Rehabilitation Engineering Concentration, 6 Courses

Students in the rehabilitation concentration must complete Computer Engineering 12/L, Computer Engineering 13/L or Computer Science 12A/L, and Computer Science 12B/M.

Computer Engineering 80A, *Universal Access: Disability, Technology, and Society*

Computer Engineering 131, *Human-Computer Interaction*

One design elective, from the approved list

One upper-division Baskin School of Engineering elective

One upper-division Baskin School of Engineering or Division of Physical and Biological Sciences elective

Electives must be selected and pre-approved in consultation with your faculty adviser.

Students may wish to focus on systems or software for rehabilitation. Suggested electives include Computer Engineering 118/L, *Mechatronics/Laboratory*; 167/L, *Sensing and Sensor Technology/Laboratory*; 232, *Human Factors*; and Computer Science 109, *Advanced Programming*.

Capstone Project, 2 Courses

All bioengineering students complete a senior capstone project in bioengineering. Students may satisfy this requirement with research in a faculty laboratory, concurrent with three offerings of 195, or by forming a student team to address a problem of interest and challenge within 123A and 123B. The project proposal must be approved by the bioengineering undergraduate director as a bioengineering project. (Satisfies the campus comprehensive requirement.)

Biomolecular Engineering, Computer Engineering, or Electrical Engineering 123A, *Engineering Design Project I* and Biomolecular Engineering, Computer Engineering, or Electrical Engineering 123B, *Engineering Design Project II*; or

15 credits of independent study or senior thesis research, such as by completing three offerings of Biomolecular Engineering, Computer Engineering, or Electrical Engineering 195; and Biomolecular Engineering 123T, *Senior Thesis Presentation* (2 credits).

Students pursuing the senior thesis option must seek approval of their project one year before graduation, typically spring quarter of the third year. Students spend three or more quarters working on their thesis projects. Thesis students also enroll in 123T, *Senior Thesis Presentation*, during the final spring quarter.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. Bioengineering majors satisfy the DC Requirement by completing Computer Engineering 185, *Technical Writing for Engineers*.

Exit Requirement

Students are required to submit a portfolio, exit survey, and exit interview. The portfolios must be turned in electronically by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the bioengineering undergraduate committee and must include the following:

- 1) The capstone project report
- 2) A second project report of the student's selection
- 3) A narrative as specified at the submission site (<http://beng.soe.ucsc.edu>)

Exit interviews are scheduled during the last week of the quarter by the Baskin School of Engineering (BSOE) advising office.

Bioengineering Major Planners

The following sample academic plans show possible courses of study for a bioengineering major. Students should consider taking courses during the summer to ensure timely completion of the degree. Courses planned to be taken at institutions other than UCSC require pre-approval. The first plan follows the biomolecular engineering concentration, the second plan follows the rehabilitation engineering concentration and includes precalculus, and the third plan follows the bioelectronics engineering concentration.

Program Description

Bioengineering focuses on the application of engineering tools and techniques to problems in medicine and the biological sciences. The UC Santa Cruz (UCSC) program in bioengineering, through its participating faculty and departments, provides students with inspiration and quality education in the theory and practice of bioengineering.

The UCSC bachelor of science (B.S.) degree in bioengineering prepares graduates for a career that combines engineering, medicine, and biology. UCSC bioengineering graduates will be trained in the principles and practices of bioengineering and in the scientific and mathematical principles upon which these principles and practices are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

Bioengineering is a broad discipline. To guide students in their study, the faculty have developed three concentrations: bioelectronics, biomolecular engineering, and rehabilitation. The bioelectronics concentration is designed for students interested in the interface between organisms and electronic instrumentation or implants. The biomolecular engineering concentration is designed for students interested in drug design or biomolecular sensors. The rehabilitation concentration is designed for students interested in developing technology to aid disabled individuals.

In the UCSC bioengineering B.S. program, many undergraduates work on faculty research projects, analyzing ideas, developing technologies, and discovering new approaches. Areas include biomolecular sensors and systems, nanoelectronic implants, assistive technologies for the elderly and disabled, bioinformatics, microfluidics, nano-scale biotechnology, and other areas at the junction between engineering, medicine, and the life sciences. More information about bioengineering research and undergraduate research opportunities can be found on the web at beng.soe.ucsc.edu, www.cbse.ucsc.edu, biomedical.ucsc.edu, marcmbrs.ucsc.edu, surf-it.soe.ucsc.edu, and graddiv.ucsc.edu/ucleads.

The program is sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental Biology, with additional participating faculty in the Departments of Applied Mathematics and Statistics, Community Studies, Chemistry and Biochemistry, Philosophy, Physics, and Psychology.

The program has course requirements in mathematics, science, and engineering. Students interested in bioengineering as a major should contact the School of Engineering advising office (advising@soe.ucsc.edu) before enrolling in any courses at UCSC.

Bioengineering students may continue their research and studies at UCSC in the graduate

programs of the collaborating department and other departments. Programs and application information may be found at <http://www.graddiv.ucsc.edu>.

Courses for Nonmajors

The following courses are recommended for nonmajors interested in bioengineering. Computer Engineering 80A, *Universal Access: Disability, Technology, and Society*; Biomolecular Engineering ~~80G~~/~~Philosophy 80G~~, *Bioethics in the 21st Century: Science, Business, and Society*; and Biomolecular Engineering 5, *Introduction to Biotechnology*. Students are also advised to consult the program discussions of the collaborating departments for additional possibilities related to bioengineering.

Admissions Policy

Admission to the major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioengineering major after a student has entered UCSC is based on performance in courses offered by the School of Engineering (SoE) and the Division of Physical and Biological Sciences (the SoE grade point average [GPA]). Students ~~in their first two years or equivalent (generally, first-year students and sophomores)~~ are required to have an SoE GPA of ~~2.5~~2.7 or better at the time of major declaration. Progress in the major and ability to complete the major within campus limits will also be considered.

After the first year, at least six courses required for the major, and any associated laboratories, must be completed prior to declaration. Required courses are listed below.

Transfer Students

Admission of transfer students will be based on GPA and whether lower-division course requirements have been satisfied. Most importantly, transfer students should have completed required courses in calculus and differential equations, as well as required courses in at least three of the four other introductory areas (programming, biology, chemistry, and physics). Students may satisfy the bioethics requirement if they have completed a suitable ethics course at their community college.

Honors in the Major

Bioengineering majors are awarded "Honors in the Major" and "Highest Honors in the Major" based on GPA and on results of undergraduate research. Students with an SoE GPA of 3.7 in most cases receive highest honors. Students with an SoE GPA of 3.3 in most cases receive honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SoE GPA.

Letter Grade Policy

The bioengineering program requires letter grades for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass.

Major Disqualification

Success in bioengineering requires achievement in many areas. Pursuit of a related disciplinary major is a good choice for students whose interests or enthusiasm do not span bioengineering's full interdisciplinary range. The faculty have established the following requirements to remain in good standing in the major.

Bioengineering majors must maintain a cumulative SOE GPA of 2.5 up to the first quarter of senior standing, and not fall below 2.0 thereafter. Majors who do not meet the

cumulative GPA requirement for two successive quarters are subject to disqualification from the major, as are students whose term SOE GPA falls below 1.5 in any quarter. Please see the Baskin School of Engineering section of the catalog for additional information. Students may appeal major disqualification through the Baskin School of Engineering Office of Undergraduate Affairs.

Baskin School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all Baskin School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees in the School of Engineering section.

Major Requirements

Advising and Elective Approval

Every major must have a bioengineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office. With assistance from the adviser, students must formulate a program of proposed course work that meets the major requirements. All electives must be pre-approved by the bioengineering undergraduate director.

Optional Courses for Majors

Students desiring or needing an early introduction to the use of mathematics in engineering may wish to take Computer Engineering 8, *Robot Automation*, in their first quarter. Students pursuing the rehabilitation concentration may wish to include one or more psychology courses in their study plan.

Biomolecular Engineering 150/L, Molecular Biomechanics/Laboratory

Electrical Engineering 101/L, Introduction to Electronic Circuits/Laboratory

Computer Engineering 9, Introduction to Statics, Dynamics, and Biomechanics

Computer Engineering 185, Technical Writing for Computer Engineers

Bioelectronics Engineering Concentration, 6 Courses

Electrical Engineering 103, Signals and Systems

Electrical Engineering 104/L, Measurement and Instrumentation in Physiology; or

Electrical Engineering 171/L, Analog Electronics

One design elective, from the approved list

Two upper-division Baskin School of Engineering electives

One upper-division Baskin School of Engineering or Division of Physical and Biological Sciences elective

Electives must be selected and pre-approved in consultation with your faculty adviser.

Suggested electives include ~~Electrical Engineering 212, Introduction to BioMEMS~~Electrical Engineering 154, Feedback Control Systems: 212, Introduction to Biomems; and 270, ~~Neural Implant Engineering, and new courses in development.~~

Biomolecular Engineering Concentration, 6 Courses

Biomolecular Engineering 5, Introduction to Biotechnology

Biomolecular Engineering 105, Genetics

One design elective, from the approved list

Two upper-division Baskin School of Engineering electives

One upper-division Baskin School of Engineering or Division of Physical and Biological Sciences elective

Electives must be selected and pre-approved in consultation with your faculty adviser.

Suggested electives include Biomolecular Engineering 140, *Bioinstrumentation*; 155, *Biotechnology and Drug Development*; 128, Protein Engineering; 178, *Stem Cell Biology*; and 110, *Computational Biology Tools*.

Rehabilitation Engineering Concentration, 6 Courses

Students in the rehabilitation concentration must complete Computer Engineering 12/L, Computer Engineering 13/L or Computer Science 12A/L, and Computer Science 12B/M.

Computer Engineering 80A, Universal Access: Disability, Technology, and Society

Computer Engineering 131, Human-Computer Interaction

One design elective, from the approved list

One upper-division Baskin School of Engineering elective

One upper-division Baskin School of Engineering or Division of Physical and Biological Sciences elective

Electives must be selected and pre-approved in consultation with your faculty adviser.

Students may wish to focus on systems or software for rehabilitation. Suggested electives include Computer Engineering 118/L, *Mechatronics/Laboratory*; 167/L, *Sensing and Sensor Technology/Laboratory*; 232, *Human Factors*; and Computer Science 109, *Advanced Programming*.

Capstone Project, 2 Courses

All bioengineering students complete a senior capstone project in bioengineering. Students

may satisfy this requirement with research in a faculty laboratory, concurrent with three offerings of 195, or by forming a student team to address a problem of interest and challenge within 123A and 123B. The project proposal must be approved by the bioengineering undergraduate director as a bioengineering project. (Satisfies the campus comprehensive requirement.)

Biomolecular Engineering, Computer Engineering, or Electrical Engineering 123A, Engineering Design Project I and Biomolecular Engineering, Computer Engineering, or Electrical Engineering 123B, Engineering Design Project II; or

15 ~~unit~~ credits of independent study or senior thesis research, such as by completing three ~~Three~~ offerings of Biomolecular Engineering, Computer Engineering, or Electrical Engineering 195, ~~Senior Thesis Research~~ and Biomolecular Engineering 123T, Senior Thesis Presentation (2 ~~credits~~ units ~~credits~~).

Students pursuing the senior thesis option must seek approval of their project one year before graduation, typically spring quarter of the third year. Students spend three or more quarters working on their thesis projects. Thesis students also enroll in 123T, *Senior Thesis Presentation*, during the final spring quarter.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. Bioengineering majors satisfy the DC Requirement by completing Computer Engineering 185, *Technical Writing for Engineers*.

Exit Requirement

Students are required to submit a portfolio, exit survey, and exit interview. The portfolios must be turned in electronically by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the bioengineering undergraduate committee and must include the following:

- 1) The capstone project report
- 2) A second project report of the student's selection
- 3) A narrative as specified at the submission site
(~~<http://www.soe.ucsc.edu/programs/beng/>~~<http://beng.soe.ucsc.edu>)

Exit interviews are scheduled during the last week of the quarter by the Baskin School of Engineering (BSOE) advising office.

Bioengineering Major Planners

The following sample academic plans show possible courses of study for a bioengineering major. Students should consider taking courses during the summer to ensure timely completion of the degree. Courses planned to be taken at institutions other than UCSC require pre-approval. SRI KURNIAWAN (Computer Engineering)

Human-computer interaction; human factors and ergonomics; accessibility; assistive technology; usability; empirical studies; user-centered design

ALAN M. LITKE (SCIPP)

Neural systems; retinal processing; development and prosthesis; technology development for neurophysiology; high-energy physics

WENTAI LIU (Electrical Engineering)

Retinal prosthesis, biomimetic systems, integrated neuro-electronics, molecular electronics, CMOS and SOI transceiver design, current mode band limited signaling, microelectronic sensor, timing/clock recovery and optimization, noise characterization and modeling, and computer vision/image processing

TODD LOWE (Biomolecular Engineering)

Experimental and computational genomics, ncRNA gene finders, and high-throughput RNA sequencing to study the biology of extremophile archaea and bacteria

ROBERTO MANDUCHI (Computer Engineering)

Computer vision and sensor processing, with application to assistive technology for the visually impaired

DOMINIC W. MASSARO, EMERITUS (Psychology)

GLENN L. MILLHAUSER (Chemistry and Biochemistry)

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

LINDA OGREN (Molecular, Cellular, and Developmental Biology)

Endocrinology

ERIC PALKOVACS (Ecology and Evolutionary Biology)

Freshwater ecology, eco-evolutionary dynamics, fisheries and fish ecology

NADER POURMAND (Biomolecular Engineering)

Bioelectronics, biosensors, chemosensors, nanotechnology, single cell characterization, sequencing, genotyping, pathogen detection, DNA fingerprinting

RAQUEL PRADO (Applied Mathematics and Statistics)

Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

JACOB ROSEN (Computer Engineering)

Biorobotics; human-centered robotics; medical robotics; surgery and rehabilitation; wearable robotics (exoskeleton); teleoperation, haptics and virtual reality, biomechanics, neuromuscular control and human-machine interfaces

WENDY ROTHWELL (Biomolecular Engineering)

Biotechnology, molecular genetics

HOLGER SCHMIDT (Electrical Engineering)

Optofluidics, hollow-core photonics for biomedicine and quantum optics, nanomagneto-optics, single-particle spectroscopy, ultrafast optics

ANDREA STEINER (Community Studies)

Health-care systems, health justice, critical public health, gerontology, ageism, long-term care

JOSHUA STUART (Biomolecular Engineering)

Computational functional genomics, comparative analysis of gene regulation, cross-species inference of gene networks, probabilistic graphical models

ELLEN KAPPY SUCKIEL (Emerita, Philosophy)

Ethics, William James, American philosophy, genetic ethics, ethics of biotechnology

JOHN TAMKUN (Molecular, Cell, and Developmental Biology)

Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

JOHN F. VESECKY (Electrical Engineering)

HF radar design and construction and observation of ocean surface winds, waves and currents with applications to coastal and deep water ocean processes; project MEDSAT

ALAN M. ZAHLER (Molecular, Cell, and Developmental Biology)

Molecular biology, splice site selection, and alternative pre-mRNA processing

JIN Z. ZHANG (Chemistry and Biochemistry)

Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

Yi Zuo (Molecular, Cell, and Developmental Biology)
Glia-synapse interaction and synaptic plasticity in vivo

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The Department of Biomolecular Engineering is an interdisciplinary department that combines expertise from the biology, mathematics, chemistry, computer science, and engineering to train students and develop technologies to address major problems at the forefront of biomedical and bio-industrial research. Students trained in the Department of Biomolecular Engineering can look forward to careers in academia, thinformation and biotechnology industries, public health, or medical sciences.

The department offers an undergraduate minor and a bachelor of science (B.S.) degree in bioinformatics, and graduate master of science (M.S.) and doctor of philosophy (Ph.D.) degrees in biomolecular engineering and bioinformatics. The department co-sponsors the B.S. in bioengineering program, described elsewhere in this catalog, with the departments of Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental (MCD) Biology. The department co-sponsors the Program in Biomedical Science and Engineering (PBSE), a doctoral training program, with the departments of MCD Biology, Chemistry and Biochemistry, and Microbiology and Enironmental Toxicology.

Departmental faculty advise undergraduate and graduate researchers enrolled in the bioinformatics, bioengineering, and related degree programs. Members of the Department of Biomolecular Engineering actively collaborate with faculty from other Baskin School of Engineering departments, such as Applied Mathematics and Statistics, Computer Engineering, Computer Science, and Electrical Engineering; and with the Physical and Biological Sciences departments of MCD Biology, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, Ecology and Evolutionary Biology, and Ocean Sciences.

Bioinformatics Major

Bioinformatics combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene-expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Center for Biomolecular Science and Engineering, <http://cbse.ucsc.edu>.

The Human Genome Project, the international collaboration to determine the sequence of human DNA and understand its function, had its origin in a conference that took place at UCSC in 1985. One notable output from our research is that UCSC is the primary release site for the public version of the human genome (<http://genome.ucsc.edu>), as well as the repository for the ENCODE (Encyclopedia Of DNA Elements) project, a national effort to annotate the entire human genome with multiple functional assays. We are also a major player in protein-structure prediction, have a strong research group in systems biology, functional genomic characterization of stem cells and play a lead role in national efforts to discover molecular underpinnings of various cancers including participating as a Dream Team for the Stand Up To Cancer project and a data-analysis center for The Cancer Genome Atlas project.

The undergraduate bioinformatics degree program prepares students for graduate school or a career in the pharmaceutical or biotechnology industries.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering.

A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar with the chemistry and biology required in the field.

Thus, this program strives for a balance of the two: an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

The undergraduate degree program in bioinformatics builds a solid foundation in the constituent areas of the field. Students complete core sequences in mathematics (including calculus, statistics, and discrete mathematics), science (including biology, chemistry, and biochemistry), and engineering (including programming, algorithms, and databases). The core topics are brought together in two bioinformatics courses: Biomolecular Engineering 110, *Computational Biology Tools*, and Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*. Students have two electives for specialization within the fields of bioinformatics and are required to take a bioethics course (either Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society* or Philosophy 145, *Brave New World: Ethical Issues in Genetics*) to study the ethical, legal, and social implications of this new technology. As a comprehensive requirement, all students complete a graduate project course: Biomolecular Engineering 210, *Experimental Systems Biology*, Biomolecular Engineering 211, *Computational Systems Biology*, Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*. Students who work on independent research projects with faculty (as all students are encouraged to do) may substitute a senior thesis, Biomolecular Engineering 195, for the graduate project course.

Courses for Nonmajors

Biomolecular Engineering 5, *Introduction to Biotechnology*, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

Biomolecular Engineering 60 and 160, *Programming for Biologists* and *Biochemists*, provide an introductory programming class using Perl and BioPerl to analyze, transform, and publish biological data.

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*, is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 110, *Computational Biology Tools*, provides an introduction to the tools and techniques of bioinformatics from a users view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 130, *Genomics*, uses genome browsers and web-based bioinformatics analyses to solve molecular biology problems.

Biomolecular Engineering 109, *Resource-efficient Programming*, provides advice and practice for people working at the limits of their computer hardware. It is of use for bioinformaticians, game programmers, and embedded-system designers.

Biomolecular Engineering 155, *Biotechnology and Drug Development*, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Bioinformatics Policies

Admissions Policy

Admission to the bioinformatics major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioinformatics major after a student has entered UCSC is based on performance in courses offered by the School of Engineering (SOE) and the Division of Physical and Biological Sciences (the SOE grade point average GPA). Due to the required graduate courses in the senior years, a School of Engineering GPA of 2.9 or better is expected at the time of major declaration. After the first year, the following foundation courses must be completed before admission to the major: Computer Science 12A/L (or 5J and 11 or Computer Engineering 12/L and 13/L) and Computer Science 12B, Chemistry 1A, 1B/M and 1C/N, and Mathematics 19A-B.

Courses Taken Elsewhere

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

Disqualification Policy

Students who do not make adequate progress in the major (normally passing six required courses per year) may be disqualified from the major. All students not meeting the progress in the major or grade point average requirements must meet with the undergraduate director to discuss their options for continuing in the major. Please refer to the Engineering section of this catalog for the School of Engineering's major disqualification policy.

Honors in the Major

Bioinformatics majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research. Students with an SOE GPA of 3.7, in most cases, receive "Highest Honors in the Major." Students with an SOE GPA of 3.3, in most cases, receive "Honors in the Major." Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Preparation for the Major

Students applying for admission to the bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

Bioinformatics Major Requirements

Every bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed course work that meets the major requirements. Because of the enormous breadth of requirements, bioinformatics majors are urged to take honors courses or sections whenever possible to get as much as possible out of the courses they take in each field.

Lower-Division Requirements

Majors must complete the following lower-division courses:

Biology

Biology (BIOL) 20A, *Cell and Molecular Biology*

Biomolecular Engineering

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*; or

Philosophy 145, *Brave New World: Ethical Issues in Genetics*

Chemistry

Chemistry 1A, 1B/M, and 1C/N, *General Chemistry/Laboratory*

Computer Engineering

Computer Engineering 16, *Applied Discrete Mathematics*

Programming 1

Computer Science 12A/L, *Introduction to Programming/Laboratory*; or

Computer Science 5J, *Introduction to Programming in Java*, and 11, *Intermediate Programming*; or

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*, and 13/L, *Computer Systems and C Programming/Laboratory*

Programming 2

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Mathematics

Mathematics 20A-B, *Honors Calculus*; or

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics* (Credit for one or both can be granted with adequate performance on the College Entrance Examination Board (CEEB) calculus AB or BC Advanced Placement examination.)

Mathematics 23A, *Multivariable Calculus*

Upper-Division Requirements

Majors must complete the following upper-division courses:

Applied Mathematics and Statistics

Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*; or

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Applied Mathematics and Statistics 206, *Bayesian Statistics*; or

Applied Mathematics and Statistics 132, *Statistical Inference*

Biochemistry and Molecular Biology

Biochemistry 100A, *Biochemistry* (first in three-part sequence)

Bioinformatics

Biomolecular Engineering 110, *Computational Biology Tools*

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

One of the following:

Biomolecular Engineering 210, *Experimental Systems Biology*; or

Biomolecular Engineering 211, *Computational Systems Biology*; or

Biomolecular Engineering 220/L, *Protein Bioinformatics/Laboratory*; or

Biomolecular Engineering 230/L, *Computational Genomics/Laboratory*; or

Biomolecular Engineering 195, *Senior Thesis Research*

Biology (BIOL)

Biology 105, *Genetics*

One of the following:

Biology 110, *Cell Biology*; or

Biology 115, *Eukaryotic Molecular Biology*; or

Biology 119, *Microbiology*; or

Biomolecular Engineering 155, *Biotechnology and Drug Development*

Chemistry

Chemistry 108A/L, *Organic Chemistry/Laboratory*; or

Chemistry 112A/L and 112B/M, *Organic Chemistry/Laboratory*

Computer Engineering

Computer Engineering 185, *Technical Writing for Computer Engineers*

Computer Science

Computer Science 101, *Algorithms and Abstract Data Types*

One of the following:

Computer Science 182, *Introduction to Database Management Systems*, or

Computer Science 180, *Database Systems*. Note that Computer Science 180 may require an additional course as a prerequisite, such as Computer Science 101.

Advanced Programming

Computer Science 109, *Advanced Programming*

Required Electives

Students must select two additional courses as electives, justify their choices in writing, and get the choices approved by their faculty adviser. The following courses are typical of the ones chosen, but do not constitute a pre-approved list:

Applied Mathematics and Statistics 132, 162, 203, 205, 207, 215

Biochemistry 100B, 100C, 110

Biology 100L, 105L, 105M, 109L, 110, 115, 115L, 117A, 117B, 119, 119L, 187L, 200A, 200B

Biomolecular Engineering 102, 109, 130, 210, 220, 230

Chemistry 103, 108B/M, 112C/N, 200A, 200B, 200C

Computer Engineering 108, 177

Computer Science 101, 104A, 105, 115, 116, 130, 140, 142, 160/L

Information Systems Management 206, 250

Note: many of these courses are offered only once a year and have long prerequisite chains, so advance planning is necessary to make sure elective courses can be fit into the student's schedule.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. Bioinformatics majors satisfy the DC requirement by completing Computer Engineering 185, *Technical Writing for Engineers*.

Comprehensive Requirement

The bioinformatics comprehensive requirement can be met by taking Biomolecular Engineering 210, *Experimental Systems Biology*, or Biomolecular Engineering 211, *Computational Systems Biology*, or Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*, which include substantial projects; or Biomolecular Engineering 195, *Senior Thesis Research*. Students electing the senior thesis must submit a written thesis proposal to the undergraduate director of bioinformatics for approval one quarter prior to submitting the final thesis.

The Bioinformatics Minor

Where the bioinformatics major is intended for people who wish to become bioinformaticians and create the tools needed to solve new problems in computational biology, the bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

A bioinformatics minor consists of the following 15 courses:

Lower-division (10 courses)

Biology (2)

Biology 20A, *Cell and Molecular Biology*; and

One of the following:

Biology 20B, *Ecology and Evolutionary Biology*; or

Biology 110, *Cell Biology*; or

Biology 105, *Genetics*; or

Biology 115, *Eukaryotic Molecular Biology*; or

Biology 119, *Microbiology*

General chemistry (3)

Chemistry 1A, 1B/M, and 1C/N

Single-Variable Calculus (2)

Mathematics 19A and 19Bpreferred; or

Mathematics 11A and 11B; or

Mathematics 20A and 20B

Programming 1 (1)

Computer Science 12A/L; or

Computer Science 5C; or

Computer Science 5J; or

Computer Science 5P; or

Computer Engineering 12/L and 13/L

Programming 2 (1)

Biomolecular Engineering 160/L; or

Computer Science 12B/M

Bioethics (1)

Biomolecular Engineering 80G; or

Philosophy 145; or

Biomolecular Engineering 247

Upper-division (5 courses)

Organic chemistry (1)

Chemistry 108A; or

Chemistry 112A and 112B

Biochemistry (1)

Biochemistry 100A; or

Biology 100

Statistics (1)

Computer Engineering 107; or

Applied Mathematics and Statistics 131

Bioinformatics (1)

Biomolecular Engineering 110

Elective(1)

Applied Mathematics and Statistics 132; or

Biochemistry 100B; or

any other upper-division or graduate biomolecular engineering course

The bioinformatics minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed in Major and Minor Requirements. Majors with substantial overlap include biochemistry, bioengineering, all biology majors, chemistry, computer science, and computer engineering. Students pursuing one of these majors are particularly encouraged to consider the bioinformatics minor.

The Bioinformatics Combined B.S./Graduate Degree Program

Because our bioinformatics B.S. program provides excellent preparation for a graduate program in bioinformatics, we offer a combined B.S./graduate degree program that allows our B.S. students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less tailored preparation.

The current B.S. and graduate requirements have four courses in common:

Biomolecular Engineering 80G, *Bioethics in the 21st Century*; or Philosophy 145/245, *Brave New World: Ethical Issues in Genetics*

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

Biomolecular Engineering 220, *Protein Bioinformatics*; or Biomolecular Engineering 230, *Computational Genomics*

Applied Mathematics and Statistics 206, *Bayesian Statistics*

Masters students take nine courses, two seminars (four credits), Biomolecular Engineering 200, and two independent project courses (such as Biomolecular Engineering 220L and Biomolecular Engineering 230L). The course work for Ph.D. students is essentially the same, except that eight credits of seminars are required and three research laboratory rotations are required in place of the two project courses.

The combined B.S./graduate degree program does not make any changes to the undergraduate program, except that students must pass the four overlapping courses listed above for a grade of B- or better.

The requirements at the graduate level are changed to remove the four courses that overlap with the B.S. and to add two graduate electives to be chosen by the students with the approval of their advisers. Thus, the total number of full courses required is reduced from nine to seven.

To apply for the combined program, students apply to the M.S. or Ph.D. program through the normal graduate admission process in the fall of their senior year. If admitted into the graduate program, they are automatically included in the combined B.S./M.S. or B.S./Ph.D. program.

Bioinformatics Major Planners

As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters. Students considering pursuing a bioengineering or bioinformatics degree should follow the biomolecular engineering concentration of the bioengineering B.S. program and complete the programming sequence (Computer Science 12A and 12B) by the end of their second year.

Four-year plans require individual design to fit in the desired electives, so only the first two years of the academic plan are presented here. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated laboratories in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*, should be taken after Biomolecular Engineering 110, *Computational Biology Tools*.

Sample Plan

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19B	MATH 23A

Biomolecular Engineering and Bioinformatics Graduate Program

The Department of Biomolecular Engineering offers interdisciplinary M.S. and Ph.D. degrees in biomolecular engineering and bioinformatics.

Course Requirements

Both masters and doctoral students must complete eight, 5-credit courses and one 3-credit research and teaching course. In addition, M.S. students must complete three seminar courses, while Ph.D. students must complete five seminar courses. M.S. students must complete two (1-credit or 2-credit) research project courses (such as course 220L, 230L, 297F, or 297), and Ph.D. students must complete three research laboratory rotations (course 296) with different supervisors.

Core courses (5-credit)six are required

Bioinformatics Emphasis

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

Two Biomolecular Engineering graduate courses from the bioinformatics list

One Biomolecular Engineering graduate course from the biomolecular engineering list

One graduate statistics course (Applied Mathematics and Statistics 206 recommended)

One graduate course from MCD Biology, Chemistry and Biochemistry, or Microbiology and Environmental Toxicology

Biomolecular Engineering Emphasis

Biomolecular Engineering 207, *Molecular Recognition*

Two Biomolecular Engineering graduate course from the biomolecular engineering list

One Biomolecular Engineering graduate courses from the bioinformatics list

Two graduate courses from Applied Mathematics and Statistics, MCD Biology, Chemistry and Biochemistry, or Microbiology and Environmental Toxicology

Ethics Course (5-credit)one is required

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*; or Philosophy 245, *Brave New World: Ethical Issues in Genetics*; or Biomolecular Engineering 247, *Stem Cell Research: Scientific, Ethical, Social and Legal Issues*, or Sociology 268A, *Science and Justice: Experiments in Collaboration*.

Electives (5-credit)two are required

Two graduate courses consistent with the students degree objectives. With preapproval by the graduate director, one or two of these electives may be upper-division undergraduate courses selected to improve background in areas not studied as an undergraduate.

For M.S. students, 5 credits of independent research (297) or thesis research (299) courses may count as one elective toward the degree requirements.

For Ph.D. students, independent or thesis research courses cannot be counted as electives.

Students must choose courses with faculty guidance and approval to balance their preparation and

make up for deficiencies in background areas. With consent of the graduate director, variations in the composition of the required courses may be approved.

Other Curriculum Requirements

Biomolecular Engineering 200, *Research and Teaching in Bioinformatics*, 3 credits

Seminars

M.S. students: a minimum of three seminar courses, including at least one quarter of the 2-credit Biomolecular Engineering seminar, 280B

Ph.D. students: a minimum of six seminar courses, including at least two quarters of the 2-credit Biomolecular Engineering seminar, 280B

Before and after advancement, full-time Ph.D. students are required to enroll in at least one seminar course each quarter (e.g., 280 or 281), and must present the results of their ongoing research at least once each year.

Research Experience

M.S. students: a minimum of two research project courses. This requirement can be met by taking course 220L, 230L, and/or independent study (course 297F or course 297).

Ph.D. Students: three quarters of laboratory rotations (course 296), generally within the first 12 months. One of the laboratory rotations must be with a faculty supervisor who does wet-lab research, though the students rotation project may be purely computational.

Course Lists

The following are the bioinformatics and biomolecular engineering course lists. The lists are subject to change as courses and course content changes. The graduate office maintains the current list.

Bioinformatics list: 205, 211, 220, 225, 230, 235

Biomolecular Engineering list: 207, 210, 215, 222, 250, 255

Qualifying Examinations

Ph.D. students are required to pass an oral qualifying examination by the end of their second year and to advance to candidacy by the end of their third year.

Adequate Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

Masters Capstone Requirement

M.S. students must complete a one-quarter research project with written report to fulfill the capstone requirement. Most often, this requirement is satisfied with Biomolecular Engineering 296 or Biomolecular Engineering 297, above, but may also be satisfied with a Ph.D. dissertation proposal, below.

Doctoral Dissertation Requirements

Ph.D. students must pass an oral comprehensive examination by the end of the second year.

Ph.D. students must select a faculty research adviser by the end of the second year. A qualifying committee is then formed, which consists of the adviser and three additional members, and which is approved by the graduate director and the campus graduate dean. At least two of the four must be members of the Department of Biomolecular Engineering. The student must submit a written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee.

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the graduate director upon the recommendation of the dissertation supervisor. At least one of the three must be a member of the Department of Biomolecular Engineering. The candidate will present his or her research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires

revision.

Transfer Limitations

Up to two courses may be transferred from other graduate institutions with the approval of the faculty adviser and the graduate director.

Biomolecular Engineering

Baskin School of Engineering
335 Baskin Engineering Building
(831) 459-2158

<http://www.soe.ucsc.edu>

Program Description

The Department of Biomolecular Engineering is an interdisciplinary department that combines expertise from the biology, mathematics, chemistry, computer science, and engineering to train students and develop technologies to address major problems at the forefront of biomedical and bio-industrial research. Students trained in the Department of Biomolecular Engineering can look forward to careers in academia, the information and biotechnology industries, public health, or medical sciences.

The department offers an undergraduate minor and a bachelor of science (B.S.) degree in bioinformatics, and graduate master of science (M.S.) and doctor of philosophy (Ph.D.) degrees in biomolecular engineering and bioinformatics. The department co-sponsors the B.S. in bioengineering program, described elsewhere in this catalog, with the departments of Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental (MCD) Biology. The department co-sponsors the Program in Biomedical Science and Engineering (PBSE), a doctoral training program, with the departments of MCD Biology, Chemistry and Biochemistry, and Microbiology and Environmental Toxicology.

Departmental faculty advise undergraduate and graduate researchers enrolled in the bioinformatics, bioengineering, and related degree programs. Members of the Department of Biomolecular Engineering actively collaborate with faculty from other Baskin School of Engineering departments, such as Applied Mathematics and Statistics, Computer Engineering, Computer Science, and Electrical Engineering; and with the Physical and Biological Sciences departments of MCD Biology, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, Ecology and Evolutionary Biology, and Ocean Sciences.

Bioinformatics Major

Bioinformatics combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene-expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Center for Biomolecular Science and Engineering, <http://cbse.ucsc.edu>.

The Human Genome Project, the international collaboration to determine the sequence of human DNA and understand its function, had its origin in a conference that took place at UCSC in 1985. One notable output from our research is that UCSC is the primary release site for the public version of the human genome (<http://genome.ucsc.edu>), as well as the repository for the ENCODE (**E**ncyclopedia **O**f **D**N **E**lements) project, a national effort to annotate the entire human genome with multiple functional assays. We are also a major

player in protein-structure prediction, have a strong research group in systems biology, functional genomic characterization of stem cells and play a lead role in national efforts to discover molecular underpinnings of various cancers including participating as a Dream Team for the Stand Up To Cancer project and a data-analysis center for The Cancer Genome Atlas project.

The undergraduate bioinformatics degree program prepares students for graduate school or a career in the pharmaceutical or biotechnology industries.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering.

A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar with the chemistry and biology required in the field.

Thus, this program strives for a balance of the two: an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

The undergraduate degree program in bioinformatics builds a solid foundation in the constituent areas of the field. Students complete core sequences in mathematics (including calculus, statistics, and discrete mathematics), science (including biology, chemistry, and biochemistry), and engineering (including programming, algorithms, and databases). The core topics are brought together in two bioinformatics courses: Biomolecular Engineering 110, *Computational Biology Tools*, and Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*. Students have two electives for specialization within the fields of bioinformatics and are required to take a bioethics course (either Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society* or Philosophy 145, *Brave New World: Ethical Issues in Genetics*) to study the ethical, legal, and social implications of this new technology. As a comprehensive requirement, all students complete a graduate project course: Biomolecular Engineering 210, *Experimental Systems Biology*, Biomolecular Engineering 211, *Computational Systems Biology*, Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*. Students who work on independent research projects with faculty (as all students are encouraged to do) may substitute a senior thesis, Biomolecular Engineering 195, for the graduate project course.

Courses for Nonmajors

Biomolecular Engineering 5, *Introduction to Biotechnology*, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

Biomolecular Engineering 60 and 160, *Programming for Biologists and Biochemists*, provide an introductory programming class using Perl and BioPerl to analyze, transform, and publish biological data.

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*, is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 110, *Computational Biology Tools*, provides an introduction to the tools and techniques of bioinformatics from a user's view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 130, *Genomics*, uses genome browsers and web-based

bioinformatics analyses to solve molecular biology problems.

Biomolecular Engineering 109, *Resource-efficient Programming*, provides advice and practice for people working at the limits of their computer hardware. It is of use for bioinformaticians, game programmers, and embedded-system designers.

Biomolecular Engineering 155, *Biotechnology and Drug Development*, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Bioinformatics Policies

Admissions Policy

Admission to the bioinformatics major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioinformatics major after a student has entered UCSC is based on performance in courses offered by the School of Engineering (SOE) and the Division of Physical and Biological Sciences (the SOE grade point average—GPA). Due to the required graduate courses in the senior years, a School of Engineering GPA of 2.9 or better is expected at the time of major declaration. After the first year, the following foundation courses must be completed before admission to the major: Computer Science 12A/L (or 5J and 11 or Computer Engineering 12/L and 13/L) and Computer Science 12B, Chemistry 1A, 1B/M and 1C/N, and Mathematics 19A-B.

Courses Taken Elsewhere

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

Disqualification Policy

Students who do not make adequate progress in the major (normally passing six required courses per year) may be disqualified from the major. All students not meeting the progress in the major or grade point average requirements must meet with the undergraduate director to discuss their options for continuing in the major. Please refer to the Engineering section of this catalog for the School of Engineering's major disqualification policy.

Honors in the Major

Bioinformatics majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research. Students with an SOE GPA of 3.7, in most cases, receive "Highest Honors in the Major." Students with an SOE GPA of 3.3, in most cases, receive "Honors in the Major." Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Preparation for the Major

Students applying for admission to the bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

Bioinformatics Major Requirements

Every bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed course work that meets the major requirements. Because of the enormous breadth of requirements, bioinformatics majors are urged to take honors courses or sections whenever possible to get as much as possible out of the courses they take in each field.

Lower-Division Requirements

Majors must complete the following lower-division courses:

Biology

Biology (BIOL) 20A, Cell and Molecular Biology

Biomolecular Engineering

Biomolecular Engineering 80G, Bioethics in the Twenty-First Century: Science, Business, and Society; or

Philosophy 145, Brave New World: Ethical Issues in Genetics

Chemistry

Chemistry 1A, 1B/M, and 1C/N, General Chemistry/Laboratory

Computer Engineering

Computer Engineering 16, Applied Discrete Mathematics

Programming 1

Computer Science 12A/L, Introduction to Programming/Laboratory; or

Computer Science 5J, Introduction to Programming in Java, and 11, Intermediate Programming; or

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory, and 13/L, Computer Systems and C Programming/Laboratory

Programming 2

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Mathematics

Mathematics 20A-B, Honors Calculus; or

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics (Credit for one or both can be granted with adequate performance on the College Entrance Examination Board (CEEb) calculus AB or BC Advanced Placement examination.)

Mathematics 23A, Multivariable Calculus

Upper-Division Requirements

Majors must complete the following upper-division courses:

Applied Mathematics and Statistics

Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic; or

Applied Mathematics and Statistics 131, Introduction to Probability Theory

Applied Mathematics and Statistics 206, Bayesian Statistics; or

Applied Mathematics and Statistics 132, Statistical Inference

Biochemistry and Molecular Biology

Biochemistry 100A, Biochemistry (first in three-part sequence)

Bioinformatics

Biomolecular Engineering 110, Computational Biology Tools

Biomolecular Engineering 205, Bioinformatics Models and Algorithms

One of the following:

Biomolecular Engineering 210, Experimental Systems Biology; or

Biomolecular Engineering 211, Computational Systems Biology; or

Biomolecular Engineering 220/L, Protein Bioinformatics/Laboratory; or

Biomolecular Engineering 230/L, Computational Genomics/Laboratory; or

Biomolecular Engineering 195, Senior Thesis Research

Biology (BIOL)

Biology 105, Genetics

One of the following:

Biology 110, Cell Biology; or

Biology 115, Eukaryotic Molecular Biology; or

Biology 119, Microbiology; or

Biomolecular Engineering 155, Biotechnology and Drug Development

Chemistry

Chemistry 108A/L, Organic Chemistry/Laboratory; or

Chemistry 112A/L and 112B/M, Organic Chemistry/Laboratory

Computer Engineering

Computer Engineering 185, Technical Writing for Computer Engineers

Computer Science

Computer Science 101, Algorithms and Abstract Data Types

One of the following:

Computer Science 182, Introduction to Database Management Systems, or

Computer Science 180, Database Systems. Note that Computer Science 180 may require an additional course as a prerequisite, such as Computer Science 101.

Advanced Programming

Computer Science 109, Advanced Programming

Required Electives

Students must select two additional courses as electives, justify their choices in writing, and get the choices approved by their faculty adviser. The following courses are typical of the ones chosen, but do not constitute a pre-approved list:

Applied Mathematics and Statistics 132, 162, 203, 205, 207, 215

Biochemistry 100B, 100C, 110

Biology 100L, 105L, 105M, 109L, 110, 115, 115L, 117A, 117B, 119, 119L, 187L, 200A, 200B

Biomolecular Engineering 102, 109, 130, 210, 220, 230

Chemistry 103, 108B/M, 112C/N, 200A, 200B, 200C

Computer Engineering 108, 177

Computer Science 101, 104A, 105, 115, 116, 130, 140, 142, 160/L

Information Systems Management 206, 250

Note: many of these courses are offered only once a year and have long prerequisite chains, so advance planning is necessary to make sure elective courses can be fit into the student's schedule.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. Bioinformatics majors satisfy the DC requirement by completing Computer Engineering 185, *Technical Writing for Engineers*.

Comprehensive Requirement

The bioinformatics comprehensive requirement can be met by taking Biomolecular Engineering 210, *Experimental Systems Biology*, or Biomolecular Engineering 211, *Computational Systems Biology*, or Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*, which include substantial projects; or Biomolecular Engineering 195, *Senior Thesis Research*. Students electing the senior thesis must submit a written thesis proposal to the undergraduate director of bioinformatics for approval one quarter prior to submitting the final thesis.

The Bioinformatics Minor

Where the bioinformatics major is intended for people who wish to become bioinformaticians and create the tools needed to solve new problems in computational biology, the bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

A bioinformatics minor consists of the following 15 courses:

Lower-division (10 courses)

Biology (2)

Biology 20A, Cell and Molecular Biology; and

One of the following:

Biology 20B, Ecology and Evolutionary Biology; or

Biology 110, Cell Biology; or

Biology 105, Genetics; or

Biology 115, Eukaryotic Molecular Biology; or

Biology 119, Microbiology

General Chemistry (3)

Chemistry 1A, 1B/M, and 1C/N

Single-Variable Calculus (2)

Mathematics 19A and 19B—preferred; or

Mathematics 11A and 11B; or

Mathematics 20A and 20B

Programming 1 (1)

Computer Science 12A/L; or

Computer Science 5C; or
Computer Science 5J; or
Computer Science 5P; or
Computer Engineering 12/L and 13/L

Programming 2 (1)

Biomolecular Engineering 160/L; or
Computer Science 12B/M

Bioethics (1)

Biomolecular Engineering 80G; or
Philosophy 145; or
Biomolecular Engineering 247

Upper-division (5 courses)

Organic chemistry (1)

Chemistry 108A; or
Chemistry 112A and 112B

Biochemistry (1)

Biochemistry 100A; or
Biology 100

Statistics (1)

Computer Engineering 107; or
Applied Mathematics and Statistics 131
Bioinformatics (1)
Biomolecular Engineering 110

Elective (1)

Applied Mathematics and Statistics 132; or
Biochemistry 100B; or
any other upper-division or graduate biomolecular engineering course

The bioinformatics minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed in Major and Minor Requirements. Majors with substantial overlap include biochemistry, bioengineering, all biology majors, chemistry, computer science, and computer engineering. Students pursuing one of these majors are particularly encouraged to consider the bioinformatics minor.

The Bioinformatics Combined B.S./Graduate Degree Program

Because our bioinformatics B.S. program provides excellent preparation for a graduate program in bioinformatics, we offer a combined B.S./graduate degree program that allows our B.S. students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less tailored preparation.

The current B.S. and graduate requirements have four courses in common:

Biomolecular Engineering 80G, *Bioethics in the 21st Century*; or Philosophy 145/245, *Brave New World: Ethical Issues in Genetics*

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

Biomolecular Engineering 220, *Protein Bioinformatics*; or Biomolecular Engineering 230, *Computational Genomics*

Applied Mathematics and Statistics 206, *Bayesian Statistics*

Masters students take nine courses, two seminars (four credits), Biomolecular Engineering 200, and two independent project courses (such as Biomolecular Engineering 220L and Biomolecular Engineering 230L). The course work for Ph.D. students is essentially the same, except that eight credits of seminars are required and three research laboratory rotations are required in place of the two project courses.

The combined B.S./graduate degree program does not make any changes to the undergraduate program, except that students must pass the four overlapping courses listed above for a grade of B- or better.

The requirements at the graduate level are changed to remove the four courses that overlap with the B.S. and to add two graduate electives to be chosen by the students with the approval of their advisers. Thus, the total number of full courses required is reduced from nine to seven.

To apply for the combined program, students apply to the M.S. or Ph.D. program through the normal graduate admission process in the fall of their senior year. If admitted into the graduate program, they are automatically included in the combined B.S./M.S. or B.S./Ph.D. program.

Bioinformatics Major Planners

As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters. Students considering pursuing a bioengineering or bioinformatics degree should follow the biomolecular engineering concentration of the bioengineering B.S. program and complete the programming sequence (Computer Science 12A and 12B) by the end of their second year.

Four-year plans require individual design to fit in the desired electives, so only the first two years of the academic plan are presented here. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated laboratories in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*, should be taken after Biomolecular Engineering 110, *Computational Biology Tools*.

Sample Plan

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19B	MATH 23A
	CHEM 1A	CHEM 1B/M	CHEM 1C/N
	college core	gen ed	gen ed
2nd (soph)	CMPE 16	CMPS 12A/L	CMPS 12B/M
	CHEM 108A/L	BIOL 20A	BIOL 105
	BME 80G	gen ed	gen ed

Biomolecular Engineering and Bioinformatics Graduate Program

The Department of Biomolecular Engineering offers interdisciplinary M.S. and Ph.D. degrees in biomolecular engineering and bioinformatics.

Course Requirements

Both masters and doctoral students must complete eight, 5-credit courses and one 3-credit research and teaching course. In addition, M.S. students must complete three seminar courses, while Ph.D. students must complete five seminar courses. M.S. students must complete two (1-credit or 2-credit) research project courses (such as course 220L, 230L, 297F, or 297), and Ph.D. students must complete three research laboratory rotations (course 296) with different supervisors.

Core courses (5-credit)—six are required

Bioinformatics Emphasis

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

Two Biomolecular Engineering graduate courses from the bioinformatics list

One Biomolecular Engineering graduate course from the biomolecular engineering list

One graduate statistics course (Applied Mathematics and Statistics 206 recommended)

One graduate course from MCD Biology, Chemistry and Biochemistry, or Microbiology and Environmental Toxicology

Biomolecular Engineering Emphasis

Biomolecular Engineering 207, *Molecular Recognition*

Two Biomolecular Engineering graduate course from the biomolecular engineering list

One Biomolecular Engineering graduate courses from the bioinformatics list

Two graduate courses from Applied Mathematics and Statistics, MCD Biology, Chemistry and Biochemistry, or Microbiology and Environmental Toxicology

Ethics Course (5-credit)—one is required

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*; or Philosophy 245, *Brave New World: Ethical Issues in Genetics*; or Biomolecular Engineering 247, *Stem Cell Research: Scientific, Ethical, Social and Legal Issues*, or Sociology 268A, *Science and Justice: Experiments in Collaboration*.

Electives (5-credit)—two are required

Two graduate courses consistent with the student's degree objectives. With preapproval by the graduate director, one or two of these electives may be upper-division undergraduate courses selected to improve background in areas not studied as an undergraduate.

For M.S. students, 5 credits of independent research (297) or thesis research (299) courses may count as one elective toward the degree requirements.

For Ph.D. students, independent or thesis research courses cannot be counted as electives.

Students must choose courses with faculty guidance and approval to balance their preparation and make up for deficiencies in background areas. With consent of the graduate director, variations in the composition of the required courses may be approved.

Other Curriculum Requirements

Biomolecular Engineering 200, *Research and Teaching in Bioinformatics*, 3 credits

Seminars

M.S. students: a minimum of three seminar courses, including at least one quarter of the 2-credit Biomolecular Engineering seminar, 280B

Ph.D. students: a minimum of six seminar courses, including at least two quarters of the 2-credit Biomolecular Engineering seminar, 280B

Before and after advancement, full-time Ph.D. students are required to enroll in at least one seminar course each quarter (e.g., 280 or 281), and must present the results of their ongoing research at least once each year.

Research Experience

M.S. students: a minimum of two research project courses. This requirement can be met by taking course 220L, 230L, and/or independent study (course 297F or course 297).

Ph.D. Students: three quarters of laboratory rotations (course 296), generally within the first 12 months. One of the laboratory rotations must be with a faculty supervisor who does wet-lab research, though the student's rotation project may be purely computational.

Course Lists

The following are the bioinformatics and biomolecular engineering course lists. The lists are subject to change as courses and course content changes. The graduate office maintains the current list.

Bioinformatics list: 205, 211, 220, 225, 230, [235](#)

Biomolecular Engineering list: 207, 210, 215, 222, 250, 255

Qualifying Examinations

Ph.D. students are required to pass an oral qualifying examination by the end of their second year and to advance to candidacy by the end of their third year.

Adequate Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

Master's Capstone Requirement

M.S. students must complete a one-quarter research project with written report to fulfill the capstone requirement. Most often, this requirement is satisfied with Biomolecular Engineering 296 or Biomolecular Engineering 297, above, but may also be satisfied with a Ph.D. dissertation proposal, below.

Doctoral Dissertation Requirements

Ph.D. students must pass an oral comprehensive examination by the end of the second year.

Ph.D. students must select a faculty research adviser by the end of the second year. A qualifying committee is then formed, which consists of the adviser and three additional members, and which is approved by the graduate director and the campus graduate dean. At least two of the four must be members of the Department of Biomolecular Engineering. The student must submit a written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee. ~~This examination must be completed within six months of a successful comprehensive exam.~~

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the graduate director upon the recommendation of the dissertation supervisor. At least one of the three must be a member of the Department of Biomolecular Engineering. The candidate will present his or her research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

Transfer Limitations

Up to two courses may be transferred from other graduate institutions with the approval of the faculty adviser and the graduate director.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

Professor

MARK AKESON

DNA structure and dynamics, single-molecule biophysics, bioethics, nanopore technology

PHILLIP BERMAN

Drug development, vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)

DAVID HAUSSLER (Distinguished Professor of Biomolecular Engineering, Investigator, Howard Hughes Medical Institute; Director, Center for Biomolecular Science and Engineering; Scientific Co-Director, California Institute for Quantitative Biosciences [QB3])
Cancer genomics, immunogenomics, molecular evolution, neurodevelopment, comparative genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

RICHARD HUGHEY (joint with Computer Engineering)

Bioinformatics, hidden Markov models, computer architecture, parallel computation

KEVIN KARPLUS

Protein structure prediction, protein design, genome assembly from next-generation sequence data

Associate Professor

TODD LOWE

Experimental and computational genomics, ncRNA gene finders, and high-throughput RNA sequencing to study the biology of extremophile archaea and bacteria

NADER POURMAND

Bioelectronics, biosensors, chemosensors, nanotechnology, single-cell characterization, sequencing, genotyping, pathogen detection, DNA fingerprinting

JOSHUA STUART

Computational functional genomics, comparative analysis of gene regulation, cross-species inference of gene networks, probabilistic graphical models

Assistant Professor

CAMILLA FORSBERG

Hematopoietic stem cells. transcriptional regulation, chromatin, blood cell development, cell surface receptors, genomics

DIETLIND L. GERLOFF

Protein to protein interactions, protein function prediction, functional genomics, protein structure prediction

RICHARD "Ed" GREEN

Genomics, computational molecular biology, genome assembly, human evolutionary genetics, ancient DNA, high-throughput sequencing, mRNA-processing and alternative splicing

Research Professor

DAVID W. DEAMER (joint with Chemistry and Biochemistry; UC Davis Emeritus)

Membrane biophysics, nanopore analysis, DNA sequencing, biomolecular self-assembly

Adjunct Professor

JONATHAN TRENT

Organic aggregates, marine snow, microbial physiology, microenvironments, robust proteins, genetic engineering for nanotechnology

Lecturer

BRIAN KIDD

Statistical modeling of multidimensional datasets, creating data-driven models for personalized medicine

WENDY ROTHWELL

Biotechnology, molecular genetics

MANUEL ARES, JR. (Molecular, Cell, and Developmental Biology)

RNA processing, structure and function of RNA

MANEL CAMPS (Microbiology and Environmental Toxicology)

Molecular mechanisms of reactive DNA methylation toxicity

WILLIAM DUNBAR (Computer Engineering)

Theory and application of feedback control, single-molecule biophysics, nanopore sensors, dynamics and control of biomolecules

A. RUSSELL FLEGAL (Microbiology and Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

ROBERT S. LOKEY (Chemistry and Biochemistry)

Organic chemistry, combinatorial synthesis, biotechnology, molecular cell biology

MARC MANGEL (Applied Mathematics and Statistics, Distinguished Professor of Applied Mathematics and Statistics)

Program Director, Technology and Information Management

Mathematical modeling of biological phenomena, especially quantitative issues in fishery management; mathematical and computational aspects of aging and disease, impact of technology on biological systems

GLENN L. MILLHAUSER (Chemistry and Biochemistry)

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

KAREN OTTEMANN ((Microbiology and Environmental Toxicology)

Environmental responses of pathogenic bacteria

JOHN W. TAMKUN (Molecular, Cell, and Developmental Biology)

Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

HONGYUN WANG (Applied Mathematics and Statistics)

Theoretical biophysics, mathematical modeling of single molecule systems, molecular motors and molecular bonds, statistical physics, numerical analysis, partial differential equations, computer animation, data systems, fast algorithms

MANFRED K. WARMUTH (Computer Science)

Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

W. TODD WIPKE, Emeritus (Chemistry and Biochemistry)

FITNAT H. YILDIZ (Microbiology and Environmental Toxicology)

Microbiology, molecular genetics, genomics; the mechanism of persistence of survival of Vibrio cholerae

ALAN M. ZAHLER (Molecular, Cell, and Developmental Biology)

Molecular biology, splice site selection, and alternative pre-mRNA processing

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

5. Introduction to Biotechnology. F,W,S

Introduces the tools and applications of biotechnology in the fields of medicine, agriculture, the environment, and industry. (General Education Code(s): PE-T, IN.) *W. Rothwell, The Staff*

60. Introductory Programming for Biologists and Biochemists. S

Lecture and lab-based course teaching programming skills needed by biologists and biochemists. No programming experience required, but basic computer skills assumed. Students without prior programming experience will be taught the basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students cannot receive credit for this course and Biomolecular Engineering 160 or Biology 180. (Formerly *Programming for Biologists and Biochemists*.) Prerequisite(s): Biology 20A or 21A. Concurrent enrollment in course 60L required. (General Education Code(s): MF.) *J. Stuart, The Staff*

60L. Introductory Programming for Biologists and Biochemists Laboratory (1 credit). S

Laboratory sequence illustrating topics covered in course 60. One two-hour laboratory per week. Concurrent enrollment in course 60 required. Students cannot receive credit for this course and Biomolecular Engineering 160L or Biology 180L. (Formerly *Programming for Biologists and Biochemists Laboratory*.) Prerequisite(s): Biology 20A or 21A. Concurrent enrollment in course 60 is required. *J. Stuart, The Staff*

80G. Bioethics in the 21st Century: Science, Business, and Society. F

Serves science and non-science majors interested in bioethics. Guest speakers and instructors lead discussions of major ethical questions having arisen from research in genetics, medicine, and industries supported by this knowledge. (Also offered as Philosophy 80G. Students cannot receive credit for both courses.) (General Education Code(s): PE-T, T6-Natural Sciences or Humanities and Arts.) *M. Akeson, The Staff*

80H. The Human Genome. F,W,S

Course will focus on understanding human genes. Accessible to non-science majors. Will cover principles of human inheritance and techniques used in gene analysis. The evolutionary, social, ethical, and legal issues associated with knowledge of the human genome will be discussed. (General Education Code(s): PE-T, T2-Natural Sciences.) *W. Rothwell, The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

110. Computational Biology Tools. F,S

Hands-on laboratory geared to teach basic tools used in computational biology (motif searching, primer selection, sequence comparison, multiple sequence alignment, genefinders, phylogenetics analysis, X-ray crystallography software). Web- and Unix-based tools/databases are used. Open to all science students; no prior Unix experience required. (Also offered as Biology: Molecular Cell & Dev 181. Students cannot receive credit for both courses.) Prerequisite(s): Biology 100, 105, or Biochemistry 100A or declared Bioinformatics majors. Enrollment limited to 25. *D. Gerloff, T. Lowe*

122. Environmental Virus Bioinformatics. S

Introduces hypothesis-driven laboratory research. Students use high-throughput sequencing data to assemble, finish, and annotate the genomic sequence of a novel viral genome. Students use both computational and experimental methods to assemble a previously generated sequencing library to produce a high-quality genome sequence. Small teams find and annotate the encoded gene content to construct a complete, publishable genome. Two written projects are required. Prerequisite(s): Biology 20A. Enrollment restricted to sophomores, juniors, and seniors. Enrollment by instructor permission only. Enrollment limited to 20. *T. Lowe, The Staff*

123A. Bioengineering Project 1 (7 credits). F

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Students are billed a materials fee. Prerequisite(s): course 140 or 150 and previous or concurrent enrollment in Computer Engineering 185. *K. Karplus, The Staff*

123B. Bioengineering Project 2 (7 credits). W

Second of two-course bioengineering project sequence. Students implement and test the engineering designs from course 123A. Projects are usually done as group projects, but individual projects are permitted. Requires written progress reports, formal written report, and oral presentation before a panel of faculty. Students are billed a materials fee. Prerequisite(s): course 123A and Computer Engineering 185. Enrollment restricted to biengineering majors. Enrollment limited to 30. May be repeated for credit. *The Staff*

123T. Senior Thesis Presentation (2 credits). S

For bioengineering senior thesis students, guidance in preparing a research seminar and a draft manuscript describing their senior research project. Students collaborate with each other and with investigators from their sponsoring laboratory as they fulfill the course requirements. Prerequisite(s): CMPE 185, and one of the following: BME 195 or BME 198 or CMPE 195 or CMPE 198 or EE 195 or EE 198. Concurrent enrollment in BME 195 or BME 198 or CMPE 195 or CMPE 198 or EE 195 or EE 198 is required. (General Education Code(s): PR-E.) *D. Gerloff, M. Akeson*

128. Protein Engineering. S

For bioengineering, bioinformatics, and biology majors, focuses on engineering (i.e., changing) of proteins. Topics focus on practical aspects of protein engineering strategies that are crucial to modern biotechnology and biomedical applications. Prerequisite(s): Biology 20A, and Biology 100 or Biochemistry and Molecular Biology 100A, or by permission of instructor. *D. Gerloff*

130. Genomes. F

Advanced elective for biology majors, examining biology on the genome scale. Topics include genome sequencing; large scale computational and functional analysis; features specific to prokaryotic, eukaryotic, or mammalian genomes; proteomics; SNP analysis; medical genomics; and genome evolution. (Also offered as Biology: Molecular Cell & Dev 182. Students cannot receive credit for both courses.) Prerequisite(s): Biology 100 or Biochemistry 100A and Biology 105, or approval of instructor. Enrollment limited to 30. *E. Green, T. Lowe*

140. Bioinstrumentation. F

Introduction to theory, design, and application of bioinstrumentation in clinical, pharmaceutical, and biotechnology laboratories. Highly recommended for students planning careers in the biomolecular industries. Typical topics and demonstrations include thermocycler, polymerase chain reaction (PCR), pyrosequencing, fabless nanofabrication, ion-sensitive measurements, microarray fabrication, and fluorescent-activated cell sorter (FACS). Students are billed a materials fee. Prerequisite(s): course 5, or Biology 100, or Biochemistry and Molecular Biology 100A. *N. Pourmand*

150. Molecular Biomechanics. S

Considers how assemblies of macromolecules (molecular motors) convert chemical energy into mechanical work on the nanometer-to-Angstrom scale. Processes examined include ATP-dependent movement of organelles in the cytosol facilitated by kinesin; proton pumping by ATPases in the mitochondrial membrane; viral genome packaging; bacterial movement driven by flagella; processive addition of nucleotides by polymerases during replication and transcription; and protein synthesis by ribosomes. Cannot receive credit for this course and course 250. Prerequisite(s): Biology 20A; and Biology 20B or 105; and Biology 100 or Biochemistry 100A; and Physics 5C or 6C. Concurrent enrollment in course 150L required. *M. Akeson*

150L. Molecular Biomechanics Laboratory (2 credits). S

Students address a current scientific question about molecular motor function using techniques established in the UCSC Nanopore Laboratory. Specifically, students use recombinant DNA technology to produce an enzyme (e.g., a DNA polymerase) bearing a point mutation that is predicted to alter function in a defined manner. Students then use nanopore force spectroscopy to model the energy landscape for a mechanical or chemical step altered by the critical amino acid. Cannot receive credit for this course and course 250L. Prerequisite(s): Biology 20A; and Biology 20B or 105; and Biology 100 or Biochemistry 100A; and Physics 5C or 6C. Concurrent enrollment in course 150 required. *M. Akeson*

155. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on

recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 255 and Chemistry 255. (Also offered as Biology: Molecular Cell & Dev 179. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A and Biology 100 or Biochemistry and Molecular Biology 100A. Enrollment limited to 15. *P. Berman*

160. Research Programming for Biologists and Biochemists. S

No programming experience required, but basic computer skills assumed. Students without prior programming experience taught basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students required to solve a research problem as a final project. Lectures and labs are shared with Biomolecular Engineering 60. Students cannot receive credit for this course and Biomolecular Engineering 60. (Also offered as Biology: Molecular Cell & Dev 180. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160L is required. (General Education Code(s): MF.) *J. Stuart, The Staff*

160L. Research Programming for Biologists and Biochemists Laboratory (1 credit). S

Laboratory sequence illustrating topics covered in course 160. One two-hour laboratory per week. Students cannot receive credit for this course and Biomolecular Engineering 60L. (Also offered as Biology: Molecular Cell & Dev 180L. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160 is required. *J. Stuart, The Staff*

170. Frontiers in Drug Action and Discovery. S

Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology; medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 270. (Also offered as Chemistry and Biochemistry 170. Students cannot receive credit for both courses.) Prerequisite(s): Biology 100 and Biology 100K; or Chemistry 103; or Biochemistry 100 A, 100B, 100C, and Biology 100K. Biology 110 and 130/L or 131/L are recommended. Enrollment restricted to juniors and seniors. *D. Smith, T. Holman, M. Camps, R. Linington, P. Berman*

178. Stem Cell Biology. W

Basic concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading the primary scientific literature. (Also offered as Biology: Molecular Cell & Dev 178. Students cannot receive credit for both courses.) Prerequisite(s): Biology 110; Biology 115 recommended. *C. Forsberg*

193. Field Study. F,W,S

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195F. Senior Thesis or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in bioinformatics or bioengineering. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in Bioinformatics (3 credits). F

Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of library and online databases, technical typesetting, writing journal and conference papers, publishing in bioinformatics, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Enrollment restricted to graduate students. *D. Gerloff, K. Karplus*

205. Bioinformatics Models and Algorithms. F

Covers bioinformatics models and algorithms: the use of computational techniques to convert the masses of information from biochemical experiments (DNA sequencing, DNA chips, and other high-throughput experimental methods) into useful information. Emphasis is on DNA and protein sequence alignment and analysis. Enrollment restricted to graduate students. Undergraduates may enroll with prerequisite(s): Computer Science 12B; and Computer Engineering 107 or Applied Math and Statistics 131; and Biology 20A; and concurrent enrollment in Biochemistry 100A. *K. Karplus*

207. Biomolecular Recognition. F

Course is the core biomolecular-engineering emphasis graduate course. Focuses on the molecular mechanism enabling the flow of information within and between cells in living systems, and its application to engineering new tools for high-throughput molecular-biology research, improving biomedical diagnostics, and aiding treatment of human disease. Prerequisite(s): Equivalent of one full year of undergraduate biochemistry. Enrollment restricted to graduate students. *T. Lowe, N. Pourmand, C. Forsberg, D. Gerloff*

211. Computational Systems Biology. S

Teaches machine-learning methods relevant for the analysis of high-throughput molecular biology experiments. Students should be fluent in a programming language and should have taken basic molecular biology courses. Prerequisite(s): course 205. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205, Computer Science 101, and any upper-division molecular biology or biochemistry course, such as Biochemistry 100 or 100A. *J. Stuart*

215. Applied Gene Technology. S

Detailed insight into the techniques and technological trends in genomics and transcriptomics, building the necessary foundations for further research in genetic association studies, population genetic association studies, population genetics, diagnostics, medicine, and drug development. Students should already have a deeper understanding of the basic tools of molecular biotechnology than acquired in introductory courses in biotechnology, biochemistry, and molecular biotechnology. Enrollment restricted to graduate students. *N. Pourmand*

220. Protein Bioinformatics. *

Covers the application of bioinformatics techniques to protein sequences and structures. Topics include protein sequence analysis, protein structure prediction, and sources of experimental data about proteins. Prerequisite(s): course 205, or Chemistry 200B; concurrent enrollment in course 220L, 296, or 297 is required. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205 and Biochemistry 100A. *K. Karplus*

220L. Protein Bioinformatics Laboratory (1 credit). *

Project in protein bioinformatics. Prerequisite(s): course 205 or Chemistry 200B; concurrent enrollment in course 220 is required. *K. Karplus*

222. Applied Biotechnology: Protein and Cell Engineering. *

For students interested in careers in the biotech industry. Focus is applied technology, with particular emphasis on the application of cell engineering and protein engineering to solve problems encountered in the design and manufacturing of biopharmaceutical products and industrial enzymes produced by recombinant DNA technology. Prior course work in biochemistry, molecular biology, genetics, and cell biology highly recommended. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. *P. Berman*

225. Protein Function in Biology and Bioinformatics. *

Reviews functional roles of proteins and computational methods used to predict functional aspects of proteins. Focus is on molecular function and structure-function relationships. Wider-reaching notions of function (pathways, interaction networks) are considered peripherally, as the context in which molecular function occurs. Course includes lectures, (computational) lab work, and discussions of topical publications. Prerequisite(s): Biochemistry and Molecular Biology 100A (or equivalent knowledge) and courses 205 and 220, or by instructor's permission. Enrollment limited to 15. *D. Gerloff*

230. Computational Genomics. W

Genomics databases: analysis of high-throughput genomics datasets; BLAST and related sequence comparison methods; pairwise alignment of biosequences by dynamic programming; statistical methods to discover common motifs in biosequences; multiple alignment and database search using motif models; constructing phylogenetic trees; hidden Markov models for finding genes, etc.; discriminative methods for analysis of bioinformatics data, neural networks, and support vector machines; locating genes and predicting gene function, including introduction to linkage analysis

and disease association studies using SNPs; and modeling DNA and RNA structures. Prerequisite(s): course 205; concurrent enrollment in course 230L, 296, or 297 is required. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205, Computer Science 101, and BIOC 100A. *J. Stuart, E. Green, D. Haussler*

230L. Computational Genomics Laboratory (1 credit). W

Project in computational genomics. Prerequisite(s): course 205; concurrent enrollment in course 230 is required. *J. Stuart, E. Green, D. Haussler*

235. Banana Slug Genomics. *

Students will assemble and annotate the banana slug genome (*Ariolimax dolichophallus*) from next-generation sequencing data. Students also will explore the capabilities of the latest next-generation bioinformatics tools and write their own as needed. Prerequisite(s): course 205 or graduate status. Seniors who have taken course 110 and a computer programming course may enroll with permission of instructor. May be repeated for credit. *N. Pourmand, K. Karplus*

237. Applied RNA Bioinformatics. F

Teaches methods for RNA gene discovery; probabilistic modeling, secondary structure/trans-interaction prediction; mRNA splicing; and functional analysis. Emphasis on leveraging comparative genomics and employing high-throughput RNA sequencing data. Includes lectures, scientific literature discussion, problem sets, and final gene-discovery project. Enrollment restricted to seniors and graduate students. *T. Lowe*

250. Molecular Biomechanics. S

Considers how assemblies of macromolecules (molecular motors) convert chemical energy into mechanical work on the nanometer-to-Angstrom scale. Processes examined in the course include ATP-dependent movement of organelles in the cytosol facilitated by kinesin; proton pumping by ATPases in the mitochondrial membrane; viral genome packaging; bacterial movement driven by flagella; processive addition of nucleotides by polymerases during replication and transcription; and protein synthesis by ribosomes. Cannot receive credit for this course and course 150. Enrollment restricted to graduate students. Concurrent enrollment in course 250L required. *M. Akeson*

250L. Molecular Biomechanics Laboratory (2 credits). S

Laboratory course taken in conjunction with course 250. Students address a current scientific question about molecular motor function using techniques established in the UCSC Nanopore Laboratory. Specifically, students use recombinant DNA technology to produce an enzyme (e.g., a DNA polymerase) bearing a point mutation that is predicted to alter function in a defined manner. Students then use nanopore force spectroscopy to model the energy landscape for a mechanical or chemical step altered by the critical amino acid. Cannot receive credit for this course and course 150L. Concurrent enrollment in course 250 required. Enrollment restricted to graduate students. *M. Akeson*

255. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 155 and Biology 179. (Also offered as Chemistry and Biochemistry 255. Students cannot receive credit for both courses.) Enrollment limited to graduate students. Enrollment limited to 15. *P. Berman*

268A. Science and Justice: Experiments in Collaboration. *

Considers the practical and epistemological necessity of collaborative research in the development of new sciences and technologies that are attentive to questions of ethics and justice. Enrollment by permission of instructor. Enrollment restricted to graduate students. (Also offered as Feminist Studies 268A and Sociology 268A. Students cannot receive credit for both courses.) Enrollment limited to 15. *The Staff*

268B. Science and Justice Research Seminar. F

Provides in-depth instruction in conducting collaborative interdisciplinary research. Students produce a final research project that explores how this training might generate research that is more responsive to the links between questions of knowledge and questions of justice. Prerequisite(s): course 268A. Enrollment by permission of instructor. Enrollment restricted to graduate students. (Also offered as Feminist Studies 268B, and Sociology 268B. Students cannot receive credit for all three courses.) Enrollment limited to 15. *The Staff*

270. Frontiers in Drug Action and Discovery. S

Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology; medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 170. (Also offered as Chemistry and Biochemistry 270. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *D. Smith, T. Holman, M. Camps, R. Linington, P. Berman*

280B. Seminar on Bioinformatics (2 credits). F,W,S

Weekly seminar series covering topics of current research in computational biology or bioinformatics. Current research work and literature in these areas are discussed in weekly meetings. May be repeated for credit. *J. Stuart, D. Haussler, T. Lowe, N. Pourmand, D. Gerloff, C. Forsberg, M. Akeson*

281A. Seminar on Processive Enzymes and Nanopores (2 credits). F,W,S

Weekly seminar series covering experimental research in nanopore technology and single-molecule analysis of polymerase function. Current research work and literature is discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students. Qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *M. Akeson*

281B. HIV Vaccine Research (2 credits). F,W

Weekly seminar series covering topics of HIV vaccine research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *P. Berman*

281C. Seminar in Cancer Genomics (2 credits). F,W,S

Presents current computational biology research to identify genomics-based signatures of cancer onset, progression, and treatment response. Examples of such investigations include: genetic pathway interpretation of multivariate high-throughput datasets; discovery of mutations in whole-genome sequence; identifications and quantification of gene isoforms, alleles, and copy number variants; and machine-learning tools to predict clinical outcomes. Students present their own research, host journal clubs, and attend lectures and teleconferences to learn about research conducted by national and international projects. Enrollment restricted to graduate students. May be repeated for credit. *D. Haussler, J. Stuart*

281E. Seminar in Genomics (2 credits). F,W,S

Current topics in genomics including high-throughput sequencing, genome assembly, and comparative genomics. Students design and implement independent research projects. Weekly laboratory meetings are held to discuss these projects and related research in the field. Enrollment restricted to graduate students. May be repeated for credit. *E. Green*

281F. Blood Cell Development (2 credits). F,W,S

Weekly seminar covering topics in current research on blood cell development and stem cell biology. Current research and literature in these areas discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *C. Forsberg*

281G. Seminar on Protein Structure and Function (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in protein structure prediction and design, structure-function relationships and protein evolution. Current research work and literature in these areas discussed. Students lead some discussions and participate in all meetings. (Formerly course 281R.) Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Gerloff*

281H. Seminar in Comparative Genomics (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in comparative genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Haussler*

281K. Seminar on Protein Structure Prediction (2 credits). *

Weekly seminar series covering topics of current computational and experimental research in protein structure prediction. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *K. Karplus*

281L. Seminar in Computational Genetics (2 credits). F,W,S

Weekly seminar series covering topics and experimental research in computational genetics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *T. Lowe*

281P. Seminar on Nanotechnology and Biosensors (2 credits). F,W,S

Weekly seminar covering topics of research in the development of new tools and technologies to detect and study genes and proteins. Latest research work and literature in these areas are discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *N. Pourmand*

281S. Seminar in Computational Functional Genomics (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in computational functional genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *J. Stuart*

293. Seminar in Biomolecular Engineering. *

Weekly seminar series covering topics of bioinformatics and biomolecular engineering research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. *The Staff*

296. Research in Bioinformatics. F,W,S

Independent research in bioinformatics under faculty supervision. Although this course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study or Research (2 credits). F,W,S

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The UCSC Department of Computer Engineering sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering. The department offers the bachelor of science (B.S.) in computer engineering, the bachelor of science in robotics engineering, the bachelor of arts (B.A.) in digital and network technology, the master of science (M.S.) and the doctor of philosophy (Ph.D) in computer engineering degrees as well as an undergraduate minor. A combined B.S./M.S. program allows students to complete both the B.S. and M.S. in computer engineering degrees in five years. The department administers the interdisciplinary graduate designated emphasis in robotics and control that may be pursued along with a graduate degree in computer engineering or another field such as applied mathematics and statistics or electrical engineering.

Undergraduate Program Description

The department offers two bachelor of science majors, one in computer engineering and the other in robotics engineering. The department also offers a bachelor of arts in network and digital technology. The programs are closely related with many common requirements, so that students do not need to immediately decide among the three.

The two undergraduate engineering degrees have the same program objectives for their graduates. The program objectives of the UCSC B.S. in computer engineering and B.S. in robotics engineering are:

1. Graduates who choose to pursue a career in industry, government, or academia will become successful engineers, scientists, or educators who demonstrate strong leadership, technical, and team skills; and a commitment to continuing professional development.
2. Graduates who choose to pursue advanced degrees will gain admission to graduate programs and will be successful graduate students.

The UCSC B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. Because computer engineering is so broad, the B.S. in computer engineering offers five specialized concentrations for completing the program: systems programming, computer systems, robotics and control, networks, and digital hardware.

Descriptions of these concentrations follow in the section on major requirements.

The UCSC B.S. in robotics engineering prepares graduates for a rewarding career at the interfaces between electrical, computer, and mechanical engineering. UCSC robotics engineering graduates will have a thorough grounding in the principles and practices of robotics and control, and the scientific and mathematical principles upon which they are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

The UCSC B.A. in network and digital technology provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes that make those technologies function. The program is tailored to students who wish to combine technology with other fields or have a general focus on digital design or computer networks. The B.A. in network and digital technology is not an engineering degree, but B.A. graduates will be prepared to work with technology development in other capacities, or join the computer network workforce. Students interested in graduate study should pursue either B.S. program.

The Department of Computer Engineering offers an undergraduate minor, described after the B.A.

program below. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded systems, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty-led research projects to take part in cutting-edge research. The department sponsors the summer undergraduate research fellowship in information technology (SURF-IT, <http://surf-it.soe.ucsc.edu>), as well as many other research opportunities. The department holds regular faculty-undergraduate lunches to discuss research and other issues of interest.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers an accelerated combined B.S./M.S. degree in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the Ph.D. degrees.

The computer engineering B.S. program is accredited by the Engineering Accreditation Commission of ABET.

Courses for Nonmajors

The Department of Computer Engineering offers course 1, Hands-on Computer Engineering: a two-credit laboratory course designed to introduce students to computer engineering via many short fun projects; course 3, Personal Computer Concepts: Software and Hardware, providing students an introductory course on the design and use of computers from an engineering viewpoint; and course 8, Robot Automation: Intelligence through Feedback Control. Other computer engineering courses of interest to nonmajors include course 12, Computing Systems and Assembly Language, an introductory course on computer systems, system software, and machine-level programming; course 80N, Introduction to Networking and the Internet, an introduction to technological services of the Internet; course 80E, Engineering Ethics; and course 80A, Universal Access: Disability, Technology, and Society.

Computer Engineering Policies

Admissions Policy

Lower-division students will be accepted into the majors on completion of the School of Engineering (SoE) major declaration process during any of their first three quarters at UCSC. See <http://www.soe.ucsc.edu/advising/undergraduate/> for quarterly deadlines and mandatory major declaration workshops. Students considering any of the department's majors are strongly encouraged to take course 8 in the first quarter, and course 12 within the first three quarters.

After the first three quarters, petitions to declare the major are reviewed individually. Students seeking to declare the computer engineering or robotics engineering must have completed at least five courses required for the major, and are expected to have a grade point average (GPA) among School of Engineering and Division of Physical and Biological Sciences courses (the SoE GPA) of 2.5. Students seeking to declare the B.A. in network and digital technology must have an SoE of 2.3. Progress in the major and ability to complete the major within campus limits will also be considered.

Transfer Students

Admission to any of the three computer engineering majors for transfer students is based on performance in all transferable science, mathematics, and engineering courses. To be admitted, at least four courses required for the major must transfer for a student to be eligible for admission. Requirements are listed below. We recommend, in particular, substantial completion of the mathematics series, as well as programming and physics.

Advising

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed course work that meets the major or minor requirements (see <http://www.soe.ucsc.edu/advising/undergraduate/>).

Honors in the Major

Majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SoE GPA of 3.7, in most cases, receive highest honors. Students with an SoE GPA of 3.3, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SoE GPA. Computer engineering and robotics engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Progress in the Major

Declared majors must complete courses required for the major in a manner that will enable graduation within campus limits. Students not making sufficient progress may be required to take a higher course load, complete courses during summer, change their major or concentration, or otherwise adjust their study plan, at the discretion of the faculty. Students who do not complete required changes to the study plan may be disqualified from the major.

Disqualification Policy

Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Letter Grade Policy

The Computer Engineering Department requires letter grading for all courses applied to its degrees with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This policy includes courses required for the majors but sponsored by other departments.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees under the School of Engineering.

Computer Engineering Major Requirements

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence. The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the exit requirement.

Lower-Division Core Requirements

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*; or Mathematics 21, *Linear Algebra*

Applied Mathematics and Statistics 20, *Mathematical Methods for Engineers II*; or Mathematics 24, *Ordinary Differential Equations*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory* (recommended); or Computer Science 12A/L, *Introduction to Programming/Laboratory*

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A, *Multivariable Calculus*

Physics 5A/L, *Introduction to Physics I /Laboratory*; or Physics 6A/L, *Introductory Physics I/Laboratory*;

Physics 5B/M, *Introduction to Physics II/Laboratory*; or 6B/M, *Introductory Physics II/Laboratory*; or Computer Engineering 9, *Statics, Dynamics, and Biomechanics* (recommended for robotics concentration).

Physics 5C/N, *Introduction to Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*;

Computer Engineering 80E, *Engineering Ethics*; or another approved ethics course. This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L, *Logic Design/Laboratory*

Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*

Computer Engineering 110, *Computer Architecture*

Computer Engineering 121/L, *Microprocessor System Design/Laboratory*

Computer Science 101, *Abstract Data Types*

Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*

Electrical Engineering 103, *Signals and Systems*

Concentrations

The following concentrations are specializations for the computer engineering student. Students must complete all of the courses listed within their selected concentration.

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems of all types. This concentration is the closest one to a computer science major-the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

Computer Science 111, *Introduction to Operating Systems*

Computer Science 115, *Software Methodology*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Elective: Upper-division or graduate elective from the approved list

Any one of the following courses:

Computer Engineering 113, *Parallel and Concurrent Programming*

Computer Engineering 156/L, *Network Programming/Laboratory*

Computer Science 104A, *Fundamentals of Compiler Design I*

Computer Science 104B, *Fundamentals of Compiler Design II*

Computer Science 116, *Software Design Project*

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Science 111, *Introduction to Operating Systems*

Elective: Upper-division or graduate elective from the approved list

Robotics and Control Concentration

This concentration covers the hardware, software, sensing, and control aspects of autonomous and embedded systems. Students receive training in the theory, design, and realization of complex systems such as mobile robots. The concentration emphasizes integration of embedded software with hardware systems that interact with the environment. The Computer Engineering 9 option, above, is highly recommended.

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Electrical Engineering 154, *Feedback Control Systems*

Any two of the following:

Computer Engineering 153, *Digital Signal Processing*

Computer Engineering 167/L, *Sensing and Sensor Technologies/Laboratory*

Applied Mathematics and Statistics 114, *Introduction to Dynamical Systems*; or
Computer Engineering 240, *Introduction to Linear Dynamical Systems*

Computer Engineering 215, *Models of Robotic Manipulation*

Computer Engineering 242, *Applied Feedback Control*

Networks Concentration

The networks concentration focuses on communication between computers, covering both network

hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Engineering 156/L, *Network Programming/Laboratory*

Computer Science 111, *Introduction to Operating Systems*

Elective: Computer Engineering 151/L, *Network Administration/Laboratory*; or an upper-division or graduate elective from approved list.

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*

Computer Engineering 173/L, *High-Speed Digital Design/Laboratory*

Computer Engineering 174, *Introduction to the EDA Tools for PCB Design* (three credits)

Electrical Engineering 171/L, *Analog Electronics/Laboratory*

Elective: Upper-division or graduate elective from approved list

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in computer engineering is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

Capstone Requirement

All computer engineering students complete a two-quarter capstone project sequence. Working with students from different concentrations and majors, students apply the skills and techniques from their own chosen concentration to a major design problem.

Computer Engineering 123A, *Computer Engineering Design Project I*

Computer Engineering 123B, *Computer Engineering Design Project II*; or 195, *Senior Thesis Research*

Exit Requirement

Students are required to submit a portfolio, complete the exit survey, and attend an exit interview. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically via <http://www.ce.ucsc.edu/node/20> by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the following:

- A hardware-oriented project report;
- A software-oriented project report;
- A third project report of the student's selection;

and any additional information related to these projects requested in <http://www.ce.ucsc.edu/node/20>.

If a project report is associated with a course, it must be an upper-division (other than CMPE100/L) or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Exit interviews are scheduled during the last week of the quarter.

Computer Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the computer engineering major. Plan One is suggested guidelines for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major. Students who take precalculus at UCSC, or who have little programming experience, are strongly advised to take course 8, Robot Automation in the fall quarter.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19B	CMPE 80E
	CMPS 12A/L	CMPE 12/L	CMPS 12B/M
	core course	gen ed	MATH 23A
2nd (soph)	PHYS 5A/L	AMS 20	PHYS 5C/N
	AMS 10	CMPE 107	CMPE 100/L
	CMPE 16	PHYS 5B/M	CMPS 101

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	MATH 3 (pre-calc)	MATH 19A	MATH 19B
	CMPE 8	CMPE 12/L	CMPE 13/L
	core course	gen ed	CMPE 80E
2nd (soph)	PHYS 5A/L	CMPE 100/L	PHYS 5C/N
	CMPS 12B/M	CMPE 9	MATH 23A
	AMS 10	AMS 20	CMPE 16

Robotics Engineering Major Requirements

All students in the robotics engineering major must take the following courses. The senior comprehensive requirement for robotics engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement. The robotics engineering major requires two more courses than the computer engineering major, including one graduate course. Students not making sufficient progress in the major may be required to change to another major.

Lower-Division Core Requirements

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*; or Mathematics 21 *Linear Algebra*

Applied Mathematics and Statistics 20, *Mathematical Methods for Engineers II*; or Mathematics 24 *Ordinary Differential Equations*

Computer Engineering 8/L, *Introduction to Robot Automation*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 13/L *Computer Systems and C Programming/Laboratory* (recommended); or Computer Science 12A/L, *Introduction to Programming (Accelerated)/Laboratory* (recommended); or Computer Science 5J, *Introduction to Programming in Java*, and Computer Science 11, *Intermediate Programming*

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A, *Multivariable Calculus*

Physics 5A/L, *Introduction Physics /Laboratory I*; or Physics 6A/L, *Introductory Physics I/Laboratory*

Physics 5C/N, *Introduction Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*

Computer Engineering 9, *Statics, Dynamics, and Biomechanics*

Computer Engineering 80E, *Engineering Ethics*; or another approved ethics course. This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L, *Logic Design/Laboratory*

Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*

Computer Engineering 115/L, *Solid Mechanics*

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Engineering 121/L, *Microprocessor System Design/Laboratory*

Computer Engineering 167/L, *Sensing and Sensor Technologies/Laboratory*

Computer Engineering 174, *Tools for Digital Systems Design Laboratory*

Computer Engineering 185, *Technical Writing for Computer Engineers*

Computer Science 101, *Abstract Data Types*

Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*

Electrical Engineering 103, *Signals and Systems*

Electrical Engineering 154, *Feedback Control Systems*

Advanced Robotics Engineering: One of Computer Engineering 215, *Models of Robotic Manipulation*; 240. *Introduction to Linear Dynamical Systems*; or 242. *Applied Feedback Control*.

Elective: Upper-division or graduate elective from approved list.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in robotics engineering is satisfied by completing Computer Engineering 185, *Technical Writing for Computer Engineers*.

Capstone Requirement

Computer Engineering 123A, *Computer Engineering Design Project I*

Computer Engineering 123B, *Computer Engineering Design Project II*; or 195, *Senior Thesis Research*

Exit Requirement

Students are required to submit a portfolio, complete the exit survey and attend an exit interview. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically via <http://www.ce.ucsc.edu/node/20> at least seven days before the end of instruction in the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include three project reports of the student's selection and any additional information related to these projects requested in <http://www.ce.ucsc.edu/node/20>. If a project report is associated with a course, it must be an upper-division (other than Computer Engineering 100/L) or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Network and Digital Technology Major Requirements

The B.A. in network and digital technology provides students with knowledge and skills related to network and computer technology and the design processes which make those technologies

function. The B.A. is tailored to students who wish to combine technology with other fields, such as through a double-major or a minor, or who, through the choice of electives, wish to concentrate on the digital design or computer networks aspects of computer engineering in preparation for future employment as, for example, a network administrator. The B.A. in network and digital technology is not an engineering degree

All students in the network and digital technology major must take the following courses. The senior comprehensive requirement is satisfied by completion of the capstone course and the portfolio exit requirement.

Lower-Division Requirements

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*; or Mathematics 21, *Linear Algebra*

Applied Mathematics and Statistics 20, *Mathematical Methods for Engineers II*; or Mathematics 24, *Ordinary Differential Equations*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory* (recommended); or Computer Science 12A/L, *Introduction to Programming (Accelerated)/Laboratory*; or Computer Science 5J, *Introduction to Programming in Java*, and 11, *Intermediate Programming*.

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A, *Multivariable Calculus*

Physics 5A/L, *Introduction Physics I/Laboratory I*; or Physics 6A/L, *Introductory Physics I/Laboratory*;

Physics 5C/N, *Introduction Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*;

Upper-Division Requirements

Computer Engineering 100/L, *Logic Design/Laboratory*

Computer Engineering 150/L, *Computer Networks/Laboratory*

Computer Engineering 185, *Technical Writing for Computer Engineers*

Computer Science 101, *Abstract Data Types*; or Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*

Three additional 5-unit upper-division electives, and associated laboratories, from the approved list of electives, and one capstone requirement course.

Capstone Requirement

Each capstone course features a 3-month supervised design experience in digital or network technology culminating in a substantial written report. Computer Engineering 185, *Technical Writing for Computer Engineers*, must be completed prior to or concurrently with the capstone project course. Students must notify the instructor at the start of the quarter that they are working to complete their B.A. in Digital Technology Capstone Requirement. Students select one of the following:

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Engineering 121/L, *Microprocessor System Design/Laboratory*

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*

Computer Engineering 195, *Senior Thesis*, and submission of a thesis approved by two faculty members and the undergraduate director.

Computer Science 115, *Software Methodology*

As a requirement for graduation, students submit electronically a senior portfolio that includes the capstone-course project report. The Senior Portfolio is evaluated independently of the course grade, and it is possible to pass the capstone course but also be required to improve the senior portfolio.

Elective Choice

Students wishing to focus on digital technology should consider including among their courses: Electrical Engineering 101/L, Computer Engineering 110, Computer Engineering 118/L, Computer Engineering 121/L, and Computer Engineering 125/L.

Students wishing to focus on network technology should consider including among their courses:

Computer Science 101, Computer Engineering 151/L, Computer Engineering 156/L, Computer Engineering 158/L, and Computer Science 111.

In all cases, students should discuss their interests and elective choices with their faculty adviser.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in network and digital technology is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

Network and Digital Technology Major Planner

The first year is similar to option 2 for the computer engineering major. Students choosing between the B.S. and the B.A. program should follow the B.S. curriculum until major declaration. General education courses needed outside major requirements are not shown.

Year	Fall	Winter	Spring

	CMPE 185		

Computer Engineering Minor

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Computer Engineering 118/L, Introduction to Mechatronics/Introduction to Mechatronics Laboratory or course 121/L, Microprocessor System Design/Microprocessor System Design Laboratory provides a capstone engineering design experience for students pursuing the computer engineering minor.

Computer Engineering Minor Requirements

Requirements for the minor in computer engineering are the following:

Applied Mathematics and Statistics 20A or 20, (*Basic Mathematical Methods for Engineers II* (requires prerequisite); or Mathematics 24, *Ordinary Differential Equations*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Computer Engineering 100/L, *Logic Design/Laboratory*

Computer Engineering 110, *Computer Architecture*

Computer Engineering 118/L *Introduction to Mechatronics/Laboratory* or 121/L, *Microprocessor System Design/Laboratory*

Computer Engineering 13/L, *Computer Systems and C Programming* (recommended); or

Computer Science 12A/L, *Introduction to Programming/Laboratory*

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*; or 13H/L, *Introduction to Programming and Data Structures (Honors)/ Laboratory*

Computer Science 101, *Abstract Data Types*

Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Physics 5A/L, *Introduction to Physics I/Laboratory*; or Physics 6A/L, *Introductory Physics I/Laboratory*

Physics 5C/N, *Introduction to Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*

B.S./M.S. Undergraduate Program

The Department of Computer Engineering offers a combined bachelor and master of science degree program in computer engineering, providing the opportunity to earn both degrees in five years. The B.S./M.S. program offers a competitive edge to students who are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The program assists qualified enrolled students with a simplified graduate application process and makes it possible to complete an M.S. degree with just seven courses beyond the B.S. program.

The program prepares students for engineering positions in industry, and it is particularly attractive for undergraduate students planning to engage in engineering research in industry or academia. The School of Engineering has many opportunities for undergraduate research, and B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for support as graduate research assistants.

Particularly motivated B.S./M.S. students can complete the entire program in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career—no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate course work in advance of graduate standing.

Admission to the B.S./M.S. Program

The undergraduate degree requirements are the same as those for other computer engineering majors; however, the B.S./M.S. program capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may apply (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. program is by formal application, and it is very simple. Undergraduate applicants seeking admission to the program can apply at any time starting in the first quarter of junior standing, and no graduate record examination (GRE) is required to apply. To qualify, applicants must have a 3.0 SoE GPA when they apply to the B.S./M.S. program, and must maintain a 3.0 SoE GPA or higher until the completion of their undergraduate requirements. Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the program are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year.

Additional information about this program can be found on the department's web pages at <http://www.ce.ucsc.edu/academics/undergraduate/bs-ms>.

Graduate Programs

M.S. and Ph.D. Degree Programs

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UCSC are networks; embedded and autonomous systems; computer systems design and computer-aided design; and sensing and interaction.

The computer engineering program benefits from a close relationship with, among others, the computer science and electrical engineering programs at UCSC and ties to industry in the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in teaching and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's web pages at <http://www.ce.ucsc.edu/academics/graduate/requirements>.

Requirements for the Master's Degree

Base Requirement

In their first year, graduate students must show proficiency in three fundamental subjects: 1) data structures; 2) computer architecture; and 3) one of the following three subjects—logic design, circuits, or software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final examination (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer

engineering base worksheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of their first year in the program.

Course Requirements

Each student is required to complete a total of 48 credits. The course work must include:

Computer Engineering 200, Research and Teaching in Computer Science and Engineering

Computer Science 201, Analysis of Algorithms

Computer Engineering 202, Computer Architecture

Up to 10 credits of Computer Engineering 297, Independent Study or Research; or Computer Engineering 299, Thesis Research

Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval).

All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses (available online or from the department)

In addition, the selection of graduate elective courses must show breadth by including a minimum of five credits in each of two categories from computer engineering's list of approved graduate electives. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

Thesis

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student is required to present an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Base Requirement

In their first year, graduate students must show proficiency in three of five fundamental subjects: 1) data structures; 2) computer architecture; and 3) one of the following three subjects—logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final examination (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer engineering base work sheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of the first year in the program.

Course Requirements

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of:

Computer Engineering 200, Research and Teaching in Computer Science and Engineering

Computer Science 201, Analysis of Algorithms

Computer Engineering 202, Computer Architecture

A minimum of 20 credits of graduate computer engineering courses from computer engineering's list of approved graduate courses (available online or from the department)

Up to 10 credits of Computer Engineering 297, Independent Study or Research; or Computer Engineering 299, Thesis Research

Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval).

All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses.

The selection of elective courses must show breadth by including either 10 credits in each of two categories or five credits in each of three separate categories from computer engineering's list of approved graduate courses. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter.

Examination committees consist of four faculty members, two chosen by the student and two by the computer engineering graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate committee. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying examination committee, approved by the computer engineering graduate committee and the graduate council. The student must submit his or her written dissertation proposal to all members of the qualifying examination committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

M.S. students who have previously successfully completed graduate-level classes in a related field at another institution may substitute courses from their previous institution with the approval of the graduate committee. The number of courses that can be substituted is limited so that, in all cases, the students must complete a minimum of 4 graduate-level classes during their matriculation at UCSC. These classes must be graduate-level classes from the list of approved graduate courses (<http://www.ce.ucsc.edu/academics/graduate/approved-courses>).

Petitions for course substitutions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Ph.D. students who have previously earned a master's degree or have successfully completed graduate-level classes as regular students in a graduate program in a related field at another institution may apply for a modified program of course requirements taking into account their previous coursework. Such a modified program should specify the coursework that will be

completed at UCSC, which must include no fewer than four courses from the list of approved graduate courses (<http://www.ce.ucsc.edu/academics/graduate/approved-courses>). These four courses must be taken while in the graduate program at UCSC.

Application for a modified program of course requirements must be made within the first year of graduate study at UCSC, and will be reviewed by the graduate director and a committee of three faculty members approved by the graduate director. The application should be accompanied by copies of the syllabi, exams, and other course work, as well as the relevant transcript from the other institution. Interviews with the committee members may be required to properly assess the coursework.

Acceptance of prior work for course transfer and modified programs of study is at the discretion of the department.

Robotics and Control Designated Emphasis

The graduate designated emphasis (DE) leading to the degree notation "with an emphasis in Robotics and Control" is a collaboration of faculty from several Baskin School of Engineering programs and is administered by the Department of Computer Engineering. Students wishing to complete a master's thesis or doctoral dissertation in this area satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in Applied Mathematics and Statistics, Computer Engineering and Electrical Engineering, but students from any area may work in this interdisciplinary field so long as they meet all requirements, including progress, within the primary degree program. A current list of the robotics and control faculty and electives is available at the Computer Engineering web site, ce.ucsc.edu.

Requirements for the Notation

Committee composition. The student's Ph.D. or M.S. committee must include one member of the robotics and control faculty.

Writing. The student's dissertation or thesis must include a significant section (chapter) related to robotics and control, with content suitable for a conference or journal article.

Course requirements. The student must complete four five-credit graduate courses and several two-credit seminar courses. All students must complete CMPE 241/EE 241, Introduction to Feedback Control Systems, and three 5-credit robotics and control graduate electives.

Master's students must complete two offerings of CMPE 280C, Seminar in Control (2 credits).

Doctoral students must complete four offerings of CMPE 280C.

Review of Progress

Each year, the computer engineering faculty reviews the progress of every student in the graduate program. Students not making adequate progress towards completion of degree requirements (see the UCSC Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete Computer Science 201 and Computer Engineering 202 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U (Unsatisfactory) or below B in School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half of a quarter of enrollment. Should any computer engineering graduate student fail a School of Engineering course while on probation, the Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If, after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation. Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

UCSC General Catalog[2011-12 Updates](#)[2010-12 General Catalog](#)[2009-10 Updates](#)[2008-10 General Catalog](#)[2007-08 Updates](#)[2006-08 General Catalog](#)**Computer Engineering**

Baskin School of Engineering

(831) 459-2158

<http://www.soe.ucsc.edu>***Program Description***

Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The UCSC Department of Computer Engineering sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering. The department offers [the bachelor of science \(B.S.\) in computer engineering, the bachelor of science in robotics engineering, the bachelor of arts \(B.A.\) in digital and network technology, the master of science \(M.S.\) and the doctor of philosophy \(Ph.D\) in computer engineering degrees](#) as well as an undergraduate minor. A combined B.S./M.S. program allows students to complete both [the B.S. and M.S. in computer engineering](#) degrees in five years. The department administers the interdisciplinary graduate designated emphasis in robotics and control that may be pursued along with a graduate degree in computer engineering or another field such as applied mathematics and statistics or electrical engineering.

Undergraduate Program Description

[The department offers two bachelor of science majors, one in computer engineering and the other in robotics engineering. The department also offers a bachelor of arts in network and digital technology. The programs are closely related with many common requirements, so that students do not need to immediately decide among the three.](#)

[The two undergraduate engineering degrees have the same program objectives for their graduates. The program objectives of the UCSC B.S. in computer engineering and B.S. in robotics engineering are:](#)

[1. Graduates who choose to pursue a career in industry, government, or academia will become successful engineers, scientists, or educators who demonstrate strong leadership, technical, and team skills; and a commitment to continuing professional development.](#)

[2. Graduates who choose to pursue advanced degrees will gain admission to graduate programs and will be successful graduate students.](#)

[The UCSC B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education \(both formal and informal\) and for productive employment in industry. Because computer engineering is so broad, the B.S. in computer engineering offers five specialized concentrations for completing the program: systems programming, computer systems, robotics and control, networks, and digital hardware. Descriptions of these concentrations](#)

follow in the section on major requirements.

-

The UCSC B.S. in robotics engineering prepares graduates for a rewarding career at the interfaces between electrical, computer, and mechanical engineering. UCSC robotics engineering graduates will have a thorough grounding in the principles and practices of robotics and control, and the scientific and mathematical principles upon which they are built; ~~they~~ graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

The UCSC B.A. in network and digital technology provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes that make those technologies function. The program is tailored to students who wish to combine technology with other fields or have a general focus on digital design or computer networks. The B.A. in network and digital technology is not an engineering degree, but B.A. graduates will be prepared to work with technology development in other capacities, or join the computer network workforce. Students interested in graduate study should pursue either B.S. program.

~~Because computer engineering is so broad, we offer five specialized concentrations for completing the program: systems programming, computer systems, robotics and control, networks, and digital hardware. Descriptions of these concentrations follow in the section on major requirements.~~

The Department of Computer Engineering offers an undergraduate minor, described after the B.S.A. program below. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded systems, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty-led research projects ~~labs~~ to take part in cutting-edge research. The department sponsors the summer undergraduate research fellowship in information technology (SURF-IT, <http://surf-it.soe.ucsc.edu>), as well as many other research opportunities. The department holds regular faculty-undergraduate lunches to discuss research and other issues of interest.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers an accelerated combined B.S./M.S. degree in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the Ph.D. degrees.

The computer engineering B.S. program is accredited by the Engineering Accreditation Commission of ABET.

Courses for Nonmajors

The Department of Computer Engineering offers course 1, *Hands-on Computer Engineering*: a two-credit laboratory course designed to introduce students to computer engineering via many short fun projects; course 3, *Personal Computer Concepts: Software and Hardware*, providing students an introductory course on the design and use of

computers from an engineering viewpoint; and course 8, *Robot Automation: Intelligence through Feedback Control*. Other computer engineering courses of interest to nonmajors include course 12, *Computing Systems and Assembly Language*, an introductory course on computer systems, system software, and machine-level programming; course 80N, *Introduction to Networking and the Internet*, an introduction to technological services of the Internet; ~~course 80U, *Ubiquitous and Mobile Computing*~~; course 80E, *Engineering Ethics*; and course 80A, *Universal Access: Disability, Technology, and Society*.

Computer Engineering Policies

Admissions Policy

Lower-division students will be accepted into the ~~computer engineering~~ majors on completion of the School of Engineering (SoE) major declaration process during any of their first three quarters at UCSC. See <http://www.soe.ucsc.edu/advising/undergraduate/> for quarterly deadlines and mandatory major declaration workshops. Students considering any of the department's majors ~~the computer engineering major among other possibilities~~ are strongly encouraged to take course ~~1 (2 credits) or course 8~~ within in the first ~~two~~ quarters, and course 12 within the first three quarters.

After the first three quarters, petitions to declare the major are reviewed individually. Students seeking to declare the computer engineering or robotics engineering must have completed at least five courses required for the major, and are expected to have a grade point average (GPA) among School of Engineering and Division of Physical and Biological Sciences courses (the SoE GPA) of 2.5. Students seeking to declare the B.A. in network and digital technology must have an SoE of 2.3. Progress in the major and ability to complete the major within campus limits will also be considered.

Transfer Students

Admission to any of the three computer engineering majors for transfer students is based on performance in all transferable science, mathematics, and engineering courses. To be admitted, at least four courses required for the major must transfer for a student to be eligible for admission. Requirements are listed below. We recommend, in particular, substantial completion of the mathematics series, as well as programming and physics.

Advising

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed course work that meets the major or minor requirements (see <http://www.soe.ucsc.edu/advising/undergraduate/>).

Honors in the Major

~~Computer engineering m~~Majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SoE GPA of 3.7, in most cases, receive highest honors. Students with an SoE GPA of 3.3, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SoE GPA. Computer engineering and robotics engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Progress in the Major

Declared majors must complete courses required for the major in a manner that will enable graduation within campus limits. Students not making sufficient progress may be required to take a higher course load, complete courses during summer, change their major or

concentration, or otherwise adjust their study plan, at the discretion of the faculty. Students who do not complete required changes to the study plan may be disqualified from the major.

Disqualification Policy

Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Letter Grade Policy

The Computer Engineering Department requires letter grading for all courses applied to ~~the~~ its degrees with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This policy includes courses required for the ~~computer engineering~~ majors but sponsored by other departments.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees under the School of Engineering.

Computer Engineering Major Requirements

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence. The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the ~~portfolio~~-exit requirement.

Lower-Division Core Requirements

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or
Mathematics 21, Linear Algebra

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II; or
Mathematics 24, Ordinary Differential Equations

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory
(recommended); or Computer Science 12A/L, Introduction to Programming/Laboratory

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A, Multivariable Calculus

Physics 5A/L, Introduction to Physics I /Laboratory; or Physics 6A/L, Introductory Physics
I/Laboratory➔

Physics 5B/M, Introduction to Physics II/Laboratory; or 6B/M, Introductory Physics
II/Laboratory; or Computer Engineering 9, Statics, Dynamics, and Biomechanics
(recommended for robotics concentration)➔

Physics 5C/N, Introduction to Physics III/Laboratory; or Physics 6C/N, Introductory Physics
III/Laboratory➔

Computer Engineering 80E, Engineering Ethics; or another approved ethics course. This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L, Logic Design/Laboratory

Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic

Computer Engineering 110, Computer Architecture

Computer Engineering 121/L, Microprocessor System Design/Laboratory

Computer Science 101, Abstract Data Types

Electrical Engineering 101/L, Introduction to Electronics/Laboratory

Electrical Engineering 103, Signals and Systems

Concentrations

The following concentrations are specializations for the computer engineering student. Students must complete all of the courses listed within their selected concentration.

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems of all types. This concentration is the closest one to a computer science major-the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

Computer Science 111, Introduction to Operating Systems

Computer Science 115, Software Methodology

Computer Engineering 150/L, Introduction to Computer Networks/Laboratory

Elective: Upper-division or graduate elective from the approved list~~*Elective: Upper-division elective from the approved list*~~

Any ~~two~~one of the following courses:

Computer Engineering 113, *Parallel and Concurrent Programming*

~~*Computer Engineering 118/L, Introduction to Mechatronics/Laboratory*~~

Computer Engineering 156/L, *Network Programming/Laboratory* ~~(requires Computer Engineering 150)~~

Computer Science 104A, *Fundamentals of Compiler Design I*

Computer Science 104B, *Fundamentals of Compiler Design II*

Computer Science 116, *Software Design Project*

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Science 111, *Introduction to Operating Systems*

Elective: Upper-division or graduate elective from the approved list~~Electives: Two upper-division or graduate electives from approved list~~

Robotics and Control Concentration

This concentration covers the hardware, software, sensing, and control aspects of autonomous and embedded systems. Students receive training in the theory, design, and realization of complex systems such as mobile robots. The concentration emphasizes integration of embedded software with hardware systems that interact with the environment. The Computer Engineering 9 option, above, is highly recommended.

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Electrical Engineering 154, *Feedback Control Systems*

Any two of the following:

Computer Engineering 153, *Digital Signal Processing*

Computer Engineering 167/L, *Sensing and Sensor Technologies/Laboratory*

Applied Mathematics and Statistics 114, *Introduction to Dynamical Systems*; or
Computer Engineering 240, *Introduction to Linear Dynamical Systems*

Computer Engineering 215, *Models of Robotic Manipulation*

Computer Engineering 242, *Applied Feedback Control*

Networks Concentration

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Engineering 156/L, *Network Programming/Laboratory*

Computer Science 111, *Introduction to Operating Systems*

Elective: Computer Engineering 151/L, *Network Administration/Laboratory*; or an upper-division or graduate elective from approved list.

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*

Computer Engineering 173/L, *High-Speed Digital Design/Laboratory*

Computer Engineering 174, *Introduction to the EDA Tools for PCB Design (three credits)*

Electrical Engineering 171/L, *Analog Electronics/Laboratory*

Elective: Upper-division or graduate elective from approved list

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in computer engineering is satisfied by completing Computer Engineering 185, *Technical Writing for Computer Engineers*.

Capstone Requirement

All computer engineering students complete a two-quarter capstone project sequence. Working with students from different concentrations and majors, students apply the skills and techniques from their own chosen concentration to a major design problem.

Computer Engineering 123A, Computer Engineering Design Project I

Computer Engineering 123B, Computer Engineering Design Project II; or 195, Senior Thesis Research

Exit Requirement

Students are required to submit a portfolio, complete the exit survey, and attend an exit interview. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically via <http://www.ce.ucsc.edu/node/20> by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the following:

- A hardware-oriented project report;
- A software-oriented project report;
- A third project report of the student's selection;

and any additional information related to these projects requested in ~~A one- to two-page overview of the three projects, the student's contribution to them, and a narrative as specified at~~ <http://www.ce.ucsc.edu/node/20>.

If a project report is associated with a course, it must be an upper-division (other than CMPE100/L) or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Exit interviews are scheduled during the last week of the quarter.

Computer Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the computer engineering major. Plan One is suggested guidelines for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major. Students who take precalculus at UCSC, or who have little programming experience, are strongly advised to take course 8, *Robot Automation* in the fall quarter.

Plan One			
Year	Fall	Winter	Spring

1st (frsh)	MATH 19A	MATH 19B	CMPE 80E
	CMPS 12A/L	CMPE 5 12/L	CMPS 12B/M
	core course	gen ed	MATH 23A
2nd (soph)	PHYS 5A/L	AMS 20	PHYS 5C/N
	AMS 10	CMPE 10 10/L	CMPE 100 100/L
	CMPE 16	PHYS 5B/M	CMPS 101

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	MATH 3 (pre-calc)	MATH 19A	MATH 19B
	CMPE 8	CMPE 12/L	CMPE 13/L
	core course	gen ed	CMPE 80E
2nd (soph)	PHYS 5A/L	CMPE 100/L	PHYS 5C/N
	CMPS 12B/M	CMPE 9	MATH 23A
	AMS 10	AMS 20	CMPE 16 16/L

Robotics Engineering Major Requirements

All students in the robotics engineering major must take the following courses. The senior comprehensive requirement for robotics engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement. The robotics engineering major requires two more courses than the computer engineering major, including one graduate course. Students not making sufficient progress in the major may be required to change to another major.

Lower-Division Core Requirements

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or
Mathematics 21 Linear Algebra

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II; or

Mathematics 24 Ordinary Differential Equations

Computer Engineering 8/L, Introduction to Robot Automation

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L Computer Systems and C Programming/Laboratory (recommended); or Computer Science 12A/L, Introduction to Programming (Accelerated)/Laboratory (recommended); or Computer Science 5J, Introduction to Programming in Java, and Computer Science 11, Intermediate Programming

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Engineering 16 Applied Discrete Mathematics

Mathematics 19A-B Calculus for Science, Engineering, and Mathematics

Mathematics 23A Multivariable Calculus

Physics 5A/L Introduction Physics /Laboratory I; or Physics 6A/L, Introductory Physics I/Laboratory;

Physics 5C/N Introduction Physics III/Laboratory; or Physics 6C/N, Introductory Physics III/Laboratory;

Computer Engineering 9 Statics, Dynamics, and Biomechanics

Computer Engineering 80E Engineering Ethics; or another approved ethics course. This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L Logic Design/Laboratory

Computer Engineering 107 Mathematical Methods of Systems Analysis: Stochastic

Computer Engineering 115/L Solid Mechanics

Computer Engineering 118/L, Introduction to Mechatronics/Laboratory

Computer Engineering 121/L Microprocessor System Design/Laboratory

Computer Engineering 167/L Sensing and Sensor Technologies/Laboratory

Computer Engineering 174, Tools for Digital Systems Design Laboratory

Computer Engineering 185 Technical Writing for Computer Engineers

Computer Science 101 Abstract Data Types

Electrical Engineering 101/L Introduction to Electronics/Laboratory

Electrical Engineering 103 Signals and Systems

Electrical Engineering 154, Feedback Control Systems

Advanced Robotics Engineering: One of Computer Engineering 215, Models of Robotic Manipulation; 240 Introduction to Linear Dynamical Systems; or 242 Applied Feedback Control.

Elective: Upper-division or graduate elective from approved list. <datetime="2011-01-26T11:31">

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in robotics engineering is satisfied by completing Computer Engineering 185, *Technical Writing for Computer Engineers*.

Capstone Requirement

Computer Engineering 123A, *Computer Engineering Design Project I*

Computer Engineering 123B, *Engineering Design Project II*; or 195, *Senior Thesis Research*

~~Portfolio~~ Exit Requirement

Students are required to submit a portfolio, ~~and~~ complete the exit survey and attend an exit interview~~y~~. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically via <http://www.ce.ucsc.edu/node/20> at least seven days before the end of instruction in the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee

~~and~~ must include ~~the following~~:

~~FF~~three project reports of the student's selection and

~~a~~any additional information related to these projects requested in ~~A one-to two page overview of the three projects, the student's contribution to them, and a narrative as specified at~~ -<http://www.ce.ucsc.edu/node/20>.

~~An exit survey~~

If a project report is associated with a course, it must be an upper-division (other than ~~CMPE~~Computer Engineering 100/L) or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

--	----------	-----------------	--

Network and Digital Technology Major Requirements

The B.A. in network and digital technology provides students with knowledge and skills related to network and computer technology and the design processes which make those technologies function. The B.A. is tailored to students who wish to combine technology with other fields, such as through a double-major or a minor, or who, through the choice of electives, wish to concentrate on the digital design or computer networks aspects of computer engineering in preparation for future employment as, for example, a network administrator. The B.A. in network and digital technology is not an engineering degree

All students in the network and digital technology major must take the following courses. The senior comprehensive requirement is satisfied by completion of the capstone course and the portfolio exit requirement.

Lower-Division Requirements

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*; or Mathematics 21, *Linear Algebra*

Applied Mathematics and Statistics 20, *Mathematical Methods for Engineers II*; or Mathematics 24, *Ordinary Differential Equations*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory* (recommended); or Computer Science 12A/L, *Introduction to Programming (Accelerated)/Laboratory*; or Computer Science 5J, *Introduction to Programming in Java, and 11, *Intermediate Programming.**

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A, *Multivariable Calculus*

Physics 5A/L, *Introduction Physics /Laboratory I*; or Physics 6A/L, *Introductory Physics I/Laboratory*:

Physics 5C/N, *Introduction Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*:

Upper-Division Requirements

Computer Engineering 100/L, *Logic Design/Laboratory*

Computer Engineering 150/L, *Computer Networks/Laboratory*

Computer Engineering 185, *Technical Writing for Computer Engineers*

Computer Science 101, *Abstract Data Types*; or Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*

Three additional 5-unit upper-division electives, and associated laboratories, from the approved list of electives, and one capstone requirement course.

Capstone Requirement

Each capstone course features a 3-month supervised design experience in digital or

network technology culminating in a substantial written report. Computer Engineering 185, *Technical Writing for Computer Engineers*, must be completed prior to or concurrently with the capstone project course. Students must notify the instructor at the start of the quarter that they are working to complete their B.A. in Digital Technology Capstone Requirement. ~~One~~Students select one of the following:

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Engineering 121/L, *Microprocessor System Design/Laboratory*

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*

Computer Engineering 195, *Senior Thesis*, and submission of a thesis approved by two faculty members and the undergraduate director.

Computer Science 115, *Software Methodology*

As a requirement for graduation, students submit electronically a ~~S~~senior ~~P~~portfolio that includes the capstone--course project report. The Senior Portfolio is evaluated independently of the course grade, and it is possible to pass the capstone course but also be required to improve the ~~S~~senior ~~P~~portfolio.

Elective Choice

Students wishing to focus on ~~D~~digital ~~T~~technology should consider including among their courses: ~~E~~lectrical Engineering 101/L, ~~CMPE~~Computer Engineering 110, Computer Engineering ~~CMPE~~118/L, Computer Engineering ~~CMPE~~121/L, and Computer Engineering ~~CMPE~~125/L.

Students wishing to focus on ~~N~~network ~~T~~technology should consider including among their courses: Computer Science~~CMPS~~101, Computer Engineering ~~CMPE~~151/L, Computer Engineering ~~CMPE~~156/L, Computer Engineering ~~CMPE~~158/L, and Computer Science ~~CMPS~~111.

In all cases, students should discuss their interests and elective choices with their faculty adviser.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in network and digital technology is satisfied by completing Computer Engineering 185, *Technical Writing for Computer Engineers*.

Network and Digital Technology Major Planner

The first year is similar to option 2 for the computer engineering major. Students choosing between the B.S. and the B.A. program should follow the B.S. curriculum until major declaration. General education courses needed outside major requirements are not shown.

<u>Year</u>	<u>Fall</u>	<u>Winter</u>	<u>Spring</u>

Computer Engineering Minor

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Computer Engineering 118/L, *Introduction to Mechatronics/Introduction to Mechatronics Laboratory* or course 121/L, *Microprocessor System Design/Microprocessor System Design Laboratory* provides a capstone engineering design experience for students pursuing the computer engineering minor.

Computer Engineering Minor Requirements

Requirements for the minor in computer engineering are the following:

Applied Mathematics and Statistics 20A or 20, (Basic) Mathematical Methods for Engineers II (requires prerequisite); or Mathematics 24, *Ordinary Differential Equations*

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Computer Engineering 100/L, Logic Design/Laboratory

Computer Engineering 110, Computer Architecture

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*; or

Computer Engineering 121/L, *Microprocessor System Design/Laboratory*

Computer Engineering 13/L, Computer Systems and C Programming (recommended); or

Computer Science 12A/L, *Introduction to Programming/Laboratory*

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*; or

Computer Science 13H/L, *Introduction to Programming and Data Structures (Honors)/Laboratory*

Computer Science 101, Abstract Data Types

Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics

Physics 5A/L, *Introduction to Physics I/Laboratory*; or

Physics 6A/L, *Introductory Physics I/Laboratory*

Physics 5C/N, *Introduction to Physics III/Laboratory*; or

Physics 6C/N, *Introductory Physics III/Laboratory*

Computer Technology Minor

The computer technology minor provides a broad exposure to computer hardware and software technology. The minor is intended for non-engineering majors who would like to develop an understanding of the design and use of computer technology. The minor may be particularly valuable for students who expect to use computer technology in another discipline, who are interested in K-12 teaching, or who have a general interest in computer technology and how it works. The minor includes a required capstone essay.

Computer Technology Minor Requirements

~~Computer Engineering 1, Hands-On Computer Engineering~~

~~Computer Engineering 8, Robot Automation: Intelligence through Feedback Control~~

~~Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory~~

~~Computer Engineering 100/L, Logic Design/Laboratory~~

~~Computer Engineering 80N, Networking and the Internet; or 80U, Ubiquitous and Mobile Computing; or 150/L, Introduction to Computer Networks/Laboratory (requires pre-requisites)~~

~~Computer Engineering 80E, Engineering Ethics; or 80A, Universal Access: Disability, Technology, and Society~~

~~Information Systems Management 101, Management of Technology Seminar (1 credit)~~

~~Two of the following courses:~~

~~Biomolecular Engineering 60/L, Programming for Biologists and Biochemists/Laboratory~~

~~Computer Engineering 13/L, Computer Systems and C Programming/Laboratory~~

~~Computer Science 5C, Introduction to Programming in C/C++~~

~~Computer Science 5J, Introduction to Programming in Java~~

~~Computer Science 5P, Introduction to Programming Python~~

~~Computer Science 11, Intermediate Programming~~

~~Computer Science 12A/L, Introduction to Programming/Laboratory~~

~~Computer Science 12B/M, Introduction to Data Structures/Laboratory~~

Elective Requirement

~~Two 5-credit, upper-division School of Engineering electives and any associated laboratories. Only one is required if Computer Engineering 150/L is used in satisfying the requirements above.~~

Capstone Requirement

~~194F, **Group Tutorial** (2 credits). A group tutorial completed during the winter quarter prior to graduation considering the impact of computer technology. Students will complete papers considering aspects of the impact of computer technology on the students' discipline. Contact the School of Engineering Undergraduate Advising office during fall quarter to join this course.~~

B.S./M.S. Undergraduate Program

The Department of Computer Engineering offers a combined bachelor and master of science degree program in computer engineering, providing the opportunity to earn both degrees in five years. The B.S./M.S. program offers a competitive edge to students who

are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The program assists qualified enrolled students with a simplified graduate application process and makes it possible to complete an M.S. degree with just seven courses beyond the B.S. program.

The program prepares students for engineering positions in industry, and it is particularly attractive for undergraduate students planning to engage in engineering research in industry or academia. The School of Engineering has many opportunities for undergraduate research, and B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for support as graduate research assistants.

Particularly motivated B.S./M.S. students can complete the entire program in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career-no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate course work in advance of graduate standing.

Admission to the B.S./M.S. Program

The undergraduate degree requirements are the same as those for other computer engineering majors; however, the B.S./M.S. program capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may apply (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. program is by formal application, and it is very simple. Undergraduate applicants seeking admission to the program can apply at any time starting in the first quarter of junior standing, and no graduate record examination (GRE) is required to apply. To qualify, applicants must have a 3.0 SoE GPA when they apply to the B.S./M.S. program, and must maintain a 3.0 SoE GPA or higher until the completion of their undergraduate requirements.

Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the program are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year.

Additional information about this program can be found on the department's web pages at <http://www.ce.ucsc.edu/academics/undergraduate/bs-ms>.

Graduate Programs

M.S. and Ph.D. Degree Programs

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UCSC are networks; embedded and autonomous systems; computer systems design and computer-aided design; and sensing and interaction.

The computer engineering program benefits from a close relationship with, among others, the computer science and electrical engineering programs at UCSC and ties to industry in

the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in teaching and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's web pages at <http://www.ce.ucsc.edu/academics/graduate/requirements>.

Requirements for the Master's Degree

Base Requirement

In their first year, graduate students must show proficiency in three fundamental subjects: 1) data structures; 2) computer architecture; and 3) one of the following three subjects-logic design, circuits, or software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final examination (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer engineering base worksheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of their first year in the program.

Course Requirements

Each student is required to complete a total of 48 credits. The course work must include:

Computer Engineering 200, Research and Teaching in Computer Science and Engineering

Computer Science 201, Analysis of Algorithms

Computer Engineering 202, Computer Architecture

Up to 10 credits of Computer Engineering 297, Independent Study or Research; or
Computer Engineering 299, Thesis Research

Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval).

All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses (available online or from the department)

In addition, the selection of graduate elective courses must show breadth by including a minimum of five credits in each of two categories from computer engineering's list of approved graduate electives. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

Thesis

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members,

each of whom is provided a copy of the proposal. The student is required to present an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Base Requirement

In their first year, graduate students must show proficiency in three of five fundamental subjects: 1) data structures; 2) computer architecture; and 3) one of the following three subjects—logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final examination (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer engineering base work sheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of the first year in the program.

Course Requirements

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of:

Computer Engineering 200, Research and Teaching in Computer Science and Engineering

Computer Science 201, Analysis of Algorithms

Computer Engineering 202, Computer Architecture

A minimum of 20 credits of graduate computer engineering courses from computer engineering's list of approved graduate courses (available online or from the department)

Up to 10 credits of Computer Engineering 297, *Independent Study or Research*; or
Computer Engineering 299, *Thesis Research*

Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval);

All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses.

The selection of elective courses must show breadth by including either 10 credits in each of two categories or five credits in each of three separate categories from computer engineering's list of approved graduate courses. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two

chosen by the student and two by the computer engineering graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate committee. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying examination committee, approved by the computer engineering graduate committee and the graduate council. The student must submit his or her written dissertation proposal to all members of the qualifying examination committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

M.S. students who have previously successfully completed graduate-level classes in a related field at another institution may substitute courses from their previous institution with the approval of the graduate committee. The number of courses that can be substituted is limited so that, in all cases, the students must complete a minimum of 4 graduate-level classes during their matriculation at UCSC. These classes must be graduate-level classes from the list of approved graduate courses (<http://www.ce.ucsc.edu/academics/graduate/approved-courses>).

Petitions for course substitutions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Ph.D. students who have previously earned a master's degree or have successfully completed graduate-level classes as regular students in a graduate program in a related field at another institution may apply for a modified program of course requirements taking into account their previous coursework. Such a modified program should specify the

coursework that will be completed at UCSC, which must include no fewer than four courses from the list of approved graduate courses

(<http://www.ce.ucsc.edu/academics/graduate/approved-courses>). These four courses must be taken while in the graduate program at UCSC.

Application for a modified program of course requirements must be made within the first year of graduate study at UCSC, and will be reviewed by the graduate director and a committee of three faculty members approved by the graduate director. The application should be accompanied by copies of the syllabi, exams, and other course work, as well as the relevant transcript from the other institution. Interviews with the committee members may be required to properly assess the coursework.

Acceptance of prior work for course transfer and modified programs of study is at the discretion of the department.

Robotics and Control Designated Emphasis

The graduate designated emphasis (DE) leading to the degree notation “with an emphasis in Robotics and Control” is a collaboration of faculty from several Baskin School of Engineering programs and is administered by the Department of Computer Engineering. Students wishing to complete a master’s thesis or doctoral dissertation in this area satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in Applied Mathematics and Statistics, Computer Engineering and Electrical Engineering, but students from any area may work in this interdisciplinary field so long as they meet all requirements, including progress, within the primary degree program. A current list of the robotics and control faculty and electives is available at the Computer Engineering web site, ce.ucsc.edu.

Requirements for the Notation

Committee composition. The student’s Ph.D. or M.S. committee must include one member of the robotics and control faculty.

Writing. The student’s dissertation or thesis must include a significant section (chapter) related to robotics and control, with content suitable for a conference or journal article.

Course requirements. The student must complete four five-credit graduate courses and several two-credit seminar courses. All students must complete CMPE 241/EE 241, *Introduction to Feedback Control Systems*, and three 5-credit robotics and control graduate electives.

Master’s students must complete two offerings of CMPE 280C, *Seminar in Control* (2 credits). Doctoral students must complete four offerings of CMPE 280C.

Review of Progress

Each year, the computer engineering faculty reviews the progress of every student in the graduate program. Students not making adequate progress towards completion of degree requirements (see the *UCSC Graduate Handbook* for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete Computer Science 201 and Computer Engineering 202 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U (Unsatisfactory) or below B in School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half of

a quarter of enrollment.

Should any computer engineering graduate student fail a School of Engineering course while on probation, the Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If, after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Faculty and Professional Interests

Professor

ALEXANDRE BRANDWAJN

Computer architecture, performance modeling, queueing network models of computer systems, operating systems

F. JOEL FERGUSON

Fault diagnosis, failure analysis, logic fault modeling, adaptive test design for test of digital circuits and systems

J. J. GARCÍA-LUNA-ACEVES (Department Chair)

*Baskin Professor of Computer Engineering and Director of Networking Sciences Institute
Computer communication, wireless networks, Internet, network science*

RICHARD HUGHEY (joint with Biomolecular Engineering)

Bioinformatics, hidden Markov models, computer architecture, parallel computation

GLEN G. LANGDON JR., EMERITUS

TRACY LARRABEE

Test-pattern simulation and generation, fault modeling, fault diagnosis, design verification, technical writing, logic simulation

PATRICK E. MANTEY

*Associate Dean, Industry Programs
Jack Baskin Endowed Professor of Computer Engineering
CITRIS Campus Director
Director of ITI
Multimedia systems, digital signal processing, sensor systems and networks, real-time monitoring and control, image systems, image processing, visualization, geographic information systems, decision support systems*

KATIA OBRACZKA

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

MARTINE D. F. SCHLAG

VLSI design tools and algorithms, VLSI theory, field-programmable gate arrays, FPGA-based computing engines

ANUJAN VARMA

Computer networking, computer architecture, optical networks

Associate Professor

PAK K. CHAN

Placement and routing algorithms, field-programmable gate arrays, spectral-based partitioning, circuit theory, computer arithmetic

WILLIAM DUNBAR

Theory and application of feedback control, single molecule biophysics, nanopore sensors, dynamics and control of biomolecules

GABRIEL ELKAIM

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

SRI KURNIAWAN

Human-computer interaction; human factors and ergonomics; accessibility; assistive technology; usability; empirical studies; user-centered design

ROBERTO MANDUCHI

Computer vision and sensor processing, with application to assistive technology for the visually impaired

JOSE RENAU

Computer architecture, including design effort metrics and models, infrared thermal measurements, thermal modeling, process variability, energy efficient data-centers, thread level speculation, and FPGA/ASIC design

JACOB ROSEN

Biorobotics; human-centered robotics; medical robotics, surgery and rehabilitation; wearable robotics (exoskeleton); teleoperation, haptics and virtual reality, biomechanics, neuromuscular control and human-machine interfaces

Assistant Professor

MATTHEW R. GUTHAUS

VLSI, CAD, design for reliability and variability, system-on-chip, 3D IC, system-in-package

Adjunct Professor

GLENN ALERS

Nanoscale devices, copper interconnects

RENWICK CURRY

Control and optimization with special attention to aviation; air-traffic control; and collision-avoidance system design and analysis

PETER DANZIG

Internet web caching, scalable techniques to stream internet media around the world, scalable mechanisms to dynamically transform web content as applied to security for residential and enterprise networks

HARWOOD G. KOLSKY, Retired

Associate Adjunct Professor

MIRCEA TEODORESCU

Dynamics, vibrations, contact mechanics, biomechanics

Assistant Adjunct Professor

ANDREA DI BLAS

Parallel computer architectures, parallel applications and programming models, combinatorial optimization

DAVID PEASE

File systems, operating systems, storage, programming languages

BRADLEY SMITH

Computer communications, distributed systems, policy-based routing, routing protocols, security and trust in distributed systems

CEDRIC WESTPHAL

Internet working and wireless networks, with special attention to analytical modeling

Lecturer

CYRUS BAZEGBI

Computer architecture, VLSI, FPGA, embedded systems, and system architecture

GERALD MOULDS

Technical writing, professional communications

STEPHEN C. PETERSEN

Embedded controller systems, RF wireless systems, modulation and spectrum reuse, digital signal processing, circuit theory

LUCA DE ALFARO (Computer Science)

Formal methods, game theory, embedded systems, software engineering

BENJAMIN FRIEDLANDER (Electrical Engineering)

Digital communications, wireless communication system, array processing, adaptive signal processing

QI GONG (Applied Mathematics and Statistics)

Computational methods for real-time control systems, trajectory optimization and motion planning, nonlinear filtering and observer design, robust and adaptive control of nonlinear systems, industry applications of control theory

CLAIRE GU (Electrical Engineering)

Fiber sensors for bio-applications, optical fiber communications, volume holographic data storage, liquid crystal displays, nonlinear optics, optical information processing

KEVIN KARPLUS (Biomolecular Engineering)

Protein structure prediction, protein design, genome assembly from next-generation sequence data

SURESH K. LODHA (Computer Science)

Visualization, vision, innovation, entrepreneurship

DARRELL D. E. LONG (Computer Science)

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

DOMINIC W. MASSARO (Psychology)

Understanding language, speech perception and reading, language learning and speech technology, pattern recognition, psychology of interactive media, psychology of art and new media, human-machine interface

CHARLES E. McDOWELL (Computer Science)

Programming languages, parallel computing, and computer science education

PEYMAN MILANFAR (Electrical Engineering)

Statistical signal, image, and video processing; computer vision; modeling and inverse problems in imaging; detection and estimation theory

ETHAN L. MILLER (Computer Science)

Archival storage systems, metadata management and information retrieval, non-volatile memory file systems, scalable file systems, reliable and secure storage, distributed systems, computer security

DEJAN MILUTINOVIĆ (Applied Mathematics and Statistics)

Stochastic, dynamical systems and statistical signal processing, multi-agent systems/robotics, systems biology/immune system, optimal control, hybrid and discrete event systems

JOHN MUSACCHIO (Information Systems Management)

Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

ALEX T. PANG (Computer Science)

Uncertainty visualization, tensor visualization, scientific visualization, comparative visualization, collaboration software, virtual reality interfaces

IRA POHL (Computer Science)

Artificial intelligence, programming languages, heuristic methods, educational and social issues, combinatorial algorithms

KEVIN ROSS (Information Systems Management)

Service engineering and management; resource allocation; operations research, pricing, scheduling; queueing theory; networks

HAMID SADJADPOUR (Electrical Engineering)

Wireless communication systems, network information theory and scaling laws, performance analysis of wireless ad hoc and sensor networks, routing and MAC protocol design for wireless networks

PATRICK TANTALO

Graph theory, combinatorics, optimization, algorithms

LINDA WERNER

Software engineering testing, educational and societal issues of computer science

E. JAMES WHITEHEAD, JR. (Computer Science)

Software engineering, software evolution, software bug prediction, automated software construction, video game level design

DONALD WIBERG, Emeritus (UCLA)

Control systems, Kalman filtering, system parameter estimation, adaptive optics for large telescopes, and biomedical system modeling

YI ZHANG (Technology and Information Management)

Information retrieval, knowledge management, natural language processing, machine learning

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Hands-On Computer Engineering (2 credits).

Hands-on introduction to computer engineering practice and research, including computer hardware, robotics, and embedded systems. Encourages interaction with UCSC's School of Engineering community. Designed for students without previous background in computer engineering. Enrollment restricted to first-year students and sophomores. Enrollment limited to 20. *T. Larrabee, S. Petersen, R. Hughey*

3. Personal Computer Concepts: Software and Hardware. F,W,S

Provides an introduction to computers. Personal computing is emphasized, and students are introduced to word processing, spreadsheets, database management, graphics, and programming. Covers fundamentals of computing and current and future uses of computer technology, PC hardware, Windows operating system, applications software, networking and the Internet, and developments in the computer industry. Designed for students with little or no experience using computers. Students cannot receive credit for this course and Computer Science 2. (General Education Code(s): IN.) *G. Moulds*

8. Robot Automation: Intelligence through Feedback Control. F

Introduction to dynamical systems, feedback control, and robotics. Fundamental concepts in dynamical systems, modeling, stability analysis, robustness to uncertainty, feedback as it occurs naturally, and the design of feedback-control laws to engineer desirable static and dynamic response. Course includes an introduction to MATLAB and programming in MATLAB. Priority enrollment restricted to first-year students and sophomores. (General Education Code(s): MF, IN, Q.) *W. Dunbar, G. Elkaim*

9. Introduction to Statics, Dynamics, and Biomechanics. W

Theory and application of mathematical models to analyze statics and dynamics of mechanical and biomechanical systems (partials and rigid bodies) using a vector algebra. Covers: Newton's laws; free-body diagrams; structure analysis; friction; virtual work; energy and momentum methods; dynamics of bodies in two and three dimensions. Prerequisite(s): Mathematics 19A, and Physics 5A/L or 6A/L, and Applied Mathematics and Statistics 10 or Mathematics 21. *G. Elkaim, J. Rosen, W. Dunbar*

12. Computer Systems and Assembly Language. F,W,S

Introduction to computer systems and assembly language and how computers compute in hardware and software. Topics include digital logic, number systems, data structures, compiling/assembly process, basics of system software, and computer architecture. May include C language. Prerequisite(s): course 3 or 8, or Computer Science 10 or 12A or 5C or 5J or 5P, or Biomolecular Engineering 60, or suitable programming experience; previous or concurrent enrollment in course 12L required. (General Education Code(s): IN, Q.) *T. Larrabee, R. Hughey, G. Elkaim, A. Brandwajn, F. Ferguson*

12L. Computer Systems and Assembly Language Laboratory (2 credits). F,W,S

Laboratory sequence in assembly language programming. The basics of logic design, both RISC and microcontroller programming. May include C language programming. Two two-hour laboratories per week. Prerequisite(s): course 3 or 8, or Computer Science 10 or 12A or 5C or 5J or 5P, or Biomolecular Engineering 60, or suitable programming experience; previous or concurrent enrollment in course 12 required. *T. Larrabee, R. Hughey, G. Elkaim, A. Brandwajn, F. Ferguson*

13. Computer Systems and C Programming. S

Introduction to the C programming language as a means for controlling embedded and general computing systems. Continuing the exploration begun in course 12, students move to higher levels of abstraction in the control of complex computer systems. Prerequisite(s): courses 12 and 12L. Concurrent enrollment in course 13L is required. *G. Elkaim, R. Hughey*

13L. Computer Systems and C Programming Lab (2 credits). S

Laboratory sequence in C programming for embedded and general computing systems. Two 2-hour laboratories per week. Concurrent enrollment in course 13 is required. *G. Elkaim, R. Hughey*

16. Applied Discrete Mathematics. F,W,S

Introduction to applications of discrete mathematical systems. Topics include sets, functions, relations, graphs, trees, switching algebra, first order predicate calculus, mathematical induction, permutations, combinations, summation, and recurrences. Examples drawn from computer science and computer engineering. Prerequisite(s): eligibility to enroll in Mathematics 19A (completion of

Mathematics 3 or Mathematics Placement Exam score of 40 or higher) or completion of Mathematics 19A or 11A, or Applied Mathematics and Statistics 11A, or Economics 11A. (General Education Code(s): MF, Q.) *J. Garcia-Luna-Aceves, M. Schlag, R. Hughey, T. Larrabee*

80A. Universal Access: Disability, Technology, and Society. F,S

Overview of human-centered technology and of its potential for increasing the quality of life and independence of disabled individuals. A substantial portion of the course is devoted to studying physical, psychological, and psychosocial aspects of disability. Topics include: diversity and integration, legislation, accessibility, and universal design. (Formerly *Assistive Technology and Universal Access*.) (General Education Code(s): PE-T, T7-Natural Sciences or Social Sciences.) *S. Kurniawan, R. Manduchi*

80E. Engineering Ethics. S

Ethical theories, analysis, and their application to issues in the practice of engineering, such as safety and liability, professional responsibility to clients and employers, codes of ethics, legal obligations, environmental issues, and social issues. Emphasis on developing independent ethical analysis through the use of case studies. (General Education Code(s): PE-T, T6-Natural Sciences or Humanities and Arts.) *R. Hughey, The Staff*

80H. History of Modern Computing.

Presents a history of the development of computing technologies (CPUs and I/O devices, operating systems, and languages) through the latter half of the 20th century in order to build an understanding of how today's computing environment evolved. (General Education Code(s): T2-Natural Sciences.) *D. Pease*

80N. Introduction to Networking and the Internet. F,W

Introduction to the evolution, technological basis, and services of the Internet, with descriptions of its underlying communications structure, routing algorithms, peer-to-peer hierarchy, reliability, and packet switching. Network security, mail, multimedia and data compression issues, HTML, and digital images. Students who have completed course 150 cannot receive credit for this course. (General Education Code(s): PE-T, T2-Natural Sciences.) *T. Larrabee, A. Varma, K. Obraczka*

80U. Ubiquitous and Mobile Computing.

Ubiquitous computing integrates computer and communication technology with day-to-day life. Ubiquitous and mobile technology includes: MP-3 players, camera cell phones, Bluetooth headsets, sensor networks, and new emerging technologies. Course provides an overview of the technology and economics of ubiquitous computing. (General Education Code(s): T2-Natural Sciences.) *R. Manduchi*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Logic Design. W,S

Boolean algebra, logic minimization, finite-state machine design, sequential circuits, common logic elements, programmable logic devices, and an introduction to system level design. The electrical behavior of circuits including three state outputs, propagation delay, logic levels, and fanout. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100L required. Enrollment limited to 60. *T. Larrabee, M. Guthaus, S. Petersen, M. Schlag*

100L. Logic Design Laboratory (2 credits). W,S

Laboratory sequence illustrating topics covered in course 100. Two 2-hour laboratory sessions per week. Weekly laboratory assignments which require the use of the oscilloscopes, TTL circuits, computer-aided design and simulation tools, and programmable logic. Students are billed a materials fee. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100 required. Enrollment limited to 60. *T. Larrabee, M. Guthaus, S. Petersen, M. Schlag*

107. Probability and Statistics for Engineers. F,W

Introduction to fundamental tools of stochastic analysis. Probability, conditional probability; Bayes Theorem; random variables and transforms; independence; Bernoulli trials. Statistics, inference from limited data; outcomes of repeated experiments; applications to design; assessment of relative frequency and probability; law of large numbers; precision of measurements. Elements of stochastic processes, Poisson processes; Markov chains. Students cannot receive credit for this course and Applied Mathematics and Statistics 131. (Formerly Mathematical Methods of Systems Analysis: Stochastic.) Prerequisite(s): course 16 or 16H and Mathematics 22 or 23A. (General Education Code(s): SR.) *A. Brandwajn, R. Manduchi*

108. Data Compression. W

Basics of information theory, lossless coding (Huffman coding, arithmetic coding, dictionary coding), lossy coding (PCM, predictive coding, transform coding). Application to the compression of specific data set, which may include biological time series, DNA sequences, and multimedia streams. Programming experience is required. Prerequisite(s): course 107 or Applied Mathematics and Statistics 131. *R. Manduchi*

110. Computer Architecture. W

Introduction to computer architecture including examples of current approaches and the effect of technology and software. Computer performance evaluation, basic combinatorial and sequential digital components, different instruction set architectures with a focus on the MIPS ISA and RISC paradigm. Evolution of CPU microarchitecture from single-cycle to multi-cycle pipelines, with overview of super-scalar, multiple-issue and VLIW. Memory system, cache, virtual memory and relationship between memory and performance. Evolution of PC system architecture. May include advanced topics, such as parallel processing, MIMD, and SIMD. Prerequisite(s): courses 12/L, and courses 13/L or Computer Science 12A/L or Computer Science 11. Course 16 recommended. *A. Di Blas, R. Hughey, J. Renau Ardevol, A. Brandwajn, F. Ferguson*

112. Computer and Game Console Architecture.

Introduces computer and game console architecture, including examples of current approaches and the effect of technology and software. Computer performance evaluation; instruction-set architectures; RISC CPU and pipelining; cache and memory; multi-core, system-level architecture; video card; special console architectures. Pre-requisite(s): course 12. *A. Di Blas*

113. Parallel and Concurrent Programming.

Introduction to parallel and concurrent programming. Topics include: types of parallel computers and programming platforms; design, implementation, and optimization of programs for parallel and multicore processors; basic and advanced programming techniques; performance analysis and load balancing; and selected parallel algorithms. (Also offered as Computer Science 113. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 12 and 12L and Computer Science 101. Computer Engineering 110 or 112 recommended. *R. Hughey, A. Di Blas*

115. Introduction to Solid Mechanics. S

Introduces the solid mechanics of materials. Topics include: stress and strain, torsion, bending of beams, shearing stresses in beams, compound stresses, principal stresses, deflections of beams, and statically indeterminate members and columns. Prerequisite(s): course 9 and Mathematics 19B, and Applied Mathematics and Statistics 10 or Mathematics 21. *J. Rosen, W. Dunbar*

118. Introduction to Mechatronics. W

Technologies involved in mechatronics (intelligent electro-mechanical systems) and techniques necessary to integrate these technologies into mechatronic systems. Topics include electronics (A/D, D/A converters, opamps, filters, power devices), software program design (event-driven programming, state machine-based design), DC and stepper motors, basic sensing, and basic mechanical design (machine elements and mechanical CAD). Combines lab component of structured assignments with a large and open-ended team project. Cannot receive credit for this course and course 218. Prerequisite(s): Electrical Engineering 101/L and courses 12/L and 100/L. Concurrent enrollment in course 118L is required. Enrollment limited to 36. *G. Elkaim*

118L. Introduction to Mechatronics Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 118. Two 2-hour laboratory sessions per week. Taught in conjunction with course 218L. Students are billed a materials fee. Cannot receive credit for this course and course 218L. Prerequisite(s): Concurrent enrollment in course 118 is required. Enrollment limited to 36. *G. Elkaim*

121. Microprocessor System Design. F,S

The design and use of microprocessor-based systems. Covers microprocessor and microcontroller architecture, programming techniques, bus and memory organization, DMA, timing issues, interrupts, peripheral devices, serial and parallel communication, and interfacing to analog and digital systems. Prerequisite(s): courses 12/L and 100/L and Electrical Engineering 101/L; previous or concurrent enrollment in course 121L required. Enrollment limited to 40. *P. Chan, S. Petersen, R. Hughey*

121L. Microprocessor System Design Laboratory (2 credits). F,S

Laboratory sequence illustrating topics covered in course 121. Two 2-hour laboratory sessions per week. Students design, build, program, debug, document, and demonstrate a microprocessor-based system. Students are billed a materials fee. Prerequisite(s): courses 12/L and 100/L and Electrical Engineering 101/L. Previous or concurrent enrollment in course 121 also required. Enrollment limited to 40. *P. Chan, S. Petersen, R. Hughey*

123A. Engineering Design Project I. W

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Prerequisite(s): Computer Engineering 121; previous or concurrent enrollment in Computer Engineering 185; permission of department and instructor. Students are billed a materials fee. (General Education Code(s): PR-E.) *P. Chan, K. Karplus, P. Mantey,*

123B. Engineering Design Project II (7 credits). S

Second of two-course sequence in engineering system design. Students fully implement and test system designed and specified in course 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required. Students are billed a materials fee. Prerequisite(s): courses 123A and 185. Enrollment limited to 35. *P. Chan, K. Karplus, P. Mantey, Petersen, J. Vesecky, J. Renau Ardevol*

125. Logic Design with Verilog. F

Verilog digital logic design with emphasis on ASIC and FPGA design. Students design and verify large-scale systems. Assignments and project use the Verilog Hardware Description Language with emphasis on verification and high-frequency ASIC/FPGA targets. Prerequisite(s): courses 100 and 100L. Concurrent enrollment in course 125L required. Enrollment limited to 40. *P. Chan, A. Varma, M. Guthaus, J. Renau Ardevol, M. Schlag*

125L. Logic Design with Verilog Laboratory (2 credits). F

Laboratory sequence illustrating topics covered in course 125. Two 2-hour laboratory sessions per week. Students are billed a materials fee. Prerequisite(s): courses 100 and 100L. Concurrent enrollment in course 125 is required. Enrollment limited to 40. *P. Chan, A. Varma, M. Guthaus, J. Renau Ardevol, M. Schlag*

131. Human-Computer Interaction. W

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Interdisciplinary course for social science and engineering majors. Students cannot receive credit for this course and Computer Engineering 231 or Digital Arts and New Media 231. Prerequisite(s): Computer Science 12B. *S. Kurniawan*

150. Introduction to Computer Networks. F,W

Addresses issues arising in organizing communications among autonomous computers. Network models and conceptual layers; Internet-working; characteristics of transmission media; switching techniques (packet switching, circuit switching, cell switching); medium access control (MAC) protocols and local area networks; error-control strategies and link-level protocols; routing algorithms for bridges and routers; congestion control mechanisms; transport protocols; application of concepts to practical wireless and wireline networks and standard protocol architectures. Students who have completed course 80N can take this course for credit. Students are billed for a materials fee. Prerequisite(s): course 16 and either courses 12 and 12L, or Computer Science 12B and 12M. Concurrent enrollment in course 150L is required. *J. Garcia-Luna-Aceves, P. Mantey, K. Obraczka, B. Smith, A. Varma*

150L. Introduction to Computer Networks Laboratory (2 credits). F,W

Illustrates the concepts covered in course 150 and provides students with hands-on experience in computer networks. Prerequisite(s): course 16 and either courses 12 and 12L, or Computer Science 12B and 12M. Concurrent enrollment in course 150 is required. *J. Garcia-Luna-Aceves, P. Mantey, K. Obraczka, B. Smith, A. Varma*

151. Advanced Computer Networks. S

Provides an in-depth coverage of fundamental topics introduced in course 150 including routing, transport, and internetworking. Also introduces advanced concepts not covered in course 150 including wireless, application-layer services, security, etc. (Formerly Network Administration.) Prerequisite(s): course 150. Concurrent enrollment in course 151L is required. Enrollment limited to 60. *K. Obraczka, B. Smith*

151L. Advanced Computer Networks Laboratory (2 credits). S

Laboratory illustrating the concepts covered in course 151: provides students with hands-on experience in computer networks. Prerequisite(s): course 150/L. Concurrent enrollment in course 151 is required. Enrollment limited to 30. *K. Obraczka, B. Smith*

153. Digital Signal Processing.

Introduction to the principles of signal processing, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete Fourier transform, computation of the discrete Fourier transform, and filter design techniques. Taught in conjunction with Electrical Engineering 250. Students cannot receive credit for this course and Electrical Engineering 250. (Also offered as Electrical Engineering 153. Students cannot receive credit for both courses.) Prerequisite(s): Electrical Engineering 103. *P. Mantey*

156. Network Programming. W

Methods and tools used for network programming. Topics include inter-process communication (IPC), facilities such as pipes, shared memory, semaphores, sockets, and remote procedure call (RPC); design of client and server sides of network applications; CGI programming; and programming projects. Prerequisites: course 150 and Computer Science 111. Concurrent enrollment in course 156L required. *A. Varma, K. Obraczka*

156L. Network Programming Laboratory (2 credits). W

Laboratory sequence illustrating concepts taught in course 156. Learn use of network programming tools and methods via programming exercises. Students are billed a materials fee. Prerequisites:

course 150 and Computer Science 111. Concurrent enrollment in course 156 required. *A. Varma, K. Obraczka*

167. Sensing and Sensor Technologies. W

Introduces the fundamental issues in sensing and various sensor technologies including motion sensors, velocity sensors, GPS sensors, acoustic sensors, light and image sensors, and range sensors. Also demonstrates sensor technologies using a system approach to show how they can be integrated into a complete digital system. Prerequisite(s): Electrical Engineering 103. Concurrent enrollment in course 167L is required. *G. Elkaim, R. Manduchi*

167L. Sensing and Sensor Technologies Lab (2 credits). W

Lab assignments reinforce the concepts and techniques learned in course 167. Assignments include measurement and estimation techniques, experiments with various sensors, and a course project in which students build digital sensing systems. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 103. Concurrent enrollment in course 167 is required. *G. Elkaim, R. Manduchi*

173. High-Speed Digital Design. S

Studies of analog circuit principles relevant to high-speed digital design: signal propagation, crosstalk, and electromagnetic interference. Topics include electrical characteristics of digital circuits, interfacing different logic families, measurement techniques, transmission lines, ground planes and grounding, terminations, power systems, connectors/ribbon cables, clock distribution, shielding, electromagnetic compatibility and noise suppression, and bus architectures. Prerequisite(s): Electrical Engineering 101/L and course 174. Electrical Engineering 171 and course 121 recommended. Previous or concurrent enrollment in course 173L required. Enrollment limited to 30. *P. Chan, S. Petersen*

173L. High-Speed Digital Design Laboratory (2 credits). S

Laboratory sequence illustrating topics covered in course 173. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 101/L and course 174. Electrical Engineering 171 and course 121 recommended. Previous or concurrent enrollment in course 173 required. Enrollment limited to 30. *P. Chan, S. Petersen*

174. Introduction to EDA Tools for PCB Design (3 credits). F

Focus on EDA tools for design of printed-circuit boards. Elements of design flow covered: schematic capture and simulation to final PCB layout. Final project is required. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 101/L or consent of instructor. *S. Petersen*

177. Applied Graph Theory and Algorithms.

Basic concepts and algorithms are reviewed including trees, Eulerian and Hamiltonian graphs, and graph transversal. Algorithms are explored to solve problems in connectivity, routing, matching, and embedding of graphs. Graph theory and algorithms are developed around applications in computer engineering. Prerequisite(s): Computer Science 101. *M. Schlag*

185. Technical Writing for Computer Engineers. F,W

Writing by engineers and computer scientists, not to general audiences, but to engineers, engineering managers, and technical writers. Exercises include job application and resume, in-code documentation, algorithm description, naive-user documentation, library puzzle, survey article, proposal, progress report, formal technical report, and oral presentation. Offered in alternate quarters. Enrollment restricted to majors in Computer Engineering, Electrical Engineering, Bioengineering, Bioinformatics, Robotics Engineering, or Network and Digital Technology, or by permission of instructor. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; and Computer Science 12B or Computer Engineering 12. Enrollment limited to 60. (General Education Code(s): W.) *T. Larrabee, G. Moulds*

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. Prerequisite: course 123A. *The Staff*

195F. Senior Thesis Research (2 credits). F,W,S

Students submit petition to sponsoring agency. Consent of instructor required. Prerequisite: course 123A. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses**200. Research and Teaching in Computer Science and Engineering (3 credits). F**

Basic teaching techniques for teaching assistants including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all T.A.s. Enrollment restricted to graduate students. *T. Larrabee, S. Brandt, J. Renau Ardevol, M. Schlag, A. Brandwajn*

202. Computer Architecture. W

Provides a thorough and fundamental treatment of the art of computer architecture. Topics include concepts of von Neumann architectures, methods of evaluating CPU performance, instruction-set design and examples, compiler issues, instruction pipelining, superscalar processors, methods for reduction of branch penalty, memory hierarchies, I/O systems, floating-point arithmetic, and current issues in parallel processing. Prerequisite(s): course 110 or 112. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 110 or 112 and with consent of instructor. Enrollment limited to 30. *P. Chan, J. Renau Ardevol, A. Varma, R. Hughey*

215. Models of Robotic Manipulation. S

Theory and application of mathematical models to analyze, design, and program serial kinematic chains (robot arms). Covers models of arbitrary articulated robotic or biological arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks; the forward and inverse kinematic models; the Jacobian matrix; trajectory generation; and dynamic models, including Newton-Euler and Lagrangian formulations. Enrollment restricted to graduate students; and to seniors who have taken electrical engineering 154, and applied mathematics and statistics 10 or 10A or mathematics 21; or by permission of instructor. *J. Rosen*

218. Mechatronics. W

Introduction to intelligent electro-mechanical systems, combining aspects of computer, electrical, mechanical, and software engineering. Students become proficient in all aspects of mechanical, electrical, computer system design, analysis, prototyping, presentation and team mentorship. Cannot receive credit for this course and course 118. Prerequisite(s): concurrent enrollment in course 218L. Enrollment restricted to graduate students. Enrollment limited to 36. *G. Elkaim*

218L. Mechatronics Lab (2 credits). W

Laboratory sequence illustrating topics covered in course 218. Two 2-hour laboratory sessions per week. Cannot receive credit for this course and course 118L. Students are billed a materials fee. Prerequisite(s): concurrent enrollment in course 218. Enrollment restricted to graduate students. Enrollment limited to 36. *G. Elkaim*

220. Advanced Parallel Processing.

Introduction to programming advanced parallel computer architecture. Topics may include: SIMD massively parallel processor arrays; streaming parallel coprocessors, such as graphics cards used for general-purpose processing (GPGPU); or other hybrid MIMD/SIMD architectures. Course has programming lab component, a project, and student presentation on related topics. (Formerly *Parallel Processing*.) Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. *R. Hughey, A. Di Blas*

221. Advanced Microprocessor Design.

Introduction to latest advances in computer architecture. Focuses on processor core design. Topics include simultaneous multithreading, thread level speculation, trace caches, novel out-of-order mechanisms, and energy-efficient processor core designs. Final project is modification/enhancement of an out-of-order processor on an FPGA development system. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221L required. Enrollment restricted to graduate students. Enrollment limited to 20. *J. Renau Ardevol*

221L. Advanced Microprocessor Design Laboratory (3 credits).

Laboratory sequence illustrating topics covered in course 221. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221 required.

Enrollment restricted to graduate students. Enrollment limited to 20. *J. Renau Ardevol*

222. VLSI Digital System Design. F

Introduction to Very Large Scale Integrated (VLSI) design, focusing on custom integrated circuits. Topics include logic families, FETs, interconnect models, simulation, and RC timing. Course covers the design flow from logic design to layout, with a focus on high performance and low power. Students should be familiar with RC circuit analysis. Enrollment restricted to seniors and graduate students. Undergraduates may enroll with permission of instructor. *M. Guthaus, The Staff*

223. VLSI System-on-a-Chip Design. W

Design methodologies for Application Specific Integrated Circuits (ASICs). Topics include: behavioral specification; logic synthesis; standard-cell libraries; advanced timing analysis; and physical design automation tools. Familiarizes students with real-world tools during the design of a small system-on-a-chip project. Students are encouraged to fabricate and test their chips in an independent study. Prerequisite(s): course 222 or permission of instructor. Enrollment restricted to graduate students. *M. Guthaus, The Staff*

224. Testing Digital Circuits.

An introduction to the theory and practice of testing. Topics are chosen from fault and defect models, test generation for combinational and sequential circuits, fault simulation, scan-design and built-in self-test. Enrollment restricted to graduate students; undergraduates may enroll if they have completed Computer Science 101. *F. Ferguson, T. Larrabee*

225. Introduction to ASIC Systems Design.

Introduces reconfigurable computing systems with emphasis on field-programmable devices. Topics include: architectures of field-programmable devices; novel reconfigurable systems; and hardware algorithms. Enrollment restricted to computer engineering graduate students. Enrollment limited to 10. Offered in alternate academic years. *P. Chan*

229. Field-Programmable Gate Arrays Computer-Assisted Design.

Design methods for Field-Programmable Gate Arrays (FPGAs), including algorithms for technology mapping, routability estimation, placement, and routing. The relationship between FPGA architectures and their computer-aided design tools. Course project involves the modification and analysis of an FPGA tool. Enrollment restricted to graduate students or by consent of instructor. Courses 100, 125, 126, 222, 225, or other digital design experience recommended. Enrollment limited to 20. *M. Schlag*

230. Computer Performance Evaluation. F

Introduction to methods of analysis of computer system performance. Predictive performance models with emphasis on queuing models; exact and appropriate solution methods, discrete-event simulation, and numeric iterative approaches; analytical solutions and their computation; separable queuing networks, decomposition approaches; examples of practical application; and performance measurement, model validation, robustness of models, and operational analysis. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *A. Brandwajn*

231. Human-Computer Interaction. W

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Individual research project. Interdisciplinary course for art, social science and engineering graduate students. Students cannot receive credit for this course and course 131. (Also offered as Digital Arts and New Media 231. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *S. Kurniawan*

232. Arithmetic Processors.

Concept of number systems: binary additions, multiplications, divisions; elementary function evaluations; algorithm acceleration; floating-point and significant arithmetics; IEEE standards; technology related issues; algorithm evaluation by implementation with gate arrays. Prerequisite(s): course 202. Enrollment restricted to graduate students. Enrollment limited to 15. *P. Chan*

233. Human Factors.

Course focuses on theories, practices, and design of systems to optimize human well-being and system performance through consideration of psychological, social, physical, and biological factors. Covers human sensory systems and memory, workload management, error and reliability, performance measurement, and ergonomic design. Interdisciplinary course for social science and engineering graduate students. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 131. *S. Kurniawan*

235. User Evaluation of Technology. F

Presents a variety of evaluation methodologies to assess usability, acceptance, and effectiveness of technology with the intended users. Combines lectures and exercises for students to gain firsthand experiences of these methodologies with real users. Enrollment restricted to graduate students. Seniors may enroll with completion of course 131. *S. Kurniawan*

240. Introduction to Linear Dynamical Systems. W

Introduction to applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics include the following: Least-

squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm and singular value decomposition. Eigenvalues, left and right eigenvectors, and dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, state transfer, and least-norm inputs. Observability and least-squares state estimation. Enrollment restricted to graduate students; undergraduates may enroll if they have completed Electrical Engineering 103 and Applied Math and Statistics 147. *G. Elkaim, W. Dunbar, K. Ross*

241. Introduction to Feedback Control Systems. F

Graduate-level introduction to control of continuous linear systems using classical feedback techniques. Design of feedback controllers for command-following error, disturbance rejection, stability, and dynamic response specifications. Root locus and frequency response design techniques. Extensive use of Matlab for computer-aided controller design. Course has concurrent lectures with Electrical Engineering 154. (Also offered as Electrical Engineering 241. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *P. Milanfar, P. Mantey, J. Rosen, W. Dunbar, G. Elkaim*

242. Applied Feedback Control. S

Sequel to Electrical Engineering 154. After reviewing control design techniques examined in EE 154, this course explores state space control, discrete time control, and two case studies in control design. Students design and implement feedback controllers on an inverted pendulum experiment. Prerequisite(s): Electrical Engineering 154 or course 241. Enrollment restricted to juniors, seniors, and graduate students. *P. Mantey, W. Dunbar, G. Elkaim*

243. System Identification.

Course provides introduction to the construction of linear dynamical models from experimental data using parametric and non-parametric identification techniques. Theoretical and practical aspects of these techniques addressed. Prerequisite(s): course 240, or by permission of instructor. *W. Dunbar, G. Elkaim*

248. Games in Design and Control.

Graduate-level introduction to game theory and its applications to system design, verification, analysis, and optimal control. Enrollment restricted to graduate students. Computer Science 101, 201, or equivalent recommended. *The Staff*

250. Multimedia Systems.

Study of state-of-the-art technology for networked multimedia systems. Topics include audio, image, and video acquisition and compression standards (JPEG, MPEG, and ITU families); networking for multimedia; and digital television. Proficiency in C or C++ required. Prerequisite(s): Enrollment restricted to graduate students. *R. Manduchi*

251. Error-Control Coding. F

Overview of coding to protect messages against error during transmission or storage. Topics include channel models, linear algebra over finite fields, linear block codes and bounds, cyclic codes (BCH and RS), decoding algorithms, spectral analysis, codes on graphs, and low-complexity algorithms. Enrollment restricted to graduate students or consent of instructor. *H. Sadjadpour*

252A. Computer Networks. F

Issues resulting from organizing communication among autonomous computers. Includes network models and switching techniques; medium access control protocols and local area networks; error control and retransmission strategies; routing algorithms and protocols; congestion control mechanisms and end-to-end protocols; application-level protocols; and application of concepts to wireless and wireline networks, with emphasis on the Internet. Enrollment restricted to graduate students. *A. Varma, J. Garcia-Luna-Aceves*

252B. Principles of Computer Communication.

Theory and practice of computer communication networks. Emphasis is on verification and performance analysis of network control processes. Topics include protocols for channel access, point-to-point and multipoint reliable transmission, routing, congestion control, network management, multicasting, and ATM networks. (Formerly Modeling of Communications Protocols.) Prerequisite(s): courses 107 and 252A. *J. Garcia-Luna-Aceves*

253. Network Security.

Fundamental mechanisms for network security and their application in widely deployed protocols. In-depth treatment of security mechanism at the data-link, network, and transport layers for both wired and wireless networks. Covers mechanisms for privacy and integrity, and methods for intrusion detection. Prerequisite(s): course 252A and Computer Science 201. Enrollment restricted to graduate students. *A. Varma*

254. High Speed Computer Networks. W

Fiber-optic technology; fiber-optic link design; network protocol concepts; coding and error control; high-speed local area and metropolitan area networks; gigabit networks; error and congestion control; photonic networks; research topics. Prerequisite(s): course 252B. *A. Varma*

256. Design Project in Computer Networks.

Students develop a working implementation of a network protocol with the goal of obtaining hands-on experience in implementing real-world network protocols. Prerequisite(s): course 252A; enrollment restricted to graduate students. *A. Varma*

257. Wireless and Mobile Networks. S

An interdisciplinary course on wireless communication and mobile computing. Covers the physical aspects of wireless communication but emphasizes higher protocol layers. Topics include cellular networks, packet radio and ad hoc networks, wireless transport protocols, security, and application-level issues. Prerequisite(s): course 252A or permission of instructor. Enrollment limited to 20. *K. Obraczka, J. Garcia-Luna-Aceves*

258. Unix Networking Internals.

In-depth treatment of the implementation of network protocols in typical open-source Unix systems. Topics include implementation of send and receive functions, buffer management, interrupt handling, locking, scheduling and timer management. Major implementation project required. Prerequisite(s): course 252A. Computer Science 111 recommended. Enrollment restricted to graduate students. *A. Varma*

259. Sensor Networks. F

Focus is on the networking aspects of sensor networks: protocols at the various layers and how they answer the specific requirements posed by these networks (e.g., data driven, energy efficient, etc.) and their applications (monitoring, tracking, etc.). Explore how physical layer and hardware issues may influence protocol design. Courses 252A and 257 recommended. *K. Obraczka*

263. Data Compression. W

Introduction to information theory and data compression. Lossless coding (Huffman, arithmetic, dictionary codes). Lossy coding (scalar and vector quantization, differential coding, transform coding). Applications to the compression of real data sets (DNA sequences, biological time series, multimedia streams). Concurrent lectures with course 108. Students cannot receive credit for both this course and course 108. Students must have basic knowledge of probability theory. Enrollment restricted to graduate students. *R. Manduchi*

264. Image Analysis and Computer Vision. W

Brief review of image processing. Binary images, thresholding, morphological operations; edge detection and segmentation; contours: digital curves and curve fitting; statistical texture analysis, shape from texture; depth cues, stereo matching, depth from stereo; color perception and segmentation; and shading and image radiance, surface orientation, and shape from shading. Electrical Engineering 264 encouraged, but not required. Undergraduate students who are interested in enrolling should meet with the instructor first. *R. Manduchi*

276. Software Engineering.

Introduction to the general principles of software engineering. Covers current and classical topics from both practical and theoretical viewpoints. Topics include software evolution, project management, software inspections, design methods, requirements analysis and specification, software testing, maintenance, software implementation, human interfaces, and software engineering experimentation. Enrollment restricted to graduate students; undergraduates may enroll in this course if they have completed Computer Science 115. *The Staff*

277. Graph Algorithms. S

Explores graph theory and algorithms for solving problems in engineering. A review of basic graph concepts and algorithms is followed by topics in network flow, partitioning, spectral analysis of graphs, graph isomorphism, and intractability. Prerequisite(s): Computer Science 101 and 102; or course 177; or Computer Science 201; or equivalent. Enrollment restricted to graduate students. Enrollment limited to 20. *M. Schlag*

280C. Seminar on Control (2 credits). F,W,S

Weekly seminar series covering topics of current research in theory and application of control to engineering systems. Current research work and literature in these areas discussed. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. *G. Elkaim, J. Rosen, W. Dunbar, K. Ross*

280G. VLSI/CAD Seminar (2 credits). F,W,S

Weekly seminar on advanced topics in VLSI and computer-aided design (CAD). Students present and discuss modern issues in semiconductor design, fabrication, and CAD. Frequent guest speakers present pertinent results from industry and academia. Enrollment limited to 20. May be repeated for credit. *M. Guthaus*

280N. Seminar on Networks (2 credits). F,W,S

Weekly seminar series covering topics of current research in networks and networked systems. Current research work and literature in these areas are discussed. Prerequisite(s): permission of instructor. Enrollment restricted to graduate students. May be repeated for credit. *K. Obraczka, J. Garcia-Luna-Aceves*

280P. Seminar on Parallel Processing (2 credits). F,W,S

Weekly seminar series covering topics of current research in parallel systems, architectures, and algorithms. Current research work and literature in these areas are discussed. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *R. Hughey, M. Guthaus, J. Renau Ardevol*

280T. Seminar on New Technologies (2 credits).

Weekly seminar series in which distinguished speakers from industry, universities, and government discuss current developments in networking and computer technology. The emphasis is on open

research questions that may lead to collaborative work with faculty and graduate students. *The Staff*

280V. Seminar on Computer Vision (2 credits). F,W,S

Weekly graduate-level seminar series discussing advanced topics in computer vision and image analysis. Current research and literature presented during each meeting. Enrollment limited to 20. May be repeated for credit. *R. Manduchi*

285. Technical Writing for Engineering Graduates.

Writing skills development for graduate engineers. Students produce a major writing project with many subtasks. Exercises includes fellowship application; mathematical and algorithmic description; use of tables and graphs; experiment description; and producing technical web sites, presentations, and posters. Enrollment restricted to graduate biomolecular engineering, computer engineering, computer science, and electrical engineering majors. (Open to all School of Engineering graduate students.) Enrollment limited to 20. *T. Larrabee, The Staff*

290L. Advanced Topics in VLSI Computer-Aided Design.

A graduate course on a research topic in VLSI computer-aided design. Topic varies according to instructor. Possible topics include, but are not limited to specification languages and formal verification, logic minimization, testing and verification, electrical simulation, layout synthesis, and behavioral synthesis. Course 100, 125, 126, 222, or 225 recommended. *P. Chan, M. Schlag, F. Ferguson, T. Larrabee*

290M. Topics in Parallel Computation.

Investigates selected topics in applied parallel computation. Topics may include numerical methods, artificial intelligence and machine learning algorithms, graphics and image processing, systolic algorithms, and the interplay between hardware and algorithms. Students are encouraged to investigate and discuss the parallelization of their own research. Enrollment restricted to graduate students. *R. Hughey*

290N. Topics in Computer Performance.

Selected topics of current interest in the area of computer system performance. Subjects may include aspects of large systems, performability, computer networks, storage subsystems, and nontraditional approaches and are subject to periodic revision. Enrollment restricted to graduate students. *A. Brandwajn*

290V. Advanced Topics in Visual Computing.

Advanced course in image analysis and computer vision. Topics include motion analysis, multiple view geometry, 3D reconstruction, image-based rendering, vision-based graphics, face detection and recognition, tracking, image and video retrieval, and human-computer interface. Enrollment restricted to seniors and graduate students. Enrollment limited to 20. *S. Lodha, R. Manduchi*

293. Advanced Topics in Computer Engineering.

A graduate seminar on a research topic in computer engineering which varies according to instructor. Possible topics include, but are not limited to, communication networks, data compression, special-purpose architectures, computer arithmetic, software reliability and reusability, systolic arrays. *J. Rosen*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

299F. Thesis Research (2 credits). F,W,S

Independent study or research under faculty supervision. Enrollment restricted to graduate students. Recommended for part-time students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, a bachelor of science in computer science: computer game design, as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

The bachelor of arts (B.A.) program at UCSC is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering, or even for a double major in another discipline. The bachelor of science program is appropriate for students desiring a somewhat stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry; this program also allows for electives outside of science and engineering.

The bachelor of science (B.S.) in computer game design builds on a rigorous core program of study in computer science, adding interdisciplinary study on the artistic, dramatic, and narrative elements of computer game design; a year-long game design project acts as a capstone learning experience. Because many courses in all three programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they begin some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art and music to business and science. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Courses for Nonmajors

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include course 2, *Computer Literacy*; course 10, *Introduction to Computer Science*; course 80B, *Systems and Simulation*; course 80C, *Computer Arts and Graphics*; course 80J, *Technology Targeted at Social Issues*; course 80S, *From Software Innovation to Social Entrepreneurship*; and course 80K, *Foundations of Interactive Game Design*. Course 10, *Introduction to Computer Science*, may be beneficial to students who are considering the major but have a limited background in computer science. There are also introductory programming classes intended for nonmajors: courses 5C, 5J, 5P, *Beginning Programming*.

Computer Science Policies

Admissions Policy

Admission to the computer science majors is selective. First-year applications may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Admission to the major after a student has entered UCSC is based on the School of Engineering grade point average (SoE GPA) (performance in all School of Engineering and Physical and Biological Sciences courses attempted at UCSC, see the School of Engineering section of the catalog). An SoE GPA of at least 2.8 is expected for admission to the major. After the first three quarters, students must have completed the foundation courses for their major (listed below) and be able to complete the major within campus limits. Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Office, addressed to the Computer Science Undergraduate Director, describing why the SoE GPA is not an accurate reflection of the student's potential.

Foundation Courses

The foundation courses for each computer science major are as follows:

Computer Science B.S. and B.A.: Computer Science 12A (or CMPS 5J and CMPS 11) and 12B; Computer Engineering 16; and Mathematics 19A-B, or 20A-B

Computer Game Design: Computer Science 12A (or CMPS 5J and CMPS 11) and 12B, Computer Engineering 16; and Mathematics 19A-B, or 20A-B.

UCSC students that have completed three or more quarters at UCSC must complete the foundation courses before they can declare a computer science major.

Disqualification and Satisfactory Progress in the Major

Students who do not make adequate progress in the computer science major may be disqualified from the major. Adequate progress normally means passing a minimum of three courses required for the major over every three consecutive quarters. (For part-time students, 15 credits attempted equals one full term.) Students who do not expect to meet this requirement should consult their faculty adviser and/or the undergraduate director for their major beforehand.

Students who receive a total of three grades of D, F, or No Pass in the key courses, Computer Science 12A, 12B, 13H, 101; and Computer Engineering 12 and 16, may, at the discretion of the department, be disqualified from the major.

The department may, at its sole discretion, disqualify from the major any student making two unsuccessful attempts in any one of the following principal courses commonly used to satisfy degree requirements:

Computer Science 12A, 12B, 13H, 101, 102, 104A, 104B, 105, 111, 112, 115, 116, 130, 132, 140, 160, 161, 180, 181, and 183;

Computer Engineering 12, 16, 100, 107, and 110;

Applied Mathematics and Statistics 10, 131, and 147;

Physics 5A, 5B, 5C, 6A, 6B, and 6C;

Chemistry 1B and 1C;

Mathematics 19A-B or Mathematics 20A-B, and 23A.

Each grade of D, F, or No Pass counts as one unsuccessful attempt; each grade of W counts as one-half of an unsuccessful attempt.

The School of Engineering section contains additional disqualification policies, such as maintaining a 2.0 School of Engineering GPA and the ethics requirement, that apply to computer science majors.

Students at risk of disqualification must meet with an undergraduate adviser to discuss their options for continuing in the major.

Letter Grade Policy

The Computer Science Department requires letter grades for all courses applied toward the B.A., B.S., Computer Game Design B.S., and minor in computer science with the exception of two lower-division courses which students may elect to take Pass/No Pass. This policy includes courses required for the computer science majors but sponsored by other departments.

Transfer Students

Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for computer science students to obtain preapproval before taking courses elsewhere.

Preparation for the Major

It is recommended that high school students intending to apply to the computer science major

have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. Major Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 17 courses, eight lower-division and nine upper-division. Out of these, the eight lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing eight additional upper-division elective courses. To provide an adequate balance in subject matter, these additional courses must be divided between those that emphasize the theoretical aspects of the field and those that have a more practical focus. To provide a depth of study in one aspect of computer science, students must complete one of the approved depth sequences.

Lower-Division Requirements

Each student must successfully complete the following nine required preparatory courses:

Computer Science

12A/L, *Introduction to Programming(Accelerated)/Laboratory* (or 5J, *Introduction to Programming in Java* and 11, *Intermediate Programming*)

12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering

12/L, *Computer Systems and Assembly Language/Laboratory*

16, *Applied Discrete Mathematics*

Mathematics

19A-B, *Calculus for Science, Engineering, and Mathematics* (credit for one or both may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examination), or Mathematics 20A-B, *Honors Calculus*

Applied Mathematics and Statistics

10, *Mathematical Methods for Engineers I* or Mathematics 21, *Linear Algebra*

Upper-Division Requirements

101, *Algorithms and Abstract Data Types*

In addition to the above eight required courses, students must complete seven upper-division electives chosen as follows:

- Complete three courses from the breadth list below;
- Complete two additional computer science electives chosen from any 5-unit upper-division computer science course except those numbered 190 and above;
- Complete two additional 5-unit technical electives selected from the technical elective list below.

At least 50 percent of these upper-division courses must be completed at UCSC.

Breadth List (complete at least three):

CMPS 102, *Introduction to Analysis of Algorithms*

CMPS 104A, *Compiler Design*

CMPS 111, *Operating Systems*

CMPS 112, *Comparative Programming Languages*

CMPS 115, *Software Methodology*

CMPS 122, *Computer Security*

CMPS 140, *Artificial Intelligence*

CMPS 160, *Computer Graphics*

CMPS 180, *Database Systems*

CMPE 110, *Computer Architecture*

Technical Elective List (complete at least two):

Any 5-unit upper-division course offered by the Baskin School of Engineering except those numbered 190 and above.

Any 5-unit upper-division course from the Division of Physical and Biological Sciences except those numbered 190 and above.

ART 118, *Computer Art: Theories, Methods, and Practices*

ART 120/121, *Advanced Projects in Computer Art I/II*

ECON 100M, *Intermediate Microeconomics, Math Intensive*

ECON 100N, *Intermediate Macroeconomics, Math Intensive*

ECON 101, *Managerial Economics*

ENVS 115A/L, *Geographic Information Systems*

FILM 170A, *Fundamentals of Introduction to Digital Media Production*

FILM 177, *Digital Media Workshop: Computer as Medium*

LING 112/113/114, *Syntax I/II/III*

LING 116/118, *Semantics II/III*

LING 125, *Foundations of Linguistic Theory*

MUSC 123, *Electronic Sound Synthesis*

MUSC 124, *Intermediate Electronic Sound Synthesis*

MUSC 125, *Advanced Electronic Sound Synthesis*

Note: For additional choices for Technical Electives visit <http://ua.soe.ucsc.edu/cmepsBATEchnicalElectives>.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science (B.A.) is satisfied by completing CMPS 115, CMPS 195, Computer Engineering 185, CMPS 132W, or CMPS 180W. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

B.S. Major Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 22 courses must be completed for the B.S. in computer science, whereas a minimum of 17 courses must be completed for the B.A. in computer science. Out of the 22 courses, 10 are lower-division courses (including two science courses), and 12 are upper-division courses. The B.S. is more structured than the B.A.; 18 specific courses are required, and the remaining four are elective upper-division computer science or computer engineering courses.

Lower- and Upper-Division Requirements

Students are required to take the following 18 courses:

Computer Science

12A/L *Introduction to Programming(Accelerated)/Laboratory* (or 5J, *Introduction to Programming in Java* and 11, *Intermediate Programming*)

12B/M *Introduction to Data Structures/Laboratory*

101 *Algorithms and Abstract Data Types*

102 *Introduction to Analysis of Algorithms*

104A *Fundamentals of Compiler Design I*

111 *Introduction to Operating Systems*

112 *Comparative Programming Languages*

130 *Computational Models*

Computer Engineering

12/L *Computer Systems and Assembly Language/Laboratory*

16 *Applied Discrete Mathematics*

107 *Mathematical Methods of Systems Analysis: Stochastic*, or AMS 131, *Introduction to Probability Theory*

110 *Computer Architecture*, or 112, *Computer and Game Console Architecture*

Mathematics

19A-B *Calculus for Science, Engineering, and Mathematics*, or Mathematics 20AB, *Honors Calculus*

23A *Multivariable Calculus*

Applied Mathematics and Statistics

10 *Mathematical Methods for Engineers I*; or Mathematics 21, *Linear Algebra*

131 *Introduction to Probability Theory*; or Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*

Physics or Chemistry

Either two physics or two chemistry courses, with their associated laboratories, from the following:

Physics 5A/L, *Introduction to Physics I/Laboratory* (or 6A/L);

and either Physics 5B/M, *Introduction to Physics II/Laboratory* (or 6B/M);

or Physics 5C/N, *Introduction to Physics III/Laboratory* (or 6C/N)

Chemistry 1B/M, *General Chemistry/Laboratory*

Chemistry 1C/N, *General Chemistry/Laboratory*

The remaining four courses must be upper-division computer science or computer engineering electives selected from the theory and practice course lists (see B.A. Major Requirements reference above). One of these courses may be replaced by an upper-division mathematics course from the theory course list.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science (B.S.) is satisfied by completing CMPS 115, CMPS 195, Computer Engineering 185, CMPS 132W, or CMPS 180W. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Comprehensive Requirement

In addition to the above B.A. or B.S. requirements, students in the computer science majors must satisfy one of the following three exit requirements: pass one of the capstone courses (see Capstone Courses below); obtain a scaled score of 600 or above on the graduate record examination (GRE) advanced computer science subject test; or successfully complete a senior thesis.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement:

104B *Fundamentals of Compiler Design II*

116 *Software Design Project*

161/L *Visualization and Computer Animation/Laboratory*

181 *Database Systems II*

183 *Hypermedia and the Web*

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. W's count as an attempted class for this purpose. If a student fails to receive a passing score during these two attempts, he or she may still take the GRE Advanced Computer Science Subject Test and achieve a scaled score of 600 or above to satisfy the exit requirement.

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in course 195, *Senior Thesis Research*; submit a written thesis proposal; and have it accepted by a faculty supervisor. The supervision of a senior thesis student is always at the discretion of the faculty member. A written report and an oral presentation to a faculty examining committee are required.

Students who elect to use the GRE advanced computer science subject test as their senior exit requirement must arrange to take the GRE test and have scores submitted to the department before graduation deadlines. Contact the UCSC Career Center for GRE information and application forms.

Honors in the Major

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the Major." The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

Computer Science Major Planners

The following are four sample academic plans for first-year students as preparation for the computer science major. Plans One A and Two A are suggested guidelines for students who have some prior experience with programming. Plans One B and Two B are for students who are considering the major and have no prior programming experience. Students who plan carefully can still have several openings free to take other breadth courses they find interesting.

Plan One A, B.A. Degree

Year	Fall	Winter	Spring
1st (frsh)	CMPS 10	MATH 19B	CMPS 12B/M
	MATH 19A	CMPS 12A/L	MATH 23A
2nd (soph)	CMPE 12/L	CMPS 101	AMS 10
	CMPE 16		

Plan One B, B.A. Degree

Year	Fall	Winter	Spring
1st (frsh)	AMS 3	MATH 19A	MATH 19B
	CMPS 10	CMPS 5J	CMPS 11
2nd (soph)	CMPS 12B/M	MATH 23A	AMS 10
	CMPE 16	CMPE 12/L	
		CMPE 100/L	CMPE 80E

Plan Two A, B.S. Degree

Year	Fall	Winter	Spring
1st (frsh)	CMPS 12A/L	CMPS 12B/M	CMPE 16
	MATH 19A	MATH 19B	MATH 23A
2nd (soph)	CMPS 101	CMPE 12/L	CMPE 110/L
	AMS 10	PHYS 6A/L	PHYS 6C/N

Plan Two B, B.S. Degree

Year	Fall	Winter	Spring
1st (frsh)	CMPS 10	MATH 19A	CMPS 11
	MATH 3	CMPS 5J	MATH 19B
2nd (soph)	CMPS 12B/M	MATH 23A	AMS 10
	CMPE 16	CMPE 12/L	

B.S. Computer Science: Computer Game Design Major Requirements

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering, and a broad background in the artistic, narrative, and dramatic elements of game design. The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in math and physics. Classes in ethics, as well as courses in art, film, music, theater arts, and economics provide breadth in topics of special relevance to computer game design. In their upper division courses, students gain depth

by taking upper division electives in computer science and computer engineering. Two advanced courses in digital media give students the ability to view computer software from an artistic framework. A year-long capstone game design studio class allows students to develop substantial computer games, and integrate materials from the rest of the program.

The curriculum has 124-141 credits in 24-25 courses (depending on whether a student enters as a transfer student). 12 of the courses are upper division. Students interested in the major should pay special attention to the overlap between general education requirements and major requirements, as the major covers up to six general education requirements.

Lower- and Upper-Division Requirements

Course requirements are divided into six conceptual areas:

Mathematics and Physics

Complete all of the following courses:

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics* (students can alternately take, Mathematics 20A-B, *Honors Calculus*. Credit for one or both Mathematics 19A-B may be granted with adequate performance on the CEEB calculus AB or BC advanced placement exams).

Mathematics 21, *Linear Algebra*, or Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*

Computer Engineering 16, *Applied Discrete Mathematics*

Physics 5A/L, *Introduction to Physics I/Laboratory* (or 6A/L)

Computational Foundations

Complete all of the following courses:

Computer Science 12A/L, *Introduction to Programming(Accelerated)/Laboratory* (or 5J *Introduction to Programming in Java*, and 11 *Intermediate Programming*)

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Science 109, *Advanced Programming*

Computer Science 101, *Algorithms and Abstract Data Types*

Game Design

Complete all of the following courses.

Course 80K, *Foundations of Interactive Game Design*

Computer Science 20, *Game Design Experience*

Computer Science 170, *Game Design Studio I*

Computer Science 171, *Game Design Studio II*

Computer Science 172, *Game Design Studio III*

Computer Game Engineering

Complete five courses from the following list:

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Applied Mathematics and Statistics 147, *Computational Methods and Applications*

Computer Science 102, *Introduction to Analysis of Algorithms*

Computer Science 104A, *Fundamentals of Compiler Design I*

Computer Science 104B, *Fundamentals of Compiler Design II*

Computer Science 105, *Systems Programming*

Computer Science 111, *Introduction to Operating Systems*

Computer Science 112, *Comparative Programming Languages*

Computer Science 115, *Software Methodology*

Computer Science 116, *Software Design Project*

Computer Science 122, *Computer Security*

Computer Science 128, *Distributed Systems, File Sharing, Online Gaming, and More*

Computer Science 129, *Data Storage Systems*

Computer Science 130, *Computational Models*

Computer Science 132, *Computability and Computational Complexity*

Computer Science 142, *Machine Learning and Data Mining*

Computer Science 160/L, *Introduction to Computer Graphics/Laboratory*

Computer Science 161/L, *Visualization and Computer Animation/Laboratory*

Computer Science 164/L, *Game Engines/Laboratory*

Computer Science 140, *Artificial Intelligence*

Computer Science 146, *Game Artificial Intelligence*

Computer Science 148, *Interactive Storytelling*

Computer Science 166A, *Game Theory and Applications I*

Computer Science 180, *Database Systems I*

Computer Science 181, *Database Systems II*

Computer Science 183, *Hypermedia and the Web*

Computer Engineering 110, *Computer Architecture*

Computer Engineering 112, *Computer and Game Console Architecture*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Engineering 113, *Parallel and Concurrent Programming*

Computer Engineering 117/L, *Embedded Software/Laboratory*

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Engineering 131, *Human-Computer Interaction*

Digital Media

Complete two courses from the following list:

Film and Digital Media 130, *Silent Cinema*

Film and Digital Media 136C, *Visual Culture and Technology: History of New Media*

Film and Digital Media 150, *Screenwriting*

Film and Digital Media 170A, *Introduction to Digital Media Production*

Film and Digital Media 173, *Narrative Workshop: Reconfiguring Narrative within the Digital Realm*

Film and Digital Media 177, *Digital Media Workshop, Computer as Medium*

Film and Digital Media 171D, *Social Information Spaces*

Film and Digital Media 189, *Advanced Topics in Digital and Electronic Media Spaces*

Art 118, *Computer Art: Theories, Methods, and Practices* (may require approval of instructor)

Theatre 105, *Introduction to Digital Media Design*

Theatre 114, *Design Studio: Sound*

Theater Arts 157, *Playwriting*

Music 123, *Electronic Sound Synthesis*

Music 124, *Intermediate Electronic Sound Synthesis*

Music 125, *Advanced Electronic Sound Synthesis*

Any 5-credit, upper-division course offered in the digital arts new media (DANM) curriculum (requires approval of professor)

Art and Social Foundations

Complete the ethics requirement and three of the following electives.

Ethics Requirement

One of:

Computer Engineering 80E, *Engineering Ethics*

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics, Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Biomolecular Engineering 80G, *Bioethics in the 21st Century: Science, Business, and Society*
(crosslisted as Philosophy 80G)

Art Elective

One of:

Art 10G, *2D Foundation*

Art 10H, *3D Foundation*

Art 80A, *Introduction to Drawing*

Art 80F, *Introduction to Issues in Digital Media*

Film Elective

One of:

Film and Digital Media 20A, *The Film Experience*

Film and Digital Media 20C, *Introduction to Digital Media*

Film and Digital Media 20P, *Introduction to Production Technique*

Theater Elective

One of:

Theater Arts 10, *Introduction to Theater Design and Technology*

Theater Arts 18, *Drafting for Theatrical Production*

Theater Arts 19, *Design Studio, Lighting Studio*

Theater Arts 20, *Introductory Studies in Acting*

Theater Arts 30, *Introduction to Modern Dance Theory and Technique*

Theater Arts 40, *Introduction to Directing*

Theater Arts 80E, *Stand-Up Comedy*

Theater Arts 80L, *Muppet Magic: Jim Henson's Art*

Music Elective

One of:

Music 11A, *Introduction to Western Art Music*

Music 11B, *Introduction to Jazz*

Music 11C, *Introduction to American Popular Music*

Music 11D, *Introduction to World Music*

Music 80C, *History, Literature, and Technology of Electronic Music*

Music 80L, *Artificial Intelligence and Music*

Music 80M, *Film Music*

Music 80R, *Music and the World Wide Web*

Economics Elective

One of:

Economics 1, *Introductory Microeconomics, Resource Allocation and Market Structure*

Economics 2, *Introductory Macroeconomics, Aggregate Economic Activity*

Economics 80H, *Wall Street and the Money Game*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science: game design is satisfied by completing CMPS 170, 171, and 172.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by either receiving a passing grade in all three courses of the game design studio sequence or performing a senior thesis.

Computer Science: Computer Game Design Major Planners

The following are three sample academic plans that students can use to plan their sequence of courses in the major. Plans one and two are suggested guidelines for students who begin their studies in their freshman year. Such students, if they plan carefully will have several openings free to take other breadth courses they find interesting. Plan one is for a student entering UCSC in their freshman year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A. Plan two is for a student entering UCSC their freshman year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A to ensure a successful outcome in those courses. Plan three is for students that transfer to campus at the beginning of their junior year.

Plan One--Enter UCSC Freshman Year

Year	Fall	Winter	Spring
1st (frsh)	Core	Art/Social Elective I	CMPS 80K (<i>Foundations of Interactive Game Design</i>)
	MATH 19A or 20A	MATH 19B or 20B	CMPE 16
	CMPS 12A/L	CMPS 12B/M	Composition (C or gen ed)
2nd (soph)	PHYS 5A/L or 6A/L	Art/Social elective II	Art/Social elective III
	gen ed	CMPS 101	Ethics requirement
	MATH 21 or AMS 10	CMPS 20 (<i>Game Design Experience</i>)	Game engineering elective I
3rd (jr)	CMPE 12/L	gen ed	gen ed
	Game engineering elective II	Game engineering elective III	Game engineering elective IV
	gen ed	CMPS 109	
4th (sr)	Digital Media elective I	gen ed	gen ed
	CMPS 170 (<i>Game Design Studio I</i>)	Game engineering elective V	CMPS 172 (<i>Game Design Studio III</i>)
	gen ed	CMPS 171 (<i>Game Design Studio II</i>)	Digital Media elective II

Plan Two--Enter UCSC Freshman Year, Need Math and Computer Science Preparation Classes (Mathematics 3, Computer Science 5P)

Year	Fall	Winter	Spring
1st (frsh)	Core	Writing (C, or gen ed)	MATH 19B
	MATH 3	MATH 19A	CMPS 12A/L
	CMPS 5P	Art/Social Elective I	CMPS 80K (<i>Foundations of Interactive Game Design</i>)
2nd (soph)	Art/Social elective II	CMPS 30 (<i>Game Design Experience</i>)	MATH 21 or AMS 10
	CMPS 12B/M	Ethics requirement	CMPE 16
	PHYS 6A/L	CMPE 12/L	Art/Social elective III
3rd (jr)	CMPS 101	Game engineering elective I	gen ed
	Digital Media elective I	CMPS 109	Game engineering elective II
	gen ed	gen ed	Game engineering elective III
	gen ed	gen ed	gen ed

4th (sr)	CMPS 170 (<i>Game Design Studio I</i>)	CMPS 171 (<i>Game Design Studio II</i>)	Digital Media elective II
	Game engineering elective IV	Game engineering elective V	CMPS 172 (<i>Game Design Studio III</i>)

Plan Three--Transfer Student

Year	Fall	Winter	Spring
1st (frsh)	CMPS 101	CMPS 109	Ethics requirement
	CMPE 12/L	Game engineering elective I	Game engineering elective II
	Art/Social elective I	CMPS 20 (<i>Game Design Experience</i>)	Digital Media elective I
2nd (soph)	Digital Media elective II	Art/Social elective II	Art/Social elective III
	CMPS 170 (<i>Game Design Studio I</i>)	CMPS 171 (<i>Game Design Studio II</i>)	CMPS 172 (<i>Game Design Studio III</i>)
	Game engineering elective III	Game engineering elective IV	Game engineering elective V

Minor Requirements

Courses required for the computer science minor are Mathematics 19A-B or 20A-B, and 23A; Applied Mathematics and Statistics 10; Computer Science courses 12A/L (or CMPS 5J and CMPS 11) and 12B/M and course 101; Computer Engineering 12/L and 16; and four additional upper-division computer science courses from a list of approved electives (see the department's curriculum chart for the computer science minor at <http://ua.soe.ucsc.edu/>). In selecting the four upper-division courses, students may elect to focus on one subdiscipline of computer science by completing the courses in a B.A. depth sequence. Upper-division computer engineering and mathematics courses that generally apply toward the computer science major may not be applied toward the computer science minor. In addition, some upper-division computer science courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

Graduate Programs

Program Description

The Computer Science Department at UCSC offers both a master's program and a doctoral program. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The master of science (M.S.) degree may be used as a terminal degree or as the first step toward the doctor of philosophy degree (Ph.D.). The student-faculty ratio is five to one, making it possible for students to receive individual attention and to pursue programs that fit their individual needs. The intellectual atmosphere is enriched by regular colloquia and seminars presented by eminent contributors to the field, many of whom are associated with other major universities and industrial research centers in the San Francisco Bay Area.

The Computer Science Department enjoys a close relationship with the Computer Engineering and Electrical Engineering Departments, the Bioinformatics Department, and the new Applied Mathematics and Statistics Department.

Most computer science graduate students are hired as teaching assistants helping with undergraduate courses, hired as research assistants working for computer science and other School of Engineering faculty, or awarded fellowships to pursue their research.

Additional information on the computer science graduate programs can be found on the department's web pages at www.soe.ucsc.edu.

Requirements for the Masters Degree: Project Track

Course Requirements

Each student is required to take 50 credits as follows:

Computer Science 200, *Research and Teaching in Computer Science and Engineering*, 3 credits

Computer Science 201, *Analysis of Algorithms*, 5 credits;

Computer Science 203, *Programming Languages*, 5 credits;

Computer Science 296, *Master's Project*, 2 credits;

a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits)-- see www.cs.ucsc.edu/graduates/breadth/;

all remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 30 credits must be in computer science;

two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Project

Completion of a master's project is required for the master's degree. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Master's Degree: Thesis Track

Course Requirements

Each student is required to take 48 credits as follows:

Computer Science 200, *Research and Teaching in Computer Science and Engineering*, 3 credits;

Computer Science 201, *Analysis of Algorithms*, 5 credits;

Computer Science 203, *Programming Languages*, 5 credits;

a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits) -- see www.cs.ucsc.edu/graduates/breadth/;

up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;

all remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 28 credits must be in computer science;

two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

Each student is required to take 58 credits as follows:

Computer Science 200, *Research and Teaching in Computer Science and Engineering*, 3 credits;

Computer Science 201, *Analysis of Algorithms*, 5 credits;

Computer Science 203, *Programming Languages*, 5 credits;

a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits)-- see www.cs.ucsc.edu/graduates/breadth/;

up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;

all remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 33 credits must be in computer science;

graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements;

each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a masters degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer science graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two chosen by the student and two by the computer science graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student writes a Ph.D. dissertation. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government labs, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation. As the first step, a student submits a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the dissertation supervisor. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying examination committee, approved by the graduate committee and the Graduate Council. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all Incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee.

Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the *Graduate Handbook* for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete course 201, Computer Engineering 202, and course 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Ph.D. students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Students receiving two or more grades of below B or U (fail) in the School of Engineering (SoE) courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail a School of Engineering course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Baskin School of Engineering

(831) 459-2158

<http://www.soe.ucsc.edu>

Program Description

Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, a bachelor of science in computer science: computer game design, as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

The bachelor of arts (B.A.) program at UCSC is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering, or even for a double major in another discipline. The bachelor of science program is appropriate for students desiring a somewhat stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry; this program also allows for electives outside of science and engineering.

The bachelor of science (B.S.) in computer game design builds on a rigorous core program of study in computer science, adding interdisciplinary study on the artistic, dramatic, and narrative elements of computer game design; a year-long game design project acts as a capstone learning experience. Because many courses in all three programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they begin some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art and music to business and science. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Courses for Nonmajors

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include course 2, *Computer Literacy*; course 10, *Introduction to Computer Science*; course 80B, *Systems and Simulation*; course 80C, *Computer Arts and Graphics*; course 80J, *Technology Targeted at Social Issues*; course 80S, *From Software Innovation to Social Entrepreneurship*; and course 80K, *Foundations of Interactive Game Design*. Course 10, *Introduction to Computer Science*, may be beneficial to students who are considering the major but have a limited background in computer science. There are

also introductory programming classes intended for nonmajors: courses 5C, 5J, 5P, *Beginning Programming*.

Computer Science Policies

Admissions Policy

Admission to the computer science majors is selective. First-year applications may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Admission to the major after a student has entered UCSC is based on the School of Engineering grade point average (SoE GPA) (performance in all School of Engineering and Physical and Biological Sciences courses attempted at UCSC, see the School of Engineering section of the catalog). An SoE GPA of at least 2.8 is expected for admission to the major. After the first three quarters, students must have completed the foundation courses for their major (listed below) and be able to complete the major within campus limits. Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Office, addressed to the Computer Science Undergraduate Director, describing why the SoE GPA is not an accurate reflection of the student's potential.

Foundation Courses

The foundation courses for each computer science major are as follows:

Computer Science B.S. and B.A.: Computer Science 12A (or CMPS 5J and CMPS 11) and 12B; Computer Engineering 16; and Mathematics 19A-B, or 20A-B

Computer Game Design: Computer Science 12A (or CMPS 5J and CMPS 11) and 12B, Computer Engineering 16; and Mathematics 19A-B, or 20A-B.

UCSC students that have completed three or more quarters at UCSC must complete the foundation courses before they can declare a computer science major.

Disqualification and Satisfactory Progress in the Major

Students who do not make adequate progress in the computer science major may be disqualified from the major. Adequate progress normally means passing a minimum of three courses required for the major over every three consecutive quarters. (For part-time students, 15 credits attempted equals one full term.) Students who do not expect to meet this requirement should consult their faculty adviser and/or the undergraduate director for their major beforehand.

Students who receive a total of three grades of D, F, or No Pass in the key courses, Computer Science 12A, 12B, 13H, 101; and Computer Engineering 12 and 16, may, at the discretion of the department, be disqualified from the major.

The department may, at its sole discretion, disqualify from the major any student making two unsuccessful attempts in any one of the following principal courses commonly used to satisfy degree requirements:

Computer Science 12A, 12B, 13H, 101, 102, 104A, 104B, 105, 111, 112, 115, 116, 130, 132, 140, 160, 161, 180, 181, and 183;

Computer Engineering 12, 16, 100, 107, and 110;

Applied Mathematics and Statistics 10, 131, and 147;

Physics 5A, 5B, 5C, 6A, 6B, and 6C;

Chemistry 1B and 1C;

Mathematics 19A-B or Mathematics 20A-B, and 23A.

Each grade of D, F, or No Pass counts as one unsuccessful attempt; each grade of W counts as one-half of an unsuccessful attempt.

The School of Engineering section contains additional disqualification policies, such as maintaining a 2.0 School of Engineering GPA and the ethics requirement, that apply to computer science majors.

Students at risk of disqualification must meet with an undergraduate adviser to discuss their options for continuing in the major.

Letter Grade Policy

The Computer Science Department requires letter grades for all courses applied toward the B.A., B.S., Computer Game Design B.S., and minor in computer science with the exception of two lower-division courses which students may elect to take Pass/No Pass. This policy includes courses required for the computer science majors but sponsored by other departments.

Transfer Students

Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for computer science students to obtain preapproval before taking courses elsewhere.

Preparation for the Major

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. Major Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 17 courses, eight lower-division and nine upper-division. Out of these, the eight lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing eight additional upper-division elective courses. To provide an adequate balance in subject matter, these additional courses must

be divided between those that emphasize the theoretical aspects of the field and those that have a more practical focus. To provide a depth of study in one aspect of computer science, students must complete one of the approved depth sequences.

Lower-Division Requirements

Each student must successfully complete the following nine required preparatory courses:

Computer Science

12A/L, *Introduction to Programming(Accelerated)/Laboratory* (or 5J, *Introduction to Programming in Java* and 11, *Intermediate Programming*)

12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering

12/L, *Computer Systems and Assembly Language/Laboratory*

16, *Applied Discrete Mathematics*

Mathematics

19A-B, *Calculus for Science, Engineering, and Mathematics* (credit for one or both may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examination), or Mathematics 20A-B, *Honors Calculus*

~~23A, *Multivariable Calculus*~~

Applied Mathematics and Statistics

10, *Mathematical Methods for Engineers I* or Mathematics 21, *Linear Algebra*

Upper-Division Requirements

101, *Algorithms and Abstract Data Types*

In addition to the above ~~nine-eight~~ required courses, students must complete ~~eight-seven~~ upper-~~-~~division electives chosen as follows:

- Complete three courses from the breadth list below;
- Complete two additional computer science electives chosen from any 5-unit upper-division computer science course except those numbered 190 and above;
- Complete two additional 5-unit technical electives selected from the technical elective list below.

-

~~, by completing the requirements for one depth sequence.~~ At least 50 percent of these upper-division courses must be completed at UCSC.

~~Depth Sequence Requirements~~ Breadth List (complete at least three)

CMPS 102, *Introduction to Analysis of Algorithms*

CMPS 104A, *Compiler Design*

CMPS 111, *Operating Systems*

CMPS 112, *Comparative Programming Languages*

CMPS 115, *Software Methodology*

CMPS 122, *Computer Security*

CMPS 140, *Artificial Intelligence*

CMPS 160, Computer Graphics

CMPS 180, Database Systems

CMPE 110, Computer Architecture

For the following depth sequences, students must take at least seven courses from the theory and practice course lists, as follows:

- a minimum of three courses from the theory course list and a minimum of three courses from the practice course list;
- the seven courses from the theory and practice course lists must include all of the courses of one of the depth sequences;
- the eighth upper division elective must be selected from any upper division (5-credit) School of Engineering course.

The depth sequence courses are:

~~Compilers and language theory: Computer Science 104A, 112, and 104B or 130.~~

~~Operating systems and hardware: Computer Engineering 100/L, Computer Science 111, and Computer Engineering 110 or 121/L.~~

~~Theory: Computer Science 102, 130, and 132.~~

~~Software methodology: Computer Science 115 and two of the following: Computer Science 104A, 112, and 116.~~

~~Graphics: Computer Science 160/L, 161/L, and Applied Mathematics and Statistics 147.~~

~~Databases: Computer Science 180, 181, and 183.~~

For the interactive game design depth sequence only, students must satisfy the following requirements:

~~Core courses: students must take Computer Science 130, 105, 140, 160/L, and 115.~~

~~Game design electives: students must take two courses from the game design electives list.~~

~~Free elective: any course from the theory and practice course lists.~~

~~Theory Course List~~Technical Elective List (complete at least two)

Any 5-unit upper-division course offered by the Baskin School of Engineering except those numbered 190 and above.

Any 5-unit upper-division course from the Division of Physical and Biological Sciences except those numbered 190 and above.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science (B.A.) is satisfied by completing CMPS 115, CMPS 195, ~~or~~ Computer Engineering 185, CMPS 132W, or CMPS 180W. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

B.S. Major Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 22 courses must be completed for the B.S. in computer science, whereas a minimum of 17 courses must be completed for the B.A. in computer science. Out of the 22 courses, 10 are lower-division courses (including two science courses), and 12 are upper-division courses. The B.S. is more structured than the B.A.; 18 specific courses are required, and the

remaining four are elective upper-division computer science or computer engineering courses.

Lower- and Upper-Division Requirements

Students are required to take the following 18 courses:

Computer Science

12A/L *Introduction to Programming(Accelerated)/Laboratory* (or 5J, *Introduction to Programming in Java* and 11, *Intermediate Programming*)

12B/M *Introduction to Data Structures/Laboratory*

101 *Algorithms and Abstract Data Types*

102 *Introduction to Analysis of Algorithms*

104A *Fundamentals of Compiler Design I*

111 *Introduction to Operating Systems*

112 *Comparative Programming Languages*

130 *Computational Models*

Computer Engineering

12/L *Computer Systems and Assembly Language/Laboratory*

16 *Applied Discrete Mathematics*

107 *Mathematical Methods of Systems Analysis: Stochastic*, or AMS 131, *Introduction to Probability Theory*

110 *Computer Architecture*, or 112, *Computer and Game Console Architecture*

Mathematics

19A-B *Calculus for Science, Engineering, and Mathematics*, or Mathematics 20AB, *Honors Calculus*

23A *Multivariable Calculus*

Applied Mathematics and Statistics

10 *Mathematical Methods for Engineers I*, or Mathematics 21, *Linear Algebra*

131 *Introduction to Probability Theory*, or Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*

Physics or Chemistry

Either two physics or two chemistry courses, with their associated laboratories, from the following:

Physics 5A/L, Introduction to Physics I/Laboratory (or 6A/L),

and either *Physics 5B/M, Introduction to Physics II/Laboratory* (or 6B/M),

or *Physics 5C/N, Introduction to Physics III/Laboratory* (or 6C/N)

Chemistry 1B/M, General Chemistry/Laboratory

Chemistry 1C/N, [General Chemistry/Laboratory](#)

The remaining four courses must be upper-division computer science or computer engineering electives selected from the theory and practice course lists (see B.A. Major Requirements reference above). One of these courses may be replaced by an upper-

division mathematics course from the theory course list.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science (B.S.) is satisfied by completing CMPS 115, CMPS 195, ~~or~~ Computer Engineering 185, [CMPS 132W](#), [or CMPS 180W](#). Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Comprehensive Requirement

In addition to the above B.A. or B.S. requirements, students in the computer science majors must satisfy one of the following three exit requirements: pass one of the capstone courses (see Capstone Courses below); obtain a scaled score of 600 or above on the graduate record examination (GRE) advanced computer science subject test; or successfully complete a senior thesis.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement:

104B *Fundamentals of Compiler Design II*

116 *Software Design Project*

~~140 Artificial Intelligence~~

161/L *Visualization and Computer Animation/Laboratory*

181 *Database Systems II*

183 *Hypermedia and the Web*

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. W's count as an attempted class for this purpose. If a student fails to receive a passing score during these two attempts, he or she may still take the GRE Advanced Computer Science Subject Test and achieve a scaled score of 600 or above to satisfy the exit requirement.

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in course 195, *Senior Thesis Research*; submit a written thesis proposal; and have it accepted by a faculty supervisor. The supervision of a senior thesis student is always at the discretion of the faculty member. A written report and an oral presentation to a faculty examining committee are required.

Students who elect to use the GRE advanced computer science subject test as their senior exit requirement must arrange to take the GRE test and have scores submitted to the department before graduation deadlines. Contact the UCSC Career Center for GRE information and application forms.

Honors in the Major

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the

Major.” The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

Computer Science Major Planners

The following are four sample academic plans for first-year students as preparation for the computer science major. Plans One A and Two A are suggested guidelines for students who have some prior experience with programming. Plans One B and Two B are for students who are considering the major and have no prior programming experience. Students who plan carefully can still have several openings free to take other breadth courses they find interesting.

Plan One A, B.A. Degree			
Year	Fall	Winter	Spring
1st (frsh)	CMPS 10	MATH 19B	CMPS 12A/L B/M
	MATH 19A	CMPS 10 <u>12A/L</u>	MATH 23A
2nd (soph)	CMPS 12B/M CMPE <u>12/L</u>	CMPS 101	AMS 10
	CMPE 16	CMPE 12/L	

Plan One B, B.A. Degree			
Year	Fall	Winter	Spring
1st (frsh)	AMS 3	MATH 19A	MATH 19B
	CMPS 10	CMPS 5J	CMPS 11
2nd (soph)	CMPS 12B/M	MATH 23A	AMS 10
	CMPE 16	CMPE 12/L	

Plan Two A, B.S. Degree			

Year	Fall	Winter	Spring
1st (frsh)	CMPS 12A/L	CMPS 12B/M	CMPE 16
	MATH 19A	MATH 19B	MATH 23A
2nd (soph)	CMPS 101	CMPE 12/L	CMPE 100/L 110
	AMS 10	PHYS 6A/L	PHYS 6C/N

Plan Two B, B.S. Degree			
Year	Fall	Winter	Spring
1st (frsh)	CMPS 10	MATH 19A	CMPS 11
	MATH 3	CMPS 5J	MATH 19B
2nd (soph)	CMPS 12B/M	MATH 23A	AMS 10
	CMPE 16	CMPE 12/L	

B.S. Computer Science: Computer Game Design Major Requirements

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering, and a broad background in the artistic, narrative, and dramatic elements of game design. The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in math and physics. Classes in ethics, as well as courses in art, film, music, theater arts, and economics provide breadth in topics of special relevance to computer game design. In their upper division courses, students gain depth by taking upper division electives in computer science and computer engineering. Two advanced courses in digital media give students the ability to view computer software from an artistic framework. A year-long capstone game design studio class allows students to develop substantial computer games, and integrate materials from the rest of the program.

The curriculum has 124-141 credits in 24-25 courses (depending on whether a student enters as a transfer student). 12 of the courses are upper division. Students interested in the major should pay special attention to the overlap between general education requirements and major requirements, as the major covers up to six general education

requirements.

Lower- and Upper-Division Requirements

Course requirements are divided into six conceptual areas:

Mathematics and Physics

Complete all of the following courses:

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics* (students can alternately take, Mathematics 20A-B, *Honors Calculus*. Credit for one or both Mathematics 19A-B may be granted with adequate performance on the CEEB calculus AB or BC advanced placement exams).

Mathematics 21, *Linear Algebra*, or Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*

Computer Engineering 16, *Applied Discrete Mathematics*

Physics 5A/L, *Introduction to Physics I/Laboratory* (or 6A/L)

Computational Foundations

Complete all of the following courses:

Computer Science 12A/L, *Introduction to Programming(Accelerated)/Laboratory* (or 5J *Introduction to Programming in Java*, and 11 *Intermediate Programming*)

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Science 109, *Advanced Programming*

Computer Science 101, *Algorithms and Abstract Data Types*

Game Design

Complete all of the following courses.

Course 80K, *Foundations of Interactive Game Design* ~~(this course waived for transfer students)~~

Computer Science 20, *Game Design Experience*

Computer Science 170, *Game Design Studio I*

Computer Science 171, *Game Design Studio II*

Computer Science 172, *Game Design Studio III*

Computer Game Engineering

Complete five courses from the following list:

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Applied Mathematics and Statistics 147, *Computational Methods and Applications*

Computer Science 102, *Introduction to Analysis of Algorithms*

Computer Science 104A, *Fundamentals of Compiler Design I*

Computer Science 104B, *Fundamentals of Compiler Design II*

Computer Science 105, *Systems Programming*

Computer Science 111, *Introduction to Operating Systems*

Computer Science 112, *Comparative Programming Languages*

Computer Science 115, *Software Methodology*

Computer Science 116, *Software Design Project*

Computer Science 122, *Computer Security*

Computer Science 128, *Distributed Systems, File Sharing, Online Gaming, and More*

Computer Science 129, *Data Storage Systems*

Computer Science 130, *Computational Models*

Computer Science 132, *Computability and Computational Complexity*

Computer Science 142, *Machine Learning and Data Mining*

Computer Science 160/L, *Introduction to Computer Graphics/Laboratory*

Computer Science 161/L, *Visualization and Computer Animation/Laboratory*

Computer Science 164/L, *Game Engines/Laboratory*

Computer Science 140, *Artificial Intelligence*

Computer Science 146, *Game Artificial Intelligence*

Computer Science 148, *Interactive Storytelling*

Computer Science 166A, *Game Theory and Applications I*

Computer Science 180, *Database Systems I*

Computer Science 181, *Database Systems II*

Computer Science 183, *Hypermedia and the Web*

Computer Engineering 110, *Computer Architecture*

Computer Engineering 112, *Computer and Game Console Architecture*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Engineering 113, *Parallel and Concurrent Programming*

Computer Engineering 117/L, *Embedded Software/Laboratory*

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Engineering 131, *Human-Computer Interaction*

Digital Media

Complete two courses from the following list:

Film and Digital Media 130, *Silent Cinema*

Film and Digital Media 136C, *Visual Culture and Technology: History of New Media*

Film and Digital Media 150, *Screenwriting*

Film and Digital Media 170A, *Introduction to Digital Media Production*

Film and Digital Media 173, *Narrative Workshop: Reconfiguring Narrative within the Digital Realm*

Film and Digital Media 177, *Digital Media Workshop, Computer as Medium*

Film and Digital Media 171D, *Social Information Spaces*

Film and Digital Media 189, *Advanced Topics in Digital and Electronic Media Spaces*

Art 118, *Computer Art: Theories, Methods, and Practices* (may require approval of instructor)

Theatre 105, *Introduction to Digital Media Design*

Theatre 114, *Design Studio: Sound*

Theater Arts 157, *Playwriting*

Music 123, *Electronic Sound Synthesis*

Music 124, *Intermediate Electronic Sound Synthesis*

Music 125, *Advanced Electronic Sound Synthesis*

Any 5-credit, upper-division course offered in the digital arts new media (DANM) curriculum (requires approval of professor)

Art and Social Foundations

Complete the ethics requirement and three of the following electives.

Ethics Requirement

One of:

Computer Engineering 80E, *Engineering Ethics*

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics, Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Biomolecular Engineering 80G, *Bioethics in the 21st Century: Science, Business, and Society* (crosslisted as Philosophy 80G)

Art Elective

One of:

Art 10G, *2D Foundation*

Art 10H, *3D Foundation*

Art 80A, *Introduction to Drawing*

Art 80F, *Introduction to Issues in Digital Media*

Film Elective

One of:

Film and Digital Media 20A, *The Film Experience*

Film and Digital Media 20C, *Introduction to Digital Media*

Film and Digital Media 20P, *Introduction to Production Technique*

Theater Elective

One of:

Theater Arts 10, *Introduction to Theater Design and Technology*

Theater Arts 18, *Drafting for Theatrical Production*

Theater Arts 19, *Design Studio, Lighting Studio*

Theater Arts 20, *Introductory Studies in Acting*

Theater Arts 30, *Introduction to Modern Dance Theory and Technique*

Theater Arts 40, *Introduction to Directing*

Theater Arts 80E, *Stand-Up Comedy*

Theater Arts 80L, *Muppet Magic: Jim Henson's Art*

Music Elective

One of:

Music 11A, *Introduction to Western Art Music*

Music 11B, *Introduction to Jazz*

Music 11C, *Introduction to American Popular Music*

Music 11D, *Introduction to World Music*

Music 80C, *History, Literature, and Technology of Electronic Music*

Music 80L, *Artificial Intelligence and Music*

Music 80M, *Film Music*

Music 80R, *Music and the World Wide Web*

Economics Elective

One of:

Economics 1, *Introductory Microeconomics, Resource Allocation and Market Structure*

Economics 2, *Introductory Macroeconomics, Aggregate Economic Activity*

Economics 80H, *Wall Street and the Money Game*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science: game design is satisfied by completing CMPS 170, 171, and 172.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by either receiving a passing grade in all three courses of the game design studio sequence or performing a senior thesis.

Computer Science: Computer Game Design Major Planners

The following are three sample academic plans that students can use to plan their sequence of courses in the major. Plans one and two are suggested guidelines for students who begin their studies in their freshman year. Such students, if they plan carefully will have several openings free to take other breadth courses they find interesting. Plan one is for a student entering UCSC in their freshman year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A. Plan two is for a student entering UCSC their freshman year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A to ensure a successful outcome in those courses. Plan three is for

students that transfer to campus at the beginning of their junior year.

Plan One—Enter UCSC Freshman Year			
Year	Fall	Winter	Spring
1st (frsh)	Core	CMPS 80K (Foundations of Interactive Game Design) <u>Art/Social Elective I</u>	Art/Social elective I <u>CMPS 80K (Foundations of Interactive Game Design)</u>
	MATH 19A or 20A	MATH 19B or 20B	CMPE 16

Minor Requirements

Courses required for the computer science minor are Mathematics 19A-B or 20A-B, and 23A; Applied Mathematics and Statistics 10; Computer Science courses 12A/L (or CMPS 5J and CMPS 11) and 12B/M and course 101; Computer Engineering 12/L and 16; and four additional upper-division computer science courses from a list of approved electives (see the department's curriculum chart for the computer science minor at <http://ua.soe.ucsc.edu/>). In selecting the four upper-division courses, students may elect to focus on one subdiscipline of computer science by completing the courses in a B.A. depth sequence. Upper-division computer engineering and mathematics courses that generally apply toward the computer science major may not be applied toward the computer science minor. In addition, some upper-division computer science courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

Graduate Programs

Program Description

The Computer Science Department at UCSC offers both a master's program and a doctoral

program. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The master of science (M.S.) degree may be used as a terminal degree or as the first step toward the doctor of philosophy degree (Ph.D.). The student-faculty ratio is five to one, making it possible for students to receive individual attention and to pursue programs that fit their individual needs. The intellectual atmosphere is enriched by regular colloquia and seminars presented by eminent contributors to the field, many of whom are associated with other major universities and industrial research centers in the San Francisco Bay Area.

The Computer Science Department enjoys a close relationship with the Computer Engineering and Electrical Engineering Departments, the Bioinformatics Department, and the new Applied Mathematics and Statistics Department.

Most computer science graduate students are hired as teaching assistants helping with undergraduate courses, hired as research assistants working for computer science and other School of Engineering faculty, or awarded fellowships to pursue their research.

Additional information on the computer science graduate programs can be found on the department's web pages at www.soe.ucsc.edu.

Requirements for the Master's Degree: Project Track

Course Requirements

Each student is required to take 50 credits as follows:

Computer Science 200, *Research and Teaching in Computer Science and Engineering*, 3 credits

Computer Science 201, *Analysis of Algorithms*, 5 credits

Computer Science 203, *Programming Languages*, 5 credits

Computer Science 296, *Master's Project*, 2 credits

a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits)—see www.cs.ucsc.edu/graduates/breadth/;

all remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 30 credits must be in computer science;

two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Project

Completion of a master's project is required for the master's degree. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Master's Degree: Thesis Track

Course Requirements

Each student is required to take 48 credits as follows:

Computer Science 200, *Research and Teaching in Computer Science and Engineering*, 3 credits

Computer Science 201, *Analysis of Algorithms*, 5 credits

Computer Science 203, *Programming Languages*, 5 credits

a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits) — see www.cs.ucsc.edu/graduates/breadth/;

up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;

all remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 28 credits must be in computer science;

two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

Each student is required to take 58 credits as follows:

Computer Science 200, *Research and Teaching in Computer Science and Engineering*, 3 credits

Computer Science 201, *Analysis of Algorithms*, 5 credits

Computer Science 203, *Programming Languages*, 5 credits

a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits)—see www.cs.ucsc.edu/graduates/breadth/;

up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis*

Research;

all remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 33 credits must be in computer science;

graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements;

each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer science graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two chosen by the student and two by the computer science graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student writes a Ph.D. dissertation. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government labs, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation. As the first step, a student submits a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the dissertation supervisor. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying examination committee, approved by the graduate committee and the Graduate Council. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all Incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate presents his or her research results in a public

seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee.

Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the *Graduate Handbook* for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete course 201, Computer Engineering 202, and course 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Ph.D. students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Students receiving two or more grades of below B or U (fail) in the School of Engineering (SoE) courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail a School of Engineering course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Faculty and Professional Interests

Professor

MARTIN ABADI

Computer and network security, principles of programming languages, specification and verification methods

DIMITRIS ACHLIOPTAS

Analysis of algorithms, machine learning, random structures

LUCA DE ALFARO

Formal methods, game theory, embedded systems, software engineering

SCOTT A. BRANDT

Operating systems, storage systems, real-time systems

CORMAC FLANAGAN

Programming languages, computer security, web programming, concurrency, verification, type systems, dynamic analysis

DAVID P. HELMBOLD

Machine learning, computational learning theory, analysis of algorithms

HARRY D. HUSKEY, Emeritus

PHOKION G. KOLAITIS

Principles of database systems, logic in computer science, and computational complexity

ROBERT A. LEVINSON

Artificial intelligence, machine learning, heuristic search, associative pattern retrieval, hierarchical reinforcement learning, semantic networks

SURESH K. LODHA

Visualization, vision, innovation

DARRELL D. E. LONG

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

CHARLES E. McDOWELL

Programming languages, parallel computing, and computer science education

ETHAN L. MILLER

Archival storage systems, non-hierarchical file systems and metadata management, non-volatile memory and next-generation storage, scalable file systems, reliable and secure storage, distributed systems, information retrieval, computer security

ALEX T. PANG

Uncertainty visualization, tensor visualization, scientific visualization, comparative visualization, collaboration software, virtual reality interfaces

IRA POHL

Artificial intelligence, programming languages, heuristic methods, educational and social issues, combinatorial algorithms

R. MICHAEL TANNER, Emeritus

ALLEN VAN GELDER

Logic programming algorithms, parallel algorithms, complexity, programming languages, automated theorem proving, scientific visualization

MARILYN WALKER

Dialogue systems, natural language processing, computer games, human-computer interaction, machine learning, artificial intelligence

MANFRED K. WARMUTH

Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

E. JAMES WHITEHEAD JR.

Software engineering, software evolution, software bug prediction, level design in computer games, procedural content generation

Associate Professor

JAMES E. DAVIS

Information and Communication Technologies for Development (ICTD), technology for global social issues, human computation, computational photography, computer vision, computer graphics

MICHAEL MATEAS

Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

NEOKLIS POLYZOTIS

Online index tuning, P2P database systems, ranked queries, skyline queries

WANG-CHIEW TAN

Database systems: data provenance, information integration

NOAH WARDRIP-FRUIIN

Digital media, computer games, electronic literature, software studies

Assistant Professor

ARNAV JHALA

Artificial Intelligence: storytelling in games, intelligent machinima generation, smart graphics, and intelligent user interfaces

Adjunct Professor

DON CHAMBERLIN

Database languages and systems, document processing

Associate Adjunct

JOHN D. FUNGE

Artificial intelligence (AI), game AI, computer games, machine learning, knowledge representation and democratic methods

CARLOS MALTZAHN

Scalable file system data and metadata management, storage Quality of Service (QoS), data management games, network intermediaries, information retrieval and cooperation dynamics

THOMAS SCHWARZ

Reliability and security in storage systems

Assistant Adjunct Professor

REINER KRAFT

Data mining, contextual analysis, contextual/semantic search

Lecturer

WESLEY MACKEY

Compiler construction, programming languages

PATRICK TANTALO

Graph theory, combinatorics, optimization, algorithms

LINDA WERNER

Software engineering, computer-science education, testing

LAWRENCE ANDREWS (Film and Digital Media)

Film, video, installation and media art

ALEXANDRE BRANDWAJN (Computer Engineering)

Computer architecture, performance modeling, queuing network models of computer systems, operating systems

PAK K. CHAN (Computer Engineering)

Placement and routing algorithms, field-programmable gate arrays, spectral-based partitioning, circuit theory, computer arithmetic

GABRIEL ELKAIM (Computer Engineering)

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

F. JOEL FERGUSON (Computer Engineering)

Fault diagnosis, failure analysis, logic fault modeling, digital test pattern generation, design-for-test of digital circuits and systems

J. J. GARCIA-LUNA-ACEVES (Computer Engineering)

Chair of Computer Engineering

Baskin Professor of Computer Engineering and Director of Networking Sciences Institute

Computer communication, wireless networks, Internet, network science

JORGE HANKAMER (Linguistics)

Syntax, semantics, morphology, computational linguistics, Turkish

DAVID HAUSSLER (Biomolecular Engineering; Distinguished Professor of Biomolecular Engineering, Investigator, Howard Hughes Medical Institute; Director, Center for Biomolecular Science and Engineering; Scientific Co-Director, California Institute for Quantitative Biosciences [QB3])

Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

RICHARD HUGHEY (Biomolecular Engineering and Computer Engineering)

Computer architecture, parallel processing, computational biology

KEVIN KARPLUS (Biomolecular Engineering)

Protein structure prediction, protein design, genome assembly from next-generation sequence data

TRACY LARRABEE (Computer Engineering)

Test-pattern simulation and generation, fault modeling, fault diagnosis, design verification, technical writing, logic simulation

PATRICK E. MANTEY (Computer Engineering)

(Baskin Professor of Computer Engineering)

Multimedia systems, digital signal processing, sensor systems and networks, real-time monitoring and control, image systems, image processing, visualization, geographic information systems, decision support systems

KATIA OBRACZKA (Computer Engineering)

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

WARREN SACK (Film and Digital Media)

Software design and media theory

MARTINE D. F. SCHLAG (Computer Engineering)

VLSI design tools and algorithms, VLSI theory, field-programmable gate arrays, FPGA-based computing engines

BARRY SINERVO (Ecology and Evolutionary Biology)

Animal behavior, evolution, physiological ecology

ANUJAN VARMA (Computer Engineering)

Computer networking, computer architecture, optical networks

W. TODD WIPKE, Emeritus (Chemistry and Biochemistry)

Lower-Division Courses

2. Computer Literacy. S

Introduction to how computers work and how to use them. Topics covered include network information systems, text editors, formatting, file and directory system, spreadsheets and databases. Computers as symbol manipulation devices. Introduction to programming concepts and computer languages. Impact of computers on society. Designed for students with little or no experience using computers. Preference is given to students who have not taken other computer engineering or computer science courses. Students cannot receive credit for this course and Computer Engineering 3. (General Education Code(s): PE-T, IN.) *The Staff, R. Levinson, N. Polyzotis*

5C. Introduction to Programming in C/C++. *

Introductory programming for students who have no prior programming experience. Students learn programming and documentation skills as well as algorithmic problem-solving and programming methodologies. Introduces computers, compilers, and editors. Students write medium-sized programs. This course and courses 5J and 5P cover the same material, but use different programming languages. (Formerly course 60N.) (General Education Code(s): MF, IN.) *I. Pohl, C. McDowell, D. Long, S. Brandt*

5J. Introduction to Programming in Java. F,W

Introductory programming for School of Engineering majors who have no prior programming experience. Students learn programming and documentation skills, as well as algorithmic problem-solving and programming methodologies. Introduces computers, compilers, and editors. Students write medium-sized programs. The two-quarter sequence courses 5J and 11 cover in two quarters the same material as the accelerated introductory course and lab 12A/L cover in one quarter. (Formerly course 60G.) (General Education Code(s): MF, IN.) *D. Helmbold, C. McDowell*

5P. Introduction to Programming in Python. S

Introduction to programming for engineering or science students who have no prior programming experience. Students learn programming and documentation skills, as well as algorithmic problem-solving and programming methodologies. Introduces students to computers, programming tools, and editors. Students write medium-sized programs to solve web-based and scientific problems. This course and courses 5C and 5J cover largely the same material, but use different programming languages. (General Education Code(s): MF, IN.) *D. Long, E. Miller*

10. Introduction to Computer Science. F,W,S

An overview of the theory, foundations, and practice of computer science with emphasis on what computers can and cannot do, now and in the future. Topics include algorithms and data, correctness and efficiency of algorithms, hardware, programming languages, limitations of computation, applications, and social issues. No programming skills are required as a prerequisite. Major concepts and open problems in computer science are presented without reliance on sophisticated mathematical tools. (General Education Code(s): MF, IN.) *The Staff, P. Tantalo, M. Walker, R. Levinson, S. Lodha*

11. Intermediate Programming. S

Continuation of course 5J. Covers basic object-oriented programming, event-driven programming, graphical user interface (GUI) creation, recursion, two-dimensional arrays, and introduces programming in C and Java. The two-quarter sequence courses 5J and 11 cover in two quarters the same material as the accelerated introductory course and lab 12A/L cover in one quarter. Students cannot receive credit this course and course 12A. Prerequisite(s): course 5J and Mathematics 3, 11A, or 19A, or Applied Mathematics and Statistics 3 or 11A, or Economics 11A, or 40 or higher on mathematics placement exam. (General Education Code(s): MF.) *C. McDowell*

12A. Introduction to Programming (Accelerated). F,W

Accelerated introduction to programming. Students write medium-sized programs. Topics include: functions; conditionals and loops; classes; event-driven programming and graphic user interfaces (GUIs); recursion; and arrays. Students who have no or very limited programming experience should consider courses 5J and 11 which cover the same material in two quarters. Students may not receive credit for both this course and course 11. Some prior programming experience in a language such as C, C++, Java, or C# strongly recommended. Prerequisite(s): Mathematics 3, 11A, or 19A, or Applied Math and Statistics 3 or 11A, or Economics 11A, or 40 or higher on the mathematics placement exam). Concurrent enrollment in 12L required. (General Education

Code(s): IN.) *W. Mackey, S. Brandt, D. Long, D. Helmbold, A. Pang, C. McDowell, C. Flanagan*

12B. Introduction to Data Structures. F,W,S

Teaches students to implement common data structures and the algorithms associated with each data structure, through progressively difficult exercises. Topics include big "O" notation; pointers, recursion (induction), and dynamic allocation; linked lists and list processing; stacks, queues, binary trees and binary search trees; simple sorting techniques and simple search techniques. Students will gain a working knowledge of the elements of the Java and C programming languages. Prior experience with Unix is assumed. Prerequisite(s): course 11 or 12A or Computer Engineering 13. Concurrent enrollment in course 12M required. (General Education Code(s): MF, IN.) *W. Mackey*

12L. Computer Programming Laboratory (2 credits). F,W

Laboratory sequence complementing topics taught in course 12A by providing training and exposure to several software development tools and practices not covered in course 12A. In addition, the lab provides an initial exposure to a second programming language to reinforce concepts from course 12A. Concurrent enrollment in course 12A is required. *W. Mackey, S. Brandt, D. Long, D. Helmbold, A. Pang, C. McDowell, C. Flanagan*

12M. Data Structures Laboratory (2 credits). F,W,S

Complements course 12B, gaining additional competence with a number of important software development tools, languages, and techniques. Included are advanced Unix features and utilities such as grep, find, diff, the shell, and pipes; C programs utilizing I/O, arrays, pointers, and structures; a scripting language to perform simple text and file manipulation; and the make utility. Prerequisite(s): course 11 or 12A or Computer Engineering 13. Concurrent enrollment in course 12B required. *W. Mackey*

13H. Introduction to Programming and Data Structures (Honors). *

Provides an accelerated introduction to programming and data structures. Includes a review of basic programming, including loop and conditional control structures, procedures and parameter passing, and arrays. Course goes on to cover same material as course 12B. Students cannot receive credit for this course and course 12A or 12B. Prerequisite(s): interview only; students must have completed a high school or college level programming course in Java, C, or C++. A short oral examination given to ascertain programming level. Concurrent enrollment in course 13L required. (General Education Code(s): IN.) *D. Long, S. Brandt*

13L. Introduction to Programming and Data Structures Laboratory (2 credits). *

Provides accelerated introduction to practical aspects of programming and data structures. Covers three areas: 1) common programming tools, including Unix commands, compilers and linkers, editors, debuggers, and Makefiles; 2) basic programming techniques, including design, testing, and debugging; and 3) C programming, focusing on the major differences between C and Java. Previous or concurrent enrollment in course 13H required. Prerequisite(s): interview only; students must have completed a high school or college level programming course in Java, C, or C++. A short oral examination given to ascertain programming level. *D. Long, S. Brandt*

20. Game Design Experience. W

Introduction to computer game development. Topics covered include: animating sprites; use of game development frameworks; collision detection; game audio; scrolling game worlds; basic artificial intelligence for games; and basic 3-D graphics. Also covers basic object-oriented design and software design patterns. Course 80K recommended. Prerequisite(s): course 12B. (General Education Code(s): PR-E, IN.) *E. Whitehead, A. Jhala, M. Mateas*

25. Introduction to Computer Graphics: 3D Modeling. F,W

Introduces theory and techniques of 3D computer graphics. Topics include: capabilities of modern graphics hardware; 3D coordinate spaces; modeling with polygons; NURBS and subdivision surfaces; applying textures and materials; lighting; and simple effects. Students develop proficiency in 3D modeling via lectures and assignments focused on the use of a 3D modeling tool. (General Education Code(s): PR-C.) *E. Whitehead, The Staff*

60M. Scientific Computation with Matlab and Maple. *

Basic concepts from calculus visualized using Matlab and Maple; plotting data and functions, integration, differentiation, limits; solving systems of equation; linear regression; and example applications from science and engineering. Prerequisite(s): Mathematics 19B, or 20B, or by consent of instructor. *M. Warmuth*

80B. Systems and Simulation. *

An introduction to systems analysis as an approach to understanding and solving complex problems. The use of simulation as an aid in this problem solving. Examples are taken from ecology, economics, physics, computer science, and other fields. Intended as a generally accessible undergraduate course in which students can develop and explore computer simulation models matched to their individual interests. (General Education Code(s): T2-Natural Sciences, Q.) *The Staff*

80G. Introduction to Unix. *

Introduction to computing, the Internet, and the World Wide Web through the language of the Unix operating system. Oriented to the beginner, the course presupposes no previous acquaintance with any particular sort of computer. It covers the basic concepts of text editing and formatting, writing Web pages in basic HTML, and promotes a rigorous understanding of Unix commands and shell scripts. Views communication with a computer as a matter of learning a few simple though

powerful languages. (Also offered as Linguistics 80G. Students cannot receive credit for both courses.) (General Education Code(s): T2-Natural Sciences.) *The Staff*

80J. Technology Targeted at Social Issues. *

Introduces the idea that engineering can be a means for addressing social issues. Case studies and guest speakers. Issues might include: economic development, privacy, activism, safe drinking water, inexpensive shelters, sustainable energy, education, and waste disposal. (General Education Code(s): PE-T, T7-Natural Sciences or Social Sciences.) *J. Davis, S. Lodha*

80K. Foundations of Interactive Game Design. S

Surveys history, technology, narrative, ethics, and design of interactive computer games. Work in teams to develop novel game-design storyboards. Intended as a generally accessible undergraduate course in which students can explore the interplay of narrative, graphics, rule systems, and artificial intelligence in the creation of interactive games. Programming experience not required. (General Education Code(s): IM, T2-Natural Sciences.) *N. Wardrip-Fruin, E. Whitehead*

80S. From Software Innovation to Social Entrepreneurship. W

Emerging software innovations with emphasis on social software. Web 2.0 companies and services. Software that has social impact in a global context. Entrepreneurial plan including social, economic, and innovation value. Final group project on innovative software design and entrepreneurship plan. (General Education Code(s): PE-T, T7-Natural Sciences or Social Sciences, E.) *S. Lodha*

80V. Creating Virtual Worlds on the Web. *

Project-oriented course about creating and publishing interactive 3D content on the web. Focuses on the creation of static and dynamic objects, such as characters, terrain, accessories, and works of art. Also covers inclusion of animation and sound effects with these objects. The objects created can be used in a stand-alone setting (e.g., a 3D document) or incorporated into existing virtual worlds (e.g., as part of a level design in a computer game or assets in massively multiplayer online games). Uses 3D authoring tools (pending availability of resources) like VRML, Second Life, Alice, and/or Acrobat 3D. (Formerly *VRML 3D Worlds on the Web*.) (General Education Code(s): PR-C, T2-Natural Sciences.) *A. Pang*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

101. Algorithms and Abstract Data Types. F,W,S

Studies basic algorithms and their relationships to common abstract data types. Covers the notions of abstract data types and the distinction between an abstract data type and an implementation of that data type. The complexity analysis of common algorithms using asymptotic (big "O") notation is emphasized. Topics include sorting and searching techniques, basic graph algorithms, and algorithm design techniques. Abstract data types covered include priority queues, dictionaries, disjoint sets, heaps, balanced trees, and hashing. Familiarity with C, Java, and Unix is assumed. Prerequisite(s): course 12B or 13H; CMPE 16 or 16H; MATH 19B; and one course from the following: MATH 21, 22, 23A, or AMS 10. *P. Tantalo, D. Helmbold, A. Van Gelder, M. Warmuth*

102. Introduction to Analysis of Algorithms. S

Methods for the systematic construction and mathematical analysis of algorithms. Order notation, the RAM model of computation, lower bounds, and recurrence relations are covered. The algorithm design techniques include divide-and-conquer, branch and bound, and dynamic programming. Applications to combinatorial, graph, string, and geometric algorithms. Prerequisite(s): course 101. *M. Warmuth, A. Van Gelder, D. Achlioptas, D. Helmbold, S. Lodha*

104A. Fundamentals of Compiler Design I. F

An introduction to the basic techniques used in compiler design. Topics include compiler structure, symbol tables, regular expressions and languages, finite automata, lexical analysis, context-free languages, LL(1), recursive descent, LALR(1), and LR(1) parsing; and attribute grammars as a model of syntax-directed translation. Students use compiler building tools to construct a working compiler. Prerequisite(s): course 101 and Computer Engineering 12 and 12L. *W. Mackey*

104B. Fundamentals of Compiler Design II. *

Advanced study of compiler implementation. Topics include compiler structure back end, run-time environments, storage management, garbage collection, register allocation, code generation, basic blocks, control flow, data flow, local and global optimization, interpretation, and machine-code

generation. Students may not receive credit for this course and course 204. Taught in conjunction with course 204. Prerequisite(s): course 104A. *W. Mackey*

105. Systems Programming. *

Covers fundamentals of systems programming including standard tools, shell programming, file I/O, files and directories, system data files and information, Unix processes, process control, synchronization, signals, event-driven programming, terminal I/O, daemons, interprocess communication, basic network programming, and basic user-interface programming.

Prerequisite(s): course 101 and Computer Engineering 12 and 12L. Enrollment restricted to School of Engineering majors. *E. Miller, D. Long, S. Brandt*

109. Advanced Programming. W,S

An introduction to object-oriented techniques of software development including data abstraction, inheritance, polymorphism, and object-oriented design. Extensive practice using a computer to solve problems, including construction of graphical user interfaces and a multithreaded client/server applications. Prerequisite(s): course 12B/M. *I. Pohl, C. McDowell, W. Mackey*

111. Introduction to Operating Systems. S

Fundamental principles of operating systems: process synchronization, deadlocks, memory management, resource allocation, scheduling, storage systems, and study of several operating systems. A major programming project will be required. Prerequisite(s): course 101, and Computer Engineering 110 or Computer Engineering 112. *E. Miller, D. Long, S. Brandt, W. Mackey*

112. Comparative Programming Languages. W

Covers several programming languages and compares styles, philosophy, and design principles. Principles underlying declarative, functional, and object-oriented programming styles are studied. Students write programs emphasizing each of these techniques. Prerequisite(s): course 101 or 109. *W. Mackey, M. Abadi, W. Tan, C. McDowell, C. Flanagan, A. Van Gelder, D. Long*

113. Parallel and Concurrent Programming. W

Introduction to parallel and concurrent programming. Topics include: types of parallel computers and programming platforms; design, implementation, and optimization of programs for parallel and multicore processors; basic and advanced programming techniques; performance analysis and load balancing; and selected parallel algorithms. (Also offered as Computer Engineering 113. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 12 and 12L and Computer Science 101. Computer Engineering 110 or 112 recommended. *J. Renau Ardevol, E. Miller*

115. Software Methodology. F

Emphasizes the characteristics of well-engineered software systems. Topics include requirements analysis and specification, design, programming, verification and validation, maintenance, and project management. Practical and research methods are studied. Imparts an understanding of the steps used to effectively develop computer software. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 101. Enrollment restricted to computer science, computer engineering, and information systems management majors. *E. Whitehead, L. Werner, C. Flanagan*

116. Software Design Project. *

Students in teams specify, design, construct, test, and document a complete software system in a specialized application domain. Class time is spent in technical discussions and ongoing design reviews. A formal presentation and demonstration of each project is required. An organizational meeting will be held during the preceding quarter. Projects may be drawn from industry and campus research groups. Prerequisite(s): course 115. *L. De Alfaro, E. Whitehead*

122. Computer Security. *

Introduction to computer security (including selected topics in network security). Access control. Security in programming languages. Basic cryptography. Security protocols. Prerequisite(s): course 111 or permission of instructor. Enrollment restricted to School of Engineering majors. *M. Abadi, E. Miller*

128. Distributed Systems: File Sharing, Online Gaming, and More. *

Covers topics in distributed computing including communication, naming, synchronization, consistency and replication, fault tolerance, and security. Examples drawn from peer-to-peer systems, online gaming, the World Wide Web; other systems also used to illustrate approaches to these topics. Students implement simple distributed systems over the course of the quarter. Prerequisite(s): course 101 or Computer Engineering 150. Course 111 or 105 recommended. *E. Miller, D. Long, S. Brandt*

129. Data Storage Systems. *

Covers all aspects of storage systems technology from magnetic media up through system software, including principles of magnetic recording, hard drive technology and evolution, performance measurement, file systems, storage networking, disk arrays, network-attached storage, and alternative storage technologies. Prerequisite(s): course 101, 111, and Physics 5A or 6A. *E. Miller, D. Long, S. Brandt*

130. Computational Models. F

Various representations for regular languages, context-free grammars, normal forms, parsing, pushdown automata, pumping lemmas, Turing machines, the Church-Turing thesis. Prerequisite(s): course 101. *M. Warmuth, D. Helmbold, P. Kolaitis, R. Levinson*

132. Computability and Computational Complexity. W

Turing machines, general phase-structure grammars, the Chomsky hierarchy, recursive functions, diagonalization, the Halting problem, computability and unsolvability, computational complexity, time and space bounds, NP-completeness with emphasis on reductions between problems from various areas. Prerequisite(s): course 130. *M. Warmuth, D. Helmbold, P. Kolaitis, A. Van Gelder*

132W. Computability and Computational Complexity (2 credits). W

Disciplinary Communication (DC) course to be taken concurrently with course 132. Students satisfy the DC requirement by writing a survey paper on a topic related to computability and computational complexity. Possible topics include: overview of a different model of computation (e.g., quantum computing); overview of a major complexity class; a critical analysis of the Church-Turing thesis. Prerequisite(s): course 130, or permission of instructor; satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in course 132 required. Enrollment limited to 14. *M. Warmuth, D. Helmbold, P. Kolaitis*

140. Artificial Intelligence. W

Introduction to the contemporary concepts and techniques of artificial intelligence, including any or all of: machine perception and inference, machine learning, optimization problems, computational methods and models of search, game playing and theorem proving. Emphasis may be on any formal method of perceiving, learning, reasoning, and problem solving which proves to be effective. This includes both symbolic and neural network approaches to artificial intelligence. Issues discussed include symbolic versus nonsymbolic methods, local versus global methods, hierarchical organization and control, and brain modeling versus engineering approaches. Lisp or Prolog may be introduced. Involves one major project or regular programming assignments. Students cannot receive credit for this course and course 240. Prerequisite(s): course 101. *I. Pohl, M. Walker, R. Levinson*

142. Machine Learning and Data Mining. F

Introduction to machine learning algorithms and their applications. Topics include classification learning, density estimation and Bayesian learning regression, and online learning. Provides introduction to standard learning methods such as neural networks, decision trees, boosting, and nearest neighbor techniques. Students may not receive credit for both this course and course 242. Prerequisite(s): course 101 and one of Applied Mathematics and Statistics 5, 7, 113, 131, or Computer Engineering 107. *D. Helmbold, M. Warmuth*

146. Game AI. W

Course provides a comprehensive introduction to the use of artificial intelligence (AI) in computer games. Building on fundamental principles of AI, course explains how to create non-player characters (NPCs) with progressively more sophisticated capabilities. Prerequisite(s): course 101; familiarity with C++. Enrollment restricted to sophomores, juniors, seniors, and graduate students. *I. Pohl, M. Mateas, J. Funge*

148. Interactive Storytelling. *

Covers a range of design approaches and technologies including storytelling in games, interactive fiction, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, students explore the theoretical positions, debates, and technical and design issues arising from these approaches. Students may not receive credit for this course and course 248. Prerequisite(s): course 101. Enrollment restricted to juniors and seniors. *M. Mateas*

160. Introduction to Computer Graphics. F

Introduces techniques of modeling, transformation, and rendering for computer-generated imagery. Topics: 2D/3D primitives, projections, matrix composition, and shading algorithms. Programming assignments and a major project are required. Students cannot receive credit for both this course and course 260. Prerequisite(s): course 101 and Mathematics 21 or Applied Mathematics and Statistics 10. Concurrent enrollment in course 160L required. *A. Pang, J. Davis, S. Lodha*

160L. Introduction to Computer Graphics Laboratory (2 credits). F

Complements course 160, gaining additional competence with a number of important software development tools, graphics libraries, and graphical user interfaces. Included are OpenGL program, utilizing rubberbanding, picking, trackballing, display lists, double buffering, lighting, shading, materials and textures; and FLTK program, utilizing sliders, buttons, and dialog boxes. Prerequisite(s): course 101 and Mathematics 21 or Applied Math 10. Concurrent enrollment in course 160 required. Enrollment restricted to all engineering majors. *A. Pang, J. Davis, S. Lodha*

161. Introduction to Data Visualization. W

Concepts and methods for data analysis, information and scientific visualization, and effective communication of technical data. Topics include: mathematical foundations; scalar, vector, and tensor field visualization; multivariate visualization; and tree and graph visualizations. Applications are drawn from social-network analysis; environmental and space science; and medical imaging. Evaluation based on examinations, programming exercises, and a project. (Formerly Visualization and Computer Animation.) Prerequisite(s): course 160 or equivalent. Concurrent enrollment in course 161L required. *S. Lodha, A. Pang*

161L. Data Visualization Laboratory (2 credits). W

Complements course 161. Students gain additional competence with a number of important software development tools and techniques. Included are Paraview, Visualization Toolkit (VTK), and Insight Toolkit (ITK). Students get hands-on experience with designing transfer functions,

isosurfacing, direct volume rendering, vector-field visualization techniques, as well as methods for dealing with non-spatial data. (Formerly Visualization and Computer Animation Laboratory.)

Prerequisite(s): courses 160 and 160L; concurrent enrollment in course 161 required. *S. Lodha, A. Pang*

162. Advanced Computer Graphics and Animation. S

Covers concepts and methods for modeling and rendering static and dynamic scenes Topics include: mathematical foundations (e.g., splines and numerical integration; global illumination models; texture mapping; morphing; physically based animation; behavioral animations; and procedural animations. Evaluation based on examinations, programming exercises, and a project.

Prerequisite(s): course 160 or equivalent. Concurrent enrollment in course 162L required. *A. Pang, J. Davis, S. Lodha*

162L. Advanced Computer Graphics and Animation Laboratory (2 credits). S

Complements course 162. Students gain additional competence in a hands-on computational laboratory setting. Representative examples include topics, such as interactive curve and surface design; shaders for advanced effects; crowd and behavioral animation; experiments with particle systems; facial animation; and motion and planning. Prerequisite(s): concurrent enrollment in course 162 is required. *A. Pang, J. Davis, S. Lodha*

164. Game Engines. S

Covers the graphic elements in computer games. Topics include modifying, optimizing, adding components, and building a game engine. Course evaluation based on exams and several programming projects, including a game built using the student's game engine. Prerequisite(s): courses 160 and 160L. Concurrent enrollment in course 164L required. *A. Jhala, A. Pang*

164L. Game Engines Lab (2 credits). S

Provides hands-on experience in using, designing, and building game engines. Students also explore different special effects, such as particle systems, spring systems, and game physics. Prerequisite(s): courses 160 and 160L. Concurrent enrollment in course 164 required. *A. Jhala, A. Pang*

166A. Game Theory and Applications I. F

Introduces modern game theory, including applications in social science, biology, and engineering. Topics include extensive form, strategic form, mixed strategies, incomplete information, repeated games, evolutionary games, and simulation techniques. (Also offered as Economics 166A. Students cannot receive credit for both courses.) Prerequisite(s): Applied Math and Statistics 5 or 7 or Economics 113; and Economics 11B, Applied Math and Statistics 11B, or Mathematics 11B or 19B. Enrollment restricted to juniors and seniors. Enrollment limited to 100. *The Staff*

166B. Game Theory and Applications II. W

Explores research frontiers in game theory, emphasizing applications in social science, biology, and engineering. Each interdisciplinary team develops a topic, and presents it to the class in oral and written reports and demonstrations. Students must have shown a strong performance in course 166A or equivalent. Students cannot receive credit for this course and Economics 272, Computer Science 272, or Biology: Ecology and Evolutionary 274. (Also offered as Economics 166B. Students cannot receive credit for both courses.) Prerequisite(s): course 166A, Economics 166A, or Biology: Ecology and Evolutionary 166A; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. Enrollment limited to 40. (General Education Code(s): W.) *The Staff*

170. Game Design Studio I. F

First of a three-course capstone sequence for the computer game design program. Students work in teams to develop a comprehensive game design for a substantial computer game, including detailed storyline, level design, artistic approach, implementation technologies, and art-asset pipeline. Emphasis placed on creating novel, artistic game design concepts. Includes design reviews and formal presentations. Companion lectures cover advanced topics in game design, game programming, and software project management. Students are billed a materials fee.

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Courses 20 and 101 and 109, and any two of: courses 102,104A,104B,105,111,112,116,128,129,130,132,140,142,146,148,160/L,161/L, 164/L,166A,180,181,183; Computer Engineering 110,112,113,118/L,131,150/L; Applied Mathematics and Statistics 131,147. *E. Whitehead, N. Wardrip-Fruin, M. Mateas*

171. Game Design Studio II. W

Second of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation, and testing of the computer game designed in course 170. Includes design reviews, progress reviews, and formal presentations. Companion lectures cover topics in software engineering, including design, testing, and project management. Game design and game programming also covered. Students are billed a materials fee.

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior computer game design majors. *E. Whitehead, N. Wardrip-Fruin, M. Mateas*

172. Game Design Studio III. S

Third of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation and testing of the computer game designed in courses 170 and 171. Includes progress reviews and formal presentations. Companion lectures cover topics in software engineering, including user and software testing, release engineering and project management; also covered are game design and game programming. Students are billed a

materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 171. Enrollment restricted to senior computer game design majors. *E. Whitehead, N. Wardrip-Fruin, M. Mateas*

180. Database Systems I. W

Introduction to the concepts, approaches, tools, and methodology of database design. Covers the entity-relationship model, the relational model, relational algebra, relational calculus, commercial languages (such as SQL and QBE), functional dependencies, normal forms, and design theory. Other topics may include knowledge-bases, constraint databases, and alternative database models. Prerequisite(s): course 101. *W. Tan, P. Kolaitis, N. Polyzotis*

180W. Database Systems (2 credits). W

Disciplinary Communication (DC) course to be taken concurrently with course 180. Students satisfy the DC requirement by producing a database design document, a document with comments on the source code for complex queries, and a literature survey or systems survey. Prerequisite(s): course 101, or permission of instructor; satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in course 180 required. Enrollment limited to 15. *W. Tan, P. Kolaitis, N. Polyzotis*

181. Database Systems II. *

Introduction to the architecture and implementation of database systems. Topics covered include data storage, tree and hash indexes, storage management, query evaluation and optimization, transaction management, concurrency control, recovery, and XML data management. Prerequisite(s): course 180. *N. Polyzotis, W. Tan*

182. Introduction to Database Management Systems. F

Concepts, approaches, tools, and methodology of database design. Topics include the entity-relationship model; the relational data model; normal forms; commercial languages such as SQL (SQL constraints, SQL triggers, and update languages); query-by-example (QBE); XML data model, and XML query language (XQuery); as well as relational database-management support for XML and object-relational features in database-management systems. Involves a database -application development project. Prerequisite(s): course 12B. Course intended for non-majors; computer science majors should enroll in course 180. *N. Polyzotis, W. Tan*

183. Hypermedia and the Web. F

An introduction to the construction of hypermedia systems and large-scale web applications. Topics covered include pre-web hypertext systems, hypermedia data models, namespaces, system architecture of the web, design of large linked information spaces, design and development of database-backed web applications, web site load testing, and web collaboration technologies. Students work in teams over the term to develop a significant web application. Prerequisite(s): courses 12B and 12M. *E. Whitehead*

191. Computer Science and Technology Seminar (2 credits). *

Weekly talks by industry experts, university researchers, field practitioners, and video presentations provide an in-depth exposure to a specific or a broad area of computer science and technology. Topics include emerging ideas, opportunities, challenges, and future of the industry. May be repeated for credit. *The Staff*

192. Supervised Student Teaching/Tutoring. F,W,S

Students hold tutoring hours, run a lab, or lead discussion section in conjunction with a regularly offered course and under close supervision by the course's instructor. Weekly meetings with a regular faculty member to discuss teaching techniques, pedagogy, sensitivity to students' needs, maintaining a comfortable learning environment, and strategies for handling difficult situations. Students submit a report on their teaching experience. Enrollment by permission of instructor and restricted to sophomores, juniors, and seniors. *D. Helmbold*

192F. Supervised Student Teaching/Tutoring (2 credits). F,W,S

Students hold tutoring hours, run a lab, or lead discussion section in conjunction with a regularly offered course and under close supervision by the course's instructor. Weekly meetings with a regular faculty member to discuss teaching techniques, pedagogy, sensitivity to students' needs, maintaining a comfortable learning environment, and strategies for handling difficult situations. Students submit a report on their teaching experience. Enrollment by permission of instructor and restricted to sophomores, juniors, and seniors. *D. Helmbold*

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a member of the Computer Science Department and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives, usually a term paper or project. Cannot normally be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Science Department and a willing sponsor at the field site. Uses resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. Cannot normally be repeated for credit. Intended for students majoring in computer science. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Intended for students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. *The Staff*

195F. Senior Thesis Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

For fourth-year students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in Computer Science and Engineering (3 credits). F

Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. The course examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Enrollment restricted to graduate students. *C. Flanagan, The Staff*

201. Analysis of Algorithms. F

Rigorous analysis of the time and space requirements of important algorithms, including worst case, average case, and amortized analysis. Techniques include order-notation, recurrence relations, information-theoretic lower bounds, adversary arguments. Analysis of the key data structures: trees, hash tables, balanced tree schemes, priority queues, Fibonacci and binomial heaps. Algorithmic paradigms such as divide and conquer, dynamic programming, union-find with path compression, augmenting paths. Selected advanced algorithms. Introduction to NP-completeness. Enrollment restricted to graduate students; undergraduate students may enroll in this course if they have completed either course 102 or Computer Engineering 177 and have the consent of the instructor. *A. Van Gelder, D. Achlioptas, D. Helmbold*

203. Programming Languages. W

Covers current issues in programming languages. Language topics include object oriented, concurrent, functional, and logic programming, and other programmable applications such as symbolic manipulators and simulation. Enrollment restricted to graduate students; undergraduate students may enroll for this course if they have completed course 112 and have the consent of the instructor. *C. Flanagan, C. McDowell, A. Van Gelder*

204. Compiler Design. *

Advanced study of compiler implementation. Topics include compiler structure back end, run-time environments, storage management, garbage collection, register allocation, code generation, basic blocks, control flow, data flow, local and global optimization, interpretation, machine code generation. Students may not receive credit for this course and course 104B. Taught in conjunction with 104B. Prerequisite(s): course 104A or equivalent. Enrollment restricted to graduate students. Offered in alternate academic years. *W. Mackey*

210. Computational Models and Complexity. *

Finite automata and regular expressions, universal models of computation, computability and unsolvability, relations between complexity classes, hierarchy theorems, reductions, complete problems for the major complexity classes (L, NL, P, NP, PSPACE). Other topics may include complexity of counting and enumeration problems, complexity of approximation, randomized complexity classes. Prerequisite(s): course 201. *M. Warmuth, D. Helmbold, P. Kolaitis*

211. Combinatorial Algorithms. W

Fundamental combinatorial algorithms, graph algorithms, flow problems, matching problems, linear

programming, integer programming, NP-completeness, approximation algorithms for optimization problems. Prerequisite(s): course 201. Offered in alternate academic years. *A. Van Gelder, D. Achlioptas, P. Kolaitis*

217. Logic in Computer Science. *

The applications and uses of formal systems to computer science. Covers the syntax and semantics of propositional logic and first-order logic, normal forms, soundness and completeness theorems, Herbrand's theorem, unification and resolution, foundations of logic programming, automated theorem proving. Other topics may include deductive databases, database query languages, nonmonotonic reasoning. Enrollment restricted to graduate students. Offered in alternate academic years. *P. Kolaitis, A. Van Gelder*

221. Advanced Operating Systems. F

A detailed study of the issues involved in operating systems design and implementation. Readings cover current research topics and systems of historical significance. Topics include (but are not restricted to) process and memory management, protection, security, synchronization, performance evaluation, file systems, distributed systems. Enrollment restricted to graduate students; undergraduates by interview only. *E. Miller, D. Long, S. Brandt*

223. Advanced Computer Security. *

Overview of research topics in computer and network security. Topics may include cryptographic operations, security properties and policies, authentication and access control, attacks on computer systems and defenses against them, security in programming languages, and network protocols for security. Enrollment restricted to graduate students or consent of instructor. *E. Miller, D. Long, M. Abadi*

229. Storage Systems. W

Topics include storage devices, storage architectures, local file systems, high-performance file systems, and next-generation storage devices and architectures; covers issues of performance, reliability, scalability, robustness, and security. Enrollment restricted to graduate students. *E. Miller, D. Long, S. Brandt*

232. Distributed Systems. *

Overview of research topics in distributed computer systems. Topics may include communication paradigms, process management, naming, synchronization and coordination, consistency and replication, fault tolerance, and security. Examples include distributed operating systems, distributed file and object systems, distributed document systems, and peer-to-peer systems. Enrollment restricted to graduate students. *D. Long, E. Miller*

240. Artificial Intelligence. W

Prepares students for doing research in artificial intelligence. Major topics covered are search and heuristics, knowledge representation, planning, deduction and inference, reinforcement learning, associative pattern retrieval, and adaptive search. Discussion includes current research issues in AI problem-solving methods. Individualized projects. Students cannot receive credit for this course and course 140. Enrollment limited to 30. *I. Pohl, M. Walker, R. Levinson*

241. Knowledge Engineering. *

Introduction to the acquisition, representation, and application of knowledge in expert systems. Topics include production systems, backward and forward chaining, dependency-directed backtracking, reasoning with uncertainty, certainty factors, fuzzy systems, knowledge representation (rules, frames, and semantic nets), inference engines, and metaknowledge. Discussion includes current research issues in adaptive expert systems. Involves one major project. Undergraduates may enroll in this course if they have completed course 140. Offered in alternate academic years. *R. Levinson*

242. Machine Learning. F

Introduction to machine learning algorithms. Covers learning models from fields of statistical decision theory and pattern recognition, artificial intelligence, and theoretical computer science. Topics include classification learning and the Probably Approximately Correct (PAC) learning framework, density estimation and Bayesian learning, EM, regression, and online learning. Provides an introduction to standard learning methods such as neural networks, decision trees, boosting, nearest neighbor, and support vector machines. Requirements include one major experimental learning project or theoretical paper. Students may not receive credit for both this course and course 142. Enrollment restricted to graduate students. Enrollment limited to 30. *D. Helmbold, M. Warmuth*

244. Artificial Intelligence in Games. *

Artificial intelligence has long used game-playing as a metric for progress. Key algorithms such as alpha-beta and HPA search studied. Computer algorithms for backgammon, poker, and chess examined. There will be individualized projects. Prerequisite(s): course 201; and course 211 or 240 or 242. Enrollment limited to 20. *I. Pohl, A. Jhala, M. Mateas*

245. Computational Models of Discourse and Dialogue. S

Focuses on classic and current theories and research topics in the computational modeling of discourse and dialogue, with applications to human-computer dialogue interactions; dialogue interaction in computer games and interactive story systems; and processing of human-to-human conversational and dialogue-like language such as e-mails. Topics vary depending on the current research of the instructor(s) and the interests of the students. Students read theoretical and technical papers from journals and conference proceedings and present class lectures. A research

project is required. (Also offered as Psychology 245. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. May be repeated for credit. *M. Walker*

248. Interactive Storytelling. *

Covers wide range of practices including hypertext, interactive fiction, embedded narratives in games, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, explores the theoretical positions, debates, and technical and design issues arising from these different approaches. Students may not receive credit for this course and course 148. (Formerly *Interactive Narrative*.) Enrollment restricted to graduate students. Enrollment limited to 20. *M. Mateas*

250. Introduction to Information Theory. W

An introduction to information theory including topics such as entropy, relative entropy, mutual information, asymptotic equipartition property, channel capacity, differential entropy, rate distortion theory, and universal source coding. (Also offered as Electrical Engineering 253. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 107, or Applied Mathematics and Statistics 131 or equivalent course, or permission of instructor. Enrollment restricted to graduate students. *H. Sadjadpour*

253. Advanced Programming Languages. S

Covers issues in the design, implementation, analysis, and specification of programming languages. Topics include formal semantics (including operational, axiomatic, and denotational semantics), advanced type systems, program analysis (including abstract interpretation and model checking), specification, and verification. Prerequisite(s): course 203 or equivalent. *C. Flanagan*

260. Computer Graphics. *

Introduces current research and techniques of modeling, 2D/3D transformation, matrix composition, shading algorithms, and rendering to obtain computer-generated imagery. Programming assignments and major project required. Students cannot receive credit for both this course and course 160. Enrollment restricted to graduate students; undergraduates by interview only. Enrollment limited to 20. *A. Pang, J. Davis, S. Lodha*

261. Advanced Visualization. *

Covers advanced topics in visualization, e.g., tensor-field visualization, uncertainty visualization, information visualization. Topics vary with differing offerings of the course. Course includes lectures, exam, research paper reading/presentation, and projects. Final project is expected to be at a sufficiently advanced level for submission to a conference. Students work individually or in pairs. Enrollment by permission of instructor. Enrollment restricted to graduate students. *A. Pang*

262. Computer Animation. *

An in-depth treatment of computer animation, including its origins in conventional animation, 2-D animation, inbetweening, motion control, morphing, graphical motion editors, animation languages, motion blur, simulation of articulated body motion, realtime animation, and special-purpose animation hardware. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Davis, A. Pang*

272. Evolutionary Game Theory. W

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. Cannot receive credit for this course and Economics 166B or Computer Science 166B. (Also offered as Biology:Ecology & Evolutionary 274. Students cannot receive credit for both courses.) *M. Warmuth, B. Sinervo, D. Friedman*

277. Principles of Database Systems. F

Advanced course on principles of database systems. Main topics include overview of the relational data model and relational query languages; recursive queries, datalog, and fixed-points; query processing and optimization; database design, dependencies, normal forms, and the chase procedure. Additional topics may include information integration, complex objects, semistructured data, and XML. (Formerly *Database Systems I*.) Prerequisite(s): course 180 (or equivalent) or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *W. Tan, P. Kolaitis, N. Polyzotis*

278. Design and Implementation of Database Systems. S

Advanced course in implementation techniques for database systems. For students who wish to do research in databases or to learn more about large-scale data processing. Topics include: indexing of complex data; techniques for high-volume concurrency control; query processing and optimization; database recovery; parallel database system architectures; database systems for streaming data; approximate query answering. Additional topics may include: self-managing database systems; advanced query optimization techniques; and query processing techniques for semi-structured data. (Formerly *Database Systems II*.) Prerequisite(s): course 181 (or equivalent) or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *N. Polyzotis*

279. Software Reuse and Component-Based Software Engineering. *

Detailed study of interlocking business, organizational, and technical issues in large-scale software reuse and component-based software engineering. Topics include architecture, design for reuse,

domain engineering, model-driven development, domain-specific kits, components, frameworks, software agents, generators, problem-oriented languages, library design, reuse tools, patterns, and aspects. Assumes prior exposure to software engineering topics. Prerequisite(s): computer engineering 276 or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *C. McDowell*

280A. Seminar in Computer Science Research (2 credits). *

Weekly seminar covering topics of current research in computer science. Enrollment by permission of instructor. May be repeated for credit. *The Staff*

280D. Seminar in Database Systems (2 credits). F,W,S

Covers advanced research topics from the recent literature in database systems and related fields. Involves presentations from UCSC students and faculty, and guest talks from researchers in industry and other academic institutions. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. *W. Tan, P. Kolaitis, N. Polyzotis*

280G. Seminar on Software Engineering (2 credits). *

Weekly seminar covering topics of current research in software engineering. Prerequisite(s): permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 30. May be repeated for credit. *N. Whitehead, C. McDowell, C. Flanagan*

280H. Seminar in Human Computation Systems (2 credits). F

Covers advanced topics and current research in the general area of human computation. Material is drawn from several disciplines that involve or deal with human computation, including computer vision, human-computer interaction, databases, and machine learning. The course comprises presentations from faculty, enrolled students, and external visitors. Enrollment restricted to graduate students. May be repeated for credit. *J. Davis, N. Polyzotis*

280J. Seminar on Computer Graphics (2 credits). *

Weekly seminar covering topics of current research in computer graphics. Enrollment restricted to graduate students and by permission of instructor. Enrollment limited to 30. May be repeated for credit. *J. Davis*

280S. Seminar on Computer Systems (2 credits). F,W,S

Weekly seminar series covering topics of current research in computer systems. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. *E. Miller, C. Maltzahn, D. Long, S. Brandt*

280W. Seminar in Digital Media (2 credits). *

Covers advanced topics and current research in digital media—the interdisciplinary field at the intersection of computer science, media authoring, and models of interpretation from the humanities and social sciences. Focuses on student presentations and seminar participation. Enrollment restricted to graduate students. May be repeated for credit. *N. Wardrip-Fruin*

280X. Expressive AI (2 credits). F,W,S

Weekly seminar covering topics of current research in artificial intelligence applied to interactive art and entertainment, including computer games. Enrollment restricted to graduate students. Enrollment limited to 30. May be repeated for credit. *N. Wardrip-Fruin, M. Mateas*

290A. Topics in Algorithms and Complexity Theory: Probabilistic Algorithms and Average Case Analysis. W

Graduate seminar in algorithms and complexity theory on topics from recently published research journal articles and conference proceedings. Topics vary from year to year depending on the current research of the instructor(s) and interests of students. Students read technical papers from relevant journals and conference proceedings and present class lectures. Guest lectures may supplement the student presentations. A research project and/or paper may be required. Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. May be repeated for credit. *D. Achlioptas*

290B. Advanced Topics in Computer Graphics. *

A graduate seminar in computer graphics on topics from recently published research journal articles and conference proceedings. Topics vary from year to year depending on interests of students. Primary areas of interest are likely to be scientific visualization, modeling, rendering, scattered data techniques, wavelets, and color and vision models. Students read technical papers and present class lectures. Guest lecturers supplement the student presentations. A research project is required. Enrollment limited to 15. May be repeated for credit. *A. Pang, J. Davis, S. Lodha*

290C. Advanced Topics in Machine Learning. S

In-depth study of current research topics in machine learning. Topics vary from year to year but include multi-class learning with boosting and SUM algorithms, belief nets, independent component analysis, MCMC sampling, and advanced clustering methods. Students read and present research papers; theoretical homework in addition to a research project. Prerequisite(s): course 242. May be repeated for credit. *D. Helmbold, M. Warmuth*

290D. Neural Computation. *

An introduction to the design and analysis of neural network algorithms. Concentrates on large artificial neural networks and their applications in pattern recognition, signal processing, and forecasting and control. Topics include Hopfield and Boltzmann machines, perceptions, multilayer feed forward nets, and multilayer recurrent networks. Enrollment restricted to graduate students.

Offered in alternate academic years. May be repeated for credit. *M. Warmuth*

290E. Object-Oriented Programming Methodology. *

Object-oriented programming methodology is the application of abstract-data types and polymorphism to coding solution. Topics geared to beginning thesis research in this field. Prerequisite(s): courses 201 and 203. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *C. McDowell, I. Pohl*

290F. Applications of Combinatorics. *

Combinatorial mathematics, including summation methods, working with binomial coefficients, combinatorial sequences (Fibonacci, Stirling, Eulerian, Harmonic, Bernoulli numbers), generating functions and their uses, Bernoulli processes, and other topics in discrete probability. Oriented toward problem solving, applications mainly to computer science, but also physics. Prerequisite(s): Computer Engineering 16 and Applied Mathematics and Statistics 10. Enrollment restricted to graduate students and upper-division undergraduates. Offered in alternate academic years. May be repeated for credit. *I. Pohl*

290G. Topics in Software Engineering. *

Research seminar on current topics in software engineering. Topics vary from year to year depending on the current research of the instructor(s) and interests of students. Students read technical papers from relevant journals and conference proceedings. Synthesis and understanding of materials is demonstrated by a required research project. Prerequisite(s): Computer Engineering 276 recommended. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 35. May be repeated for credit. *E. Whitehead, C. McDowell, C. Flanagan*

290H. Topics in Database Systems. *

Focuses on current research topics in database systems. Different offerings cover different topics depending on current research of instructor(s) and the interests of students. Students read technical papers from journals and conference proceedings and present class lectures. A research project is required. Prerequisite(s): course 180 (or equivalent) or 277 or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *W. Tan, P. Kolaitis, N. Polyzotis*

290J. Playable Media. W

Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. (Also offered as Digital Arts and New Media 250D. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. May be repeated for credit. *N. Wardrip-Fruin, M. Mateas*

290P. Topics in Computational Cinematography. F

Focuses on discussion of recent advances in visual storytelling in graphical environments. Major topics covered are: intelligent camera control, shot-compositions, lighting design, interactive storytelling, and computational techniques associated with these applications. Class consists of in-class discussions and student presentations of research papers and a final student project. Enrollment restricted to graduate students. *A. Jhala*

290S. Advanced Topics in Computer Systems. F

Focuses on current research topics in computer systems. Topics vary from year to year depending on the current research of the instructor(s) and the interests of the students. Students read technical papers from current journals and conference proceedings, and present class lectures. A research project is required. Prerequisite(s): course 221 recommended. Enrollment restricted to graduate students; qualified undergraduates may enroll with instructor's consent. May be repeated for credit. *E. Miller, C. Maltzahn, D. Long, S. Brandt*

290T. Topics in Computing for Society. *

Current research topics on computer technology that is intentionally targeted to benefiting society. Topics vary year to year. Students read papers from current conferences and journals, and present class lectures. A research project is required. Enrollment restricted to graduate students. May be repeated for credit. *J. Davis*

290X. Cryptography and Computer Security. *

Research seminar on encryption and related technologies. Topics include theory of codes, random sequences and generators, public key cryptosystems, private key cyphers, key exchange protocols, quantum computing and cryptography. Major project required. Prerequisite: interview with instructor. Enrollment limited to 12. May be repeated for credit. *The Staff*

296. Masters Project (2 credits). F,W,S

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study or Research (2 credits). F,W,S

Independent study or research under faculty supervision. Although this course may be repeated for

credit, not every degree program will accept a repeated course toward degree requirements. Formerly offered as *Directed Readings in Machine Learning*. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Although the course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2011-12

Program Description

Mission Statement

The mission of the Electrical Engineering (EE) Department is to build and sustain a teaching and research program to provide undergraduate and graduate students with inspiring and quality education in the theory and practice of hardware- and information-processing-oriented electrical engineering; serving industry, science, and government; and bringing faculty and staff a rewarding career in teaching, research, and service. The electrical engineering program is accredited by the Engineering Accreditation Committee of the Accreditation Board for Engineering and Technology (ABET).

Summary of Objectives

The educational objectives that the Electrical Engineering Department strives to provide for students are focused in five areas: fundamental prerequisites in theory, design, and basic science for a career based on electrical engineering; a scope of application that provides theory and practical knowledge as well as specialized training in hardware- and information-oriented electrical engineering; a professional approach to engineering in terms of high quality work skills in communication, teamwork, responsibility, high ethical standards, and participation in lifelong learning and the professional engineering community; encouragement and motivation based on a milieu of readily available opportunities, mentoring, and advising; and the basis for a successful transition to an engineering career, including an ability to apply research to engineering and opportunities for experience in an industry setting.

Engineering is a profession that emphasizes analysis and design, and electrical engineers apply their knowledge to an expanding array of technical, scientific, and mathematical questions. A good engineering education has three parts: a sound foundation in mathematics and science, substantial design experience to develop skills and engineering aesthetics, and a focus in the humanities and social sciences to learn how and where to apply the skills developed. Electrical engineering is a very broad discipline; the program at UCSC complements existing campus programs, emphasizing three general areas: electronics/optics (including digital and analog circuits and devices); communications (including signal and image processing and control); and VLSI design, micro-technology, nanotechnology, and biomedical devices.

The undergraduate curriculum provides a balance of engineering science and design. For the first two years, all electrical engineering students are expected to take a basic set of lower-division mathematics, physical science, and engineering courses. After the first two years, electrical engineering students focus on topics within the discipline and specialize in one of two options: electronics/optics, including digital and analog circuits and devices, VLSI design, optoelectronics, electromagnetics, and biomedical device engineering; or communications, signals, systems, and control, including optical, wireless communication, signal and image processing, networks signal processing, instrumentation, and control. Students interested in admission to the electrical engineering major should contact the Baskin School of Engineering Undergraduate Advising office, (831) 459-5840 or advising@soe.ucsc.edu.

Electrical Engineering Policies

Admissions Policy

Admission to the electrical engineering major is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Students not directly admitted may still apply during their first year and their acceptance will be based upon their School of Engineering grade point average (GPA), their high school grade point average, courses completed in mathematics and sciences, and scores on standardized tests. After

the first year, students can apply to declare an electrical engineering major upon successful completion of all the following foundation courses with a School of Engineering GPA of 2.8 or better: Mathematics 19A-B, Applied Mathematics and Statistics 10 and 20, Physics 5A/L, 5B/M, and 5C/N.

Students who have not met this GPA requirement are required to meet with the Electrical Engineering Undergraduate Director. Please refer to the School of Engineering section of the catalog for the full admissions policy.

Course Substitution

Please refer to the School of Engineering section of the catalog for the policy regarding course substitution.

Disqualification Policy

Please refer to the School of Engineering section of the catalog for the Major Disqualification Policy.

Letter Grade Policy

The Electrical Engineering Department requires letter grading for all courses applied toward the bachelor of science (B.S.) degree, with the exception of two lower-division courses, which students may elect to take Pass/No Pass.

Honors in the Major

Electrical engineering majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SoE GPA of 3.7, in most cases, receive highest honors. Students with an SoE GPA of 3.3, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SoE GPA. Electrical engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students and admission of transfer students to the electrical engineering major.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Major Requirements

In addition to completing UCSC's general education requirements, students must complete 15 lower-division science and engineering courses, plus associated laboratories; nine upper-division engineering courses, plus associated laboratories; four engineering electives; and a two-quarter comprehensive senior design project course. To plan for completion of these requirements within the normative time, students should consult with an adviser at the Baskin School of Engineering Undergraduate Advising office as early as possible.

Lower-Division Requirements

Students gain a solid foundation in calculus, engineering mathematics, physics, computer science, and computer engineering during their first two years. Majors must complete the following 15 lower-division courses (including corresponding laboratories). These courses form part of the prerequisite sequence and should be completed during the first two years at UCSC. The requirements are rigorous; students must be prepared to begin these courses early in their studies.

Electrical Engineering

80T, *Modern Electronic Technology and How It Works*

Computer Engineering/Computer Science

Computer Engineering 12/L, *Computer Systems and Assembly Language/ Laboratory*

Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory* or Computer Science 12A/L, *Introduction to Programming (Accelerated)/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Computer Engineering 80E, *Engineering Ethics*

Mathematics

19A-B, *Calculus for Science, Engineering, and Mathematics*

23A-B, *Multivariable Calculus*

Applied Mathematics and Statistics

10, *Mathematical Methods for Engineers I*

20, *Mathematical Methods for Engineers II*

Physics

5A/L, 5B/M, 5C/N, *Introduction to Physics/Laboratories*

5D, *Heat, Thermodynamics, and Kinetics*

Ethics

Students must take one of the following courses (required even for transfer students who have had their general education requirements waived):

Computer Engineering 80E, *Engineering Ethics*

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics: Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Biomolecular Engineering 80G/Philosophy 80G, *Bioethics in the 21st Century: Science, Business, and Society*

Upper-Division Requirements

Fifteen upper-division courses along with associated 1- or 2-credit laboratories are required for the major. The course requirements include both depth and breadth, technical writing, and a comprehensive capstone design project.

All students are required to take the following nine upper-division courses, with associated laboratories:

Electrical Engineering

101/L, *Introduction to Electronic Circuits/Laboratory*

103/L, *Signals and Systems/Laboratory*

135/L, *Electromagnetic Fields and Waves/Laboratory*

145/L, *Properties of Materials/Laboratory*

151, *Communications Systems*

171/L, *Analog Electronics/Laboratory*

Computer Engineering

100/L, *Logic Design/Laboratory*

107, *Mathematical Methods of Systems Analysis: Stochastic*

185, *Technical Writing for Computer Engineers*

Required Electives. In addition to completing the above required courses, electrical engineering majors must complete four elective courses chosen from the list below. At least three must be from one of the depth-sequence concentrations listed. Certain graduate-level courses as well as those courses taught in conjunction with graduate courses may also be used to fulfill an elective requirement as listed below. No course may be counted twice. See the electrical engineering web site for course descriptions: www.ee.ucsc.edu/academics.htm.

Electronics/Optics Concentration

Electrical Engineering

115, *Introduction to Micro-Electro-Mechanical-Systems Design*

130/L/ 230, *Introduction to Optoelectronics and Photonics and Laboratory/Optical Fiber Communication*

136, *Engineering Electromagnetics* (strongly recommended)

154/241, *Feedback Control Systems, and Introduction to Feedback Control Systems*

157/L, *RF Hardware Design/Laboratory*

172/221, *Advanced Analog Circuits/Advanced Analog Integrated Circuits*

175/L, *Energy Generation and Control/Laboratory*

176/L, *Energy Conversion and Control/Laboratory*

177/L, *Power Electronics/Laboratory*

178, *Device Electronics*

211, *Introduction to Nanotechnology*

231, *Optical Electronics*

Computer Engineering

118/L, *Introduction to Mechatronics/Laboratory*

121/L, *Microprocessor System Design/Laboratory* (strongly recommended)

173/L, *High Speed Digital Design/Laboratory*

Applied Mathematics and Statistics

147, *Computational Methods and Applications*

Communications, Signals, Systems, and Controls Concentration

Electrical Engineering

130/L/230, *Introduction to Optoelectronics, and Photonics and Laboratory/Optical Fiber Communication*

136, *Engineering Electromagnetics* (strongly recommended)

152/252, *Introduction to Wireless Communications and Wireless Communications*

153/250, *Digital Signal Processing/Digital Signal Processing*

154/241, *Feedback Control Systems and Introduction to Feedback Control Systems*

251, *Principles of Digital Communications*

253, *Introduction to Information Theory*

261, *Error Control Coding*

262, *Statistical Signal Processing I*

264, *Image Processing and Reconstruction*

Computer Engineering

118/L, *Introduction to Mechatronics/Laboratory*

150/L, *Introduction to Computer Networks/Laboratory*

251, *Error Control Coding* (taught in conjunction with EE 261)

Applied Mathematics and Statistics

147, *Computational Methods and Applications*

The senior-year curriculum enables students to pursue independent study with a faculty member. Electrical engineering students are encouraged to take advantage of the opportunity to work within a faculty member's research group as part of their educational experience. Internship programs with local industry are also available.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in electrical engineering is satisfied by completing Computer Engineering 185.

Comprehensive Requirement

The senior comprehensive requirement for electrical engineering majors is in two parts: a project course and assessment options.

Project Course

Students must complete one capstone design course that spans two quarters, Electrical Engineering 123A and 123B, or complete a senior thesis. These senior-level courses encompass an in-depth project, including analysis, design, testing, and documentation, requiring students to call upon knowledge acquired throughout their undergraduate studies. Current course choices include the

following:

Electrical Engineering

123A and 123B, Engineering *Design Project I* (5 credits) and *Engineering Design Project II* (7 credits)

195, *Senior Thesis Project* (10 credits over two quarters)

Outcomes Assessment Options

The Electrical Engineering Department requires an outcomes assessment. All students are required to complete an exit survey and meet with a faculty member for an exit interview. The specifics of the outcomes assessment may change from year to year; for this catalog year, students must complete one of the following options:

1. maintenance of a 2.5 grade point average in all required and elective courses for the major; or
2. senior thesis submission; or
3. portfolio review.

Portfolios must include the following:

- project report(s);
- a one- or two-page overview of the student's contribution to the project(s);
- a two-page essay concerning the relationship of engineering to society (specific topics will be provided by the Electrical Engineering Department).

The portfolios must be submitted electronically at least seven days before the end of the instruction in the quarter of graduation. Portfolios will not be returned.

Electrical Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the electrical engineering major.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19	AMS 10
	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N
	college core	EE 80T	gen ed (C2)
2nd (soph)	PHYS 5D	EE 101/L	EE 171/L
	MATH 23A	AMS 20	CMPE 13/L
	CMPE 12/L	MATH 23B	gen ed

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	AMS 3	MATH 19A	MATH 19B
	CMPE 8	CMPE 12/L	CMPE 13/L
	college core	EE 80T	gen ed (C2)
2nd (soph)	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N
	AMS 10	AMS 20	MATH 23A
	gen ed	CMPE 100/L	CMPE 80E

Additional information about this program can be found on the department's web site at <http://www.ee.ucsc.edu/undergraduates>.

Electrical Engineering Minor

The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in Applied Physics or any School of Engineering major.

Electrical Engineering Minor Requirements

Requirements for the minor in electrical engineering are the following:

Mathematics

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A, *Multivariable Calculus*

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*, and 20, *Mathematical Methods for Engineers II*; or Mathematics 21, *Linear Algebra* and Mathematics 24, *Ordinary Differential Equations*

Science

Physics 5A/L or 6A/L, *Mechanics* and 5C/N or 6C/N, *Electricity and Magnetism*

Core Requirements

Electrical Engineering

Electrical Engineering 101/L, *Introduction to Electronic Circuits/Laboratory*; and

Electrical Engineering 103, *Signals and Systems*; and

Electrical Engineering 171/L, *Analog Electronics/Laboratory*

Upper-Division Electives

At least 15 credits of upper-division or graduate electrical engineering courses, all chosen from one of the existing electrical engineering major tracks. All of the upper-division electives must come from the same track.

Graduate Programs

The Department of Electrical Engineering (EE) at the University of California, Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in:

- Photonics and electronics focusing on VLSI, electronic and optoelectronic materials, devices, circuits and systems for information transmission, storage, processing, and display, especially for optical-fiber communications and lower-power, high-performance systems, biomedical device instrumentation and MEMS;
- Signal processing and communications, including wireless communications, network information theory, digital signal processing, image and video processing;
- Remote sensing including wave propagation and scattering radar oceanography, and microwave remote sensing.
- Nanotechnology including applications to bio-medicine, integrated optics for biomedical imaging, opto-thermo-electric energy conversion, near-field scanning optical microscopy, nano-magneto-optics, micro-mechanics and micro-fluidics.

Electrical Engineering enjoys a close relationship with the Departments of Applied Mathematics and Statistics, Computer Science, Computer Engineering, Biomolecular Engineering, Chemistry, Physics, Astronomy, and Molecular, Cell and Developmental Biology faculty. The Electrical Engineering faculty are affiliated with: 1) several federally funded and nationally recognized centers such as the Center for Biomimetic MicroElectronic Systems, the Center for Adaptive Optics, and the Center for Biomolecular Science and Engineering; 2) state-funded centers such as the Institute for Quantitative Biology (QB3), the Center for Information Technology Research in the Interest of Society (CITRIS), and the Institute for Regenerative Medicine (CIRM); and 3) many EE faculty participate in the University Affiliated Research Center (UARC) at NASA-Ames Research Center, which is managed by UCSC and in the Advanced Studies Laboratory, a partnership between UCSC and NASA-Ames Research Center. The department also has ties to nearby industry, employing electrical engineering professionals as visiting and adjunct faculty and arranging for students to gain practical research experience through work in industrial labs. Indeed, the department strongly encourages students of all nationalities to seek practical training as part of their graduate education.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. The M.S. degree can be completed in two years. M.S. students must complete a master's thesis. A Ph.D. degree is usually completed in four to six years. Ph.D. students are required to take a preliminary exam within their first two years of study. After completing the course requirements, students must pass an oral qualifying exam and write a dissertation. Part-time study is possible for students working in industry while attending school.

Requirements for the Master's Degree

Course Requirements

Each student is required to take 45 credits which must consist of:

- At least 15 credits in one of the four core areas of emphasis defined above.
- At least 25 of the total 45 credits must be satisfied through EE graduate courses.
- At most 10 credits of independent study (EE 297, EE 299) are counted toward the EE course requirements.

Total credits required for the M.S. degree = 45.

Note that each graduate course satisfying the above requirements typically covers 5 credits.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. Upon completion of the thesis work, the student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

M.S. students admitted to continue to the Ph.D. program must pass a preliminary exam covering fundamental undergraduate course work (see below).

Requirements for the Ph.D. Degree

Course Requirements*

Each student is required to take 50 credits which must consist of:

- At least 20 credits in one of the four core areas of emphasis defined above.
- At least 30 of the total 50 credits must be satisfied through EE graduate courses.
- At most 10 credits of independent study (EE297, EE299) will be counted toward EE course requirements.

Total credits required for the Ph.D. degree = 50

* For students already holding a master of science in electrical engineering (M.S.E.E.) or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent coursework performed at the students' M.S. granting institution. Credit transfer is subject to approval by the adviser and the electrical engineering graduate director.

Preliminary Examination

At the end of the first year, i.e., no later than the fall quarter in the following year after their entry, students admitted to the Ph.D. program must take a written examination covering basic knowledge in electrical engineering. This examination will cover material from the following technical areas:

- Circuits at the level of Electrical Engineering 101
- Electromagnetics at the level of Electrical Engineering 135
- Systems and signals at the level of Electrical Engineering 103
- Materials at the level of Electrical Engineering 145
- Applied Mathematics and Statistics at the level of Computer Engineering 107, and Applied Mathematics and Statistics 10 and 20.

The student will choose three areas from the above list in which to be examined. If the student does not pass the preliminary examination, the electrical engineering graduate committee may allow the student to repeat the preliminary examination once. If the student is to leave the Ph.D. program, and the student wishes to obtain a master's degree prior to departure, all requirements for the master's degree must still be satisfied.

After the student passes the preliminary examination, the student begins work on a thesis prospectus in preparation for the qualifying examination. During this period the student finds an adviser to supervise the student's thesis research, works with the adviser to prepare for the qualifying examination, and assembles a dissertation reading committee, consisting of the student's research supervisor (chair of the committee) and three or four appropriate faculty members in electrical engineering and other relevant departments. The committee must consist of at least two ladder-rank, electrical-engineering, faculty members in addition to the student's supervisor.

Qualifying Examination

This oral examination is a defense of the student's thesis prospectus and a test of the student's knowledge in advanced technical areas of relevance to the dissertation topic. This oral examination consists of a seminar-style talk before the examining committee, where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk and the areas of presumed expertise of the student. The examination, taken typically in the third year of Ph.D. study, is administered by a Ph.D. qualifying examination committee, consisting of at least four examiners. The composition of the committee must be approved by the graduate director and the dean of graduate studies whereupon the student and the committee are notified.

If the student does not pass the qualifying examination, the student may be asked to complete additional coursework, or other research-related work, before retaking the examination. The student may be allowed to retake the qualifying examination once, and the composition of the examining committee will remain the same for the second try. Students who fail the qualifying examination twice may be dismissed from the Ph.D. program.

Ph.D. students who have not advanced to candidacy by the end of the fourth year may be recommended for academic probation.

Dissertation and Advancement to Ph.D. Degree Candidacy

Advancement to candidacy requires that the student:

- pass the preliminary examination;
- complete all course requirements prior to taking the qualifying examination;
- clear all Incompletes from the student's record;
- pass the qualifying examination; and
- have an appointed Ph.D. dissertation reading committee.

After advancement to candidacy, work on the thesis research progresses until the dissertation is completed. The Ph.D. dissertation must show the results of in-depth research, be an original contribution of significant knowledge to the student's field of study, and include material worthy of publication. The student is strongly advised to submit research work for publication in advance of completing the thesis so that the latter requirement is clearly satisfied. The Ph.D. thesis results are presented in both oral and written forms, the oral form being a dissertation defense (see below) and the written form being the Ph.D. dissertation. The student must submit his or her written Ph.D. dissertation to the dissertation reading committee at least one month before the defense.

Dissertation Defense

Each Ph.D. candidate submits the completed dissertation to a Ph.D. thesis reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee (only), who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

For students already holding an M.S.E.E. or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent course work performed at the student's M.S. granting institution. Credit transfer is subject to approval by the electrical engineering graduate director.

Students not already holding an M.S.E.E. degree, who are studying for the Ph.D. degree, may apply to be granted a M.S. degree when they have fulfilled all the M.S. degree requirements (including an M.S. thesis).

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the *Graduate Student Handbook* for the policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree course requirements at the rate of at least two courses each quarter. Full-time students must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of U (unsatisfactory) or below B in the School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical engineering graduate student fails a School of Engineering course while on probation, the Electrical Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Materials Fee

Baskin School of Engineering
335 Baskin Engineering Building
(831) 459-2158
<http://www.soe.ucsc.edu>

Program Description**Mission Statement**

The mission of the Electrical Engineering (EE) Department is to build and sustain a teaching and research program to provide undergraduate and graduate students with inspiring and quality education in the theory and practice of hardware- and information-processing-oriented electrical engineering; serving industry, science, and government; and bringing faculty and staff a rewarding career in teaching, research, and service. The electrical engineering program is accredited by the Engineering Accreditation Committee of the Accreditation Board for Engineering and Technology (ABET).

Summary of Objectives

The educational objectives that the Electrical Engineering Department strives to provide for students are focused in five areas: fundamental prerequisites in theory, design, and basic science for a career based on electrical engineering; a scope of application that provides theory and practical knowledge as well as specialized training in hardware- and information-oriented electrical engineering; a professional approach to engineering in terms of high quality work skills in communication, teamwork, responsibility, high ethical standards, and participation in lifelong learning and the professional engineering community; encouragement and motivation based on a milieu of readily available opportunities, mentoring, and advising; and the basis for a successful transition to an engineering career, including an ability to apply research to engineering and opportunities for experience in an industry setting.

Engineering is a profession that emphasizes analysis and design, and electrical engineers apply their knowledge to an expanding array of technical, scientific, and mathematical questions. A good engineering education has three parts: a sound foundation in mathematics and science, substantial design experience to develop skills and engineering aesthetics, and a focus in the humanities and social sciences to learn how and where to apply the skills developed. Electrical engineering is a very broad discipline; the program at UCSC complements existing campus programs, emphasizing three general areas: electronics/optics (including digital and analog circuits and devices); communications (including signal and image processing and control); and VLSI design, micro-technology, nanotechnology, and biomedical devices.

The undergraduate curriculum provides a balance of engineering science and design. For the first two years, all electrical engineering students are expected to take a basic set of lower-division mathematics, physical science, and engineering courses. After the first two years, electrical engineering students focus on topics within the discipline and specialize in

one of two options: electronics/optics, including digital and analog circuits and devices, VLSI design, optoelectronics, electromagnetics, and biomedical device engineering; or communications, signals, systems, and control, including optical, wireless communication, signal and image processing, networks signal processing, instrumentation, and control. Students interested in admission to the electrical engineering major should contact the Baskin School of Engineering Undergraduate Advising office, (831) 459-5840 or advising@soe.ucsc.edu.

Electrical Engineering Policies

Admissions Policy

Admission to the electrical engineering major is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Students not directly admitted may still apply during their first year and their acceptance will be based upon their School of Engineering grade point average (GPA), their high school grade point average, courses completed in mathematics and sciences, and scores on standardized tests. After the first year, students can apply to declare an electrical engineering major upon successful completion of all the following foundation courses with a School of Engineering GPA of 2.8 or better: Mathematics 19A-B, Applied Mathematics and Statistics 10 and 20, Physics 5A/L, 5B/M, and 5C/N.

Students who have not met this GPA requirement are required to meet with the Electrical Engineering Undergraduate Director. Please refer to the School of Engineering section of the catalog for the full admissions policy.

Course Substitution

Please refer to the School of Engineering section of the catalog for the policy regarding course substitution.

Disqualification Policy

Please refer to the School of Engineering section of the catalog for the Major Disqualification Policy.

Letter Grade Policy

The Electrical Engineering Department requires letter grading for all courses applied toward the bachelor of science (B.S.) degree, with the exception of two lower-division courses, which students may elect to take Pass/No Pass.

Honors in the Major

Electrical engineering majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SoE GPA of 3.7, in most cases, receive highest honors. Students with an SoE GPA of 3.3, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SoE GPA. Electrical engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students and admission of transfer students to the electrical engineering major.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that

apply to all School of Engineering programs.

Major Requirements

In addition to completing UCSC's general education requirements, students must complete 15 lower-division science and engineering courses, plus associated laboratories; nine upper-division engineering courses, plus associated laboratories; four engineering electives; and a two-quarter comprehensive senior design project course. To plan for completion of these requirements within the normative time, students should consult with an adviser at the Baskin School of Engineering Undergraduate Advising office as early as possible.

Lower-Division Requirements

Students gain a solid foundation in calculus, engineering mathematics, physics, computer science, and computer engineering during their first two years. Majors must complete the following 15 lower-division courses (including corresponding laboratories). These courses form part of the prerequisite sequence and should be completed during the first two years at UCSC. The requirements are rigorous; students must be prepared to begin these courses early in their studies.

Electrical Engineering

80T, *Modern Electronic Technology and How It Works*

Computer Engineering/Computer Science

Computer Engineering 12/L, *Computer Systems and Assembly Language/ Laboratory*

Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory* or
Computer Science 12A/L, *Introduction to Programming (Accelerated)/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Computer Engineering 80E, *Engineering Ethics*

Mathematics

19A-B, *Calculus for Science, Engineering, and Mathematics*

23A-B, *Multivariable Calculus*

Applied Mathematics and Statistics

10, *Mathematical Methods for Engineers I*

20, *Mathematical Methods for Engineers II*

Physics

5A/L, 5B/M, 5C/N, *Introduction to Physics/Laboratories*

5D, *Heat, Thermodynamics, and Kinetics*

Ethics

Students must take one of the following courses (required even for transfer students who have had their general education requirements waived):

Computer Engineering 80E, *Engineering Ethics*

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics: Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Biomolecular Engineering 80G/Philosophy 80G, *Bioethics in the 21st Century: Science, Business, and Society*

Upper-Division Requirements

Fifteen upper-division courses along with associated 1- or 2-credit laboratories are required for the major. The course requirements include both depth and breadth, technical writing, and a comprehensive capstone design project.

All students are required to take the following nine upper-division courses, with associated laboratories:

Electrical Engineering

101/L, *Introduction to Electronic Circuits/Laboratory*

103/L, *Signals and Systems/Laboratory*

135/L, *Electromagnetic Fields and Waves/Laboratory*

145/L, *Properties of Materials/Laboratory*

151, *Communications Systems*

171/L, *Analog Electronics/Laboratory*

Computer Engineering

100/L, *Logic Design/Laboratory*

107, *Mathematical Methods of Systems Analysis: Stochastic*

185, *Technical Writing for Computer Engineers*

Required Electives. In addition to completing the above required courses, electrical engineering majors must complete four elective courses chosen from the list below. At least three must be from one of the depth-sequence concentrations listed. Certain graduate-level courses as well as those courses taught in conjunction with graduate courses may also be used to fulfill an elective requirement as listed below. No course may be counted twice. See the electrical engineering web site for course descriptions:

www.ee.ucsc.edu/academics.htm.

Electronics/Optics Concentration

Electrical Engineering

115, *Introduction to Micro-Electro-Mechanical-Systems Design*

130/L/ 230, *Introduction to Optoelectronics and Photonics and Laboratory/Optical Fiber Communication*

136, *Engineering Electromagnetics* (strongly recommended)

154/241, *Feedback Control Systems, and Introduction to Feedback Control Systems*

[157/L, RF Hardware Design/Laboratory](#)

172/221, *Advanced Analog Circuits/Advanced Analog Integrated Circuits*

[175/L, Energy Generation and Control/Laboratory](#)

[176/L, Energy Conversion and Control/Laboratory](#)

[177/L, Power Electronics/Laboratory](#)

178, *Device Electronics*

211, *Introduction to Nanotechnology*

231, *Optical Electronics*

Computer Engineering

118/L, *Introduction to Mechatronics/Laboratory*

121/L, *Microprocessor System Design/Laboratory* (strongly recommended)

173/L, *High-Speed Digital Design/Laboratory*

Applied Mathematics and Statistics

147, *Computational Methods and Applications*

Communications, Signals, Systems, and Controls Concentration

Electrical Engineering

130/L/230, *Introduction to Optoelectronics and Photonics and Laboratory/Optical Fiber Communication*

136, *Engineering Electromagnetics* (strongly recommended)

152/252, *Introduction to Wireless Communications/Wireless Communications*

153/250, *Digital Signal Processing/Digital Signal Processing*

154/241, *Feedback Control Systems/Introduction to Feedback Control Systems*

251, *Principles of Digital Communications*

253, [*Introduction to Information Theory*](#)

261, *Error Control Coding*

262, *Statistical Signal Processing I*

264, *Image Processing and Reconstruction*

Computer Engineering

118/L, *Introduction to Mechatronics/Laboratory*

150/L, *Introduction to Computer Networks/Laboratory*

251, *Error Control Coding* (taught in conjunction with EE 261)

Applied Mathematics and Statistics

147, *Computational Methods and Applications*

The senior-year curriculum enables students to pursue independent study with a faculty member. Electrical engineering students are encouraged to take advantage of the opportunity to work within a faculty member's research group as part of their educational experience. Internship programs with local industry are [also](#) available.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in electrical engineering is satisfied by completing Computer Engineering 185.

Comprehensive Requirement

The senior comprehensive requirement for electrical engineering majors is in two parts: a project course and assessment options.

Project Course

Students must complete one capstone design course that spans two quarters, Electrical Engineering 123A and 123B, or complete a senior thesis. These senior-level courses encompass an in-depth project, including analysis, design, testing, and documentation, requiring students to call upon knowledge acquired throughout their undergraduate studies. Current course choices include the following:

Electrical Engineering

123A and 123B, Engineering *Design Project I* (5 credits) and *Engineering Design Project II* (7 credits)

195, *Senior Thesis Project* (10 credits over two quarters)

Outcomes Assessment Options

The Electrical Engineering Department requires an outcomes assessment. All students are required to complete an exit survey and meet with a faculty member for an exit interview. The specifics of the outcomes assessment may change from year to year; for this catalog year, students must complete one of the following options:

maintenance of a 2.5 grade point average in all required and elective courses for the major; or

senior thesis submission; or

portfolio review.

Portfolios must include the following:

project report(s);

a one- or two-page overview of the student's contribution to the project(s);

a two-page essay concerning the relationship of engineering to society (specific topics will be provided by the Electrical Engineering Department).

The portfolios must be submitted electronically at least seven days before the end of the instruction in the quarter of graduation. Portfolios will not be returned.

Electrical Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the electrical engineering major.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19B	AMS 10
	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N
	college core	EE 80T	gen ed (C2)
2nd (soph)	PHYS 5D	EE 101/L	EE 171/L
	MATH 23A	AMS 20	CMPS CMPE 13/L
	CMPE 12/L	MATH 23B	gen ed

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	AMS 3	MATH 19A	MATH 19B
	CMPE 8	CMPE 12/L	CMPE 13/L
	college core	EE 80T	gen ed (C2)
2nd (soph)	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N
	AMS 10	AMS 20	MATH 23A
	gen ed	CMPE 100/L	CMPE 80E

Additional information about this program can be found on the department's web site at <http://www.ee.ucsc.edu/undergraduates>.

Electrical Engineering Minor

The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in Applied Physics or any School of Engineering major.

Electrical Engineering Minor Requirements

Requirements for the minor in electrical engineering are the following:

Mathematics

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A, *Multivariable Calculus*

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*, and 20, *Mathematical Methods for Engineers II*; or Mathematics 21, *Linear Algebra* and Mathematics 24, *Ordinary Differential Equations*

Science

Physics 5A/L or 6A/L, *Mechanics* and 5C/N or 6C/N, *Electricity and Magnetism*

Core Requirements

Electrical Engineering

Electrical Engineering 101/L, *Introduction to Electronic Circuits/Laboratory*; and

Electrical Engineering 103, *Signals and Systems*; and

Electrical Engineering 171/L, *Analog Electronics/Laboratory*

Upper-Division Electives

At least 15 credits of upper-division or graduate electrical engineering courses, all chosen from one of the existing electrical engineering major tracks. All of the upper-division electives must come from the same track.

Graduate Programs

The Department of Electrical Engineering (EE) at the University of California , Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in:

- Photonics and electronics focusing on VLSI, electronic and optoelectronic materials, devices, circuits and systems for information transmission, storage, processing, and display, especially for optical-fiber communications and lower-power, high-performance systems, biomedical device instrumentation and MEMS;
- Signal processing and communications, including wireless communications, network information theory, digital signal processing, image and video processing
~~Signal processing and communications, including wireless and optical communications, coding, digital signal processing, image and video processing;~~
- Remote sensing including wave propagation and scattering radar oceanography, and microwave remote sensing.
- Nanotechnology including applications to bio-medicine, integrated optics for biomedical imaging, opto-thermo-electric energy conversion, near-field scanning optical microscopy, nano-magneto-optics, micro-mechanics and micro-fluidics.

Electrical Engineering enjoys a close relationship with the Departments of Applied Mathematics and Statistics, Computer Science, Computer Engineering, Biomolecular Engineering, Chemistry, Physics, Astronomy, and Molecular, Cell and Developmental Biology faculty. The Electrical Engineering faculty are affiliated with: 1) several federally funded and nationally recognized centers such as the Center for Biomimetic MicroElectronic Systems, the Center for Adaptive Optics, and the Center for Biomolecular Science and Engineering; 2) state-funded centers such as the Institute for Quantitative Biology (QB3), the Center for Information Technology Research in the Interest of Society (CITRIS), and the Institute for Regenerative Medicine (CIRM); and 3) many EE faculty participate in the University Affiliated Research Center (UARC) at NASA-Ames Research Center, which is managed by UCSC and in the Advanced Studies Laboratories, a partnership between UCSC and NASA-Ames Research Center. The department also has ties to nearby industry, employing electrical engineering professionals as visiting and adjunct faculty and arranging for students to gain practical research experience through work in industrial labs. Indeed, the department strongly encourages students of all nationalities to seek practical training as part of their graduate education.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. The M.S. degree can be completed in two years. M.S. students must complete a master's thesis. A Ph.D. degree is usually completed in four to six years. Ph.D. students are required to take a preliminary exam within their first two years of study. After completing the course requirements, students must pass an oral qualifying exam and write a dissertation. Part-time study is possible for students working in industry while attending school.

Requirements for the Master's Degree

Course Requirements

Each student is required to take 45 credits which must consist of:

- At least 15 credits in one of the four core areas of emphasis defined above.
- At least 25 of the total 45 credits must be satisfied through EE graduate courses.
- At most 10 credits of independent study (EE 297, EE 299) are counted toward the EE course requirements.

Total credits required for the M.S. degree = 45.

Note that each graduate course satisfying the above requirements typically covers 5 credits.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. Upon completion of the thesis work, the student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

M.S. students admitted to continue to the Ph.D. program must pass a preliminary exam covering fundamental undergraduate course work (see below).

Requirements for the Ph.D. Degree

Course Requirements*

Each student is required to take 50 credits which must consist of:

- At least 20 credits in one of the four core areas of emphasis defined above.
- At least 30 of the total 50 credits must be satisfied through EE graduate courses.
- At most 10 credits of independent study (EE297, EE299) will be counted toward EE course requirements.

Total credits required for the Ph.D. degree = 50

* For students already holding a master of science in electrical engineering (M.S.E.E.) or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent coursework performed at the students' M.S. granting institution. Credit transfer is subject to approval by the adviser and the electrical engineering graduate director.

Preliminary Examination

At the end of the first year, i.e., no later than the fall quarter in the following year after their entry, students admitted to the Ph.D. program must take a written examination covering basic knowledge in electrical engineering. This examination will cover material from the following technical areas:

- Circuits at the level of Electrical Engineering 101
- Electromagnetics at the level of Electrical Engineering 135
- Systems and signals at the level of Electrical Engineering 103
- Materials at the level of Electrical Engineering 145
- Applied Mathematics and Statistics at the level of Computer Engineering 107, and Applied Mathematics and Statistics 10 and 20.

The student will choose three areas from the above list in which to be examined. If the student does not pass the preliminary examination, the electrical engineering graduate committee may allow the student to repeat the preliminary examination once. If the student is to leave the Ph.D. program, and the student wishes to obtain a master's degree prior to departure, all requirements for the master's degree must still be satisfied.

After the student passes the preliminary examination, the student begins work on a

thesis prospectus in preparation for the qualifying examination. During this period the student finds an adviser willing to supervise the student's thesis research, works with the adviser to prepare for the qualifying examination, and assembles a dissertation reading committee, consisting of the student's research supervisor (chair of the committee) and three or four appropriate faculty members in electrical engineering and other relevant departments. The committee must consist of at least two ladder-rank, electrical-engineering, faculty members in addition to the student's supervisor.

Qualifying Examination

This oral examination is a defense of the student's thesis prospectus and a test of the student's knowledge in advanced technical areas of relevance to the dissertation topic. This oral examination consists of a seminar-style talk before the examining committee, where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk and the areas of presumed expertise of the student. The examination, taken typically in the third year of Ph.D. study, is administered by a Ph.D. qualifying examination committee, consisting of at least four examiners. The composition of the committee must be approved by the graduate director and the dean of graduate studies whereupon the student and the committee are notified.

If the student does not pass the qualifying examination, the student may be asked to complete additional coursework, or other research-related work, before retaking the examination. The student may be allowed to retake the qualifying examination once, and the composition of the examining committee will remain the same for the second try. Students who fail the qualifying examination twice may be dismissed from the Ph.D. program.

Ph.D. students who have not advanced to candidacy by the end of the fourth year may be recommended for academic probation.

Dissertation and Advancement to Ph.D. Degree Candidacy

Advancement to candidacy requires that the student:

- pass the preliminary examination;
- complete all course requirements prior to taking the qualifying examination;
- clear all Incompletes from the student's record;
- pass the qualifying examination; and
- have an appointed Ph.D. dissertation reading committee.

After advancement to candidacy, work on the thesis research progresses until the dissertation is completed. The Ph.D. dissertation must show the results of in-depth research, be an original contribution of significant knowledge to the student's field of study, and include material worthy of publication. The student is strongly advised to submit research work for publication in advance of completing the thesis so that the latter requirement is clearly satisfied. The Ph.D. thesis results are presented in both oral and written forms, the oral form being a dissertation defense (see below) and the written form being the Ph.D. dissertation. The student must submit his or her written Ph.D. dissertation to the dissertation reading committee at least one month before the defense.

Dissertation Defense

Each Ph.D. candidate submits the completed dissertation to a Ph.D. thesis reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate presents his or her research results in

a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee (only), who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

For students already holding an M.S.E.E. or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent course work performed at the student's M.S. granting institution. Credit transfer is subject to approval by the electrical engineering graduate director.

Students not already holding an M.S.E.E. degree, who are studying for the Ph.D. degree, may apply to be granted a M.S. degree when they have fulfilled all the M.S. degree requirements (including an M.S. thesis).

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the *Graduate Student Handbook* for the policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree course requirements at the rate of at least two courses each quarter. Full-time students must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of U (unsatisfactory) or below B in the School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical engineering graduate student fails a School of Engineering course while on probation, the Electrical Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Materials Fee

Faculty and Professional Interests

Professor

BENJAMIN FRIEDLANDER

Digital communications, wireless communication system, array processing, adaptive signal processing

CLAIRE GU

Fiber sensors for bio-applications, optical fiber communications, volume holographic data storage, liquid crystal displays, nonlinear optics, optical information processing

MICHAEL ISAACSON

Nano- and microfabrication technology and applications to biomedical and diagnostic devices, nanocharacterization of materials with emphasis on the development of microscopy tools, novel modes of imaging, electron and light optics

GRETCHEN KALONJI

Symmetry constraints on the structure and properties of crystalline defects; phase transformations and microstructural evolution; atomistic computer simulation techniques applied to materials; innovations in science and engineering education; new models for multinational collaboration in research and education

SUNG-MO (STEVE) KANG

Low-power.High-speed VLSI circuit design and synthesis, RF circuits, biological circuits, mixed technology, mixed signal CAD

WENTAI LIU

Retinal prosthesis, biomimetic systems, integrated neuro-electronics, molecular electronics, CMOS and SOI transceiver design, current mode band limited signaling, microelectronic sensor, timing/clock recovery and optimization, noise characterization and modeling, and computer vision/image processing

PEYMAN MILANFAR

Statistical signal, image, and video processing; computer vision; modeling and inverse problems in imaging; detection and estimation theory

KENNETH PEDROTTI (Department Chair)

Integrated circuit design for communications, analog electronics, radio frequency integrated circuits, low-phase-noise oscillators, frequency synthesis, VLSI clock distribution, optical communications, high-speed electronics for lightwave systems, devices for all optical networking and imaging

ARTHUR P. RAMIREZ (Divisional Dean)

Experimental materials physics encompassing a broad range of systems including semiconductors, superconductors, magnets, thermoelectrics, and dielectrics. Research that connects materials and devices, with a focus on oxides and organics. Many-body physics that arises from geometrical frustration of low energy degrees of freedom. Techniques include ultra-low temperatures and high magnetic fields, thermodynamic and transport measurements, defect spectroscopy, and device characterization.

HAMID SADJADPOUR

Wireless communication systems, network information theory and scaling laws, performance analysis of wireless and social networks, routing and MAC protocol design for wireless networks

HOLGER SCHMIDT

Optofluidics, atom photonics, hollow-core photonics for biomedicine and quantum optics, nanomagnetism, nanomagneto-optics, single-particle spectroscopy, ultrafast optics

ALI SHAKOURI

Quantum electronics; nano- and microscale heat and current transport in semiconductor devices;

thermoelectric/thermionic energy conversion; renewable energy sources; thermal imaging; micro-refrigerators on a chip; and optoelectronic integrated circuits

JOHN F. VESECKY

HF radar design and construction and observation of ocean surface winds, waves and currents with applications to coastal and deep water ocean processes; project MEDSAT

DONALD WIBERG, Emeritus (UCLA)

Control systems, Kalman filtering, system parameter estimation, adaptive optics for large telescopes, and biomedical system modeling

Associate Professor

NOBUHIKO P. KOBAYASHI

Physics and chemistry of complex functional materials; Group III-V compound semiconductor nanometer-scale structures and devices; mixed oxide nanometer-scale structures and devices; tailored nanomicro-meter-scale hybrid semiconductor structures for energy conversion devices and advanced electronics, Science Director of Advanced studies Laboratories, UCSC and NASA Ames Research Center)

JOEL KUBBY

Micro-Electro-Mechanical-Systems (MEMS), adaptive optics (AO), optical-MEMS, bio-MEMS, bio-imaging, AO microscopy

Adjunct Professor

JOHN BALACHANDRA

Electric power systems control and stability, microgrid generation and controls, sustainable energy and power generation

BIN CHEN

Synthesis and characterizations of semiconductor and metal nanostructure materials and hybrid composites; novel materials applications and multifunctional devices for energy harvesting, conversions and storage, and ultra-sensitive imaging and detection techniques

FARID DOWLA

RF communications, radar, and signal and image processing

HEINZ ERZBERGER

Air traffic control

EPHRAIM SUHIR

Physical design, reliability and packaging of micro- and optoelectronic systems, materials engineering, applied probability, predictive modeling, nanoengineering

KAZUAKI YAZAWA

System optimization of thermoelectric power generation

Associate Adjunct Professor

NATALIO MINGO

Thermal and electronic transport, nanomaterials, nanotechnology, surface science, computational physics

TOSHISHIGE YAMADA

Modeling of micro/nanoscale electronic material and devices emphasizing energy-band and equivalent-circuit methods, comparison of modeling and experiments; semiconducting nanowires; carbon nanotubes/nanofibers devices; atomic chain devices; metallic nanoislands; strained Si/SiGe channels; lateral surface superlattice; Josephson devices, etc.

Assistant Adjunct Professor

ZHIXI BIAN

Semiconductor materials and devices for optoelectronics and thermoelectrics, thermal management of microelectronics, renewable energy

KENNETH LAWS

HF radar sensing of ocean surface currents, HF radar detection of ships, other applications of radar remote sensing, development of autonomous ocean surface vehicles for coastal marine sensing, and development of renewable energy sources

MICHAEL OYE

Nanotechnology-based devices using carbon nanotubes and inorganic nanowires for solar energy, field emission lighting, chemical nanosensor

SUE CARTER (Physics)

Experimental condensed matter physics, polymer physics, molecular electronics, phase transitions, electronic and optical properties of materials

DAVID W. DEAMER (joint with Chemistry and Biochemistry and Biomolecular Engineering, UC Davis Emeritus)

Membrane biophysics, nanopore analysis, DNA sequencing, biomolecular self-assembly

WILLIAM DUNBAR (Computer Engineering)

Theory and application of feedback control, single-molecule biophysics, nanopore sensors, dynamics and control of biomolecules

GABRIEL ELKAIM (Computer Engineering)

Embedded systems, robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems, robotics, unmanned autonomous vehicles (UAVs); and cooperative control

J.J. GARCIA-LUNA-ACEVES Chair of Computer Engineering, Baskin Professor of Computer Engineering, and Director of Networking Sciences Institute

Computer communication, wireless networks, Internet, network science

MATTHEW R. GUTHAUS (Computer Engineering)

VLSI, CAD, design for reliability and variability, system-on-chip, 3D IC, system-in-package

RONNIE D. LIPSCHUTZ (POLITICS)

International relations; global political economy; globalization; foreign policy; resource/environmental politics; global political networks; global civil society and social movements; popular culture and politics; technology and society; risk society

DARRELL D. E. LONG (Computer Science)

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

ROBERTO MANDUCHI (Computer Engineering)

Computer vision and sensor processing, with application to assistive technology for the visually impaired

PATRICK E. MANTEY (Computer Engineering)

(Baskin Professor of Computer Engineering)

CITRIS Campus Director

Multimedia systems, digital signal processing, sensor systems and networks, real-time monitoring and control, image systems, image processing, visualization, geographic information systems, decision support systems

CLAIRE MAX (Astronomy and Astrophysics and UCO/Lick Observatory)

Adaptive optics, planetary science

JERRY NELSON (Astronomy and Astrophysics and UCO/Lick Observatory)

Design and construction of large telescopes; project scientist for the Keck telescope and Thirty Meter telescope

JOSE RENAULT (Computer Engineering)

Computer architecture, including design effort metrics and models, infrared thermal measurements, thermal modeling, process variability, energy efficient data-centers, thread level speculation, and FPGA/ASIC design

B. SHASTRY (Physics)

Condensed matter physics, strongly correlated matter, Mott-Hubbard physics, high T_c superconductivity, quantum magnetism, exactly integrable systems, exactly solvable models of many-body systems and in statistical mechanics, quantum chaos, geometric frustration

WILLIAM T. SULLIVAN (Biology)

Genetics, cell biology, development of the Drosophila embryo

JIN Z. ZHANG (Chemistry)

Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

80J. Renewable Energy Sources. S

Introduction to energy storage and conversion with special emphasis on renewable sources. Fundamental energy conversion limits based on physics and existing material properties. Various sources, such as solar, wind, hydropower, geothermal, and fuel cells described. Cost-benefit analysis of different alternative sources performed, and key roadblocks for large-scale implementation examined. Latest research on solar cells and applications of nanotechnology on energy conversion and storage introduced. Students cannot receive credit for this course and course 81J. (General Education Code(s): PE-E, T2-Natural Sciences.) *A. Shakouri*

80S. Sustainability Engineering and Practice. F

Topical introduction to principles and practices of sustainability engineering and ecological design with emphasis on implementation in society. Provides an understanding of basic scientific, engineering, and social principles in the design, deployment, and operation of resource-based human systems, and how they can be maintained for this and future generations. No specialized background in engineering, science, or social sciences is assumed. (General Education Code(s): PE-E, T7-Natural Sciences or Social Sciences.) *A. Shakouri*

80T. Modern Electronic Technology and How It Works. W

Basic knowledge of electricity and "how things work," how technology evolves, its impact on society and history, and basic technical literacy for the non-specialist. Broad overview of professional aspects of engineering and introduction and overview of basic systems and components. Topics include electrical power, radio, television, radar, computers, robots, telecommunications, and the Internet. (General Education Code(s): SI, T7-Natural Sciences or Social Sciences, Q.) *K. Pedrotti*

81C. Technological Innovation and Environmental Challenges. S

Introduces key technological solutions to environmental problems; discusses their underlying principles; and examines their societal dimensions. Topics include: conventional and renewable energy; emerging technologies for transportation, energy efficiency clean water; planetary engineering; and lean manufacturing. (Also offered as College Eight 81C. Students cannot receive credit for both courses.) (General Education Code(s): SI, T-2 Natural Sciences.) *K. Pedrotti, J. Vesecky*

94. Group Tutorial. F,W,S

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

101. Introduction to Electronic Circuits. F,W

Introduction to the physical basis and mathematical models of electrical components and circuits. Topics include circuit theorems (Thevenin and Norton Equivalents, Superposition), constant and sinusoidal inputs, natural and forced response of linear circuits. Introduction to circuit/network design, maximum power transfer, analog filters, and circuit analysis using Matlab. Topics in elementary electronics including amplifiers and feedback. Prerequisite(s): Physics 5C/N or 6C/N, and Mathematics 24 or previous or concurrent enrollment in Applied Mathematics and Statistics 20 or 20A. Concurrent enrollment in course 101L is required. *M. Isaacson, J. Vesecky, H. Schmidt, J. Kubby, A. Shakouri, W. Liu, K. Pedrotti*

101L. Introduction to Electronic Circuits Laboratory (2 credits). F,W

Illustrates topics covered in course 101. One two-hour laboratory session per week. Students are billed for a materials fee. Prerequisite(s): Physics 5C/N or 6C/N; and Mathematics 24 or previous or concurrent enrollment in Applied Mathematics and Statistics 20 or 20A. Concurrent enrollment in course 101 is required. *M. Isaacson, J. Vesecky, H. Schmidt, J. Kubby, A. Shakouri, W. Liu, K. Pedrotti*

103. Signals and Systems. F,S

The course covers the following topics: characterization and analysis of continuous-time signals and linear systems, time domain analysis using convolution, frequency domain analysis using the Fourier series and the Fourier transform, the Laplace transform, transfer functions and block diagrams, continuous-time filters, sampling of continuous time signals, examples of applications to communications and control systems. Prerequisite(s): courses 101/L and Applied Mathematics and Statistics 20 or 20A. *H. Sadjadpour, P. Milanfar, B. Friedlander*

103L. Signals and Systems Laboratory (2 credits). F,S

Use and operation of spectrum analyzers; advanced signal analysis using oscilloscopes; measuring impulse response, step response, frequency response, and computer analysis of real signals. MATLAB programming is taught and used as a tool for signal analysis. Students are billed a materials fee. Prerequisite(s): course 101 and 101L, and Applied Mathematics and Statistics 20 or 20A. Concurrent enrollment in course 103 required. *H. Sadjadpour, P. Milanfar, B. Friedlander*

104. Bio-electronics and Bio-instrumentations. W

Focuses on the analysis, design, and measurement of components and systems of biomedical devices which interface biological systems with electronics mechanics, and optics. Topics include: abiotic/biotic interface; low-power analog/digital circuits and systems; signal integrity; energy harvesting; wireless techniques; regulatory/ethic compliance tailored for both invasive and non-invasive biomedical applications. Prerequisite(s): course 103. Enrollment restricted to juniors, seniors, and graduate students. *W. Liu*

115. Introduction to Micro-Electro-Mechanical-Systems (MEMS) Design. S

Begins with overview of MEMS devices and processes that are used to fabricate them. The basic governing equations for MEMS devices in different energy domains (mechanical, electrical, optical, thermal, and fluidic) reviewed, and both analytical and finite element coupled-domain modeling is used to design MEMS devices. Students work in teams to design, lay out, and fabricate MEMS devices and test structures using a standard multi-user process available through a foundry service. A presentation and term paper describing the design and layout will be required. Prerequisite(s): courses 101/L, 135/L, 145/L, Mathematics 19A and 19B, Mathematics 23A and 23B, and Mathematics 24 or Applied Mathematics and Statistics 20 or 20A, Physics 5A, 5B, 5C, and 5D. Enrollment limited to 15. *J. Kubby*

123A. Engineering Design Project I. W

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Prerequisite(s): Electrical Engineering 171 and Computer Engineering 100; previous or concurrent enrollment in Computer Engineering 185 and in at least one of the following: Electrical Engineering 157, Computer Engineering 121 or Computer Engineering 118; permission of department and instructor. Students are billed a materials fee. (General Education Code(s): PR-E.) *S. Petersen, J. Vesecky*

123B. Engineering Design Project II (7 credits). S

Second of two-course sequence in engineering system design. Students fully implement and test system designed and specified in course 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required. Students are billed a materials fee. Prerequisite(s): course 123A. *S. Petersen, J. Vesecky*

130. Introduction to Optoelectronics and Photonics. F

Introduction to optics, photonics and optoelectronics, fiber optic devices and communication systems. Topics include: ray optics, electromagnetic optics, resonator optics, interaction between photons and atoms, dielectric waveguides and fibers, semiconductor light sources and detectors, modulators, amplifiers, switches, and optical fiber communication systems. Taught in conjunction with course 230. Students cannot receive credit for this course and course 230. Prerequisite(s): Physics 5B and 5C, or 6B and 6C; concurrent enrollment in course 130L. *C. Gu*

130L. Introduction to Optoelectronics Laboratory (1 credit). F

Includes a series of projects to provide hands-on experience needed for basic concepts and laboratory techniques of optical fiber technology. Students are billed a materials fee. Prerequisite(s): Physics 5L-M-N, or 6L-M-N; concurrent enrollment in course 130. Enrollment limited to 30. *C. Gu*

135. Electromagnetic Fields and Waves. W

Vector analysis. Electrostatic fields. Magnetostatic fields. Time-varying fields and Maxwell's equations. Plane waves. Concurrently enrollment in course 135L required. Prerequisite(s): course 101/L; Mathematics 23B; and Mathematics 24 or Applied Mathematics and Statistics 20 or 20A. Students must concurrently enroll in course 135. *M. Isaacson*

135L. Electromagnetic Fields and Waves Laboratory (2 credits). W

Laboratory sequence illustrating topics in course 135. One two-hour laboratory session per week. Students must concurrently enroll in course 135. Students are billed a materials fee.

Prerequisite(s): course 101/L; Mathematics 23B; and Mathematics 24 or Applied Mathematics and Statistics 20 or 20A. Students must concurrently enroll in course 135. *M. Isaacson*

136. Engineering Electromagnetics.

Course will cover electromagnetic wave propagation, transmission lines, waveguides, and antennas.

Prerequisite(s): course 135/L. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *M. Isaacson*

145. Properties of Materials. F,S

The fundamental electrical, optical, and magnetic properties of materials, with emphasis on metals and semiconductors: chemical bonds, crystal structures, elementary quantum mechanics, energy bands. Electrical and thermal conduction. Optical and magnetic properties. Prerequisite(s): Physics 5A/L, 5B/M, and 5C/N or 6A/L, 6B/M, and 6C/N. Students must also concurrently enroll in course 145L. *H. Schmidt, N. Kobayashi, J. Kubby, A. Shakouri*

145L. Properties of Materials Laboratory (2 credits). F,S

Laboratory sequence illustrating topics covered in course 145. One two-hour laboratory per week. Students are billed a materials fee. Prerequisite(s): Physics 5A/L, 5B/M, and 5C/N or 6A/L, 6B/M, and 6C/N. Students must also concurrently enroll in course 145. *H. Schmidt, N. Kobayashi, J. Kubby, A. Shakouri*

151. Communications Systems. W

An introduction to communication systems. Analysis and design of communication systems based on radio, transmission lines, and fiber optics. Topics include fundamentals of analog and digital signal transmission in the context of baseband communications, including concepts such as modulation and demodulation techniques, multiplexing and multiple access, channel loss, distortion, bandwidth, signal-to-noise ratios and error control. Digital communication concepts include an introduction to sampling and quantization, transmission coding and error control. Prerequisite(s): courses 103, 101/L, and Computer Engineering 107 or probability theory and random variables background. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *H. Sadjadpour, P. Mantey, B. Friedlander*

152. Introduction to Wireless Communications.

Introduction to the principles of wireless communications systems. Wireless propagation channels and their impact on digital communications. Modulation techniques for wireless systems and their performance. Multi-antenna systems and diversity. Multicarrier and spread spectrum. Multi-access methods: FDMA, TDMA, CDMA. The structure of cellular systems. Students cannot receive credit for this course and course 252. Prerequisite(s): Computer Engineering 107 and course 151, or by consent of instructor. Enrollment restricted to juniors and seniors. *B. Friedlander*

153. Digital Signal Processing.

Introduction to the principles of signal processing, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete Fourier transform, computation of the discrete Fourier transform, and filter design techniques. Taught in conjunction with Electrical Engineering 250. Students cannot receive credit for this course and Electrical Engineering 250. (Also offered as Computer Engineering 153. Students cannot receive credit for both courses.) Prerequisite(s): course 103. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *H. Sadjadpour, P. Mantey, P. Milanfar*

154. Feedback Control Systems. F

Analysis and design of continuous linear feedback control systems. Essential principles and advantages of feedback. Design by root locus, frequency response, and state space methods and comparisons of these techniques. Applications. Prerequisite(s): course 103. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. Enrollment limited to 30. *P. Milanfar, P. Mantey, J. Rosen, W. Dunbar, G. Elkaim*

157. RF Hardware Design. W

Engineering design cycle for wireless and RF systems: design, practical hardware implementation, and prototype. Prerequisite(s): courses 101/L, 103, and 171, and Computer Engineering 174; or consent of instructor. Concurrent enrollment in course 157L is required. Enrollment limited to 30. *K. Pedrotti, S. Petersen*

157L. RF Hardware Design Laboratory (2 credits). W

Laboratory to accompany course 157, emphasizing hardware-design practice and principles applies to RF apparatus. Students design and implement a substantial final project during the last half of the course. Students are billed a materials fee. Prerequisite(s): courses 101/L, 103, 171, and Computer Engineering 174; or consent of instructor. Concurrent enrollment in course 157 is required. Enrollment limited to 30. *K. Pedrotti, S. Petersen*

171. Analog Electronics. S

Introduction to (semiconductor) electronic devices. Conduction of electric currents in semiconductors, the semiconductor p-n junction, the transistor. Analysis and synthesis of linear and nonlinear electronic circuits containing diodes and transistors. Biasing, small signal models, frequency response, and feedback. Operational amplifiers and integrated circuits. Prerequisite(s): course 101/L; previous or concurrent enrollment in course 171L required. *C. Gu, W. Liu, A.*

171L. Analog Electronics Laboratory (2 credits). S

Laboratory sequence illustrating topics covered in course 171. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): courses 101/L; previous or concurrent enrollment in course 171 required. *C. Gu, W. Liu, A. Shakouri, K. Pedrotti*

172. Advanced Analog Circuits. S

Analog circuit design covering the basic amplifier configurations, current mirrors, differential amplifiers, frequency response, feedback amplifiers, noise, bandgap references, one- and two-stage operational amplifier design, feedback amplifier stability, switched capacitor circuits and optionally the fundamentals of digital-to-analog and analog-to-digital converters. Emphasis throughout will be on the development of approximate and intuitive methods for understanding and designing circuits. Cannot receive credit for this course and course 221. Prerequisite(s): course 171. *W. Liu, K. Pedrotti*

175. Energy Generation and Control. S

Introduces electrical energy generation, sensing, and control, emphasizing the emerging smart grid. Topics include 3-phase AC power systems, voltage and transient stability, fault analysis, grid protection, power-flow analysis, economic dispatch, and high voltage DC distribution (HVDC). Prerequisite(s): course 101. Concurrent enrollment in course 175L required. *J. Balachandra*

175L. Energy Generation and Control Laboratory (2 credits). S

Computer analysis and simulation of energy generation, components, power-flow analysis, systems, and control covering topics from course 195. Weekly computer simulations reinforce the concepts introduced in course 175. Students are billed a materials fee. Prerequisite(s): course 101. Concurrent enrollment in course 175 required. *J. Balachandra*

176. Energy Conservation and Control. F

AC/DC electric-machine drives for speed/position control. Integrated discussion of electric machines, power electronics, and control systems. Computer simulations. Applications in electric transportation, hybrid-car technology, robotics, process control, and energy conservation. Prerequisite(s): courses 103 and 171. Concurrent enrollment in course 176L is required. *J. Balachandra*

176L. Energy Conversion and Control Laboratory (2 credits). F

Simulink-based simulations of electric machines/drives in applications such as energy conservation and motion control in robotics and electric vehicles. Students are billed a materials fee. Prerequisite(s): courses 103 and 171. Concurrent enrollment in course 176 is required. *J. Balachandra*

177. Power Electronics. W

Switch-mode power electronics. Switch-mode DC power supplies. Switch-mode converters for DC and AC motor drives, wind/photovoltaic inverters, interfacing power electronic equipment with utility systems. Power semiconductor devices, magnetic design, electromagnetic interference (EMI). Prerequisite(s): courses 103 and 171. Concurrent enrollment in course 177L is required. *J. Balachandra*

177L. Power Electronics Laboratory (2 credits). W

Simulink-based simulations with power electronic devices and systems in applications such as energy conservation and motion control in robotics and electric vehicles. Students are billed a materials fee. Prerequisite(s): courses 103 and 171. Concurrent enrollment in course 177 is required. *J. Balachandra*

178. Device Electronics. W

This course reviews the fundamental principles, device's materials, and design and introduces the operation of several semiconductor devices. Topics include the motion of charge carriers in solids, equilibrium statistics, the electronic structure of solids, doping, the pn junction, the junction transistor, the Schottky diode, the field-effect transistor, the light-emitting diode, and the photodiode. Prerequisite(s): courses 145/L and 171/L. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *C. Gu, N. Kobayashi, W. Liu, K. Pedrotti*

180J. Advanced Renewable Energy Sources. S

Provides a comprehensive overview of renewable energy sources. Fundamental energy-conversion limits based on physics and existing material properties discussed. Various sources and devices, such as solar, wind, hydropower, geothermal, and fuel cells described. Solar- and wind-site assessment, as well as biofuel energy balance, also discussed. Key scientific and economic roadblocks for large-scale implementation examined. Finally, the latest research on application of nanotechnology to energy conversion and storage introduced. Taught in conjunction with course 80J. Prerequisite(s): Mathematics 3 or Applied Mathematics and Statistics 3, 5 or 7. Enrollment limited to 30. (General Education Code(s): PE-E.) *A. Shakouri*

183. Special Topics in Electrical Engineering.

Topics vary with instructor. Sample topics include smart grids, bioelectronics, antennas, etc. Enrollment by instructor permission. Approval of undergraduate adviser required for credit as an upper-division elective. May be repeated for credit. *The Staff*

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the electrical engineering program and a willing sponsor at the field site and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the electrical engineering program and a willing sponsor at the field site and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. If using this course to replace the capstone design requirement (courses 123A and 123B), students must take course 157 or Computer Engineering 118 to fulfill the ABET team design experience. May be repeated for credit. *The Staff*

195F. Senior Thesis Research (2 credits). F,W,S

Prerequisite(s): petition on file with sponsoring agency. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Individual Study or Research. F,W,S

Provides for department-sponsored individual study program off campus, for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for department-sponsored individual study program off campus for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in Electrical Engineering (3 credits).

Basic teaching techniques for TAs: responsibilities and rights, resource materials, computer security, leading discussion or lab sessions, presentations techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training: use of library and online databases, technical typesetting, writing journal and conference papers, publishing, giving talks, and ethical issues. Enrollment restricted to graduate students. *C. Gu*

211. Introduction to Nanotechnology. W

Introduction to underlying principles of the emerging field of nanotechnology. Intended for multidisciplinary audience with a variety of backgrounds. Introduces scientific principles and laws relevant on the nanoscale. Discusses applications in engineering, physics, chemistry, and biology. Students are billed a materials fee. Prerequisite(s): course 145 or consent of instructor. Enrollment limited to 35. *H. Schmidt*

212. Introduction to BioMEMS. F

Oriented to general engineering and science students. Topics included are: 1) microfabrication of silicon, glass, and polymer materials; 2) microfluidics and electrokinetics; 3) sensors, actuators, and drug-delivery systems; 4) micro total-analysis systems and lab-on-a-chip devices; 5) detection and measuring systems; 6) genomics, proteomics, DNA, and protein microarrays; 7) emerging applications in medicine, research, and homeland security; 8) packaging, power systems, data communication, and RF safety; and 9) biocompatibility and standards. Recommended for advanced undergraduates and graduate students in bioengineering, electrical engineering, chemistry, and health-related fields including biochemistry, molecular and cellular biology, physiology, and genetics. Enrollment restricted to graduate students, or by permission of the instructor. *J. Kubby*

213. Nanocharacterization of Materials. S

Covers the many characterization techniques used to characterize materials from volumes less than one cubic micrometer, including the basic physics of each method, the methodology used to get quantitative results, and the advantages and limitations of each technique. Enrollment restricted to graduate students, or to undergraduates majoring in engineering or science by permission of instructor. *M. Isaacson*

215. Micro-Electro-Mechanical Systems (MEMS) Design.

Introduction to MEMS technology: covers basic microfabrication technologies, the governing physics for MEMS devices in different energy domains (mechanical, electrical, optical, thermal, and fluidic).

Fabrication and design of MEMS devices illustrated using examples of existing research prototypes and commercial products. Students design, lay out, and fabricate an optical MEMS deformable mirror device for applications in adaptive optics. Students are billed a materials fee. Prerequisite(s): courses 135, 145, and 211; and Physics 5A, 5B, and 5C. Enrollment restricted to seniors and graduate students. May be repeated for credit. *J. Kubby*

216. Nanomaterials and Nanometer-scale Devices. S

Materials controlled at nanometer-scale will revolutionize existing technologies. Offers two core parts: (1) physics and chemistry of nanomaterials discussed in lectures; and (2) advanced research in nanomaterials and nanometer-scale devices presented by leading scientists from academia and industries. Prerequisite(s): course 211; enrollment restricted to graduate students. *N. Kobayashi*

221. Advanced Analog Integrated Circuits. S

Analog integrated circuit design with emphasis on fundamentals of designing linear circuits using CMOS. Covers MOS devices and device modeling, current mirrors, op-amp design, op-amp compensation, comparators, multipliers, voltage references, sample-and-holds, noise, and an introduction to more complicated systems using these building blocks, such as phase locked loops and analog-to-digital converters. If time permits, integrated circuit layout issues and device/circuit fabrication. Students cannot receive credit for this course and course 172. Prerequisite(s): course 171 or equivalent; course 178 or equivalent recommended. Enrollment limited to 20. *W. Liu, K. Pedrotti*

222. High-Speed Low-Power Integrated Circuit Design.

Digital integrated circuit design covered with an emphasis on high-speed and low-power applications. Covers signaling techniques and circuits including transmitters and receivers, with emphasis on on-chip interconnect, timing fundamentals and timing circuits. Theoretical fundamentals of phase locked loops and design issues of implementation addressed. Course has a project design component. Interview to assess technical skills of student. Enrollment restricted to electrical engineering and computer engineering graduate students. Enrollment limited to 20. May be repeated for credit. *W. Liu*

223. Advanced Solid-State Devices.

Offers graduate students the opportunity to learn advanced solid-state devices (e.g., electronic, optoelectronic, photonic devices, and smart sensors) from various scientific, technological, and engineering aspects of functional materials (e.g., semiconductors, metals, insulators) used in these devices. Enrollment restricted to undergraduate students who have completed course 178 or to graduate students. *N. Kobayashi*

224. Physical Design of Micro- and Opto-Electronic Packages.

Micro- and opto-electronic packaging and materials; mechanical properties and behavior, thermal stress in dissimilar materials, and predictive modeling. Design for reliability, dynamic response to shocks and vibrations; reliability evaluations and testing; plastic packages of IC devices; photonics packages, fiber optics structures, and new frontiers. Enrollment restricted to graduate students. *The Staff*

225. Basics of Electronics Reliability. W

Basic concepts of reliability engineering taught in application to microelectronic and photonic materials, assemblies, and packages and systems. Emphasis on the physics and mechanics of failure physical design for reliability predictive modeling and accelerated testing, with numerous practical examples and illustrations. Prerequisite(s): basic calculus; electronic and photonic devices and systems. Enrollment restricted to graduate students. *The Staff*

226. CMOS Radio Frequency Integrated Circuit Design.

Covers narrowband and high-frequency techniques, noise, distortion, nonlinearities, low-noise amplifiers, power amplifiers, mixers, receivers, and transmitters for wireless communications. Topics are presented in the context of integrated designs in CMOS, but topics are fundamental and widely applicable. Prerequisite(s): course 172 or 221 or permission of instructor. *K. Pedrotti*

230. Optical Fiber Communication. F

Components and system design of optical fiber communication. Topics include step-index fibers, graded-index fibers, fiber modes, single-mode fibers, multimode fibers, dispersion, loss mechanisms, fiber fabrication, light-emission processes in semiconductors, light-emitting diodes, laser diodes, modulation response, source-fiber coupling, photodetectors, receivers, receiver noise and sensitivity, system design, power budget and rise-time budget, fiber-optic networks (FDDI, SONET, etc), wavelength division multiplexing (WDM). Students cannot receive credit for this course and course 130. Enrollment restricted to graduate students. May be repeated for credit. *C. Gu*

231. Optical Electronics.

Introduction to phenomena, devices, and applications of optoelectronics. Main emphasis is on optical properties of semiconductors and semiconductor lasers. Prerequisite(s): course 145/L. May be repeated for credit. *H. Schmidt, A. Shakouri, C. Gu*

232. Quantum Electronics.

Covers basic theory of interaction of electromagnetic radiation with resonant atomic transitions; density matrix treatment; Rabi oscillation, laser mode-locking, Q-switching; parametric oscillation, stimulated Brillouin and Raman scattering, coherent radiation; and noise in photodetectors and lasers. Prerequisite(s): course 231 or equivalent. *A. Shakouri*

233. Fiber Optics and Integrated Optics.

Concepts and analysis of optical wave propagation in optical fibers and waveguides. Topics include geometrical optics description and electromagnetic theory of slab waveguides; modes, dispersion, and birefringence in optical fibers; mode coupling and gratings in fibers; wavelength-division multiplexing; nonlinear optics in fibers and solitons; semiconductor optical amplifiers and Er doped fiber amplifiers. Prerequisite(s): courses 135 and 145. *C. Gu*

234. Liquid Crystal Displays.

Introduction to principle of operation, components and systems of liquid crystal displays (LCDs). Topics include basic LCD components, properties of liquid crystals, polarization of optical waves, optical wave propagation in anisotropic media, Jones matrix method, various display systems, active matrix addressing, and color LCDs. Prerequisite(s): course 135 and 136. Enrollment restricted to seniors and graduate students. *C. Gu*

235. Optical Information Storage and Processing.

Introduction to applications of optical technologies in data storage and information processing. Topics include basic principles of Fourier optics; electro-optic, acousto-optic, and magneto-optic effects and devices; planar and volume holography; optical data storage systems; and optical information processing, interconnecting, and switching systems. Enrollment restricted to graduate students, or undergraduates having completed Physics 5B and 5C and course 103. *C. Gu*

236. Integrated Biophotonics.

Covers use of integrated optics for study of biological material; fluorescence spectroscopy, single molecule detection, optical tweezers, layered dielectric media, hollow-core waveguides, photonic crystals, optofluidics, biophotonic systems, and applications. Prerequisite(s): course 233 or equivalent. Enrollment restricted to graduate students. Enrollment limited to 20. *H. Schmidt*

241. Introduction to Feedback Control Systems. F

Graduate-level introduction to control of continuous linear systems using classical feedback techniques. Design of feedback controllers for command-following error, disturbance rejection, stability, and dynamic response specifications. Root locus and frequency response design techniques. Extensive use of Matlab for computer-aided controller design. Course has concurrent lectures with Electrical Engineering 154. (Also offered as Computer Engineering 241. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *G. Elkaim, J. Rosen, W. Dunbar*

250. Digital Signal Processing.

In-depth study of signal processing techniques, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete Fourier transform, computation of the discrete Fourier transform, filter design techniques. Students cannot receive credit for this course and course 153. *H. Sadjadpour, P. Mantey, P. Milanfar, B. Friedlander*

251. Principles of Digital Communications. S

A core course on digital communications theory. Provides an introduction to digital communication, including source coding, characterization of communication signals and systems, modulation and demodulation for the additive Gaussian channel, digital signaling, and over bandwidth constrained linear filter channels and over fading multipath channels. Prerequisite(s): course 151 and 153 (or Computer Engineering 153) and Computer Engineering 107. *B. Friedlander*

252. Wireless Communications.

In-depth study of the physical layer of wireless communications. Wireless propagation channels and their impact on digital communications. Modulation techniques for wireless systems and their performance. Multi-antenna systems and diversity. Multicarrier and spread spectrum. Multi-access methods: FDMA, TDMA, CDMA. The structure of cellular systems. Students cannot receive credit for this course and course 152. Prerequisite(s): course 251. *B. Friedlander*

253. Introduction to Information Theory. W

An introduction to information theory including topics such as entropy, relative entropy, mutual information, asymptotic equipartition property, channel capacity, differential entropy, rate distortion theory, and universal source coding. (Also offered as Computer Science 250. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 107, or Applied Mathematics and Statistics 131 or equivalent course, or permission of instructor. Enrollment restricted to graduate students. *H. Sadjadpour*

254. Multi-User Information Theory.

Topics include basic information theory, multiple-access channel, broadcast channel, interference channel, relay channel, capacity with feedback, capacity of networks, and channels with state and current research. Prerequisite(s): course 253. Enrollment restricted to graduate students. *The Staff*

255. Multiple-Antenna Wireless Communications.

Basic theory of multiple-antenna wireless systems. Introduction to space-time propagation models, capacity of multiple-input multiple-output (MIMO) channels, space-time coding, transmitter CSI, and multiuser space-time systems. Includes discussion of multiple antennas in emerging systems and standards. Prerequisite(s): course 252 and Computer Engineering 107, or Applied Mathematics and Statistics 131, or equivalent. *The Staff*

256. Introduction to Radar Systems and SAR.

Fundamentals of radar systems and radar-signaling processing, including SAR. Emphasizes real-world applications. MATLAB emphasizes algorithm development and performance analysis. Basic EM

theory and a first course in signal processing are recommended. Enrollment limited to 20. *F. Dowla*

261. Error Control Coding. F

Covers the following topics: introduction to algebra; linear block code; cyclic codes; BCH code; RS codes; spectral domain study of codes; CRC; and product codes. Enrollment restricted to graduate students. *H. Sadjadpour*

262. Statistical Signal Processing I. W

Covers fundamental approaches to designing optimal estimators and detectors of deterministic and random parameters and processes in noise, and includes analysis of their performance. Binary hypothesis testing: the Neyman-Pearson Theorem. Receiver operating characteristics. Deterministic versus random signals. Detection with unknown parameters. Optimal estimation of the unknown parameters: least square, maximum likelihood, Bayesian estimation. Will review the fundamental mathematical and statistical techniques employed. Many applications of the techniques are presented throughout the course. Note: While a review of probability and statistics is provided, this is not a basic course on this material. Prerequisite(s): course 103 and Computer Engineering 107, or permission of instructor. *P. Milanfar*

263. Advanced Topics in Coding Theory.

Covers convolutional codes and its principles, maximum likelihood decoding and Viterbi decoding, performance evaluation of convolutional codes, trellis coded modulation (TCM), rotationally invariant convolutional codes, turbo codes, turbo decoding principles, performance evaluation of turbo codes, interleaver design for turbo codes, topics on turbo codes, space-time codes, and LDPC. Prerequisite(s): course 261. Enrollment restricted to electrical engineering, computer engineering, and computer science graduate students. Enrollment limited to 10. *H. Sadjadpour*

264. Image Processing and Reconstruction. F

Fundamental concepts in digital image processing and reconstruction. Continuous and discrete images; image acquisition, sampling. Linear transformations of images, convolution and superposition. Image enhancement and restoration, spatial and spectral filtering. Temporal image processing: change detection, image registration, motion estimation. Image reconstruction from incomplete data. Applications. Students that have completed Computer Engineering 261 may not take this course for credit. Prerequisite(s): course 153 or permission of instructor. *P. Milanfar*

265. Introduction to Inverse Problems (3 credits).

Fundamental approaches and techniques in solving inverse problems in engineering and applied sciences, particularly in imaging. Initial emphasis on fundamental mathematical, numerical, and statistical formulations and known solution methods. Sampling of applications presented from diverse set of areas (astronomical, medical and optical imaging, and geophysical exploration). Enrollment restricted to graduate students. *P. Milanfar*

270. Neural Implant Engineering.

Advanced studies of the basic neuroscience-engineering design requirements and technological issues associated with implantable neural prostheses, with particular emphasis on retinal and cortical function. Course is team-taught via remote web cast. A basic understanding of physics, circuit theory, and electronics is required. Enrollment restricted to graduate students; juniors and seniors may enroll by permission of instructor. *W. Liu*

280B. Seminar on Integrated Bioelectronics (2 credits). F,W,S

Weekly seminar covering current research in integrated bioelectronics. May be repeated for credit. *W. Liu*

280I. Seminar on Microscopy and Nanotechnology (1 credit).

Weekly seminar series covering research topics and experimental research in microscopy and nanotechnology. Current research and literature are discussed. Students lead discussion and participate in all meetings. Enrollment restricted to graduate students. Enrollment by permission of instructor. Enrollment limited to 10. May be repeated for credit. *M. Isaacson*

280M. Seminar on Micro-Electro-Mechanical Systems (MEMS) (2 credits). F,W,S

Weekly seminar series covering topics of current research interest in Micro-Electro-Mechanical Systems (MEMS) design, fabrication and applications. Current research work and literature in these areas are discussed. Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. May be repeated for credit. *J. Kubby*

280O. Seminar on Applied Optics (2 credits). F,W,S

Weekly seminar series covering topics of current research in applied optics, including integrated, quantum, nonlinear, and nano-optics. Current research work and literature in these areas are discussed. Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. May be repeated for credit. *H. Schmidt*

280Q. Seminar on Quantum Electronics and Nanoelectronics (2 credits). F,W,S

Weekly series covers current research in quantum electronics including electron and photon transport in nanostructures; nanoscale heat transport; optoelectronic integrated circuits; nanoscale devices for energy conversion; micro-refrigeration; thermal and acoustic imaging of nanostructures. Current research work and recent literature are discussed. Enrollment restricted to graduate students; undergraduates may enroll by permission of instructor. May be repeated for credit. *A. Shakouri*

281. Guest Seminar Series (1 credit).

Distinguished speakers from industry, universities, and government discuss current developments in electrical engineering and related fields. Emphasis on research questions that may lead to collaborative work with faculty and graduate students. Enrollment restricted to graduate students. May be repeated for credit. *N. Mingo, The Staff*

283. Special Topics in Electrical Engineering (3 credits).

Graduate seminar on a research topic in electrical engineering that varies with the particular instructor. Topics may include, but are not limited to, electromagnetics, antennas, electronics biotechnology, nanotechnology, signal processing, communications, VLSI, MEMS, and radio frequency. Enrollment restricted to graduate students and consent of instructor. Enrollment limited to 25. May be repeated for credit. *The Staff*

290. EE Graduate Seminar (1 credit).

Research seminar at the graduate level regarding technical areas of electrical engineering activity that are of interest to the research and/or commercial communities. Enrollment restricted to computer engineering, electrical engineering, or physics graduate students, or by permission of instructor. Enrollment limited to 30. May be repeated for credit. *The Staff*

291. Tomorrow's Professor: Preparing for an Academic Career in Science and Engineering (3 credits).

The aim of this course is two-fold: (1) inform, motivate, and prepare graduate students for a possible career in academia; (2) expose both undergraduate and graduate students to the academic enterprise, possible career options for those who pursue advanced degrees in engineering and science. Restricted to graduate students. Appropriate for graduate students in all fields of engineering, science, and mathematics; advanced undergraduates in good standing may enroll with permission of instructor. *P. Milanfar*

293. Advanced Topics in Electrical Engineering. F,S

Graduate seminar course on a research topic in electrical engineering that varies with the particular instructor. Typical topics include, but are not limited to, electromagnetics, antennas, electronics biotechnology, nanotechnology, signal processing, communications, VLSI, and MEMS. Prerequisite(s): Consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 25. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Technology and Information Management (TIM) is a multi-disciplinary program that focuses on the integration of engineering, computer science, information technology, and business management for two purposes: the technology of management, which includes the design of information technology to solve business problems, and the management of technology, which includes the management of new-product development and entrepreneurship. The program offers a bachelor of science (B.S.) degree in technology and information management (TIM) as well as a minor in technology and information management (TIM). See description below concerning advanced degree programs that became available starting fall 2009.

TIM is a rigorous, challenging major for those students wanting to pursue careers in the management of information and technology. TIM students will receive a thorough grounding in the fundamental principles and practices of technology (in particular, computer science and computer engineering) and management, and the scientific, mathematics, and economics principles upon which they are built. In particular, they will become proficient in the following areas: strategy, planning, innovation, entrepreneurship, information technology, software design, product development, and supply-chain management.

The essence of the technology and information management major at UCSC is the integration of fundamental intellectual content from the disciplines of computer science, computer engineering, business management economics, and finance. TIM students learn how to apply the fundamentals of these diverse disciplines to solving problems that require the integration of management and technology, e.g., developing information technology systems to manage all activities and operations in a firm, e-commerce, managing and commercializing a new technology, and starting a new high-technology company.

To graduate with a B.S. in technology and information management, students normally complete 23 required courses (with four laboratories, totaling 120 quarter credits) plus four elective courses (20 quarter credits) for the technology and information management major program. To plan for completion of these course requirements within the normative time, students should consult with an adviser as early as possible. Honors students are likely to find the rigorous management and leadership elements of the new program of significant interest. Industrial interactions and projects are key features of this major.

Technology and Information Management Policies

Admissions Policy

Lower-division students will be accepted into the technology and information management (TIM) major on completion of the School of Engineering (SOE) major declaration process during any of their first three quarters at UCSC. See <http://ua.soe.ucsc.edu/declare-your-major> for the complete process.

After the first three quarters, petitions to declare the major are reviewed individually. Students must have completed the foundation courses required for the major, and are expected to have a grade point average (GPA) among School of Engineering and Division of Physical and Biological Science courses (the SOE GPA) of 2.5. Progress in the major and ability to complete the major within campus limits will also be considered.

Foundation Courses: Computer Science 12A, or 5J and 11; Computer Engineering 16; and Mathematics 19A-B, or Mathematics 20A-B; Technology and Information Management 50 (or Economics 1 and 2).

Disqualification and Satisfactory Progress in the Major

Please refer to the Engineering section of this catalog for the School of Engineering's major disqualification policy.

Letter Grade Policy

Technology and Information Management requires letter grading for all courses applied toward the B.S. in technology and information management, with the exception of two lower-division courses which students may elect to take Pass/No Pass (not to include course 50 or 58). This policy includes courses required for the technology and information management major but sponsored by other departments.

Transfer Students

Articulation agreements with other California institutions are in place for some courses required for the technology and information management major; it is important for students to inquire whether specific courses meet the requirements of this major. Articulation information is available on ASSIST at www.assist.org. Courses taken at other institutions which emphasize applications of programming languages often do not count toward the technology and information management major at UCSC. Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for UCSC students to obtain pre-approval before taking courses elsewhere.

Preparation for the Major

The technology and information management major is intended for students with an interest in both technology and business. It is recommended that students intending to declare this major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Completion of business-oriented computer literacy and basic programming courses is of benefit to students entering this major. Completion of any economics and/or business-related courses in high school is also beneficial, but the faculty realizes that these courses may not be available at many high schools. Completion of comparable college courses at other institutions serves to strengthen the preparation of a student for the technology and information management major.

Technology and Information Management Major Requirements

In addition to completing UCSC general education requirements, students must complete 23 required courses (with four laboratories, totaling 120 quarter credits) plus four elective courses (20 quarter credits) for the technology and information management major program. To plan for completion of these course requirements within the normative time, students should consult with a School of Engineering adviser as early as possible. These 26 courses include the following:

Required Courses (23 courses plus four laboratories)

Applied Mathematics and Statistics (one 5-credit course)

Applied Mathematics and Statistics 5, *Statistics*

Mathematics (five 5-credit courses)

19A-B, *Calculus for Science, Engineering, and Mathematics*; and

22, *Introduction to Calculus of Several Variables*; and

Applied Mathematics and Statistics 10A and 20A, *Basic Mathematical Methods for Engineers I and II*

(3 credits each); or Applied Mathematics and Statistics 10 and 20, *Mathematical Methods for Engineers I and II*; or Mathematics 21, *Linear Algebra* and Mathematics 24, *Ordinary Differential Equations*

Economics (five 5-credit courses)

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

10A, *Economics of Accounting*

100A, *Intermediate Microeconomics*; or

100M, *Intermediate Microeconomics Math Intensive*

113, *Introduction to Econometrics*

Computer Engineering (three 5-credit courses and two 2-credit laboratories)

12/L, *Computer Systems and Assembly Language/Laboratory*

16, *Applied Discrete Mathematics*

150/L, *Introduction to Computer Networks/Laboratory*

Computer Science (three 5-credit courses and two 2-credit laboratories)

12A/L, *Introduction to Programming(Accelerated)/Laboratory*; or 5J, *Introduction to Programming in Java* and 11, *Intermediate Programming*

12B/M, *Introduction to Data Structures/Laboratory*

182, *Introduction to Database Management Systems*

Technology and Information Management (five 5-credit courses and one 2-credit seminar)

50, *Business Information Systems*

58, *Systems Analysis and Design*

101, *Management of Technology Seminar*

105, *Management of Technology I*

125, *Management of Technology II*

158, *Business Strategy and Information Systems*

Elective Courses (four courses)

Two 5-credit School of Engineering courses

- Students select two upper-division School of Engineering electives on the basis of their particular interests. These electives may be any 5-credit upper-division or graduate School of Engineering courses, with the following limitations:
 1. either Computer Engineering 153 or Electrical Engineering 153, but not both;
 2. either Applied Mathematics and Statistics 131 or Computer Engineering 107, but not both;
 3. at most one independent or field-study course (193, 195, 198, 199) with prior approval from the department to be used as an elective.
- One 5-credit upper-division economics course
- One 5-credit, upper-division School of Engineering or economics course (the limitations on School of Engineering electives given above apply)

Technology and Information Management Major Planners

The following are three sample academic plans for students to complete during their first two years as preparation for the technology and information management major. Plan One A is recommended for students who are more proficient in mathematics and programming and Plan One B is recommended for students who need more time to develop proficiency in mathematics and programming. Plan Two is for students who are considering the major.

Plan One A

Year	Fall	Winter	Spring
1st (frsh)	ECON 10A	ECON 1	ECON 2
	MATH 19A	MATH 19B	CMPE 16
	college core		
2nd (soph)	CMPS 10	CMPS 12A/L	CMPE 12B/M
	TIM 50	TIM 58	AMS 10A
			ECON 100A

Plan One B

Year	Fall	Winter	Spring
1st (frsh)	ECON 1	ECON 2	TIM 150
	MATH 3	MATH 19A	MATH 19B
	college core		
2nd (soph)	CMPS 10 (recommended)	CMPS 5J	CMPS 11
	ECON 10A	TIM 58	AMS 10A
	CMPE 16		

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	ECON 1	ECON 2	TIM 50
2nd (soph)	CMPS 10	CMPS 5J	CMPS 11
	MATH 3	MATH 19A	MATH 19B
	ECON 10A		

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in technology and information management is satisfied by completing course 158.

Comprehensive Requirement

Students complete two project-intensive courses, Technology and Information Management 158 and Technology and Information Management 105, which constitute the comprehensive requirement for the technology and information management major, based on the dual aspects (technology of management and management of technology) of the program. Course 158 deals with the technology of management, and course 105 deals with the management of technology. Both courses involve a substantial amount of critical thinking and writing within the context of comprehensive projects.

Technology and Information Management 158, Business Strategy and Information Systems, requires that students understand and use a structured methodology to evaluate the competitive use of information systems within an enterprise. This is accomplished by a team project as well as by an individual project that involves researching and writing a comprehensive analytical term paper using a methodology taught as part of this course.

Technology and Information Management 105, Management of Technology I, requires that students understand and apply structured methodologies for the development, management, and commercialization of technologies and products. Students will work in teams on a comprehensive term project in the development, commercialization, and management of technologies such as computers, networks, semiconductors, mechatronics, and biotechnology.

Honors

The TIM program awards honors to students whose academic performance is excellent. Students with a GPA between 3.5 and 3.75 will be awarded honors, and students with GPAs greater than 3.75 will be awarded high honors.

Minor in Technology and Information Management (TIM)***Purpose***

There is a growing need in today's increasingly complex socio-technological world for the fusion of information systems, technology, and business management for two important purposes: the use of information systems to solve business problems, and the management of technology, which includes new product development and enterprise management. The technology and information management (TIM) program therefore offers a minor in technology and information management (TIM) to provide undergraduates in the School of Engineering as well in other programs and divisions in the university, such as economics and business management economics, the physical and biological sciences, and arts, the opportunity to expand the breadth of their knowledge and training to include the management of information systems and the management of technology.

Rationale for the Courses

Courses for the technology and information management minor will include a combination of courses from the TIM program, computer engineering, computer science, and economics as well as the chains of prerequisites behind these courses. The TIM program courses for the technology and information management minor will include a mix of information systems and management of technology courses, providing students with a strong foundation in both the management of information systems and the management of technology.

Course Requirements

Requirements for the minor in technology and information management are the following:

Lower-Division Requirements

Mathematics (2 courses)

Mathematics 19A, *Calculus* (or Applied Mathematics and Statistics 11A/Economics 11A, *Mathematical Methods for Economists*, or Mathematics 11A, *Calculus*, or Mathematics 20A, *Honors Calculus*)

Mathematics 19B, *Calculus* (or Applied Mathematics and Statistics 11B/Economics 11B, *Mathematical Methods for Economists*, or Mathematics 11B, *Calculus*, or Mathematics 20B, *Honors Calculus*)

Computer Science (1 course)

12A/L, *Introduction to Programming (Accelerated)/Laboratory*; or Computer Science 5J, *Introduction to Programming in Java*; or Computer Science 5C, *Introduction to Programming in C/C++*

Technology and Information Management (2 courses)

Technology and Information Management 50, *Business Information System*; and

One of the following courses:

Technology and Information Management 58, *Systems Analysis and Design*; or

Technology and Information Management 80C, *Starting a New Technology Company*

Upper-Division Requirements

Mathematics (1 course)

One of the following courses:

Economics 113, *Introduction to Econometrics*; or

Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*;
or

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Upper-Division Electives (4 courses)

Four upper -division courses selected from the following:

Technology and Information Management 105, *Management of Technology I*

Technology and Information Management 125, *Management of Technology II*

Technology and Information Management 158, *Business Strategy and Information Systems*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Science 180, *Database Systems I* (or Computer Science 182, *Introduction to Database Management Systems*)

Economics 100A, *Intermediate Microeconomics* (or 100M, *Intermediate Microeconomics*, mathematics intensive)

Economics 100B, *Intermediate Macroeconomics* (or 100N, *Intermediate Macroeconomics*, mathematics intensive)

With pre-approval from the technology and information management undergraduate director, up to two graduate technology and information management courses may be used to satisfy upper-division elective requirements.

Graduate Programs

Technology and Information Management Ph.D. and Master's Degrees

Technology and information management (TIM) is a new and distinct discipline within engineering, combining technology management, systems engineering, and information technology. TIM's research and academic programs, combining information technology with both knowledge management and systems management, address problems facing firms today as they deal with more complex decisions in a global environment, facing new business models (e.g., "services") and business practices. TIM places special emphasis on research arising from challenges faced in creation and management of knowledge-based services and enterprises. TIM themes include:

Management and optimization of enterprise systems, which is the integration of business, technology, and management perspectives to enable an entity to achieve enhanced growth and profitability through use of analytical methods including stochastic models, optimization, game theory and knowledge management.

New product, technology, and services management, which is the design and development of

products and services, the design and risk management of product portfolios, and pricing.

Financial engineering, which addresses the management of risk, reward, and allocation of resources in technology development and deployment.

Information retrieval and knowledge management, which includes semantic mining and machine learning, linking business to knowledge management.

TIM offers a master of science (M.S.) degree as a terminal degree for engineers who wish to prepare for careers in management in high-tech enterprises, providing the appropriate breadth and depth of courses for preparation of these engineering managers.

The TIM doctor of philosophy (Ph.D.) degree focuses on research, with emphasis on analytic methods for managing high-tech enterprises, including product, services, and business-process innovation and development; financial engineering for technology and enterprise management; entrepreneurship; operations and supply-chain management; costing and strategy; marketing engineering; data mining; and the applications of information technology to knowledge-management, high-tech enterprises.

Base Requirement

Most entering students are expected to come from undergraduate engineering programs. Students with quantitative undergraduate preparation in the sciences, economics, or mathematics would also be prepared if they had significant industry experience in a technology field or if they are prepared to take extra courses and/or an internship in industry to obtain this background. The TIM M.S. attracts students now employed in industry and also recent B.S. graduates who have not yet entered the workforce. For this latter group, industrial experience will be encouraged through internships with local companies. TIM M.S. students may take up to two upper-division, undergraduate, prerequisite courses and, with adviser approval, may count these as credit toward the M.S. degree. (These courses will not count as credit toward the Ph.D. degree.)

Mathematics

Probability and statistics (AMS 131)—Focus on probability models, random variables, maximum likelihood and Bayesian estimation

Linear algebra (AMS 10 or MATH 21)

Differential equations (AMS 10 or MATH 24)

Computer Science

Abstract Data Types (CMPS 101)—Focus on abstract data types and common algorithms
Programming project (e.g., CMPS 104A, CMPS 115, CMPS 111)—Any upper-division, computer science course that involves a large programming project

Database systems (CMPS 180, 181)

Computer Engineering

Probability and Statistics for Engineers (CMPE 107)

Computer networks (CMPE 150, 151)

Computer Architecture (CMPE 110)

Applied Graph Theory and Algorithms (CMPE 177)

Economics

Microeconomics (ECON 100A)

Macroeconomics (ECON 100 B)

Managerial Economics (ECON 101)—Includes pricing schemes, non-price competition, and game theory

Field examinations and/or other pre-qualifying examinations

The graduate record examination (GRE) General Test is required for admission and a GRE subject advanced test—preferably in computer science, engineering, physics, or mathematics—is highly recommended. Chemistry and biology students with adequate training in mathematics and physics may also be considered. Student GPA of 3.5 or higher is recommended for admission into the program.

Relationship of Master's and Doctor's programs

The M.S. and Ph.D. programs have the same admission requirements. As in other SOE graduate programs, students admitted to the M.S. program may be subsequently admitted to the Ph.D. program by departmental approval. Ph.D. students may receive the M.S. degree upon fulfillment of the M.S. degree requirements.

Course requirements

Masters students must complete a minimum of 49 credits, comprising the following:

Four TIM core courses (20 credits minimum);

Two TIM seminars (4 credits minimum);

Four elective graduate courses offered by TIM, or relevant graduate courses from other UCSC departments as approved by the graduate adviser and the TIM graduate director. Up to two appropriate upper-division undergraduate courses may be used as electives, to strengthen a student's preparation for graduate studies, with approval of the adviser. (20 credits minimum);

Thesis research or independent study (5 credits minimum).

Up to 15 credits of appropriate UCSC Extension XSC or concurrent credit may be used to satisfy the degree credit requirements (core and elective), as approved by the graduate adviser and TIM graduate director.

Ph.D. students must complete a minimum of 62 credits:

Four TIM core courses (20 credits);

Two TIM seminars (4 credits minimum);

Two elective graduate courses (10 credits) offered by TIM;

Three additional graduate electives (15 credits) chosen with approval of the adviser and TIM graduate director. Students may substitute other appropriate courses for the TIM core courses or electives with the approval of their adviser and TIM graduate director;

A minimum of 10 credits of thesis research or independent study;

Applied Mathematics and Statistics 200, Research and Teaching in AMS (3 credits), or Computer Science 200, Research and Teaching in Computer Science and Engineering (3 credits).

Master's Requirements

Core Courses (4 required)

- TIM 205, Management of Technology I (5 credits)
- TIM 206, Optimization Theory and Applications (5 credits) (Possible substitutes include: ISM 207, CMPE 230, ECON 216, 217, AMS 205)
- TIM 225, Management of Technology II (5 credits), or ISM 270, Service Engineering and Management (5 credits) or Applied Mathematics and Statistics 215, Stochastic Modeling in Biology
- TIM 240, Information Technology for Decision Support: An Introduction (5 credits)

Seminars (2 required)

- Two ISM graduate seminars

Other Courses (electives)

- Ten (10) or more credits of graduate courses in related disciplines outside the Baskin School of Engineering (requires adviser and graduate director approval). A maximum of two SOE upper-division undergraduate courses may be counted as electives when necessary to strengthen a student's preparation for graduate studies (requires adviser approval).
- All remaining credits must be graduate elective courses approved by the adviser and the TIM graduate director. The program offers a wide variety of electives (see Table 8, Section 5).
- With appropriate preparation and/or student interests, proposals will be accepted to allow substitution of another graduate course for one of the core courses. This proposal will require approval of the faculty adviser and the TIM graduate director.
- On-campus students serving as teaching assistants or who plan to pursue a Ph.D. must take Applied Mathematics and Statistics 200, Research and Teaching in AMS (3 credits), or Computer Science 200, Research and Teaching in Computer Science and Engineering (3 credits) before or during their first teaching-assistant (TA) assignment.

Optional Elective Concentrations: The range of elective options allows for the diversity of M.S. student interests. It also allows TIM M.S. students to specialize. For example, a student specializing in the following areas of management of technology and technology of management could take the corresponding elective classes:

Management of technology track—TIM 208, TIM 220, TIM 225, and TIM 230;

Technology of management track—TIM 209, TIM 245, TIM 260, CMPE 276, and CMPS

Ph.D. Requirements

A minimum of 45 credits of approved graduate courses, of which 30 credits must be from courses offered by TIM (unless exceptions are approved by the faculty adviser and TIM graduate director);

Two TIM seminars (4 credits minimum);

Applied Mathematics and Statistics 200, Research and Teaching in AMS (3 credits), or Computer Science 200, Research and Teaching in Computer Science and Engineering (3 credits);

A minimum of 10 credits of dissertation research or independent study credits; and

Ph.D. dissertation.

The research areas in TIM are varied, and each will require a different sequence of classes to develop appropriate depth in analytical methods and technology. The selection of graduate courses will be in consultation with the dissertation supervisor.

Although there is no teaching requirement, students will be encouraged to gain teaching experience by becoming teaching assistants (TAs).

Where appropriate, research internships with companies, government laboratories, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation.

Technology and Information Management

Baskin School of Engineering

(831) 459-2158

<http://www.soe.ucsc.edu>

Program Description

~~Information systems management (ISM)~~ Technology and Information Management (TIM) is a multi-disciplinary program that focuses on the integration of engineering, computer science, information technology, and business management for two purposes: the technology of management, which includes the design of information technology to solve business problems, and the management of technology, which includes the management of new-product development and entrepreneurship. The program offers a bachelor of science (B.S.) degree in technology and information management (TIM) ~~information systems management (ISM)~~ as well as a minor in technology and information management (TIM) ~~information systems and technology management (ISTM)~~. See description below concerning advanced degree programs that are available starting fall 2009.

~~ISM-TIM~~ is a rigorous, challenging major for those students wanting to pursue careers in the management of information and technology. ~~ISM-TIM~~ students will receive a thorough grounding in the fundamental principles and practices of technology (in particular, computer science and computer engineering) and management, and the scientific, mathematics, and economics principles upon which they are built. In particular, they will become proficient in the following areas: strategy, planning, innovation, entrepreneurship, information technology, software design, product development, and supply-chain management.

The essence of the ~~information systems management~~ technology and information management major at UCSC is the integration of fundamental intellectual content from the disciplines of computer science, computer engineering, business management economics, and finance. ~~ISM-TIM~~ students learn how to apply the fundamentals of these diverse disciplines to solving problems that require the integration of management and technology, e.g., developing information technology systems to manage all activities and operations in a firm, e-commerce, managing and commercializing a new technology, and starting a new high-technology company.

To graduate with a B.S. in ~~information systems management~~ technology and information management, students normally complete ~~22~~ 23 required courses (with four laboratories, totaling ~~115~~ 120 quarter credits) plus four elective courses (20 quarter credits) for the ~~information systems management~~ technology and information management major program. To plan for completion of these course requirements within the normative time, students should consult with an adviser as early as possible. Honors students are likely to find the rigorous management and leadership elements of the new program of significant interest. Industrial interactions and projects are key features of this major.

~~Information Systems Management~~ Technology and

Information Management Policies

Admissions Policy

Lower-division students will be accepted into the ~~information systems management (ISM)~~ technology and information management (TIM) major on completion of the School of Engineering (SOE) major declaration process during any of their first three quarters at UCSC. See <http://ua.soe.ucsc.edu/declare-your-major> for the complete process.

After the first three quarters, petitions to declare the major are reviewed individually. Students must have completed the foundation courses required for the major, and are expected to have a grade point average (GPA) among School of Engineering and Division of Physical and Biological Science courses (the SOE GPA) of 2.5. Progress in the major and ability to complete the major within campus limits will also be considered.

Foundation Courses: Computer Science 12A, or 5J and 11; Computer Engineering 16; and Mathematics 19A-B, or Mathematics 20A-B, ~~or Economics 11A and 11B~~; ~~Information Systems Management~~ Technology and Information Management 50 (or Economics 1 and 2).

Disqualification and Satisfactory Progress in the Major

Please refer to the Engineering section of this catalog for the School of Engineering 's major disqualification policy.

Letter Grade Policy

~~Information systems management~~ Technology and Information Management requires letter grading for all courses applied toward the B.S. in ~~information systems management~~ technology and information management, with the exception of two lower-division courses which students may elect to take Pass/No Pass (not to include course 50 or 58). This policy includes courses required for the ~~information systems management~~ technology and information management major but sponsored by other departments.

Transfer Students

Articulation agreements with other California institutions are in place for some courses required for the ~~information systems management~~ technology and information management major; it is important for students to inquire whether specific courses meet the requirements of this major. Articulation information is available on ASSIST at www.assist.org. Courses taken at other institutions which emphasize applications of programming languages often do not count toward the ~~information systems management~~ technology and information management major at UCSC. Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for UCSC students to obtain pre-approval before taking courses elsewhere.

Preparation for the Major

The ~~information systems management~~ technology and information management major is intended for students with an interest in both technology and business. It is recommended that students intending to declare this major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Completion of business-oriented computer literacy and basic programming courses is of benefit to students entering this major. Completion of any economics and/or business-

related courses in high school is also beneficial, but the faculty realizes that these courses may not be available at many high schools. Completion of comparable college courses at other institutions serves to strengthen the preparation of a student for the ~~information systems management~~ technology and information management major.

~~Information Systems Management~~ Technology and Information Management Major Requirements

In addition to completing UCSC general education requirements, students must complete ~~22~~23 required courses (with four laboratories, totaling ~~120~~115 quarter credits) plus four elective courses (20 quarter credits) for the ~~information systems management~~ technology and information management major program. To plan for completion of these course requirements within the normative time, students should consult with a School of Engineering adviser as early as possible. These 26 courses include the following:

Required Courses (~~22~~23 courses plus four laboratories)

Applied Mathematics and Statistics (one 5-credit course)

Applied Mathematics and Statistics 5, *Statistics*

Mathematics (~~four 5-credit~~ five 5-credit courses)

19A-B, *Calculus for Science, Engineering, and Mathematics*; ~~and/or~~

22, *Introduction to Calculus of Several Variables*; and

~~*Applied Mathematics and Statistics 11A and 11B, or Economics 11A and 11B, Mathematical Methods for Economists; and*~~

Applied Mathematics and Statistics 10A and 20A, *Basic Mathematical Methods for Engineers I and II*

(3 credits each); or Applied Mathematics and Statistics 10 and 20, *Mathematical Methods for Engineers I and II*; or Mathematics 21, *Linear Algebra* and Mathematics ~~24~~ 24, *Ordinary Differential Equations*

Economics (~~five required~~ 5-credit courses)

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

10A, *Economics of Accounting*

100A, *Intermediate Microeconomics*; or

100M, *Intermediate Microeconomics Math Intensive*

113, *Introduction to Econometrics*

Computer Engineering (three 5-credit courses and two 2-credit laboratories)

12/L, *Computer Systems and Assembly Language/Laboratory*

16, *Applied Discrete Mathematics*

150/L, *Introduction to Computer Networks/Laboratory*

Computer Science (three 5-credit courses and two 2-credit laboratories)

12A/L, *Introduction to Programming(Accelerated)/Laboratory*; or 5J, *Introduction to Programming in Java* and 11, *Intermediate Programming*

12B/M, *Introduction to Data Structures/Laboratory*

182, *Introduction to Database Management Systems*

~~Information Systems Management~~ Technology and Information Management (five 5-credit courses and one 2-credit seminar)

50, *Business Information Systems*

58, *Systems Analysis and Design*

101, *Management of Technology Seminar*

105, *Management of Technology I*

125, *Management of Technology II*

158, *Business Strategy and Information Systems*

Elective Courses (four courses)

Two 5-credit School of Engineering courses

- Students select two upper-division School of Engineering electives on the basis of their particular interests. These electives may be any 5-credit upper-division or graduate
- School of Engineering courses, with the following limitations:

either Computer Engineering 153 or Electrical Engineering 153, but not both;

either Applied Mathematics and Statistics 131 or Computer Engineering 107, but not both;

at most one independent ~~or~~ and

field-study course (193, 195, 198, 199) with prior approval from the department to be used as an elective.

- One 5-credit upper-division economics course
- One 5-credit, upper-division School of Engineering electives given above apply)

~~Information Systems Management~~ Technology and Information Management **Major Planners**

The following are three sample academic plans for students to complete during their first two years as preparation for the ~~information systems management~~ technology and information management major. Plan One A is recommended for students who are more proficient in mathematics and programming and Plan One B is recommended for students who need more time to develop proficiency in mathematics and programming. Plan Two is for students who are considering the major.

Plan One A			
Year	Fall	Winter	Spring
1st (frsh)	ECON 10A	ECON 1	ECON 2
	CMPS 10 (recommended) <u>MATH 19A</u>	MATH 19A <u>MATH 19B</u>	MATH 19B <u>CMPE 16</u>
	college core		

2nd (soph)	CMPS 12A/L <u>CMPS 10A</u>	CMPS 12B/M <u>CMPS 12A/L</u>	CMPE 16 <u>CMPS 12B/M</u>
	ISM 50 <u>TIM 50</u>	TIM 58 <u>ISM 58</u>	AMS 10A
			ECON 100A

Plan One B			
Year	Fall	Winter	Spring
1st (frsh)	ECON 1	ECON 2	ISM 150 <u>TIM 50</u>
	MATH 3	ECON 11A <u>MATH 19A</u>	AMS 10A <u>MATH 19B</u>
	college core		
2nd (soph)	CMPS 10 (recommended)	CMPS 5J	CMPS 11
	ECON 10A	TIM 58 <u>ISM 58</u>	AMS 10A
	CMPE 16		

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	MATH 3 <u>ECON 1</u>	ECON 1 <u>ECON 2</u>	ECON 2 <u>TIM 50</u>
			ISM 50
2nd (soph)	CMPS 10	CMPS 5J	CMPS 11
	MATH 19A or <u>ECON 11A</u> <u>MATH 3</u>	MATH 19N or <u>ECON 11B</u> <u>MATH 19A</u>	AMS 10A <u>MATH 19B</u>
	ECON 10A		

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in ~~information systems management~~ technology and information management is satisfied by completing course 158.

Comprehensive Requirement

Students complete two project-intensive courses, ~~Information Systems Management Technology and Information Management~~ 158 and ~~Information Systems Management Technology and Information Management~~ 105, which constitute the comprehensive requirement for the ~~information systems management~~ technology and information management major, based on the dual aspects (technology of management and management of technology) of the program. Course 158 deals with the technology of management, and course 105 deals with the management of technology. Both courses involve a substantial amount of critical thinking and writing within the context of comprehensive projects.

~~Information Systems Management~~ Technology and Information Management 158, *Business Strategy and Information Systems*, requires that students understand and use a structured methodology to evaluate the competitive use of information systems within an enterprise. This is accomplished by a team project as well as by an individual project that involves researching and writing a comprehensive analytical term paper using a methodology taught as part of this course.

~~Information Systems Management~~ Technology and Information Management 105, *Management of Technology I*, requires that students understand and apply structured methodologies for the development, management, and commercialization of technologies and products. Students will work in teams on a comprehensive term project in the development, commercialization, and management of technologies such as computers, networks, semiconductors, mechatronics, and biotechnology.

Honors

The ~~ISM-TIM~~ program awards honors to students whose academic performance is excellent. Students with a GPA between 3.5 and 3.75 will be awarded honors, and students with GPAs greater than 3.75 will be awarded high honors.

Minor in ~~Information Systems and Technology Management (ISTM)~~ Technology and Information Management (TIM)

Purpose

There is a growing need in today's increasingly complex socio-technological world for the fusion of information systems, technology, and business management for two important purposes: the use of information systems to solve business problems, and the management of technology, which includes new product development and enterprise management. The ~~information systems management (ISM)~~ technology and information management (TIM) program therefore offers a minor in ~~information systems and technology management (ISTM)~~ technology and information management (TIM) to provide undergraduates in the School of Engineering as well in other programs and divisions in the university, such as economics and business management economics, the physical and biological sciences, and arts, the opportunity to expand the breadth of their knowledge and training to include the management of information systems and the management of technology.

Rationale for the Courses

Courses for the ~~information systems and technology management~~ technology and information management minor will include a combination of courses from the ~~ISM-TIM~~ program, computer engineering, computer science, and economics as well as the chains of prerequisites behind these courses. The ~~ISM-TIM~~ program courses for the ~~information systems and technology management~~ technology and information management minor will include a mix of information systems and management of technology courses, providing students with a strong foundation in both the management of information systems and the management of technology.

Course Requirements

Requirements for the minor in ~~information systems and technology management~~ technology and information management are the following:

Lower-Division Requirements

Mathematics (2 courses)

Mathematics 19A, *Calculus* (or Applied Mathematics and Statistics 11A/Economics 11A, *Mathematical Methods for Economists*, or Mathematics 11A, *Calculus*, or Mathematics 20A, *Honors Calculus*)

Mathematics 19B, *Calculus* (or Applied Mathematics and Statistics 11B/Economics 11B, *Mathematical Methods for Economists*, or Mathematics 11B, *Calculus*, or Mathematics 20B, *Honors Calculus*)

Computer Science (1 course)

12A/L, *Introduction to Programming (Accelerated)/Laboratory*; or Computer Science 5J, *Introduction to Programming in Java*; or Computer Science 5C, *Introduction to Programming in C/C++*

~~Information-Systems-Management~~ Technology and Information Management (2 courses)

~~Information-Systems-Management~~ Technology and Information Management 50, *Business Information System*; ~~and~~

One of the following courses:

~~Information-Systems-Management~~ Technology and Information Management 58, *Systems Analysis and Design*; or

~~Information-Systems-Management~~ Technology and Information Management 80C, *Starting a New Technology Company*

Upper-Division Requirements

Mathematics (1 course)

One of the following courses:

Economics 113, *Introduction to Econometrics*; or

Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*; or

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Upper-Division Electives (4 courses)

Four upper -division courses selected from the following:

~~Information Systems Management~~ Technology and Information Management 105,
Management of Technology I

~~Information Systems Management~~ Technology and Information Management 125,
Management of Technology II

~~Information Systems Management~~ Technology and Information Management 158, *Business Strategy and Information Systems*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Science 180, *Database Systems I* (or Computer Science 182, *Introduction to Database Management Systems*)

Economics 100A, *Intermediate Microeconomics* (or 100M, *Intermediate Microeconomics*, mathematics intensive —requires additional prerequisites)

Economics 100B, *Intermediate Macroeconomics* (or 100N, *Intermediate Macroeconomics*, mathematics intensive —requires additional prerequisites)

With pre-approval from the ~~information systems management~~ technology and information management undergraduate director, up to two graduate ~~information systems management~~ technology and information management courses may be used to satisfy upper-division elective requirements.

Graduate Programs

Technology and Information Management Ph.D. and Master's Degrees

Technology and information management (TIM) is a new and distinct discipline within engineering, combining technology management, systems engineering, and information technology. TIM's research and academic programs, combining information technology with both knowledge management and systems management, address problems facing firms today as they deal with more complex decisions in a global environment, facing new business models (e.g., "services") and business practices. TIM places special emphasis on research arising from challenges faced in creation and management of knowledge-based services and enterprises. TIM themes include:

- **Management and optimization of enterprise systems**, which is the integration of business, technology, and management perspectives to enable an entity to achieve enhanced growth and profitability through use of analytical methods including stochastic models, optimization, game theory and knowledge management.
- **New product, technology, and services management**, which is the design and development of products and services, the design and risk management of product portfolios, and pricing.
- **Financial engineering**, which addresses the management of risk, reward, and allocation of resources in technology development and deployment.
- **Information retrieval and knowledge management**, which includes semantic mining and machine learning, linking business to knowledge management.

TIM offers a master of science (M.S.) degree as a terminal degree for engineers who wish to prepare for careers in management in high-tech enterprises, providing the appropriate breadth and depth of courses for preparation of these engineering managers.

The TIM doctor of philosophy (Ph.D.) degree focuses on research, with emphasis on analytic methods for managing high-tech enterprises, including product, services, and business-process innovation and development; financial engineering for technology and enterprise management; entrepreneurship; operations and supply-chain management; costing and strategy; marketing engineering; data mining; and the applications of

information technology to knowledge-management, high-tech enterprises.

Base Requirement

Most entering students are expected to come from undergraduate engineering programs. Students with quantitative undergraduate preparation in the sciences, economics, or mathematics would also be prepared if they had significant industry experience in a technology field or if they are prepared to take extra courses and/or an internship in industry to obtain this background. The TIM M.S. attracts students now employed in industry and also recent B.S. graduates who have not yet entered the workforce. For this latter group, industrial experience will be encouraged through internships with local companies. TIM M.S. students may take up to two upper-division, undergraduate, prerequisite courses and, with adviser approval, may count these as credit toward the M.S. degree. (These courses will not count as credit toward the Ph.D. degree.)

Mathematics

- Probability and statistics (AMS 131)—Focus on probability models, random variables, maximum likelihood and Bayesian estimation
- Linear algebra (AMS 10 or MATH 21)
- Differential equations (AMS 10 or MATH 24)

Computer Science

- *Abstract Data Types* (CMPS 101)—Focus on abstract data types and common algorithms
- Programming project (e.g., CMPS 104A, CMPS 115, CMPS 111)—Any upper-division, computer science course that involves a large programming project
- Database systems (CMPS 180, 181)

Computer Engineering

- *Probability and Statistics for Engineers* (CMPE 107)
- *Computer networks* (CMPE 150, 151)
- *Computer Architecture* (CMPE 110)
- *Applied Graph Theory and Algorithms* (CMPE 177)

Economics

- *Microeconomics* (ECON 100A)
- *Macroeconomics* (ECON 100 B)
- *Managerial Economics* (ECON 101)—Includes pricing schemes, non-price competition, and game theory

Field examinations and/or other pre-qualifying examinations

The graduate record examination (GRE) General Test is required for admission and a GRE subject advanced test—preferably in computer science, engineering, physics, or mathematics—is highly recommended. Chemistry and biology students with adequate training in mathematics and physics may also be considered. Student GPA of 3.5 or higher is recommended for admission into the program.

Relationship of Master's and Doctor's programs

The M.S. and Ph.D. programs have the same admission requirements. As in other SOE graduate programs, students admitted to the M.S. program may be subsequently admitted to the Ph.D. program by departmental approval. Ph.D. students may receive the M.S. degree upon fulfillment of the M.S. degree requirements.

Course requirements

Masters students must complete a minimum of 49 credits, comprising the following:

- Four ~~ISM~~~~TIM~~ core courses (20 credits minimum);
- Two ~~ISM~~~~TIM~~ seminars (4 credits minimum);
- Four elective graduate courses offered by ~~ISM~~~~TIM~~, or relevant graduate courses from other UCSC departments as approved by the graduate adviser and the TIM graduate director. Up to two appropriate undergraduate courses may be used as electives, to strengthen a student's preparation for graduate studies, with approval of the adviser. (20 credits minimum);
- Thesis research or independent study (5 credits minimum).

Up to 15 credits of appropriate UCSC Extension XSC or concurrent credit may be used to satisfy the degree credit requirements (core and elective), as approved by the graduate adviser and TIM graduate director.

Ph.D. students must complete a minimum of 62 credits:

- Four ~~ISM~~~~TIM~~ core courses (20 credits);
- Two ~~ISM~~~~TIM~~ seminars (4 credits minimum);
- Two elective graduate courses (10 credits) offered by ~~ISM~~~~TIM~~;
- Three additional graduate electives (15 credits) chosen with approval of the adviser and TIM graduate director. Students may substitute other appropriate courses for the ~~ISM~~~~TIM~~ core courses or electives with the approval of their adviser and TIM graduate director;
- A minimum of 10 credits of thesis research or independent study;
- Applied Mathematics and Statistics 200, *Research and Teaching in AMS* (3 credits), or Computer Science 200, *Research and Teaching in Computer Science and Engineering* (3 credits).

Master's Requirements

Core Courses (4 required)

- ~~ISM~~~~TIM~~ 205, *Management of Technology I* (5 credits)
- ~~ISM~~~~TIM~~ 206, *Optimization Theory and Applications* (5 credits) (Possible substitutes include: ISM 207, CMPE 230, ECON 216, 217, AMS 205)
- ~~ISM~~~~TIM~~ 225, *Management of Technology II* (5 credits), or ISM 270, *Service Engineering and Management* (5 credits) or Applied Mathematics and Statistics 215, *Stochastic Modeling in Biology*
- ~~ISM~~~~TIM~~ 240, *Information Technology for Decision Support: An Introduction* (5 credits)

Seminars (2 required)

- Two ISM graduate seminars

Other Courses (electives)

- Ten (10) or more credits of graduate courses in related disciplines outside the Baskin School of Engineering (requires adviser and graduate director approval). A maximum of two SOE upper-division undergraduate courses may be counted as electives when necessary to strengthen a student's preparation for graduate studies (requires adviser approval).
- All remaining credits must be graduate elective courses approved by the adviser and the TIM graduate director. The program offers a wide variety of electives (see Table 8, Section 5).
- With appropriate preparation and/or student interests, proposals will be accepted to allow substitution of another graduate course for one of the core courses. This proposal will require approval of the faculty adviser and the TIM graduate director.

- On-campus students serving as teaching assistants or who plan to pursue a Ph.D. must take Applied Mathematics and Statistics 200, *Research and Teaching in AMS* (3 credits), or Computer Science 200, *Research and Teaching in Computer Science and Engineering* (3 credits) before or during their first teaching-assistant (TA) assignment.

Optional Elective Concentrations: The range of elective options allows for the diversity of M.S. student interests. It also allows TIM M.S. students to specialize. For example, a student specializing in the following areas of management of technology and technology of management could take the corresponding elective classes:

Management of technology track—~~ISM-TIM~~ 208, ~~ISM-TIM~~ 220, ~~ISM-TIM~~ 225, and ~~ISM-TIM~~ 230;

Technology of management track—~~ISM-TIM~~ 209, ~~ISM-TIM~~ 245, ~~ISM-TIM~~ 260, CMPE 276, and CMPS 277.

Ph.D. Requirements

- *A minimum of 45 credits of approved graduate courses, of which 30 credits must be from courses offered by TIM (unless exceptions are approved by the faculty adviser and TIM graduate director);*
- *Two ~~ISM-TIM~~ seminars (4 credits minimum);*
- *Applied Mathematics and Statistics 200, Research and Teaching in AMS (3 credits), or Computer Science 200, Research and Teaching in Computer Science and Engineering (3 credits);*
- *A minimum of 10 credits of dissertation research or independent study credits; and*
- *Ph.D. dissertation.*

The research areas in TIM are varied, and each will require a different sequence of classes to develop appropriate depth in analytical methods and technology. The selection of graduate courses will be in consultation with the dissertation supervisor.

Although there is no teaching requirement, students will be encouraged to gain teaching experience by becoming teaching assistants (TAs).

Where appropriate, research internships with companies, government laboratories, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

Professor

RAMAKRISHNA AKELLA

Information technology and systems, management of technology, new product introduction and development, enterprise and knowledge management, supply chain management and e-business, financial engineering

MARC MANGEL

Distinguished Professor of Applied Mathematics and Statistics
Program Director, Information Systems Management

Mathematical modeling of biological phenomena, especially quantitative issues in fishery management; mathematical and computational aspects of aging and disease; impact of technology on biological systems

Associate Professor

JOHN MUSACCHIO

Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

YI ZHANG

Information retrieval, knowledge management, natural language processing, machine learning

Assistant Professor

KEVIN ROSS

Service engineering and management; resource allocation; operations research; pricing; scheduling; queueing theory; networks

YI ZHANG

Information retrieval, knowledge management, natural language processing, machine learning

Lecturer

SUBHAS DESA

Product development, supply chain management, management of technology, system dynamics and control

YIN-WONG CHEUNG (Economics)

Econometrics, applied econometrics, exchange rate dynamics, financial price behavior, aggregate output dynamics

LUCA DE ALFARO (Computer Science)

Formal methods, game theory, embedded systems, software engineering

WILLIAM B. DUNBAR (Computer Engineering)

Theory and application of feedback control, single-molecule biophysics, nanopore sensors, dynamics and control of biomolecules

DANIEL FRIEDMAN (Economics)

Microeconomic theory, experimental economics, evolution and learning, behavioral economics, financial markets

BRENT HADDAD (Environmental Studies)

Fresh-water economics, policy, and communications; economic institutions and the environment; climate-change mitigation and adaptation; institutional and ecological economics

MICHAEL ISAACSON (Electrical Engineering)

Nano- and microfabrication technology and applications to biomedical and diagnostic devices,

nanocharacterization of materials with emphasis on the development of microscopy tools, novel modes of imaging, electron and light optics

ROBERT A. LEVINSON (Computer Science)

Artificial intelligence, machine learning, heuristic search, associative pattern retrieval, hierarchical reinforcement learning, semantic networks

DARRELL LONG (Computer Science)

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

PATRICK MANTEY

Associate Dean, Industry Programs

Jack Baskin Endowed Professor of Computer Engineering

CITRIS Campus Director

Director of ITI

Multimedia systems, digital signal processing, sensor systems and networks, real-time monitoring and control, image systems, image processing, visualization, geographic information systems, decision support systems

CHARLES E. McDOWELL (Computer Science)

Programming languages, parallel computing, and computer science education

ALEX PANG (Computer Science)

Uncertainty visualization, tensor visualization, scientific visualization, comparative visualization, collaboration software, virtual reality interfaces

IRA POHL (Computer Science)

Artificial intelligence, programming languages, heuristic methods, educational and social issues, combinatorial algorithms

NIRVIKAR SINGH (Economics)

Industrial organization, political economy, economic development, technology and innovation, South Asian immigrants in the U.S.

LINDA WERNER

Software engineering, testing, usability engineering, educational and social issues

JAMES WHITEHEAD, JR. (Computer Science)

Software engineering, software evolution, software bug prediction, automated software construction, video game level design

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

50. Business Information Systems. F,W,S

Addresses the use of information systems (IS) within a business enterprise. Subjects include computer hardware and software concepts, system design and implementation, telecommunications, data management, transaction-based systems, management information systems, and the use of IS to compete. Intended for technology and information management and business management economics majors. (Formerly Information Systems Management 50.) *R. Akella, J. Musacchio, K. Ross*

58. Systems Analysis and Design. W

Students learn how information technology is used to deal with business requirements and/or solve business problems. Provides an understanding of structured computer systems analysis and design methodologies and techniques and their application to business information systems. Intended for technology and information management and business management economics majors. (Formerly Information Systems Management 58.) Prerequisite(s): course 50. Enrollment limited to 40. *Y. Zhang*

80C. Starting a New Technology Company. S

Focuses on the creation and management of technology start-ups and small companies, using case studies and team projects as the basis for learning and applying the course materials. (Formerly Information Systems Management 80C.) (General Education Code(s): T7-Natural Sciences or Social Sciences.) *S. Desa, R. Akella*

94. Group Tutorial. F,W,S

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. (Formerly Information Systems Management 94.) May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. (Formerly Information Systems Management 94F.) May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. (Formerly Information Systems Management 99.) May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. (Formerly Information Systems Management 99F.) May be repeated for credit. *The Staff*

Upper-Division Courses

101. Management of Technology Seminar (2 credits). F,W,S

Uses weekly talks by leading industry practitioners and university researchers to provide in-depth exposure to the management of technology. Topics covered include product development, operations, strategy, finance, and marketing for technologies such as software and information systems. (Formerly Information Systems Management 101.) May be repeated for credit. *S. Desa*

105. Management of Technology I. F

An in-depth examination of technological, strategic, marketing, and financial methods and analytical tools for the management of technology to enable cost-effective and rapid development of profitable and high quality technologies. Includes case studies and a comprehensive project. Students who receive credit for course 205 cannot also receive credit for this course. (Formerly Information Systems Management 105.) Prerequisite(s): Mathematics 19B or 11B or Applied Mathematics and Statistics 11B or Economics 11B. *S. Desa*

125. Management of Technology II. W

High-technology enterprises must understand and operate effectively within their technology-business value chains in order to maximize profitability. This course develops and applies methods and tools for the design, optimization, selection, and management of these value chain networks.

Students who receive credit for course 225 cannot also receive credit for this course. (Formerly Information Systems Management 125.) Prerequisite(s): course 105. *S. Desa, R. Akella*

130. Financial Engineering and Management in High Technology Firms. S

Addresses methods and tools for financing technology development and projects. Includes approaches for coordinating finance and accounting with strategy and operations of firms; discounted cash-flow analysis; activity-based costing; financial planning; and elements of financial account and investment science. Taught in conjunction with course 230. (Formerly Information Systems Management 130.) Prerequisite(s): Economics 113 or Applied Mathematics and Statistics 131 or Computer Engineering 107 or by instructor permission. Enrollment limited to 20. *The Staff*

158. Business Strategy and Information Systems. S

Analysis of effective use of information systems within a business enterprise, with emphasis on gaining a competitive advantage. Integration of information systems with business strategy, financial justification, personnel, and organizational considerations are highlighted. Intended for technology and information management majors or senior engineering majors who have a business interest. (Formerly Information Systems Management 158.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50 or permission of instructor. (General Education Code(s): W.) *K. Ross*

193. Field Study. F,W,S

Provides individual programs of study with specific academic objectives carried out under direction of faculty member of Information Systems Management and a willing sponsor at field site. Uses resources not normally available on campus. Credit based on presentation of evidence of achieving objectives by submitting written and oral presentation. Students submit petition to sponsoring agency. (Formerly Information Systems Management 193.) May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides individual programs of study with specific academic objectives carried out under direction of faculty member of Information Systems Management and a willing sponsor at field site. Uses resources not normally available on campus. Credit based on presentation of evidence of achieving objectives by submitting written and oral presentation. Cannot normally be repeated for credit. Students submit petition to sponsoring agency. (Formerly Information Systems Management 193F.) May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. (Formerly Information Systems Management 194.) May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. (Formerly Information Systems Management 194F.) May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Intended for majors. Students submit petition to sponsoring agency. (Formerly Information Systems Management 195.) *The Staff*

195F. Senior Thesis Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. (Formerly Information Systems Management 195F.) *The Staff*

198. Individual Study or Research. F,W,S

Intended for majors. Students submit petition to sponsoring agency. (Formerly Information Systems Management 198.) May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. (Formerly Information Systems Management 198F.) May be repeated for credit. *The Staff*

199. Individual Study or Research. F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. Enrollment restricted to senior information systems management majors. (Formerly Information Systems Management 199.) May be repeated for credit. *The Staff*

Graduate Courses

204. Introduction to Optimization in Business.

Covers optimization with emphasis on problems arising in management. Students become proficient at mathematical modeling of business decisions and familiar with a range of techniques and tools used to solve optimization problems. (Formerly Information Systems Management 204.) Enrollment restricted to graduate students. *K. Ross*

205. Management of Technology I. F

Addresses technological, strategic, marketing, financial methods, and analytical tools for management of technology in an integrated manner that enables the cost-effective and rapid development of profitable and high quality technologies. Includes case studies and a

comprehensive project. Students cannot receive credit for this course and course 105. (Formerly Information Systems Management 205.) Enrollment restricted to juniors, seniors, and graduate students. *S. Desa, R. Akella*

206. Optimization Theory and Applications. F

A first graduate course in optimization with an emphasis on problems arising in management and engineering applications. Objectives are to become experts in problem formulation, comfortable with software for solving these problems, and familiar with analytical methods behind these solver technologies. (Formerly Information Systems Management 206.) Prerequisite(s): calculus and linear algebra. Enrollment restricted to graduate students. *K. Ross, S. Desa*

207. Random Process Models in Engineering. S

A first graduate course in stochastic process modeling and analysis with an emphasis on applications in technology management, information systems design, and engineering. (Formerly Information Systems Management 207.) Enrollment restricted to graduate students. Prerequisite: Computer Engineering 107 or other undergraduate probability course recommended. *J. Musacchio*

209. Data Mining and Business Analytics in Knowledge Services. F

Provides students with systematic methodology and analytical tools in data and text mining and business analytics. Also provides an integrated perspective and examines use of these methods in the field of knowledge services, such as online marketing, sponsored search, health care, financial services, recommender systems, etc. Includes training in the basic elements of stochastic optimization and other algorithmic approaches, such as stochastic dynamic programming, statistics, constrained optimization, and machine learning with exposure to software tools. These methods enable firms to achieve rapid, effective, and profitable optimization of knowledge-services management. (Formerly Knowledge Services and Data Analytics.) (Formerly Information Systems Management 209.) Enrollment restricted to graduate students. Students are expected to have undergraduate preparation in probability and statistics. Undergraduates may enroll with instructor approval. *R. Akella*

210. Marketing Analytics and Engineering.

Provides students with a systematic methodology and the corresponding set of methods and analytical tools to address the analytic approaches to marketing in a real-world context. Trains students in the basic elements of statistics decision trees, stochastic optimization, and other algorithmic approaches. Students should have a solid background in the following: probability equivalent to statistics, stochastic methods, calculus, linear algebra, stochastic processes and optimization, and/or mathematical maturity. Recommended courses: course 207, course 250, Applied Mathematics and Statistics 203, Applied Mathematics and Statistics 205, Computer Engineering 230. Enrollment restricted to graduate students. Enrollment by permission of instructor. (Formerly Information Systems Management 210.) *R. Akella*

211. E-Business Technology and Strategy.

Surveys structure of modern information technology, the relation of that structure to structure of the industry that creates it, and the economic forces that drive the players in the industry. Building on these technological and economic concepts, studies how firms can craft a technology and business strategy to create and capture value in the information technology product and/or services sectors. (Formerly Information Systems Management 211.) Enrollment restricted to graduate students. *J. Musacchio*

215. Organizations and Leadership. F

Addresses organizational and managerial aspects of high-tech enterprises, providing an understanding of various corporate functions. Considers issues of human resources: motivation and rewards, group dynamics, communication, ethics, and leadership. Includes perspectives from behavioral theories and corporate practice/culture. Enrollment restricted to graduate students. *P. Mantey*

225. Management of Technology II. W

High technology enterprises must understand and operate effectively within their technology-business value chains in order to maximize profitability. Course develops and applies methods and tools for the design, optimization, selection, and management of these value chain networks. Students cannot receive credit for this course and course 125. (Formerly Information Systems Management 225.) Prerequisite(s): course 205 or consent of instructor. Enrollment restricted to juniors, seniors, and graduate students. *S. Desa, R. Akella*

230. Financial Engineering and Management in High Technology Firms. S

Course provides students with a systematic methodology, and the corresponding set of methods and analytical tools, to address the field of financial engineering and its use in high-tech enterprises in an integrated manner. Covers basic concepts of stochastic optimization and other algorithmic approaches, such as stochastic dynamic programming; decision models and analysis; and binomial trees; and their application in financial engineering in the context of high-tech enterprises. (Formerly Information Systems Management 230.) Prerequisite(s): Computer Engineering 107 or Economics 113 or Applied Mathematics and Statistics 131, or instructor approval. Enrollment restricted to graduate students. *R. Akella*

240. Information Technology for Decision Support: An Introduction.

Introduction to the information technologies useful to IT management. Reviews/surveys four major topics: 1) information systems: from computer technology—systems architecture (hardware and software), multiprocessors and cluster—to client-server, networking and distributed computing, data storage and data servers, file management, database systems, input/output technology,

graphics and multimedia; 2) IT as a "service": commercial and open-course tools for information-system development and knowledge management; 3) managing, searching, and mining of structured and unstructured data; 4) decision-support systems that integrate knowledge with data mining and text mining tools to support decision-making in product development, supply-chain management, marketing, sales and logistics. (Formerly Information Systems Management 240.) Enrollment restricted to graduate students. *The Staff, Y. Zhang, P. Mantey*

245. Data Mining. S

Covers the principles, algorithms, and applications of data mining, including mining sequential data, structured data, stream data, text data, spatiotemporal data, biomedical data, and other forms of complex data. (Formerly Information Systems Management 245.) Enrollment restricted to graduate students. *R. Akella, Y. Zhang*

250. Stochastic Optimization in Business Intelligence: Digital Advertising and Online Marketing.

Trains students in stochastic optimization and other algorithmic approaches, such as stochastic dynamic programming, to achieve business intelligence (BI) optimization. Special emphasis on digital advertising, and online and computational marketing. Students should have solid background in: probability equivalent to statistics, stochastic methods, calculus, linear algebra, mathematical maturity, stochastic processes, and optimization. First of a sequence of courses in information systems and technology management (ISTM). Provides students with systematic methodology and corresponding set of methods and analytical tools to address the field of ISTM in an integrated manner. (Formerly Stochastic Optimization in Information Systems and Technology.) (Formerly Information Systems Management 250.) Enrollment restricted to graduate students; undergraduates who have completed Computer Engineering (CMPE) 107 or Applied Mathematics & Statistics (AMS) 131 may enroll by permission of instructor. AMS 205A, CMPE 230 recommended. *R. Akella*

251. Large-Scale Web Analytics and Machine Learning. W

Provides a systematic methodology and corresponding set of methods and analytical tools in stochastic models; reinforcement learning; stochastic (neuro-)dynamic programming; Bayesian graphical models; inference; and social networks used for web analytics and machine learning to achieve business intelligence (BI) and support research and applications in computer science, computer engineering, and electrical engineering, applied mathematics and statistics, business, management, and economics. Includes exposure to Hadoop for large-scale computation. Students should have solid background in probability equivalent to statistics, stochastic methods, calculus, (and preferably) stochastic processes and optimization, or mathematical maturity and exposure to business intelligence and algorithms. (Formerly Information Systems and Technology Management 2.) (Formerly Information Systems Management 251.) Prerequisite(s): Computer Engineering 107 or Applied Mathematics and Statistics 131 or permission of instructor. Enrollment restricted to graduate students. Course 230, 250, and Applied Mathematics and Statistics 205A or 205B recommended. *R. Akella*

260. Information Retrieval. F

Course covers major topics of information retrieval, including statistical characteristics of text, several important retrieval models, text clustering, text classification, text filtering, web analysis, information extraction, peer to peer research, distributed search, personalized search, and other related topics. (Formerly Information Systems Management 260.) Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. *Y. Zhang*

270. Service Engineering and Management. S

Introduction to service engineering and management, from the role of services in the global economy to analytical models in service operations management. This field is developing rapidly; the material covers the fundamental principles of services as well as recent research. Topics include designing efficient service networks, forecasting, resource allocation, and globalization. (Formerly Information Systems Management 270.) Enrollment restricted to graduate students. *K. Ross, The Staff*

280A. Graduate Research Seminar (2 credits).

Weekly seminar series in topics of current research in information systems and technology management. Enrollment by permission of instructor. (Formerly Information Systems Management 280A.) Enrollment limited to 30. May be repeated for credit. *The Staff*

280I. Seminar on Information Retrieval and Knowledge Management (2 credits).

Seminar series discussing advanced topics in information retrieval and knowledge management. Current research and literature are presented during each meeting. (Formerly Information Systems Management 280I.) Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *Y. Zhang*

280M. Sales and Marketing for Technologists and Engineers (2 credits).

Perspective on the theory, plus examples, and tools useful to technologists and engineers for successfully guiding and supporting sales and marketing endeavors and, thereby, ensuring funding, staffing, product appeal, positive customer relationships, and marketplace success. (Formerly Information Systems Management 280M.) *P. Mantey, The Staff*

280S. Seminar Topics (2 credits).

Weekly seminar series of current research on a special topic in information systems and technology management. The theme of research presented throughout the course selected by the instructor. Topics may include, but are not limited to, knowledge planning, new product development and

management of technology. Enrollment with permission of instructor. (Formerly Information Systems Management 280S.) Enrollment limited to 30. May be repeated for credit. *P. Mantey*

293. Advanced Topics in Technology and Information Management (TIM).

Advanced research topics in TIM (as determined by instructor). Topics include, but are not limited to, approaches and solutions to complex business problems, and development of information-based technology and services. (Formerly Information Systems Management 293.) Enrollment restricted to graduate students. Enrollment limited to 25. May be repeated for credit. *P. Mantey, The Staff*

297. Independent Study. F,W,S

Independent study under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. (Formerly Information Systems Management 297.) May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. (Formerly Information Systems Management 299.) May be repeated for credit. *The Staff*

*Not offered in 2011-12

Environmental Studies

405 Interdisciplinary Sciences Building
(831) 459-2634
<http://envs.ucsc.edu>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The environmental studies major prepares students for meaningful lifetime engagement with the environmental challenges that are facing society. UCSC environmental studies graduates hold leadership positions as legislative and policy analysts, environmental lawyers, environmental managers, city and state planners, educators, restoration ecologists, organic farmers and agroecological specialists, conservation biologists, environmental engineers, museum curators, business consultants, and political advocates. In addition, many graduates go on to obtain professional, master's, or doctoral degrees at the nation's finest institutions.

Students pursue an interdisciplinary curriculum that combines course work in the natural and social sciences. Introductory courses cover the ecological, political, and economic aspects of historic, current and future environmental issues. The core course, Environmental Studies 100/L, Ecology and Society (most often completed during the fall quarter of a student's junior year) builds on the skills acquired in the lower-division classes, and encourages students to apply ecological, economical and political skills toward environmental and ecosystem management. The remaining upper-division elective courses further emphasize the integration of ecological knowledge with an understanding of social institutions and policies. The program emphasizes active, interdisciplinary learning with the overall objective of instilling the necessary skills to conserve biodiversity and integrate the principles of sustainability with respect to management of complex environmental systems. Faculty work on these issues at local, regional, and global levels providing a unique, proactive, and progressive academic environment for students wishing to pursue a degree program within the Environmental Studies Department.

In addition to the single environmental studies major, students may choose to pursue one of three combined majors with biology, Earth sciences, or economics. The combined major curricula offer the unique integration of the underlying concepts of environmental studies with a focus on the application of these concepts in a closely related field (or vice versa).

As a complement to classroom instruction and research, many courses have field components. The Environmental Studies Internship Program helps qualified students find placements with government and educational agencies, community organizations, and private firms. Furthermore, faculty-directed, independent, or field-oriented research courses allow environmental studies students the opportunity to learn more about their specific academic career or personal interests, often while earning academic credit.

Requirements for the Major

Prerequisites for the Single Major

Continuing UCSC students are required to complete all six prerequisite courses before taking Environmental Studies 100/L. Five of the prerequisite courses are preset and are listed below. See the course descriptions for more specific information.

Environmental Studies 23, *The Physical and Chemical Environment* (offered in spring and summer quarters)

Environmental Studies 24, *General Ecology* (offered in fall and summer quarters). *

Environmental Studies 25, *Environmental Policy and Economics*. Offered in winter and summer quarters.

Applied Mathematics and Statistics 2, *Pre-Statistics*; or Applied Mathematics and Statistics 3, *Precalculus for Science and Engineering*; or Mathematics 3, *Precalculus*; or a score of 3 or higher on the College Board AP calculus examination, or equivalent. Check the catalog for the quarters offered.

Applied Mathematics and Statistics 7/L, *Statistical Methods for the Biological and Environmental*

Studies. Check the catalog for the quarters offered. *

*Prerequisite for Environmental Studies 24 and Applied Mathematics and Statistics 7/L is Applied Mathematics and Statistics 2 or 3 or Mathematics 3.

In addition, students choose one introductory course in sociology, cultural anthropology, or ethics. The acceptable courses are as follows:

Anthropology 2, *Introduction to Cultural Anthropology*

Sociology 1, *Introduction to Sociology*

Sociology 10, *Issues and Problems in American Society*

Sociology 15, *World Society*

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics: Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Philosophy 80G, *Bioethics in the 21st Century: Science, Business, and Society*

Plan One for students placing into MATH 3

Year	Fall	Winter	Spring
1st (frsh)	MATH 3 or AMS 2 or 3	AMS 7/L or SOC/ANTH/	ENVS 23
2nd (soph)*	ENVS 24	ENVS 25	
	AMS 7/L or SOC/ANTH/Ethics		
3rd (jr)	ENVS 100/L		

* 2nd Year (soph) courses incorrect in printed catalog.

Plan Two for students placing out of MATH 3

Year	Fall	Winter	Spring
1st (frsh)	ENVS 24	ENVS 25	ENVS 23
		AMS 7/L or SOC/ANTH/Ethics	AMS 7/L or SOC/ANTH/Ethics
2nd (soph)	ENVS 100/L		

Declaration Process for Environmental Studies Students

Students wishing to declare within the Environmental Studies Department should visit the Environmental Studies web site at <http://envs.ucsc.edu/undergraduate> and follow the steps listed there. In order to be officially declared and enroll in the core course, Environmental Studies 100/L, students must have the official declaration of major form filed with the Environmental Studies Department. Study plans may be downloaded from the environmental studies web site (<http://envs.edu/undergraduate/>).

Transfer Students

Transfer students are accepted in the environmental studies major in the fall quarter only. Students transferring to UCSC should complete as much of the lower-division curriculum as possible, with a grade of C or better, at another recognized institution before transferring to UCSC. Below is an outline of acceptable substitute courses for the lower-division environmental studies single major prerequisites. Please note that all students wishing to pursue a degree within the Environmental Studies Department must complete Applied Mathematics and Statistics 7/L at UCSC to fulfill the introductory statistics requirement. It is recommended that transfer students plan to enroll in Applied Mathematics and Statistics 7/L and any other missing prerequisite during the summer quarter.

Completion of an introductory college chemistry course will substitute for Environmental Studies 23.

Two courses, one in politics, one in economics, will substitute for Environmental Studies 25.

A college-level precalculus course will substitute for Mathematics 3 or Applied Mathematics and Statistics 3 at UCSC.

Environmental Studies 23, 24 and 25 are offered during Summer Session at UCSC, and transfer students are encouraged to take them. If you are transferring, compare catalog descriptions, consult your current institution's adviser, and refer to the

ASSIST web site, www.assist.org, to determine equivalency.

Upper-Division Requirements

In addition to lower-division course work, students are required to complete nine upper-division courses:

Environmental Studies 100/L, Ecology and Society (environmental studies core course, offered once yearly during the fall quarter).

Seven upper-division electives (environmental studies courses numbered 101-179). One must be based in the social sciences and one course must be based in the natural sciences. List of these courses is available from the Environmental Studies Department.

Senior comprehensive requirement (see below).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing. The DC Requirement in environmental studies is satisfied by completing Environmental Studies 100/L and one of the following courses: 183B, 190, 195A, 195B, or 196.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. These courses require careful planning, additional independent research, and at least a two-quarter commitment.

Environmental Studies 183B, *Senior Internship*

Environmental Studies 190, *Capstone Course: Environmental Problem Solving* (offered winter quarter only)

Environmental Studies 195A or 195B, *Senior Thesis*

Environmental Studies 196 (one course from the series), *Senior Seminar*

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

Major Disqualification Policy

There are six introductory requirements for the environmental studies major. Five required courses include: Environmental Studies 23; Environmental Studies 24 (or Biology: Ecology and Evolutionary Biology 20C); Environmental Studies 25; Applied Mathematics and Statistics 2 or 3 or Mathematics 3; Applied Mathematics and Statistics 7/L.

Students must also take one of the following courses: Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, 10, or 15.

Students are also required to complete Environmental Studies 100/L.

A student who either 1) fails two of these required courses, or 2) fails one required course twice, will be disqualified from the major. The department also reserves the right to disqualify from the major students who fail three or more upper-division environmental studies elective courses numbered 100 or above.

Procedures

Students who wish to appeal their disqualification based on extenuating circumstances must submit a letter to the department chair or designee within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Requirements for the Combined Majors

Environmental Studies/Biology

This course of study provides students with the basic tools of biological science and sufficient understanding of resource conservation, conservation biology, and concerns about environmental sustainability to apply these tools to environmental problems.

Prerequisites

All courses must be taken for a letter grade.

Biology and mathematics courses may require placement examinations. See course descriptions for prerequisite information.

Ecology and Evolutionary Biology 20A, 20B, and 20C

Environmental Studies 25

Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, 10 or 15

Applied Mathematics and Statistics 3, Precalculus or Applied Mathematics and Statistics 2 Pre-Statistics; Mathematics 3; or a score on the math placement examination or the College Board AP calculus examination sufficient to be placed into calculus)

Applied Mathematics and Statistics 7 and 7L

Chemistry 1A, 1B, and 1C/N

Two courses in physics, Physics 1 and 2, or Physics 6A/L and 6B or 6C.

Upper-Division Requirements

Students are required to complete nine upper-division courses and the comprehensive requirement listed below.

Environmental Studies 100/L (prerequisites are: Chemistry 1A; Ecology and Evolutionary Biology 20C; Environmental Studies 25; Applied Mathematics and Statistics 2 or 3, or Mathematics 3; Applied Mathematics and Statistics 7/L; and the cultural anthropology/sociology/philosophy option).

Biology 105, *Genetics*

Biology 175, *Evolution*

Six upper-division courses, three in biology and three in environmental studies. One of the six must be a laboratory course, and one of the three environmental studies courses must be based in the social sciences. Students wishing to pursue an advanced degree in the pure or applied sciences are strongly encouraged to complete the organic chemistry series as well. Chemistry 108A/L and 108B/M may be substituted to fulfill one of the upper-division biology elective requirements.

These upper-division elective courses should be selected in pursuit of a coherent plan of study, chosen in consultation with faculty sponsors from both the Biological Sciences and Environmental Studies Departments. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study, or substitution course.
Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement for the environmental studies/biology combined major is satisfied by completing Environmental Studies 100/L and one of the following courses:

Environmental Studies 183B, 190, 195A, 195B, or 196, or Biology: Ecology and Evolutionary Biology 109.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by completing either:

- one of the options for environmental studies majors (see Comprehensive Requirement above); or
- one of the approved internships, independent research or field course or a thesis

Disqualification Policy for the Environmental Studies/Biology Combined Major

All environmental studies/biology combined majors are covered by the biology and environmental studies major disqualification policies. Students should refer to the Biological Sciences section and the Major Disqualification Policy section above for more information.

Environmental Studies/Earth Sciences

This course of study provides students with the basic tools of Earth sciences and environmental studies needed to address environmental problems.

Prerequisites

Applied Mathematics and Statistics 7 and 7L

Mathematics 11A-B (or 19A-B)

Chemistry 1A, 1B/M, and 1C/N

Physics 6A/L and 6B/M (or 5A/L and 5B/M)

Earth Sciences 20/L (or 5/L or 10/L)

Environmental Studies 24 and 25

Anthropology 2 or Philosophy 21, 22, 24, 28, or 80G or
Sociology 1, 10, or 15.

Upper-Division Requirements

Earth Sciences 110A/L, 110B/M, or 110C/N

Environmental Studies 100/L (Prerequisites are: Chemistry 1A, Ecology and Evolutionary Biology 20C, Environmental Studies 25, Applied Mathematics and Statistics 2 or 3 or Mathematics 3, Applied Mathematics and Statistics 7/L, and the cultural anthropology/sociology/philosophy option)

Three additional upper-division environmental studies courses, including at least one course based in the social sciences

Three additional upper-division Earth sciences courses

The upper-division courses should be selected in pursuit of a coherent plan of study, such as water policy-hydrology, restoration ecology-geochemistry, agroecology-soil physical processes, or environmental policy-climate change, among others, in consultation with faculty from both the Environmental Studies and Earth Sciences Departments. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Disqualification Policy for the Environmental Studies/Earth Sciences Combined Major

All environmental studies/earth sciences majors are covered by the earth science and environmental studies major disqualification policies.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement for the environmental studies/Earth and planetary sciences combined major is satisfied by completing Environmental Studies 100/L and one of the following courses: Environmental Studies 183B, 190, 195A, 195B, or 196, or Earth Sciences 195 or 188A-B.

Comprehensive Requirement

Students satisfy their senior comprehensive requirement in environmental studies or Earth sciences by completing either:

One of the senior comprehensive options for single environmental studies majors (see Comprehensive Requirement above) or one of the senior comprehensive options for Earth sciences majors (see Comprehensive Requirement under Earth Sciences).

Environmental Studies/Economics

This major provides students with the basic tools of economic analysis and an understanding of the mechanics of resource production, conservation, and use, in both ecological and economic terms.

Prerequisites

Economics 1, 2, 11A, 11B

Environmental Studies 23, 24, 25

Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, 10 or 15.

Upper-Division Requirements

Economics 100A, Intermediate Microeconomics

Economics 113, Econometrics

Environmental Studies 100/L

Six elective courses from, three from each discipline. Only specifically approved economics electives. Economics 100B, 101, 114, 115, 120, 128, 130, 131, 133, 135, 136, 138, 139A, 140, 141, 142, 150, 160A, 160B, 161A, 165, 169, 180, 183.

Environmental Studies courses numbered 101-179, with one course based in the natural sciences. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement in environmental studies/economics combined major is satisfied

by completing Environmental Studies 100/L and one of the following courses: Environmental Studies 183B, 190, 195A, 195B, or 196.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by completing the following: one of the options for environmental studies majors (see Comprehensive Requirement above); and pass those portions of the economics comprehensive examination administered in Economics 100A and 113.

Disqualification Policy for the Environmental Studies/Economics Combined Major

There are eight introductory requirements for the environmental studies/economics combined major. Seven required courses include: Environmental Studies 23, Environmental Studies 24 (or Biology: Ecology and Evolutionary Biology 20C); Environmental Studies 25; Economics 1; Economics 2; Economics 11A; and Economics 11B. Students must also take one of the following courses: Anthropology 2, Philosophy 21, 22, 24, 28, or 80G, or Sociology 1, 10, or 15. Students are also required to complete Environmental Studies 100/L. A Student who either (1) fails two of these required courses, or (2) fails one required course twice, will be disqualified from the combined major. The department also reserves the right to disqualify from the combined major students who fail three or more upper-division environmental studies or economics elective courses numbered 100 or above.

Honors

Senior Comprehensive Honors. Only applicable is senior thesis, internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's advisor) must confer.

Departmental Honors. To be considered for departmental honors, students must have a grade point average (GPA) of 3.5 in upper-division environmental studies courses.

Highest Departmental Honors. To be considered for highest departmental honors, students must have a GPA of 3.75 in the major in upper-division environmental studies courses, and received honors on the senior comprehensive.

For combined majors, students must fulfill all requirements for honors from both departments.

Graduate Program

The doctor of philosophy (Ph.D.) program in Environmental Studies at UCSC draws from two areas of knowledge: ecology and social sciences. Our interests in ecology range from conservation biology, to agroecology, and to global change. Our interests in the social sciences bridge the dimension between environmental policy analysis and political economy of the environment. These all are historically independent fields and UCSC's program is one of the first to link them.

Graduates of the program are expected to be informed in all of these fields, to have deep intellectual strength in their area of specialty, and to have made substantial contributions toward the understanding of an environmental problem. We expect our doctoral students to be as skilled and intellectually rigorous within their research emphases as are students emerging from more traditional programs-but also to possess the knowledge needed to understand, analyze, and communicate in different but highly relevant fields of study. This expectation of intellectual breadth as well as disciplinary depth is a central goal of our doctoral program.

Given the strong interdisciplinary focus of the environmental studies Ph.D. program, study in other fields is encouraged. The environmental studies faculty have a wide range of research interests, and most are affiliated with other departments on campus. Students have the option of pursuing a "designated emphasis in environmental studies," the equivalent of a graduate minor. These provide a framework for in-depth study in specialized fields in your area, and an opportunity for recognition of particular scholarly expertise. We currently have agreements with the Ecology and Evolutionary Biology, Latin American and Latino Studies, Sociology, and Applied Mathematics and Statistics Departments, and are pursuing agreements with others.

Requirements for the Doctorate

The typical duration of the doctoral program is five to six years.

A dissertation in environmental studies is expected to present an original contribution to the understanding of a significant environmental problem or issue. It should demonstrate a clear understanding of the relevant literature, careful and rigorous research design, and effective communication of the results within the context of the student's area of emphasis.

Also note:

Students are expected to serve as teaching assistants in undergraduate courses for two quarters, unless they can demonstrate equivalent experience.

Students have the option of pursuing a "designated emphasis," the equivalent of a graduate minor. Designated emphases provide a framework for in-depth study in specialized fields in the area, and an opportunity for recognition of particular

scholarly expertise. The Environmental Studies Department has agreements with the Sociology Department and the Latin American and Latino Studies Department, and is pursuing agreements with other departments.

The Environmental Studies Department does not offer a terminal master's degree, except for students who have been advanced to candidacy but who do not complete the Ph.D. dissertation.

Program Prerequisites

The interdisciplinary nature of the core curriculum requires rigorous preparation at the undergraduate level. Students are expected to have had at least one course in statistical analysis. Calculus is useful in many areas of the program and essential to independent work in some areas. In addition, all students should have—either from prior course work or independent reading—an advanced upper-division knowledge of ecology; genetics; evolutionary biology; macro- and microeconomics; politics; and political economy. However, preparation in these areas is best accomplished by course work.

Committees

On admission to the program, each student is assigned a guidance committee of three faculty: two from the student's general research area and one from a complementary field. Thus, a student whose interests are in conservation biology has two committee members who are natural scientists and one who is a social scientist; similarly, a student whose interests are in the political economy of agriculture has a natural scientist on the guidance committee.

Through the membership of the committee may change as the student forms relationships with particular faculty and begins to define the dissertation research, subsequent committees always include one environmental studies faculty member from the other metadiscipline to ensure that the student takes fully into account the interdisciplinary implications of the student's training and research.

Under the guidance of an interdisciplinary faculty committee, a student is expected to begin to define and plan further education and research. For some students, further education and research may involve closely focused preparation and additional course work in particular fields, (such as ecology, economics, or politics), guided by environmental studies faculty and other campus and UCSC faculty. Depending on the student's background, interests, and intentions, the student's advisers may suggest or require additional course work, including courses from other departments.

The guidance committees work with students throughout the first two years to ensure that each student's preparation is individually designed to meet particular needs and interests. At the same time, the various research-seminar formats are intended to encourage students to work collaboratively in reading and research preparation.

Required Courses

Environmental Studies 201A, *Keywords and Concepts Part 1*

Environmental Studies 201B, *Keywords and Concepts Part 2*

Environmental Studies 201M, *Interdisciplinary Research Methods*

Environmental Studies 201N, *Interdisciplinary Research Design*

Two of the following, one each from the social and natural sciences:

Social Sciences:

- Environmental Studies 210, *Political Ecological Thought and the Environment*
or
- Environmental Studies 240, *Public Policy and Conservation*

Natural Sciences:

- Environmental Studies 220, *Conservation Biology*, or
- Environmental Studies 230, *Agroecology and Sustainable Agriculture*

An upper-division or graduate course in quantitative methods, providing a basis in research design and analysis

These courses are designed to ensure that students acquire disciplinary depth in their chosen research fields; gain experience of their research communities; and refine the research skills necessary to perform successfully in their professional arena.

In addition, every quarter before advancement to candidacy, all students are required to participate in:

Environmental Studies 290, *Interdisciplinary Research Seminar* (2 credits)

Environmental Studies 290L, *Graduate Research Seminar* (2 credits)

Environmental Studies 292, *Topics in Research in Environmental Studies* (2 credits)

Graduate students are encouraged to participate in course Environmental Studies 291, *Advanced Readings in Environmental Studies*, in areas of interest.

Pre- and Qualifying Examinations

During the second year, students prepare for the pre-qualifying examination, which must be taken no later than winter quarter of the third year. The qualifying examination for advancement to candidacy normally takes place by the end of the spring quarter of the third year (UCSC requires that the qualifying examination be completed no later than the end of the fourth year).

If the venue of a student's research is in a non-English-speaking country, a language examination testing for reading and speaking competence in the language of that country must be passed before advancement to candidacy.

Application and Admission

For admission to the doctoral program, students must have completed a bachelor's degree or the equivalent in a related disciplinary field. Students with interdisciplinary degrees, such as environmental studies should have disciplinary course work equivalent to a double major or a master's degree in an appropriate field.

Superior scholarship, capacity to carry out independent research, and commitment to disciplinary integration must be demonstrated in the statement of purpose, course work, Graduate Record Examination (GRE) General Test, and letters of recommendation. The GRE Subject Test (in a disciplinary field of the student's choice) is strongly recommended. Prospective students must contact faculty directly to inquire about specific course requirements and sponsorship. Students are rarely accepted into the program without significant, early communications with potential faculty sponsors. See the faculty list at <http://envs.ucsc.edu/faculty/> for contact information.

Other considerations for admission include grades, evaluation, publications, professional or extramural experience, and more than one degree (second bachelor's or master's). Students are required to have completed coursework, or equivalent practical experience, in ecology, statistics, sociology/political science, and economics. Limited deficiencies in these areas can be remedied during the first year of graduate study. In addition to the application materials, students are strongly encouraged to submit a substantial written project (undergraduate or master's research project).

Admissions information and the online graduate application are at the UCSC Division of Graduate Studies web site under prospective student information (<http://graddiv.ucsc.edu/prospective/whyucsc.php>).

Admission is only considered for the fall quarter. Completed applications are due by December 15th of the previous academic year.

Environmental Studies

405 Interdisciplinary Sciences Building
(831) 459-2634

<http://envs.ucsc.edu>

Program Description

The environmental studies major prepares students for meaningful lifetime engagement with the environmental challenges that are facing society. UCSC environmental studies graduates hold leadership positions as legislative and policy analysts, [environmental lawyers](#), environmental ~~management officials~~ [managers, city and state planners](#), educators, restoration ecologists, [organic farmers and agroecological specialists](#), conservation ~~and field~~ biologists, [environmental engineers](#), museum curators, business consultants, and political advocates. In addition, many graduates go on to obtain professional, master's, or doctoral degrees at the nation's finest institutions.

Students pursue an interdisciplinary curriculum that combines course work in the natural and social sciences. Introductory courses cover the ecological, political, and economic aspects of historic, current and future environmental issues. The core course, Environmental Studies 100/L, *Ecology and Society* (most often completed during the fall quarter of a student's junior year) builds on the skills acquired in the lower-division classes, and encourages students to apply ecological, economical and political skills toward environmental and ecosystem management. The remaining upper-division elective courses further emphasize the integration of ecological knowledge with an understanding of social institutions and policies. The program emphasizes active, interdisciplinary learning with the overall objective of instilling the necessary skills to conserve biodiversity and integrate the principles of sustainability with respect to management of complex environmental systems. Faculty work on these issues at local, regional, and global levels providing a unique, proactive, and progressive academic environment for students wishing to pursue a degree program within the Environmental Studies Department.

In addition to the single environmental studies major, students may choose to pursue one of three combined majors with biology, Earth sciences, or economics. The combined major curricula offer the unique integration of the underlying concepts of environmental studies with a focus on the application of these concepts in a closely related field (or vice versa).

As a complement to classroom instruction and research, many courses have field components. The Environmental Studies Internship Program helps qualified students find placements with government and educational agencies, community organizations, and private firms. Furthermore, faculty-directed, independent, or field-oriented research courses allow environmental studies students the opportunity to learn more about their specific academic career or personal interests, often while earning academic credit.

Requirements for the Major

Prerequisites for the Single Major

Continuing UCSC students are required to complete all six prerequisite courses before taking Environmental Studies 100/L. Five of the prerequisite courses are preset and are listed below. See the course descriptions for more specific information.

Environmental Studies 23, *The Physical and Chemical Environment* (offered in spring and summer quarters); ~~or Chemistry 1A, General Chemistry.~~

Environmental Studies 24, *General Ecology* (offered in fall and summer quarters). ~~*; or Ecology and Evolutionary Biology 20C, Ecology and Evolution.*~~

Environmental Studies 25, *Environmental Policy and Economics*. Offered in winter and summer quarters.

Applied Mathematics and Statistics 2, *Pre-Statistics*; or Applied Mathematics and Statistics 3, *Precalculus for Science and Engineering*; or Mathematics 3, *Precalculus*; or a score of 3 or higher on the College Board AP calculus examination, or equivalent. Check the catalog for the quarters offered.

Applied Mathematics and Statistics 7/L, *Statistical Methods for the Biological and Environmental Studies*. Check the catalog for the quarters offered. ~~Applied Mathematics and Statistics 2, Pre-Statistics, or Applied Mathematics and Statistics 3, Precalculus for Science and Engineering, or Mathematics 3, Precalculus is a required prerequisite for this course.*~~

*Prerequisite for Environmental Studies 24 and Applied Mathematics and Statistics 7/L is Applied Mathematics and Statistics 2 or 3 or Mathematics 3.

In addition, students choose one introductory course in sociology, cultural anthropology, or ethics. The acceptable courses are as follows:

Anthropology 2, *Introduction to Cultural Anthropology*

Sociology 1, *Introduction to Sociology*

Sociology 10, *Issues and Problems in American Society*

Sociology 15, *World Society*

~~Philosophy 2, Wilderness Studies~~

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics: Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Philosophy 80G, *Bioethics in the 21st Century: Science, Business, and Society*

Plan One for students plaing into MATH 3

Year	Fall	Winter	Spring
1st (frsh)	MATH 3 or AMS 2 or 3	AMS 7/L or SOC/ANTH/ <u>Ethics</u>	ENVS 23
	gen-ed	Ethics	gen-ed
		gen-ed	
2nd	ENVS 24	ENVS 25	AMS 7/L or
	gen-ed AMS 7/L or	_____	_____

(soph)*	<u>SOC/ANTH/Ethics</u>	gen ed	Soc/Anth/Ethics
			gen-ed
3rd (jr)	ENVS 100/L		

* 2nd Year (soph) courses incorrect in printed catalog.

Plan Two for students placing out of MATH 3

Year	Fall	Winter	Spring
1st (frsh)	ENVS 24	ENVS 25	ENVS 23
	gen-ed	AMS 7/L or SOC/ANTH/ <u>Ethics</u>	AMS 7/L or SOC/ANTH/ <u>Ethics</u>
		Ethics	Ethics

Declaration Process for Environmental Studies Students

Students wishing to declare within the Environmental Studies Department ~~are to~~should visit the Environmental Studies web site at <http://envs.ucsc.edu/undergraduate> and follow the steps listed there. In order to be officially declared and enroll in the core course, Environmental Studies 100/L, students must have the official declaration of major form filed with the Environmental Studies Department. Study plans may be downloaded from the environmental studies web site (<http://envs.edu/undergraduate/>).

Transfer Students

Transfer students are accepted in the environmental studies major in the fall quarter only. Students transferring to UCSC should complete as much of the lower-division curriculum as possible, with a grade of C or better, at another recognized institution before transferring to UCSC. Below is an outline of acceptable substitute courses for the lower-division environmental studies single major prerequisites. Please note that ~~as of fall 2006,~~ all students wishing to pursue a degree within the Environmental Studies Department must complete Applied Mathematics and Statistics 7/L at UCSC to fulfill the introductory statistics requirement. It is recommended that transfer students plan to enroll in Applied Mathematics and Statistics 7/L and any other missing prerequisite during the summer quarter.

Completion of an introductory college chemistry course will substitute for Environmental Studies 23.

Two courses, one in politics, one in economics, will substitute for Environmental Studies 25.

A college-level precalculus course will substitute for Mathematics 3 or Applied Mathematics and Statistics 3 at UCSC.

Environmental Studies 23, 24 and 25 are offered during Summer Session at UCSC, and transfer students are encouraged to take them. If you are transferring, compare catalog descriptions, consult your current institution's adviser, and refer to the ASSIST web site, www.assist.org, to determine equivalency.

Upper-Division Requirements

In addition to lower-division course work, students are required to complete nine upper-division courses:

Environmental Studies 100/L, *Ecology and Society* (environmental studies core course, offered once yearly during the fall quarter).

Seven upper-division electives (environmental studies courses numbered 101-179). One must be based in the social sciences and one course must be based in the natural sciences. List of these courses is available from the Environmental Studies Department.

Senior comprehensive requirement (see below).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing. The DC Requirement in environmental studies is satisfied by completing Environmental Studies 100/L and one of the following courses: 183B, 190, 195A, 195B, or 196.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. These courses require careful planning, additional independent research, and at least a two-quarter commitment.

Environmental Studies 183B, *Senior Internship*

Environmental Studies 190, *Capstone Course: Environmental Problem Solving* (offered winter quarter only)

Environmental Studies 195A or 195B, *Senior Thesis*

Environmental Studies 196 (one course from the series), *Senior Seminar*

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

Major Disqualification Policy

There are six introductory requirements for the environmental studies major. Five required courses include: Environmental Studies 23; Environmental Studies 24 (or Biology: Ecology and Evolutionary Biology 20C); Environmental Studies 25; Applied Mathematics and Statistics 2 or 3 or Mathematics 3; Applied Mathematics and Statistics 7/L.

Students must also take one of the following courses: Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, 10, or 15.

Students are also required to complete Environmental Studies 100/L.

A student who either 1) fails two of these required courses, or 2) fails one required course twice, will be disqualified from the major. The department also reserves the right to disqualify from the major students who fail three or more upper-division environmental studies elective courses numbered 100 or above.

Procedures

Students who wish to appeal their disqualification based on extenuating circumstances must submit a letter to the department chair or designee within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Requirements for the Combined Majors

Environmental Studies/Biology

This course of study provides students with the basic tools of biological science and sufficient understanding of resource conservation, conservation biology, and concerns about environmental sustainability to apply these tools to environmental problems.

Prerequisites

All courses must be taken for a letter grade.

Biology and mathematics courses may require placement examinations. See course descriptions for prerequisite information.

Ecology and Evolutionary Biology 20A, 20B, and 20C

Environmental Studies 25

Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, [10](#) or 15

Applied Mathematics and Statistics 3, *Precalculus* or Applied Mathematics and Statistics 2 *Pre-Statistics*; Mathematics 3; or a score on the math placement examination or the College Board AP calculus examination sufficient to be placed into calculus)

Applied Mathematics and Statistics 7 and 7L

Chemistry 1A, 1B, and 1C/N

Two courses in physics, Physics 1 and 2, or Physics 6A/L and 6B/~~M~~ or [6C](#).

Upper-Division Requirements

Students are required to complete nine upper-division courses and the comprehensive requirement listed below.

Environmental Studies 100/L (prerequisites are: Chemistry 1A; Ecology and Evolutionary Biology 20C; Environmental Studies 25; Applied Mathematics and Statistics 2 or 3, or Mathematics 3; Applied Mathematics and Statistics 7/L; and the cultural anthropology/sociology/philosophy option).

Biology 105, *Genetics*

Biology 175, *Evolution*

Six upper-division courses, three in biology and three in environmental studies. One of the six must be a laboratory course, and one of the three environmental studies courses must be based in the social sciences. Students wishing to pursue an advanced degree in the pure or applied sciences are strongly encouraged to complete the organic chemistry series as well. Chemistry 108A/L and 108B/M may be substituted to fulfill one of the upper-division biology elective requirements.

These upper-division elective courses should be selected in pursuit of a coherent plan of study, chosen in consultation with faculty sponsors from both the Biological Sciences and Environmental Studies Departments. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study, or substitution course.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement for the environmental studies/biology combined major is satisfied by completing Environmental Studies 100/L and one of the following courses: Environmental Studies 183B, 190, 195A, 195B, or 196, or Biology: Ecology and Evolutionary Biology 109.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by completing either:

- one of the options for environmental studies majors (see Comprehensive Requirement above); or
- one of the approved internships, independent research or field course or a thesis

Disqualification Policy for the Environmental Studies/Biology Combined Major

All environmental studies/biology combined majors are covered by the biology and environmental studies major disqualification policies, ~~which limit the number of times a student may receive a No Pass, D, and/or F in the introductory major requirements for both biological sciences and environmental studies and still remain a combined major, and which also limits the number of times a student may receive a No Pass, D, and/or F in upper-division biology and environmental studies courses.~~ Students should refer to the Biological Sciences section and the Major Disqualification Policy section above for more information.

Environmental Studies/Earth Sciences

This course of study provides students with the basic tools of Earth sciences and environmental studies needed to address environmental problems.

Prerequisites

Applied Mathematics and Statistics 7 and 7L

Mathematics 11A-B (or 19A-B)

Chemistry 1A, 1B/M, and 1C/N

Physics 6A/L and 6B/M (or 5A/L and 5B/M)

Earth Sciences 20/L (or 5/L or 10/L)

Environmental Studies 24 and 25

Anthropology 2 or Philosophy 21, 22, 24, 28, or 80G or

Sociology 1, 10, or 15.

Upper-Division Requirements

Earth Sciences 110A/L, 110B/M, or 110C/N

Environmental Studies 100/L (Prerequisites are: Chemistry 1A, Ecology and Evolutionary Biology 20C, Environmental Studies 25, Applied Mathematics and Statistics 2 or 3 or Mathematics 3, Applied Mathematics and Statistics 7/L, and the cultural anthropology/sociology/philosophy option)

Three additional upper-division environmental studies courses, including at least one course based in the social sciences

Three additional upper-division Earth sciences courses

The upper-division courses should be selected in pursuit of a coherent plan of study, such as water policy-hydrology, restoration ecology-geochemistry, agroecology-soil physical

processes, or environmental policy-climate change, among others, in consultation with faculty from both the Environmental Studies and Earth Sciences Departments. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Disqualification Policy for the Environmental Studies/Earth Sciences Combined Major

All environmental studies/earth sciences majors are covered by the earth science and environmental studies major disqualification policies.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement for the environmental studies/Earth and planetary sciences combined major is satisfied by completing Environmental Studies 100/L and one of the following courses: Environmental Studies 183B, 190, 195A, 195B, or 196, or Earth Sciences 195 or 188A-B.

Comprehensive Requirement

Students satisfy their senior comprehensive requirement in environmental studies or Earth sciences by completing either:

One of the senior comprehensive options for single environmental studies majors (see Comprehensive Requirement above) or one of the senior comprehensive options for Earth sciences majors (see Comprehensive Requirement under Earth Sciences).

Environmental Studies/Economics

This major provides students with the basic tools of economic analysis and an understanding of the mechanics of resource production, conservation, and use, in both ecological and economic terms.

Prerequisites

Economics 1, 2, 11A, 11B

Environmental Studies 23, 24, 25

Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, [10](#) or 15.

Upper-Division Requirements

Economics 100A, Intermediate Microeconomics

Economics 113, Econometrics

Environmental Studies 100/L

Six elective courses from, three from each discipline. Only specifically approved economics electives. [Economics 100B, 101, 114, 115, 120, 128, 130, 131, 133, 135, 136, 138, 139A, 140, 141, 142, 150, 160A, 160B, 161A, 165, 169, 180, 183.](#) ~~List of approved courses available at the Economics Department.*~~

Environmental Studies courses numbered 101-179, with one course based in the natural sciences. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

~~* Subject to change. Please see the Economics Department adviser or the environmental studies adviser for the most up-to-date approved course listings.~~

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary

Communication (DC) requirement. The DC Requirement in environmental studies/economics combined major is satisfied by completing Environmental Studies 100/L and one of the following courses: Environmental Studies 183B, 190, 195A, 195B, or 196.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by completing the following:

one of the options for environmental studies majors (see Comprehensive Requirement above); and

pass those portions of the economics comprehensive examination administered in Economics 100A and 113.

Disqualification Policy for the Environmental Studies/Economics Combined Major

There are eight introductory requirements for the environmental studies/economics combined major. Seven required courses include: Environmental Studies 23, Environmental Studies 24 (or Biology: Ecology and Evolutionary Biology 20C); Environmental Studies 25; Economics 1; Economics 2; Economics 11A; and Economics 11B. Students must also take one of the following courses: Anthropology 2, Philosophy 21, 22, 24, 28, or 80G, or Sociology 1, 10, or 15. Students are also required to complete Environmental Studies 100/L. A Student who either (1) fails two of these required courses, or (2) fails one required course twice, will be disqualified from the combined major. The department also reserves the right to disqualify from the combined major students who fail three or more upper-division environmental studies or economics elective courses numbered 100 or above.

Honors

Senior Comprehensive Honors. Only applicable is senior thesis, internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's advisor) must confer.

Departmental Honors. To be considered for departmental honors, students must have a grade point average (GPA) of 3.5 in upper-division environmental studies courses.

Highest Departmental Honors. To be considered for highest departmental honors, students must have a GPA of 3.75 in the major in upper-division environmental studies courses, and received honors on the senior comprehensive.

For combined majors, students must fulfill all requirements for honors from both departments.

Graduate Program

The doctor of philosophy (Ph.D.) program in Environmental Studies at UCSC draws from two areas of knowledge: ecology and social sciences. Our interests in ecology range from conservation biology, to agroecology, and to global change. Our interests in the social sciences bridge the dimension between environmental policy analysis and political economy of the environment. These all are historically independent fields and UCSC's program is one of the first to link them.

Graduates of the program are expected to be informed in all of these fields, to have deep intellectual strength in their area of specialty, and to have made substantial contributions toward the understanding of an environmental problem. We expect our doctoral students to be as skilled and intellectually rigorous within their research emphases as are students emerging from more traditional programs-but also to possess the knowledge needed to understand, analyze, and communicate in different but highly relevant fields of study. This

expectation of intellectual breadth as well as disciplinary depth is a central goal of our doctoral program.

Given the strong interdisciplinary focus of the environmental studies Ph.D. program, study in other fields is encouraged. The environmental studies faculty have a wide range of research interests, and most are affiliated with other departments on campus. Students have the option of pursuing a “designated emphasis in environmental studies,” the equivalent of a graduate minor. These provide a framework for in-depth study in specialized fields in your area, and an opportunity for recognition of particular scholarly expertise. We currently have agreements with the Ecology and Evolutionary Biology, Latin American and Latino Studies, Sociology, and Applied Mathematics and Statistics Departments, and are pursuing agreements with others.

Requirements for the Doctorate

The typical duration of the doctoral program is five to six years.

A dissertation in environmental studies is expected to present an original contribution to the understanding of a significant environmental problem or issue. It should demonstrate a clear understanding of the relevant literature, careful and rigorous research design, and effective communication of the results within the context of the student’s area of emphasis.

Also note:

Students are expected to serve as teaching assistants in undergraduate courses for two quarters, unless they can demonstrate equivalent experience.

Students have the option of pursuing a “designated emphasis,” the equivalent of a graduate minor. Designated emphases provide a framework for in-depth study in specialized fields in the area, and an opportunity for recognition of particular scholarly expertise. The Environmental Studies Department has agreements with the Sociology Department and the Latin American and Latino Studies Department, and is pursuing agreements with other departments.

The Environmental Studies Department does not offer a terminal master’s degree, except for students who have been advanced to candidacy but who do not complete the Ph.D. dissertation.

Program Prerequisites

The interdisciplinary nature of the core curriculum requires rigorous preparation at the undergraduate level. Students are expected to have had at least one course in statistical analysis. Calculus is useful in many areas of the program and essential to independent work in some areas. In addition, all students should have—either from prior course work or independent reading—an advanced upper-division knowledge of ecology; genetics; evolutionary biology; macro- and microeconomics; politics; and political economy. However, preparation in these areas is best accomplished by course work.

Committees

On admission to the program, each student is assigned a guidance committee of three faculty: two from the student’s general research area and one from a complementary field. Thus, a student whose interests are in conservation biology has two committee members who are natural scientists and one who is a social scientist; similarly, a student whose interests are in the political economy of agriculture has a natural scientist on the guidance committee.

Through the membership of the committee may change as the student forms relationships with particular faculty and begins to define the dissertation research, subsequent committees always include one environmental studies faculty member from the

other metadiscipline to ensure that the student takes fully into account the interdisciplinary implications of the student's training and research.

Under the guidance of an interdisciplinary faculty committee, a student is expected to begin to define and plan further education and research. For some students, further education and research may involve closely focused preparation and additional course work in particular fields, (such as ecology, economics, or politics), guided by environmental studies faculty and other campus and UCSC faculty. Depending on the student's background, interests, and intentions, the student's advisers may suggest or require additional course work, including courses from other departments.

The guidance committees work with students throughout the first two years to ensure that each student's preparation is individually designed to meet particular needs and interests. At the same time, the various research-seminar formats are intended to encourage students to work collaboratively in reading and research preparation.

Required Courses

Environmental Studies 201A, *Keywords and Concepts* part 1

Environmental Studies 201B, *Keywords and Concepts* part 2

Environmental Studies 201M, *Interdisciplinary Research Methods*

Environmental Studies 201N, *Interdisciplinary Research Design*

Two of the following, one each from the social and natural sciences:

Social Sciences:

- Environmental Studies 210, *Political Ecological Thought and the Environment*, or
- Environmental Studies 240, *Public Policy and Conservation*

Natural Sciences:

- Environmental Studies 220, *Conservation Biology*, or
- Environmental Studies 230, *Agroecology and Sustainable Agriculture*

An upper-division or graduate course in quantitative methods, providing a basis in research design and analysis

These courses are designed to ensure that students acquire disciplinary depth in their chosen research fields; gain experience of their research communities; and refine the research skills necessary to perform successfully in their professional arena.

In addition, every quarter before advancement to candidacy, all students are required to participate in:

Environmental Studies 290, *Interdisciplinary Research Seminar* (2 credits)

Environmental Studies 290L, *Graduate Research Seminar* (2 credits)

Environmental Studies 292, *Topics in Research in Environmental Studies* (2 credits)

Graduate students are encouraged to participate in course Environmental Studies 291, *Advanced Readings in Environmental Studies*, in areas of interest.

Pre- and Qualifying Examinations

During the second year, students prepare for the pre-qualifying examination, which must be taken no later than winter quarter of the third year. The qualifying examination for advancement to candidacy normally takes place by the end of the spring quarter of the third year (UCSC requires that the qualifying examination be completed no later than the end of the fourth year).

If the venue of a student's research is in a non-English-speaking country, a language examination testing for reading and speaking competence in the language of that country must be passed before advancement to candidacy.

Application and Admission

For admission to the doctoral program, students must have completed a bachelor's degree or the equivalent in a related disciplinary field. Students with interdisciplinary degrees, such as environmental studies should have disciplinary course work equivalent to a double major or a master's degree in an appropriate field.

Superior scholarship, capacity to carry out independent research, and commitment to disciplinary integration must be demonstrated in the statement of purpose, course work, Graduate Record Examination (GRE) General Test, and letters of recommendation. The GRE Subject Test (in a disciplinary field of the student's choice) is strongly recommended. Prospective students must contact faculty directly to inquire about specific course requirements and sponsorship. Students are rarely accepted into the program without significant, early communications with potential faculty sponsors. See the faculty list at <http://envs.ucsc.edu/faculty/> for contact information.

Other considerations for admission include grades, evaluation, publications, professional or extramural experience, and more than one degree (second bachelor's or master's). Students are required to have completed coursework, or equivalent practical experience, in ecology, statistics, sociology/political science, and economics. Limited deficiencies in these areas can be remedied during the first year of graduate study. In addition to the application materials, students are strongly encouraged to submit a substantial written project (undergraduate or master's research project).

Admissions information and the online graduate application are at the UCSC Division of Graduate Studies web site under prospective student information (<http://graddiv.ucsc.edu/prospective/whyucsc.php>).

Admission is only considered for the fall quarter. Completed applications are due by December 15th of the previous academic year.

Faculty and Professional Interests

Professor

WEIXIN CHENG

Soil ecology, agroecology, biogeochemistry, global change ecology

ROBERT R. CURRY, Emeritus

BRYAN H. FARRELL, Emeritus

MARGARET FITZSIMMONS

Social and spatial aspects of environmental change, the development and regulation of primary-sector activities and the regional integration of environmental planning and resources management institutions in urban and rural settings

GREGORY S. GILBERT

Disease ecology, forest ecology, tropical ecology, biological invasions, conservation biology

STEPHEN R. GLIESSMAN

Agroecology, sustainable agriculture, tropical land use and development, alternative trade networks, sustainable livelihoods and conservation, linking community and agroecology

DAVID GOODMAN, Emeritus

BRENT HADDAD

Fresh-water economics, policy, and communications; economic institutions and the environment; climate-change mitigation and adaptation; institutional and ecological economics

KAREN D. HOLL

Restoration ecology, conservation biology, landscape ecology

SHELDON KAMIENIECKI

Environmental politics and policy; agenda building; strategic regulatory planning; business and interest group influence; political campaigns and elections; research methodology

DEBORAH K. LETOURNEAU

Agroecology, tropical biology, insect-plant interactions, biological control as an alternative to chemical pesticides, environmental risks of genetically modified crops

PAUL L. NIEBANCK, Emeritus

JAMES E. PEPPER, Emeritus

DANIEL M. PRESS

U.S. environmental politics and policy, water quality, industrial ecology, resources management, policy analysis

ALAN RICHARDS, Emeritus

CAROL SHENNAN

Agroecology, ecosystem processes, organic agriculture, participatory research, agricultural development with a focus on Africa

MICHAEL E. SOUL, Emeritus

Associate Professor

JEFFREY T. BURY

Political ecology; sustainable development; Latin America; extractive industries; climate change; new models of conservation

TIMOTHY DUANE

Environmental law and policy, renewable energy development, ecosystem-based management, land use planning and regulation, water law and policy, conservation

MICHAEL E. LOIK

Plant physiological ecology, climate change ecology, biometeorology, ecohydrology

S. RAVI RAJAN

Environmental history and political ecology, risk and disaster studies, science and technology studies, North-South environmental conflicts, environmental social theory, environmental ethics

ERIKA ZAVALETA

Ecology and evolutionary biology, biodiversity and global change, biological invasions, terrestrial plant and ecosystem ecology, ecological economics, human ecology, conservation

Assistant Professor

ZDRAVKA TZANKOVA

Environmental policy and politics (United States and comparative), especially: scientific expertise and environmental decision-making; non-state market-based governance; interactions between public and private regulation (dynamics and conservation consequences); marine policy

CHRISTOPHER C. WILMERS

Wildlife ecology and conservation; food webs and climate change; movement ecology; animal behavior; predator-prey dynamics; ecological modeling

ERIKA ZAVALETA

Ecology and evolutionary biology, biodiversity and global change, biological invasions, terrestrial plant and ecosystem ecology, ecological economics, human ecology, conservation

Lecturer

ANDREW SCHIFFRIN

Environmental assessment, transportation, watershed management

DORIS ASH (Education)

Informal science learning, teacher professional development, science discourse in and out of the classroom

GIACOMO BERNARDI (Ecology and Evolutionary Biology)

Fish biology, phylogenetics, evolution

MICHAEL K. BROWN, EMERITUS (Politics)

Inequality, race and African American politics, political economy, political development of welfare states, theories and methods of historical social science

KENNETH W. BRULAND (Ocean Sciences)

Chemical oceanography, biogeochemistry of trace metals and radionuclides, aquatic chemistry, geochemistry

EDMUND BURKE III (History)

Islamic history, modern Middle East and North African history, French history, European imperialism, world history

MELISSA L. CALDWELL (Anthropology)

Poverty and welfare, religious development work, food, transnationalism, socialism and postsocialism, Russia, the former Soviet Union, and Eastern Europe

MARK CIOC (History)

German history, modern European history, environmental history

DANIEL P. COSTA (Ecology and Evolutionary Biology)

Physiological ecology of marine mammals and birds

DONALD CROLL (Ecology and Evolutionary Biology)

Ecology and conservation of islands and seabirds

BEN CROW (Sociology)

International development, sociology of water and markets, global inequality, South Asia and East Africa, political economy, and green enterprise

E. MELANIE DUPUIS (Sociology)

Economic sociology, sociology of consumption, sociology of development, political sociology, sociology of the environment, technological change, historical sociology, social theory, food and social change

KENT EATON (Politics)

Comparative politics, international relations, political economy, public policy, territorial conflict, federalism, decentralization, party and electoral systems, Latin America, the Philippines

JAMES ESTES (Ecology and Evolutionary Biology, and Ocean Sciences)
Marine sciences, community ecology

ANDREW FISHER (Earth Sciences and Planetary Sciences)
Hydrogeology, crustal studies, heat flow, modeling

JONATHAN A. FOX (Latin American and Latino Studies)
Latin American and Latino politics, including issues of democratization, social movements, social and environmental policy, immigration, and public interest groups

LAUREL R. FOX (Ecology and Evolutionary Biology)
Terrestrial population and community ecology, plant-animal interactions

DIANE GIFFORD-GONZALEZ (Anthropology)
Paleolithic and Neolithic Africa and Eurasia, colonial New Mexico, origins of food production, pastoralists, zooarchaeology, history of archaeology, interpretive theory, visual anthropology

JAMES B. GILL (Earth Sciences and Planetary Sciences)
Igneous petrology, geochemistry of island arcs

GARY B. GRIGGS (Earth Sciences and Planetary Sciences)
Coastal processes, hazards and engineering

DANIEL GUEVARA (Philosophy)
Kant, moral philosophy, moral psychology, environmental ethics, history of modern philosophy

JULIE H. GUTHMAN (Community Studies)
Sustainable agriculture and alternative food movements, international political economy of food and agriculture, politics of obesity, political ecology, race and food, critical human geography

DONNA J. HARAWAY (History of Consciousness and Feminist Studies)
Feminist theory, cultural and historical studies of science and technology, relation of life and human sciences, human-animal relations, and animal studies

SUSAN HARDING (Anthropology)
Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, Spain

A. MARM KILPATRICK (Ecology and Evolutionary Biology)
Disease Ecology, population biology

PAUL L. KOCH, Professor (Earth and Planetary Sciences)
Isotope biogeochemistry, vertebrate paleontology

RONNIE D. LIPSCHUTZ (Politics)
International relations; international political economy; foreign policy; resource/environmental politics; global political networks; global civil society; film, fiction, and politics; technology and society; states of terror

FLORA LU, (Latin American and Latino Studies)
Ecological anthropology, human behavioral ecology, Amazon rainforest, indigenous peoples, conservation, Ecuador, culture change, market integration, indigenous resource management, political ecology, environmental justice

PAUL M. LUBECK (Sociology)
Political sociology; political economy of development, globalization, labor and work; logics of methodology; religion and social movements; Islamic society and identities; information and networks

ANDREW SALVADOR MATHEWS (Anthropology)
Environmental anthropology, science and technology studies, conservation and development

INGRID M. PARKER (Ecology and Evolutionary Biology)
Plant ecology, plant-pathogen interactions, biological invasions

MANUEL PASTOR JR., (Latin American and Latino Studies)
Urban poverty and regional development, Latinos in the urban U.S., environmental justice, macroeconomic stabilization in Latin America; distribution and growth in the developing world; Cuban economic reform; Mexican economic reform

ADINA PAYTAN, IMS Research Scientist (Earth and Planetary Sciences)
Biogeochemistry, paleoceanography, environmental and aquatic chemistry

GRANT H. POGSON (Ecology and Evolutionary Biology)
Molecular population genetics, ecological genetics, marine invertebrates and fishes

DONALD C. POTTS (Ecology and Evolutionary Biology)
Coral reef ecology, genetics, evolution, and geological history; marine biodiversity; tropical biology, global change, and remote sensing

PETER T. RAIMONDI (Ecology and Evolutionary Biology)

Marine ecology, evolutionary ecology, experimental design, applied ecology

DANILYN RUTHERFORD (Anthropology)

Borders and frontiers, colonialism, nationalism, ethnicity, kinship, performance, Christianity, secularism, sovereignty, publics, affect, technology, governancy, theory and method in anthropology, West Papua, Indonesia, the U.S.

ALI SHAKOURI (Electrical Engineering)

Quantum electronics; nano- and microscale heat and current transport in semiconductor devices; thermoelectric/thermionic energy conversion; renewable energy sources; thermal imaging; micro-refrigerators on a chip; and optoelectronic integrated circuits

LISA C. SLOAN (Earth Sciences and Planetary Sciences)

Paleoclimatology, climate change, Earth system science, surficial processes

DONALD R. SMITH (Microbiology and Environmental Toxicology)

Neurotoxicity, cellular and organismal responses to environmental toxins

ANDREW SZASZ (Sociology)

Environmental sociology (environmental movements, policy, environmental justice); theory

DANA Y. TAKAGI (Sociology)

Social inequality and identity, research methods, race relations, nationalism and social movements

ANNA TSING (Anthropology)

Culture and politics, feminist theory and gender in the U.S., social landscapes and tropical forest ethnoecologies, ethnicity, local power and relations to the state in Indonesia, Southeast Asia, and the U.S.

TERRIE M. WILLIAMS (Ecology and Evolutionary Biology)

Vertebrate locomotor and thermoregulatory physiology; marine biodiversity; comparative vertebrate energetics, exercise physiology

PATRICIA ZAVELLA (Latin American and Latino Studies)

Relationship between women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicana/o workers and U.S. capital

Lower-Division Courses

15. Natural History of the UCSC Campus (2 credits). W

Introduces students to the range of natural species and communities occurring on the UCSC campus. All class time is spent outside, and each week a different area of campus is visited. Course 24 is recommended. *C. Lay*

23. The Physical and Chemical Environment. S

Provides an overview of the physical and chemical environment of planet Earth. Fundamental chemistry and physics is introduced in the process of learning about Earth in a holistic way. The influence of human societies on the global environment is one focus of discussion. Earth's many "spheres" are explored first: the lithosphere; the atmosphere; the hydrosphere, and the ecosphere. Then global cycles of carbon, nitrogen, and several other elements are studied in the context of basic sciences and societal issues. (General Education Code(s): IN.) *W. Cheng*

24. General Ecology. F

Covers principles of ecology including limits to species abundances, evolutionary ecology, population dynamics, community interactions and patterns, and ecosystem patterns and dynamics. Prerequisite(s): Applied Mathematics and Statistics 2 or 3, or Mathematics 3 or higher level Mathematics course or placement exam score of 31 or higher; or AP Calculus AB exam score of 3 or higher; course 23 recommended as prerequisite to this course. (General Education Code(s): SI, IN.) *J. Washburn*

25. Environmental Policy and Economics. W

Introduces basic concepts from policy studies and economics that help explain environmental challenges. Provides an overview of how government, non-governmental organizations, and the private sector are dealing with major environmental challenges. (General Education Code(s): PE-E, IS.) *J. Barsimantov*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80A. The Future of Rain Forests. *

A broad overview of both ecological and social aspects related to tropical rain forests drawing on case studies worldwide. Topics include the biology and distribution of rain forests, causes and effects of their destruction, and management options to facilitate their conservation. (General Education Code(s): PE-E, T7-Natural Sciences or Social Sciences.) *(S) The Staff*

80B. The Ecological Forecast for Global Warming. F

A broad overview of the impacts of human activities on the global climate system. Topics include how climate affects the distribution of ecosystems, the influence of global climate change on biodiversity, ecosystem function, and consequences for the human enterprise. (General Education Code(s): PE-E, T7-Natural Sciences or Social Sciences.) *M. Loik*

83. Environmental Studies Internship. F,W,S

A supervised off-campus learning experience related to environmental problem solving. Focuses on initial experiences in applied work and specific skill development. Students may be placed individually or with a team in government agencies, private organizations, citizen action groups. May be repeated for credit. (General Education Code(s): PR-S.) *The Staff*

91F. Community and Agroecology (2 credits). F,W,S

Interdisciplinary two-credit seminar designed to introduce students to concepts of community and agroecology in the context of sustainability. Course can serve as a gateway to or as a continuing basis for participation in PICA (Program in Community and Agroecology). Specific topics and readings change each quarter. May be repeated for credit. *S. Gliessman, The Staff*

99. Tutorial. F,W,S

Directed reading, supervised research, and organized projects relating to environmental problems. May be repeated for credit with consent of the chairperson of Environmental Studies Department. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Provides for department-sponsored directed reading, supervised research, or organized project for lower-division students under the direct supervision of a faculty sponsor. May not be counted toward major requirements. Students submit petition to sponsoring agency. May be repeated for

credit. *The Staff*

Upper-Division Courses

100. Ecology and Society. F

Introduction to environmental issues in an interdisciplinary matrix. Focuses on three issues at the intersection of ecological questions and social institutions: agroecology and sustainable agriculture; population growth, economic growth, and environmental degradation; and biodiversity conservation and land management. Reviews the important roles of disciplinary abstraction and of the application of that knowledge to context-dependent explanations of environmental problems. Enrollment restricted to environmental studies, environmental studies/biology, environmental studies/economics, and environmental studies/Earth sciences majors. Prerequisite(s): course 23 or CHEM 1A; course 24 or BIOE 20C; course 25; and AMS 7/L or ECON 113; and one from: ANTH 2, SOCY 1,10,15, PHIL 21,22,24,28, or 80G. Concurrent enrollment in 100L is required. *Z. Tzankova, E. Zavaleta*

100L. Ecology and Society Writing Laboratory (2 credits). F

Required writing lab accompanying course 100. Students are introduced to writing in different styles and for different audiences typical of the ecosystem-society interface. Course 100 writing assignments are developed, written, and revised in conjunction with the lab. W credit is granted only upon successful completion of course 100. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in 100 is required. (General Education Code(s): PR-E.) *Z. Tzankova, E. Zavaleta*

104A. Introduction to Environmental Field Methods.

A course in the process of field research and monitoring, with emphasis on use of the scientific method; experimental design, data handling, statistical analysis and presentation; and basic field methodologies. Application of basic field skills, including habitat description; methods for sampling plants, animals, soils, water, and microclimate; and observational and manipulative techniques to address ecological, conservation, and management questions. Enrollment restricted to environmental studies majors and combined majors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; concurrent enrollment in course 104L and previous or concurrent enrollment in courses 100/L required, or by permission of instructor. (General Education Code(s): W.) *E. Zavaleta*

104L. Field Methods Laboratory (2 credits). *

Students directly observe elements of natural history and ecological process; design and implement field studies based on lectures; deploy the methods discussed in lectures; and collect data to analyze, interpret, and report in written and oral forms. Concurrent enrollment in course 104A is required. *E. Zavaleta*

107A. Natural History Field Quarter. S

A 15-unit field course that uses California wild lands to develop skills of natural history observation and interpretation. Students gain the ability to identify plants, animals, vegetation types, and landscapes, as well as address the complex issues of preservation and management of these resources. Enrollment by interview. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L; concurrent enrollment in courses 107B and 107C required. Enrollment restricted to environmental studies majors and combined majors with biology, Earth sciences and economics. Students are billed a materials fee. *S. Gliessman*

107B. Natural History Field Quarter. S

A 15-unit field course that uses California wild lands to develop skills of natural history observation and interpretation. Students gain the ability to identify plants, animals, vegetation types, and landscapes, as well as address the complex issues of preservation and management of these resources. Enrollment by interview. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L; concurrent enrollment in courses 107A and 107C required. Enrollment restricted to environmental studies majors and combined majors with biology, Earth sciences and economics. *The Staff*

107C. Natural History Field Quarter. S

A 15-unit field course that uses California wild lands to develop skills of natural history observation and interpretation. Students gain the ability to identify plants, animals, vegetation types, and landscapes, as well as address the complex issues of preservation and management of these resources. Enrollment by interview. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L; concurrent enrollment in courses 107A and 107B required. Enrollment restricted to environmental studies majors and combined majors with biology, Earth sciences and economics. *S. Gliessman*

108. General Entomology. S

Introduction to entomology including anatomy, physiology, systematics, evolution, behavior, and reproduction of the world's most diverse group of organisms. These topics are illustrated in several contexts, from the importance of insects as disease vectors to the historical and contemporary uses of insects by humans. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors with biology, Earth sciences and economics. Offered in alternate academic years. *D. Letourneau*

108L. General Entomology Laboratory (3 credits). S

Laboratory sections are devoted to the identification of insects. Individual collections representing 15 orders, sight identification of 60 families, and use of taxonomic keys for positive designations

required. Concurrent enrollment in course 108 is required. Offered in alternate academic years. *D. Letourneau*

109A. Ecology and Conservation in Practice Supercourse: Ecological Field Methods. S

An intensive, on-site learning experience in terrestrial field ecology and conservation, using the University of California Natural Reserves. Students study advance concepts in ecology, conservation, and field methods for four weeks, then experience total immersion in field research at the UC Natural Reserves. Lectures, field experiments, and computer exercises familiarize students with research methods, study design, statistical approaches, and analytical tools for ecological research. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151B-C-D or ENVS 109B-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 107, 107L, ENVS 104A or 196A. (Also offered as Biology:Ecology & Evolutionary 151A. Students cannot receive credit for both courses.) *D. Croll, E. Zavaleta*

109B. Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory. S

Field-oriented course in ecological research. Combines overview of methodologies and approaches to field research with practical field studies. Students complete field projects in ecology and also learn the natural history of the flora and fauna of California. Students are billed a materials fee. Enrollment by application. Prerequisite(s): Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-C-D or ENVS 109A-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Biology:Ecology & Evolutionary 151B. Students cannot receive credit for both courses.) (General Education Code(s): W.) *D. Croll, E. Zavaleta*

109C. Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems. S

From lectures and discussion of terrestrial community and ecosystem ecology, students work individually or in small groups to present an idea for a project, review relevant literature, develop a research question/hypothesis, design and perform an experiment, collect and analyze data, and write a report. The instructor evaluates the feasibility of each student's project before it begins. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-B-D or ENVS 109A-B-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Biology:Ecology & Evolutionary 151C. Students cannot receive credit for both courses.) *D. Croll, E. Zavaleta*

109D. Ecology and Conservation in Practice Supercourse: Conservation in Practice. *

Focuses on current issues in environmental and conservation biology and the emerging field methods used to address them. From field-oriented lectures about current issues in environmental and conservation biology, students pursue research project as individuals and small groups to develop hands-on experience with field skills in conservation research and resource management. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-B-C or ENVS 109A-B-C is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Biology:Ecology & Evolutionary 151D. Students cannot receive credit for both courses.) *D. Croll, E. Zavaleta*

110. Institutions, the Environment, and Economic Systems. *

Debate about environmental policy is often couched in economic terms. Environmental issues have become questions of political economy, as they influence international and domestic policy and reflect on the functioning of the market system. Examines the assumptions and implications of alternative approaches to political economy, as these pertain to questions of environmental policy and political institutions. Prerequisite(s): previous or concurrent enrollment in courses 100 and 100L, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors with biology, Earth sciences and economics. (S) *M. Fitzsimmons*

115A. Geographic Information Systems and Environmental Applications. F

Introduction to geographic information systems (GIS) as the technology of processing spatial data, including input, storage and retrieval; manipulation and analysis; reporting and interpretation. Emphasizes GIS as a decision support system for environmental and social problem solving, using basic model building, experimental design, and database management. Students cannot receive credit for this course and course 215A. Enrollment restricted to environmental studies majors and combined majors. Prerequisite(s): Previous or concurrent enrollment in course 115L, 100/L, or permission of instructor. Course in computer science, Earth science, math, or geography recommended. Enrollment restricted to environmental studies majors and combined majors. *B. Nickel*

115L. Exercises in Geographic Information Systems (2 credits). F

Exercises in Geographic Information Systems and Remote Sensing that demonstrate the development of digital geographic data. Students gain hands-on experience with developing datasets, using imagery to create GIS layers, performing spatial analysis, and utilizing GPS technology. Emphasis placed on environmental applications. Students cannot receive credit for this

course and course 215L. Students are billed a materials fee. Concurrent enrollment in course 115A is required. *W. Nickell*

120. Conservation Biology. W

Introduces biological and anthropogenic influences on the diversity and scarcity of organisms. Explores the basic ecological models and research tools that provide the foundation for many conservation and management decisions regarding endangered and/or declining species. Topics explored in the context of various examples of conservation decision-making in the real world. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *C. Wilmers*

122. Tropical Ecology and Conservation. S

An introduction to the ecological processes, principles, and players of tropical ecosystems, and to conservation issues facing tropical American forests. We will look at how tropical ecosystems work, roles of humans in shaping them, and current conservation opportunities and dilemmas. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L is required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *G. Gilbert*

123. Animal Ecology and Conservation. S

Advanced course in animal ecology and conservation focusing on the ecology, behavior, biogeography, and evolution of vertebrates. Prerequisite(s): course 120. Previous or concurrent enrollment in courses 100 and 100L required; or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *C. Wilmers*

129. Integrated Pest Management. *

Provides an extensive coverage of applied ecology, pest control technology, and the social, political, and economic factors regulating the ideologies and practice of pest management. Topics include agroecosystem design and population regulation of insects, weeds, vertebrates, and pathogens; field monitoring, chemical and biological control; economic thresholds, decision-making processes, and the role of agribusiness. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *D. Letourneau*

129L. Integrated Pest Management Laboratory (2 credits). *

Field trips and field exercises that demonstrate the practice of integrated pest management techniques. Individual and group projects provide hands-on experience with field sampling techniques, pest identification, recognition of biological control agents, experimental design, interview techniques, data interpretation and field report writing. Prerequisite(s): concurrent enrollment in course 129. Enrollment restricted to environmental studies majors and combined majors. *The Staff*

130A. Agroecology and Sustainable Agriculture. F

Ecological concepts and principles are applied to the design and management of sustainable agroecosystems. Alternatives for agriculture are discussed in terms of ecosystem structure and function. A weekly three-hour lab is required. Prerequisite(s): Concurrent enrollment in course 130L and previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *S. Gliessman*

130B. Principles of Sustainable Agriculture. W

Agricultural sustainability is examined as a complex set of interactions between ecological, social, and economic components of an agroecosystem. Case studies are drawn from issues facing current U.S. agriculture and a basis for formulating policy for change that ensures sustainability is developed. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *M. Fitzsimmons*

130L. Agroecology and Sustainable Agriculture Laboratory (2 credits). F

Laboratory and field exercises to train in the analysis of ecological processes in agricultural systems, with a focus on the quantification of ecological sustainability. Experimental design, analysis, and data interpretation are emphasized. Concurrent enrollment in course 130A is required. *S. Gliessman*

131. Insect Ecology. F

Advanced course in ecology featuring insect-plant interactions such as herbivory, pollination, and the effects of plants on insect population dynamics. Lectures emphasize current controversies in ecological theory and relate theory to application. Prerequisite(s): previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. Offered in alternate academic years. *The Staff*

133. Agroecology Practicum. *

Lectures and demonstrations are combined with field applications to give students direct experience and knowledge of sustainable agriculture and horticulture practices and principles. UCSC Farm and Garden are the living laboratories for testing agroecological principles. Emphasis is placed on small-farm systems. May be applied to major only once. Prerequisite(s): courses 130A and 130L and previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor.

Enrollment restricted to environmental studies majors and combined majors. Offered in alternate academic years. May be repeated for credit. *The Staff*

138. Field Ethnobotany. *

Lectures, laboratory, and fieldwork examine field botany from a human ecology perspective. Students have the opportunity to learn the skills of field botany and plant identification through the study of plants that are of major significance for human cultures. The emphasis of field skills is on applications to sustainable management of natural resources. Prerequisite(s): courses 130A and 130L, or by permission of instructor. Concurrent enrollment in course 138L required. Enrollment restricted to environmental studies majors and combined majors. Offered in alternate academic years. *S. Gliessman*

138L. Ethnobotany Laboratory (2 credits). *

Laboratory and field studies allow students to learn the taxonomy of important useful plant families, carry out field studies on local plant use and management practices, and investigate in detail home garden agroecosystems and model systems. Prerequisite(s): concurrent enrollment in course 138 required. *S. Gliessman*

140. National Environmental Policy. W

An overview of all major federal environmental policy domains. Analyzes political, social, economic, and other forces influencing federal (and some state) public policy responses to land use, natural resources, pollution, and conservation dilemmas. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *D. Press*

140L. National Environmental Policy Field Studies Laboratory (2 credits).

Students travel to waste-management facilities and environmental agencies around the San Francisco and Monterey Bay regions. Laboratory assignments include: facility profiles and policy-options memos related to each facility. Enrollment restricted to environmental studies majors, and environmental studies/economics, environmental studies/biology, or environmental studies/Earth sciences combined majors. Concurrent enrollment in course 140 is required. Enrollment limited to 24. *D. Press*

141. Ecological Economics. F

Application of economic analysis to natural resource policy and management. Topics include welfare economics, property rights and externalities, natural resource valuation, exhaustible and renewable resources, and sustainable development. Prerequisite(s): Economics 1 is strongly recommended as preparation. Previous or concurrent enrollment in courses 100 and 100L is required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *J. Barsimantov*

142. Energy Politics and Policy. W

Explores the social and environmental dimensions of energy production and consumption. Provides an overview of the tools to evaluate a new clean-energy economy and its wider political and economic implications. Students study assessment tools, such as risk assessment, material energy balances, and life-cycle assessment. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *The Staff*

142L. Energy Politics and Policy Laboratory (2 credits). *

Trains students in the concepts and skills required to make decisions about energy production. Concurrent enrollment in course 142 required. Enrollment limited to 24. *T. Duane*

143. Sustainable Development: Economy, Policy, and Environment. W

Considers whether and how global poverty can be alleviated without irreparably damaging the environment. Examines interactions among population, economic growth, poverty, global consumption ethos, property rights systems, global economy, state capacity, and environmental damage. Scrutinizes impact of various developmental strategies adopted during the past 50 years on poverty, governance, and the environment. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *J. Bury*

145. Green Building Design. S

Promotes an ecological approach to design with an understanding of the environmental opportunities and constraints at play on the site and situation; works with the environment to maximize human comfort and energy efficiency. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor; enrollment restricted to environmental studies majors and combined majors. *The Staff*

149. Environmental Law and Policy. S

Surveys a wide range of topics in environmental law, including population control, state and federal jurisdiction, land and resources control, public land management, pollution control, and private rights and remedies. Students read a large number of judicial cases and other legal documents. (Also offered as Legal Studies 149. Students cannot receive credit for both courses.) Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *The Staff*

150. Coastal and Marine Policy. S

Introduces and analyzes the history, design, implementation, and effectiveness of key legal and institutional frameworks that govern the use and stewardship of coastal and marine areas and resources. Primary focus is on the U.S., although attention is also devoted to international laws and institutions targeting major transboundary issues like marine pollution and management of migratory fish stocks. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *The Staff*

151. Environmental Assessment. S

Introduction to California land use planning law and practice, and the theory, practice, and public policy aspects of environmental assessment, using the California Environmental Quality Act (CEQA) as a model. The National Environmental Policy Act (NEPA) and other environmental and planning legislation also considered. Covers elements of State law and regulations, environmental impact assessment requirements, and practical procedures for preparing and evaluating CEQA documents, with case studies that exemplify legal, regulatory and public policy and practice aspects of the assessment process. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *A. Schiffrin*

156. Environmental Action through Writing. S

Guided practice in writing skills useful to environmental activists. Assignments emphasize thinking quickly, revising adeptly, researching resourcefully, and tempering powerful passions with careful arguments. Toward the development of effective individual voices, students read each other's drafts as well as the published work of established writers. Enrollment priority will be given to students who have not taken course 157. Enrollment restricted to environmental studies majors and combined majors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. (General Education Code(s): W.) *S. Rabkin*

157. Writing in the Natural Sciences. *

Guided practice in writing effectively about science and natural history for a variety of audiences. Assignments emphasize reporting first-hand observations, explaining processes and phenomena, understanding scientific papers, and writing about scientific and technical subjects for a general audience. Enrollment priority will be given to students who have not taken course 156. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and previous or concurrent enrollment in courses 100/L required, or by permission of instructor. Enrollment restricted to environmental studies and combined majors (General Education Code(s): W.) *S. Rabkin*

158. Political Ecology and Social Change. S

The object is to provide a rigorous grounding in the method of political ecology and to demonstrate how this approach has been used in environmental analysis and problem solving by environmental social movements. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L is required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *J. Bury*

159. Nature Literature. *

Introduction to 19th- and 20th-century American writers who have influenced our understanding of humans' place in the natural world. Readings include original works as well as biographical and critical texts. Discussions, field trips, and writing assignments emphasize active learning. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *S. Rabkin*

160. Restoration Ecology. W

A multidisciplinary overview of restoring degraded ecosystems. Among the topics addressed are linkages between ecological principles and restoration, planning and implementing restoration projects, evaluating restoration success, and case studies of restoration of specific ecosystem types. Participation in one work day is required. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L is required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *K. Holl*

161A. Soils and Plant Nutrition. W

Provides fundamentals of soils and plant nutrition. The physical, biological, and chemical components of soils are investigated in relation to their ecological functions, fertility to plants, and sustainable management. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *W. Cheng*

161L. Soils and Plant Nutrition Laboratory (2 credits). W

Practice analytical techniques for evaluation of physical, chemical, and biological properties of soils. Grow plants to observe some typical symptoms of plant nutrient deficiencies. Prerequisite(s): Concurrent enrollment in course 161A is required. *W. Cheng*

162. Plant Physiological Ecology. S

Introduces the theory of plant interactions with the physical environment. Emphasizes influence of abiotic stresses on the recruitment, survival, growth, productivity, and reproduction of plants. Prior course work in ecology and/or plant physiology is recommended. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment

restricted to environmental studies majors and combined majors. *M. Loik*

162L. Plant Physiological Ecology Laboratory (2 credits). S

Introduces techniques for the study of plant interactions with the physical environment. Examines the role of stress on energy budgets, water relations, photosynthesis, and reproductive allocation. Emphasizes experimental design, field techniques, and instrumentation during field trips to local chaparral and grassland ecosystems. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. *M. Loik*

163. Plant Disease Ecology. *

Introduction to ecological roles of plant diseases, including their importance in regulating plant population dynamics, community diversity, and system function in natural ecosystems; considerations of plant diseases in conservation ecology; and ecological approaches to managing diseases in agroecosystems. Students cannot receive credit for this course and course 263. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *G. Gilbert*

163L. Plant Disease Ecology Lab (2 credits). *

Introduction to techniques for studying plant diseases, including detection, isolation, cultivation, and identification of important groups of plant pathogens, completing Koch's postulates; diseases assessment techniques; experimental manipulation of plant-pathogen systems; and basic epidemiological tools. One field trip required. Prerequisite(s): concurrent enrollment in course 163 required. *G. Gilbert*

165. Freshwater Issues and Policy. F

Concepts, vocabulary, and skills necessary to the analysis of freshwater issues are introduced from hydrology, ecology, law, economics, engineering, and other disciplines. The skills are then applied to case studies involving local, state, and international freshwater conflicts and crises. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L is required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *B. Haddad*

166. Agroecosystem Analysis and Watershed Management. F

Explores a range of approaches to examine agroecosystem function, watershed management, and concepts of sustainability. Uses a combination of lecture, demonstration, field work, and field trips to illustrate approaches to analysis of managed ecosystems behavior and the integration of biophysical and socio-political knowledge to aid in watershed management. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor; and course 130A or 130B or 129 or 133 or 160 or 167. Enrollment restricted to environmental studies majors and combined majors. *C. Shennan*

167. Freshwater and Wetland Ecology. W

Field and lecture course teaches the physical and biological patterns and processes in freshwater and wetland systems, primarily focusing on Central Coast systems from headwaters to coastal marshes. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *C. Shennan*

167L. Freshwater and Wetland Ecology Lab (2 credits). *

Provides basic skills to assess chemical, biological, and physical characteristics of freshwater creeks, rivers, and wetlands. These skills are needed in environmental consulting, municipal agencies engaging in water management or impacts on water, and regulatory agencies. Relies on methods in geomorphology, biogeochemistry, hydrology, and field biology. Concurrent enrollment in course 167 is required. *The Staff*

168. Biogeochemistry and the Global Environment. *

Studies biogeochemical cycles and related environmental issues such as global environmental change, eutrophication, ecosystem degradation, and agricultural sustainability. Discusses transformation and movement of major nutrient elements in context of watershed ecology and societal implications. Students cannot receive credit for this course and course 268. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *W. Cheng*

169. Climate Change Ecology. *

Advanced topics in atmospheric science and ecological theory. Topics include impacts on biodiversity, carbon sequestration, sustainable agriculture, and innovative solutions. Prerequisite(s): courses 100 and 100L. Enrollment restricted to environmental studies majors and combined majors. Enrollment limited to 40. *M. Loik*

172. Science, Policy, and the Environment. *

Introduces students to the dilemmas of science-based environmental policy and discusses their underlying philosophical underpinnings. Explores emergent alternatives, such as the precautionary principle and alternatives assessment, and examines the relationship between experts and the lay public in public controversies. Prerequisite(s): previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. (General Education Code(s): W.) *S. Rajan*

173. An Introduction to World Environmental History. W

Introduces students to some of the central issues in world environmental history such as: human attitudes toward the natural environment; the role of human societies, their institutions and technologies in changing the face of the earth; and the historical impact of environmental and developmental policies on race, class, and gender differences in a variety of human communities across the world. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *K. Worthy*

175. Biotechnology: Social and Environmental Dimensions. *

Surveys the rapid development of genetic engineering science and biotechnology-based industries and examines the economic, health, environmental, legal, and social justice dimensions of new biotechnology applications: genetic screening, cloning, transgenic animals and crops, genetically engineered food, and biodiversity prospecting. Readings, lectures, World Wide Web site reviews, student presentations, and papers will address controversial choices faced now by scientists, farmers, doctors, consumers, public officials, and global governance agencies. Prerequisite(s): Previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *The Staff*

177. Teaching Environmental Education. F

Designed for environmental studies majors interested in teaching environmental education in the K-12 school system. Students investigate incorporation of environmental education in the classroom; design an environmental education school project; and are placed in a school where they observe environmental education in practice. Prerequisite(s): course 91F or 191F, and previous or concurrent enrollment in courses 100 and 100L required, or by permission of instructor. Enrollment restricted to environmental studies majors and combined majors. *R. Jaffe*

179. Environmental Interpretation. S

A field course in theory and practice of environmental interpretation in parks, museums, and school programs with special attention to local natural history and children. Students will work to define their own interpretive philosophy, skills, and style. Background in natural history and/or experience working with children recommended. Prerequisite(s): course 100. Concurrent enrollment in course 184 required. Enrollment restricted to environmental studies majors and combined majors with economics, Earth sciences, and biological sciences. Enrollment by instructor interview only. *C. Lay*

183. Environmental Studies Internship. F,W,S

A supervised off-campus learning experience related to environmental problem solving. Students may work with government agencies, private organizations, citizen action groups, or in specialized apprenticeships on an individual or team basis. A significant, independently researched project is required. Internship intended for environmental studies majors. Prerequisite(s): previous or concurrent enrollment in courses 100 and 100L and by permission of instructor. Students submit petition to course sponsoring agency. May be repeated for credit. *The Staff*

183A. Senior Internship. F,W,S

First quarter of two-quarter senior internship exit requirement. Supervised off-campus learning experience related to environmental problem-solving. Students may work with government agencies, private organizations, citizen action groups, or in specialized apprenticeships on an individual or team basis. Students submit petition to course-sponsoring agency. Enrollment restricted to environmental studies majors and the combined majors with Earth science, biology, and economics. Enrollment by permission of instructor. *The Staff*

183B. Senior Internship. F,W,S

This course combines fieldwork at an off-campus agency and a comprehensive analytical paper produced for the agency. Equivalent to a thesis in terms of the depth and quality of the work expected. Prerequisite(s): course 183A. Students submit petition to course-sponsoring agency. Enrollment restricted to environmental studies majors and the combined majors with Earth sciences, biology, and economics. *The Staff*

184. Environmental Studies Internship (2 credits). F,W,S

Supervised learning experience related to environmental problem solving. Students may work with government agencies, private organizations, citizen action groups, or in specialized apprenticeships on an individual or team basis. This 2-credit internship puts students in the field and offers them the experience of practicing environmental problem solving. This internship experience focuses on specific skill development. May be repeated for credit. (General Education Code(s): PR-S.) *The Staff*

189. Environmental Studies Research Seminar (1 credit). F,W,S

Research seminars presented weekly throughout the year by environmental studies faculty, visiting scholars, and graduate students. Students discuss content and methodology of research presented following each seminar. Students write critiques of some seminars. May be repeated for credit. *K. Holl, E. Zavaleta*

190. Capstone Course: Environmental Problem Solving. W

A synthetic course that draws on the knowledge and skills students bring from other courses in the major. Focuses on written and oral individual and group projects in which students must take the initiative. Emphasizes developing skills critical for students in their future careers. Prerequisite(s): course 100; Entry Level Writing and Composition requirements. Enrollment restricted to senior environmental studies majors and the combined majors with Earth sciences, biology, and economics. *D. Letourneau*

191F. Community and Agroecology Seminar (2 credits). F,W,S

Interdisciplinary two-credit seminar designed for upper-division students who want to become involved in PICA (Program in Community and Agroecology) and to explore concepts of community and agroecology as they relate to sustainability. Also emphasizes development of leadership skills. Specific topics and readings change each quarter. Prerequisite(s): course 91F, 130A, 130B, 133, or equivalent experience. Enrollment limited to 25. May be repeated for credit. *S. Gliessman, The Staff*

192. Directed Student Teaching. F,W,S

Teaching a lower-division seminar. (See course 42.) Prerequisite(s): upper-division standing; permission of environmental studies faculty member and chairperson of department. *The Staff*

194. Teaching Environmental Studies. F,W,S

This provides an opportunity to participate in the preparation and teaching of introductory environmental studies courses. Students will have significant responsibility in leading discussion sections. Students submit petition to sponsoring agency. *The Staff*

195A. Senior Research. F,W,S

An individually supervised course, with emphasis on independent research that either results in a thesis or project or is done in conjunction with a senior internship. In order to receive credit, students must turn in an electronic copy of the final write-up. Satisfies the senior comprehensive requirement. Students submit petition to sponsoring agency. Prerequisite(s): Entry Level Writing and Composition requirements. *The Staff*

195B. Senior Thesis Group. S

Students involved in group or individual research that results in a senior thesis or project or done in conjunction with an internship meet regularly with their faculty sponsor to discuss the progress of their work, to receive academic and technical guidance, and to critique one another's written work. To receive credit the student must submit two bound copies of the completed research and write-up. Satisfies the senior comprehensive requirement. Students must discuss details with faculty sponsor. Students submit petition to sponsoring agency. Prerequisite(s): Entry Level Writing and Composition requirements. *J. Bury, K. Holl*

196. Senior Seminar. F,W,S

Readings and discussions of primary literature on a current environmental studies topic. Field or literature-based research projects (individual or group) writing multiple drafts resulting in a final paper. Topics vary yearly; consult current course listings. Enrollment by application with selection based on appropriate background and academic performance. Satisfies senior comprehensive requirement. Enrollment restricted to senior environmental studies majors; senior environmental studies/biology combined majors; senior environmental studies / Earth sciences combined majors; and senior environmental studies / economics combined majors. Prerequisite(s): Entry Level Writing and Composition requirements. *R. Jaffe, S. Rabkin, M. Fitzsimmons, B. Nickel, D. Press, S. Kamieniecki, C. Shennan, W. Cheng*

199. Tutorial. F,W,S

Advanced directed reading, supervised research, and organized projects relating to environmental problems. May be repeated for credit with consent of the chair of environmental studies. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Provides for department-sponsored directed reading, supervised research, or organized project under the direct supervision of a faculty sponsor. May not be counted toward major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses**201A. Keywords and Concepts. F**

Two-quarter course introduces keywords and concepts that underlie interdisciplinary work in environmental studies through lectures, directed readings, and discussion. Modules include resonant concepts in ecology and society; ecology and evolution; environment and development; the global environment and society; agroecology and conservation biology; and public policy, economics, and law. Final grade for both courses assigned at the end of the second quarter. Enrollment restricted to graduate students. *G. Gilbert, M. Fitzsimmons*

201B. Keywords and Concepts. W

Two-quarter course introduces keywords and concepts that underlie interdisciplinary work in environmental studies through lectures, directed readings, and discussion. Modules include resonant concepts in ecology and society; ecology and evolution; environment and development; the global environment and society; agroecology and conservation biology; and public policy, economics, and law. Final grade for both courses assigned at the end of the second quarter. Enrollment restricted to graduate students. *Z. Tzankova, M. Loik*

201M. Developing Research Proposals (2 credits). F

Offers graduate students the opportunity to become familiar with the research expertise of the faculty in the Environmental Studies department. Enrollment restricted to graduate students. *G. Gilbert*

201N. Interdisciplinary Research Design in Environmental Studies. S

Provides students with opportunities to learn research protocols, practices, and methods used in environmental studies. Combination of lectures, reading, practical exercises, and short projects

used to explore how these methods can best be incorporated into interdisciplinary research designs. Enrollment restricted to graduate students. *D. Letourneau*

210. Political Ecological Thought and Environment. *

Provides an introduction to social scientific analyses of the relationships between capitalistic development and the environment in the late 20th century. It has a dual purpose: First, to develop a contemporary historical understanding and sensibility of how economic change, new institutional configurations, and world scale processes are shaping interactions with the environment. Second, to examine some recent political social theoretical perspectives on nature-society relations and radical environmental and social movements. Enrollment restricted to graduate students in environmental studies. *S. Rajan*

215A. Geographic Information Systems and Environmental Applications. F

Introduction to geographic information systems (GIS) as the technology of processing spatial data, including input, storage and retrieval; manipulation and analysis; reporting and interpretation. Emphasizes GIS as a decision support system for environmental and social problem solving, using basic model building, experimental design, and database management. Students cannot receive credit for this course and course 115A. Concurrent enrollment in course 215L is required. Enrollment restricted to environmental studies graduates students. *B. Nickel*

215L. Exercises in Geographic Information Systems (2 credits). F

Exercises in Geographic Information Systems and Remote Sensing that demonstrate the development of digital geographic data. Students gain hands-on experience with developing datasets, using imagery to create GIS layers, performing spatial analysis, and utilizing GPS technology. Emphasis placed on environmental applications. Students cannot receive credit for this course and course 115L. Students are billed a materials fee. Concurrent enrollment in course 215A is required. Enrollment restricted to environmental studies graduate students. *B. Nickel*

220. Conservation Biology. *

The principles of conservation biology, including a review of the core disciplines of demography, population genetics, island biogeography, and community ecology and discussion of area and edge effects, population viability, and ecosystem issues related to the maintenance of biological diversity, especially in fragmented landscapes. Enrollment restricted to environmental studies graduate students. *C. Wilmers*

230. Agroecology and Sustainable Agriculture. S

The application of ecological concepts and principles to the design and management of agricultural systems. The long-term goal of sustainable agroecosystems is examined in economic, social, and ecological contexts. Enrollment restricted to environmental studies graduate students. *C. Shennan*

235. Social Theories of Nature. *

Intensive reading and discussion seminar on the treatment of nature in social theory. Focuses on major recent works which examine nature in social theory, in themselves, and in the context of the intellectual history of development of disciplinary discourses about nature. Students write critical reviews of assigned books and a research paper situating a particular book within its intellectual tradition. Prerequisite(s): interview with instructor to determine preparedness. May be repeated for credit. *M. Fitzsimmons*

240. Public Policy and Conservation. *

Introduction to political and economic approaches to policy analysis, with particular reference to natural resource scarcity, property rights, and environmental conservation. Case studies apply economic and policy process concepts to the management of public lands, biodiversity, and renewable resources. Enrollment restricted to environmental studies graduate students. *D. Press*

247. Regional Approaches to Environmental Policy. *

A research seminar combining theoretical issues in democratic theory, political economy, and planning with emerging concepts of bioregionalism. The focus is on institutional, scientific, and political innovations in managing the environment. Students evaluate current and historical proposals to regionalize environmental policy in the U.S. Enrollment restricted to environmental studies graduate students. *The Staff*

263. Plant Disease Ecology. *

Introduction to ecological roles of plant diseases, including their importance in regulating plant populations dynamics, community diversity and system function in natural ecosystems, considerations of plant diseases in conservation ecology, and ecological approaches to managing diseases in agroecosystems. Students cannot receive credit for this course and course 163. Prerequisite(s): one ecology course. Enrollment restricted to graduate students. *G. Gilbert*

268. Biogeochemistry and the Global Environment. *

Studies biogeochemical cycles and related environmental issues such as global environmental change, eutrophication, ecosystem degradation, and agricultural sustainability. Discusses transformation and movement of major nutrient elements in context of watershed ecology and societal implications. Students cannot receive credit for this course and course 168. Enrollment restricted to environmental studies graduate students. *W. Cheng*

271. Valuing the Environment. *

Intensive seminar examining the normative underpinnings of environmental values. Draws on tools from analytical, ethical, and political philosophy to develop normative arguments concerning

environmental inequality and justice, environmental preservation, and risk evaluation. Involves team projects in which students develop cases on controversial contemporary issues such as biotechnology. Prerequisite(s): interview only. Enrollment restricted to graduate students. May be repeated for credit. *S. Rajan*

280. Advanced Topics in Environmental Studies. *

Intensive research seminar, including reading and critique of primary research literature and research in progress. Topics vary and are announced in advance; students should consult with faculty prior to enrolling. Enrollment by permission of instructor. Enrollment restricted to graduate students. May be repeated for credit. *J. Bury*

283. Environmental Studies Internship. F,W,S

Graduate level internship focuses on integrating interdisciplinary academic theory with practical, specialized experience in a professional setting. Course intended for environmental studies graduate students; students must complete paperwork and meet with coordinator prior to first day of instruction. *The Staff*

290. Interdisciplinary Research Seminar (2 credits). F,W,S

Research seminars presented weekly throughout the year by environmental studies and affiliated faculty, by visiting scholars, and by graduate students. Students discuss the content and methodology of research presented following each seminar. Enrollment restricted to graduate students. May be repeated for credit. *E. Zavaleta*

290L. Graduate Research Seminar (2 credits). F,W,S

Graduate student presentations of doctoral research proposals, dissertation work-in-progress, grant applications, and conference papers. This weekly laboratory meeting seeks to develop professional skills, teach constructive criticism, and foster effective discussion among peers. Enrollment restricted to graduate students. *B. Haddad, C. Wilmers, K. Holl*

291. Advanced Readings in Environmental Studies (3 credits). F

Focusing on a recently published volume or on a topic of current interest, this seminar requires a rigorous analysis of the principles and methods employed in the four core areas of the program: sustainable agriculture and agro-ecology; conservation biology; environmental policy analysis; and political economy. Enrollment restricted to graduate students. May be repeated for credit. *G. Gilbert*

291C. Advanced Readings in Risk and Public Policy (3 credits). *

Advanced readings and research on environmental risk and public policy. Explores environmental decision making given the question of the burden of proof and scientific uncertainty and grapples, in an advanced manner, with emergent policy alternatives, such as the precautionary principle. Also offered as course 281C for 5 credits. Prerequisite(s): course 172 or equivalent work demonstrated by an interview. Enrollment restricted to graduate students. May be repeated for credit. *S. Rajan*

291D. Advanced Readings in Tropical Ecology, Agriculture, and Development (3 credits). S

Analyzes recent publications in ecology, conservation, agroecology, and development in tropical and subtropical regions, particularly Latin America. Discussions place special emphasis on integration across natural and social science disciplines to address issues of sustainability in tropical regions. Enrollment restricted to graduate students. *G. Gilbert, K. Holl*

291M. Advanced Readings in Biogeochemistry (3 credits). *

Course consists of three parts: fundamental biogeochemistry of the Earth, global cycles of nutrient elements, and societal and scientific issues of global change. Class activities include (1) presentation of summary statements based on reading assignments; (2) discussion of theories, concepts, methodologies, and applications; (3) computer simulation and modeling of elemental cycles using STELLA; and (4) integration of scientific information on global change with social issues by writing. Enrollment restricted to graduate students. *W. Cheng*

291P. Advanced Readings in Environmental History and Anthropology (3 credits). *

Course of readings systematically surveying the theoretical contributions of the disciplines of environmental history, historical ecology, environmental anthropology, and geography. After an overview of the evolution of 20th-century thought on the relationship between environment and culture as seen through the lenses of these disciplines, explores emerging research hybrids and new research frontiers. Enrollment restricted to graduate students. *S. Rajan*

292. Topics in Research in Environmental Studies (2 credits). F,W,S

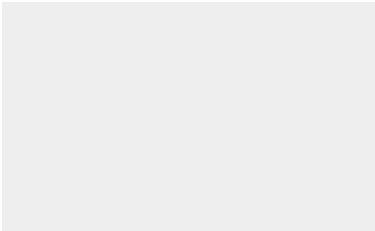

Seminar in which students give critically evaluated presentations regarding current research in environmental studies and issues in research design. Students should consult with faculty prior to enrolling. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2011-12

Ethnic Studies

209 Humanities 1
(831) 459-4658
<http://americanstudies.ucsc.edu>

(There were no substantive changes to the Ethnic Studies Program Description from the General Catalog 2010-12.)

Program Description

Ethnic studies is not a separate undergraduate program of study at UCSC, but students with an interest in ethnic studies can find an extensive array of courses on the subject in the following departments: American Studies, Anthropology, Community Studies, Education, Feminist Studies, Film and Digital Media, Economics, History, History of Art and Visual Culture, History of Consciousness, Latin American and Latino Studies, Literature, Music, Politics, Psychology, Sociology, and Theater Arts. The Community Studies Department and the Latin American and Latino Studies Department offer opportunities for fieldwork that extend ethnic studies outside the traditional classroom setting. See also the campus general education requirement (codes E, CC, and ER). Faculty for whom ethnic studies are a professional specialty are listed in the individual departments' faculty and professional interests sections in the UCSC *General Catalog*.

Feminist Studies

315 Humanities 1
(831) 459-2461
fmst@ucsc.edu
<http://feministstudies.ucsc.edu/>

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

(There were no substantive changes to the Feminist Studies Program Description from the General Catalog 2010-12.)

Program Description

Feminist studies is an interdisciplinary field of analysis that investigates how relations of gender are embedded in social, political, and cultural formations. The undergraduate program in feminist studies provides students with a unique interdisciplinary and transnational perspective. The department emphasizes theories and practices derived from multiracial and multicultural contexts. Feminist studies prepares undergraduates for a variety of careers. The bachelor of arts (B.A.) degree in feminist studies provides excellent grounding for undergraduates who have career aspirations in, for example, law, health, public administration, community organizations, and social services. Students wishing to pursue doctoral work will also find that interdisciplinary training in feminist studies equips them with theoretical and methodological strengths in most disciplines and applied research fields. Specialists in feminist studies are employed as consultants in industry, higher education, and human resources. State and federal government agencies employ people who have special training in understanding gender relations. Educational institutions need specialists to develop and administer feminist studies programs, women's centers, and other institutional structures designed specifically to study and assist women.

Requirements for the Major

Feminist studies majors must complete 10 courses and a senior comprehensive exit requirement in the feminist studies program. Students must choose one of the following concentrations within the major: Culture, Power, and Representation; Law, Politics, and Social Change; Science, Technology, and Medicine; or Sexuality Studies. Courses appropriate for each concentration are listed at <http://feministstudies.ucsc.edu>.

A proposal for an independent concentration will be approved only when a student presents a clear, coherent, and rigorous plan of study that does not fit the existing concentrations. Both the student's adviser and the Feminist Studies Department chair must approve a proposal for an independent concentration.

Required courses include course 1, Feminist Studies: An Introduction; course 80 or another 80 course taught by feminist studies affiliated faculty; course 100, Feminist Theories (must be taken at UCSC); five 5-credit, upper-division courses in the concentration; two 5-credit, upper-division electives; and an upper-division exit (comprehensive) requirement course. One independent study (course 199) may count toward the concentration or toward the elective requirements. Either course 193 or 198 (internship) may be used to count toward the elective requirements.

Feminist studies is an interdisciplinary major and lists courses taught by affiliate faculty in other departments. However, feminist studies majors must take a minimum of five courses at UCSC taught directly in the Feminist Studies Department, i.e., courses designated FMST, not including course 193, 198, or 199. Two Education Abroad Program (EAP) courses may count towards the major; three transfer courses may count towards the major; and the total combined number of EAP and transfer courses that may count towards the major is a maximum of three.

Exit requirement options include a senior seminar (course 194) taught by core faculty, senior thesis, or a senior project (course 195). Courses 1, 80, 100, and the composition (general education code C) requirement are prerequisites to course 194 and 195.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in feminist studies is satisfied by completing course 194A, 194D,

194E, 194F, 194G, 194I, 194J, 194M, 194N, 194O, 194P, or 195.

Honors

Feminist studies awards honors and highest honors in the major. At the end of each quarter, a faculty committee meets to review each graduating student's file. Students are considered for honors and highest honors based on the preponderance of excellent evaluations for applicable course work and senior exit requirement. Writing a thesis is not a requirement for receiving honors or highest honors.

Transfer Students

Transfer students are encouraged to declare the major as soon as possible to be assured entrance into the required core courses. Feminist studies advisers or the chair determine which courses from other institutions are transferable. Courses 1, 80, and 100 must be completed in the junior year so that the exit requirement may be completed in the senior year.

Graduate Studies

Graduate students may work toward a doctor of philosophy (Ph.D.) degree that notes a designated emphasis in feminist studies on the graduation documents. Students wishing to pursue this option should consult with the chairs of their respective Ph.D. programs and are encouraged to apply in the first or second year of graduate study. The application and an annually updated list of regularly offered, approved graduate courses are available at <http://feministstudies.ucsc.edu>.

The following are required for the designated emphasis:

Committee composition. The student must have a designated graduate adviser from the feminist studies core or associate faculty who serves on the qualifying examination committee or in some other appropriate capacity.

Writing. The student must prepare a significant piece of writing in the area of feminist studies. This writing must be a master's essay or a chapter of the doctoral dissertation.

Course requirements. The student must take four graduate courses in feminist studies, two of which must be taught directly in the department. Two courses can be selected from among the graduate offerings of any UCSC department, as long as they are taught by core or affiliated feminist studies faculty.

Teaching. The student must be a teaching assistant in at least one feminist studies course or teach a feminist studies course independently (designated FMST) in the regular curriculum or in Summer Session.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

BETTINA APTHEKER, Professor of Feminist Studies and History
Feminist histories, feminist oral history and memoir; feminist pedagogy; African-American women's history; queer studies; feminist Jewish studies; feminist critical race studies

ANJALI ARONDEKAR, Associate Professor of Feminist Studies
South Asian studies, colonial historiography; feminist theories; queer theory; critical race studies; 19th-century interdisciplinary studies

NEDA ATANASOSKI, Assistant Professor of Feminist Studies
U.S. and Eastern European film and media; cultural studies and critical theory; war and nationalism; gender, ethnicity, and religion

KAREN BARAD, Professor of Feminist Studies, History of Consciousness, and Philosophy
Science studies, poststructuralist theory, feminist theory, queer theory, 20th-Century continental philosophy, philosophy of science, and physics

GINA DENT, Associate Professor of Feminist Studies, History of Consciousness, and Legal Studies
Africana literary and cultural studies, legal theory, popular culture

MARGARET M. DOWNES-BASKIN, Research Associate in Feminist Studies
Presidential leadership styles, elections and the media, women's political and corporate leadership style, intergenerational relations

MARGE FRANTZ, Emerita, Lecturer in American Studies and Feminist Studies

LISBETH HAAS, Chair, Feminist Studies, and Professor of History
U.S.-Mexico borderlands, Chicano and Native American history; visual culture in the colonial Americas; the U.S. West and California; historical memory, theory, and historical methodology

AKASHA HULL, Emerita, Professor of Feminist Studies and Literature

MARCIA OCHOA, Assistant Professor of Feminist Studies
Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela, political philosophy, geography

FELICITY SCHAEFFER-GRABIEL, Assistant Professor of Feminist Studies
Transnational feminisms; sexuality and migration, technology, and subjectivity; Latin American/Latino studies; border studies; Chicana/o studies; affect and globalization

ANGELA Y. DAVIS, Emerita, Professor of History of Consciousness and Feminist Studies
Feminism, African American studies, critical theory, popular music culture and social consciousness, philosophy of punishment (women's jails and prisons)

CARLA FRECCERO, Professor of Literature, Feminist Studies, and History of Consciousness
Renaissance studies, French and Italian language and literature, early modern studies, postcolonial theories and literature, contemporary feminist theories and politics, queer theory, U.S. popular culture

ROSA LINDA FREGOSO, Professor of Latin American and Latino Studies, Feminist Studies, and Film and Digital Media
Human-rights studies; intercultural and transborder feminism; cultural studies; Latina/o and Latin American film and media arts

JODY GREENE, Associate Professor of Literature and Feminist Studies

Seventeenth- and 18th-century British and French literature and culture, pre- and early modern studies, early modern colonialisms, gay and lesbian cultural studies, gender studies, history of authorship, history of the book

DONNA J. HARAWAY, Professor of History of Consciousness and Feminist Studies
Feminist theory, cultural and historical studies of science and technology, relation of life and human sciences, human-animal relations, and animal studies

HELENE MOGLEN, Emerita, Professor of Literature
The English novel; feminist, critical, cultural, and psychoanalytic theory; gender and genre in social and psychological contexts

Affiliated Faculty

GABRIELA ARREDONDO, Associate Professor of Latin American and Latino Studies
U.S. social and cultural history; Chicana/o history; critical race and ethnicity theories; im/migration history; Latina/os in the U.S.; Chicana feminisms; "borderlands" studies, modern Mexico history

LORA BARTLETT, Assistant Professor of Education
Educational policy and school reform, schools as workplaces for teachers, the conditions of teachers' commitment

KAREN BASSI, Professor of Classics (Literature)
Greek and Latin literatures, Greek drama, Hellenistic poetics, feminist interpretation, literary and cultural theory, pre- and early modern studies, historiography

CAETLIN BENSON-ALLOTT, Assistant Professor, Film and Digital Media
Distribution studies, technology and culture, film history and theory, new media studies; queer and feminist theory, horror

JULIE BETTIE, Associate Professor of Sociology
Cultural studies, feminist studies, race/ethnic studies, identity, popular culture, critical ethnography, visual ethnography

HEATHER BULLOCK, Professor of Psychology
Poverty and economic inequality, welfare policy, feminist psychology, discrimination

JULIANNE BURTON-CARVAJAL, Professor Emerita of Literature
American visual media, particularly film; melodrama as a transnational form; gender and authorship; history, cultures, and representations of California, particularly the Central Coast

NANCY N. CHEN, Professor of Anthropology
Medical anthropology, visual anthropology, urban anthropology, Asian American identity, mental health, food, China

VILASHINI COOPAN, Associate Professor of Literature
Postcolonial studies, comparative and world literature, literatures of slavery and diaspora, globalization studies, cultural theory of race and ethnicity

E. G. CRICHTON, Associate Professor of Art
Intermedia, electronic arts, photography, installation

FAYE J. CROSBY, Professor of Psychology
Gender; social identity; and social justice, especially affirmative action

TERESA DE LAURETIS, EMERITA, Professor of History of Consciousness
Semiotics, psychoanalysis, feminism, film theory, literary theory, queer studies

SYLVANNA FALCÓN, Assistant Professor of Latin American and Latino Studies
Human rights, racism/antiracism, globalization, gender, transnational feminism, Latin America (Mexico, Peru), United States

DANA FRANK, Professor of History
U.S. social and economic history; women, labor, and working-class history; contemporary political economy

MAYANTHI FERNANDO, Assistant Professor of Anthropology
Anthropology of religion, secularism, Islam, multiculturalism/pluralism; colonial and post-colonial France, Europe

PASCALE GAITET, EMERITA, Professor of Literature and Language Studies
Nineteenth- and 20th-century French literature, sociolinguistics, political history, Celine, Genet

MARY-KAY GAMEL, Professor of Classics and Comparative Literature
Performance studies, ancient Mediterranean performance, Greek and Latin literatures, myth, reception of Greek and Roman texts and artifacts, film, feminist approaches to literature and performance

DIANE GIFFORD-GONZALEZ, Professor of Anthropology

Paleolithic and Neolithic Africa and Eurasia, colonial New Mexico, origins of food production, pastoralists, zooarchaeology, history of archaeology, interpretive theory, visual anthropology

SUSAN GILLMAN, Professor of American Literature

Nineteenth-century American literature and culture; theories of culture, race, and gender; world literature and cultural studies

JENNIFER A. GONZLEZ, Associate Professor of History of Art and Visual Culture

Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

JUNE GORDON, Professor of Education

Urban education of working-class and ethnic minority students in East Asia, Britain, and the U.S. and related issues in teacher education

DEBORAH GOULD, Assistant Professor of Sociology

Political emotion; social movements and contentious politics; classic and contemporary social theory; sexualities; lesbian/gay/queer studies; feminist and queer theory

SHELLY A. GRABE, Assistant Professor of Psychology

Cultural objectification of women and womens bodies as a pervasive global phenomenon played out in different ways across different cultures; how embodied oppression affects womens psychological well-being and empowerment

HERMAN GRAY, Professor of Sociology

Cultural studies, media and television studies, black cultural politics, social theory

IRENE GUSTAFSON, Associate Professor of Film and Digital Media

Producing across the boundaries between "theory" and "practice," non-fiction, gender and queer studies, production design

JULIE GUTHMAN, Associate Professor of Community Studies Sustainable agriculture and alternative food movements, international political economy of food and agriculture, politics of obesity, political ecology, race and food, critical human geography

AMELIE HASTIE, Associate Professor of Film and Digital Media

Film theory and history, feminist film and television studies, Chinese cinemas, issues of authorship, interdisciplinary approaches

MARGO HENDRICKS, Professor Emerita of Literature

Early modern English literature and culture; theories and discourses of race, gender, drama, and theory; women playwrights; pre- and early modern studies

GAIL B. HERSHATTER, Professor of History

Modern Chinese social and cultural history; labor history; gender history; history of sexuality; feminist theory; history, memory, and nostalgia

EMILY HONIG, Professor of History

Gender, sexuality, and ethnicity in modern Chinese history; comparative labor history; Chicana history, nationalism, and sexuality in the Third World; oral history

JOCELYN HOY, <p class=heading-2-bold- >Lecturer</p> in Philosophy

Feminist philosophy, 19th- and 20th-century continental philosophy

DONNA HUNTER, Associate Professor of History of Art and Visual Culture

European painting (especially French) from 1600 to the 1960s; German art and visual culture between the two world wars; art as social practice, portraiture

AIDA HURTADO, Professor of Psychology

Social identity, feminist theory, social psychology of education, survey methodology

VIRGINIA JANSEN, Professor of History of Art and Visual Culture

Medieval visual culture, urbanism, and secular building; Gothic architecture; campus planning and architecture

STACY KAMEHIRO, Associate Professor of History of Art and Visual Culture

Visual cultures of the Pacific, 19th-century Hawai'i, (inter)nationalism, culture contact; (post)colonialism

L. S. KIM, Associate Professor of Film and Digital Media

Television history and theory, racial discourse, feminist criticism, Asian-American media production, industrial practices and social change in both mainstream Hollywood and alternative media

NORMA KLAHN, Professor of Literature

Latin American literary and cultural studies (specialization: Mexico), Chicano/Latino literature and culture from a cross-border perspective, modernity/postmodernity, poetics and politics, genre theory (novel, poetry, autobiography), contemporary critical theories (i.e., border, ethnic, feminist, transnational/global)

LORI G. KLETZER, Professor of Economics

Employment and wage determination, impact of globalization on the domestic labor market, industrial relations, government labor market policies, higher education and the labor market

CAMPBELL LEAPER, Professor of Psychology

Social construction and socialization of gender in childhood, adolescence, and adulthood; self-concept and social identity; language and social interaction; social relationships, gender bias in the schools and academic achievement; images of gender in the media; perceptions and consequences of sexism

PETER LIMBRICK, Assistant Professor of Film and Digital Media

International cinemas; intersections of race, gender, and sexuality; theories of globalization, transnationalism, and postcoloniality; queer theory

JENNIE LIND McDADE, Professor of Art

Drawing, painting

CAROLYN MARTIN SHAW, Professor Emerita of Anthropology

African societies, colonial discourse, social theory, anthropology of women, sexuality

LOURDES MARTNEZ-ECHAZBAL, Professor of Latin American Literature

Latin American and Caribbean literatures; Afro-Latin American literatures, cultures, and societies; found[n]ational narratives; Brazilian literature; literatures of Cuba and the Cuban diaspora; critical race theory

MEGAN MOODIE, Assistant Professor of Anthropology

South Asian studies, feminist theory, reproductive and population politics, kinship, development, legal identities, tribal communities

TANYA MERCHANT, Assistant Professor of Music

Ethnomusicology, musics of Central Asia and the former Soviet Union, music and gender, identity, nationalism, globalization, and the institutionalization of music

LETA E. MILLER, Professor of Music

Renaissance and baroque music history and performance practices, 20th-century American music, modern and baroque flute, 16th-century chanson and madrigal, music and science, 18th- and 20th-century flute literature and performance styles, music of C.P.E. Bach and Lou Harrison

MARGARET MORSE, Professor of Film and Digital Media

Digital and electronic media theory and criticism, media art, media history, technology and culture, film history and theory, German cinema, documentary and science fiction

CATHERINE RAMIREZ, Associate Professor of Latin American and Latino Studies

Chicana and U.S. Latino literature, culture, and history; gender studies and feminist theory; visual culture and style politics; cultural studies; popular and urban youth cultures; speculative fiction, Afrofuturism, and Chicanafuturism; science, technology, race, and gender; theories and methods of American studies

JENNIFER E. REARDON, Associate Professor of Sociology

Issues of social identity as influenced by the new sciences of genetics and genomics; intersection of the sociology of science and knowledge and the sociology of race, gender, and class

B. RUBY RICH, Professor of Community Studies and Film and Digital Media

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

CECILIA RIVAS, Assistant Professor of Latin American and Latino Studies

Salvadoran transnationalism; media (Internet, newspapers); migration; globalization; race, ethnicity, and gender; bilingualism; consumption; El Salvador; Central America

PAMELA ANN ROBY, EMERITA, Professor of Sociology

Sociology of learning, women and work, leadership and social change, sociology of emotions, feminist research, inequality and social policy

LISA ROFEL, Professor of Anthropology

Critical theory, anthropology of modernity, popular/public culture, gender and sexuality, cultures of capitalism, postcolonial feminist anthropology, China

GABRIELA SANDOVAL, ASSISTANT Professor of Sociology

Race and ethnic studies, Latina/o and Chicana/o studies, stratification, urban and political sociology, and voting behavior

VANITA SETH, Associate Professor of Politics

Early modern and modern political theory, feminist theory, cultural history, race politics, postcolonial theory

DEANNA SHEMEK, Professor of Literature

Italian literature and cultural history, Renaissance studies, early modern popular culture, narrative

(early modern to contemporary), women's studies, literary theory

MARY W. SILVER, Professor of Ocean Sciences
Biological oceanography, marine plankton, midwater ecology

SHELLEY STAMP, Professor of Film and Digital Media
Film history, theory, and criticism; silent cinema; women's filmmaking; film censorship; histories of moviegoing; feminist approaches to cinema

ELIZABETH STEPHENS, Professor of Art
Intermedia, electronic art, sculpture, and performance art

NANCY STOLLER, EMERITA, Professor of Community Studies
Race and gender aspects of health, the AIDS epidemic, community organizing, sexualities, and medicine in prisons

RENEE TAJIMA-PEA, Professor of Community Studies
Documentary film and video focusing on Asian American and immigrant communities, media, and social change

AVRIL THORNE, Professor of Psychology
Identity development through personal memory telling, development of meaning in adolescents' self-defining memory narratives, family storytelling and the development of a sense of self, narrative co-construction of identity and intimacy

NINA K. TREADWELL, Associate Professor of Music
Renaissance through early baroque music history and performance practices, early plucked-string instruments (theorbo, renaissance, and baroque guitar; renaissance lute), 16th- and 17th-century Italian theatrical music, gender studies, women and music, literary and critical theory

ANNA TSING, Professor of Anthropology
Culture and politics, feminist theory and gender in the U.S., social landscapes and tropical forest ethnoecologies, ethnicity, local power and relations to the state in Indonesia, Southeast Asia, and the U.S.

CANDACE WEST, Professor of Sociology
Language and social interaction, sociology of gender, conversation analysis, microanalysis and medicine

MARILYN J. WESTERKAMP, Professor of History
British America, American revolution/early national U.S., U.S. religious history, early modern cultural and religious history, women/gender

AARONETTE WHITE, Associate Professor of Psychology
Adult feminist-identity development; personality correlates of feminist activism; feminist masculinities studies; feminist perspectives on peace and violence; narrative psychology and adult personality change; black feminist political psychology in the U.S. and abroad; critical psychology

ROB WILSON, Professor of Literature
Transnational and postcolonial literatures, especially as located in Asia/Pacific emergences as posited against American empire of globalization; cultural poetics of America; the sublime, Longinus to Hiroshima; mongrel poetics of experimental writing, especially poetry

ALICE YANG, Associate Professor of History
Historical memory, Asian American history, gender history, race and ethnicity, 20th-century U.S., oral history

PATRICIA ZAVELLA, Professor of Latin American and Latino Studies
Relationship between women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicana/o workers and U.S. capital

EILEEN ZURBRIGGEN, Associate Professor of Psychology
Connections between power and sex, sexual aggression and abuse, sexual decision making. Motivation, especially power and affiliation-intimacy motives. Information processing models of social and personality psychology

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**1. Feminist Studies: An Introduction. W**

Introduces the core concepts underlying the interdisciplinary field-formation of feminist studies within multiple geopolitical contexts. Explores how feminist inquiry rethinks disciplinary assumptions and categories, and animates our engagement with culture, history, and society. Topics include: the social construction of gender; the gendered division of labor, production, and reproduction; intersections of gender, race, class, and ethnicity; and histories of sexuality. (Formerly Introduction to Feminisms.) (General Education Code(s): CC, IH.) *A. Arondekar*

80A. Feminism and Social Justice. F

Examines, and critically analyzes, select post-World War II movements for social justice in the United States from feminist perspectives. Considers how those movements and their participants responded to issues of race, class, gender, and sexuality. A feminist, transnational, analytic framework is also developed to consider how those movements may have embraced, enhanced, or debilitated feminist formations in other parts of the world. (General Education Code(s): ER, T5-Humanities and Arts or Social Sciences.) *B. Aptheker*

80B. Sexuality and Globalization. *

Examines the relationship between sexuality and the contemporary term "globalization" as a dense entanglement of processes that emerges from a history of U.S. empire. Sexuality cannot be separated from power struggles over the classification of bodies, territories, and questions of temporality. Examines how sexualized contact zones produce new knowledge, commerce, inequalities, possibilities, and identities. (General Education Code(s): CC, T5-Humanities and Arts or Social Sciences.) *F. Schaeffer-Grabiel*

80F. Feminisms of/and the Global South. S

Explores feminist theories from domestic U.S. and global contexts in order to ask how interventions of women of color in the U.S. and of radical feminist movements in non-U.S. locations radically re-imagine feminist politics. Rather than focusing on feminist movements that represent different regions of the world, course examines feminist theory through multiple histories of colonialism, post-colonialism, and globalization. (General Education Code(s): CC, T5-Humanities and Arts or Social Sciences, E.) *A. Arondekar*

80K. Feminism and Science. *

Considers the nature of scientific practice, the culture of science, and criteria for the responsible practice of science. Particular attention is given to feminist commitments to strengthening objectivity, increasing scientific literacy, and including ethical considerations in the practice of science. Enrollment limited to 80. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *K. Barad*

80M. Trans Gender Bodies. S

Draws from representations of transgender/transsexual people in popular, biomedical, and political contexts. Examines the impact of transgender lives on concepts of gender, identity, and technology. Engages with biological and sexological frameworks of sex/gender, trans experience, and social movements and theories. Enrollment limited to 80. *M. Ochoa*

80P. War in Film and Culture. *

Explores how war films, media, and political discourses about war and violence shape and transform ideas about national identity. Focuses on how ideas about gender, sexuality, race, and class have particularly affected representations of military conflicts. (General Education Code(s): IM, T5-Humanities and Arts or Social Sciences, E.) *N. Atanasoski*

80S. Women in Music. *

An exploration of the sociological position of women as composers and performers in Western and non-Western musics, with a focus on both ethnographic and historical sources. (Also offered as Music 80S. Students cannot receive credit for both courses.) Offered in alternate academic years. (General Education Code(s): CC, T4-Humanities and Arts, A.) *T. Merchant*

80T. Religion in American Politics and Culture. W

Introduces dominant discourses about Christianity and Islam in the American public sphere, with particular attention paid to race, gender, sexuality, and class in thinking about religion. Visual and

textual media, political commentary, and popular ethnographies are analyzed. (Also offered as Anthropology 80R. Students cannot receive credit for both courses.) *N. Atanasoski, M. Fernando*

Upper-Division Courses

100. Feminist Theories. S

Core course for feminist studies. Serves as an introduction to thinking theoretically about issues of feminism within multiple contexts and intellectual traditions. Sustained discussion of gender and its critical connections to productions of race, class, and sexuality. Focus will change each year. Enrollment restricted to sophomores, juniors, and seniors. *G. Dent*

102. Feminist Critical Race Studies. *

Working from the perspective that race is a cultural invention and racism is a political, economic, and social relation, investigates how "race" is produced as a meaningful and powerful social category, examines the effects of racism as a social relation, and argues for the necessity of combining feminist and critical race studies. By considering different historical periods and places, aims to equip students with the tools necessary to critically examine the production and reproduction of race and racism in the U.S. Prerequisite(s): one course from feminist studies. Enrollment restricted to juniors and seniors. Enrollment limited to 20. (General Education Code(s): E.) *The Staff*

112. Women and the Law. W

Interdisciplinary approach to study of law in its relation to category "women" and production of gender. Considers various materials including critical race theory, domestic case law and international instruments, representations of law, and writings by and on behalf of women living under different forms of legal control. Examines how law structures rights, offers protections, produces hierarchies, and sexualizes power relations in both public and intimate life. (Also offered as Politics 112. Students cannot receive credit for both courses.) Enrollment restricted to feminist studies, politics, legal studies, and Latin American and Latino studies/politics combined majors during priority enrollment only. *G. Dent*

115. Gender, Sexuality, and Transnational Migration Across the Americas. *

Examines migration as a mode of inquiry into transnational practices across geographic locales and temporal zones. Analyzes migration in relation to the transnational formation of gender, race, and sexuality as well as processes of neocolonialism, the state, and globalization. Prerequisite(s): course 1, 100, or 145. Enrollment restricted to sophomores, juniors, and seniors. (General Education Code(s): ER, E.) *F. Schaeffer-Grabiel*

116. Feminist Ethnographies. *

Examines ethnographic methods and writing in anthropology from a feminist perspective; focuses on questions of representation and representativeness, power, and knowledge production; traces theories of exchange in 20th-century anthropology including outsourcing, financialization, and microcredit. (Formerly *Ethnographies of Transnational Feminisms*.) Prerequisite(s): course 1. Enrollment restricted to junior and senior feminist studies majors or by permission of instructor. Enrollment limited to 20. *The Staff*

120. Transnational Feminisms. *

Explores the emergence of transnational feminism through U.S. women of color and postcolonial feminism. Underscores the role of globalization, nationalism, and state formation in relation to feminist theorizing, activism, and labor across the Global South. In an attempt to understand the salience of inequalities, the course interrogates the continuation of feminist critique that is attentive to the war on terror, neocolonialism, and empire. Prerequisite(s): course 1. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 40. (General Education Code(s): CC, E.) *F. Schaeffer-Grabiel*

123. Feminism and Cultural Production. *

Explores relationship between feminism and culture. Topics will vary and include different forms of cultural production such as film and literature. Regional/national focus will also vary. Prerequisite(s): course 1. Enrollment restricted to sophomores, juniors, and seniors. May be repeated for credit. (General Education Code(s): A, E.) *The Staff*

124. Technology, Science, and Race Across the Americas. F

Examines new ways of understanding the body and race through the intersection of technology and science. Addresses how broader structures of power and the rise of new technological and scientific discoveries mediate power relations and alter how race, national boundaries, the body, and citizenship are normalized and contested from colonialism to the present. Course content may vary; themes may include: U.S. eugenics, I.Q. tests, patenting debates, sterilization, assisted reproduction, biometrics, and genetics across the Americas. (Formerly *Technologies and Latinidad: Cyberspace and Beyond*.) Enrollment restricted to sophomore, junior, and senior feminist studies majors during priority enrollment only. Enrollment limited to 25. (General Education Code(s): PE-T, E.) *F. Schaeffer-Grabiel*

126. Images, Power, and Politics: Methods in Visual and Textual Analysis. *

Introduces the analysis of visual images and text with particular emphasis on feminist critical methodologies. Using case studies from photography, film, TV, advertising, and new media, students learn how to read and analyze culture. Enrollment restricted to sophomore, junior, and senior feminist studies majors during priority enrollment only. Enrollment limited to 25. (General Education Code(s): IM.) *N. Atanasoski*

132. Gender and Postcoloniality. *

Postcolonial feminist studies. Explores how discourses of gender and sexuality shaped the policies and ideologies of the historical processes of colonialism, the civilizing mission, and anticolonial nationalism. Considers orientalism as a gendered discourse as well as colonial understandings of gender and sexuality in decolonialization. Explores Western media representations, literature, the law, and the place of gender in the current debate between cultural relativism and universalism. Provides an understanding of some key terms in postcolonial studies and an in-depth examination of the place of gender in these processes. Prerequisite(s): courses 80F and 100 or permission of instructor. Enrollment restricted to juniors and seniors. Enrollment limited to 20. (General Education Code(s): E.) *A. Arondekar*

133. Science and the Body. *

Contemporary technoscientific practices, such as nano-, info-, and biotechnologies, are rapidly reworking what it means to be human. Course examines how both our understanding of the human and the very nature of the human are constituted through technoscientific practices. Prerequisite(s): courses 1 and 100. Enrollment restricted to juniors and seniors. *K. Barad*

135. Topics in Science and Sexuality. W

Introduces the multiple debates animating the linkages between science, race, and sexuality. Interrogates the interrelated, epistemological frameworks of science and sexuality/queer studies across a range of interdisciplinary and geopolitical locations. Prerequisite(s): course 100 or 145. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 25. *A. Arondekar*

139. African American Women's History. S

Considers African American women as central to understanding of U.S. history, focusing on everyday survival, resistance, and movements for social change. Discussion of critical theories for historical research, gender, and race. Emphasis on biography, cultural history, and documentary and archival research. Enrollment restricted to sophomores, juniors, and seniors. (General Education Code(s): ER, E.) *B. Aptheker*

145. Racial and Gender Formations in the U.S. F

Introduces the defining issues surrounding racial and gender formations in the U.S. through an understanding of the term "women of color" as an emergent, dynamic, and socio-political phenomenon. Interrogates organizing practices around women of color across multiple sites: film and media, globalization, representation, sexuality, historiography, and war, to name a select few. (General Education Code(s): ER, E.) *F. Schaeffer-Grabiel*

148. Gender and Development. W

Uses the critical tools of feminist theory and cultural anthropology to look at how global development discourses and institutions mobilize, reinforce, and challenge systems of gender-based inequality. Topics include non-governmental organizations (NGOs), development practice, microcredit, and technocrat cultures. (Also offered as Anthropology 148. Students cannot receive credit for both courses.) *The Staff*

150. Mediating Desire. F

From a foundation in semiotics, considers the ways race and gender are constructed, understood, performed, embraced, commodified, and exploited through representations. Uses representations of, by, and for the margins to engage theories of communication, identity, and representation. Creative final projects encouraged. (Formerly Community Studies 152) (Also offered as American Studies 150. Students cannot receive credit for both courses.) Enrollment restricted to sophomore, junior, and senior feminist studies majors or by permission of instructor. Enrollment limited to 100. (General Education Code(s): ER, E.) *M. Ochoa*

151A. Chicana Feminism. *

Students are introduced to the writings of Chicana feminists to identify the gender issues that produce conflict and cooperation in their communities. The course also makes linkages to gender issues in other U.S. communities of color and Latin America. (Also offered as Psychology 157. Students cannot receive credit for both courses.) Prerequisite(s): course 1 or Psychology 3 or 100. (General Education Code(s): E.) *A. Hurtado*

151B. Advanced Topics in Chicana Feminism. *

Course is a continuation of course 151A which introduces students to the writings of Chicana feminists to identify the gender issues that cause conflict and cooperation in their communities. The seminar format allows students an opportunity for extensive discussion. (Also offered as Psychology 159K. Students cannot receive credit for both courses.) Prerequisite(s): courses 1, 100, or 151A or Psychology 1, 40, or 157A, or consent of instructor. Enrollment restricted to juniors and seniors. Enrollment limited to 30. *A. Hurtado*

168. Topics in Feminist Philosophy. *

Topics in feminist philosophy, which may include: the nature of feminist philosophy, feminist approaches to philosophical issues, social and political philosophy, theories of knowledge, ethics, aesthetics, and science, technology, and medicine studies. Presupposes some familiarity with philosophy or feminist scholarship. (Also offered as Philosophy 147. Students cannot receive credit for both courses.) Prerequisite(s): Philosophy 100A or 100B or 100C. *J. Hoy*

175. Gender and Sexuality in Latin America. S

Advanced topics in gender and sexuality in Latin America and Latina/o studies. Analyzes role of power, race, coloniality, national and transnational processes in the production and analysis of

genders and sexualities. Materials include memoir, fiction, ethnography, social documentary and history. (Also offered as Community Studies 185. Students cannot receive credit for both courses.) Enrollment restricted to sophomore, junior, and senior feminist studies majors during priority enrollment. (General Education Code(s): CC, E.) *M. Ochoa*

185. Psychoanalysis and Feminism. *

Introduction to Freudian and Lacanian theories of sexuality and the construction of the self as well as to feminist critiques and rewritings of those theories. An attempt is made to place psychoanalytic theory in socioeconomic, racial, and colonialist contexts. Appropriate prior work in theory is recommended as preparation. Enrollment restricted to juniors and seniors. Enrollment limited to 25. *H. Moglen*

189. Advanced Topics in Feminist Theory. *

Focus on a particular problem in feminist theory. Problems vary each year but might include theorizing the gendered subject, racializing gender, the meeting points of psychoanalysis and social-political analysis in theorizing gender, the relationship between queer theory and feminist theory, postcolonial feminist theory. Prerequisite(s): course 100. Enrollment restricted to juniors, seniors, and graduate students. Enrollment limited to 20. May be repeated for credit. *The Staff*

193. Field Study. F,W,S

Individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Senior Seminar.

Discussion classes providing a broad overview of some general "area of concentration." Discussion of assigned readings, focus on oral presentations, and a final 20- to 25-page paper. Satisfies the senior comprehensive requirement in feminist studies. Enrollment limited to 20. *The Staff*

194A. Feminist Jurisprudence. S

Approaches legal reasoning from a feminist and intersectional perspective with attention to structures and jurisdiction, case materials, and emerging international frameworks for gender justice. Designed to facilitate completion of a substantial research essay based in feminist legal philosophy. Instructor permission required to enroll. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 112 or Politics 112. Enrollment restricted to senior feminist studies majors. Enrollment limited to 20. *G. Dent*

194D. Feminist Science Studies. *

Examines different feminist approaches to understanding the nature of scientific practices. Particular attention paid to notions of evidence, methods, cultural and material constraints, and the heterogeneous nature of laboratory practices. Considers the ways in which gender, race, and sexuality are constructed by science and how they influence both scientific practices and conceptions of science. Also examines the feminist commitment to taking social factors into account without forfeiting the notion of objectivity. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; and courses 1 and 100. Enrollment restricted to senior feminist studies majors. Enrollment limited to 20. *K. Barad*

194E. History of Sexuality. *

Explores one of the central texts of dialogue and contestation in sexuality studies today: Michel Foucault's *The History of Sexuality*. Considers the epistemic challenges outlined in Foucault's early work and engages its instantiations in the proliferating scholarship on gender, sexuality, and critical race studies. Readings challenge the marginalization of empire in Foucault's work and demonstrate that a history of 19th-century European sexuality must also be a history of race. Interview with instructor required. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; enrollment restricted to senior feminist studies majors. Enrollment limited to 20. *A. Arondekar*

194F. Chicana/Latina Cultural Production. W

Traces the intersection between Chicana studies and Latin American studies through transnational forms of cultural production, imaginaries, and empowerment. Analysis of theories of cultural production and discussion of the political salience of culture as a site for resistance, critique, and creativity. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 100. Enrollment restricted to senior feminist study majors. Enrollment limited to 20. (General Education Code(s): E.) *F. Schaeffer-Grabiel*

194G. Images of Africa. *

Explores questions of colonialism, empire, race, gender, and geopolitics in the proliferating images—filmic, televisual, and media—of Africa in the United States. Facilitates the completion of a substantial research essay based on the study of popular culture. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 100; enrollment restricted to seniors. Enrollment by permission of instructor. Enrollment limited to 20. *G. Dent*

194I. Feminist Oral History and Memoir. S

Designed to train students in oral history and memoir writing. Emphasizes the specialness of transgressive voices; race, class, and sexuality, women's silence, erasure, censorship, and marginalization are addressed. The politics of memory, narratives, storytelling, and editorial

judgment are considered. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1 and 100. Enrollment restricted to senior feminist studies majors. Enrollment limited to 20. (General Education Code(s): W.) *B. Aptheker*

194J. Advanced Feminist Philosophy. *

Focuses on issues in epistemology and ontology: the construction of knowledge and objectivity, rationality and emotions, subjectivity and personal identity, and the body and sexuality. (Also offered as Philosophy 190T. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 168 or 100; and two from Philosophy 100A, 100B, and 100C. Enrollment limited to 22. *J. Hoy*

194M. Empire and Sexuality. *

Explores the production of sexualities, sexual identification, and gender differentiation within multiple contexts of colonialism, decolonization, and emerging neo-colonial global formations. (Formerly course 118.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 100 or 145. Enrollment restricted to senior feminist studies majors. Enrollment limited to 20. (General Education Code(s): E.) *A. Arondekar*

194N. Gender, Class, and Sex in Shanghai. *

Focusing on Shanghai, course examines issues of gender, class, and sex in modern urban Chinese history. Given Shanghai's history as a treaty port, particular attention paid to ways in which its semi-colonial status inflected the articulation of gender identities, class formations and issues of sexuality (particularly sexual labor). Also looks at Shanghai during the Maoist period and in the context of more contemporary economic reforms. (Also offered as History 194A. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; and History 40B, 140C, 140D, or 140E, or permission of instructor. Restricted to junior and senior feminist studies majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194O. The Politics of Gender and Human Rights. F

Examines human rights projects and discourses with a focus on the politics of gender, sexuality, race, and rights in the international sphere. Reading important human rights documents and theoretical writings, and addressing particular case studies, emphasizes the tensions between the ideals of the universal and the particular inherent in human rights law, activism, and humanitarianism. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1 and 100. Enrollment restricted to senior feminist studies majors. *N. Atanasoski*

194P. Religion, Gender, and Politics. *

Addresses the relationship between religious identities and movements, gender and sexuality, and feminism. Analyzes how media discourses, popular culture, and scholarly writing represent the role of religion and gender in shaping contemporary geopolitics. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1 and 100. Enrollment restricted to senior feminist studies majors. Enrollment limited to 20. *N. Atanasoski*

195. Senior Thesis or Project. F,W,S

The senior thesis/project which satisfies the major requirement. Course is for independent research and writing. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; students submit petition to sponsoring agency. May be repeated for credit. (General Education Code(s): W.) *The Staff*

198. Independent Field Study. F,W,S

Provides for individual study program off campus for which faculty supervision is not in person. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for individual study program off campus for which faculty supervision is not in person. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

201. Topics in Feminist Methodologies. S

Explores feminist theorizing across disciplinary and cultural contexts for both methodology (theories about the research process) and epistemology (theories of knowledge). Goal is to orient students toward changes in organization of knowledge and provide them with different feminist methodologies in their pursuit of both an "object" of study and an epistemology. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *A. Arondekar*

203. Feminist Pedagogies. *

Examines feminist pedagogies as projects in transgressing traditional disciplinary boundaries. Examines historical examples of alternative pedagogies and contemporary models for creating

communities dedicated to social justice. Designed to assist graduate students develop teaching strategies in multiple fields. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Aptheker*

205. Feminism, Nationalism, and Sexuality in the Third World. *

Focus on the historical construction and articulation of feminism in the Third World. Explores the relationship of feminist and nationalist movements, considering such questions as whether Third World women's political movements are necessarily "feminist," how these political movements define feminism, and the tensions between nationalisms and feminisms. Particular attention to issues of sexuality, the effects of colonial institutions and policies on sexual identities in Third World countries, the notions of womanhood and female sexualities articulated within nationalist ideologies and movements, the consequences of such constructions for women, and the formulation of sexual issues among feminists. Offered every two or three years. Enrollment restricted to graduate students. Enrollment limited to 15. *E. Honig*

206. Feminism and Psychoanalytic Theory. *

After studying essays by Freud, Lacan, and Melanie Klein which have been central to the construction of feminist theory, considers the writings of such feminist theorists as Jessica Benjamin, Judith Butler, Julia Kristeva, Juliet Mitchell, Jaqueline Rose, Carolyn Steedman, and Maria Torok. Enrollment restricted to graduate students or seniors with permission of instructor, based on narrative evaluations and sample essays. Enrollment limited to 15. *H. Moglen*

207. Topics in Queer/Race Studies. *

Explores the interrelated epistemological frameworks of critical race studies and queer studies. Through the study of a range of philosophical, scientific, literary, and cinematic texts, course historicizes and theorizes discourses of race and sexuality. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Arondekar*

211. Sexuality, Race, and Migration in the Americas. W

Analyzes the ways transnational processes intersect with changing notions of gender, sexuality, and race. Examines processes such as tourism, the Internet, capitalism, and labor spanning Brazil, the Dominican Republic, and the United States. Enrollment restricted to graduate students. Enrollment limited to 15. *F. Schaeffer-Grabiel*

212. Feminist Theory and the Law. *

Interrogation of the relationship between law and its instantiating gendered categories, supported by feminist, queer, Marxist, critical race, and postcolonial theories. Topics include hypostasization of legal categories, the contest between domestic and international human rights frameworks, overlapping civil and communal codes, cultural explanations in the law, the law as text and archive, testimony and legal subjectivity. (Also offered as History of Consciousness 212. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *G. Dent*

214. Topics in Feminist Science Studies. *

Graduate seminar on feminist science studies. Topics will vary and may include: the joint consideration of science studies and poststructuralist theory; the relationship between discursive practices and material phenomena; and the relationship between ontology, epistemology, and ethics. Enrollment restricted to graduate students. Enrollment limited to 15. *K. Barad*

215. Postsocialism, Postcolonialism, Neoliberalism. W

Addresses the intersection of the postcolonial and the postsocialist as theoretical ground. Considers how (neo)liberal ideologies about race, class, gender, secularism, and democracy are shaped by the intersection between postsocialist geopolitics and imperial legacies. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Atanasoski*

225A. Theories of Slavery. S

Explores philosophical, legal, and socio-historical analyses of slavery. Focus on Atlantic slavery and the production of race and gender formations, complemented by discussion on contemporary forms of slavery. Impact of historical slavery on prevailing discourses and institutions. (Also offered as History of Consciousness 205A. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *A. Davis*

225B. Theories of Slavery. *

Writing-intensive course based on readings in History of Consciousness 205A and Feminist Studies 225A. (Also offered as History of Consciousness 205B. Students cannot receive credit for both courses.) Prerequisite(s): course 225A or History of Consciousness 205A. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Davis*

232. Topics in Postcolonial Studies. *

Variable topics that could include postcolonial approaches to questions of epistemology and knowledge production, theories of nationalism and nation-state formation, subaltern historiography, analyses of modernization and developmental theory, postcolonial approaches to globalization, and transnationalism. Significant component of feminist contributions to these literatures. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Arondekar*

240. Culture and Politics of Human Rights. *

Examines cultural, philosophical, and political foundations for human rights and provides students with critical grounding in the major theoretical debates over conceptualizations of human rights in the Americas. Addresses the role of feminist activism and jurisprudence in the expansion of human

rights since the Universal Declaration of Human Rights. Addresses challenges of accommodating gender rights, collective rights, and social and economic rights within international human rights framework. (Also offered as Latin American and Latino Studies 240. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *R. Fregoso*

251. Feminist Theory and Social Psychology. *

Course bridges feminist theory and social psychological research to explore connections between theory covered and empirical studies on various topics in social psychology. Seminar format allows students opportunity for extensive discussion. (Also offered as Psychology 251. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *A. Hurtado*

260. Black Feminist Reconstruction. F

Re-visions and extends Reconstruction from 1865-1920 from a black feminist standpoint. Topics include: redefining democracy; labor; literacy and education; suffrage; re-visioning sexuality; childbirth; parenting, etc. Analyzes traditional historiography and the methodological implications of the boundaries between history and fiction, and archival and oral traditions. Enrollment restricted to graduate students Enrollment limited to 15. *B. Aptheker*

264. The Idea of Africa. *

Examines the position of Africa in cultural studies and the simultaneous processes of over- and under-representation of the continent that mark enunciations of the global and the local. Themes include defining diaspora, the West as philosophy, and Africa in the global economy. (Also offered as History of Consciousness 264. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *G. Dent*

268A. Science and Justice: Experiments in Collaboration. *

Considers the practical and epistemological necessity of collaborative research in the development of new sciences and technologies that are attentive to questions of ethics and justice. Enrollment by permission of instructor. Enrollment restricted to graduate students. (Also offered as Biomolecular Engineering 268A and Sociology 268A. Students cannot receive credit for all three courses.) Enrollment limited to 15. *J. Reardon, K. Barad*

268B. Science and Justice Research Seminar. F

Provides in-depth instruction in conducting collaborative interdisciplinary research. Students produce a final research project that explores how this training might generate research that is more responsive to the links between questions of knowledge and questions of justice. Prerequisite(s): course 268A. Enrollment by permission of instructor. Enrollment restricted to graduate students. (Also offered as Biomolecular Engineering 268B and Sociology 268B. Students cannot receive credit for all three courses.) Enrollment limited to 15. *J. Reardon*

297. Independent Study. F,W,S

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study (2 credits). F,W,S

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Program Description

The film and digital media major at UCSC offers an integrated curriculum involving theory, criticism, and cultural analysis, as well as a production program in the aesthetics and techniques of film and digital media. This bachelor of arts degree program provides students with the critical skills, theoretical concepts, and historical knowledge necessary to conduct informed analysis of cinema, television, video art, and new media, along with the up-to-date technical knowledge, practical skills, and artistic contexts needed for the production of film, video, and digital media. The major provides a course of study that develops an understanding of moving image and digital media as essential tools of communication and artistic practice.

Students in the general film and digital media major develop an understanding of major movements in world cinema and different aesthetic approaches to the medium, while studying the cultural impact of television and the rise of video and digital art in recent decades. The critical studies concentration is designed for film and digital media majors who have a special aptitude for and interest in the history and theory of film, television, video, and digital media. This rigorous program can help prepare undergraduates for graduate work in critical studies. Students in the highly selective production concentration are encouraged to demonstrate technical proficiency and creative vision in film and digital media production while also studying the histories and theories of these media. The integrated critical practice concentration will serve students currently enrolled in the major who have a special aptitude for and interest in combining work in critical studies and production. The concentration provides them with a more rigorous pathway through the major and, in their senior year, allows them to work on a senior project that integrates creative and intellectual work.

Students in all facets of the major acquire skills in media analysis while maintaining a broadly based, liberal arts perspective. The UCSC program is interdisciplinary, combining theory and practice in film, video, and digital media with study in other areas of the arts, humanities, and social sciences that help students understand the role these media play in society.

As the technologies of film and video have merged with digital computer-based moving images and interactive media, and as digital media continues to expand into everyday experience, students in the major are uniquely positioned to excel in these fields. Graduates of the UCSC film and digital media program have enjoyed considerable success both in the professional world and in gaining admission into top graduate schools in the field.

Students enrolled in film and digital media production classes have access to audio, video, and digital production and postproduction equipment. Facilities include a digital media lab; audio recording studio; sound stage with green screen; digital nonlinear editing rooms; video format conversion rooms; a computerized sound effects library; and student equipment checkout. Additionally, computer laboratories equipped for digital image manipulation, web authoring, and interactive interface design and viewing rooms are available. The critical studies facilities include classrooms equipped for high-end film, video, and data projection. The library holdings in film and video history, theory, and literature are complemented by a large collection of films, videos, laser disks, and DVDs, including a diverse range of international feature films, experimental film and video work, animation, silent films, and documentaries.

Some courses offered by the Film and Digital Media Department are restricted in enrollment; admission is based on completion of prerequisites and other specific written application requirements. Admission to advanced production courses is generally restricted to third- and fourth-year students and is based on the submission of a portfolio of work produced in the introductory production class (Film 170B for film production pathway, Film 170A for digital media pathway) and other production workshops.

Upper-division digital media and production studio courses require coursework to be completed on computers. The department recognizes that students often purchase a new computer on their arrival at the university during their freshman year. It is strongly suggested that students who plan to apply for the production concentration wait until their second or third year of studies before

making this investment. Delaying the purchase until this time allows a student to have the most up-to-date hardware and the fastest machine at the price they can afford at the moment they enter into the production concentration. Laptop computers are strongly encouraged for production students, and laptop computers may become required in the near future. Instruction in and software for production courses are based on the Apple OS X platform. Compatibility with the department's operating system for instruction is strongly advised. Students are encouraged to consult with the department office or the web site for list of recommended computers and software packages.

Declaring the Film and Digital Media Pre-Major

Students who have completed one lower-division course (20A, 20B or 20C) with a grade of B- or better may declare the film and digital media pre-major. Pre-majors are expected to complete the requirements to declare the major by the end of their second year. Transfer students must declare the pre-major no later than their second quarter in residence.

Declaring the Film and Digital Media Major

Prior to declaring the film and digital media major, students must complete FILM 20A, and either 20B or 20C, with a grade of B- or better. FILM 20A, 20B, and 20C must be taken for a letter grade by students intending to major in film and digital media. Students who have met the B- grade minimum for declaration of the major may choose to take FILM 20P as the third lower-division requirement.

20A Introduction to Film Studies

20B Introduction to Television Studies

20C Introduction to Digital Media

20P Introduction to Production Technique

Students are encouraged to complete the lower-division courses early in their studies so that the petition to major status is accomplished no later than the first quarter of the junior year. Acceptance into the film and digital media major does not constitute acceptance into any of the concentrations (production, critical studies, or integrated critical practice). Transfer students should consult the Transfer Student section for instructions about declaring the major.

Students who feel that there were extenuating circumstances which prevented them from meeting the requirements for declaring the major may appeal their denial by submitting a letter to the Film and Digital Media Department. The appeal must be filed no later than 15 days after the denial notification was sent. For further information regarding this process, contact the Film and Digital Media Department.

Program of Study

The general film and digital media major requires three lower-division and nine upper-division courses in residence and satisfaction of the senior comprehensive requirement. Students must include among these 13 courses at least one upper-division, 5-credit course that focuses on diversity (i.e., non-Western; underrepresented ethnicity, gender, or sexual orientation). A list of courses satisfying the department's diversity requirement is available at the department office. Students in the general film and digital media major may apply for admission to the critical studies concentration (see Critical Studies Concentration below), to the highly selective and competitive production concentration (see Production Concentration below), or the more rigorous integrated critical practice concentration (see Integrated Critical Practice Concentration below) within the major.

Lower-Division Requirements

Students must take the lower-division classes 20A, 20B, and 20C for a letter grade, and they must earn a B- or better in two of these three lower-division classes (20A and either 20B or 20C) to petition for the major. A third lower-division course is required to satisfy major requirements.

20A Introduction to Film Studies

and two of the following three courses are required for all majors:

20B Introduction to Television Studies

20C Introduction to Digital Media

20P Introduction to Production Technique (cannot be used to satisfy the B- grade minimum)

General Film and Digital Media Major

Students must complete the upper-division core curriculum by completing one course from each of the following five groups in film and digital media:

120 Introduction to Film Theory and Criticism

130 Silent Cinema or

132A *International Cinema to 1960* or

132B *International Cinema, 1960 to Present* or

132C *Gender and Global Cinema*

134A *American Film, 1930–60* or

134B *American Film, 1960–Present*

136A *Experimental Film and Video* or

136B *History of Television* or

136C *Visual Culture and Technology: History of New Media*

136D *Documentary Film and Video*

194A *Film Theory Seminar* or

194B *Electronic Media Theory Seminar* or

194C *New Media Theory Seminar* or

194D *Film History Seminar* or

194E *International Cinemas* or

194F *Film and the Other Arts: Music and Dance* or

194G *New(s) Media* or

194S *Senior Seminar: Special Topics*

Five upper-division elective courses are to be chosen from the following:

- up to five additional upper-division history/critical studies courses in film and digital media
- up to two upper-division courses in film and digital media production (150, 151, 170A, 170B, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- up to two upper-division courses offered by other departments; course substitutions must be pre-approved by the Film and Digital Media Department

Film and Digital Media Major Planners

The following are two recommended academic plans for students to complete during their first two years as preparation for the film and digital media major. Plan One is a guideline for students who are committed to the major early in their academic career; Plan Two is for students who are considering the major.

Students who are interested in the production concentration, the critical studies concentration, or the integrated critical practice concentration should seriously consider Plan One to be better prepared for application to production studio classes or either the critical studies concentration or the integrated critical practice concentration in their junior year.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	college core	low-div Fidm* req	low-div Fidm* req
	gen ed	gen ed	gen ed
	FILM 20A	(declare pre-major)	(declare major)
2nd (soph)	Fidm* critical studies core	Film 120	Fidm* critical studies core
	gen ed	gen ed	gen ed

Plan Two

*film and digital media

Critical Studies Concentration

The critical studies concentration provides a more rigorous pathway through the film and digital media major and offers classes specifically reserved for seniors who have exceptional abilities. Students are eligible to apply for the critical studies concentration in spring quarter of their junior year, provided they have completed FILM 120 and at least three other upper-division critical studies classes. Applicants must already be declared film and digital media majors in good standing.

Students will be asked to submit the following application materials:

- a completed application form
- a one-page statement of purpose
- a sample essay
- copies of narrative evaluations for all courses taken in film and digital media

Application materials and instructions are available at the Film and Digital Media Department office. Student application materials are reviewed by a committee of film and digital media critical studies faculty. Admission to the critical studies concentration will be granted to students who have overwhelmingly excellent evaluations, an outstanding writing sample, and a clear statement of purpose. Students may reapply a second time if not accepted, but not later than the first quarter of their senior year.

Requirements for the Critical Studies Concentration

The critical studies concentration curriculum adds the following requirements to those already established for the film and digital media major. Students are required to take two upper-division electives, rather than the five electives currently required for the film and digital media major. FILM 190, an *Advanced Critical Studies Seminar*, replaces the current requirement for one of the FILM 194 seminars, and serves as an exit requirement in the major.

Students in the critical studies concentration complete the following required upper-division core curriculum (9 courses):

120 *Introduction to Film Theory and Criticism*

130 *Silent Cinema* or
 132A *International Cinema to 1960* or
 132B *International Cinema, 1960 to Present* or
 132C *Gender and Global Cinema*

134A *American Film, 1930–60* or
 134B *American Film, 1960–Present*

136A *Experimental Film and Video* or
 136B *History of Television* or
 136C *Visual Culture and Technology: History of New Media*
 136D *Documentary Film and Video*

165A *Film, Video and Gender* or
 165B *Race on Screen* or
 165C *Lesbian, Gay and Queer Film and Video* or
 165D *Asian Americans in Media*

187 *Advanced Topics in Television Studies* or
 189 *Advanced Topics in Electronic and Digital Media Studies*

190 *Advanced Critical Studies Seminar*

191 *Critical Studies Thesis Preparation Seminar*

192 *Student-Directed Seminar* or
 195 *Senior Thesis*

Two upper-division elective courses are to be chosen from the following:

- up to two additional upper-division history/critical studies courses in film and digital media
- one upper-division course in film and digital media production (150, 151, 170A, 170B, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- one upper-division course offered by other departments; course substitutions must be pre-approved by the Film and Digital Media Department

Production Concentration

Admission to the production concentration is highly selective, based on promise and

accomplishment shown in the student's work. After completing FILM 170A (prerequisite for most digital media production courses) or 170B (prerequisite for most film/video production courses), students may apply to the production concentration by submitting works created in FILM 170A or 170B to a portfolio review conducted at the end of each quarter. These student works are reviewed by a committee of film and digital media production faculty. Application materials and instructions for the portfolio review are available at the Film and Digital Media Department office. Students should note that production courses are in high demand and that faculty/student ratios and equipment resources limit the number of applicants accepted into the production concentration. Students may reapply a second time if not accepted. A student accepted into the production concentration who is unable to meet all the requirements for the concentration may instead be able to satisfy the graduation requirements of the general major. Application materials and instructions for all production courses are available each quarter online at slugfilm.ucsc.edu.

Requirements for the Production Concentration

Students in the production concentration complete the following required upper-division core curriculum (six courses):

120 *Introduction to Film Theory and Criticism*

170A *Fundamentals of Digital Media Production* (prerequisite for most digital media production courses)

or

170B *Fundamentals of Film and Video Production* (prerequisite for most film/video production courses)

two of the following production courses:

150 *Screenwriting*

151 *Film Directing*

170A *Fundamentals of Digital Media Production*

170B *Fundamentals of Film and Video Production*

171A *Special Topics Workshop: Sound*

171C *Special Topics Workshop: Found Footage*

171D *Social Information Spaces*

171F *Autobiographical Film*

172 *Film and Video Studio*

173 *Narrative Workshop*

175 *Documentary Video Workshop*

176 *Experimental Video Workshop*

177 *Digital Media Workshop: Computer as Medium*

178A *Personal Computers in Film and Video*

178B *Advanced Personal Computers in Film and Video*

and two critical studies courses—one each from two of the three following groups:

130 *Silent Cinema* or

132A *International Cinema to 1960* or

132B *International Cinema, 1960 to Present* or

132C *Gender and Global Cinema*

134A *American Film, 1930–60* or

134B *American Film, 1960–Present*

136A *Experimental Film and Video* or

136B *History of Television* or

136C *Visual Culture and Technology: History of New Media*

136D *Documentary Film and Video*

and four upper-division elective courses from the following:

- up to two upper-division courses in film and digital media production (150, 151, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- at least two upper-division film and digital media history/critical studies courses
- up to two upper-division critical studies elective courses from another department; course substitutions must be pre-approved by the Film and Digital Media Department.

and one course from the following:

- 194A *Film Theory Seminar*
- 194B *Electronic Media Theory Seminar*
- 194C *New Media Seminar*
- 194D *Film History Seminar*
- 194E *International Cinemas*
- 194F *Film and the Other Arts: Music and Dance*
- 194G *New(s) Media*
- 194S *Senior Seminar: Special Topics*
- 195 *Senior Thesis*
- 196A *Senior Project in Film and Video Production*
- 196B *Senior Project in Screenwriting*
- 196C *Senior Documentary Workshop*
- 197 *Senior Digital Media Workshop*

Integrated Critical Practice Concentration

The integrated critical practice concentration provides a more rigorous pathway through the film and digital media major and offers classes specifically reserved for seniors with exceptional abilities in both critical studies and production who seek to combine creative and scholarly work. Students are eligible to apply for the integrated critical practice concentration in the last quarter of their junior year, provided they have completed FILM 120 and at least three other upper-division critical studies classes. Students not already admitted to the production concentration should apply simultaneously to the production concentration. Acceptance into the production concentration is a necessary pre-condition for acceptance into the integrated critical practice concentration. Applicants must already be declared film and digital media majors in good standing.

Students will be asked to submit the following application materials:

- a completed application form
- a one-page statement of purpose
- a sample essay
- copies of narrative evaluations for all courses taken in film and digital media

Application materials and instructions are available at the Film and Digital Media Department Office. Student application materials are reviewed by a committee of film and digital media faculty. Admission to the integrated critical practice concentration will be granted to students with overwhelmingly excellent evaluations, an outstanding writing sample, and a clear statement of purpose outlining a senior project that integrates critical studies and production work. Students may reapply a second time if not accepted, but not later than the first quarter of their senior year.

Requirements for the Integrated Critical Practice Concentration

The integrated critical practice concentration curriculum adds the following requirements to those already established for the film and digital media major. Students are required to take both 20A and 20P for their required lower-division courses, in addition to selecting a third lower-division class from either 20B or 20C. The minimum grade requirement for lower-division courses will apply (see Lower-Division Requirements). Students are required to take 170B as part of their core curriculum, and to complete six elective classes, rather than five. For the senior exit requirement students are required to complete one course (192, 195, 196A, 196B, 196C, or 197) which, combined with an independent study (199) taken either consecutively or simultaneously, will integrate critical studies and production work.

Students in the integrated critical practice concentration complete the following required upper-division core curriculum (6 courses):

- 120 *Introduction to Film Theory and Criticism*
- 130 *Silent Cinema* or
- 132A *International Cinema to 1960* or
- 132B *International Cinema, 1960 to Present* or
- 132C *Gender and Global Cinema*
- 134A *American Film, 1930–60* or
- 134B *American Film, 1960–Present*
- 136A *Experimental Film and Video* or
- 136B *History of Television* or

136C *Visual Culture and Technology: History of New Media*
136D *Documentary Film and Video*

170A *Fundamentals of Digital Media Production* or
170B *Fundamentals of Film/Video Production*

192 *Student-Directed Seminar* or
195 *Senior Thesis* or
196A *Senior Project in Film and Video Production* or
196B *Senior Project in Screenwriting* or
196C *Senior Documentary Workshop* or
197 *Senior Project in Digital Media*

Six upper-division elective courses are to be chosen from the following:

- two upper-division history/critical studies course in film and digital media
- three upper-division courses in film and digital media production (150, 151, 170A, or 170B, one of the 171 series, 172, 173, 175, 176, 177, one of the 178 series)
- one senior seminar chosen from the 194 series
- graduate seminars, taken with permission of the faculty advisor, may substitute for one of the electives
- a maximum of two electives may be taken in another department if pre-approved by the Film and Digital Media department

Courses from the above core curriculum in excess of requirements may NOT count as electives.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will be met by completion of FILM 120, *Introduction to Film Theory and Criticism*. For detailed information on this major's DC requirement, consult your major adviser.

Comprehensive Requirement

All seniors in the general film and digital media major or in the production concentration may select one of three options to satisfy the campus exit requirement.

- Senior seminar: The senior seminars (courses in the 194 series) are restricted to majors in their senior year and are writing intensive. Students in the general major are required to complete one senior seminar. Students in the production concentration may complete the senior seminar to satisfy the senior exit requirement or as an elective.
- Senior thesis: With prior faculty approval, a student may elect to do a senior thesis (FILM 195). The student must contact a faculty member at least one quarter in advance to submit a proposal and to obtain faculty approval for a senior thesis. The proposal may involve writing a screenplay; expanding on a paper from a previously completed upper-division critical studies course in film and digital media; or writing an original paper in a particular area resulting in a work of substantial research.
- Senior project: A limited number of students in the production concentration may participate in the senior project (FILM 196A, 196B, 196C, or 197) class. Admission is by application, with review of previous works and evaluation of the proposed final project by film and digital media production faculty.

Seniors in the critical studies concentration must complete the following to satisfy the campus exit requirement: FILM 190, *Advanced Critical Studies Seminar*.

Seniors in the integrated critical practice concentration must complete one course (192, 195, 196A, 196B, 196C, or 197) combined with an independent study course (199).

Transfer Students

All transfer students must enroll in at least one lower-division course (20A, 20B, or 20C) during their first quarter in residence. Transfer students are encouraged to enroll in 20A during the Summer Session preceding their first quarter in residence. After completion of one lower-division course (20A, 20B, or 20C) with a grade of B- or better, transfer students may declare the film and digital media pre-major.

All transfer students must earn a B- or higher in two 20-level courses, FILM 20A and either 20B or 20C (at least one must be taken at UCSC) to declare the major. Appeal procedures are the same as for non-transfer students. Three lower-division and ten upper-division courses are required for completion of the general major. With some lower-division preparation, transfer students should be able to complete the upper-division coursework and the major within two years. As preparation, prospective transfer students are encouraged to fulfill at least one lower-division film and digital media major requirement (FILM 20 series) through UCSC Summer Session prior to their transfer. Transfer students must petition the department to have equivalent lower-division courses taken at their current institution count toward their UCSC major requirements provided they have earned a B- or higher in each course.

Students who have completed none of the lower-division major requirements prior to transfer to

UCSC, students who are interested in graduating with a double major, and students who must finish general education requirements may need additional time to complete their studies.

Transfer students are strongly encouraged to speak with an academic adviser at the department office prior to enrolling in classes to determine their status and to begin the declaration of major process as soon as possible.

Honors

Honors in film and digital media are awarded to graduating seniors whose academic performance in their major coursework is judged by a faculty committee to be consistently excellent to outstanding. Students must also do excellent work on their senior exit requirement. Both narrative evaluations and letter grades will be considered; to be considered for Honors, students must have at least a cumulative GPA of 3.5 in the major or the relative equivalent in narrative evaluations, as determined by the faculty committee.

Minor Requirements

The minor in film and digital media offers a foundation in visual culture and contributes important scholarly techniques of value to other disciplines. Students earn a minor in film and digital media by completing eight courses: two lower-division courses as prerequisites for the minor and six upper-division courses including four from the core curriculum of the general major and two electives. There is no production component in the minor, nor is there a comprehensive requirement.

Lower-Division Requirements

Students must complete at least two lower-division courses prior to petitioning for the minor:

20A *Introduction to Film Studies*

and one of the following three courses:

20B *Introduction to Television Studies*

20C *Introduction to Digital Media*

20P *Introduction to Production Technique*

Requirements for the Minor

Students in the minor must complete the upper-division core curriculum by completing one course from each of the following four categories in film and digital media:

120 *Introduction to Film Theory Criticism*

130 *Silent Cinema* or

132A *International Cinema to 1960* **or**

132B *International Cinema, 1960 to Present* or

132C *Gender and Global Cinema*

134A *American Film, 1930–60* or

134B *American Film, 1960–Present*

136A *Experimental Film and Video* or

136B *History of Television* or

136C *Visual Culture and Technology: History of New Media*

136D *Documentary Film and Video*

Two upper-division elective courses to be chosen from the following: any two additional upper-division film and digital media history/critical studies courses other than production studio courses (150, 151, 170A through 178B) that have not been used to satisfy the above core curriculum. One of the electives may be substituted from another department or institution. Course substitutions must be approved by the Film and Digital Media Department.

Film and Digital Media Ph.D.

The Doctor of Philosophy (Ph.D.) program in film and digital media challenges the traditionally conceived borders between creative and critical practice. The program enables potential dialogue between creative practice and theoretical knowledge as related forms of intellectual work and provides the conditions for students to realize a wide range of possible projects, including those that exist across the traditional divides of critical studies and production. Focusing on a diverse range of cultural production that includes cinema, television, video art, and Internet-based media, Ph.D. program participants interrogate the historical, aesthetic, political, ideological, and technological aspects of these media forms across a range of international contexts, investigating

their points of connection and convergence as well as their relationship to broader cultural and historical change. The program thus prepares students for intellectually informed creative practice as well as theoretical and critical production in a range of environments, not limited to traditional academic contexts.

The doctoral program in film and digital media prepares students to be artists and scholars who can situate their work within a larger historical framework of cultural and technological change, looking at the interrelationships of various media. The program is not divided into paths or specific fields of emphasis. As well as educating students in the intellectual histories of their field and working with them to facilitate new theoretical and critical interventions, we also expose students to fundamental and advanced aspects of media technologies that will illuminate their understanding of media production and reception.

Requirements

Normative Time for Completion

Normative time for completion of the program is six years. The first two years of the program are primarily devoted to coursework. Preliminary exams for the master's degree occur in the spring of the second year. By the end of the third year, students should have formulated a dissertation topic and proposal deriving from their work in that year and should have nominated a Ph.D. qualifying examination committee and dissertation committee. Qualifying examinations for advancement to Ph.D. candidacy occur in the fall of the fourth year.

Coursework

A minimum of 108 units of study in coursework at UCSC will be required for the Ph.D. degree. Doctoral students will be in residence for a minimum of six quarters. When in residence, students will take a minimum of 12 credits per quarter until advancement to candidacy. Applicants who already hold an M.A. or M.F.A. degree may petition to waive up to six of their required elective courses for a maximum of 30 transfer credits; such a waiver is subject to the approval of the Graduate Committee.

In their first year, doctoral students will be required to take the three foundational courses (200A-B-C). In addition, students will take a 2-credit, colloquium-based, independent study, or another 2-5 credit course, every quarter.

They must then take two film and digital media graduate elective courses in the second year (for a total of five courses; three core and two electives).

In the third year, students take the three graduate courses in film and digital media, 295 (*Directed Reading*), 292 (*Seminar in Thesis Area*), and 297 (*Independent Study and Research*, leading to thesis proposal). Students will continue to meet the minimum number of credits per quarter in years two and three with other 2-5 credit courses as appropriate.

A student will thus take at least eight film and digital media graduate courses over the degree. The remaining elective courses may be selected from film and digital media or graduate or advanced undergraduate courses from other departments, subject to approval from the student's graduate adviser. If a student chooses to take an undergraduate course, they will be required to seek permission to enroll from the department, if approved by the faculty adviser.

In each year, it is expected that students will carefully choose which courses to take, in consultation with their graduate adviser, so as to ensure a program of study that is intellectually rigorous and that reflects the student's eventual goals and aspirations.

Students are expected to complete at least one year of supervised teaching as part of the degree requirements.

Foreign Language Requirement

Students must demonstrate proficiency in a language other than English. This may include a computer programming language instead of a natural language when such a language is integral to the student's field of study. The language requirement may be satisfied in one of two ways:

- by passing an upper-division course in a language related to the student's research
- by passing a reading proficiency test administered by a faculty member in the relevant language department

A student must pass the language requirement before taking Ph.D. qualifying examinations. There are two exceptions:

- The "foreign" language requirement may be waived for a non-English native speaker who has passed the proficiency test in English required for admission (application must be made in writing at least two months prior to the qualifying examination).
- The requirement may be waived if a student has proof of proficiency in a language other than English in the form of a language major or minor from recent (within the last five years) undergraduate or master's level education or equivalent (accredited institution). Documentation must be received and approved by the Director of Graduate Studies at least two months before the qualifying examination.

Timeline: Course Sequence, Examinations, and Dissertation

During the first year of study in FILM 200B-C (a 2-quarter course), students will be introduced to the methodologies of developing, and the questions that surround a critical practice approach. This will occur while the student simultaneously strengthens, with the appropriate elective classes, areas of theory or practice that pertain to their focus but in which they are not fluent.

During the second year, the student will focus on selecting classes from the film and digital media elective series numbered 210–289. Of the 19 classes currently in this series, approximately one third embrace a strong mix of critical studies and media production. In these classes, students will be charged with producing and thinking about the relationship between critical studies and media production. The remainder of the classes in this series fall on either side of the equation.

At the end of the second year, students take a preliminary examination which functions as the master's examination. In the winter quarter of the second year, a "call" is made for students to submit the critical or creative work they have produced from their first two years of coursework. Students prepare for the examination by talking to their graduate adviser about the work they have done and how they might situate and respond to it. At this stage they also nominate faculty members whom they think would be suitable examiners. It is expected that these faculty would include at least one of the instructors of the courses already taken by the student. The graduate adviser and director of graduate studies will assemble the committee, taking into account the student's nominations. The written component of the examination consists of the coursework projects already submitted, which for some students will be a combination of written text and creative work; and, a statement about that work and its contexts, which will form the basis for oral examination questions by faculty members. At the oral examination, students will be questioned about their work, their relationship to it, and the way they might situate it. The goal is for students to be able to talk meaningfully about the connections and implications of their work and to place it within a wider critical, theoretical, and creative context. The graduate adviser will discuss the scope and format of the examination with the student before the examination date.

After the oral examination, the committee considers the student's performance and will recommend one of three grades: fail, pass, or pass with permission to proceed. Students who fail may retake the oral component of the examination one time. A student with a pass only may leave the program with the degree of Master of Arts (M.A.). These students must also meet the campus requirement of B or higher in their coursework and complete the units requirements of 72 credits. Students who pass with permission to proceed may enter the third year of coursework toward the Ph.D. The decision on permission to proceed will take into account the examination result and input from the faculty whose courses the student has completed.

The third year will be spent developing a dissertation topic in close consultation with faculty advisers and the FILM 290 series classes. A student's advisers over the program's duration will include both critical studies and production faculty depending on the research and the qualifying examination, and dissertation committees will reflect a balance between critical studies and production faculty appropriate to the student's research topic. In spring of the third year, students should, in consultation with their graduate adviser, suggest names of faculty to become members of the Ph.D. qualifying examination committee. This committee will be comprised of four faculty members, at least one of whom must be from another discipline at UCSC or from another campus. The committee shall have a tenured film and digital media faculty member as chair. Students should also begin assembling a dissertation committee. The 297 independent study course, taken in the spring, should result in a dissertation proposal, and the student will receive feedback on that during and at the end of quarter.

In fall of the fourth year, the student's Ph.D. qualifying examination committee will consider the work completed in the 292, 295, and 297 courses, including the student's dissertation proposal (which the student may choose to revise over the summer before submitting to the committee) and will then conduct an oral qualifying examination based on the proposal and other work. The aim of the examination is to test a student's readiness for advanced research and production of the Ph.D. dissertation, and to assess the student's abilities to advance themselves in their respective fields of inquiry. Advancement to candidacy is based on successful completion of the qualifying examination as well as completion with a B or better grade of the required coursework and assembly of a graduate division approved thesis committee. If a student fails the Ph.D. examination, he or she may be permitted to take it a second time.

Completion of the Degree

Upon successful advancement to candidacy, students must then complete the following requirements for the Ph.D.

Dissertation: The dissertation, or Ph.D. thesis, is to be an original contribution of high quality to the field of film and digital media studies. If a student's thesis contains a substantial creative component, the thesis project must also include a written component of no less than 75 pages which contextualizes the work in relation to other scholarly and creative practices, and situates the work in relation to relevant aesthetic and cultural theory. The dissertation must be approved by a committee consisting of a minimum of three faculty members, at least two of whom must be from the film and digital media faculty. If the dissertation director does not hold a Ph.D. degree, then the majority of the remaining committee members must hold Ph.D.s. When the student has submitted the dissertation and the committee has approved it, the student is ready for the oral defense.

Oral Defense: Once the dissertation is approved, the student will present an oral summary before his or her dissertation committee and invited members of the academic community. The student

will then answer questions posed by the faculty.

Sample Student Program for Each Year

(Years 1-4)

Year 1: three core film and digital media courses; three electives

Fall

FILM 200A: *Introduction to Graduate Study*

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Winter

FILM 200B: *Theory and Praxis of Film and Digital Media, Part 1*

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Spring

FILM 200C: *Theory and Praxis of Film and Digital Media, Part 2*

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Year 2: two film and digital media electives; four other electives from Film and Digital Media or another department

Fall

Film and digital media elective

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Winter

Film and digital media elective

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Student suggests M.A. examination committee; prepares for examination.

Spring

Elective (from Film and Digital Media or another department)

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Student takes M.A. examination. If successful, advances to third year.

Year 3: three required film and digital media courses, three electives from Film and Digital Media or another department

Fall

FILM 295: *Directed Reading*

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Winter

FILM 292: *Seminar: Developing a Thesis Area*

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Spring

FILM 297: *Independent Study and Research* (thesis)

proposal)

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Student assembles Ph.D. dissertation committee, nominates Ph.D. qualifying examination committee.

Year 4

Student takes Ph.D. qualifying examination. If successful, advances to candidacy and continues research and writing of dissertation.

Designated Emphasis

UC Santa Cruz graduate students enrolled in doctoral programs may obtain a designated emphasis in film and digital media as part of their Ph.D. degree. Students must meet the following requirements in order to obtain the designated emphasis:

- Secure approval from a member of the film and digital media core faculty to serve as the adviser for the designated emphasis.
- Submit a significant piece of writing, or a project that includes both writing and creative practice, that demonstrates competence in the field of film and digital media. A writing submission could take the form of
- a seminar paper or dissertation chapter. A writing/creative project may be constituted from a range of possible media such as film, video, web-based or other digital media. The submitted project must meet the approval of the student's film and digital media adviser.
- Successfully complete four graduate courses (not independent studies) taught by either core or affiliated faculty of the film and digital media Ph.D. program. The courses must be pre-approved by the student's designated emphasis adviser.

Social Documentation M.A.

101 Communications Building

(831) 459-3204

film@ucsc.edu<http://film.ucsc.edu>***Program Description***

The film and digital media major at UCSC offers an integrated curriculum involving theory, criticism, and cultural analysis, as well as a production program in the aesthetics and techniques of film and digital media. This bachelor of arts degree program provides students with the critical skills, theoretical concepts, and historical knowledge necessary to conduct informed analysis of cinema, television, video art, and new media, along with the up-to-date technical knowledge, practical skills, and artistic contexts needed for the production of film, video, and digital media. The major provides a course of study that develops an understanding of moving image and digital media as essential tools of communication and artistic practice.

Students in the general film and digital media major develop an understanding of major movements in world cinema and different aesthetic approaches to the medium, while studying the cultural impact of television and the rise of video and digital art in recent decades. The critical studies concentration is designed for film and digital media majors who have a special aptitude for and interest in the history and theory of film, television, video, and digital media. This rigorous program can help prepare undergraduates for graduate work in critical studies. Students in the highly selective production concentration are encouraged to demonstrate technical proficiency and creative vision in film and digital media production while also studying the histories and theories of these media. The integrated critical practice concentration will serve students currently enrolled in the major who have a special aptitude for and interest in combining work in critical studies and production. The concentration provides them with a more rigorous pathway through the major and, in their senior year, allows them to work on a senior project that integrates creative and intellectual work.

Students in all facets of the major acquire skills in media analysis while maintaining a broadly based, liberal arts perspective. The UCSC program is interdisciplinary, combining theory and practice in film, video, and digital media with study in other areas of the arts, humanities, and social sciences that help students understand the role these media play in society.

As the technologies of film and video have merged with digital computer-based moving images and interactive media, and as digital media continues to expand into everyday experience, students in the major are uniquely positioned to excel in these fields. Graduates of the UCSC film and digital media program have enjoyed considerable success both in the professional world and in gaining admission into top graduate schools in the field.

Students enrolled in film and digital media production classes have access to audio, video, and digital production and postproduction equipment. Facilities include a digital media lab; audio recording studio; sound stage with green screen; digital nonlinear editing rooms; video format conversion rooms; a computerized sound effects library; and student equipment checkout. Additionally, computer laboratories equipped for digital image manipulation, web authoring, and interactive interface design and viewing rooms are available. The critical studies facilities include classrooms equipped for high-end film, video, and data projection. The library holdings in film and video history, theory, and literature are complemented by a large collection of films, videos, laser disks, and DVDs, including a diverse range of international feature films, experimental film and video work, animation, silent films, and documentaries.

Some courses offered by the Film and Digital Media Department are restricted in enrollment; admission is based on completion of prerequisites and other specific written application requirements. Admission to advanced production courses is generally restricted to third- and fourth-year students and is based on the submission of a portfolio of work produced in the introductory production class (Film 170B ~~for film production pathway~~, [Film 170A for digital media pathway](#)) and other production workshops.

Upper-division digital media and production studio courses require coursework to be completed on computers. The department recognizes that students often purchase a new computer on their arrival at the university during their freshman year. It is strongly suggested that students who plan to apply for the production concentration wait until their second or third year of studies before making this investment. Delaying the purchase until this time allows a student to have the most up-to-date hardware and the fastest machine at the price they can afford at the moment they enter into the production concentration. Laptop computers are strongly encouraged for production students, and laptop computers may become required in the near future. Instruction in and software for production courses are based on the Apple OS X platform. Compatibility with the department's operating system for instruction is strongly advised. Students are encouraged to consult with the department office or the web site for list of recommended computers and software packages.

Declaring the Film and Digital Media Pre-Major

Students who have completed one lower-division course (20A, 20B or 20C) with a grade of B- or better may declare the film and digital media pre-major. Pre-majors are expected to complete the requirements to declare the major by the end of their second year. Transfer students must declare the pre-major no later than their second quarter in residence.

Declaring the Film and Digital Media Major

Prior to declaring the film and digital media major, students must complete FILM 20A, and either 20B or 20C, with a grade of B- or better. FILM 20A, 20B, and 20C must be taken for a letter grade by students intending to major in film and digital media. Students who have met the B- grade minimum for declaration of the major may choose to take FILM 20P as the third lower-division requirement.

20A ~~The Film Experience~~ [Introduction to Film Studies](#)

20B *Introduction to Television* ~~Culture and Society~~ [Studies](#)

20C *Introduction to Digital Media*

20P *Introduction to Production Technique*

Students are encouraged to complete the lower-division courses early in their studies so that the petition to major status is accomplished no later than the first quarter of the

junior year. Acceptance into the film and digital media major does not constitute acceptance into any of the concentrations (production, critical studies, or integrated critical practice). Transfer students should consult the Transfer Student section for instructions about declaring the major.

Students who feel that there were extenuating circumstances which prevented them from meeting the requirements for declaring the major may appeal their denial by submitting a letter to the Film and Digital Media Department. The appeal must be filed no later than 15 days after the denial notification was sent. ~~mailed or the 10th day of classes in the quarter of the denial, whichever is later.~~ For further information regarding this process, contact the Film and Digital Media Department.

Program of Study

The general film and digital media major requires three lower-division and nine upper-division courses in residence and satisfaction of the senior comprehensive requirement. Students must include among these 13 courses at least one upper-division, 5-credit course that focuses on diversity (i.e., non-Western; underrepresented ethnicity, gender, or sexual orientation). A list of courses satisfying the department's diversity requirement is available at the department office. Students in the general film and digital media major may apply for admission to the critical studies concentration (see Critical Studies Concentration below), to the highly selective and competitive production concentration (see Production Concentration below), or the more rigorous integrated critical practice concentration (see Integrated Critical Practice Concentration below) within the major.

Lower-Division Requirements

Students must take the lower-division classes 20A, 20B, and 20C for a letter grade, and they must earn a B- or better in two of these three lower-division classes (20A and either 20B or 20C) to petition for the major. A third lower-division course is required to satisfy major requirements.

20A ~~The Film Experience~~ Introduction to Film Studies

and two of the following three courses are required for all majors:

20B *Introduction to Television* ~~Culture and Society~~ Studies

20C *Introduction to Digital Media*

20P *Introduction to Production Technique* (cannot be used to satisfy the B- grade minimum)

General Film and Digital Media Major

Students must complete the upper-division core curriculum by completing one course from each of the following five groups in film and digital media:

120 Introduction to Film Theory and Criticism

130 *Silent Cinema* or

132A *International Cinema to 1960* or

132B *International Cinema, 1960 to Present* or

132C *Gender and Global Cinema*

134A *American Film, 1930–60* or

134B *American Film, 1960–Present*

136A *Experimental Film and Video* or

- 136B *History of Television* or
- 136C *Visual Culture and Technology: History of New Media*
- 136D *Documentary Film and Video*
- 194A *Film Theory Seminar* or
- 194B *Electronic Media Theory Seminar* or
- 194C *New Media Theory Seminar* or
- 194D *Film History Seminar* or
- 194E *International Cinemas* or
- 194F *Film and the Other Arts: Music and Dance* or
- 194G *New(s) Media* or
- 194S *Senior Seminar: Special Topics*

Five upper-division elective courses are to be chosen from the following:

- to five additional upper-division history/critical studies courses in film and digital media
- to two upper-division courses in film and digital media production (150, 151, 170A, 170B, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- ~~Film 150 or 151~~
- to two upper-division courses offered by other departments; course substitutions must be pre-approved by the Film and Digital Media Department

Film and Digital Media Major Planners

The following are two recommended academic plans for students to complete during their first two years as preparation for the film and digital media major. Plan One is a guideline for students who are committed to the major early in their academic career; Plan Two is for students who are considering the major.

Students who are interested in the production concentration, the critical studies concentration, or the integrated critical practice concentration should seriously consider Plan One to be better prepared for application to production studio classes or either the critical studies concentration or the integrated critical practice concentration in their junior year.

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	college core	low-div Fidm* req	low-div Fidm* req

*film and digital media

Critical Studies Concentration

The critical studies concentration provides a more rigorous pathway through the film and digital media major and offers classes specifically reserved for seniors who have exceptional abilities. Students are eligible to apply for the critical studies concentration in spring quarter of their junior year, provided they have completed FILM 120 and at least three other upper-division critical studies classes. Applicants must already be declared film and digital media majors in good standing.

Students will be asked to submit the following application materials:

- a completed application form
- a one-page statement of purpose
- a sample essay
- copies of narrative evaluations for all courses taken in film and digital media

Application materials and instructions are available at the Film and Digital Media Department office. Student application materials are reviewed by a committee of film and digital media critical studies faculty. Admission to the critical studies concentration will be granted to students who have overwhelmingly excellent evaluations, an outstanding writing sample, and a clear statement of purpose. Students may reapply a second time if not accepted, but not later than the first quarter of their senior year.

Requirements for the Critical Studies Concentration

The critical studies concentration curriculum adds the following requirements to those already established for the film and digital media major. Students are required to take two upper-division electives, rather than the five electives currently required for the film and digital media major. FILM 190, an *Advanced Critical Studies Seminar*, replaces the current requirement for one of the FILM 194 seminars, and serves as an exit requirement in the major.

Students in the critical studies concentration complete the following required upper-division core curriculum (9 courses):

- 120 Introduction to Film Theory and Criticism
- 130 *Silent Cinema* or
- 132A *International Cinema to 1960* or
- 132B *International Cinema, 1960 to Present* or
- 132C *Gender and Global Cinema*
- 134A *American Film, 1930–60* or
- 134B *American Film, 1960–Present*
- 136A *Experimental Film and Video* or
- 136B *History of Television* or
- 136C *Visual Culture and Technology: History of New Media*
- [136D *Documentary Film and Video*](#)
- 165A *Film, Video and Gender* or
- 165B *Race on Screen* or
- 165C *Lesbian, Gay and Queer Film and Video* or
- 165D *Asian Americans in Media*
- 187 *Advanced Topics in Television Studies* or
- 189 *Advanced Topics in Electronic and Digital Media Studies*
- 190 *Advanced Critical Studies Seminar*
- 191 *Critical Studies Thesis Preparation Seminar*
- 192 *Student-Directed Seminar* or
- 195 *Senior Thesis*

Two upper-division elective courses are to be chosen from the following:

- up to two additional upper-division history/critical studies courses in film and digital media
- upper-division course in film and digital media production (150, 151, 170A, 170B, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- one upper-division course offered by other departments; course substitutions must be pre-approved by the Film and Digital Media Department

Production Concentration

Admission to the production concentration is highly selective, based on promise and accomplishment shown in the student's work. After completing FILM [170A \(prerequisite for most digital media production courses\)](#) or [170B \(prerequisite for most film/video production courses\)](#), students may apply to the production concentration by submitting works created in ~~FILM-170A~~ or 170B to a portfolio review conducted at the end of each quarter. These student works are reviewed by a committee of film and digital media production faculty. Application materials and instructions for the portfolio review are available at the Film and Digital Media Department office. Students should note that production courses are in high demand and that faculty/student ratios and equipment resources limit the number of applicants accepted into the production concentration. Students may reapply a second time if not accepted. A student accepted into the production concentration who is unable to meet all the requirements for the concentration may instead be able to satisfy the graduation requirements of the general major. Application materials and instructions for all production courses are available each quarter online at slugfilm.ucsc.edu.

Requirements for the Production Concentration

Students in the production concentration complete the following required upper-division core curriculum (six courses):

120 *Introduction to Film Theory and Criticism*

[170A Fundamentals of Digital Media Production \(prerequisite for most digital media production courses\)](#)

or

170B *Fundamentals of Film and Video Production* [\(prerequisite for most film/video production courses\)](#)

two of the following production courses:

150 *Screenwriting*

151 *Film Directing*

170A *Fundamentals of Digital Media Production*

[170B Fundamentals of Film and Video Production](#)

171A *Special Topics Workshop: Sound*

171C *Special Topics Workshop: Found Footage*

171D *Social Information Spaces*

[171G Documentary Animation Workshop](#)

171F *Autobiographical Film*

172 *Film and Video Studio*

173 *Narrative Workshop*

175 *Documentary Video Workshop*

176 *Experimental Video Workshop*

177 *Digital Media Workshop: Computer as Medium*

178A *Personal Computers in Film and Video*

178B *Advanced Personal Computers in Film and Video*

and two critical studies courses—one each from two of the three following groups:

130 *Silent Cinema* or

132A *International Cinema to 1960* or

132B *International Cinema, 1960 to Present* or

132C *Gender and Global Cinema*

134A *American Film, 1930–60* or

134B *American Film, 1960–Present*

136A *Experimental Film and Video* or

136B *History of Television* or

136C *Visual Culture and Technology: History of New Media*

136D *Documentary Film and Video*

and four upper-division elective courses from the following:

- up to two upper-division courses in film and digital media production (150, 151, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- at least two upper-division film and digital media history/critical studies courses
- up to two upper-division critical studies elective courses from another department; course substitutions must be pre-approved by the Film and Digital Media Department.

and one course from the following:

194A *Film Theory Seminar*

194B *Electronic Media Theory Seminar*

194C *New Media Seminar*

194D *Film History Seminar*

194E *International Cinemas*

194F *Film and the Other Arts: Music and Dance*

194G *New(s) Media*

194S *Senior Seminar: Special Topics*

195 *Senior Thesis*

196A *Senior Project in Film and Video Production*

196B *Senior Project in Screenwriting*

196C *Senior Documentary Workshop*

197 *Senior Digital Media Workshop*

Integrated Critical Practice Concentration

The integrated critical practice concentration provides a more rigorous pathway through the film and digital media major and offers classes specifically reserved for seniors with exceptional abilities in both critical studies and production who seek to combine creative and scholarly work. Students are eligible to apply for the integrated critical practice concentration in the last quarter of their junior year, provided they have completed FILM

120 and at least three other upper-division critical studies classes. Students not already admitted to the production concentration should apply simultaneously to the production concentration. Acceptance into the production concentration is a necessary pre-condition for acceptance into the integrated critical practice concentration. Applicants must already be declared film and digital media majors in good standing.

Students will be asked to submit the following application materials:

- a completed application form
- a one-page statement of purpose
- a sample essay
- copies of narrative evaluations for all courses taken in film and digital media

Application materials and instructions are available at the Film and Digital Media Department Office. Student application materials are reviewed by a committee of film and digital media faculty. Admission to the integrated critical practice concentration will be granted to students with overwhelmingly excellent evaluations, an outstanding writing sample, and a clear statement of purpose outlining a senior project that integrates critical studies and production work. Students may reapply a second time if not accepted, but not later than the first quarter of their senior year.

Requirements for the Integrated Critical Practice Concentration

The integrated critical practice concentration curriculum adds the following requirements to those already established for the film and digital media major. Students are required to take both 20A and 20P for their required lower-division courses, in addition to selecting a third lower-division class from either 20B or 20C. The minimum grade requirement for lower-division courses will apply (see Lower-Division Requirements). Students are required to take [170A or 170B](#) as part of their core curriculum, and to complete six elective classes, rather than five. For the senior exit requirement students are required to complete one course (192, 195, 196A, 196B, 196C, or 197) which, combined with an independent study (199) taken either consecutively or simultaneously, will integrate critical studies and production work.

Students in the integrated critical practice concentration complete the following required upper-division core curriculum (6 courses):

120 *Introduction to Film Theory and Criticism*

130 *Silent Cinema or*

132A *International Cinema to 1960 or*

132B *International Cinema, 1960 to Present or*

132C *Gender and Global Cinema*

134A *American Film, 1930–60 or*

134B *American Film, 1960–Present*

136A *Experimental Film and Video or*

136B *History of Television or*

136C *Visual Culture and Technology: History of New Media*

[136D *Documentary Film and Video*](#)

[170A *Fundamentals of Digital Media Production*](#)

[or](#)

- 170B *Fundamentals of Film/Video Production*
- 192 *Student-Directed Seminar* or
- 195 *Senior Thesis* or
- 196A *Senior Project in Film and Video Production* or
- 196B *Senior Project in Screenwriting* or
- 196C *Senior Documentary Workshop* or
- 197 *Senior Project in Digital Media*

Six upper-division elective courses are to be chosen from the following:

- two upper-division history/critical studies course in film and digital media (~~152, 160, 161, 162, one of the 165 series, 168, 180, one of the 185 series, 187, 189~~)
- three upper-division courses in film and digital media production (150, 151, 170A, or 170B, one of the 171 series, 172, 173, 175, 176, 177, one of the 178 series)
- one senior seminar chosen from the 194 series
- graduate seminars, taken with permission of the faculty advisor, may substitute for one of the electives
- a maximum of two electives may be taken in another department if pre-approved by the Film and Digital Media department

Courses from the above core curriculum in excess of requirements may NOT count as electives.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will be met by completion of FILM 120, *Introduction to Film Theory and Criticism*. For detailed information on this major's DC requirement, consult your major adviser.

Comprehensive Requirement

All seniors in the general film and digital media major or in the production concentration may select one of three options to satisfy the campus exit requirement.

- *Senior seminar*: The senior seminars (courses in the 194 series) are restricted to majors in their senior year and are writing intensive. Students in the general major are required to complete one senior seminar. Students in the production concentration may complete the senior seminar to satisfy the senior exit requirement or as an elective.
- *Senior thesis*: With prior faculty approval, a student may elect to do a senior thesis (FILM 195). The student must contact a faculty member at least one quarter in advance to submit a proposal and to obtain faculty approval for a senior thesis. The proposal may involve writing a screenplay; expanding on a paper from a previously completed upper-division critical studies course in film and digital media; or writing an original paper in a particular area resulting in a work of substantial research.
- *Senior project*: A limited number of students in the production concentration may participate in the senior project (FILM 196A, 196B, 196C, or 197) class. Admission is by application, with review of previous works and evaluation of the proposed final project by film and digital media production faculty.

Seniors in the critical studies concentration must complete the following to satisfy the campus exit requirement: FILM 190, *Advanced Critical Studies Seminar*.

Seniors in the integrated critical practice concentration must complete one course (192, 195, 196A, 196B, 196C, or 197) combined with an independent study course (199).

Transfer Students

All transfer students must enroll in at least one lower-division course (20A, 20B, or 20C) during their first quarter in residence. Transfer students are encouraged to enroll in 20A during the Summer Session preceding their first quarter in residence. After completion of one lower-division course (20A, 20B, or 20C) with a grade of B- or better, transfer students may declare the film and digital media pre-major.

All transfer students must earn a B- or higher in two 20-level courses, FILM 20A and either 20B or 20C (at least one must be taken at UCSC) to declare the major. Appeal procedures are the same as for non-transfer students. Three lower-division and ten upper-division courses are required for completion of the [general](#) major. With some lower-division preparation, transfer students should be able to complete the upper-division coursework and the major within two years. As preparation, prospective transfer students are encouraged to fulfill at least one lower-division film and digital media major requirement (FILM 20 series) through UCSC Summer Session prior to their transfer. Transfer students must petition the department to have equivalent lower-division courses taken at their current institution count toward their UCSC major requirements provided they have earned a B- or higher in each course.

Students who have completed none of the lower-division major requirements prior to transfer to UCSC, students who are interested in graduating with a double major, and students who must finish general education requirements may need additional time to complete their studies.

Transfer students are strongly encouraged to speak with an academic adviser at the department office prior to enrolling in classes to determine their status and to begin the declaration of major process as soon as possible.

Honors

Honors in film and digital media are awarded to graduating seniors whose academic performance in their major coursework is judged by a faculty committee to be consistently excellent to outstanding. Students must also do excellent work on their senior exit requirement. Both narrative evaluations and letter grades will be considered; to be considered for Honors, students must have at least a cumulative GPA of 3.5 in the major or the relative equivalent in narrative evaluations, as determined by the faculty committee.

Minor Requirements

The minor in film and digital media offers a foundation in visual culture and contributes important scholarly techniques of value to other disciplines. Students earn a minor in film and digital media by completing eight courses: two lower-division courses as prerequisites for the minor and six upper-division courses including four from the core curriculum of the general major and two electives. There is no production component in the minor, nor is there a comprehensive requirement.

Lower-Division Requirements

Students must complete at least two lower-division courses prior to petitioning for the minor:

20A ~~The Film Experience~~ [Introduction to Film Studies](#)

and one of the following three courses:

20B *Introduction to Television* ~~Culture and Society~~ [Studies](#)

20C *Introduction to Digital Media*

Requirements for the Minor

Students in the minor must complete the upper-division core curriculum by completing one course from each of the following four categories in film and digital media:

- 120 *Introduction to Film Theory Criticism*
- 130 *Silent Cinema* or
- 132A *International Cinema to 1960* or
- 132B *International Cinema, 1960 to Present* or
- 132C *Gender and Global Cinema*
- 134A *American Film, 1930–60* or
- 134B *American Film, 1960–Present*
- 136A *Experimental Film and Video* or
- 136B *History of Television* or
- 136C *Visual Culture and Technology: History of New Media*
- 136D *Documentary Film and Video*

Two upper-division elective courses to be chosen from the following: any two additional upper-division film and digital media history/critical studies courses other than production studio courses (150, 151, 170A through ~~178A, and 178B~~) that have not been used to satisfy the above core curriculum. One of the electives may be substituted from another department or institution. Course substitutions must be approved by the Film and Digital Media Department.

Film and Digital Media Ph.D.

The Doctor of Philosophy (Ph.D.) program in film and digital media challenges the traditionally conceived borders between creative and critical practice. The program enables potential dialogue between creative practice and theoretical knowledge as related forms of intellectual work and provides the conditions for students to realize a wide range of possible projects, including those that exist across the traditional divides of critical studies and production. Focusing on a diverse range of cultural production that includes cinema, television, video art, and Internet-based media, Ph.D. program participants interrogate the historical, aesthetic, political, ideological, and technological aspects of these media forms across a range of international contexts, investigating their points of connection and convergence as well as their relationship to broader cultural and historical change. The program thus prepares students for intellectually informed creative practice as well as theoretical and critical production in a range of environments, not limited to traditional academic contexts.

The doctoral program in film and digital media prepares students to be artists and scholars who can situate their work within a larger historical framework of cultural and technological change, looking at the interrelationships of various media. The program is not divided into paths or specific fields of emphasis. As well as educating students in the intellectual histories of their field and working with them to facilitate new theoretical and critical interventions, we also expose students to fundamental and advanced aspects of media technologies that will illuminate their understanding of media production and reception.

Requirements

Normative Time for Completion

Normative time for completion of the program is six years. The first two years of the program are primarily devoted to coursework. Preliminary exams for the master's degree occur in the spring of the second year. By the end of the third year, students should have formulated a dissertation topic and proposal deriving from their work in that year and should have nominated a Ph.D. qualifying examination committee and dissertation committee. Qualifying examinations for advancement to Ph.D. candidacy occur in the fall of the fourth year.

Coursework

A minimum of 108 units of study in coursework at UCSC will be required for the Ph.D. degree. Doctoral students will be in residence for a minimum of six quarters. When in residence, students will take a minimum of 12 credits per quarter until advancement to candidacy. Applicants who already hold an M.A. or M.F.A. degree may petition to waive up to six of their required elective courses for a maximum of 30 transfer credits; such a waiver is subject to the approval of the Graduate Committee. ~~Up to 10 transfer credits may be granted from another institution if approved by the faculty.~~

In their first year, doctoral students will be required to take the three foundational courses (200A-B-C). In addition, students will take a 2-credit, colloquium-based, independent study, or another 2-5 credit course, every quarter. ~~and the 2-credit colloquium series sequence.~~

They must then take two film and digital media graduate elective courses in the second year (for a total of five courses; three core and two electives). ~~In addition, most students will take FILM 204A-B-C, a 2-credit colloquium every quarter.~~

In the third year, students take the three graduate courses in film and digital media, 295 (*Directed Reading*), 292 (*Seminar in Thesis Area*), and 297 (*Independent Study and Research*, leading to thesis proposal). Students will continue to meet the minimum number of credits per quarter in years two and three with other 2-5 credit courses as appropriate.

A student will thus take at least eight film and digital media graduate courses over the degree, ~~for a total of 40 credits plus 12 credits of the colloquium series.~~ The remaining elective courses may be selected from film and digital media or graduate or advanced undergraduate courses from other departments, subject to approval from the student's graduate adviser. If a student chooses to take an undergraduate course, they will be required to seek permission to enroll from the department, if approved by the faculty adviser.

~~It~~ In each year, it is expected that students will carefully choose which courses to take, in consultation with their graduate adviser, so as to ensure a program of study that is intellectually rigorous and that reflects the student's eventual goals and aspirations.

Students are expected to complete at least one year of supervised teaching as part of the degree requirements.

Foreign Language Requirement

Students must demonstrate proficiency in a language other than English. This may include a computer programming language instead of a natural language when such a language is integral to the student's field of study. The language requirement may be satisfied in one of two ways:

- by passing an upper-division course in a language related to the student's research
- by passing a reading proficiency test administered by a faculty member in the

relevant language department

A student must pass the language requirement before taking Ph.D. qualifying examinations. There are two exceptions:

- The “foreign” language requirement may be waived for a non-English native speaker who has passed the proficiency test in English required for admission (application must be made in writing at least two months prior to the qualifying examination).
- The requirement may be waived if a student has proof of proficiency in a language other than English in the form of a language major or minor from recent (within the last five years) undergraduate or master’s level education or equivalent (accredited institution). Documentation must be received and approved by the Director of Graduate Studies at least two months before the qualifying examination.

Timeline: Course Sequence, Examinations, and Dissertation

During the first year of study in FILM 200B-C (a 2-quarter course), students will be introduced to the methodologies of developing, and the questions that surround a critical practice approach. This will occur while the student simultaneously strengthens, with the appropriate elective classes, areas of theory or practice that pertain to their focus but in which they are not fluent.

During the second year, the student will focus on selecting classes from the film and digital media elective series numbered 210–289. Of the 19 classes currently in this series, approximately one third embrace a strong mix of critical studies and media production. In these classes, students will be charged with producing and thinking about the relationship between ~~the~~ critical studies and media production. The remainder of the classes in this series fall on either side of the equation.

At the end of the second year, students take a preliminary examination which functions as the master’s examination. In the winter quarter of the second year, a “call” is made for students to submit the critical or creative work they have produced from their first two years of coursework. Students prepare for the examination by talking to their graduate adviser about the work they have done and how they might situate and respond to it. At this stage they also nominate faculty members whom they think would be suitable examiners. It is expected that these faculty would include at least one of the instructors of the courses already taken by the student. The graduate adviser and director of graduate studies will assemble the committee, taking into account the student’s nominations. The written component of the examination consists of the coursework projects already submitted, which for some students will be a combination of written text and creative work; and, a statement about that work and its contexts, which will form the basis for oral examination questions by faculty members. At the oral examination, students will be questioned about their work, their relationship to it, and the way they might situate it. The goal is for students to be able to talk meaningfully about the connections and implications of their work and to place it within a wider critical, theoretical, and creative context. The graduate adviser will discuss the scope and format of the examination with the student before the examination date.

After the oral examination, the committee considers the student’s performance and will recommend one of three grades: fail, pass, or pass with permission to proceed. Students who fail may retake the oral component of the examination one time. A student with a pass only may leave the program with the degree of Master of Arts (M.A.). These students must also meet the campus requirement of B or higher in their coursework and complete the units requirements of 72 credits. Students who pass with permission to proceed may enter the third year of coursework toward the Ph.D. The decision on permission to proceed will take into account the examination result and input from the faculty whose courses the student has completed.

The third year will be spent developing a dissertation topic in close consultation with

faculty advisers and the FILM 290 series classes. A student's advisers over the program's duration will include both critical studies and production faculty depending on the research and the qualifying examination, and dissertation committees will reflect a balance between critical studies and production faculty appropriate to the student's research topic. In spring of the third year, students should, in consultation with their graduate adviser, suggest names of faculty to become members of the Ph.D. qualifying examination committee. This committee will be comprised of four faculty members, at least one of whom must be from another discipline at UCSC or from another campus. The committee shall have a tenured film and digital media faculty member as chair. Students should also begin assembling a dissertation committee. The 297 independent study course, taken in the spring, should result in a dissertation proposal, and the student will receive feedback on that during and at the end of quarter.

In fall of the fourth year, the student's Ph.D. qualifying examination committee will consider the work completed in the 292, 295, and 297 courses, including the student's dissertation proposal (which the student may choose to revise over the summer before submitting to the committee) and will then conduct an oral qualifying examination based on the proposal and other work. The aim of the examination is to test a student's readiness for advanced research and production of the Ph.D. dissertation, and to assess the student's abilities to advance themselves in their respective fields of inquiry. Advancement to candidacy is based on successful completion of the qualifying examination as well as completion with a B or better grade of the required coursework and assembly of a graduate division approved thesis committee. If a student fails the Ph.D. examination, he or she may be permitted to take it a second time.

Completion of the Degree

Upon successful advancement to candidacy, students must then complete the following requirements for the Ph.D.

Dissertation: The dissertation, or Ph.D. thesis, is to be an original contribution of high quality to the field of film and digital media studies. If a student's thesis contains a substantial creative component, the thesis project must also include a written component of no less than 75 pages which contextualizes the work in relation to other scholarly and creative practices, and situates the work in relation to relevant aesthetic and cultural theory. The dissertation must be approved by a committee consisting of a minimum of three faculty members, at least two of whom must be from the film and digital media faculty. If the dissertation director does not hold a Ph.D. degree, then the majority of the remaining committee members must hold Ph.D.s. When the student has submitted the dissertation and the committee has approved it, the student is ready for the oral defense.

Oral Defense: Once the dissertation is approved, the student will present an oral summary before his or her dissertation committee and invited members of the academic community. The student will then answer questions posed by the faculty.

Sample Student Program for Each Year (Years 1-4)

Year 1: three core film and digital media courses; three electives

Fall

FILM 200A: Introduction to Graduate Study ~~FILM 204A: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Winter

FILM 200B: *Theory and Praxis of Film and Digital Media, Part 1* ~~FILM-204B: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language colloquium study/other elective (at least 2 credits) ~~Foreign language or teaching assistant~~

Spring

FILM 200C: *Theory and Praxis of Film and Digital Media, Part 2* ~~FILM-204C: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language colloquium study/other elective (at least 2 credits) ~~Foreign language or teaching assistant~~

Year 2: two film and digital media electives; four other electives from Film and Digital Media or another department

Fall

Film and digital media elective ~~FILM-204A: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language colloquium study/other elective (at least 2 credits) ~~Teaching assistant or graduate student research assistantship~~

Winter

Film and digital media elective ~~FILM-204B: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language colloquium study/other elective (at least 2 credits) ~~Teaching assistant or graduate student research assistantship~~

Student suggests M.A. examination committee; prepares for examination.

Spring

Elective (from Film and Digital Media or another department) ~~FILM-204C: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language colloquium study/other elective (at least 2 credits) ~~Teaching assistant or graduate student research assistantship~~

Student takes M.A. examination. If successful, advances to third year.

Year 3: three required film and digital media courses, three electives from Film and Digital Media ~~Department~~ or another department

Fall

FILM 295: *Directed Reading*~~FILM 204A: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)~~Teaching assistant or graduate student research assistantship~~

Winter

FILM 292: *Seminar: Developing a Thesis Area*~~FILM 204B: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)~~Teaching assistant or graduate student research assistantship~~

Spring

FILM 297: *Independent Study and Research* (thesis proposal)~~FILM 204C: Colloquium~~

Elective (from Film and Digital Media or another department)

Foreign language/colloquium study/other elective (at least 2 credits)

Student assembles Ph.D. dissertation committee, nominates Ph.D. qualifying examination committee.

Year 4

Student takes Ph.D. qualifying examination. If successful, advances to candidacy and continues research and writing of dissertation.

Designated Emphasis

UC Santa Cruz graduate students enrolled in doctoral programs may obtain a designated emphasis in film and digital media as part of their Ph.D. degree. Students must meet the following requirements in order to obtain the designated emphasis:

- Secure approval from a member of the film and digital media core faculty to serve as the adviser for the designated emphasis.
- Secure approval from a member of the film and digital media core faculty to serve as the adviser for the designated emphasis.
- Submit a significant piece of writing, or a project that includes both writing and creative practice, that demonstrates competence in the field of film and digital media. A writing submission could take the form of a seminar paper or dissertation chapter. A writing/creative project may be constituted from a range of possible media such as film, video, web-based or other digital media. The submitted project must meet the approval of the student's film and digital media adviser.
- Successfully complete four graduate courses (not independent studies) taught by either core or affiliated faculty of the film and digital media Ph.D. program. The courses must be pre-approved by the student's designated emphasis adviser.

Faculty and Professional Interests

Professor

SHARON DANIEL

Community-based public art in information and communications environments, social and political aspects of information technology, new media documentary and database documentary, participatory culture, digital inclusion, net art, human-computer interface design

ELI E. HOLLANDER

Film and video directing; ethnographic documentary directing, editing, cinematography, and videography; digital image generation; screenwriting

CHARLES L. LORD, Professor Emeritus

MARGARET MORSE

Media theory and criticism emphasis on digital/new/bio/electronic, media history/archeology, media art, technology and culture, collaborative culture, sensory studies and art, feminist and gender studies, German cinema, documentary media, science fiction, and silent comedy

B. RUBY RICH

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

SHELLEY STAMP

Film history, theory, and criticism; silent cinema; women's filmmaking; film censorship; histories of moviegoing; feminist approaches to cinema

RENEE TAJIMA-PEA

Documentary film and video focusing on Asian American and immigrant communities, media, and social change

Associate Professor

LAWRENCE ANDREWS

Film, video, installation and media art

IRENE GUSTAFSON

Producing across the boundaries between "theory" and "practice," non-fiction media, experimental film/video, production design, gender and queer studies

JONATHAN KAHANA

Documentary film and media; film and politics; American film history; essay film; cultural and social theory; media publics; arts of historical re-enactment; war and cultural memory; audio culture; disciplines of listening

L. S. KIM

Television history and theory, racial discourse, feminist criticism, Asian-American media production, industrial practices and social change in both mainstream Hollywood and alternative media

PETER LIMBRICK

International cinemas; intersections of race, gender, and sexuality; theories of globalization, transnationalism, and postcoloniality; queer theory

WARREN SACK

Software design and media theory

GUSTAVO VAZQUEZ

Film and video production, directing drama, documentary and experimental cross-cultural experiences in film, film curator

Assistant Professor

JENNIFER HORNE

Media citizenship; non-theatrical film and film exhibition; archives and technologies of information; film preservation; mass media and humanitarianism; cinema and media history and historiography; institutions, disciplinarity, and the politics of knowledge

JOHN JOTA LEAOS

Social documentation, social art practice, community arts, documentary animation, Chicana/o art practice and cultural studies, media and cultural studies, subaltern studies, photography, installation art, public art and intervention

IRENE LUSZTIG

Film and video production, experimental documentary, ethnographic film, autobiographical film, editing

SORAYA MURRAY

New media art, theory, and criticism; visual culture including digital, film, video, and electronic games; theories of technology and globalization; representation of otherness, migration, citizenship

YIMAN WANG

Film history and theory; colonial/semi-colonial/postcolonial/postsocialist modes of media production and exchange; border-crossing film remakes; silent cinema; translation theory and cinema; acting theory/practice and ethnic star studies; transnational connections and ramifications of Chinese cinema and documentary; fan culture; East Asian cinemas

**Professor**

JULIANNE BURTON-CARVAJAL, Emerita, Literature

TERESA DE LAURETIS, Emerita, History of Consciousness

ROSA LINDA FREGOSO, Latin American and Latino Studies

Human-rights studies; intercultural and transborder feminism; cultural studies; Latina/o-Latino American film and media arts

HERMAN S. GRAY, Sociology

Cultural studies, media and television studies, black cultural politics, social theory

DONNA J. HARAWAY, Emerita, History of Consciousness and Feminist Studies

DAVID S. MARRIOTT, History of Consciousness

Literary theory, psychoanalysis, black cultural theory and philosophies of race, literary and visual cultures of modernism

Assistant Professor

NEDA ATANASOSKI, Feminist Studies

U.S. and Eastern European film and media; cultural studies and critical theory; war and nationalism; gender, ethnicity, and religion

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**20A. Introduction to Film Studies. F**

An introduction to the basic elements, range, and diversity of cinematic representation and expression. Aesthetic, theoretical, and critical issues are explored in the context of class screenings and critical readings. Students are billed a course fee. (Formerly The Film Experience.) Enrollment restricted to first-year students, sophomores, and juniors. *S. Stamp*

20B. Introduction to Television Studies. W

Introduction to the basic forms of televisual presentation, including differing narrative structure from movies and situation comedies to soap opera, plus modes of direct discourse in news, advertising, sports, music, television, and other genres. Alternative forms and modes in electronic media, such as independent video art and documentary, public television, cable, and electronic networks are explored, with their potential for expressing cultural diversity set in relation to social, cultural, and political conditions. Students are billed a course fee. (Formerly Introduction to Television Culture and Society.) Enrollment restricted to first-year students, sophomores, and juniors. *The Staff*

20C. Introduction to Digital Media. S

Introduces fundamental features of digital media and examines the immense visual, social, and psychological impact of the "digital revolution" on our culture. Topics include the concepts and forms of the digital hypertext interface, Internet, and web, and the impact of digital media on conceptions of the self, body, identity, and community. Students are billed a course fee. Enrollment restricted to first-year students, sophomores, and juniors. *The Staff*

20P. Introduction to Production Technique. F

Introduction to production process with emphasis on low-budget, independent film and video making. Explores conceptualization, planning, shooting, editing of documentary, personal essay, and feature narrative works. Emphasis on visualization and shooting style, and scriptwriting, but not hands-on editing. Open to students of varied backgrounds and goals. Students are billed a course fee. Enrollment restricted to film pre-majors, majors, and minors. *I. Lusztig*

42. Student-Directed Seminar. F,W,S

Seminars on selected topics taught by upper-division students under faculty supervision (see course 192). Students submit petition to sponsoring agency. *The Staff*

80A. The Film Experience. F

Students learn to understand how films reach the public through a collaborative, industrial, and artistic practice; how films "work" in a narrative sense; how they construct meanings for viewers; and how their formal techniques construct different possibilities for meaning and interpretation. (General Education Code(s): IM.) *I. Gustafson*

80S. Special Topics in Film and Digital Media. W,S

Study of selected aspects of film, television, and/or digital media. Includes weekly screenings and historical/theoretical readings. May be repeated for credit. (General Education Code(s): IM, T5-Humanities and Arts or Social Sciences, A.) *The Staff*

80T. Technothrillers. *

Examination of recent films classified as "thrillers" that approach technology (computers, robotics, biotech, the Internet, etc.) through suspense, anxiety, and paranoia. It will also address how technologically produced popular culture negotiates attitudes toward technological change. Students are billed a course fee. (Formerly course 80A.) (General Education Code(s): PE-T, T5-Humanities and Arts or Social Sciences, A.) *The Staff*

80X. Sex in the Cinema. *

Examines the historical representation of sexual difference, orientation, and politics in film and video using cultural studies, political and economic historiography, and feminist and queer theory and paying special attention to intersections of U.S. political movements with filmmaking and reception. (General Education Code(s): IM, T5-Humanities and Arts or Social Sciences, A.) *The Staff*

Upper-Division Courses**120. Introduction to Film Theory and Criticism. W**

An introduction to classical and contemporary film theory and those theoretical paradigms and methods that have illuminated the media: formalism, realism, structuralism, semiotics, psychoanalysis, Marxism, feminism, and issues of identity and difference. Students are billed a course fee. Prerequisite(s): course 20A, satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to film and digital media majors, pre-majors, and minors during priority enrollment; may be opened if space allows. (General Education Code(s): W.) *S. Murray*

130. Silent Cinema. W

Presents the development of silent film as a cultural form from the early period to the beginning of sound, addressing its historical evolution, technological development, aesthetic transformations, and varied cultural contexts. Students are billed a course fee. Usually offered in alternate academic years. Prerequisite(s): course 20A . (General Education Code(s): IM.) *S. Stamp*

132A. International Cinema to 1960. *

A survey of significant developments in narrative film outside Hollywood from the advent of sound technology to the late '50s. Differing inter/national contexts, theoretical movements, technological innovations, and major directors are studied. Students are billed a course fee. Usually offered alternate academic years. Prerequisite(s): course 20A . (General Education Code(s): CC, A.) *P. Limbrick*

132B. International Cinema, 1960 to Present. S

A survey of significant developments in narrative film outside Hollywood from 1960 to the present. Major film movements and directors from around the world are studied. Students are billed a course fee. Usually offered in alternate academic years. Prerequisite(s): course 20A . (General Education Code(s): CC, A.) *Y. Wang*

132C. Gender and Global Cinema. *

Offers students historical and critical tools to investigate global film through the framework of gender. Focused in particular on contemporary film (from 1960 to present), the class is structured both chronologically and via national industries. Students are billed a course fee. Prerequisite(s): course 20A. (General Education Code(s): CC, E.) *Y. Wang*

134A. American Film, 1930–1960. *

A survey of American narrative cinema from 1930 to 1960. Examines developments in film style, film technology, and the film industry in relation to American cultural history. Students are billed a course fee. Prerequisite(s): course 20A or 20B. Offered in alternate academic years. (General Education Code(s): IM.) *S. Stamp*

134B. American Film, 1960–Present. F

A survey of American narrative cinema from 1960 to the present. Examines developments in film style, film technology, and the film industry in relation to American cultural history. Students are billed a course fee. Prerequisite(s): course 20A or 20B. Offered in alternate academic years. (General Education Code(s): IM.) *The Staff*

136A. Experimental Film and Video. *

A survey of various experimental styles and practices in film and video, addressing the historical developments of these media formats. The course situates experimental film and video work within the larger contexts of artistic traditions as well as networks of production and reception. Students are billed for a course fee. Prerequisite(s): course 20A . (General Education Code(s): IM, A.) *The Staff*

136B. History of Television. *

Survey of the historical development of broadcast television from its origins to the present day phenomena of cable, satellite, and electronic networks. Examination of major genres, forms, and modes of production and consumption within cultural, social, and economic contexts. Offered every other year, alternating with course 136A. Students are billed for a course fee. Prerequisite(s): course 20B. (General Education Code(s): IM, A.) *The Staff*

136C. Visual Culture and Technology: History of New Media. W

Explores the relationship between technology and change and surveys the history of various technologies of visual culture from print to computer based imagery and the Internet. Students are billed a course fee. Prerequisite(s): course 20C. (General Education Code(s): PE-T.) *M. Morse*

136D. Documentary Film and Video. F

Explores the category of nonfiction through a historical and theoretical study of documentary in film and video. Addresses ethnographic film, Soviet and Griersonian documentary, cinema verit  and/or other selected documentary texts and the issues of representation they raise. Students are billed a course fee. (Formerly course 161.) Prerequisite(s): course 20A or 20B. Offered in alternate academic years. (General Education Code(s): IM.) *M. Morse*

142. Beyond Cybernetics: Advanced Topics in New Media Technologies. *

Analysis of the effects of communication and information technologies on culture and cultural production through the study of systems and networks. Assignments may include papers, Internet presentations, development/participation in virtual communities, interactive multimedia. Emphasis on advanced critical and experimental approaches. Students are billed a course fee. Prerequisite(s): course 20C. Enrollment restricted to film and digital media majors. Enrollment limited to 40. *L. Andrews, S. Daniel*

150. Screenwriting. W

Problems in writing for film and television are explored through the writing of original material and analysis of existing works. Various film genres, conventions, and styles, both fictional and nonfictional, are examined. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Admission by application process which may begin prior to start of quarter; application materials generally available final week of preceding quarter. See enrollment conditions section in quarterly *Schedule of Classes* for application dates and other application instructions that may apply. May be repeated for credit. (General Education Code(s): PR-C, W.) *The Staff*

151. Film Directing. *

Workshop that explores the director's involvement in film and video production. Topics will include the manipulation of time and space, continuity, script planning and blocking, and working with actors and crew. Students will participate in group and individual exercises in pre-production and scene direction. Prerequisite(s): courses 20A, 20P, and/or 170B are recommended. Admission by application process which may begin prior to the start of the quarter; application materials generally available final week of preceding quarter. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Enrollment limited to 25. (General Education Code(s): PR-E, A.) *The Staff*

152. Script Analysis. *

Students analyze diverse narrative techniques, dramatic structures, and genre forms to understand the craft of screenwriting and prepare for their own creative writing and filmmaking. Students read finished scripts and view films. Prerequisite(s): course 120. Enrollment restricted to film and digital media majors and film and digital media pre-majors. Enrollment limited to 25. *The Staff*

160. Film Genres. F,W

Concentrated study of films from one cinematic grouping with similar themes and narrative structures such as westerns, musicals, or science fiction, or a comparative study of different genres. History, theory, and criticism of the genre are covered. Students are billed a course fee. Prerequisite(s): course 132A, 132B, 132C, 134A or 134B. May be repeated for credit. (General Education Code(s): A.) *Y. Wang, The Staff*

161. Topics in Documentary.

Study of topics in documentary film and video. *The Staff*

161B. Documentary Animation. S

Examines the history, practice, and emergence of documentary animation in contemporary film, on the Web and as activist media with emphasis on the discourse central to social documentary, decolonial theory, and the politics of representation. Prerequisite(s): course 20A. Enrollment restricted to juniors and seniors. *J. Leanos*

162. Film Authors. S

Intensive critical study of the work of one film auteur (director, screenwriter, actor, cinematographer). Themes, style, and structure are explored using various critical modes of analysis. Students are billed a course fee. Prerequisite(s): course 120. May be repeated for credit. (General Education Code(s): IM.) *S. Stamp*

165A. Film, Video, and Gender. *

A study of texts, theories, and issues of gender in film and/or video. Changing focus on one or more topics, including production and authorship, representation, reception, theories of identification, sexual preference, and related issues. Students are billed a course fee. Usually offered in alternate academic years. Prerequisite(s): course 20A or 20B. (General Education Code(s): A.) *I. Gustafson*

165B. Race on Screen. *

Review of historical and critical tools to interpret representations of race on cinematic, television, and computer screens. Class will consider the place of race in theoretical and historical scholarship and examine the debates about race produced within and across film and digital media. Students are billed a course fee. Usually offered in alternate academic years. Prerequisite(s): course 20A or 20B. (General Education Code(s): ER, E.) *Y. Wang*

165C. Lesbian, Gay, and Queer Film and Video. *

An overview of homosexuality in American film. Explores a baseline Hollywood homophobia and the formal and historical attempts to change it. Recent independent queer film and video discussed. Topics include authorship, spectatorship, genre and genre reappropriation, historical gender constructs, the "art" film, mainstream vs. independent production, the relationship of film to popular music. Students are billed a course fee. Usually offered in alternate catalog years. *I. Gustafson*

165D. Asian Americans and Media. F

Examines media representations about, as well as by, Asian Americans. Using critical essays on film theory, racial studies, feminist criticism, and independent cinema, students develop the skills necessary to conduct critical analysis of Asian Americans in film and television. Students are billed a course fee. Enrollment restricted to juniors and seniors. Enrollment limited to 60. (General Education Code(s): ER, E.) *L. Kim*

168. National Cinema and Culture. S

Study of a specific cinematic or other media tradition of a region, nation, language, diasporic collectivity or other unifying cultural entity. Not a survey, this course selects one focus or offers a comparative of cross-cultural framework. Students are billed a course fee. Prerequisite(s): course

130, 132A, 132B, or 132C. May be repeated for credit. (General Education Code(s): CC.) *The Staff*

170A. Fundamentals of Digital Media Production. F,S

Introduction to the conceptual and technical fundamentals of making digital media. Covers principles of digital image manipulation, basic web authoring, and interface design through projects that introduce production techniques and methods. Students are billed for a materials fee. Prerequisite(s): course 20C Enrollment limited to 20. (General Education Code(s): PR-C, A.) *The Staff*

170B. Fundamentals of Film and Video Production. F,W,S

An introduction to the art and craft of making films and videos. Covers principles of cinematography, videography, editing, production planning, and lighting involving both production techniques and methods. Students are billed a materials fee. Prerequisite(s): course 20A or 20B and one other film/video and digital media critical studies or history course required. Completion of additional upper-division film and digital media critical studies or history courses improves students' ability to be admitted to this course. Admission by application and entrance essay. The online application process begins several weeks prior to the start of the quarter. See enrollment conditions section in quarterly Schedule of Classes for application dates and other application instructions that may apply. Enrollment limited to 24. (General Education Code(s): PR-C, A.) *The Staff, G. Vazquez, E. Hollander*

171. Special Topics Workshops.

Study of selected aspects of film, video, and/or digital media production. *The Staff*

171A. Sound. W

The cinematic equation equals images plus sound. What are sound-specific properties? What is the relationship between sound and image? Examines these and other questions through the creation of audio and audiovisual pieces. Students are billed a materials fee. Prerequisite(s): priority given to students who have been accepted into the production concentration. Admission is by an online application process which begins several weeks prior to the start of the quarter. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170A or 170B may apply by submitting an application and sample of production work at first class meeting; these applications will be considered on a space-available basis. Enrollment limited to 20. *L. Andrews*

171C. Special Topics Workshop: Found Footage. S

Students will consider the practice of "recycling" images perhaps not intended by the original "owner" or "creator." In addition to assigned readings and technical workshops, students produce three video projects and give a presentation on a specific issue or artist/group. Prerequisite(s): course 170A or 170B; priority given to students who have been accepted into the production concentration. Admission is by an online application process which begins several weeks prior to the start of the quarter. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170A or 170B may apply by submitting an application and sample of production work at first class meeting; these applications will be considered on a space-available basis. Enrollment limited to 20. *The Staff*

171D. Social Information Spaces. *

Investigates how information spaces can be designed to be inhabited, socially navigable spaces. Emphasizes the social navigation of information spaces, a set of techniques and ideas from computer-supported cooperative works, human-computer interaction, and architecture. Prerequisite(s): course 170A. Enrollment limited to 20. *The Staff*

171F. Special Topics Workshop: Autobiographical Film. F

Students explore autobiography as a filmmaking genre and practice, using experimental, fictionalized, documentary, and hybrid forms. Readings and screenings provide a theoretical context for production work. Topics include: strategies of (self) representation, reenactment, performance, portraiture, memoir, confession, and diaristic film. Admission is by an online application process which begins several weeks prior to the start of the quarter. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170A or 170B may apply by submitting an application and sample of production work at first class meeting; these applications will be considered on a space-available basis. Students are billed a materials fee. Enrollment limited to 20. *The Staff*

171G. Documentary Animation Workshop. F

A project-based production seminar in documentary animation: students learn diverse animation styles and techniques, and apply them to a documentary-animation class project. Courses 161B and 170A are strongly recommended as preparation (or equivalent background). Enrollment by interview only: an online application process is available in the preceding quarter. Enrollment limited to 20. *J. Leanos*

172. Film and Video Studio. F,W,S

Intermediate workshop in film and video production concentrating on narrative production, development of critical standards, and technical methods. Topics include cinematography, sound, and non-linear digital editing techniques. Each student is responsible for the completion of short narratives from assignments. Students must bear the cost of materials and are billed a materials fee. Prerequisite(s): priority given to students who have been accepted into the production

concentration. Admission is by an online application process which begins several weeks prior to the start of the quarter. See enrollment conditions section in quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170A or 170B may apply by submitting an application and sample of production work at first class meeting; these applications will be considered on a space-available basis. Enrollment limited to 20. *The Staff, L. Andrews, E. Hollander*

173. Narrative Workshop: Reconfiguring Narrative within the Digital Realm. S

Analysis of cinematic codes and narrative structure through digital video, Internet and interactive multimedia projects. Required readings address contemporary research in narratology and hyper-media, exploring the potential of digital technology to reconfigure the role of both author and audience. Students billed a course fee. Prerequisite(s): course 170A. Enrollment limited to 20. *S. Daniel*

175. Documentary Video Workshop. W

Workshop in documentary video production, development of critical standards, ethical issues, and technical methods. Each student is responsible for the completion of short documentaries from assignments. Students must bear the cost of materials and are billed a materials fee. Prerequisite(s): priority given to students who have been accepted into the production concentration. Admission is by an online application process which begins several weeks prior to the start of the quarter. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170A or 170B may apply by submitting an application and sample of production work at first class meeting; applications will be considered on a space-available basis. Enrollment limited to 20. *I. Lusztig*

176. Experimental Video Workshop. F

Introductory workshop in video production (non-narrative, experimental). Topics include a survey of non-narrative experimental video from a historical/theoretical perspective and an introduction to videography, fundamentals of video editing, and sound. Students complete several short projects and are billed a materials fee. Students must bear the cost of all materials. Prerequisite(s): course 170B; priority given to students who have been accepted into the production concentration. Admission is by an online application process which begins several weeks prior to the start of the quarter. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170B may apply by submitting an application and sample of production work at first class meeting; these applications will be considered on a space-available basis. Enrollment limited to 20. (General Education Code(s): A.) *G. Vazquez*

177. Digital Media Workshop: Computer as Medium. *

Introduction to the computer as a medium as well as a tool. Students explore art practice within digital imaging and information and communications environments through projects, readings, and "screenings." Assignments may include designing virtual communities and /or interactive, multimedia web works. Students are billed a course fee. Prerequisite(s): course 170A. Enrollment limited to 20. *S. Daniel*

178A. Personal Computers in Film and Video. *

Introduction to the specific applications of computers for film and video. By using computer-generated, enhanced and imported graphics, animation, text, sound, and moving video, students create still and time-based works in a computer environment. Prerequisite(s): course 170A or 170B; priority given to students who have been accepted into the production concentration. Admission is by an online application process which begins several weeks prior to the start of the quarter. See enrollment conditions section in quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170B may apply by submitting an application and sample of production work at first class meeting; these applications will be considered on a space-available basis. Students are billed a materials fee. Enrollment limited to 20. *L. Andrews*

178B. Advanced Personal Computers in Film and Video. *

Study of advanced computer tools in digital media, including exploration, creation, and manipulation of sound with the same level of complexity as required in composing the moving image. Students produce a final project that demonstrates skills learned. Prerequisite(s): course 170A; priority given to students who have been accepted into the production concentration. Admission is by an online application process which begins several weeks prior to the start of the quarter. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions that may apply. Students who are not in the production concentration and who have completed course 170A may apply by submitting an application and sample of production work at first class meeting; these applications will be considered on a space-available basis. Enrollment limited to 20. *The Staff*

180. Writing About Film, Television, and Digital Media. *

Improves students' ability to write and edit, and invites students to explore different kinds of writing related to film, television, and digital media including historical, theoretical, cultural criticism, popular reviews, grant proposals, online forums, and publishing. Prerequisite(s): course 20A, 20B, or 20C. Enrollment restricted to sophomore and junior film and digital media majors. Enrollment limited to 20. *L. Kim*

185. Special Topics in Film and Video.

Study of selected aspects of film and/or video history, theory, or criticism. Students are billed a

course fee. *The Staff*

185D. Sound and Image in Theory and Criticism. *

Explores theories and critiques of sound in culture and analyzes sound in relation to media images in film, video, digital media, and music/image practices such as Vjaying. Voice, noise, and music are addressed (but not scores). Students are billed for a course fee. Prerequisite(s): courses 20A and 120. Enrollment restricted to film and digital media majors and minors during priority enrollment; may be opened if space allows. (General Education Code(s): A.) *The Staff*

185E. Chicana/o Cinema, Video. *

Examines emergence of Chicana/o cinema and video from a place of social displacement, resistance, and affirmation. Looks at Chicana/o representation and spectatorship as it pertains to ethnicity, class, gender, and the beginning of a new Chicana/o film aesthetic. Students are billed for a course fee. Prerequisite(s): course 20A. Enrollment limited to 60. (General Education Code(s): CC, E.) *The Staff*

185R. The Film Remake. *

History and theory of the remake through case studies across cultural, gender, and genre boundaries. Examines changing cultural, social, stylistic, and technical values and explores notions of originality, repetition, homage, allusion, quotation, and intertextuality from Feuilleard and Hitchcock to Raimi and Johnny To. Students are billed a materials fee. Prerequisite(s): courses 20A and 120. Enrollment restricted to film and digital media majors and minors during priority enrollment; may be opened if space allows. *The Staff*

185S. Advanced Topics in Film Studies. S

Study of a selected aspect of film history, theory, or criticism. Includes weekly screenings and historical/theoretical readings. Usually offered in alternate academic years with rotating topics. Students are billed a materials fee. Prerequisite(s): courses 20A and 120. Enrollment restricted to film and digital media majors and minors. May be repeated for credit. *The Staff*

185X. EyeCandy Seminar. W

Seminar and workshop on writing, producing, and publishing a journal. Students engage in assignments and exercises directly and indirectly related to the production of a web launch as well as a print copy of *EyeCandy*. Permission of instructor required based upon student's participation in *EyeCandy* in winter and spring quarters. Preference given to film and digital media majors and minors; others may apply based on qualifications and as space allows. Students are billed a materials fee. May be repeated for credit. (General Education Code(s): PR-E.) *B. Rich*

187. Advanced Topics in Television Studies. *

Study of a selected aspect of television history, television criticism, or national television. Includes weekly screenings and historical/theoretical readings. Usually offered in alternate academic years, with rotating topics. Students are billed a course fee. Prerequisite(s): course 20B. Enrollment restricted to junior and senior film and digital media majors and minors. May be repeated for credit. *The Staff*

189. Advanced Topics in Digital and Electronic Media Studies. S

Study of a selected aspect of digital and/or electronic media history and criticism. Topics can include virtual environments, electronic networks, video installations, computer games, and hyper-media. Usually offered in alternate academic years. Students are billed a course fee. Prerequisite(s): course 20C. Enrollment restricted to junior and senior film and digital media majors and minors during priority enrollment; may be opened if space allows. May be repeated for credit. *The Staff*

190. Advanced Critical Studies Seminar. *

Intensive research and writing on a changing topic chosen to demonstrate critical mastery in a specific area of film and/or digital media studies. Prerequisite(s): course 120. Enrollment restricted to senior film and digital media majors accepted into the critical studies concentration. Enrollment limited to 15. *The Staff*

191. Critical Studies Thesis Preparation Seminar. *

Intensive seminar prepares students for writing a critical studies thesis. Designed to be taken prior to enrolling in course 195, seminar guides students through the process of choosing a thesis topic, preparing a bibliography, and drafting a detailed outline. Prerequisite(s): course 190. Enrollment restricted to senior film and digital media majors accepted into the critical studies concentration. Enrollment limited to 15. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching a lower-division course under faculty supervision (see course 42). Proposal supported by a faculty sponsor and department. *The Staff*

194A. Film Theory Seminar. F,S

Advanced senior seminar examining classical and contemporary film theory and those theoretical paradigms and methods that have illuminated the medium: formalism, realism, structuralism, semiology, psychoanalysis, Marxism, feminism, and phenomenology. Primary texts are read. Students are billed a course fee. Prerequisite(s): course 120. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. *J. Horne*

194B. Electronic Media Theory Seminar. S

Study of the major theoretical approaches to electronic media and their critical application to texts

from television, independent video art and documentary, and electronic networks. Readings include a range of theoretical approaches selected from semiotic, ideological, feminist, cultural studies, reception theory, postmodernist, and other critical traditions. Students are billed a course fee. Prerequisite(s): courses 20B and 120. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. *L. Kim*

194C. New Media Theory Seminar. *

Study of theories of emerging genres of electronic culture, with emphasis on the discourse about computer-assisted and computer-generated forms of art and mass culture such as digital imagery, virtual environments, telematics, hyper- and multimedia, and electronic networks. Students are billed a course fee. Prerequisite(s): courses 20C and 120. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. *S. Daniel*

194D. Film History Seminar. *

In-depth study of film history investigating developments in cinematic style, technological innovation, and industrial practice against the broad canvas of cultural history. Students will acquire the basic tools necessary to conduct informed film historical research. Students are billed a course fee. Prerequisite(s): course 120 and either 130 or 134A or 134B. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. *S. Stamp*

194E. International Cinemas. *

In-depth study of the history and theory of international cinemas with changing topics such as globalism and resistance, postcolonial theory, international productions and querying race, the "national," and cinema. Students are billed a course fee. Prerequisite(s): course 120 and either 132A, 132B, or 132C. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. *P. Limbrick*

194F. Film and the Other Arts. *

Examines the use of artistic media within films and of films that thematically are about other media. What do other art forms allow for—in terms of the story, the film's meaning, the gaze, and the spectator? Students are billed a course fee. (Formerly *Film and the Other Arts: Music and Dance*.) Prerequisite(s): course 120. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. *L. Kim*

194G. New(s) Media. *

Addresses the role of new media technologies in the production, distribution, and reception of the news, especially international news. Examines software and network technologies as amplifying, filtering, extending, and countering the forces of media. Students are billed a course fee. Prerequisite(s): courses 20C and 120. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. *W. Sack*

194S. Special Topics Seminar. W,S

Intensive research and writing on a changing topic chosen to demonstrate critical mastery in a specific area of film and digital media studies, for example, film adaptations and their literary sources, documentary/reality shows, or networked new media texts. Students are billed a materials fee. Prerequisite(s): course 120. Enrollment restricted to senior film and digital media majors. Enrollment limited to 20. May be repeated for credit. *J. Kahana, Y. Wang*

195. Senior Thesis/Project. F,W,S

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis/project/production. Proposals should be submitted to adviser one quarter in advance. Petition required, approved by instructor and department; thesis petitions available in the department office. *The Staff*

196A. Senior Project in Narrative Production. W,S

Students accomplish a range of production work focused on narrative production including script development, casting, and rehearsing to shooting and post-production work. Students are billed a materials fee. Admission by application during the preceding quarter. Students may apply a maximum of two times. See the enrollment conditions section in the quarterly *Schedule of Classes* for application dates and other application instructions. (Formerly *Senior Project in Film and Video Production*.) Enrollment limited to 20. *G. Vazquez, E. Hollander*

196B. Senior Project in Screenwriting. S

Students write a full-length (75–100 page) screenplay in this seminar while studying structural concepts and character development in selected films. Scheduling, outlining, pitching ideas, and critique are all part of the workshop format of the class. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 150 or another screenwriting course. Interview only: petition required; special application should be submitted to adviser one quarter in advance; see department office for more information. Enrollment restricted to senior film and digital media majors. Enrollment limited to 16. (General Education Code(s): W.) *The Staff*

196C. Senior Documentary Workshop. S

Students are responsible for producing short documentaries (up to 12 minutes). In class, students discuss each other's work as well as view and discuss other documentary films. Admission by application during the preceding quarter. Enrollment restricted to senior film and digital media majors. Students are billed a materials fee. Enrollment limited to 20. *I. Lusztig*

197. Senior Digital Media Workshop. *

Independent projects using the computer as a medium as well as a tool. Students will design and

implement projects in digital imaging, information, and communications environments. Students' projects may include designing virtual communities, building collaborative networks, and/or interactive, multimedia web works. Students are billed a course fee. Admission by application during previous quarter. See department office for more information. Enrollment limited to 20. *W. Sack*

198. Independent Field Study. F,W,S

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students engaging in field study must complete application procedures for such study by the fifth week of the previous quarter. Field study may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available in the department office. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students engaging in field study must complete application procedures for such study by the fifth week of the previous quarter. Field study may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available in the department office. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available in the department office. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available in the department office. May be repeated for credit. *The Staff*

Graduate Courses

200A. Introduction to Graduate Study. F

Introduces graduate study in the critical practice of film and digital media. Conducted as a pro-seminar, with faculty presentations and discussion. Enrollment restricted to graduate students. Enrollment limited to 15. *S. Stamp*

200B. Theory and Praxis of Digital Media 1. W

Investigates methods for rhetorical production of written and visual/aural texts. Emphasizes questions about delineation between theory and practice, and provides groundwork in theories relevant to key areas in film, television, and digital media studies. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Kim*

200C. Theory and Praxis of Film and Digital Media 2. S

Investigates methods for rhetorical production of written and visual/aural texts. Emphasizes interwoven practices of the artist/researcher/teacher, formal and expressive possibilities of "hybridized" research, and cultural issues raised by integrated methods of inquiry. Students are billed for a materials fee. Enrollment restricted to graduate students. Enrollment limited to 15. *I. Gustafson*

222. Critical Methodologies in Film and Television. *

Introduces graduate students to critical methodologies in media studies and offers sustained examination of theoretical approaches to media studies. Methodologies may include (but are not limited to) contemporary theory (semiotic, psychoanalytic, ideological), cultural studies, intertextuality, feminist film, and television theory. Enrollment restricted to graduate students. Enrollment limited to 14. *The Staff*

223. The Film/Video Essay. W

Focuses on "essayistic" approaches to scholarship and production, emphasizing relationships between theory and praxis that this mode of production requires. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Kahana*

224. Mediating Difference. S

Considers theoretical and strategic, situated "difference" in the era of (semi-)colonialism, post-colonialism, and globalism, examining theoretical writing alongside media works on the topic. Enrollment restricted to graduate students. Enrollment limited to 15. *Y. Wang*

225. Software Studies. *

Today, our lives are woven into vast software systems that facilitate our family communications, personal relations, jobs, and cultural, economic, political, and social institutions. Course examines these conditions of life and thought using insights from the arts and humanities. Enrollment restricted to graduate students. *W. Sack*

226. Queer Theory and Global Film and Media. *

Examines queer subjectivities, practices, and theories in relation to globalization, transnationalism, and postcoloniality, focusing on film/media produced outside the United States. The course addresses representation and also uses queer theoretical work to engage wider contexts of film/media production, distribution, and exhibition. Enrollment restricted to graduate students. *P.*

227. Representing Memory. F

Studio-based hybrid practice/theory to explore problems of historical representation in film, video, and new media and engage with the production of new cinematic/visual forms that take on issues of personal, collective, and national memories. Enrollment restricted to graduate students. Enrollment limited to 15. *I. Lusztiig*

283. New Media Art and Digital Culture. *

A study of new media art in the context of digital culture. Electronic, digital and online technology art are set in critical relation to discourse on history, aesthetics, hypermedia, the interface, hacks, embodiment, robotics, artificial life and other topics. Students are billed a course fee. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Morse*

284. Film, Culture, and Modernity. *

Traces the rise of motion picture culture from the late 19th century through the end of the 1920s, looking at film's emerging visual and narrative grammar, its changing cultural status, and its engagement with shifting registers of class, ethnicity, gender, and sexuality. Enrollment restricted to graduate students. Enrollment limited to 15. *S. Stamp*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to course-sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Either study related to a course being taken or a totally independent study. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. May be repeated for credit. *The Staff*

297F. Independent Study (2 credits). F,W,S

Students submit petition to course-sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Independent Study. F,W,S

Independent study or research for graduate students. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Students interested in acquiring proficiency in French can enroll in language courses from beginning to advanced levels. In addition, students may select from among the following programs: a major in language studies, a major in literature with an emphasis in French literature, or a major in global economics.

Lower-division courses 1-6 are taught entirely in French and prepare students for advanced study either on campus or abroad. They are designed to develop proficiency in aural comprehension, speaking, reading, and writing skills, and to introduce student to French and Francophone cultures.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Language Program](#).

Study Abroad

The Office of International Education (OIE) offers both semester and one-year programs in many regions of France, including Bordeaux, Lyon, Grenoble, Toulouse, and Paris. With the approval of an adviser, some French courses taken abroad may be applied to major requirements. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>.

Language Program

218 Cowell College

(831) 459-2054

<http://language.ucsc.edu>***Program Description***

Students interested in acquiring proficiency in French can enroll in language courses from beginning to advanced levels. In addition, students may select from among the following programs: a major in language studies, a major in literature with an emphasis in French literature, or a major in global economics.

Lower-division courses 1-6 are taught entirely in French and prepare students for advanced study either on campus or abroad. They are designed to develop proficiency in aural comprehension, speaking, reading, and writing skills, and to introduce student to French and Francophone cultures.

Campus Language Laboratories and Placement Exams

Lower-Division Courses

1. Instruction in the French Language.

Introduction to French language and culture with practice in all four language skills: listening, speaking, reading, and writing. Intended for students with no previous study of French. *The Staff*

2. Instruction in the French Language.

Further development of cultural competence and basic French language skills, both written and spoken. Students learn past tenses in this course. Prerequisite(s): course 1 or placement by interview. *The Staff*

3. Instruction in the French Language.

Final quarter of first-year sequence. Students complete study of French language basics, including the future tense and the conditional and the subjunctive moods, while continuing to learn about French and Francophone cultures. Prerequisite(s): course 2 or placement by interview. *The Staff*

4. Intermediate French.

First course in intermediate sequence. Students review and expand upon their previous study of the language through short literary readings, vocabulary building, grammar study, composition, and discussions. Prerequisite(s): course 3 or placement by interview. (General Education Code(s): CC, IH.) *The Staff*

5. Intermediate French.

Further development of intermediate-level oral and written skills through study of vocabulary and structures. Students also read and discuss a French or Francophone play. Prerequisite(s): course 4 or placement by interview. (General Education Code(s): CC, IH.) *The Staff*

6. Intermediate French.

Final course of intermediate sequence includes grammar study, vocabulary building, extensive writing, and discussion. Reading of a French or Francophone novel is an integral part of course. Prerequisite(s): course 5 or placement by interview. (General Education Code(s): CC, IH.) *The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

111. Stylistics. W

Intensive work in French composition with the aim of attaining grammatical correctness and excellence of expression while developing literary appreciation. May be repeated for credit with consent of instructor. Prerequisite(s): course 6. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. *The Staff*

125A. French Civilization: 19th Century. *

Survey of the important historical events, social changes, and artistic movements contributing to the development of French culture during the 19th century. Prerequisite(s): course 6. *The Staff*

125B. French Civilization: 20th Century. F

A survey of the important historical events, social changes, and artistic movements contributing to the development of French culture during the 20th century. Prerequisite(s): course 6. *The Staff*

136. La Francophonie. S

In-depth multidisciplinary study of one or more French-speaking regions of the world. Includes history, language, society, literature, and the arts. All course work will be done in French. Prerequisite(s): course 6 May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Program Description

Students interested in acquiring proficiency in German can enroll in language courses from beginning to advanced levels. In addition, students may select from among the following programs: a major or minor in language studies, a major in German studies, a major in literature with an emphasis in German literature, or a major in global economics.

The sequence of lower-division courses 1-6 is aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing. Another sequence of lower-division courses, equivalent to levels 1, 2, and 3, consist of 1A and 1B, which offer accelerated German language instruction. Courses 1A and 1B are taught sequentially, winter and spring quarters. Instruction takes place almost exclusively in German.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Language Program](#).

Study Abroad

The Office of International (OIE) offers study abroad opportunities in Berlin, Potsdam, and Göttingen. Students may spend fall or spring semesters or a full academic year in Berlin (Berlin European Studies (BEST) or regular course of study), a spring semester in Potsdam (beginning German language program or intermediate German language and culture program), or a semester or year in Göttingen (graduate study). Language requirements for admission to these programs range from little or no German required (BEST program in Berlin and beginning German program in Potsdam) to one year of college-level German required (intermediate German language and culture program in Potsdam) to two years of college-level German required (regular course of study in Berlin). The Potsdam program courses may also be used to fulfill the language requirement for the year-long program in Berlin. Selected students may continue directly from the spring semester in Potsdam to the one-year program in Berlin. Academic and professional internship opportunities are also available to all students on study abroad in Germany.

Students may apply to any of these programs at any point in their student career. For the year-long programs, students generally apply in their sophomore year for a junior year abroad. As an exception, some students apply in their junior year for a senior year abroad; such students must sometimes spend an additional quarter at UCSC in order to satisfy all requirements for their major. Courses taken abroad can, with approval of an adviser, be applied to major requirements. For a list of current programs and requirements, visit the OIE web site, <http://oie.ucsc.edu>. For information on credit applied to a major, contact the appropriate department.

Lower-Division Courses

1. Instruction in the German Language. F

Teaches beginning-level competence in speaking, reading, writing, and listening comprehension. Elementary sequence (1-2-3) starts in fall quarter only. (An accelerated sequence, course 1A-1B, begins winter quarter.) Not all levels are available each quarter. Check the quarterly *Schedule of Classes* for exact quarter(s) of offering. *The Staff*

1A. Intensive Elementary German. W

Accelerated instruction in elementary German language. Taken in conjunction with German 1B, the two courses are equivalent to levels 1-2-3. Accelerated pace allows a more rapid acquisition of reading, writing, listening, and speaking skills. *The Staff*

1B. Intensive Elementary German. S

Sequential to course 1A, completes the equivalent instruction offered through German 1-2-3. Prerequisite(s): course 1A or 2, or placement by interview. For students completing course 2, course 3 is preferable. *The Staff*

2. Instruction in the German Language. W

Teaches beginning-level competence in speaking, reading, writing, and listening comprehension. Not all levels are available each quarter. Check the quarterly *Schedule of Classes* for exact quarter(s) of offering. Prerequisite(s): course 1 or 1A; or placement by examination. Students interested in a course who have not taken the prerequisites should meet with the instructor prior to the first class meeting. *The Staff*

3. Instruction in the German Language. S

Teaches beginning-level competence in speaking, reading, writing, and listening comprehension. Not all levels are available each quarter. Check the quarterly *Schedule of Classes* for exact quarter(s) of offering. Prerequisite(s): course 2; or placement by examination. Students interested in a course who have not taken the prerequisites should meet with the instructor prior to the first class meeting. *The Staff*

4. Intermediate Studies in German Language. F

Intermediate composition and conversation based on the reading of selected prose and related cultural material. Speaking, reading, writing, and listening comprehension skills are developed by extensive use of media materials. Conducted entirely in German. Not all levels are available each quarter. Check the quarterly *Schedule of Classes* for the exact quarter(s) of offering. Prerequisite(s): course 1B or 3; or placement by examination. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. (General Education Code(s): CC, IH.) *The Staff*

5. Intermediate Studies in German Language. W

Intermediate composition and conversation based on the reading of selected prose and related cultural material. Speaking, reading, writing, and listening comprehension skills are developed by extensive use of media materials. Conducted entirely in German. Not all levels are available each quarter. Check the quarterly *Schedule of Classes* for the exact quarter(s) of offering. Prerequisite(s): course 4; or placement by examination. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. (General Education Code(s): CC, IH.) *The Staff*

<http://germanstudies.ucsc.edu/>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#)

Program Description

German studies is a transnational and transdisciplinary major that deals with the various German-speaking regions of central Europe. Whether one thinks of philosophy, music, art, education, religion, or political and social history, German culture has exercised a profound and often decisive influence on Europe. Some of the most important ideological debates in Western culture have arisen in the German-speaking area, and changes in German culture and society have sometimes had devastating effects on world history. Events and political developments of recent years-such as the unification of East and West Germany and the emergence of the German-speaking region of Europe as a major player in world affairs have had important impacts.

A German studies major provides students with an intellectually diverse program covering history, history of art and visual culture, literature, and philosophy-in which students and faculty come together in exciting and demanding pursuits.

The German studies major is administered by the History Department.

Major Requirements

German language level 5 or the equivalent is a prerequisite for the German studies major and all upper-division courses taught in German. Students are encouraged to take German 1 through German 5 as early as possible in their academic program. All students are required to take a total of 11 courses, including the comprehensive requirement. No more than two of the 11 required courses may be lower-division. A minimum of 40 upper-division units must be completed within the German studies course requirements. In consultation with a faculty adviser, students will plan a program of study to fulfill the following distribution of courses:

I. Five courses in German literature and history:

- two core courses in German literature
- one core course in German history
- one core course in either German literature or German history depending upon the student's chosen area of emphasis
- one comprehensive exit requirement (see below).

II. Three additional core courses, including EAP courses

III. Three additional courses from the pre-approved German Studies course list (which may include additional core courses).

Distribution requirements. A minimum of five of the 11 required courses must be taught in German or principally through German-language texts. No more than three courses may come from the Germany in a European or World Context list.

Comprehensive requirement. All students must complete an approved senior seminar in either German literature or German history. The senior seminar is one of the 11 courses required for the major. Consult the annual German studies course list for available seminar courses, published online at <http://germanstudies.ucsc.edu>.

UC Education Abroad Program. It is strongly recommended that students spend time in residence in Germany through the University of California Education Abroad Program (EAP) or one of its affiliate programs to further enrich their program of study and ensure a command of the language. Students are allowed to transfer up to five courses taken at German universities toward the requirements for the major. However, the four required core courses in German literature and history and the comprehensive requirement must be taken at UCSC.

Disciplinary Communication (DC) Requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in German Studies is fulfilled by completing HIS 196G, *Modern Germany and Europe*, HIS 196P, *Hitler and Stalin*. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Honors in the German Studies major. All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The German studies faculty advisers determine honors based upon courses applied towards the German studies major. Performance in courses taken elsewhere and being transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most courses for honors, and excellence in all courses for highest honors. Summer graduates are reviewed for honors in fall quarter.

Program Description

The History Department offers instruction in elementary ancient Greek. It consists of a two-course sequence, Greek 1 and Greek 2, that begins in the fall quarter only. Students interested in Greek literature should see the course listings under Literature. Those interested in classical studies should see the program description for classical studies under history.

Campus Language Laboratories and Placement Exams

No placement exam is required for entry into Greek 1. Contact the History Department for more information about these topics.

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Students interested in acquiring proficiency in modern Hebrew can enroll in language courses from beginning to intermediate levels. In addition, credits from these courses may be counted toward the major or minor in Jewish studies. Lower-division courses are aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing. Attention is also given to developing an understanding of the culture, history, and religion that have been expressed through the Hebrew language from antiquity until today. Some instruction takes place in Hebrew from the beginning level. Students interested in learning the basic lexicon and grammatical structures of biblical Hebrew can enroll in Hebrew 80. Hebrew 1, Hebrew 2, and Hebrew 3 (or equivalency) are required for the major in Jewish studies, and other Hebrew courses are encouraged. In addition, credits from modern or biblical Hebrew courses may be counted toward the minor in Jewish studies.

Lower-Division Courses

1. Instruction in the Hebrew Language. F

Speaking, listening comprehension, reading, and writing fundamentals. The use of Modern Hebrew is encouraged through classroom practice supplemented by language laboratory work. Elementary sequence (1-2-3) begins in fall quarter only. *The Staff*

2. Instruction in the Hebrew Language. W

Speaking, listening comprehension, reading, and writing fundamentals. The use of Modern Hebrew is encouraged through classroom practice supplemented by language laboratory work. Prerequisite(s): course 1. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. *The Staff*

3. Instruction in the Hebrew Language. S

Speaking, listening comprehension, reading, and writing fundamentals. The use of Modern Hebrew is encouraged through classroom practice supplemented by language laboratory work. Prerequisite(s): course 2. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. *The Staff*

4. Intermediate Hebrew. F

Development of the students' familiarity with the spoken and written language through grammar review, discussions, and vocabulary building. Varied readings on literary and cultural topics related to modern Israel. Prerequisite(s): course 3. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. (General Education Code(s): IH.) *The Staff*

5. Intermediate Hebrew. W

Development of the students' familiarity with the spoken and written language through grammar review, discussions, and vocabulary building. Varied readings on literary and cultural topics related to modern Israel. Prerequisite(s): course 4. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. (General Education Code(s): IH.) *The Staff*

80. Introduction to Biblical Hebrew. W

Introduces students to the basic lexicon and grammatical structures of biblical Hebrew, with an emphasis on the development of a set of useful translation strategies. Throughout the course, students will be applying their emergent skills to translating a variety of biblical texts. (General Education Code(s): T4-Humanities and Arts.) *The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

106. Israel's Struggle for Identity as Seen Through Israeli Cinema. *

Examines, through the medium of film, Israel's struggle for identity since its founding as a modern state. Taught in English with a weekly discussion section in Hebrew. Readings in English and Hebrew; writing, film analysis, cultural commentary, and other assignments in Hebrew. Students may not receive credit for this course and Languages 80F. Prerequisite(s): course 5 (or equivalent). May be repeated for credit. (General Education Code(s): ER, E.) *T. Rossman-Benjamin*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. Enrollment limited to 10. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2011-12

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

History is the attempt to understand the meanings of the human life experience, not generally and abstractly, but in terms of specific individuals, events, and circumstances. Consequently, of all academic pursuits, it is the one best equipped to help us locate phenomena in their specific contexts, whether we are concerned with political events, social changes, the production of art, the development of technologies, scientific discoveries, or life stories. In this sense, the study of history can also be an invaluable complement to any other major.

The history program at UCSC is designed to bring about an understanding of the ideas, experiences, and events that have shaped this country and the world at large. The program's main emphases are in social and cultural history, with additional strengths in intellectual and political history.

A degree in history opens up a wide range of career possibilities. Some careers fall within the historical profession, including teaching at the university, college, and high school levels and working in various areas of public and applied history, such as historic preservation, archives, libraries, and museums. For careers in fields as diverse as law, business, government, foreign service, publishing, journalism, and communications, a degree in history lays the foundation in research, analytic, and writing skills upon which later professional training can be built.

Requirements for the Major

A minimum of 12 courses is required for the major. No more than four of the minimum 12 courses may be lower division. A minimum of 40 upper-division units must be completed within the history major course requirements. The history major does not require an examination for entrance and does not limit the number of students accepted into the program. It is strongly advised that students complete at least one introductory history course before declaring the major.

At UCSC, the history curriculum offers three broad, geographically defined regions of concentration:

- the Americas and Africa
- Asia and the Islamic World
- Europe

Course requirements. Each history major selects one of the three regions of concentration listed above. History majors are required to take at least one lower-division survey course within their chosen region of concentration.

- Americas/Africa: History 10A, 10B, 11A, 11B, or 30
- Asia/Islamic World: History 40A, 40B, 41, or 43
- Europe: History 65A, 65B, 70A, 70B, or 70C

Transfer coursework may or may not apply toward the survey course requirement; consult the History Department.

In consultation with the history undergraduate program coordinator, the student plans a program of study that will also fulfill the following distribution of courses:

- five courses in the chosen region of concentration, one of which must be the lower-division survey course; three of the remaining courses must be upper-division;
- two courses from each of the remaining two regions of concentration;
- two upper-division history electives based in any of the regions of concentration;
- one comprehensive exit requirement (see below) in the student's chosen region of concentration.

Students often choose to satisfy the history major course requirements listed above according to some general theme of special interest to them. Faculty and staff advisers will assist the students who choose this option with their course selection.

In addition to all coursework, history majors must complete a senior check and exit survey in the first quarter of their senior year. For details, see the department web site, <http://history.ucsc.edu>.

Distribution requirements. Among the 12 courses required for the major, at least three must meet chronological distribution requirements. One must be set before 600 A.D., and two must be set in periods prior to the year 1800 A.D.

Interdisciplinary coursework. The History Department encourages its majors to take upper-division courses in disciplines related to history, including sociology, literature, community studies, American studies, politics, Latin American and Latino studies, and others. Students who wish to substitute one or two such appropriate upper-division courses for history electives must obtain approval from the History Department. These courses are subject to the limitations described below under the "Transfer credits and substitutions" section.

Comprehensive requirement. A comprehensive exit requirement in the student's chosen region of concentration can be fulfilled by completing an exit seminar (one quarter: 190-series, 194-series, or 196-series) or a thesis (two quarters: courses 195A and 195B). Please consult the department web site for a more detailed description of these courses.

Disciplinary Communication (DC) requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. History students can fulfill the upper-division Disciplinary Communication (DC) Requirement by completing a comprehensive exit requirement in their chosen region of concentration. Students may complete an exit seminar (one quarter: 190 series, 194 series, or 196 series) or a thesis (two quarters: courses 195A and 195B). Please consult the department web site for a more detailed description of these courses and refer to updated DC information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Honors in the history major. Honors are awarded to the top 10-15 percent of graduating students per quarter; highest honors may be granted to approximately the top 5 percent. Honors are determined by the Undergraduate Education Committee in consultation with the History Department faculty. The department considers each student's GPA in the history major, supplemented when appropriate by an assessment of work in the senior capstone course or honors thesis preparation. The history major GPA is calculated based upon all history courses attempted at UCSC; grades from courses taken outside of the department will not be calculated into a student's history major GPA, even in cases when the student is allowed to use said courses toward their history major degree requirements. Summer, fall, and winter graduates will be reviewed at the end of each of their respective quarters. Spring graduates will be reviewed using their earned history major GPAs as of the spring announcement of candidacy deadline.

Language recommendation. Proficiency in a foreign language is strongly recommended for all history students and is essential for those who plan to pursue graduate studies in history. Many Ph.D. programs in history require applicants to read one or two languages besides English. The University of California Education Abroad Program (EAP) is appropriate for history majors as a means to both enhance language skills and take history courses elsewhere.

UC Education Abroad Program. Subject to the limitations described below under "Transfer credits and substitutions," up to three courses in history completed through EAP may be applied toward major requirements. Consult the History Department web site, and speak with the undergraduate program coordinator for further details.

Transfer credits and substitutions. A minimum of five regularly scheduled history courses plus the comprehensive requirement must be taken from members of the UCSC history faculty. Subject to the limits indicated in parentheses, courses from the following categories may also be applied to the history major:

Transfer courses taken at another institution (limit of 3)

Education Abroad Program (limit of 3)

UCDC (limit of 2)

UC in Sacramento (limit of 2)

Related upper-division courses taken in another UCSC department (limit of 2)

Independent and field studies (limit of 2)

Requirements for the Minor

Students whose major area of interest is not history may nonetheless find that a minor in history makes an invaluable contribution to their studies. For the minor in history, eight history courses, four of which must be upper division, are required. There is no senior comprehensive requirement for the minor.

Graduate Program

The Ph.D. program in history at UCSC emphasizes an interdisciplinary and cross-cultural approach to historical studies. The History Department offers a rigorous program of instruction and independent work that trains students in the techniques of original historical research and equips them to teach university-level courses in history. The department only admits those highly motivated students who are most qualified to pursue advanced studies in history. The department also only admits those applicants who can best benefit from the specific strengths of our faculty. Just as the work of most professional historians centers around research and teaching, training in these areas constitutes the two essential poles of the graduate program in history.

Research and Teaching

In preparing graduate students for research and teaching at the university level, the department offers training in four geographically and chronologically defined fields: U.S. history, European history since 1500, East Asian history since 1600, and world history since 1500. U.S., European, and East Asian history are defined as primary teaching fields; each graduate student is required to choose one. Students of U.S. history may incorporate Latin American history in their coursework, while students of European history might include the history of European colonialism and imperialism. Every year the faculty in each field offer introductory readings seminars and, when possible, classes on more specific topics (see below for information about course offerings). Each graduate student also prepares a second teaching field different from the primary field and can choose from among U.S., European, East Asian, or world history. Students may also petition the graduate committee to prepare a secondary teaching field in African or Latin American history.

Research Centers and Clusters

The History Department has created a series of thematic research clusters to coordinate the training of graduate students in historical research. Each research cluster is composed of History Department faculty and graduate students as well as faculty outside the department who share broad scholarly interests. The clusters serve as a way to coordinate the research of faculty and graduate students whose work encompasses different geographic regions and chronological periods. Although the nature and number of the research clusters may change over time, the department currently offers two basic groupings: 1) colonialism, nationalism, and race; and 2) the history of gender. These clusters are complemented by scholarly activities sponsored by various UCSC Centers. Centers that are currently directed by UCSC History faculty are: the Center for Jewish Studies, the Center for Labor Studies, the Center for Mediterranean Studies, the Center for the Study of Pacific War Memories, and the Center for World History. For information on current research clusters, please visit the Institute for Humanities Research web site, ihr.ucsc.edu.

The faculty of each cluster provide at least one research seminar every other year in addition to readings courses. All the affiliated graduate students must take at least one research seminar during their first two years; they are encouraged to take more than one. Faculty and graduate students also participate in interdisciplinary forums outside the department.

These include programs sponsored by the Chicano/Latino Research Center, the Center for Cultural Studies, and the UCSC Institute for Humanities Research. Advanced graduate students may also have the opportunity to work in programs sponsored by the University of California Humanities Research Institute at UC Irvine. Finally, multi-campus groups in which students and faculty are involved include the Bay Area Seminar in Early American Studies, and the French Studies Group at Stanford.

Courses

Until they pass the qualifying examination and are formally advanced to candidacy for the Ph.D. degree, students must be in residence at UCSC and are expected to complete a minimum of 12 credits each quarter to maintain normal academic progress. Completion of a minimum of 12 courses of 5 credits each (in addition to History 280A, 280B, and 280C) is required for advancement to candidacy. Courses taken are graduate seminars, independent study courses, and most upper-division undergraduate courses.

Students are required to take the following before advancing to candidacy:

- History 200 (year 1, fall quarter); History 201 (year 2, winter quarter); History 280A (year 1, fall quarter) 280B (year 1 or 2), 280C (year 1 or 2);
- one research seminar during the first four quarters: History 204A, 204B, or 204C;
- second teaching field: two courses in American, European, East Asian or world history;
- outside courses: two quarters of graduate coursework outside the History Department;
- readings courses in the appropriate field: East Asia—History 230A, 230B, 230C (China) or History 242, 243, 244 (Japan); Europe—History 250A, 250B; U.S.—History 210A, 210B.

Graduate students in East Asian history specialize in either modern Chinese or modern Japanese history, but all students in the East Asian program will be prepared to teach both. The core curriculum for East Asian history consists of three China reading seminars (courses 230A, 230B, 230C) and three Japan reading seminars (courses 242, 243, 244) taught in sequence over three years, covering such topics as foundational historiographies, gender, social movements, and transnational circulation of people, commodities, and ideas. Over the course of the three years to the qualifying examination, China students will be expected to take all three China seminars and at least two of the three Japan seminars. Japan students will be expected to take all three Japan seminars and at least two of the three China seminars. Additional coursework in research methods as well as occasional independent studies will also be available, and students are encouraged to

take classes that have a wide range of faculty in other departments across the campus.

Foreign Language Requirement

No prior foreign language preparation is required for admission with a primary teaching field in U.S. history. Two to three years of college work, or its equivalent, in at least one foreign language is required for admission to the European program. Students who choose East Asian history as their primary teaching field will be required to have completed at least three years of college-level Chinese or Japanese prior to admission; more years are recommended. Depending upon the student's intended field of research, Japanese language study may also be required of China specialists as part of the graduate program of study.

Students with a primary teaching field in U.S. history are expected to demonstrate a reading competency in at least one foreign language prior to taking the Ph.D. qualifying examination. Students in all other teaching fields must demonstrate a reading competency in at least two foreign languages prior to taking the Ph.D. qualifying examination; competency in one of the languages must be demonstrated by the end of the sixth quarter of enrollment. Usually, competency will be demonstrated by passing a reading examination administered by a member of the history faculty. Students who believe that they have already demonstrated competency through previous coursework or through their performance on a standardized test should petition the graduate director.

M.A. Degree

The master of arts (M.A.) degree is awarded to all Ph.D. students after two years in residence, successful completion of 12 courses of 5 credits each, demonstrated competency in one foreign language (for those in primary teaching fields other than U.S. history), removal of all Incomplete notations (I) on record, and approval of a substantial essay of 25-30 pages.

The M.A. Essay

Students are required to produce a substantial research essay grounded in original research in primary historical documents. A successful essay will reflect a general understanding of the field of inquiry along with a critical grasp of the scholarship that currently defines the field; deep knowledge of the specific subject under investigation; the application of appropriate analytical models; and a well-supported interpretation of the materials explored. This essay could (but need not) be a segment of a larger project; but it must be a complete, self-contained essay in and of itself.

Students enroll in course 201, Directed Research Colloquium, the winter quarter of their second year. While taking course 201, students work intensively with a faculty reader in the preparation, crafting, and revising of the essay. The final draft, approved by the reader, must be submitted to the graduate committee by the spring quarter deadline (usually mid-April). The deadline will be noted in the department's call for M.A. essays.

Qualifying Examination

The qualifying examination (QE) emphasizes field mastery, integration of material from different fields, and focused preparation for dissertation research. The QE is a three-hour meeting during which a student presents and discusses a dossier that has been submitted to the student's committee at least three weeks in advance. The examination is normally taken by the spring quarter of the third year, but no later than the end of the 10th quarter of residency. Prior to taking the QE, all incomplete notations (I) must be cleared from the student's record. Additionally, the student must be registered the quarter the examination is taken.

The four examination fields are designed in consultation with the student's QE committee members. Students prepare for the examination through regularly offered courses and independent readings courses sponsored by the examiners. Students are required to take at least two courses in each of the four fields. The fields are as follows:

- *Primary Field of Concentration.* One of three fields: American history; European history 1500 to the present; East Asian history 1600 to the present.
- *Research Field.* Normally a subfield of the primary field with a focus on the student's specific area of research interests. This field is most closely connected to the student's work in a specific research cluster.
- *Second Teaching Field.* Chosen from the above list of primary fields, with the addition of world history, or, where appropriate, a comparative, thematic field such as gender, colonialism, etc. Students may petition to be examined in Latin American or African history.
- *Outside Field.* One field outside history, such as American studies, anthropology, literature, feminist studies, politics, sociology, or history of consciousness. Students select a field of topical, thematic, or methodological relevance to their dissertation. The student's faculty adviser must approve the outside field.

The four examination fields must be defined and preliminary reading lists (see below) filed with the department no later than the student's eighth quarter of residency.

A pass or fail will be given after the examination based on the student's knowledge and research preparation as demonstrated by his or her dossier. All areas must receive passing marks from all members of the committee. Immediately following the exam, the QE committee will complete and submit to the History Department the Report on Qualifying Examination form. If a student does not

pass the QE the first time, they may retake only those sections not passed. No one will be permitted to take the QE more than twice.

Qualifying Examination Dossier Requirements

The QE dossier includes four parts, each of which should be prepared in consultation with the student's primary academic adviser and with the advice of the examiners. The examination will focus upon the dossier. All examiners, including the examiner from outside the department, will participate in all segments of the examination.

The dossier includes:

1. An essay (20-page limit) reviewing the state of the scholarship in the student's primary field of concentration. This essay should reflect the student's general, broad competence in his or her field as well as a mastery of the theoretical issues and historiographic debates in four to five areas that represent their primary area of expertise. The essay may reflect the thematic focus of a research cluster as well as work completed in an outside field (literature, anthropology, etc.).
2. One syllabus or, at most, two syllabi (the number to be decided in discussion with the student's primary adviser) that demonstrates the student's preparation to teach across the breadth of their primary field at the introductory level. The syllabus should be annotated to show how each class session would be prepared: principal sources for lectures, principal questions for discussion, reasons for assigning particular readings, etc.
3. A syllabus (annotated in the same fashion as described in section number 2 above) in the student's second teaching field, accompanied by a brief (three- to five-page) statement of principal issues. The exact content of these items will be decided in consultation with the examiner in the secondary teaching field.
4. A 10- to 15-page dissertation prospectus that includes an evaluative survey of the literature relevant to the student's proposed research topic, a detailed discussion of the archival resources, and a consideration of the theoretical issues to be engaged. The prospectus lays out, in reasonable detail, the direction of research the student intends to pursue for the dissertation. The prospectus includes the following information:
 - three- to four-page description of the overall argument of the project, including a discussion of the research base and the appropriate methodological/theoretic models;
 - a detailed discussion of the archival resources;
 - two- to three-page outline, tracking the research and analysis chapter by chapter;
 - substantive bibliography with complete citations.

Note:

- Although no specific segment of the dossier focuses upon the coursework completed outside the History Department, it is expected that this work will be incorporated into different sections of the portfolio, particularly the research prospectus.
- Complete bibliographies must be appended to each piece of the QE dossier.

Dissertation

The dissertation represents an extensive, book-length project grounded in research in original historical documents. A successful dissertation will reflect a broad and deep understanding of the field of inquiry, a mastery of the scholarship that currently defines the field, detailed knowledge of the subject of study growing out of dedicated research, and the incorporation (and explicit rejection of) appropriate interpretive models.

M.A. in History (Terminal)

The Department of History offers an M.A. degree in history for those individuals who are interested in postgraduate work, but who are not planning to complete a Ph.D. It is a degree program that can fulfill in-service education requirements for current teachers as well as for future teachers earning a single-subject credential in social studies. Part-time enrollment is allowed.

Each student will be required to choose one of four areas of specialization (U.S., Europe, East Asia, world) and select one of two topical research areas—colonialism, nationalism, and race, or history of gender. To complete the degree, each student must pass a total of 12 courses of 5 credits each and six courses of 2 credits each including courses 280A, 280B, and 280C. Students must also write an M.A. paper of 25-30 pages. For students specializing in Europe, U.S., and East Asia, the curriculum will be nearly identical to that taken by Ph.D. students in their first two years, except that there will be no language requirement. Those specializing in world history will take History 204A and 204C (or other seminars approved by the department) instead of the corresponding courses in other fields (courses 250A, 250B, and so on), but otherwise their curriculum will be the same as that of a typical incoming Ph.D. student.

Course Requirements

- History 200 (year 1, fall quarter); History 201 (year 2, winter quarter)
- one research seminar during the first four quarters: History 204A, 204B, or 204C
- six courses of 2 credits each including History 280 (year 1), 280B (year 1 or 2), 280C (year 1 or 2)
- seven electives of 5 credits each, two of which must be taken outside the History Department. Courses taken are graduate seminars, most upper-division undergraduate courses, and independent study courses.
- two reading seminars in the area of specialization:

U.S.: History 210A, 210B

Europe: History 250A, 250B

World: History 204A, 204C or other seminars approved by the department

East Asia: History 230A, 230B; 230C, 242

The History Department does not normally provide financial support to students pursuing the M.A. degree; however, students may apply for available teaching assistantships. Admission to the M.A. program does not constitute admission to the Ph.D. program. Students must reapply for the Ph.D. program.

Further details about the graduate program are available from the Department of History web site: <http://history.ucsc.edu>.

201 Humanities

(831) 459-2982

<http://history.ucsc.edu/>***Program Description***

History is the attempt to understand the meanings of the human life experience, not generally and abstractly, but in terms of specific individuals, events, and circumstances. Consequently, of all academic pursuits, it is the one best equipped to help us locate phenomena in their specific contexts, whether we are concerned with political events, social changes, the production of art, the development of technologies, scientific discoveries, or life stories. In this sense, the study of history can also be an invaluable complement to any other major.

The history program at UCSC is designed to bring about an understanding of the ideas, experiences, and events that have shaped this country and the world at large. The program's main emphases are in social and cultural history, with additional strengths in intellectual and political history.

A degree in history opens up a wide range of career possibilities. Some careers fall within the historical profession, including teaching at the university, college, and high school levels and working in various areas of public and applied history, such as historic preservation, archives, libraries, and museums. For careers in fields as diverse as law, business, government, foreign service, publishing, journalism, and communications, a degree in history lays the foundation in research, analytic, and writing skills upon which later professional training can be built.

Requirements for the Major

A minimum of 12 courses is required for the major. No more than four of the minimum 12 courses may be lower division. [A minimum of 40 upper-division units must be completed within the history major course requirements.](#) The history major does not require an examination for entrance and does not limit the number of students accepted into the program. It is strongly advised that students complete at least one introductory history course before declaring the major.

At UCSC, the history curriculum offers three broad, geographically defined regions of concentration:

- the Americas and Africa
- Asia and the Islamic World
- Europe

Course requirements. Each history major selects one of the three regions of concentration listed above. History majors are required to take at least one lower-division survey course

within their chosen region of concentration.

- Americas/Africa: History 10A, 10B, 11A, 11B, or 30
- Asia/Islamic World: History 40A, 40B, 41, or 43
- Europe: History 65A, 65B, 70A, 70B, or 70C

Transfer coursework may or may not apply toward the survey course requirement; consult the History Department.

In consultation with the history undergraduate program coordinator ~~and a faculty adviser~~, the student plans a program of study that will also fulfill the following distribution of courses:

- five courses in the chosen region of concentration, one of which must be the lower-division survey course; three of the remaining courses must be upper-division;
- two courses from each of the remaining two regions of concentration;
- two upper-division history electives based in any of the regions of concentration;
- one comprehensive exit requirement (see below) in the student's chosen region of concentration.

Students often choose to satisfy the history major course requirements listed above according to some general theme of special interest to them. Faculty and staff advisers will assist the students who choose this option with their course selection.

In addition to all coursework, history majors must complete a senior check and exit survey in the first quarter of their senior year. For details, see the department web site, <http://history.ucsc.edu>.

Distribution requirements. Among the 12 courses required for the major, at least three must meet chronological distribution requirements. One must be set before 600 A.D., and two must be set in periods prior to the year 1800 A.D.

Interdisciplinary coursework. The History Department encourages its majors to take upper-division courses in disciplines related to history, including sociology, literature, community studies, American studies, politics, Latin American and Latino studies, and others. Students who wish to substitute one or two such appropriate upper-division courses for history electives must obtain approval from the History Department. These courses are subject to the limitations described below under the "Transfer credits and substitutions" section.

Comprehensive requirement. A comprehensive exit requirement in the student's chosen region of concentration can be fulfilled by completing an exit seminar (one quarter: 190-series, 194-series, or 196-series) or a thesis (two quarters: courses 195A and 195B). Please consult the department web site for a more detailed description of these courses.

Disciplinary Communication (DC) requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. History students can fulfill the upper-division Disciplinary Communication (DC) Requirement by completing a comprehensive exit requirement in their chosen region of concentration. Students may complete an exit seminar (one quarter: 190 series, 194 series, or 196 series) or a thesis (two quarters: courses 195A and 195B). Please consult the department web site for a more detailed description of these courses and refer to updated DC information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Honors in the history major. ~~All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The History undergraduate education committee determines honors at the end of each quarter. Performance in history courses taken elsewhere and being transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most history courses for honors,~~

~~and excellence in all history courses for highest honors. Summer graduates are reviewed for honors in fall quarter.~~ Honors are awarded to the top 10-15 percent of graduating students per quarter; highest honors may be granted to approximately the top 5 percent. Honors are determined by the Undergraduate Education Committee in consultation with the History Department faculty. The department considers each student's GPA in the history major, supplemented when appropriate by an assessment of work in the senior capstone course or honors thesis preparation. The history major GPA is calculated based upon all history courses attempted at UCSC; grades from courses taken outside of the department will not be calculated into a student's history major GPA, even in cases when the student is allowed to use said courses toward their history major degree requirements. Summer, fall, and winter graduates will be reviewed at the end of each of their respective quarters. Spring graduates will be reviewed using their earned history major GPAs as of the spring announcement of candidacy deadline.

Language recommendation. Proficiency in a foreign language is strongly recommended for all history students and is essential for those who plan to pursue graduate studies in history. Many ~~doctor-of-philosophy~~ (Ph.D.) programs in history require applicants to read one or two languages besides English. The University of California Education Abroad Program (EAP) is appropriate for history majors as a means to both enhance language skills and take history courses elsewhere.

UC Education Abroad Program. Subject to the limitations described below under "Transfer credits and substitutions," up to three courses in history completed through EAP may be applied toward major requirements. Consult the History Department web site, and speak with the undergraduate program coordinator for further details.

Transfer credits and substitutions. A minimum of five regularly scheduled history courses plus the comprehensive requirement must be taken from members of the UCSC history faculty. Subject to the limits indicated in parentheses, courses from the following categories may also be applied to the history major:

Transfer courses taken at another institution (limit of 3)

Education Abroad Program (limit of 3)

UCDC (limit of 2)

UC in Sacramento (limit of 2)

Related upper-division courses taken in another UCSC department (limit of 2)

Independent and field studies (limit of 2)

Requirements for the Minor

Students whose major area of interest is not history may nonetheless find that a minor in history makes an invaluable contribution to their studies. For the minor in history, eight history courses, four of which must be upper division, are required. There is no senior comprehensive requirement for the minor.

Graduate Program

The Ph.D. program in history at UCSC emphasizes an interdisciplinary and cross-cultural approach to historical studies. The History Department offers a rigorous program of instruction and independent work that trains students in the techniques of original historical research and equips them to teach university-level courses in history. The department only admits those highly motivated students who are most qualified to pursue advanced studies in history. The department also only admits those applicants who can best benefit from the specific strengths of our faculty.

Just as the work of most professional historians centers around research and teaching, training in these areas constitutes the two essential poles of the graduate program in history.

Research and Teaching

In preparing graduate students for research and teaching at the university level, the department offers training in four geographically and chronologically defined fields: U.S. history, European history since 1500, East Asian history since 1600, and world history since 1500. U.S., European, and East Asian history are defined as primary teaching fields; each graduate student is required to choose one. Students of U.S. history may incorporate Latin American history in their coursework, while students of European history might include the history of European colonialism and imperialism. Every year the faculty in each field offer introductory readings seminars and, when possible, classes on more specific topics (see below for information about course offerings). Each graduate student also prepares a second teaching field different from the primary field and can choose from among U.S., European, East Asian, or world history. Students may also petition the graduate committee to prepare a secondary teaching field in African or Latin American history.

Research Centers and Clusters

The History Department has created a series of thematic research clusters to coordinate the training of graduate students in historical research. Each research cluster is composed of History Department faculty and graduate students as well as faculty outside the department who share broad scholarly interests. The clusters serve as a way to coordinate the research of faculty and graduate students whose work encompasses different geographic regions and chronological periods. Although the nature and number of the research clusters may change over time, the department currently offers two basic groupings: 1) colonialism, nationalism, and race; and 2) the history of gender. These clusters are complemented by scholarly activities sponsored by various UCSC Centers. Centers that are currently directed by UCSC History faculty are: the Center for Jewish Studies, the Center for Labor Studies, the Center for Mediterranean Studies, the Center for the Study of Pacific War Memories, and the Center for World History. For information on current research clusters, please visit the Institute for Humanities Research web site, ihr.ucsc.edu.

The faculty of each cluster provide at least one research seminar every other year in addition to readings courses. All the affiliated graduate students must take at least one research seminar during their first two years; they are encouraged to take more than one.

Faculty and graduate students also participate in interdisciplinary forums outside the department. These include programs sponsored by the Chicano/Latino Research Center, ~~the Pre and Early Modern Studies Group~~, the Center for Cultural Studies, and the UCSC Institute for Humanities Research. Advanced graduate students may also have the opportunity to work in programs sponsored by the University of California Humanities Research Institute at UC Irvine. Finally, multi-campus groups in which students and faculty are involved include the Bay Area Seminar in Early American Studies, ~~the Bay Area Pre and Early Modern Studies Group~~, and the French Studies Group at Stanford.

Courses

Until they pass the qualifying examination and are formally advanced to candidacy for the Ph.D. degree, students must be in residence at UCSC and are expected to complete a minimum of 12 credits each quarter to maintain normal academic progress. Completion of a minimum of 12 courses of 5 credits each (in addition to History 280A, 280B, and 280C) is required for advancement to candidacy. Courses taken are graduate seminars, independent study courses, and most upper-division undergraduate courses.

Students are required to take the following before advancing to candidacy:

- History 200 (year 1, fall quarter); History 201 (year 2, winter quarter); History 280A (year 1, fall quarter) 280B (year 1 or 2), 280C (year 1 or 2);
- one research seminar during the first four quarters: History 204A, 204B, or 204C;
- second teaching field: two courses in American, European, East Asian or world history;
- outside courses: two quarters of graduate coursework outside the History Department;
- readings courses in the appropriate field: East Asia—History 230A, 230B, 230C (China) or History 242, 243, 244 (Japan); Europe—History 250A, 250B; U.S.—History 210A, 210B.

Graduate students in East Asian history specialize in either modern Chinese or modern Japanese history, but all students in the East Asian program will be prepared to teach both. The core curriculum for East Asian history consists of three China reading seminars (courses 230A, 230B, 230C) and three Japan reading seminars (courses 242, 243, 244) taught in sequence over three years, covering such topics as foundational historiographies, gender, social movements, and transnational circulation of people, commodities, and ideas. Over the course of the three years to the qualifying examination, China students will be expected to take all three China seminars and at least two of the three Japan seminars. Japan students will be expected to take all three Japan seminars and at least two of the three China seminars. Additional coursework in research methods as well as occasional independent studies will also be available, and students are encouraged to take classes that have a wide range of faculty in other departments across the campus.

Foreign Language Requirement

No prior foreign language preparation is required for admission with a primary teaching field in U.S. history. Two to three years of college work, or its equivalent, in at least one foreign language is required for admission to the European program. Students who choose East Asian history as their primary teaching field will be required to have completed at least three years of college-level Chinese or Japanese prior to admission; more years are recommended. Depending upon the student's intended field of research, Japanese language study may also be required of China specialists as part of the graduate program of study.

Students with a primary teaching field in U.S. history are expected to demonstrate a reading competency in at least one foreign language prior to taking the Ph.D. qualifying examination. Students in all other teaching fields must demonstrate a reading competency in at least two foreign languages prior to taking the Ph.D. qualifying examination; competency in one of the languages must be demonstrated by the end of the sixth quarter of enrollment. Usually, competency will be demonstrated by passing a reading examination administered by a member of the history faculty. Students who believe that they have already demonstrated competency through previous coursework or through their performance on a standardized test should petition the graduate director.

M.A. Degree

The master of arts (M.A.) degree is awarded to all Ph.D. students after two years in residence, successful completion of 12 courses of 5 credits each, demonstrated competency in one foreign language (for those in primary teaching fields other than U.S. history), removal of all Incomplete notations (I) on record, and approval of a substantial essay of 25-30 pages.

The M.A. Essay

Students are required to produce a substantial research essay grounded in original research in primary historical documents. A successful essay will reflect a general understanding of the field of inquiry along with a critical grasp of the scholarship that

currently defines the field; deep knowledge of the specific subject under investigation; the application of appropriate analytical models; and a well-supported interpretation of the materials explored. This essay could (but need not) be a segment of a larger project; but it must be a complete, self-contained essay in and of itself.

Students enroll in course 201, *Directed Research Colloquium*, the winter quarter of their second year. While taking course 201, students work intensively with a faculty reader in the preparation, crafting, and revising of the essay. The final draft, approved by the reader, must be submitted to the graduate committee by the spring quarter deadline (usually mid-April). The deadline will be noted in the department's call for M.A. essays.

Qualifying Examination

The qualifying examination (QE) emphasizes field mastery, integration of material from different fields, and focused preparation for dissertation research. The QE is a three-hour meeting during which a student presents and discusses a dossier that has been submitted to the student's committee at least three weeks in advance. The examination is normally taken by the spring quarter of the third year, but no later than the end of the 10th quarter of residency. Prior to taking the QE, all incomplete notations (I) must be cleared from the student's record. Additionally, the student must be registered the quarter the examination is taken.

The four examination fields are designed in consultation with the student's QE committee members. Students prepare for the examination through regularly offered courses and independent readings courses sponsored by the examiners. Students are required to take at least two courses in each of the four fields. The fields are as follows:

- *Primary Field of Concentration*. One of three fields: American history; European history 1500 to the present; East Asian history 1600 to the present.
- *Research Field*. Normally a subfield of the primary field with a focus on the student's specific area of research interests. This field is most closely connected to the student's work in a specific research cluster.
- *Second Teaching Field*. Chosen from the above list of primary fields, with the addition of world history, or, where appropriate, a comparative, thematic field such as gender, colonialism, etc. [Students may petition to be examined in Latin American or African history.](#)
- *Outside Field*. One field outside history, such as American studies, anthropology, literature, feminist studies, politics, sociology, or history of consciousness. Students select a field of topical, thematic, or methodological relevance to their dissertation. The student's faculty adviser must approve the outside field.

The four examination fields must be defined and preliminary reading lists (see below) filed with the department no later than the student's eighth quarter of residency.

A pass or fail will be given after the examination based on the student's knowledge and research preparation as demonstrated by his or her dossier. All areas must receive passing marks from all members of the committee. Immediately following the exam, the QE committee will complete and submit to the History Department the Report on Qualifying Examination form. If a student does not pass the QE the first time, they may retake only those sections not passed. No one will be permitted to take the QE more than twice.

Qualifying Examination Dossier Requirements

The QE dossier includes four parts, each of which should be prepared in consultation with the student's primary academic adviser and with the advice of the examiners. The examination will focus upon the dossier. All examiners, including the examiner from outside the department, will participate in all segments of the examination.

The dossier includes:

- [1.](#) An essay (20-page limit) reviewing the state of the scholarship in the student's primary

field of concentration. This essay should reflect the student's general, broad competence in his or her field as well as a mastery of the theoretical issues and historiographic debates in four to five areas that represent their primary area of expertise. The essay may reflect the thematic focus of a research cluster as well as work completed in an outside field (literature, anthropology, etc.).

2. One syllabus or, at most, two syllabi (the number to be decided in discussion with the student's primary adviser) that demonstrates the student's preparation to teach across the breadth of their primary field at the introductory level. The syllabus should be annotated to show how each class session would be prepared: principal sources for lectures, principal questions for discussion, reasons for assigning particular readings, etc.
3. A syllabus (annotated in the same fashion as described in section number 2 above) in the student's second teaching field, accompanied by a brief (three- to five-page) statement of principal issues. The exact content of these items will be decided in consultation with the examiner in the secondary teaching field.
4. A 10- to 15-page ~~research-dissertation~~ prospectus that includes an evaluative survey of the literature relevant to the student's proposed research topic, a detailed discussion of the archival resources, and a consideration of the theoretical issues to be engaged. The prospectus lays out, in reasonable detail, the direction of research the student intends to pursue for the dissertation. The prospectus includes the following information:
 - three- to four-page description of the overall argument of the project, including a discussion of the research base and the appropriate methodological/theoretic models;
 - a detailed discussion of the archival resources;
 - two- to three-page outline, tracking the research and analysis chapter by chapter;
 - substantive bibliography with complete citations.

Note:

- **Although no specific segment of the dossier focuses upon the coursework completed outside the History Department, it is expected that this work will be incorporated into different sections of the portfolio, particularly the research prospectus.**
- **Complete bibliographies must be appended to each piece of the QE dossier.**

Dissertation

~~Students are required to prepare a dissertation prospectus within one year after the qualifying examination. Ideally, the prospectus will be completed by the end of the next quarter. The prospectus must be approved by the dissertation reading committee and placed on file with the department. The prospectus lays out, in reasonable detail, the direction of research the student intends to pursue for the dissertation. The prospectus includes the following information:~~

- ~~• title page with signatory lines for the dissertation committee members and the graduate director~~
- ~~• three to four page description of the overall argument of the project, including a discussion of the research base and the appropriate methodological/theoretical models~~
- ~~• two to three page outline, tracking the research and analysis chapter by chapter~~
- ~~substantive bibliography with complete citations~~

The dissertation represents an extensive, book-length project grounded in research in original historical documents. A successful dissertation will reflect a broad and deep understanding of the field of inquiry, a mastery of the scholarship that currently defines the field, detailed knowledge of the subject of study growing out of dedicated research, and the incorporation (and explicit rejection of) appropriate interpretive models.

M.A. in History (Terminal)

The Department of History offers an M.A. degree in history for those individuals who are interested in postgraduate work, but who are not planning to complete a Ph.D. It is a degree program that can fulfill in-service education requirements for current teachers as well as for future teachers earning a single-subject credential in social studies. Part-time enrollment is allowed.

Each student will be required to choose one of four areas of specialization (U.S., Europe, East Asia, world) and select one of two topical research areas—colonialism, nationalism, and race, or history of gender. To complete the degree, each student must pass a total of 12 courses of 5 credits each and six courses of 2 credits each including courses 280A, 280B, and 280C. Students must also write an M.A. paper of 25-30 pages. For students specializing in Europe, U.S., and East Asia, the curriculum will be nearly identical to that taken by Ph.D. students in their first two years, except that there will be no language requirement. Those specializing in world history will take History 204A and 204C (or other seminars approved by the department) instead of the corresponding courses in other fields (courses 250A, 250B, and so on), but otherwise their curriculum will be the same as that of a typical incoming Ph.D. student.

Course Requirements

- History 200 (year 1, fall quarter); History 201 (year 2, winter quarter)
- one research seminar during the first four quarters: History 204A, 204B, or 204C
- six courses of 2 credits each including History 280 (year 1), 280B (year 1 or 2), 280C (year 1 or 2)
- seven electives of 5 credits each, two of which must be taken outside the History Department. Courses taken are graduate seminars, most upper-division undergraduate courses, and independent study courses.
- two reading seminars in the area of specialization:

U.S.: History 210A, 210B

Europe: History 250A, 250B

World: History 204A, 204C or other seminars approved by the department

East Asia: History 230A, 230B; 230C, 242

The History Department does not normally provide financial support to students pursuing the M.A. degree; however, students may apply for available teaching assistantships. Admission to the M.A. program does not constitute admission to the Ph.D. program. Students must reapply for the Ph.D. program.

Further details about the graduate program are available from the Department of History web site: <http://history.ucsc.edu>.

Faculty and Professional Interests

Professor

JONATHAN F. BEECHER, Emeritus

ROBERT F. BERKHOFFER JR., Emeritus

DAVID BRUNDAGE

American immigration history, with particular focus on the Irish in America and on transnational immigrant politics; U.S. labor and social history; modern Irish history

EDMUND BURKE III, Emeritus

MARK CIOC

German history, modern European history, environmental history

NATHANIEL DEUTSCH

Hebrew Bible; rabbinic literature; Jewish mysticism; Hasidism; Eastern European Jewish life; ethnography

DANA FRANK

Late 19th- and 20th-century U.S. social history; women's, labor, and working-class history; race and ethnicity; modern Honduras; U.S. history in transnational perspective

LISBETH HAAS

U.S.-Mexico borderlands, Chicano and Native American history; visual culture; the U.S. West, California, and the colonial Americas; historical memory, theory, and historical methodology

CHARLES W. HEDRICK JR.

Greek and Roman history

GAIL B. HERSHATTER

Modern Chinese social and cultural history; labor history; gender history; history of sexuality; feminist theory; history, memory, and nostalgia

EMILY HONIG

Gender, sexuality, and ethnicity in modern Chinese history; comparative labor history; Chicana history, nationalism, and sexuality in the Third World; oral history

PETER KENEZ, Emeritus

BRUCE LEVINE, Emeritus

RICHARD MATHER, Emeritus

GARY B. MILES, Emeritus

BUCHANAN SHARP, Emeritus

DAVID G. SWEET, Emeritus

MARK TRAUOGOTT

Social and economic history, 19th-century France, French revolutions, European working class, historical methods, workers' autobiographies

MARILYN J. WESTERKAMP

Colonial and revolutionary America; early modern cultural and religious history; U.S. religious history; gender studies

Associate Professor

DAVID HENRY ANTHONY III

African and African American history, art, music, literature, and cinema; eastern and southern

Africa; African languages; Indian Ocean world; African and African American linkages; Islamic civilization; African diaspora studies; world history

NORIKO ASO

Japanese social and cultural history, women's history, race and ethnicity, colonialism, nationalism, Korean history

DILIP K. BASU

Modern South Asia, modern China, world history: colonial and post-colonial studies; film and visual culture

PEDRO G. CASTILLO

Chicano/a history and culture; American social and urban history; race, class, and gender in California history, immigration history

BRIAN A. CATLOS

Pre-modern Mediterranean; medieval Iberia and Europe and the Islamic world; Christian-Muslim-Jewish relations, ethnicity, minorities, social, and economic history; world history

ALAN S. CHRISTY

Early modern and modern Japan; history of social sciences, colonialism, nationalism

MARIA ELENA DIAZ

Atlantic world, Colonial Latin America and the Caribbean, Cuba; social and cultural, global and local histories; colonialism, slavery and freedom, race/ethnicity, gender and class; legal, political, popular, and religious culture

MATTHEW D. O'HARA

Colonial and modern Latin America; Mexico; religion; race, ethnicity, and identity; political culture; history of time

CYNTHIA POLECRITTI

Medieval, Renaissance, and Modern Italy, Mediterranean urban and cultural history, ritual and popular devotion

ALICE YANG

Historical memory, Asian American history, gender history, race and ethnicity, 20th-century U.S., oral history

Assistant Professor

MINGHUI HU

Early Modern China (1600-1900)

CATHERINE A. JONES

U.S. civil war and Reconstruction; slavery and emancipation; the American South; history of children; history of education; women and gender

GREGORY O'MALLEY

Colonial British America and the Caribbean; the Atlantic World; slavery and the slave trade; race, ethnicity, and identity; revolutionary America; colonization and intercultural contact

GILDAS HAMEL

History of Israel; Hebrew and Greek bible; Hellenistic and Roman Palestine, and Christianity; social history of the ancient world; history of technology; classical languages; Celtic cultures

MATTHEW LASAR

U.S. and international telecommunications; political, social, and economic history

JENNIFER K. LYNN

Later Roman Republic and Principate; Homeric epic; Hellenistic and Augustan poetry

Professor

BETTINA APTHEKER (Feminist Studies)

Women's history, feminist oral history and memoir; feminist pedagogy; African-American women's history; queer studies; feminist Jewish studies; feminist critical race studies

CHRISTOPHER CONNERY (Literature)

World literature and cultural studies, globalism and geographical thought, the 1960s, Marxism, pre-modern and modern Chinese cultural studies, cultural revolution

JOHN DIZIKES, EMERITUS (American Studies)

BARBARA L. EPSTEIN (History of Consciousness)

Social movements and theories of social movements, 20th-century U.S. politics and culture, Marxism and related theories of social change

SHARON KINOSHITA (Literature)

Intercultural relations in 12th- and 13th-century literature, Mediterranean studies, globalism, postcolonial theory, world literature and cultural studies

PAUL M. LUBECK (Sociology)

Political sociology; political economy of development, globalization, labor and work; logics of methodology; religion and social movements; Islamic society and identities; information and networks

DANIEL SELDEN (Literature)

Afroasiatic languages and literatures, Greek and Latin, Hellenistic culture, the classical tradition, history of criticism, literary theory

Associate Professor

GABRIELA ARREDONDO (Latin American and Latino Studies)

U.S. social and cultural history; Chicana/o history; critical race and ethnicity theories; im/migration history; Latina/os in the U.S.; Chicana feminisms; "borderlands" studies, modern Mexico history

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Theories of History/Theories of Society. *

European social thought understands society to be the product of the historical process. Readings from early-modern natural law thinkers (Hobbes, Lock, Rousseau), 19th-century theorists of the democratic and industrial revolutions (Tocqueville, Marx), and 20th-century social scientists (Weber, Braudel), explore the nature of this fertile connection. (General Education Code(s): TA, IH.) *M. Traugott*

2A. The World to 1500. *

Surveys the rise of complex societies: the formation of classical civilizations in Afroeurasia and the Americas, post-classical empires and cross-cultural exchange, technology and environmental change, the Mongol Empire, and oceanic voyages and the origins of the modern world. (General Education Code(s): CC, IH.) *B. Catlos*

2B. The World Since 1500. W

Examines major world issues over the past 500 years. Topics include European expansion and colonialism, the Muslim empires, East Asia from Ming to Qing, the Americas, Africa, the scientific-technological revolution, decolonization, and modern environmental problems. Designed primarily for first- and second-year students, it provides a time frame for understanding events within a global framework. (General Education Code(s): CC, IH.) *G. O'Malley*

5A. Early Muslim World. *

Surveys the history of the Muslim world from its beginnings through the Caliphal period. Islam is approached as a religious, social, political, and cultural phenomenon. Special emphasis on understanding Islam in the context of contemporary developments in the Near East, Europe, Africa, and Central Asia. (General Education Code(s): CC, IH, E.) *B. Catlos*

5B. Early Christianity: First to Fourth Century A.D.. *

Christianity from its origins as a Jewish messianic movement, its expansion in multiple forms in the Greco-Roman world and the East, to its transformation into the major religion of the Roman and Byzantine empires. (General Education Code(s): CC, IH.) *G. Hamel*

7. Archives and Public History. *

Through readings on local history topics and bi-weekly field expeditions, students discover different types of archives and historical repositories, the diversity of sources that they contain, and the varied uses to which they can be put. Course also explores the range of career opportunities open to history majors (sometimes loosely grouped together under the rubric "public history"). Students are billed a materials fee. Enrollment limited to 35. *M. Traugott*

10A. United States History to 1877. *

A survey of the political, social, and cultural history of the U.S. from the founding of the North American colonies to 1877. Satisfies American History and Institutions Requirement. (General Education Code(s): IH.) *M. Westerkamp*

10B. United States History, 1877 to 1977. S

A survey of the political, social, and cultural history of the U.S. from 1877 to 1977. Satisfies American History and Institutions Requirement. (General Education Code(s): IH.) *M. Lasar*

11A. Latin America: Colonial Period. F

Introduces the social, cultural, economic, and political history of the New World through a close examination of the process of European "conquest" in the 16th century and its consequences for both native and settler peoples. Medieval and Renaissance European and African backgrounds; Inca, Maya, Aztec, plains, woodland, and tropical rainforest native American societies; processes of military and cultural conquest; epidemics and ecological changes; native resistance and the establishment of the fundamental institutions of colonial society. (General Education Code(s): CC, IH, E.) *M. Diaz*

11B. Latin America: National Period. *

An introduction to the study of Latin American history from the Independence Wars in the early 19th century to the present. Topics include changing economic models of development, U.S. role,

rural and urban life, women, nationalisms, populism, revolution, the military in politics, and the problem of democracy. (General Education Code(s): CC, IH, E.) *M. O'Hara*

13. Introduction to American Religious Culture. *

Introduction to the many communities found within the American religious landscape, balancing extraordinary diversity characterizing American pluralism against the dominant religious culture. Proceeds historically, engaging major problems and developments including utopianism, the rise of evangelicalism, religion and reform, manifest destiny, secularization and modernity, and the intersection of politics and religion. (General Education Code(s): TA, IH.) *M. Westerkamp*

14. Race and Ethnicity in the U.S. *

An introductory course on the racial/ethnic history of the U.S. Of central concern are issues of race, ethnicity, oppression, resistance, mass migrations, city life in urban America, and power and protest in modern America. Priority enrollment to freshmen and sophomores. (General Education Code(s): ER, IH, E.) *P. Castillo*

20. Introduction to World Prehistory. W

Introduces the prehistory of humankind from the development of agriculture to social stratification and states. Emphasis is on the origins of civilization in ancient China, Egypt, Mesoamerica, Mesopotamia, and South America, as well as on the processes driving change. (General Education Code(s): CC.) *The Staff*

30. The Making of Modern Africa. W

Examines the loss and reassumption of local and state autonomy in Africa during the 19th and 20th centuries. Delineates the modalities of the colonial state and society, modes of resistance to alien occupation, and the deformation of social, class, and gender relations. (General Education Code(s): CC, IH, E.) *D. Anthony*

40A. Early Modern East Asia. F

Surveys the history of East Asia from 1500 to 1894. Covers political, social, economic, and cultural histories of China, Japan, and Korea with the goal of perceiving a regional history that encompassed each society. (General Education Code(s): CC, IH, E.) *M. Hu*

40B. The Making of Modern East Asia. W

A broad introductory survey of the political, social, economic, philosophical, and religious heritage of modern China, Japan, and Korea. Emphasis on the historical foundations of modern nationalism, the colonial experience, and revolutionary movements. (Formerly course 40.) (General Education Code(s): CC, IH, E.) *A. Christy*

41. The Making of the Modern Middle East. *

History of the modern Middle East from 1800 to the present, with special reference to the 20th century and forces which have shaped the area. The impact of imperialism, nationalism, and revolution in the area, with particular attention to the history of four countries: Turkey, Iran, Egypt, Israel. (General Education Code(s): CC, IH, E.) *E. Burke*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

43. Traditional India. W

A survey of the early histories of Indus Valley, Vedism, the epics, Buddhism, Jainism, with an exploration among original sources: archaeological, visual, ritual, literary, and epic texts. Thematic focus on communities, social systems, elite and popular cultures, and their mutual interaction. (Formerly *Histories of Traditional India*) (General Education Code(s): CC, IH, E.) *D. Basu*

45. Japanese Pop Culture. *

Introduction to Japanese popular culture from the Tokugawa era to the present. Pursues the role of mass media on Japanese society through analyses of popular movies, animation, comic books, music, and other artifacts in historical context. (General Education Code(s): CC, E.) *N. Aso*

61. Classical Mythology. S

Introduces the philosophy of myth, and surveys classical Greek mythology. Students explore the mythic mode of thinking and its distinguishing characteristics as well as the repertoire of Greek myths and their cultural contexts. *C. Hedrick*

62A. Classical World: Greece. F

An overview of Greek history from the beginnings through the Hellenistic period, with emphasis on the Archaic and Classical periods (ca. 800 B.C. through 323 B.C.). (General Education Code(s): CC, IH.) *C. Hedrick*

62B. Classical World: Rome. *

A lecture course offering an overview of Roman history and civilization from the legendary founding of Rome in 753 B.C. to the collapse of the Roman Empire's central administration in the West in 476 A.D. (General Education Code(s): CC, IH.) *The Staff*

63. Women in the Ancient World. *

Examines the lives of women in the ancient Greco-Roman world. Most readings are from primary texts (i.e., ancient sources), literary, historical, and documentary; material and artistic evidence also is considered. (General Education Code(s): CC.) *J. Lynn*

65A. Medieval Europe: 200-1000. S

A survey of Europe from the third through 10th centuries. Emphasizes cultural conflict and assimilation (Roman and Germanic, pagan and Christian, East and West). Topics include the rise of Christianity, Germanic migrations, Byzantium and Islam, the cult of saints and relics, Vikings, and gender roles. (General Education Code(s): CC, IH.) *C. Polecristi*

70A. Modern European History, 1500-1789. F

A survey of the economic, social, and political history of Europe since the late 15th century: 1500-1789. A is not prerequisite to B, nor B to C. (Formerly *Modern European History*.) (General Education Code(s): CC, IH.) *B. Thompson*

70B. Modern European History, 1789-1914. W

A survey of the political, social, and cultural history of Europe from the era of the French Revolution to the outbreak of the first World War: 1789-1914. Course 70A is not prerequisite to 70B, nor 70B to 70C. (General Education Code(s): CC, IH.) *M. Cioc*

70C. Modern European History: 1914 to Present. *

A survey of the economic, social, and political history of Europe since the outbreak of the first World War: 1914-present. Course 70A is not prerequisite to 70B, nor 70B to 70C. (General Education Code(s): CC, IH.) *B. Thompson*

74. Introduction to Jewish History and Cultures. *

Surveys 3,000 years of Jewish history. Themes include origins of the Jews in the ancient world, formation and persistence of the Jewish diaspora, coherence and diversity of Jewish experience, Jewish narrative and textual traditions, interaction between Jews and other cultures, productive tensions between tradition and modernity in Jewish history and literature. (General Education Code(s): ER.) *B. Thompson*

75. Film and the Holocaust. S

Examines a series of distinguished documentary and feature films about the destruction of European Jewry. Each film is placed in its historical context, and wherever possible, the readings include the original documents on which films were based. Emphasis is placed on the strategies the filmmakers used to address the problem of representing genocide without succumbing to mere melodrama. (General Education Code(s): ER, E.) *B. Thompson*

80H. Class, Gender, and Community in China, 1700-Present. *

Examines gender, sexuality, and family across classes in late imperial China, and the transformation of all three by revolution (and vice versa). Concentrates throughout on gender as a category of historical analysis that has remained largely invisible in the construction of conventional Chinese history. (General Education Code(s): CC, T4-Humanities and Arts, E.) *G. Hershatter*

80N. Gender, Labor, and Feminist Productions. *

Examines how constructions of gender and intersecting constructions of race, class, and sexuality define the power of women differentially in the world of work. Beginning with the history of emancipation, traces the broader constructions of paid and unpaid labor in the 20th-century U.S. Traces the specific histories of transgender women workers, specific regional and industrial histories, and those marked by the meaning given to African, Asian, Euro-, indigenous, and Mexican descent in the construction of gender and work. Uses feminist methodology and contemporaneous visual and written work by women artists and filmmakers. (Formerly "Topics in U.S. Women's History: Women at Work.") (General Education Code(s): CC, T4-Humanities and Arts.) *L. Haas*

80W. The Holocaust: The Destruction of European Jewry. *

Focus is on the destruction of the Jews of Europe by Nazi Germany. Issues are historically grounded, and include works of literature, social sciences, philosophy, and film. (Also offered as Literature 80L. Students cannot receive credit for both courses.) (General Education Code(s): ER, T4-Humanities and Arts, E.) *N. Deutsch, M. Baumgarten*

80X. Civil Rights Movement: Grassroots Change and American Society. F

The civil rights movement of the 1950s-60s was one of the most important grassroots social movements in American history. Course examines this movement and its effects on American society, focusing especially on the experiences of rank-and-file participants. (Formerly Community Studies 80B) (General Education Code(s): ER, T3-Social Sciences, E.) *D. Brundage*

80Y. World War II Memories in the U.S. and Japan. S

Examines how the meaning of such issues as war origins, war responsibility, the atomic bomb, reparations, and racism have been subjects of contention in postwar U.S. and Japan. Students explore the relations between history, memory, and contemporary politics. (General Education Code(s): CC, T4-Humanities and Arts, E.) *A. Christy, A. Yang*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Historical Skills and Methods. *

Designed to train students in the fundamental skills required for advanced historical research. Students read historical theory and learn the basics of historical analysis, research, and disciplinary

writing. Recommended to majors but open to all interested students. (General Education Code(s): TA.) *M. O'Hara*

101A. The Making of the Modern World, 1400-1750. *

Focuses on the transformation of many different societies of Asia, Africa, and the Americas from 1400 to 1750 through case histories and the comparative study of European colonial hegemony, labor systems, global economic exchange, missions, and warfare. (General Education Code(s): CC, E.) *E. Burke*

101B. The Making of the Modern World, 1750-1950. *

The history of the world from 1750. Focuses on the liberal project (the industrial and democratic revolutions) and its impact on the world—slavery and abolition, self-strengthening movements, race and class, imperialism, colonialism, and nationalism. (General Education Code(s): CC, E.) *E. Burke*

102A. The Crusades, 1000-1300. *

Examines history of Middle East and Latin Europe from 1000-1300, in particular, Latin Crusade and colonization and Muslim response. Format is chronological; topics such as acculturation, Holy War, and ethnicity examined through lectures and writing. (General Education Code(s): CC.) *B. Catlos*

102C. The Mediterranean in the Modern Era, 1730-1930. S

The cultural transformation of the Mediterranean region in comparative historical perspective from the rise of the Hapsburg and Ottoman empires to modern times. Topics include orientalism, political and economic transformations, social movements, cultural change, gender, colonialism, and imperialism. (General Education Code(s): CC.) *E. Burke*

103. Medieval Spain, 600-1500. *

History of the Iberian Peninsula and Northwest Africa from the Visigoths through the reign of the Catholic Monarchs. Political and economic history form the basis, with special attention paid to religious and social history, particularly the interrelation between the peninsula's ethno-confessional groups. Prerequisite(s): one history course; course 65A and/or course 65B recommended. (General Education Code(s): CC.) *B. Catlos*

105. Nations and Nationalism. S

Provides an historical, comparative, and theoretical exploration of the development of nations and nationalism. Emphases include the historical formation of nation-states, modernization, colonialism, decolonization, nations and globalization, and the intersections between ethnicity, race, religions, and nationalism. (General Education Code(s): CC.) *K. Silver*

106A. Vietnam War Memories. *

Compares memories and interpretations of war in Southeast Asia by diverse groups in France, America, and Vietnam. Topics include war origins, military strategies, propaganda, combat, civilians, media, activism, MIAs, refugees, mixed race children, memorials, textbooks, films, music, literature, and art. (General Education Code(s): CC, E.) *A. Yang*

106B. Asian and Asian American History, 1941-Present. *

Analyzes immigration, race relations, war, gender ideology, family life, acculturation, political activism, interracial marriage, multiracial identity, and cultural representations between 1941 and the present. Emphasis on discussion, writing, research, and group presentations. (General Education Code(s): ER, E.) *The Staff*

107. Religion and Modernity. *

Explores the impact of modernity on a variety of religious traditions. Examines the rise of secularism and the phenomenon of disenchantment; the "invention" of religion; and the emergence of fundamentalism in the modern period. (General Education Code(s): CC.) *N. Deutsch*

108. Social Movements in Historical Perspective. *

Readings examine 18th- through 20th-century social movements and related phenomena in Europe/America: examples include Tulipomania; revolutionary action in France; U.S. Civil Rights movement; and the environmental and feminist movements. Lectures focus on social science frameworks used to explore the social base, tactics, success or failure, and inter-relationships of social movements as a distinctive mode of social change. *M. Traugott*

109A. Race, Gender, and Power in the Antebellum South. S

Examines how ideologies of race and gender shaped the development of slavery and empire in the American South from European colonization to the eve of the American Civil War. (General Education Code(s): ER, E.) *C. Jones*

110A. Colonial America, 1500-1750. *

Explores the social, economic, cultural, and political development of British North America from the first European/Amerindian contacts in the late 16th century through the establishment of a provincial British colonial society. Course 110A is not a prerequisite to course 110B. Satisfies American History and Institutions Requirement. (General Education Code(s): ER.) *M. Westerkamp*

110B. Revolutionary America, 1740-1815. S

Explores the political, social, economic, and cultural development of British North America from the first stirrings of resistance to the establishment of the U.S. Course 110A is not a prerequisite to course 110B. Satisfies American History and Institutions Requirement. *G. O'Malley*

110D. The Civil War Era. F

Social, political, and economic history of the American Civil War and Reconstruction, focusing on the war's changing nature and significance, emancipation, and the postwar struggle over the future of the South and the nation. *C. Jones*

110E. What Is a Nation? The U.S. from 1877 to 1914. F

History of the U.S. during what was perhaps its most socially turbulent era, the period following Reconstruction through the First World War. What did it mean to be a nation in the post-Reconstruction era? How did a country that had only recently unified itself under one system of labor now resolve the question of national identity? Was America truly a nation by 1914? *M. Lasar*

110F. Crossroads for American Capitalism: The U.S., 1914 to 1945. *

Between the First and Second World Wars, American society accepted the need for a regulatory state to save capitalism from itself. Takes an in-depth look at many aspects of U.S. politics and culture during these years. *M. Lasar*

110G. The U.S. After the Second World War. *

From the Good War to the Cold War, the Sixties to the rise of the New Right, the post-1945 American experience has been one of extremes. This survey course looks for evidence of commonality during those times. *M. Lasar*

111. Popular Conceptions of Race in U.S. History, 1600-Present. *

Explores how race has been constructed and perceived, examining Americans' use of race to describe themselves and to label others. Particularly concerned with ordinary people and how and why their ideas of race have changed over time. (General Education Code(s): ER, E.) *G. O'Malley*

112. American Feminist Thought, 1750-1950. *

Traces history of feminist thought in the United States from the 18th century Enlightenment to the mid-20th century. Focusing on questions of social identity, gender difference, and legal/political status, examines writings of philosophers, activists, novelists, and ordinary women that challenged religious, political, and scientific beliefs underlying gender inequality. *M. Westerkamp*

113C. Women and American Religious Culture. *

Historical introduction to religious culture of U.S. as experienced and created by women. Explores religious ideas about women, the treatment of women by mainstream institutions and religio-social communities, and female religious leaders and followers. Takes an explicitly feminist analytical approach and uses a variety of "texts," including historical and literary scholarship, sacred texts, fiction, autobiography, material artifacts, visual art, and music. *M. Westerkamp*

114. Market Revolution in Antebellum U.S.. *

Examines the cultural, political, and environmental upheaval associated with antebellum market revolution. Topics include: markets and U.S. territorial expansion; reform movements that coalesced around disputes over what should, and should not be sold (e.g., antislavery activism; anti-prostitution reform movements). *C. Jones*

115A. U.S. Labor History to 1919. *

Explores the history of work, working-class people, and the labor movement in the U.S., with attention to race and gender dynamics as well as to the development of workers' organizations. (Formerly *U.S. Labor History, Colonial Period to 1919.*) Satisfies American History and Institutions Requirement. (General Education Code(s): ER.) *D. Frank*

115B. U.S. Labor History, 1919 to the Present. *

Explores the history of work, working-class people, and the labor movement in the U.S. in global perspective with attention to race and gender dynamics and political-economic changes. Satisfies American History and Institutions Requirement. (General Education Code(s): ER.) *D. Frank*

115C. Learning from the U.S. Great Depression. *

Examines U.S. society, politics, and culture during the 1930s, with emphasis on the relationship between social movements and public policy, and dynamics of race, ethnicity, immigration, and gender, and dynamics between labor, business, and the state. *D. Frank*

117. Wired Nation: Broadcasting & Telecommunications in the US from the Telegraph to the Internet. *

Explores the history of telecommunications systems in the US starting with the telegraph, the telephone, wireless telegraph, radio, television and the Internet. Students learn about the development of these systems and the cultures that they foster. *M. Lasar*

118. The Global Cold War, 1945-1991. W

Explores the history of the Cold War from a global, multinational perspective. Begins with the opening salvos between the United States and the Soviet Union in 1945, and concludes with the collapse of the latter empire in 1991. *M. Lasar*

121A. African American History to 1877. F

A survey of pre-contact Africa, indigenous social structures, class relations, the encounter with Europe, forced migration, seasoning, resistance, Africa's gift to America, slavery and its opponents, industrialization, emigration vs. assimilation, stratification, Convention Movement, Black feminism, Civil War, and Reconstruction. (General Education Code(s): ER, E.) *D. Anthony*

121B. African American History: 1877 to the Present. W

A survey of the period from 1877 to present, highlighting Jim Crow, Militarism, Black feminism, WWI, New Negro, Garveyism, Harlem Renaissance, Black Radicalism, Pan Africanism, Depression, WWII, Desegregation Movement, Black Power, 1960s, Reaganism. Cultural and economic emphases. (General Education Code(s): ER, E.) *D. Anthony*

123. Immigrants and Immigration in U.S. History. W

Introduces U.S. immigration history from the colonial era to the present, with emphasis on the recent past. Particular attention given to changing immigration patterns; the character of the immigrant experience; and the range of responses to immigration, including nativism. (Also offered as Community Studies 123. Students cannot receive credit for both courses.) (General Education Code(s): ER.) *D. Brundage*

124. American Empire. *

Examines U.S. expansion and subsequent ascent to global power. In tracing the presence of the U.S. in different areas of the world during the 20th century, course considers the ideas, politics, gender, and social relations that have influenced imperial aspirations. *L. Haas*

125. California History. S

California had a multi-ethnic indigenous society for centuries. Course traces the persistent multi-ethnic quality of the region as it became part of the Spanish empire, Mexico, and the United States. Considers the many diasporas that have shaped California's steady connection to the world, especially to Mexico and other nations that border the Pacific. (Formerly California History.) (General Education Code(s): ER.) *L. Haas*

126. From Indigenous Colonial Borderlands to the U.S.-Mexico Border. *

Examines the interactions and integration of indigenous people and settlers in the Southwest U.S. and Northern Mexico from a region defined by its indigenous colonial borderlands to national borders. Explores the connections between the U.S. and Mexico. Within the deeply cross-cultural region studied, also examines the particular histories of states, indigenous peoples, and Mexican-origin groups and regions. (Formerly History of the Southwest: Colonial Period to 1920.) (General Education Code(s): ER, E.) *L. Haas*

127. Race and the American City. *

History of racial and ethnic minorities in the American city in the 19th and 20th centuries. Examines the experiences of several non-white groups, with analyses of race, class, culture, gender, acculturation, and implications for social policy in the urban environment. Satisfies American History and Institutions Requirement. (General Education Code(s): ER, E.) *P. Castillo*

128. Chicana/Chicano History. F

A survey course on the social history of the Mexican (Chicana/o) community and people in the U.S. through the 20th century. Themes include resistance, migration, labor, urbanization, culture and politics. Satisfies American History and Institutions Requirement. (General Education Code(s): ER, E.) *P. Castillo*

129. History and Public Policy. S

Helps students better understand the various social/economic/political issues of public policy by providing a historical perspective analysis. Each student is required to participate in a public history/public service internship. Satisfies American History and Institutions Requirement. (General Education Code(s): PR-S.) *P. Castillo*

130. History of Modern Cuba. S

Covers from the Cuban sugar revolution (late 18th century) to the socialist revolution and its aftermath (1959–present). It is intended to be not only a modern history of Cuba but also a broader history of Latin America through the case of Cuba. (General Education Code(s): E.) *M. Diaz*

131. Women in Colonial Latin America. W

Introduction to the social history of Latin America through a focus on the inflections of class and ethnicity on gender in this region. First six weeks focuses on the colonial period. The last three weeks covers the 19th and 20th centuries. (Formerly *Women in Latin America*.) *M. Diaz*

132. History of the Caribbean: Colonial Period. *

A study of the Caribbean from the conquest to the abolition of slavery in the 19th century. Focus on the Greater Antilles, particularly the Spanish Caribbean. Emphasis on economic and social issues such as colonialism and the role of sugar production, slavery, and race/ethnicity in these multicultural societies. (General Education Code(s): E.) *M. Diaz*

133. Topics in Colonial Latin American History, Early and Middle Period. *

Studies Pre-18th century colonial Latin America, with particular emphasis on Peru and Mexico. Topics include: strategies of colonization; cities and urban life; and knowledge, technology, and the professions (ethnographic projects, indigenous intellectuals, schools and universities, medicine and hospitals, the law and the courts). (General Education Code(s): E.) *M. Diaz*

134A. Colonial Mexico. F

Covers the social, cultural, economic, and political history of colonial Mexico (New Spain). Special attention paid to colonial identity formation, religion, and labor systems. Begins by examining indigenous societies prior to the arrival of Europeans and concludes with Mexico's independence movement in the early 19th century. (Formerly *History of Mexico, 1500–1850*.) (General Education Code(s): ER, E.) *M. O'Hara*

134B. History of Mexico, 1850 to Present. *

Social, cultural, economic, and political history from the triumph of Liberalism to the present day, focusing on four key periods: the dictatorship of Porfirio Diaz (1900–1910), the armed phase of the Revolution (1910–1920), the consolidation of revolutionary programs and a "single-party democracy" (1920–1940), and the developmentalist counter-revolution since 1940. Provides background for understanding the Mexican diaspora to the U.S. (General Education Code(s): CC, E.) *M. O'Hara*

137A. Africa to 1800. *

Introduction to history of Africa. Topics include states and "stateless" societies, culture, society and economy in the pre-modern era, stratification, oral traditions, long distance trade, the coming of Islam, and the evolution of the South Atlantic system and its social, political, and other consequences. Some background knowledge of Africa helpful. (General Education Code(s): CC, E.) *D. Anthony*

137B. Africa from 1800 to the Present. *

How Africa lost its continental, regional, and local autonomy in the era of European imperialism. The components of European hegemony, Christian proselytization, comparative colonial strategies and structures, nationalism, decolonization and independence and the disengagement from neo-colonial patterns and the colonial legacy. Case studies from northern and sub-Saharan Africa. Some background knowledge of Africa helpful. (General Education Code(s): CC, E.) *D. Anthony*

137C. African Cinema. *

Historical study of modern African cinematography from the emergence of film as a tool of social control in the imperial and colonial periods to its theoretical and practical transformation by African cineastes in the post-independence era. Films and videos from northern, eastern, western, central/equatorial, and southern Africa viewed. Prerequisite(s): course 30 or 137A or 137B, or by permission of instructor. (General Education Code(s): CC, E.) *D. Anthony*

140B. History of Qing China, 1644-1911. F

Introduces students to how Qing China arose, expanded, and struggled to enter the modern world. Focuses on what the Qing empire had in common with other agrarian empires across Eurasia, commercialization and communication networks, elite mobility and peasant revolts, political legitimacy of the alien rule, maintaining social order (such as merchants' control and gender segregation), massive population growth and internal migration, as well as its conflicts with the industrial West. (General Education Code(s): CC.) *M. Hu*

140C. Revolutionary China 1895-1960. W

Explores history of China from the late 19th century to the early years of the People's Republic, focusing on the end of imperial rule, the sources and development of revolution, and early attempts at socialist transformation. (General Education Code(s): CC, E.) *E. Honig*

140D. Recent Chinese History. S

Explores history of China from establishment of the People's Republic of China to the present, focusing on competing strategies of socialist transformation, urban/rural relations, and the effects of the post-Mao economic reforms. (General Education Code(s): CC, E.) *G. Hershatter*

141B. Classical Chinese Culture and Literature, Sixth Century through 16th Century. *

Survey of writing and culture from the Tang through early Ming dynasties (sixth century C.E. through 16th century C.E.). Themes include literary, religious, and philosophical innovation; courtly life; cultural contacts with non-Chinese people; and transformations of state and society. Satisfies the Pre- and Early Modern and World Literature concentrations; also satisfies the Global, Poetry, and Pre- and Early Modern distribution requirements. (Also offered as World Lit & Cultural Studies 136. Students cannot receive credit for both courses.) (General Education Code(s): E.) *C. Connery*

142. World History of Science. W

Searches for a common ground in which historians and scientists can communicate with each other from a global perspective, first situating the modern world in a long span of human history to reveal our time as a distinct stage of global development. Science and technology, the focus of this course, play a crucial role in the formation of the modern world. (General Education Code(s): SI.) *M. Hu*

145. Gender, Colonialism, and Third-World Feminisms. *

Introduces the history of feminism in the third world, focusing on the ways in which colonialism (and post-colonialism) has shaped gender relations and on the feminist movements that have emerged in response to the impact of colonialism. (General Education Code(s): E.) *E. Honig*

147A. History of Premodern India. *

A study of religions (Vaisnavism, Tantrism, Islam, Sikhism), art, literature, and social movements in their historical contexts from 1000 A.D. to 1800. (General Education Code(s): CC, E.) *D. Basu*

147B. Political and Social History of Modern South Asia. F

Social, political, and religious movements in the colonial and postcolonial contexts of the 19th and 20th centuries in modern and contemporary South Asia. (General Education Code(s): CC, E.) *D. Basu*

148. Cinema and History: Film Author Satyajit Ray. W

Satyajit Ray is widely acclaimed as a master of world cinema. Course considers his work to

examine "authorship" at multiple levels: the cultural, historical, social, and familial contexts and the relationship of his film to fiction, the politics and poetics of his vision, and its relationship to colonial, nationalist, and postcolonial India. Also studies the question of gender and the underclass. (General Education Code(s): E.) *D. Basu*

150A. Ancient Japan. F

Surveys the history of the peoples of the Japanese islands from prehistorical migrations through the 15th century. Emphases include examination of social structures, political formations, cultural production, and religion. (General Education Code(s): CC.) *N. Aso*

150B. Tokugawa Japan. *

Surveys the history of the peoples of the Japanese islands from the middle of the 15th century to the middle of the 19th century. Focus is on the era of civil war, the formation of the early modern federated state, social structure, and cultural production. *A. Christy*

150C. Modern Japan. *

Surveys the history of the peoples of the modern Japanese nation from the Meiji Restoration to the present. Focuses on the formation of the modern state, empire, social movements, and cultural production. (General Education Code(s): CC, E.) *N. Aso*

150D. The Japanese Empire, 1868-1945. *

Examines the history of the Japanese colonial empire from 1868 to 1945, including the colonies of Taiwan, Korea, Micronesia, and Manchuria. Considers how the colonies were ruled and what the legacies of the empire have been. *A. Christy, N. Aso*

154A. Classic Islamic Civilization. *

The civilization of Islam to 1258 A.D. Origins and early florescence, an international civilization, the coming of the steppe peoples. (Formerly course 161.) Enrollment limited to 35. (General Education Code(s): E.) *E. Burke*

155. History of Modern Israel. S

The conflict between Israelis and Palestinians is one of the most intractable disputes in our troubled world. Course begins with a glimpse of Palestine in the late 19th and early 20th centuries, surveys the rise and fall of utopian Zionism, pays especially close attention to the events of 1948 and 1967, and concludes by analyzing the collapse of hopes for peace after Oslo and Camp David meetings. (General Education Code(s): CC, E.) *B. Thompson*

160A. Athenian Democracy. *

Athenian democracy from foundation to the fourth century B.C., with emphasis on its practices and ideologies. Readings from ancient sources and modern theory. Topics to include foundations and development; Athenian concepts of freedom, equality, law, citizenship. Lectures and discussion. (General Education Code(s): CC.) *C. Hedrick*

160C. Topics in Greek History. *

Detailed consideration of some specific topic or period in Greek history, varying from year to year. Examples include Greek religion, Alexander, the Hellenistic world, the ancient Greek economy, and Greece and India; Thucydides and the Peloponnesian War; Greek art and archaeology. Enrollment restricted to history and classical studies majors. May be repeated for credit. (General Education Code(s): CC.) *C. Hedrick*

161B. Topics in Roman History. *

Detailed consideration of some specific topic or period in Roman history, varying from year to year. Examples include Roman religion, Augustus and the Roman Empire, Julio-Claudian emperors and the principate, Roman slavery, and Christianity and Rome. Enrollment restricted to history and classical studies majors or minors, or by permission of instructor. May be repeated for credit. *C. Hedrick*

161C. Age of Augustus. *

Surveys Rome's transition from Republic to Empire, and the politics, people, and literary and material culture of the principate. Enrollment restricted to history and classical studies majors and minors, or by permission of instructor. *J. Lynn*

163A. A History of Sin. *

Ancient and modern conceptions of sin, and remedies offered for it. Course is not a theology of sin and redemption, but an invitation to reflect on ways sin and fault have been imagined and formulated. (Formerly course 163.) *G. Hamel*

163B. Genesis: A History. *

Introduction to historical, textual, source, and redaction criticism of the book of Genesis and to exegesis as science and ideology. Texts, history, and iconography of neighboring traditions (Mesopotamian, Ugaritic, Egyptian, Greek) are also studied when appropriate. Course 44, Literature 80A, or some basis in Hebrew or Greek is strongly suggested. (General Education Code(s): CC.) *G. Hamel*

164A. Late-Medieval Italy, c. 1200-1400. *

Italy from the birth of the commune to the early Renaissance in Florence. Topics include urban life and social conflict, gender roles, St. Francis, the Black Death, female mystics, Dante, Boccaccio, humanism, artistic developments from Giotto through Donatello. Requires viewing several films outside of class. *C. Polecchiti*

164B. Renaissance Italy, c. 1400-1600. *

Italy from the Florentine Renaissance through the Reformation. Topics include social change and political consolidation, the rise of the papacy, court life, witch hunting, Machiavelli, artistic developments from Donatello through late Venetian Renaissance. Requires viewing several films outside of class. Course 164A recommended as preparation. *C. Polecristi*

165. The Power of Writing: Books and Libraries 600-1500. S

Surveys how books were made and used in Europe from 600-1500. Focuses on the relationship between book production and the development of libraries. Meets in Special Collections, McHenry Library. Exhibition as class project. Enrollment limited to 25. *E. Remak-Honnet*

168. Rise of the Dutch Republic. *

Focuses on the origin of the Republic in the revolt against Spanish overlordship, and its political, social, and economic development in the 16th and 17th centuries. *B. Sharp*

170A. French History: Old Regime and Revolution. *

French history from the Middle Ages through the Revolution. Focus on the rise and fall of "absolute" monarchy, the nature of Old Regime society, the causes and significance of the French Revolution. Attention to those who endured as well as to those who made events. *J. Beecher*

170B. French History: The 19th Century. F

Social, political, and cultural history of France from the Revolution to WWI. Focus on the Revolutionary tradition, the Napoleonic myth, the transformation of Paris, and the integration of the peasantry into the national community. Readings may include novels by Stendhal and Balzac. *J. Beecher*

171. Revolutions in France. *

Examines the political/social upheaval in 1789, 1830, and 1848 in light of the sweeping changes brought to 19th-century France by those other great "revolutions" of the age, the democratic and the industrial. Students' written work focuses on the comparative analysis of revolution. Offered in alternate academic years. *M. Traugott*

172A. German History. *

The development of German civilization, including philosophy and literature as well as politics and diplomacy in the nineteenth and twentieth centuries. *The Staff*

172B. German Film, 1919-1945. F

Introduction to German films from 1919 to 1945. Through combination of movies and documentaries, gain insight into political, economic, social, and cultural conditions of Weimar and Nazi Germany. *M. Cioc*

174. Spies: History and Culture of Espionage. W

Analyzes the roles of espionage and intelligence in modern European history with emphasis on major conflicts from the Franco-Prussian War through the Cold War and beyond. Also examines images of spies in popular culture from the early 20th century to the present. (Formerly course 80K.) (General Education Code(s): CC.) *B. Thompson*

175A. Medieval Russia. F

Medieval Russia. *P. Kenez*

175B. Modern Russian History. *

Modern Russian history from serf liberation in 1861 to the present. (Formerly Russian History.) *P. Kenez*

175D. History of Soviet Film. *

Does not stress questions of aesthetics or technical aspects of film making, but the changing ideology inherent in Soviet films. The goal of examining cinema is to enrich our understanding of Soviet history. Readings include works of famous directors and theorists—Eisenstein, Vertov, Pudovkin, and Kuleshov—in addition to secondary works by Denise Youngblood, Richard Taylor, Josephine Woll, and Anna Lawton. *P. Kenez*

178A. European Intellectual History: The Enlightenment. F

Study of European thought and literature from Hobbes and Swift to Rousseau and Goethe. Focuses on relation of ideas to their social and cultural context. Special attention to traditions of religious conflict and criticism rising from the Protestant Reformation; to the discovery of the world beyond Europe; and to the intellectual and cultural roots of the French Revolution. (Formerly *European Intellectual History*.) *N. Deutsch*

178B. European Intellectual History: The 19th Century. W

Study of European thought and literature from Blake to Nietzsche. Focuses on relation of ideas to their social and cultural context. Special attention to the rise and fall of the Romantic movement, to changing conceptions of history, and to the development of socialist and aesthetic critiques of industrial civilization. (Formerly *European Intellectual History*.) *J. Beecher*

178C. European Intellectual History, 1870-1970. *

Drawing on experiments in autobiography, the arts, and social theory, this course focuses on ideas and images of modernity in European culture. It also highlights the role of the intellectual as politically engaged or disillusioned witness in a violent century. Offered in alternate academic years.

(General Education Code(s): CC.) *B. Thompson*

178D. Russian Intellectual History. *

Focus on the emergence in 19th-century Russia of a westernized intelligentsia; its effort both to assimilate western ideas and to define the destinies of Russia; the shaping of the Russian revolutionary movement. Readings in Dostoyevsky, Turgenev, Herzen, and representative Russian Slavophiles, Populists, and Nihilists. *J. Beecher*

178E. Modern Jewish Intellectual History. *

Surveys European Jewish intellectual history from the Enlightenment to the present. Major themes include emancipation and assimilation, the flowering of Yiddish literature, the rise of Zionism, new variations on the messianic idea, and Jewish contributions to the culture of urban modernism. Offered in alternate academic years. (General Education Code(s): ER.) *B. Thompson*

180A. English History. *

Emphasis on the interaction between social, economic, religious, and political developments. An attempt to place these phenomena in the context of the wider European and world scene. The period from 1485 to 1689. *B. Sharp*

180B. English History. *

Considers how Britain became the pacemaker of modernity in the 18th and 19th centuries; how national, regional, class, and gender identities formed and altered; and how Britain coped with loss of global power in the 20th century. *B. Sharp*

183A. Nineteenth-Century Italy. F

Italian politics, culture, and society from the Napoleonic era through early leftist movements. Central emphasis on the Risorgimento and Unification. Other topics include: north-south conflict; banditry; urban change; growth of tourism; popular religion; family structures and gender; visual arts and opera. *C. Polecristi*

183B. Fascism and Resistance in Italy. W

Examines Italian politics, society, and culture (c. 1900-1950), emphasizing the Fascist regime; interdisciplinary focus emphasizing history, literature, and film. Course 183A recommended as preparation. (Formerly course 183.) *C. Polecristi*

185A. Conflict of Interest: War, Holocaust, and Industry in the Lodz Ghetto. *

Examines how Nazi war machine exploited Jewish slave labor in the Lodz ghetto industrial complex while a state apparatus systematically exterminated the workers. Includes a visit from a survivor of ghetto factories and graphics from ghetto workshops. Prerequisite(s): one upper-division history course. Enrollment restricted to juniors and seniors. (General Education Code(s): ER, E.) *The Staff*

185B. Rethinking the Holocaust: Bioscience, Race Theory, and Genocide. *

Traces the Nazi "Superstate" project from its origins at the conjunction of bioscientific theory and racist ideology to its conclusion in the Holocaust, providing a historical perspective for social and political dilemmas raised by contemporary biomedical advances. (General Education Code(s): ER, E.) *The Staff*

185D. Jewish Social Movements. *

Jewish social movements of the late 19th and 20th centuries, in Europe (Eastern and Western) and the U.S.: the confrontation between Hasidism and Haskalah, tensions between socialism and Zionism, between religiosity and secularism, the mutual influences among these tendencies. (Also offered as History of Consciousness 118. Students cannot receive credit for both courses.) Enrollment restricted to juniors and seniors. Enrollment limited to 20. (General Education Code(s): E.) *B. Epstein*

185E. The Historiography of the Holocaust. *

Offers a comprehensive historiography of the Holocaust, distinct from the narrowly focused perspectives generally presented in Holocaust studies, to familiarize students with the origins, evolution, and major developments in the Nazi genocide and its historical consequences. Enrollment restricted to juniors and seniors. (General Education Code(s): ER, E.) *The Staff*

185F. Private Lives, Family Histories, and the Holocaust Experience. *

Holocaust historiography has surveyed the broad landscape of genocide or focused narrowly on individual experience. Course examines the middle ground of family and its role in resistance during the destruction of communal existence and survival in the aftermath. (Formerly course 196Q.) Prerequisite(s): two upper-division history courses or permission of instructor. Enrollment restricted to junior and senior history, German studies, and classical studies majors. Enrollment limited to 20. (General Education Code(s): ER, E.) *The Staff*

185H. Women, Gender, and Jewish Modernity (1800-Present). S

Explores the impact of modernization upon women and the concepts of gender, both feminine and masculine, in Jewish societies across Europe, the Middle East, and India. *P. Daccarett*

185I. Latin American Jewish History in the Modern Period. F

Explores Jewish immigration settlement and identity negotiation in Latin America from the mid-19th Century to the present. *P. Daccarett*

185J. The Modern Jewish Experience. W

Historical comparative overview of the political, socio-cultural, and intellectual transformation of

Jewish societies in Europe and the Middle East from the late 18th Century to the present. *P. Daccarett*

185K. Jewish Life in Eastern Mediterranean Port Cities. *

Overview of the Jewish experience in important cities in the age of empire. Istanbul, Beirut, Alexandria, and Salonica were home to thriving, culturally diverse Jewish populations. Course explores these urban Jewish cultures, the institutions, and intellectual production. *P. Daccarett*

190. Advanced Research and Reading Seminars. *

An opportunity for advanced students to focus on specific research problems resulting in a substantial research paper of 25 pages, or discussion of assigned readings resulting in a series of short papers totaling 25 pages. Courses must be taken in area of concentration in order to count towards the major. *The Staff*

190A. Slavery and Race in Latin America. *

Covers comparative history of slavery in Latin America with questions of race in the colonial and national periods and key moments and debates in the historiography of slavery and its relation to ideologies of the past and the nations. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *M. Diaz*

190B. Race and the Nation in Latin America. S

Focuses on the ways in which nation and race have been thought about in Latin America throughout the 19th and 20th centuries. These concepts were closely intertwined, albeit in differing and changing ways, since the wars of independence from Spain and Portugal (1810-1825). Compares the ways in which "black," "Indian," and "racially mixed" ("mulatto" or "mestizo") have been socially constructed, ideologized, and contended in different countries, including Brazil, the Spanish-speaking Caribbean, Mexico, Peru, and Argentina. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *M. Diaz*

190C. Race, Class, and Gender in California History. *

The study of the social history of racial minorities and women in the historical development of California society. Emphasis on racial, class, and sexual conflict within the context of the history of California since 1848. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. Offered in alternate academic years. (General Education Code(s): W, E.) *P. Castillo*

190D. Tale of Two Cities. F

A comparative study of the social, economic, cultural, political, and geographical development of Los Angeles and Mexico City in the 20th century. Emphasis on the diverse peoples, changing physical environment and various images/interpretations of these two world cities. (Also offered as Latin American&Latino Studies 194P. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history and Latin American and Latino studies majors. Enrollment limited to 20. (General Education Code(s): W, E.) *P. Castillo*

190E. Topics in Chicana/o History. *

A seminar on the history of Chicanos/Mexicans in the United States, 1848 to the present. Topics include Chicana/o labor, family, social, urban, cultural, and political history. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *P. Castillo*

190F. Research Seminar in the Americas. *

Students learn how to conduct research and write history. Primary and secondary sources are extensively read. Research sources include a rich array of government documents, newspapers, memories and diaries, visual material and film. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors Enrollment limited to 20. (General Education Code(s): W.) *L. Haas*

190G. History and Theory. W

Each year students study one or more theorists or schools of philosophy and history. Themes vary by year and include: Walter Benjamin, Hayden White, Agnes Heller, the Frankfurt School, and the Subaltern School. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior history majors. *L. Haas*

190H. History of Time. F

Writing-intensive seminar on the experience, manipulation, and representation of time in history. Students pursue advanced research using primary and secondary sources. Prerequisite(s): two upper-division history courses and satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. O'Hara*

190I. California and the Borderlands. *

Complete original research in California and borderlands history in this senior research seminar. Focus on selected problems and themes. Assignments and discussions help students frame their research and edit their writing. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *L. Haas*

190J. Diaspora and Migration in World History. *

Diaspora studies recently have included a range of movements and people in colonial, post-colonial, and national dilemmas. Diaspora studies share historical themes with migration studies, and include the study of forced exile and situations of genocide and femicide experienced by indigenous and national minorities. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. *L. Haas*

190K. Wired Planet: Readings on the Global History of Broadcasting and Telecommunications. *

Locates common themes in the history of broadcasting and telecommunications throughout the world. Why do certain strategies for developing broadcasting and telecommunications systems succeed or fail? Why do some nations outstrip other nations of comparable development in the growth of their communications systems? Why do national or regional communication systems suddenly become more or less open—or more or less centralized? Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Lasar*

190L. Personal Politics in the New South. *

Examines the tensions between movements for political reform and reaction in the southern United States between Reconstruction and the second world war. Students develop a research paper grounded in primary research that addresses these questions. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; two upper-division history courses or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *C. Jones*

190M. History of Children and Culture of Childhood in the 19th Century. *

Explores the lives of children and the functions of the literary figure of the child in the cultural politics of the 19th century in the United States. Examines the historically contingent nature of childhood through historical, literary, and visual sources. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and two upper-division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *C. Jones*

190N. Topics in African History. *

Examines contemporary crises in Africa: the new South Africa, refugees, HIV/AIDS, children of war, blood or conflict diamonds, civil war, and genocide in Rwanda. Seminar format where students will be prepared to undertake studies on specific subjects and two rounds of 15–20 page papers. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *D. Anthony*

190O. African American Historiography. *

Major themes in contemporary African American historiography on a topical basis. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *D. Anthony*

190P. Early American Society and Culture. *

Explores subjects and themes in the political, social, and cultural history of early U.S. history from the colonial period through 1850. Includes critical reading of current scholarship and research in primary texts. The focus of this course is the production of a 25-page research paper. Recommended for senior history majors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Westerkamp*

190Q. The Novel and History. *

Explores novels and novelists in relation to the writing of historical scholarship. Breaking down the simplistic genre division between fiction and nonfiction, provides opportunities for students to read novels as historical evidence, novels as editorial commentary, and novels as analytical narrative. Students produce a series of papers that culminate in a 25-page research project. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and two upper-division history courses or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Westerkamp*

190R. Research in the History of American Religions. *

Readings and research in the history of religions in the United States. Readings focus on topics including the rise of evangelicalism; gender and religion; class, race, and religious diversity; and modernity. Students produce papers that culminate in a 25-page research project. Prerequisite(s):

Satisfaction of the Entry Level Writing and Composition requirements and two upper division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *M. Westerkamp*

190S. Women and Social Movements in the U.S. *

Examines history of women and social movements in the U.S., such as abolitionism, anti-lynching, Chinese and Jewish garment workers, Chicana farm labor activism, the American Indian Movement, the Ku Klux Klan, and the Civil Rights movement. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *D. Frank*

190T. Latin America in the Cold War. *

Writing-intensive seminar on Latin America during the Cold War. Particular attention given to U.S.-Latin American relations, including moments of covert or direct interventions. Students pursue advanced research using primary and secondary sources. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and two upper-division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. O'Hara*

190U. Power and Culture in the U.S. F

Students read historical monographs that explore, from a variety of race, class, and gender perspectives, how U.S. culture and thought have changed over time. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Lasar*

190V. The Corporation and Its Critics. *

Studies transformation of the U.S. corporation from limited tool in hands of state government to the central organizational unit of capitalism and crucial focus of American politics. Readings include influential histories of the corporation from Republic's early years through 1970s. Students debate impact of the corporation from Marxist, free market, anti-colonialist, and feminist perspectives. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Lasar*

190X. History of the Atlantic World, 1492-1824. W

Explores the transatlantic societies created by Europeans' colonization of the Americas, and their exploitation of African slaves. Questions whether the cultural, economic, and political links across the ocean integrated the adjacent lands into a fundamentally "Atlantic World." Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and two upper-division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *G. O'Malley*

190Y. The Atlantic Slave Trade. *

Before 1800, far more Africans than Europeans colonized the Americas, arriving unwillingly in the slave trade. Course examines the captives' experiences; the trade's organization and significance in the Atlantic economy; and the eventual movement to abolish the traffic. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and two upper-division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *G. O'Malley*

190Z. First-Person U.S. Foreign Policy. *

Explores the history of the United States foreign policy over the past 100 years through the writing, reassessments, and memoirs of individuals who played important roles in U.S. foreign affairs. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Lasar*

192. Directed Student Teaching.

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students submit petition to sponsoring agency. *The Staff*

193. Field Study.

To allow promising, well-qualified undergraduates to pursue directed programs of archival or archaeological study in the field under supervision of the UCSC history faculty, concentrating their work within a single given quarter. Students may take two or three courses concurrently. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Advanced Research and Reading Seminars. *

An opportunity for advanced students to focus on specific research problems resulting in a substantial research paper of 25 pages, or discussion of assigned readings resulting in a series of short papers totaling 25 pages. Courses must be taken in area of concentration in order to count towards the major. *The Staff*

194A. Gender, Class, and Sex in Shanghai. *

Focusing on Shanghai, course examines issues of gender, class, and sex in modern urban Chinese history. Given Shanghai's history as a treaty port, particular attention paid to ways in which its semi-colonial status inflected the articulation of gender identities, class formations and issues of

sexuality (particularly sexual labor). Also looks at Shanghai during the Maoist period and in the context of more contemporary economic reforms. (Also offered as Feminist Studies 194N. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and course 140C, or 140D, or 140E, or permission of instructor. Restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *E. Honig*

194B. Okinawan History. *

Examines the history of Okinawa with particular attention paid to the modern era. The goal is to give students a solid foundation in the historiography of major themes in the study of Okinawan society. (Formerly course 196X.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements two upper-division history courses, or permission of instructor. Enrollment limited to 20. (General Education Code(s): W.) *A. Christy*

194D. Topics in Korean History. F

Overview of Korean history with emphasis on international relations from tributary links with China through colonization by Japan to postwar division between patron states, the USSR and U.S. History of women in Korea also a major theme. (Formerly course 196Q.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194E. Women in Japanese History. S

Examines through both primary and secondary sources such issues as work, sexuality, education, class, and ethnicity in relation to constructions of female gender in Japanese society over the past several centuries, particularly focusing on the modern era. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *N. Aso*

194G. China Since the Cultural Revolution: Histories of the Present. *

Explores the rapid and often destabilizing shifts that have taken place in China since the late 1970s (the "reform era"), tracing the effects of China's earlier experiment with revolutionary socialism on the market-driven present. Examines how various meanings of reform are negotiated; changes in rural and urban environments; and class, gender, and ethnic differences. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *G. Hershatter*

194H. Gender, Family, and State in China: 1600-Present. *

Explores gender, family, and state power in China from 1600 to present, examining gendered norms, education, political movements, revolutionary practice, sexuality and sex work, and state interventions in contemporary families. Responses to reading and a research paper required. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *G. Hershatter*

194M. Literati, Samurai, and Yangban: Comparative History of State and Elite in East Asia, 1600-1900. W

Critically examines the formation of political elites in East Asia. Compares literati in Ming and Qing, China; samurai in Tokugawa, Japan; and yangban in Joeson, Korea. Each group occupied specific roles and functions in their state and society but differed in scale and character. Students cannot receive credit for this course and course 294M. Prerequisite(s): course 40A or 140B, and one additional upper-division history course or permission of instructor, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Hu*

194N. Comparative Studies in Modern Asian History. F

Seminar on cultural and social changes in Asia, mainly in the 19th and 20th centuries. Topics include colonial encounters, cities, narratives of ordinary persons, nationalism and identity, visual cultures, and Orientalism. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *D. Basu*

194R. Cairo: The City Victorious, 1750-2000. *

The modernization of a world city from 1750 to the present. Cairo's social and cultural history (literature, film, music) against the background of its changing political and economic contexts. Topics include: orientalism, nationalism, imperialism, minorities, women, migration, urbanism, popular culture, tourism. Prerequisite(s): Two upper-division history courses; and course 41 or 101A or 101B; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *E. Burke*

194S. Comparative Studies in World History. *

Explores a broad topic in world history (varies from year to year) such as settler colonial nationalism, mission, involuntary labor, pre-political resistance, or defensive modernization in comparative historical perspective. (Formerly course 196W.) Enrollment limited to 20. May be repeated for credit. (General Education Code(s): W.) *The Staff*

194U. The Cold War and East Asia. *

Considers through primary and secondary sources the events and aftermath of the Cold War in East Asia in terms of state formation, domestic and foreign policy, and protest movements in China, Taiwan, Korea, and Japan with reference to Vietnam. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *N. Aso*

194X. The Cold War in the Mediterranean, 1942-1991. *

Writing-intensive course on the Mediterranean. Topics include: U.S. relations with the region (including direct and indirect intervention), local responses, and cultural transformations. Students pursue advanced research using primary and secondary sources. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and two upper-division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *E. Burke*

194Y. Memories of WWII in the U.S. and Japan. S

Research seminar comparing U.S. and Japanese memories of World War II. Topics include war origins, total war, the atomic bomb, war responsibility, reparations, memorials, museums, and monuments. Primary work devoted to research in original texts and documents. Prerequisite(s): two upper-division history courses or permission of instructor; satisfaction of the Entry Level Writing and Composition requirements; course 80Y recommended. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *A. Christy*

195A. Thesis Research.

Prerequisite(s): petition on file with sponsoring agency (students should have completed two upper-division courses, preferably in their area of concentration). *The Staff*

195B. Thesis Writing.

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; petition on file with sponsoring agency (students should have completed two upper-division courses, preferably in their area of concentration). (General Education Code(s): W.) *The Staff*

196. Advanced Research and Reading Seminars.

An opportunity for advanced students to focus on specific research problems resulting in a substantial research paper of 25 pages, or discussion of assigned readings resulting in a series of short papers totaling 25 pages. Courses must be taken in area of concentration in order to count towards the major. *The Staff*

196A. Is British History Possible?. *

An examination of the possibilities and problems of producing a history that is genuinely British: one that pays due attention to the histories of the four modern peoples or nations of the British archipelago. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *B. Sharp*

196B. Social Protests in Late Medieval and Early Modern England. *

Explores the social, cultural, economic, and political context of popular protest in England from 1347 through 1631. An important dimension of that exploration is an examination of official government responses to riot and rebellion. Two courses in medieval or early modern European history recommended as preparation. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; two upper-division history courses. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *B. Sharp*

196C. Modern Italian Culture. *

Developments in Italian culture and society from the postwar to the present. Topics include north-south divisions, family and gender, cinema and modernity, urbanization, mafia, and terrorism. Prerequisite(s): course 164A or 164B or 183A or 183B, or permission of instructor and one upper-division history course; and satisfaction of the Entry Level Writing Requirement. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *C. Polecristi*

196E. Modern Irish History. F

Aims to illuminate major themes and turning points of modern Irish history: the causes and consequences of the famine; the development of Irish nationalism; revolution, civil war, and partition; and the recent economic boom. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *B. Thompson*

196F. European Environmental History. *

Examines interactions between human societies and the natural world in Europe. Topics include: impact of European imperialism; changing attitudes toward the natural world; the Industrial Revolution in ecological perspective; the beginnings of preservationist and conservationist movements; the evolution of 20th-century environmentalism; and the historical context of contemporary environmental problems. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General

Education Code(s): W.) *B. Thompson*

196G. Modern Germany and Europe. W

A senior reading and research seminar that explores the major historiographic debates in German history during the 19th and 20th centuries. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history, German studies, and Jewish studies majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Cioc*

196I. The French Revolution. *

Students conduct original research on the French Revolution of 1789 based on mix of primary and secondary sources. Classroom discussions focus on interpreting contemporary documents and addressing historiographical issues. Seminar format with significant written requirements. Presumes familiarity with the period. Prerequisite(s): course 70B or 170A or 171. Students who have taken course 70B must also have taken one upper-division history course. Enrollment restricted to history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Traugott*

196J. Autobiography and History. *

Students prepare research papers using a combination of sources, both primary (the autobiographies, diaries, or memoirs of historically relevant figures) and secondary (chronologically and thematically appropriate works of synthesis that help contextualize the lives of their subjects). Seminar format with significant written requirements. Prerequisite(s): satisfaction of the Entry Level Writing requirement; Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Traugott*

196K. Studies in European Intellectual History. *

Topics in European intellectual history from the French Revolution to World War I. Readings exemplifying approaches from history of ideas and intellectual biography to recent studies of rhetoric and political culture. Preparation and presentation of research paper. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *J. Beecher*

196M. Shtetl: Eastern European Jewish Life. *

For several centuries, the shtetl functioned as the center of Jewish life in Eastern Europe. Alternately mythologized and pathologized, the shtetl continues to exist as an imaginary space that defines and distorts the historical image of Eastern European Jewish life. Students cannot receive credit for this course and course 257. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and two upper-division history courses. Enrollment restricted to junior and senior history and Jewish studies majors. Enrollment limited to 20. (General Education Code(s): W.) *N. Deutsch*

196N. Eastern European Jewish Social History. F

Study of 19th- and 20th-century Eastern European and Russian Jewish social history. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history, German studies, and Jewish studies majors. Enrollment limited to 20. (General Education Code(s): W, E.) *P. Daccarett*

196O. Russian Revolution, 1917-1932. *

Study of the major political, social, and intellectual conflicts and transformations of the period. Topics include February and October revolutions, Civil War, NEP, rise of Stalinism, and collectivization. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *P. Kenez*

196P. Hitler and Stalin. W

A discussion of 20th-century totalitarianism. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history, German studies, and Jewish studies majors. Enrollment limited to 20. (General Education Code(s): W.) *P. Kenez*

196R. Social World of Roman Palestine. *

Inquiry into the structures of Roman Palestine on the basis of parables from the synoptic Gospels, the Dead Sea Scrolls, Josephus, inscriptions, and archaeological discoveries. Physical, social, economic, and ideological conditions are researched in an ethnographic fashion. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses. Enrollment restricted to junior and senior history, classical studies, and Jewish studies majors. Enrollment limited to 20. (General Education Code(s): W.) *G. Hamel*

196S. Special Topics in Ancient History. S

Seminar focuses on different topics in ancient history. In addition to assigned readings, the student is expected to do additional research that culminates in a 20-page paper on a topic of the student's choice. General topics for the course will vary from year to year. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, two upper-division history courses, or permission of instructor. Enrollment restricted to junior and senior history majors and classical studies majors. Enrollment limited to 20. (General Education Code(s): W.) *C. Hedrick*

196U. Topics in Medieval History. *

Addresses contemporary and modern interpretations of the events relation to medieval history. Through critical discussion and debate, assesses the value and limitations of various historical sources, as well as developing skills in reserach, presentation-making, and writing. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 102A or 103, and one upper-division history course, or by permission. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): W.) *B. Catlos*

196Y. Saints and Holiness in Medieval Europe. S

Examines popular religious belief and practice, including conversion, the cult of the saints, relics, pilgrimage, miracles and visions. Emphasis on Medieval Europe, but some attention also paid to modern patterns of devotion. Prerequisite(s): two upper-division history courses; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior history majors. Enrollment limited to 20. (General Education Code(s): W.) *C. Polecristi*

198. Independent Field Study.

Student's supervision is conducted by a regularly appointed officer of instruction by means other than the usual supervision in person (e.g., by correspondence) or student is doing all or most of the course work off campus. May be repeated for credit. *The Staff*

199. Tutorial.

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits).

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Methods and Theories of History. F

An overview of theories, methods, and philosophies concerning the nature and production of history. Topics vary with instructor. Enrollment restricted to graduate history students and others by permission of instructor. Enrollment limited to 20. *N. Deutsch*

201. Directed Research Colloquium. W

Having already prepared a bibliography and research prospectus in a graduate research seminar, students will undertake further research on their projects, write a 25–30 page research paper, and present their work to their fellow students. Prerequisite(s): history graduate research seminar. Enrollment restricted to graduate history students. Enrollment limited to 15. *A. Yang*

204A. History of Gender Research Seminar. *

Introduction to theories and methods employed in gendered historical research. Readings are drawn from a range of chronological, national, and thematic fields and explore the intersection of gender analysis with such historical problems as the body and sexuality, modernity, national identity, and production/consumption. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Westerkamp*

204B. Approaches to Social and Cultural History. *

Graduate reading course focusing on both classic and contemporary approaches to social and cultural history. Readings induce: Bakhtin, Benjamin, Foucault, Auerbach, and Berlin, and a variety of more recent studies in social, cultural, and intellectual history. Course not limited to graduate students in History.(Formerly *Society and Culture Research Seminar*.) Enrollment restricted to graduate students. Enrollment limited to 15. *J. Beecher*

204C. Colonialism, Nationalism and Race Research Seminar. S

Research seminar introducing theories and methods of the comparative histories of race, ethnicity, colonialism, and nationalism. Enrollment restricted to graduate students. Enrollment limited to 15. *M. O'Hara*

205. Diaspora and World History. *

Examines the histories and historiography concerning diaspora. This area of study includes populations from Asia, Africa, Europe, and the Americas. Students study the histories of diasporic populations, and the questions, theory, and methods that scholars use to approach the subject. Enrollment restricted to graduate students. Enrollment limited to 10. *L. Haas*

210A. Readings in U.S. History. F

Introduction to major themes and controversies in the interpretation of U.S. history. Readings cover both chronological eras and topical subjects, often in a comparative context: colonial and early national periods. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Westerkamp*

210B. Readings in U.S. History. *

Introduction to major themes and controversies in the interpretation of U.S. history. Readings cover both chronological eras and topical subjects, often in a comparative context: 19th century. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Frank*

215A. Topics in American History: U.S. Labor and Working Class History. *

Addresses topics in history of working people, the labor movement broadly defined, and political-

economic change in the U.S. Topics include race, ethnic and gender dynamics, and U.S. labor and working-class history in global context. Enrollment limited to graduate students. Enrollment limited to 15. *D. Frank*

215B. Visions of Progress. *

Explores the emergence of the welfare/regulatory state in the United States from the 1870s to World War I, examining different schools of historical thought about this period. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Lasar*

215C. U.S. Immigration and Ethnic History. S

Introduces key issues and debates in United States immigration and ethnic history. Topics include causes of immigration; constructions of race, gender and ethnicity; assimilation; transnationalism; and forces shaping immigration policy. Enrollment restricted to graduate students. Enrollment limited to 10. *D. Brundage*

220. The Atlantic World, 1500-1800. *

Explores the economic, social, and cultural history of early America in terms of its Atlantic connections and intersection with the cultures of early modern Europe, Africa, and Latin America. Builds upon previous work in early America and early modern Europe, challenging students both to work comparatively and to break out of traditional geographic models. (Formerly *Topics in American History: The Atlantic World 1500-1800*.) Enrollment restricted to graduate students. Enrollment limited to 15. *M. Westerkamp*

221. Empires and New Nations in the Americas. *

Compares the history of the colonial and 19th-century Americans through a world-history perspective. Focuses on the interrelated themes of indigenous histories, slavery and other forms of servitude, commodity production, and the meaning of equality and freedom in new nations. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Haas*

225. Spanish Colonialism. *

Reading-intensive graduate seminar with emphasis on theoretical and historiographical questions regarding the field of Spanish colonialism in the Americas. Students encouraged to engage in discussions of comparative colonialisms. Enrollment restricted to graduate students. Enrollment limited to 10. *M. Diaz*

227. Gender and Colonialism. *

Explores the relationship between colonialism and gender. Examines the construction of gender categories (in conjunction with race) in the context of colonial conquest and rule; contested definitions of motherhood, domesticity, and citizenship; and regulation of sexuality. Enrollment restricted to graduate students. *E. Honig*

230A. Readings in Late Imperial China. *

Survey of the major works on and historiographical controversies about Qing Dynasty (1644-1911) China. Enrollment restricted to graduate students. Enrollment limited to 20. *M. Hu*

230B. Engendering China. S

Reading seminar on the history of Chinese gender, focusing on the Qing dynasty (1644-1911) to the present. Topics include marriage and family, sexuality, work, the gendered language of politics, and major reform movements. Enrollment restricted to graduate students. Enrollment limited to 20. *E. Honig*

230C. Readings in 20th-Century China. F

A survey of major Western-language works and historiographical controversies in Chinese history from 1900 to the present. Weekly readings emphasize particular social and political movements as well as long-term changes in urban and rural society. Enrollment restricted to graduate students. Enrollment limited to 20. *G. Hershatler*

238A. Research Methods: China. *

An introduction for graduate students to the use of major research tools and sources in Chinese history since 1600, with a focus on 20th-century materials. Students complete a series of bibliographical exercises and prepare a research prospectus. (Formerly course 228A.) Enrollment restricted to graduate students. Enrollment limited to 20. *G. Hershatler*

238B. Research Methods: China. *

Building on the research and bibliographic skills developed in course 228A, students develop a research topic and write a paper of 20-30 pages using primary sources as appropriate in English, Chinese, and/or Japanese. (Formerly course 228B.) Enrollment restricted to graduate students. Enrollment limited to 20. *G. Hershatler*

242. Readings in Modern Japan. *

A graduate course intended to give students a fundamental understanding of the major themes in the study of modern Japanese history. Central themes include modernity and modernization, colonialism, postwar recovery, gender, race, and nationalism. (Formerly course 210.) Enrollment restricted to graduate students. Enrollment limited to 15. *N. Aso*

243. Transnational Japan. W

Examines how "Japanese" history has been forged across, outside, and beyond the boundaries of the modern nation-state of Japan. Considers how Japan has transformed the world. Students debate how the world made Japan and how Japan re-made the world. Enrollment restricted to

graduate students. Enrollment limited to 10. *A. Christy*

244. Gender and Japanese History. *

Examines—through primary and secondary sources—constructions of gender (masculine, feminine, and transgender) in Japanese society over the past several centuries, focusing on the modern era. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Aso*

250A. Readings in European Social and Cultural History. *

A readings seminar that introduces beginning graduate students to some of the major conceptual and methodological approaches to early modern European social and cultural history, 1400–1789. (Formerly course 205A.) Enrollment restricted to graduate students. Enrollment limited to 20. *B. Sharp*

250B. Readings in European Social and Cultural History. *

A readings seminar that introduces beginning graduate students to some of the major problems in modern European social and cultural history, 1789 to the present. (Formerly course 205B.) Enrollment restricted to graduate students. Enrollment limited to 20. *P. Kenez*

256. Nationalism, Anti-Semitism, and Jewish Resistance in World War II. *

Jewish resistance to Nazism during World War II, in Eastern Europe, and its historical context. Includes the pre-war rise in nationalism and anti-Semitism in Poland and Lithuania, Jewish integration in the Soviet Union, and the consequences for wartime resistance. (Also offered as History of Consciousness 243A. Students cannot receive credit for both courses.) Enrollment restricted to seniors and graduate students. Enrollment limited to 15. *B. Epstein*

257. Shtetl: Eastern European Jewish Life. *

For several centuries, the shtetl functioned as the center of Jewish life in Eastern Europe. Alternately mythologized and pathologized, the shtetl continues to exist as an imaginary space that defines and distorts the historical image of Eastern European Jewish life. Students cannot receive credit for this course and course 196M. Enrollment restricted to graduate students. Enrollment limited to 20. *N. Deutsch*

280A. History Graduate Proseminar: Teaching Pedagogy (2 credits). F

Devoted to professionalism and socialization of history graduate students. Includes formal and informal meetings with faculty and other graduate students. Topics include TAs, designing course syllabi, pedagogy, teaching technologies, and teaching in different venues. This course is required for first-year students; however, it is open to all other graduate students as needed. Enrollment restricted to graduate students. May be repeated for credit. *N. Aso*

280B. History Graduate Proseminar: Research Presentations and Grant Writing (2 credits). W

Devoted to professionalism and socialization of history graduate students. Topics include discussion of researching grants; effective CV writing; successful grant applications and publication proposals; and conference paper and panel proposals. Required for first-year graduate students; however, open to all history graduate students as needed. This course is required for first-year students; however, it is open to all other graduate students as needed. Enrollment restricted to graduate students. May be repeated for credit. *N. Aso*

280C. History Graduate Proseminar: Job Market (2 credits). *

Devoted to professionalism and socialization of history graduate students. Includes formal and informal meetings with faculty and other graduate students. Topics include researching position; preparing a CV and the job-application letter; preparing for an interview; practice interview; preparing a job talk and/or teaching presentation; and practice job talk. This course is required for first-year students; however, it is open to all other graduate students as needed. Enrollment restricted to graduate students. May be repeated for credit. *C. Jones*

283. Foreign Language Preparation (2 credits). F,W,S

Independent study course in which history graduate student reads selected texts to fulfill foreign language requirement. Student meets with instructor to discuss readings, deepening his knowledge of the foreign language. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

284. Qualifying Examination Preparation (2 credits). F,W,S

Independent study course designed to help students prepare for qualifying exams. Students meet on regular basis with one or more members of qualifying examination committee to monitor preparation for exam. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

285. Readings in Research Field (2 credits). F,W,S

Independent study focusing on selected texts or authors in history or historical theory. Students meet on regular basis with instructor to discuss readings and deepen their knowledge of a particular author or historical theory. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

286. Research Colloquium on Colonialism, Nationalism, and Race (2 credits). F,W,S

Acquaints students with the department's thematic research clusters in their field to coordinate training in historical research. Students meet on a regular basis with a faculty member of a particular cluster to discuss most important readings in the field. Enrollment restricted to graduate students. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

287. Research Colloquium on Gender (2 credits). F,W,S

Acquaints students with the department's thematic research clusters in their field to coordinate training in historical research. Students meet on a regular basis with a faculty member of this cluster to discuss most important readings in their field. Enrollment restricted to graduate students. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

288. Teaching Assistant Preparation (2 credits). F,W,S

Independent study designed to help history graduate students prepare to teach in an area of history outside their specialization. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

289. History Colloquium (2 credits). F,W,S

Independent study designed to foster departmental and cross-disciplinary participation in campus talks, colloquia, conferences, and events. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294M. Literati, Samurai, and Yangban: A Comparative History of State. *

Critically examines the formation of political elites in East Asia. Compares literati in Ming and Qing China; samurai in Tokugawa, Japan; and yangban in Joeson, Korea. Each group occupied specific roles and functions in their state and society but differed in scale and character. Students cannot receive credit for this course and course 194M. Enrollment restricted to graduate students. Enrollment limited to 20. *M. Hu*

297. Independent Study.

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research.

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Program Description

The study of visual culture encompasses the production, use, form, and reception of images past and present. It incorporates the painting, sculpture, and architecture traditionally defined by art history, and extends throughout the fields of visual imagery beyond the conventional boundaries formerly drawn by the academy. The History of Art and Visual Culture (HAVC) Department offers courses covering a wide variety of representations from the cultures of Africa, the Americas, Asia, Europe, and the Pacific Islands, including areas as diverse as ritual, performative expression, bodily adornment, landscape painting, installation art, and video games.

Students of visual culture at UC Santa Cruz (UCSC) investigate complex questions concerning the social, political, economic, religious, and psychological impact of images from the perspective of their producers, users, and viewers. Images play a central role in the formation of values and beliefs, including the perception of gender, sexuality, ethnicity, race, and class. Through attentive historical study and close analysis, students are taught to recognize and assess these systems of value, and are introduced to theoretical and methodological frameworks for future research.

The history of art and visual culture curriculum guides students in acquiring skill in critical thinking about visual culture, leading to a bachelor of arts (B.A.) degree. Each student who chooses to major or minor in visual culture devises an individual study plan with a faculty adviser. The lower-division courses, numbered 1-99, intended for general education students and prospective majors, provide an introduction to the field of visual culture according to geographic areas and visual traditions within those areas. Upper-division courses numbered 100-189 cover a broad range of issues in various aspects of world culture from earliest times to the present. Advanced upper-division courses focus on selected fields, topics, and methods. The most advanced courses, numbered 190 and 191, are taught in seminar format.

Declaring the Major

To declare the major, students must complete two of the required four lower-division history of art and visual culture courses chosen from two different geographical regions:

- 10s Africa and its Diaspora;
- 20s Asia and its Diaspora;
- 30s-40s Europe and the Americas;
- 50s Mediterranean;
- 60s Native Americas;
- 70s Oceania and its Diaspora

Students considering this major are encouraged to complete these courses early in their studies and consult with the history of art and visual culture undergraduate adviser to develop a plan of study. Transfer students should consult the Transfer Student/Transfer Credit section.

Program of Study

The history of art and visual culture major requires four lower-division and nine upper-division courses including the satisfactory completion of the senior comprehensive requirement. Students must take courses in each of the different cultural settings to ensure methodological and disciplinary breadth.

HAVC majors are also strongly encouraged to take at least one thematic or cross-regional course.

(Courses in 80s, 180s, and most 191s.)

Lower-Division Requirements

Four courses, each from a different geographical region listed above.

HAVC 80 may be used to fulfill the lower-division regional breadth requirement for regions 10 (Africa), 60 (Native Americas), or 70 (Oceania).

Upper-Division Requirements

Nine courses, as follows:

100A recommended during sophomore year, must be completed before senior year

101-191: eight courses required, including a seminar (190s and 191s) to satisfy the senior comprehensive (see Comprehensive Requirement below).

In completing upper-division course work, students must complete three upper-division courses (courses 101-191) from three different regions. Two of those regions must be a geographical area not studied at the lower-division level.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Students in history of art and visual culture meet the DC requirement by completing course 100A.

Senior Comprehensive Requirement

All seniors must complete one seminar, 190-191, as their "senior exit" course to satisfy the senior comprehensive requirement. Seminars can be taken for senior exit credit only by permission of the instructor. Within the context of this advanced seminar, students will produce carefully supervised work culminating in the completion of a written project that meets the standards of the senior level of achievement in the major. Students whose performance is outstanding are eligible for honors in the senior comprehensive.

Concentration in Religion and Visual Culture

This program is for students who wish to pursue the study of religion in conjunction with studies of visual culture. It consists of an individually planned sequence of courses, including a core set of lower-division courses to provide grounding in issues, methods, and a general history of visual culture; upper-division courses from within the department; and at least four upper-division courses from other departments that focus on the study of religion.

A student enters the concentration by proposing, in consultation with their faculty adviser, a sequence of upper-division courses to fulfill the religion and visual culture requirements. The declaration of major requirements for the religion and visual culture concentration are the same as listed in the Declaration of Major section. The faculty adviser for the religion and visual culture concentration is Raoul Birnbaum.

Languages

All majors are encouraged to study at least one foreign language. Graduate programs in visual culture, art history, and other related disciplines generally require competence in another language besides English. Students are encouraged to consult with their faculty adviser to discuss an appropriate course of language study.

Requirements for the Religion and Visual Culture Concentration

The 15-course curriculum of the religion and visual culture concentration is pedagogically distinct from that of history of art and visual culture. Students are required to take four lower-division classes (each from a different geographical area) and eleven upper-division courses, seven from within history of art and visual culture and four relevant upper-division courses taken from other departments.

Students in the religion and visual studies concentration complete the following required upper-division curriculum listed below.

Eleven courses, as follows:

- 100A recommended in sophomore must be completed before senior year.
- 101-191: six courses required, including a seminar (190s and 191s) to satisfy the senior comprehensive (see Comprehensive Requirement above).
- Four relevant upper-division courses in the study of religion from programs on campus such as anthropology, history, literature, and philosophy. (The department maintains a current list of approved courses that focus on the study of religion.)

Minor Requirements

Nine courses, as follows:

- lower-division: three courses from three different geographical regions;
- upper-division: six courses planned in consultation with a faculty adviser.

Department Advising

Undergraduate Adviser

The undergraduate adviser offers specific information about navigating through the program and the curriculum and assists students with requirements, prerequisites, policies and procedures, learning support, scholarships, and special opportunities for undergraduate research.

Faculty Advisers

Faculty are the best resource for learning about the philosophies and foundations of history of art and visual culture. Faculty advisers work individually with students to develop a specific course of study, recommend additional courses of interest, and discuss long-term career goals including education beyond the baccalaureate. A faculty adviser is assigned to each student by the undergraduate adviser during the declaration of major meeting.

Transfer Students and Transfer Credit

As preparation, transfer students are encouraged to fulfill at least three of the lower-division history of art and visual culture requirements prior to transfer. Refer to the ASSIST articulation agreements at www.assist.org for approved lower-division courses. A student may transfer up to six art history courses toward the major, only three of which may be upper division. Upper-division transfer credit is evaluated on a case-by-case basis and must be approved by the student's faculty adviser. Transfer students are strongly encouraged to contact the History of Art and Visual Culture Department before enrolling at UCSC.

Study Abroad

The University of California's International Office of Education offers numerous programs abroad in countries throughout the world. Students may receive transfer credit for a maximum of three upper-division art history courses taken through the EAP program (see Transfer Student/Transfer Credit above). Many EAP programs require competency in a language besides English (see Languages above). Students should make every effort to consult with a faculty member about their course of study before going abroad.

Careers

The preparation students receive from the baccalaureate of arts degree in history of art and visual culture provides skills that can lead to successful careers in law, business, and social services, in addition to a more specific focus on museum curating, art restoration, studies in architecture, and studies in art history leading to a graduate degree.

Graduate Study

There are many graduate programs of visual culture that lead to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degree in fields such as art history, cultural history, semiotics, rhetoric, history of religions, comparative arts, theory and criticism of art, and so forth. Most graduate programs require a reading knowledge of one or two languages other than English (see Languages above). Students who are contemplating graduate study should consult with their undergraduate and faculty advisers as early as possible in their undergraduate career.

Graduate Program

The History of Art and Visual Culture Department offers a course of study leading to the Ph.D. in visual studies. The Ph.D. is designed to steep our graduates in the most theoretically relevant methodologies for understanding the significance of visual artifacts and the social and cultural qualities of human vision (termed *visuality*); provide students with exposure to a range of cultural perspectives and visual artifacts drawn from around the world; and cultivate in our graduates the necessary skills and knowledge to secure and excel in academic and curatorial positions. The program is both interdisciplinary and flexible. Students work closely with their advisers and the director of graduate studies to craft personalized courses of study that advance their intellectual and professional goals.

The program employs a wide range of visual evidence for examination, without being constrained by traditional hierarchies of art. Fine arts, architecture, photography, film, performances, utilitarian objects, and popular entertainments all are primary source material for scholars in the field. The program at UCSC is particularly adept at illustrating significant differences in how disparate cultural groups interpret their visual worlds, given the breadth of cultural perspectives taught by our faculty. With scholars focusing on cultures in Africa, the Americas, Asia, Europe, and the Pacific Islands, visual studies at UCSC offers students an unparalleled opportunity to consider the role of social and cultural forces in guiding how and what their members see.

Graduate Program Requirements

Students entering with a B.A. take a total of twelve, 5-credit graduate courses during their first two years of study. Prior to being advanced to candidacy (normally by the start of their fourth year), students must enroll in a minimum of two graduate courses per quarter. Those entering with an M.A. may receive advanced standing based on the evaluation of the visual studies graduate committee. In no case will students entering with an M.A. have more than a year's worth of course work waived.

All students entering with a B.A. (or with an M.A. that is not in visual studies) must take four 5-credit core courses within their first two years: HAVC 201, *Introduction to Visual Studies* (fall); HAVC 202, *Critical Theory* (fall); and HAVC 203, *Theories and Histories of Seeing* (winter, taken twice). Students entering with an M.A. in visual studies will meet their core courses requirements after taking *Theories and Histories of Seeing* once.

Field Clusters/Field Specialties

Appreciating that most of our graduates will be required to fit themselves back into traditional disciplinary structures once they enter the academic job market, the program is designed to provide students with both new means of interpreting visual evidence and suitable depth of understanding in older disciplinary traditions. While all graduates will acquire a shared foundation in theories of visibility (attained through our core course requirements), individual student programs vary considerably depending on the type of department in which the student hopes to secure employment after graduation. In addition to completion of the core courses required of all students, each student will develop a cluster of individualized field courses in consultation with their adviser based on her/his particular professional goals.

Each student is required to take a minimum of four, 5-credit courses in a disciplinary cluster (beyond the core course requirements). This requirement pertains both to students entering with a B.A. and an M.A. Acceptable field cluster courses might center around a medium (i.e., painting or architecture), a temporal/stylistic category (i.e., Early Modern or Postmodernism), a cultural, national, or social group (i.e., Pacific Islanders or China), or a disciplinary approach (i.e., cultural anthropology or gender studies). Field clusters are developed in consultation with the student's adviser and, ideally, help lay the foundations for dissertation work. To count toward the degree, field clusters must receive prior approval from the visual studies graduate committee. Beyond the core and field courses, students admitted with a B.A. must complete an additional four 5-credit elective courses.

Students entering with a B.A. take four courses to complete the field cluster requirement and another four to meet their elective requirement. Of these eight courses, at least four have a visual studies designation, and at least three courses must be drawn from departments outside of visual studies. Students admitted with a non-visual studies M.A. must take as many as four elective courses beyond those designated core and field (depending on the determination of the visual studies graduate committee based on a review of previous graduate course work), while students admitted with a visual studies M.A. must take a minimum of one course.

Students entering the program with an M.A. in visual studies meet the same distribution requirements as those students entering with a B.A. Of the eight courses making up the field cluster requirements and elective courses, at least four must have a visual studies designation, and at least two courses must be drawn from departments outside of visual studies. Students entering with an M.A. that is not in visual studies meet their distribution requirement by selecting at least five courses with a visual studies designation and at least two courses drawn from departments outside of visual studies.

Language Requirement

Students must demonstrate reading knowledge of one foreign language prior to the start of their second year (either through attainment of a score of 550 or higher on the Educational Testing Service Graduate Student Foreign Language Test or through passage of a reading examination administered by the department).

Students are encouraged to master a second foreign language. Based on a student's area of interest, and the joint assessment of the student's adviser and the director of graduate studies, proof of proficiency in an additional language or languages may be required prior to the student being admitted to candidacy for the Ph.D. Should proficiency in additional languages be required, it must be demonstrated prior to the close of the student's third year of study.

Qualifying Examinations

After completing all course work and passing one language examination, students are required to pass a qualifying examination prior to the close of the fall quarter of their third year, unless a petition for an extension, demonstrating reasonable cause, is approved by the visual studies graduate program committee. The qualifying examination is divided into three topic areas, with each one including a written and an oral component. Each topic area should display historical breadth and variety of media. Two of the topic areas should ideally relate to the future dissertation topic, while one of the remaining must constitute an outside area, examining a topic that is chronologically, geographically, and/or methodologically distinct from the other two. Prior to the end of his/her second year, a student who entered the program with a B.A. should consult with his/her adviser to assemble a group of three faculty members who will serve as examiners and aid the student in assembling the necessary topic areas, compiling the needed

reading lists, and preparing for the written and oral components of the examination in each area. The examination will have two parts. In part one, each student will respond in writing to three general questions, one posed by each of their three examiners in the pre-arranged topic areas. In part two, each student will gather together with his/her examiners to field questions probing and clarifying the previously submitted written component of the qualifying examination. In order to pass the qualifying examinations, the student must receive the unanimous endorsement of the committee members.

Advancing to Candidacy

Advancement to candidacy follows and is contingent upon passing the qualifying examinations, all needed language examinations, and the subsequent appointment of a dissertation reading committee of at least three members.

Dissertation

After advancing to candidacy, a student must complete an approved dissertation prospectus, a colloquium, and dissertation, and pass an oral defense of the thesis. A written dissertation prospectus is due no later than the end of the second quarter following the student's completion of the qualifying examinations. The prospectus is a brief, concise essay (with bibliography) that defines the scope, methodology, and rationale for the proposed dissertation. It is prepared in consultation with the student's dissertation director, who must approve of the document prior to scheduling the colloquium.

The dissertation director, in consultation with the student and director of graduate studies, will invite four to five faculty members, in appropriate fields, to attend the colloquium and provide input on the prospectus and assess the student's preparedness to begin researching and writing the dissertation. Faculty participating in the colloquium need not be members of the dissertation committee, but should represent faculty whose expertise has bearing on the student's project. A student will pass the colloquium after having demonstrated to the satisfaction of all colloquium committee members adequate preparation to begin researching and writing the dissertation. The dissertation itself must make a significant and original contribution to the field of visual studies, as judged by each dissertation committee member.

Final Examination

An oral defense of the dissertation is the only final examination requirement, unless a petition to waive the oral defense, demonstrating reasonable cause, is approved by the student's primary adviser and the visual studies graduate program committee. The student's dissertation committee, under the supervision of the director of graduate studies, will conduct the examination. In the event that the director of graduate studies serves on the dissertation committee, the chair of History of Art and Visual Culture will oversee the defense. Interested faculty and students in the visual studies program will have the opportunity to observe the defense.

Designated Emphasis

Graduate students enrolled in doctoral programs at Santa Cruz may obtain a Designated Emphasis in visual studies on their Ph.D. degree by meeting the following requirements:

- Secure approval from a core member of the visual studies faculty to serve as an adviser for their Designated Emphasis.
- Have at least one core member of visual studies serve on either their qualifying exam or dissertation committee.
- Submit a significant piece of writing that demonstrates competency in the field. The writing could take the form of a seminar paper or dissertation chapter. The essay must meet the approval of the student's visual studies adviser.
- Successfully complete four graduate courses taught by either core or affiliated members of the visual studies program. The courses must form a coherent cluster in visual studies and be pre-approved by the student's Designated Emphasis adviser.

Normative Time from Matriculation to Degree

The visual studies Ph.D. program at UCSC is designed to require six years for students matriculating with a B.A. and five to six years (depending on advanced standing granted) for those entering with an M.A. The pre-candidacy period is two years for students entering with a B.A. and a minimum of one year for those arriving with an M.A. in visual studies. During this period students will devote themselves to coursework, completion of the language examination, some teaching, and, ideally, our teaching-related independent study course. Students will show competency in one foreign language prior to the start of their second year, and show competency in additional foreign language(s), as required, by the close of their third year, pass their qualifying examinations during the fall quarter of their third year, complete an approved version of their prospectus and schedule their colloquium for a date prior to the close of the spring quarter of their third year, and finish their dissertation and successfully defend it before the end of their sixth year.

**UCSC General Catalog**[2011-12 Updates](#)[2010-12 General Catalog](#)[2009-10 Updates](#)[2008-10 General Catalog](#)[2007-08 Updates](#)[2006-08 General Catalog](#)**History of Art and Visual Culture**

D-201 Porter College

(831) 459-4564

havc@ucsc.edu<http://havc.ucsc.edu>***Program Description***

The study of visual culture encompasses the production, use, form, and reception of images past and present. It incorporates the painting, sculpture, and architecture traditionally defined by art history, and extends throughout the fields of visual imagery beyond the conventional boundaries formerly drawn by the academy. The History of Art and Visual Culture ([HAVC](#)) Department offers courses covering a wide variety of representations from the cultures of Africa, the Americas, Asia, Europe, and the Pacific Islands, including areas as diverse as ritual, performative expression, bodily adornment, landscape painting, installation art, and video games.

Students of visual culture at UC Santa Cruz (UCSC) investigate complex questions concerning the social, political, economic, religious, and psychological impact of images from the perspective of their producers, users, and viewers. Images play a central role in the formation of values and beliefs, including the perception of gender, sexuality, ethnicity, race, and class. Through attentive historical study and close analysis, students are taught to recognize and assess these systems of value, and are introduced to theoretical and methodological frameworks for future research.

The history of art and visual culture curriculum guides students in acquiring skill in critical thinking about visual culture, leading to a bachelor of arts (B.A.) degree. Each student who chooses to major or minor in visual culture devises an individual study plan with a faculty adviser. The lower-division courses, numbered 1–99, intended for general education students and prospective majors, provide an introduction to the field of visual culture according to geographic areas and visual traditions within those areas. Upper-division courses [numbered 100-189](#) cover a broad range of issues in various aspects of world culture from earliest times to the present. Advanced upper-division courses focus on selected fields, topics, and methods. The most advanced courses, numbered 190 and 191, are taught in seminar format.

Declaring the Major

To declare the major, students must complete two of the required four lower-division history of art and visual culture courses chosen from two different geographical regions:

*10s Africa and its Diaspora;**20s Asia and its Diaspora;**30s-40s Europe and the Americas ;*

50s Mediterranean ;

60s Native Americas ;

70s Oceania and its Diaspora

Students considering this major are encouraged to complete these courses early in their studies and consult with the history of art and visual culture undergraduate adviser to develop a plan of study. Transfer students should consult the Transfer Student/Transfer Credit section.

Program of Study

The history of art and visual culture (~~HAVC~~) major requires four lower-division and nine upper-division courses including the satisfactory completion of the senior comprehensive requirement. Students must take courses in each of the different cultural settings to ensure methodological and disciplinary breadth.

HAVC majors are also strongly encouraged to take at least one thematic or cross-regional course. (Courses in 80s, 180s, and most ~~or~~ 191s.)

Lower-Division Requirements

Four courses, each from a different geographical region listed above.

HAVC 80 may be used to fulfill the lower-division regional breadth requirement for regions 10 (Africa), 60 (Native Americas), or 70 (Oceania).

Upper-Division Requirements

Nine courses, as follows:

- ~~course~~ 100A recommended during sophomore year, must be completed before senior year or junior year
- ~~courses~~ 101-191: eight courses required, including a seminar (190s and 191s) to satisfy the senior comprehensive (see Comprehensive Requirement below).

In completing upper-division course work, students must complete three upper-division courses (courses 101-191) from three different regions. Two of those regions must be a geographical area not studied at the lower-division level.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Students in history of art and visual culture meet the DC requirement by completing course 100A.

Senior Comprehensive Requirement

All seniors must complete one seminar, 190–191, as their “senior exit” course to satisfy the senior comprehensive requirement. Seminars can be taken for senior exit credit only by permission of the instructor. Within the context of this advanced seminar, students will produce carefully supervised work culminating in the completion of a written project that meets the standards of the senior level of achievement in the major. Students whose performance is outstanding are eligible for honors in the senior comprehensive.

Concentration in Religion and Visual Culture

This program is for students who wish to pursue the study of religion in conjunction with studies of visual culture. It consists of an individually planned sequence of courses, including a core set of lower-division courses to provide grounding in issues, methods, and a general history of visual culture; upper-division courses from within the department; and

at least four upper-division courses from other departments that focus on the study of religion.

A student enters the concentration by proposing, in consultation with their faculty adviser, a sequence of upper-division courses to fulfill the religion and visual culture requirements. The declaration of major requirements for the religion and visual culture concentration are the same as listed in the Declaration of Major section. The faculty adviser for the religion and visual culture concentration is Raoul Birnbaum.

Languages

All majors are encouraged to study at least one foreign language. Graduate programs in visual culture, art history, and other related disciplines generally require competence in another language besides English. Students are encouraged to consult with their faculty adviser to discuss an appropriate course of language study.

Requirements for the Religion and Visual Culture Concentration

The 15-course curriculum of the religion and visual culture concentration is pedagogically distinct from that of history of art and visual culture. Students are required to take four lower-division classes (each from a different geographical area) and eleven upper-division courses, seven from within history of art and visual culture and four relevant upper-division courses taken from other departments.

Students in the religion and visual studies concentration complete the following required upper-division curriculum listed below.

Eleven courses, as follows:

- 100A recommended in sophomore must be completed before senior year.~~or junior year~~
- 101-191: six courses required, including a seminar (190s and 191s) to satisfy the senior comprehensive (see Comprehensive Requirement above).
- Four relevant upper-division courses in the study of religion from programs on campus such as anthropology, history, literature, and philosophy. (The department maintains a current list of approved courses that focus on the study of religion.)

~~Disciplinary Communication (DC) Requirement~~

~~Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Students in History of Art and Visual Culture meet the DC requirement by completing course 100A.—~~

Minor Requirements

Nine courses, as follows:

- lower-division: three courses from three different geographical regions;
- upper-division: six courses planned in consultation with a faculty adviser.

Department Advising

Undergraduate Adviser

The undergraduate adviser offers specific information about navigating through the program and the curriculum and assists students with requirements, prerequisites, policies and procedures, learning support, scholarships, and special opportunities for undergraduate research.

Faculty Advisers

Faculty are the best resource for learning about the philosophies and foundations of history of art and visual culture. Faculty advisers work individually with students to develop a

specific course of study, recommend additional courses of interest, and discuss long-term career goals including education beyond the baccalaureate. A faculty adviser is assigned to each student by the undergraduate adviser during the declaration of major meeting.

Languages

~~All majors are encouraged to study at least one foreign language. Graduate programs in visual culture, art history, and other related disciplines generally require competence in another language besides English. Students are encouraged to consult with their faculty adviser to discuss an appropriate course of language study.~~

Transfer Students and Transfer Credit

As preparation, transfer students are encouraged to fulfill at least three of the lower-division history of art and visual culture requirements prior to transfer. Refer to the ASSIST articulation agreements at www.assist.org for approved lower-division courses. A student may transfer up to six art history courses toward the major, only three of which may be upper division. Upper-division transfer credit is evaluated on a case-by-case basis and must be approved by the student's faculty adviser. Transfer students are strongly encouraged to contact the History of Art and Visual Culture Department before enrolling at UCSC.

Study Abroad

The University of California's ~~Education Abroad Program (EAP) operates~~ [International Office of Education offers numerous programs abroad](#) in countries throughout the world. Students may receive transfer credit for a maximum of three upper-division art history courses taken through the EAP program (see Transfer Student/Transfer Credit above). Many EAP programs require competency in a language besides English (see Languages above). Students should make every effort to consult with a faculty member about their course of study before going abroad.

Careers

The preparation students receive from the baccalaureate of arts degree in history of art and visual culture provides skills that can lead to successful careers in law, business, and social services, in addition to a more specific focus on museum curating, art restoration, studies in architecture, and studies in art history leading to a graduate degree.

Graduate Study

There are many graduate programs of visual culture that lead to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degree in fields such as art history, cultural history, semiotics, rhetoric, history of religions, comparative arts, theory and criticism of art, and so forth. Most graduate programs require a reading knowledge of one or two languages other than English (see Languages above). Students who are contemplating graduate study should consult with their [undergraduate and](#) faculty advisers as early as possible in their undergraduate career.

Graduate Program

The History of Art and Visual Culture Department offers a course of study leading to the Ph.D. in visual studies. The Ph.D. is designed to steep our graduates in the most theoretically relevant methodologies for understanding the significance of visual artifacts and the social and cultural qualities of human vision (termed *visuality*); provide students with exposure to a range of cultural perspectives and visual artifacts drawn from around the world; and cultivate in our graduates the necessary skills and knowledge to secure and excel in academic and curatorial positions. The program is both interdisciplinary and

flexible. Students work closely with their advisers and the director of graduate studies to craft personalized courses of study that advance their intellectual and professional goals.

The program employs a wide range of visual evidence for examination, without being constrained by traditional hierarchies of art. Fine arts, architecture, photography, film, performances, utilitarian objects, and popular entertainments all are primary source material for scholars in the field. The program at UCSC is particularly adept at illustrating significant differences in how disparate cultural groups interpret their visual worlds, given the breadth of cultural perspectives taught by our faculty. With scholars focusing on cultures in Africa, the Americas, Asia, Europe, and the Pacific Islands, visual studies at UCSC offers students an unparalleled opportunity to consider the role of social and cultural forces in guiding how and what their members see.

Graduate Program Requirements

~~Students are required to enroll in a minimum of two courses per quarter until advancement to candidacy (normally achieved no later than the start of their fourth year).~~ Students entering with a B.A. take a total of twelve, 5-credit graduate courses during their first two years of study. Prior to being advanced to candidacy (normally by the start of their fourth year), students must enroll in a minimum of two graduate courses per quarter. Those entering with an M.A. may receive advanced standing based on the evaluation of the visual studies graduate committee. In no case will students entering with an M.A. have more than a year's worth of course work waived.

All students entering with a B.A. (or with an M.A. that is not in visual studies) must take four ~~five~~5-credit core courses within their first two years: HAVC 201, *Introduction to Visual Studies* (fall); HAVC 202, *Critical Theory* (fall); and HAVC 203, *Theories and Histories of Seeing* (winter, taken twice). Students entering with an M.A. in visual studies will meet their core courses requirements after taking *Theories and Histories of Seeing* once.

Field Clusters/Field Specialties

Appreciating that most of our graduates will be required to fit themselves back into traditional disciplinary structures once they enter the academic job market, the program is designed to provide students with both new means of interpreting visual evidence and suitable depth of understanding in older disciplinary traditions. While all graduates will acquire a shared foundation in theories of visibility (attained through our core course requirements), individual student programs vary considerably depending on the type of department in which the student hopes to secure employment after graduation. In addition to completion of the core courses required of all students, each student will develop a cluster of individualized field courses in consultation with their adviser based on her/his particular professional goals.

Each student is required to take a minimum of four, 5-credit courses in a disciplinary cluster (beyond the core course requirements). This requirement pertains both to students entering with a B.A. and an M.A. Acceptable field cluster courses might center around a medium (i.e., painting or architecture), a temporal/stylistic category (i.e., Early Modern or Postmodernism), a cultural, national, or social group (i.e., Pacific Islanders or China), or a disciplinary approach (i.e., cultural anthropology or gender studies). Field clusters are developed in consultation with the student's adviser and, ideally, help lay the foundations for dissertation work. To count toward the degree, field clusters must receive prior approval from the visual studies graduate committee. Beyond the core and field courses, students admitted with a B.A. must complete an additional four ~~five~~5-credit elective courses.

Students entering with a B.A. take four courses to complete the field cluster requirement and another four to meet their elective requirement. Of these eight courses, at least four have a visual studies designation, and at least three courses must be drawn from

departments outside of visual studies. Students admitted with a non-visual studies M.A. must take as many as four elective courses beyond those designated core and field (depending on the determination of the visual studies graduate committee based on a review of previous graduate course work), while students admitted with a visual studies M.A. must take a minimum of one course.

Students entering the program with an M.A. in visual studies meet the same distribution requirements as those students entering with a B.A. Of the eight courses making up the field cluster requirements and elective courses, at least four must have a visual studies designation, and at least ~~three~~ two courses must be drawn from departments outside of visual studies. Students entering with an M.A. that is not in visual studies meet their distribution requirement by selecting at least five courses with a visual studies designation and at least two courses drawn from departments outside of visual studies.

~~Visual studies graduate students are encouraged to augment their course electives by drawing from the graduate seminars offered by the departments and programs of Anthropology, Digital Arts and New Media, Film and Digital Media, History, History of Consciousness, and Philosophy.~~

Language Requirement

Students must demonstrate reading knowledge of one foreign language prior to the start of their second year (either through attainment of a score of 550 or higher on the Educational Testing Service Graduate Student Foreign Language Test or through passage of a reading examination administered by the department).

Students are encouraged to master a second foreign language. Based on a student's area of interest, and the joint assessment of the student's adviser and the director of graduate studies, proof of proficiency in an additional language or languages may be required prior to the student being admitted to candidacy for the Ph.D. Should proficiency in additional languages be required, it must be demonstrated prior to the close of the student's third year of study.

Qualifying Examinations

After completing all course work and passing one language examination, students are required to pass a qualifying examination prior to the close of the fall quarter of their third year, unless a petition for an extension, demonstrating reasonable cause, is approved by the visual studies graduate program committee. The qualifying examination is divided into three topic areas, with each one including a written and an oral component. Each topic area should display historical breadth and variety of media. Two of the topic areas should ideally relate to the future dissertation topic, while one of the remaining must constitute an outside area, examining a topic that is chronologically, geographically, and/or methodologically distinct from the other two.

Prior to the end of his/her second year, a student who entered the program with a B.A. should consult with his/her adviser to assemble a group of three faculty members who will serve as examiners and aid the student in assembling the necessary topic areas, compiling the needed reading lists, and preparing for the written and oral components of the examination in each area. The examination will have two parts. In part one, each student will respond in writing to three general questions, one posed by each of their three examiners in the pre-arranged topic areas. In part two, each student will gather together with his/her examiners to field questions probing and clarifying the previously submitted written component of the qualifying examination. In order to pass the qualifying examinations, the student must receive the unanimous endorsement of the committee members.

Advancing to Candidacy

Advancement to candidacy follows and is contingent upon passing the qualifying examinations, all needed language examinations, and the subsequent appointment of a dissertation reading committee of at least three members.

Dissertation

After advancing to candidacy, a student must complete an approved dissertation prospectus, a colloquium, and dissertation, and pass an oral defense of the thesis. A written dissertation prospectus is due no later than the end of the second quarter following the student's completion of the qualifying examinations. The prospectus is a brief, concise essay (with bibliography) that defines the scope, methodology, and rationale for the proposed dissertation. It is prepared in consultation with the student's dissertation director, who must approve of the document prior to scheduling the colloquium.

The dissertation director, in consultation with the student and director of graduate studies, will invite four to five faculty members, in appropriate fields, to attend the colloquium and provide input on the prospectus and assess the student's preparedness to begin researching and writing the dissertation. Faculty participating in the colloquium need not be members of the dissertation committee, but should represent faculty whose expertise has bearing on the student's project. A student will pass the colloquium after having demonstrated to the satisfaction of all colloquium committee members adequate preparation to begin researching and writing the dissertation. The dissertation itself must make a significant and original contribution to the field of visual studies, as judged by each dissertation committee member.

Final Examination

An oral defense of the dissertation is the only final examination requirement, unless a petition to waive the oral defense, demonstrating reasonable cause, is approved by the student's primary adviser and the visual studies graduate program committee. The student's dissertation committee, under the supervision of the director of graduate studies, will conduct the examination. In the event that the director of graduate studies serves on the dissertation committee, the chair of History of Art and Visual Culture will oversee the defense. Interested faculty and students in the visual studies program will have the opportunity to observe the defense.

Designated Emphasis

Graduate students enrolled in doctoral programs at Santa Cruz may obtain a Designated Emphasis in visual studies on their Ph.D. degree by meeting the following requirements:

- Secure approval from a core member of the visual studies faculty to serve as an adviser for their Designated Emphasis.
- Have at least one core member of visual studies serve on either their qualifying exam or dissertation committee. Submit a significant piece of writing that demonstrates competency in the field. The writing could take the form of a seminar paper or dissertation chapter. The essay must meet the approval of the student's visual studies adviser.
- Successfully complete four graduate courses taught by either core or affiliated members of the visual studies program. The courses must form a coherent cluster in visual studies and be pre-approved by the student's Designated Emphasis adviser.

Minor

~~UCSC graduate students enrolled in doctoral programs may obtain a minor in visual studies on their Ph.D. degree by meeting the following requirements:~~

- ~~Securing approval from a core member of the visual studies faculty to serve as an adviser for their minor.~~
- ~~Having at least one core member of visual studies serve on either their qualifying examination or dissertation committee.~~

- ~~• Submitting a significant piece of writing that demonstrates competency in the field. The writing could take the form of a seminar paper or dissertation chapter. The essay must meet the approval of the student's visual studies adviser.~~
- ~~• Successfully completing four graduate courses taught by either core or affiliated members of the visual studies program. The courses must form a coherent cluster in visual studies and be pre-approved by the student's minor adviser.~~

Normative Time from Matriculation to Degree

The visual studies Ph.D. program at UCSC is designed to require six years for students matriculating with a B.A. and five to six years (depending on advanced standing granted) for those entering with an M.A. The pre-candidacy period is two years for students entering with a B.A. and a minimum of one year for those arriving with an M.A. in visual studies. During this period students will devote themselves to coursework, completion of the language examination, some teaching, and, ideally, our teaching-related independent study course. Students will show competency in one foreign language prior to the start of their second year, and show competency in additional foreign language(s), as required, by the close of their third year, pass their qualifying examinations during the fall quarter of their third year, complete an approved version of their prospectus and schedule their colloquium for a date prior to the close of the spring quarter of their third year, and finish their dissertation and successfully defend it before the end of their sixth year.

Faculty and Professional Interests

Professor

HARRY BERGER JR., Emeritus

MARTIN A. BERGER

Gender, race, and representation in U.S. culture

RAOUL BIRNBAUM,

Buddhist studies, especially Chinese practices from medieval times to the present; religion and visual culture in China

CAROLYN DEAN

Cultural histories of the native Americas and colonial Latin America

JOHN HAY, EMERITUS

VIRGINIA JANSEN, Emerita

JASPER A. ROSE, Emeritus

CATHERINE M. SOUSSLOFF, Emerita

Associate Professor

ELISABETH CAMERON, Patricia and Rowland Rebele Chair in History of Art and Visual Culture (2008-2013),

Visual cultures of central Africa, issues of gender, post-colonialism, and iconoclasm

JENNIFER A. GONZLEZ

Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

DONNA M. HUNTER

European painting (especially French) from 1600 to the 1960s; German art and visual culture between the two world wars; art as social practice; portraiture; monuments, counter-monuments, and anti-monuments

STACY L. KAMEHIRO

Visual cultures of Oceania; colonial cultures; visual culture and identity; gender studies; museums and collecting; material culture

Assistant Professor

MARIA EVANGELATOU

Medieval visual culture with emphasis on Byzantium and its periphery; manuscript illumination, Marian cult and iconography; ancient Greek and Roman visual culture; Islamic visual culture; gender studies

BORETH LY

Visual cultures of Southeast Asia and its diaspora: religions and materiality, theory of visual narrative, the politics of cultural translation; (post) colonial and cultural studies; issues of gender, sexuality, race, and trauma

DEREK CONRAD MURRAY

Theory and criticism of contemporary art, cultural theory, identity and representation, art of the African diaspora, popular visual culture, contemporary photography, and the ethics of art history and visual studies

DANIELA SANDLER

Modern and contemporary architecture and urbanism; visual and cultural studies; social inequality

in space; architectural preservation; history and memory in the built environment; architecture and visual culture in Latin America and Europe, with foci on Brazil and Germany

Professor

JOHN DIZIKES, Emeritus (American Studies)

SHELLY ERRINGTON (Anthropology)

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

Africa and its Diaspora

10. Introduction to African Visual Culture. *

An interdisciplinary approach to the study of the basic structures (gender, art within political sphere, and spiritual aspects of visual culture) and cultural institutions (initiations, closed associations, kingship, title association, etc.) around which the study of African visual culture revolves. (General Education Code(s): CC.) *E. Cameron*

Asia and its Diaspora

20. Visual Cultures of Asia. *

An introduction to the art and architecture of East Asia, including China, India, Southeast Asia, and Japan. In order to achieve a fuller understanding of the arts of these countries a historical, cultural, and religious context is provided. (Formerly course 10D, Presence and Power in the Visual Cultures of Asia.) (General Education Code(s): CC, IH, A.) *The Staff*

22. Religion and Visual Culture in China. S

Introduction to the study of religious currents and practices in China and their visual expression. In addition to "religious art," topics include such pivotal matters as body concepts and practices, representations of the natural world, and logics of the built environment. (Formerly course 80G.) (General Education Code(s): IM, A, E.) *R. Birnbaum*

24. Southeast Asia Visual Culture. *

Introduces the visual cultures of Southeast Asia. Topics include indigenous megalithic art, textiles, and jewelry, as well as Hindu and Buddhist art and architecture. Also considers shadow play and dance performance as alternative lenses to looking at ritual and visual narratives rendered on stone temples. (Formerly course 10C.) (General Education Code(s): CC, IH, A, E.) *B. Ly*

27. Image and Ideology in Indian Art. S

Examination of the ways social, religious, and political patronage have affected the production and reception of art in the Indian subcontinent. The course is designed as a series of case studies from different periods of Indian history. (Formerly course 80N, Indian Art: Image and Ideology.) (General Education Code(s): IM, A, E.) *K. Thangavelu*

Europe and the Americas

30. Introduction to European Visual Culture. W

An introduction to the European tradition in visual culture, from antiquity to the present, but not in chronological order. All media, including the fine arts, architecture, film, video, and installation and performance work are incorporated. Presents the major visual regimes of representation while it probes the meanings and limits of Europe and the European tradition in the context of the visual. (Formerly course 10G, Europe.) (General Education Code(s): IM, IH, A.) *The Staff*

31. The Nude in the Western Tradition. *

The human body without clothing in European and European-American art and visual culture from ancient Greece to the present day. Among the themes to be addressed: gender, youth and age, sexuality and sexual preference, fecundity and potency, erotic art and pornography, primitivism and the naked body of the non-European. (Formerly course 10F.) (General Education Code(s): IM, IH, A.) *D. Hunter*

40. Museum Cultures: The Politics of Display. *

Explores the history of collecting and displaying art (museums, galleries, fairs) since the mid-19th century and the effect of institutional changes on aesthetic conventions. Follows the history from the origins of museums and collections to contemporary critiques of institutional exclusion and misrepresentation. (Formerly course 80D.) (General Education Code(s): IM, A.) *The Staff*

41. Modern Art in Context. *

Examines the social, economic, and political significance of European and U.S. modernist art and architecture, moving from French realism to American minimalism. Provides the historical

background and theoretical frameworks needed to make sense of modernist art and culture. (Formerly course 80V.) (General Education Code(s): IM, A.) *M. Berger*

43. History of Modern Architecture. F

Examines the origins and development of modern architecture, from the Enlightenment and the Industrial Revolution to the 20th Century and beyond. Buildings, urban plans, and works of art and design are discussed in relation to political, social, and cultural currents. (Formerly course 46.) (General Education Code(s): IM, IH, A.) *The Staff*

45. Photography Now. F

Explores recent methods and approaches in photography. Surveys significant aesthetic, conceptual, and theoretical shifts occurring in the photographic medium and related discourses. Special attention given to the "current" landscape of contemporary photography (1980-present). (General Education Code(s): IM.) *D. Murray*

46. Introduction to U.S. Art and Visual Culture. W

Overview of U.S. art and visual culture from the late 18th Century to the present. Examines art as evidence for understanding evolving beliefs and values of Americans. Explores the social and political meanings of art, and pays particular attention to how artists, patrons, and audiences have constructed nationalism, race, class, sexuality, and gender. (General Education Code(s): IM.) *M. Berger*

The Mediterranean

50. Ancient Mediterranean Visual Cultures. *

The role that ancient art and visual culture play in constructing social identities, sustaining political agendas, and representing various cultural, ritual, and mythological practices in Mesopotamia, Egypt, Greece, and Rome, including the sociology of ancient cultures, mythology, religious studies, gender studies and history. (Formerly course 80E.) (General Education Code(s): IM, A.) *The Staff*

51. Greek Eyes: Visual Culture and Power in the Ancient Greek World. F

The central role of visual communication in ancient Greek civilization: examines the construction of cultural, social, political, religious, and gender identities through material objects and rituals. Includes discussions of images of the public and private sphere, athletic and theatrical performances, mythology, pilgrimage, and magic. (Formerly course 80X, Greek Eyes: Visual Culture and Power in the Ancient Greek.) (General Education Code(s): IM, A.) *M. Evangelatou*

Native Americas

60. Indigenous American Visual Culture. *

Selected aspects of art and architecture of the first peoples of the Americas, north, central, and south, from ca. 2000 B.C.E. to present. Societies to be considered may include Anasazi, Aztec, Inca, Northwest Coast, Maya, Navajo, Plains, and others. (Formerly course 80M.) (General Education Code(s): ER, A, E.) *C. Dean*

Oceania and its Diaspora

70. Visual Cultures of the Pacific Islands. S

Interdisciplinary course examines visual cultures of Australia, Melanesia, Micronesia, and Polynesia from the archaeological past through contemporary periods. (Formerly course 105P.) (General Education Code(s): CC, A, E.) *S. Kamehiro*

Topics and Cross-Regional Studies in History of Art and Visual Culture

80. Colonial Histories and Legacies: Africa, Oceania, and the Indigenous Americas. W

A comparative study of the arts of selected cultures which developed outside the spheres of influence of the major European and Asian civilizations. Emphasis is on the function of the arts in these disparate geographic regions. Students cannot receive credit for this course and course 100E. (Formerly course 10E, Africa, Oceania, and the Americas.) (General Education Code(s): CC, IH, A, E.) *S. Kamehiro*

81. Video Games as Visual Culture. W

Through the aesthetics and theory of electronic games, introduces the histories, ideas, and debates that inform game studies. Topics include: narratology/ludology debates, interactivity, serious games, and alternative games. (Formerly course 80H.) (General Education Code(s): IM, T5-Humanities and Arts or Social Sciences, A.) *The Staff*

99. Tutorial. F,W,S

Supervised study for undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100A. Methods in History of Art and Visual Culture. W

Introduction to major issues of method and critique in study of art and visual culture. Focuses on understanding disciplinary and critical modes of scholarly inquiry in the visual arts, including role of historical research. Emphasizes intensive reading, discussion, and writing. Course 100A is a prerequisite for all History of Art and Visual Culture seminars. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to sophomore, junior, and senior

History of Art and Visual Culture majors. (General Education Code(s): W,A.) *D. Hunter*

Africa and its Diaspora

110. Visual Cultures of West Africa. F

Explores visual cultures of West Africa through time (Nok to present). Attention paid to relationships between peoples and impact of European/Arab presence on visual cultures. Prerequisite(s): course 10 or 80 recommended. (Formerly course 107B, West Africa.) (General Education Code(s): CC, A, E.) *E. Cameron*

111. Visual Cultures of Central Africa. *

Examination of visual cultures of Central Africa within a historical sequence from the Sanga archaeological excavations to contemporary easel painting. (Formerly course 107A, Central Africa) Prerequisite(s): course 80 suggested. Enrollment restricted to sophomores, juniors and seniors (recommended). Enrollment limited to 90. (General Education Code(s): CC, A, E.) *E. Cameron*

115. Gender in African Visual Culture. *

In Africa, relationships exist between gender and visual culture. Course examines where categories come from, differences in men's and women's visual cultures, and how visual cultures teach, reinforce, and negotiate gender definitions. When are male/female boundaries crossed, and why? (Formerly course 185B, Gender.) Enrollment limited to 35. (General Education Code(s): A, E.) *E. Cameron*

116. African Architecture. W

Study of the built environment in Africa. Focusing in depth on 10 major architectural forms or sites, this course explores the diversity of architectural types and how gender, politics, religion, and culture shape and are shaped by architectural spaces. (Formerly course 185C.) Enrollment limited to 35. (General Education Code(s): A, E.) *E. Cameron*

117. Contemporary Art of Africa. *

Examines contemporary arts in post-colonial Africa, 1960-present, including new popular cultural forms; arts resulting from new class and national structures; commodification of culture; Pan-Africanism; exhibitionism; and questions of destiny. (Formerly course 185D.) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 35. (General Education Code(s): IM, A, E.) *E. Cameron*

118. Art of the Contemporary African Diaspora. *

Considers contemporary art by African artists operating in metropolitan centers, as well as Afro-British, Afro-Caribbean, and African-American production. Topics are organized thematically and address constructing and deconstructing the idea of Africa; cultural authenticity; diaspora; Creolité and creolization; hybridity; cosmopolitanism; post-black; and globalism in the arts. (Formerly course 189Y.) Recommended: background in art history. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 35. (General Education Code(s): A.) *The Staff*

Asia and its Diaspora

122. Visual Cultures of China.

122A. Sacred Geography of China. *

An examination of the close relationship of religious traditions and the natural world in China, and its expression in visual representation. Particular emphasis on the ways in which competing groups sought to define or re-envision an understanding of the terrain. (Formerly course 154A.) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 35. (General Education Code(s): CC, A.) *R. Birnbaum*

122B. Constructing Lives in China: Biographies and Portraits. *

Consideration of biographies and portraits in China as representations of human types and individuals, and the use of these representations as models for constructing lives. Attention to historical and social contexts, early times to present. Special focus on Chinese Buddhist traditions. A previous course that focuses on traditional China or Buddhist studies strongly recommended. (Formerly course 155.) Enrollment limited to 35. (General Education Code(s): CC, A, E.) *R. Birnbaum*

122C. Writing in China. *

Examines material and conceptual phenomena of writing in Chinese visual culture. Focuses on the intersections of places and practices of writing through various inscribed sites, ranging from oracle bones, seals, and mountain facades to hand scrolls, architecture, and contemporary art. (Formerly course 159D.) Enrollment limited to 35. (General Education Code(s): A.) *The Staff*

122D. Chinese Landscape Painting. *

Examines the history and significance of the subjects most prominent in Chinese painting during the past one thousand years, focusing on the cultural factors that made landscape a fundamental value in the Chinese tradition and the methods whereby painters created pictorial equivalents. (Formerly course 159B.) Enrollment limited to 35. (General Education Code(s): IM, A.) *The Staff*

123. Visual Cultures of South Asia.

123A. Modernity and Nationalism in the Arts in India. S

Deals with artistic responses to the forces of modernity, colonialism, industrialization and globalization in India during the 19th and 20th centuries. Addresses the complex and often painful climb toward re-establishing a truly Indian artistic identity. (Formerly course 189D.) Enrollment limited to 35. (General Education Code(s): A, E.) *K. Thangavelu*

123B. Religions and Visual Culture of South Asia. F

South Asia is the home of many religions (Hinduism, Buddhism, Jainism, Islam, and Sikhism). Introduces the role images (painting, sculpture, architecture, photography, film) play in shaping these diverse religious traditions. (Formerly course 106A.) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 80. (General Education Code(s): CC, A, E.) *B. Ly*

124. Visual Cultures of Southeast Asia.

124A. Arts of Ancient Southeast Asia. *

Focuses on Hindu and Buddhist arts of ancient Southeast Asia (Indonesia, Cambodia, Vietnam, and Thailand). Materials covered include indigenous megalithic arts, stone sculptures, and monumental temple architecture such as Angkor Wat, Borobudur, Prambanan, and the Bayon. Enrollment restricted to sophomores, juniors, and seniors. (General Education Code(s): CC.) *B. Ly*

124B. History of Photography in Southeast Asia. S

Examines how photography was used in Southeast Asia to document the racial difference and the exotic "Others" under the regime of colonialism. Considers the role photography played in "documenting" the Vietnam-American War and how contemporary Southeast Asian-American artists challenge this photographic history in their art. Enrollment restricted to sophomores, juniors and seniors. (General Education Code(s): CC.) *B. Ly*

124C. Arts and Politics in Theravada Traditions. *

Consideration of the arts and architecture in Theravada Buddhist traditions in Sri Lanka and Southeast Asia. Topics and themes include ritual, relics, visual narrative, mural painting, contemporary art, mass-meditation movement, and political protest. (Formerly course 163B.) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 35. (General Education Code(s): CC, A.) *B. Ly*

124D. Contemporary Art of Southeast Asia and its Diaspora. *

Examines the respective national notions of modernity in the region through a comparative lens. How global capital flow and transnational cultural exchanges impact the production of arts of Southeast Asia and its diaspora. Themes and issues include: colonialism and art education; nationalism; identity politics; memory; trauma; gender; race; sexuality; and the body. Enrollment restricted to sophomores, juniors, and seniors. (General Education Code(s): CC.) *B. Ly*

127. Topics in Cross-Regional Studies in Visual Cultures of Asia.

127A. Buddhist Visual Worlds. W

Introduction to the study of Buddhist visual traditions, from their beginnings to the present day. Case studies examined with careful attention to historical, social and cultural contexts; particular emphasis on the relation of visual traditions to Buddhist practices. (Formerly course 114.) Enrollment restricted to sophomore, junior, and senior students. (General Education Code(s): IM, A.) *R. Birnbaum*

127B. Buddhist Pure Lands. *

Conceptions of "pure lands" have engaged the imaginations of Mahayana Buddhists for more than two millennia. Course considers literary and visual representations of pure lands and their inhabitants, as well as related practice traditions. Special emphasis on Chinese traditions. Previous courses in Asian visual cultures and/or Buddhist studies recommended. (Formerly course 154D.) Enrollment limited to 35. (General Education Code(s): CC, A.) *R. Birnbaum*

127C. Ritual in Asian Religious Art. *

Examination of interaction between image and ritual in Asian religious art. Case studies from different historical periods and geographical locations (e.g., China, Tibet, Japan, Indonesia, India). Examples include mandalas, ritual bronzes, tankas, sacred caves, temples, tea ceremonies, and calligraphy. (Formerly course 105E.) (General Education Code(s): IM, A, E.) *The Staff*

127D. Storytelling in Asian Art. *

Combination of theoretical perspectives on narrative from literary criticism, rhetoric, folklore, and film theory with art historical focus on images (cave temples, stone reliefs on stupas, scrolls, dance-drama, etc.) from India, Pakistan, China, Japan, Cambodia, and Indonesia. (Formerly course 160.) Enrollment limited to 35. (General Education Code(s): A, E.) *The Staff*

Europe and the Americas

133A. Themes in the Study of Medieval Visual Culture. F

Many issues associated with contemporary artistic production and visual culture originated in the

Middle Ages. Themes to be considered: role of secular art; women as artists and patrons; aesthetic attitudes; relationship between cultures in holy war, crusade, and pilgrimage. (Formerly course 129.) (General Education Code(s): A.) *V. Jansen*

135. History of Art and Visual Culture in Europe.

135B. German Art, 1905–1945. F

Expressionism, agitprop, the Bauhaus, New Objectivity, attacks on modernism, National Socialist realism. Painting, sculpture, graphic art, and some architecture and film, studied in the context of political events from the eve of World War I to the end of World War II. (Formerly course 136.) (General Education Code(s): IM, A.) *D. Hunter*

135D. French Painting, 1780-1855. *

The art of David, Gros, Ingres, Gericault, Delacroix, the Barbizon School, and Courbet studied in relation to the changing status of the art and the political events from 1789 to 1848. Second in a series of three courses on French art and its historical context. See courses 135C and 141A. (Formerly course 177.) Enrollment limited to 35. (General Education Code(s): IM, A.) *D. Hunter*

135E. Jewish Identity and Visual Representation. *

An exploration of the theoretical and practical or experiential applications of Jewish identity in European visual representation. Brief background on pre-emancipation textual and cultural issues followed by study of the Jewish subject and Jewish subjectivities in modernity. (Formerly course 172.) Enrollment restricted to juniors and seniors. Enrollment limited to 35. (General Education Code(s): IM, A, E.) *The Staff*

135F. History of the Book. *

History of book production and use in the West from antiquity to modern times. Development from roll to codex and from script to print. Emphasis on the relationship between text and image. Class conducted in Special Collections, McHenry. Exhibition as class project. (Formerly course 153.) Enrollment limited to 25. (General Education Code(s): A.) *E. Remak-Honnef*

137. Renaissance.

137A. Northern Renaissance Art. *

Considers the painting and prints produced in Northern Europe in the 15th and 16th centuries. Major issues include the status of realism and classicism, the role of religion and religious reform, and the rise of popular imagery. (Formerly course 105R.) (General Education Code(s): A.) *The Staff*

137B. Italian Renaissance: Art and Architecture. *

Lives of Italian Renaissance people from birth to death, examining the nature and roles of the institutions which defined human existence in this period. Uses visual arts both illustratively and to study how institutions fashioned their images through art and architecture. (Formerly "Italian Renaissance: Representation and Institutions.") (General Education Code(s): IM, A.) *The Staff*

137C. High Renaissance. *

An investigation of the High Renaissance as a period and stylistic concept, using the major artists and monuments of the period 1480–1525 to discuss issues of theory, history, and art. Artists considered include Leonardo da Vinci, Michelangelo, and Raphael. (Formerly course 168.) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 35. (General Education Code(s): IM, A.) *The Staff*

137D. Art of the Venetian Renaissance. *

Considers Venetian art in the 15th and 16th centuries. Topics include major artists (the Bellini, Carpaccio, Titian, Tintoretto, Veronese, Palladio) and the relationship of the city to outside forces (Byzantine Empire, Turkish Empires) and other Italian cities. (Formerly course 189V.) Enrollment limited to 35. (General Education Code(s): IM, A.) *The Staff*

137E. Renaissance Prints. *

Examines the issues surrounding the technology and uses of printed images from the early Renaissance through the end of the early modern period. Topics may include the political, religious, and satirical uses of prints and the representation of women in prints. (General Education Code(s): IM, A.) *The Staff*

140. History of Art and Visual Culture in the U.S.

140A. America in Art. *

Introduction to American visual arts: architecture, painting, photography, sculpture, and performance art, from the nineteenth through the twenty-first century. Explore social and political meanings of art and what art reveals about our nation's values and beliefs, in particular, gender and race. (Formerly course 126.) (General Education Code(s): IM, A.) *M. Berger*

140B. Victorian America. *

Examines how American writers and artists negotiated complexities of U.S. society during the 19th century. Emphasis on issues ranging from women's rights to laissez-faire capitalism, and from Reconstruction to manifest destiny. Considers how the era's cultural products provided artists, patrons, and audiences with metaphorical coping strategies to counteract what Victorians perceived to be the period's overwhelming social and political changes. (Formerly course 178A.) Enrollment limited to 35. (General Education Code(s): IM, A.) *M. Berger*

140C. Race and American Visual Arts. *

Investigation of the role played by visual arts in fashioning racial identities of European-Americans, African Americans, Native Americans, and Latinos in the United States. (Formerly course 156.) Enrollment limited to 35. (General Education Code(s): ER, A, E.) *M. Berger*

140D. Chicano/Chicana Art: 1970-Present. S

Taking the terms "Chicano" and "Chicana" as a critical framework, addresses cultural and conceptual themes in visual art production since 1970. Questions concerning aesthetics, identity, gender, and activism in painting, photography, murals, and installation art explored. (Formerly course 182.) (General Education Code(s): ER, A, E.) *J. Gonzalez*

141. Modern Art and Visual Culture in Europe and the Americas.

141A. Impressionism to Pop Art: Art in Modern Culture. *

Critical reading of modernism as a high art tradition. Emphasis on context: culture of capitalism, shift in power from Europe to the U.S., role of gender and race, and the aesthetic as either apolitical refuge or site of disruption and critique. Third in a sequence of three courses on French art and its historical context; see courses 135C and 135D. (Formerly course 137.) (General Education Code(s): IM, A.) *The Staff*

141B. Surrealism to Postmodernism. *

From Paris to New York, World War II to Vietnam, consumerism to conceptualism, an introduction to visual arts and theories of representation produced in the U.S. and Western Europe between 1930 and 1990, with attention to the social and political role of the art market, criticism, and censorship. (Formerly course 140, Surrealism to Postmodernism, Paris-New York.) (General Education Code(s): IM, A.) *J. Gonzalez*

141C. Activist Art Since 1960: Art, Technology, Activism. *

Students explore art and technology produced for social change since 1960 within the context of major historical ruptures, such as the Vietnam War, the women's movement, environmental protection, AIDS activism, anti-capitalist, and international human rights movements. (Formerly course 142.) (General Education Code(s): IM, A, E.) *The Staff*

141E. Histories of Photography. *

Introduction to the histories of photography and the critical debates around different photographic genres such as medical photography, art photography, and political photography. Students will develop a critical language in order to analyze photographs while considering the importance of social and institutional contexts. (Formerly course 149A.) (General Education Code(s): IM, A.) *J. Gonzalez*

141F. The Camera and the Body. W

Through the study of historical and contemporary visual texts (from ethnography and portraiture to advertising and erotica), this course explores how photographic images of the body, while masquerading as "natural," "self-evident," or "scientific," participate in highly coded sign systems that influence who looks at whom, how, when, and why. (Formerly course 180.) Enrollment limited to 35. (General Education Code(s): IM, A.) *J. Gonzalez*

141H. Media History and Theory. *

An introductory examination of the writing about the issue of "medium" and media theory in visual culture. Technologies, discourses, and practices from all periods that use the comparison of media as a major approach to understanding the problems of the visual are highlighted. New media, film, television, video, traditional arts are also treated. (Formerly course 131.) (General Education Code(s): IM, A.) *The Staff*

141I. Environments, Installations, and Sites. *

A study of conceptual and formal issues that have informed the production of temporary, site-specific art works since 1960. Works that seek to transform the role of the audience, to escape or remake museum and gallery spaces, to introduce environmental concerns, or to situate art in "the land" or in "the street" serve as a focus. (Formerly course 181.) Enrollment limited to 35. (General Education Code(s): IM, A.) *J. Gonzalez*

141J. Critical Issues in Contemporary Art and Visual Culture. W

Considers the relationship between art, cinema, and postmodernism. Specific, thematically oriented topics are considered including: the impact of cinema aesthetics on contemporary art; film and digital technology; cinematic structure as cultural critique; and filmic strategies as an ideological tool. (General Education Code(s): IM.) *D. Murray*

143. Architecture.

143A. Contemporary Architecture and Critical Debates. F

Examination of practitioners, projects, issues, and theories in contemporary architecture circa 1968 to the present. Topics include the architecture of aftermath, the ethics of memory and memorialization, the corporatization of museums, the role of criticism and exhibitions, and the cult of the brand-name architect. (Formerly course 124.) (General Education Code(s): IM, A.) *The Staff*

143B. History of Urban Design. *

Examines urban design from the Renaissance to the present, including Latin American colonial cities, Utopian plans, and sites such as Brasilia and Chandigarh. The course focuses on social justice, diversity, and the role of art and architecture. Enrollment restricted to juniors and seniors. (General Education Code(s): IM.) *D. Sandler*

143C. Latin American Modern Architecture. *

Presents Latin America's modern architecture with relation to colonization; the influence of immigrants from Europe, Africa, and Asia; the presence of indigenous cultures; and the search for autonomy. Case studies include Argentina, Brazil, Chile, Mexico, Venezuela, and Uruguay. (General Education Code(s): CC, A, E.) *D. Sandler*

143D. Architecture and the City in Modern and Contemporary Visual Culture. *

Examines the modern and contemporary depictions of cities in visual and material culture, from paintings and photographs to logotypes and souvenirs. Also examines the roles of narrative in spatial representations, including literature, film, and television productions. Enrollment restricted to juniors and seniors. (General Education Code(s): IM.) *D. Sandler*

The Mediterranean

151. Greek Myths Antiquity to the Present. W

Myths dominated the culture and visual production of the ancient Greek world, and their presence is still strong today. How did they codify social, political, and religious realities and needs? How were they perceived in different time periods? In addition to ancient Greek and Roman and later European sculptures and paintings, this course considers less conventional sources, such as modern films, comics, and advertisements. Course 51 recommended as preparation.. (Formerly course 106I, Myth in Greek and Roman Art.) (General Education Code(s): IM, A.) *M. Evangelatou*

153. The Mediterranean from the Rise of Christianity to the Rise of Islam. *

The use of images in the transition from polytheism to Christianity and from the late Roman to the early Byzantine Empire (3rd-7th Centuries, C.E.). Examines visual culture at the intersection of historical, social, political, and religious developments. Course 51 or 151 recommended as preparation. (Formerly course 163A, Early Medieval Visual Culture: The Mediterranean.) Enrollment restricted to sophomores, juniors, and seniors; other students should contact instructor. One quarter of a 10-series course or a course in ancient or medieval culture is recommended as preparation. Enrollment limited to 35. (General Education Code(s): IM, A.) *M. Evangelatou*

154. Byzantine Visual Culture: Politics and Religion in the Empire of Constantinople, 330-1453 A. C. *

Centered on the capital city of Constantinople (modern Istanbul), the Hellenized and Christianized Roman Empire of the Eastern Mediterranean today known as Byzantium played a major, yet often overlooked, role in European history for more than a millennium. This course examines its visual production and relation to politics and religion in court and church ceremonial, expressions of Christian faith, and cultural interactions with Western Europe, Islam, and the Slavic world. (Formerly course 104A, Byzantine Visual Culture: Politics and Religion in New Rome, 300-1453 A. D.) (General Education Code(s): IM, A.) *The Staff*

155. Constructing Cleopatra: Power, Sexuality, and Femininity Across the Ages. S

The construction of female identity and the "production" of history through the myth of Cleopatra. Critical analysis of archeological data and ancient sources, later sculptures and paintings, and contemporary films, movies posters, Internet sites, advertisements, comics, games, dolls, and household objects. (General Education Code(s): IM.) *M. Evangelatou*

Native Americas

160. Topics in Pre-Hispanic Visual Culture.

160A. Mexico. F

Art and architecture of selected pre-Hispanic cultures from the gulf coast, central, western, and southern Mexico including the Olmec, Zapotec, Toltec, Mixtec, Mexica (Aztec), and others. (Formerly course 110A.) Offered in alternate academic years. (General Education Code(s): IM, A.) *C. Dean, The Staff*

160B. The Andes. *

The art of selected pre-hispanic cultures of Colombia, Ecuador, Peru, and Bolivia including the Nazca, Moche, Chimú, and Inca. (Formerly course 110B.) (General Education Code(s): IM, A.) *The Staff*

162. Advanced Studies in Pre-Hispanic Visual Culture.

162A. The Maya. *

The art and architecture of the Maya of southern Mesoamerica from the first century C.E. to ca. 1500. Courses 80, 60, or 160A recommended as preparation. (Formerly course 150A) Enrollment limited to 35. (General Education Code(s): CC, A.) *C. Dean*

162B. The Inka. W

The visual culture of the Inka of the Andean region of western South America including textiles, metalwork, and the built environment. Courses 80 (formerly 10E) or 60 (formerly 80M) recommended as preparation. (General Education Code(s): CC.) *C. Dean*

163. The Native in Colonial Spanish America. *

Indigenous contributions to colonial Spanish American visual culture including architecture, manuscripts, sculpture, painting, textiles, feather-work, and metallurgy. Focus on colonial Mexico, the Andes, and California. (Formerly course 151A.) Enrollment limited to 35. (General Education Code(s): A, E.) *C. Dean*

Oceania and its Diaspora

170. Art of the Body in Oceania. S

Explores "art of the body," defined broadly, from various perspectives. Examines colonial representations of Oceanic bodies, self-representation through bodily adornment and display (including tattoo, scarification, body painting, ornament, and dress), and bodily metaphors in Oceanic visual cultures. (Formerly course 80T.) (General Education Code(s): ER, A, E.) *S. Kamehiro*

172. Textile Traditions of Oceania. *

Investigates how textiles contribute to cultural fabric of Oceania. Explores women's roles in socioeconomic exchanges and cultural production; gender issues regarding production and function of Oceanic textiles; and history of processes, functions, and aesthetics. Prerequisite: Prior coursework related to Oceania recommended. (Formerly course 187A.) Enrollment limited to 25. (General Education Code(s): CC, A, E.) *S. Kamehiro*

Topics and Cross-Regional Studies in History of Art and Visual Culture

180. Gardens of Delight: Fifteen Centuries of Islamic Visual Culture. *

Examines some of the most representative creations of Islamic visual culture from the 7th Century to the present in order to appreciate the richness of this tradition and its extensive influence on other cultures. Focuses on the social, political, and religious role of a variety of materials, from mosques, palaces, and gardens to visual narratives, ceremonies, dance, and contemporary films. (Formerly course 139, The Art and Architecture of Islam.) (General Education Code(s): CC, A, E.) *M. Evangelatou*

190. Seminars in the History of Art and Visual Culture.

190A. African Art and Visual Culture. *

Advanced seminar requiring intensive research and writing on changing topics related to a specific area of African art and/or visual culture chosen to demonstrate critical mastery of this subject. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 191O.) Prerequisite(s): courses 100A, and 80 or 10. Enrollment restricted to juniors and seniors majoring or minoring in history of art and visual culture. Enrollment limited to 18. May be repeated for credit. (General Education Code(s): A, E.) *E. Cameron*

190B. Play and Ritual in Visual Cultures. *

Compares how play and ritual construct worlds and regulate visual cultures—from dolls to "ritual" objects and performances. Attention given to areas where play and ritual overlap and the visual cultures that result. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 191F.) Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A, E.) *E. Cameron*

190D. The World of the Lotus Sutra. *

Close study of the principal text of East Asian Buddhism as a self-enclosed vision of reality, with careful consideration of the forms and functions of the world of visual and aural representation that it has inspired. This course can be taken for senior exit credit only by permission of the instructor. Prerequisite(s): course 100A and course 127A or permission of instructor. Enrollment limited to 18. (General Education Code(s): A.) *R. Birnbaum*

190E. Huayan Visions. S

Explores the distinctive conceptual world of the Buddhist *Huayanjing* (*Avatamsaka-sutra*) and its expression in visual forms. This long text, composed in Sanskrit and later translated into Chinese, is a principal scripture of the international Mahayana Buddhist traditions of Asia. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190I.) Prerequisite(s): course 100A; course 127A, an upper-division course in Buddhist studies is recommended, or permission of the instructor. Enrollment restricted to junior and senior history of art

and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.) *R. Birnbaum*

190F. Chan Texts and Images. *

Examines selected issues in history of Chan (Zen) Buddhist traditions in China from medieval times to the present day. Concepts, methods, and visual expression of Chan practice situated through study of texts and visual materials. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 191H.) Prerequisite(s): course 100A, and course 127A or permission of instructor. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.) *R. Birnbaum*

190G. Buddhist Wisdom Traditions. *

Careful study of Mahayana Buddhist perfection-of-wisdom traditions--texts and related material culture, including visual imagery and illustrated books--with focus on the particular vision of reality that they aim to produce or reveal. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 191Z.) Prerequisite(s): courses 100A and 127A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.) *R. Birnbaum*

190J. Visual Cultures of the Vietnam-American War. S

Examines the visual culture of the Vietnam-American war and its legacy in contemporary art of Southeast Asia. Considers representations in different media: painting, drawing, photography, film, novels, and material cultures. Issues addressed include memory, trauma, identity politics, body, race, gender, pornography, and prostitution. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 191A.) Prerequisite(s): course 100A or permission of the instructor. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): ER, A, E.) *B. Ly*

190K. Thematic Approach to Visual Cultures of Southeast Asia. *

Undergraduate seminar that takes topical and thematic approach to looking at ancient or modern and contemporary arts of Southeast Asia (e.g., textile, water in arts and architecture, comparative modernity, race, gender, and sexuality). The specific topic and theme varies from year to year. This course can be taken for senior exit credit only by permission of the instructor. Prerequisite(s): course 100A, or by permission of instructor. Enrollment restricted to senior history of art and visual culture majors and minors. Enrollment limited to 18. *B. Ly*

190M. Representations of Women in Indian Art. *

Deals with representations of the female divinity in Indian religious imagery, and of women in secular and courtly paintings. Also examines roles women play in the production of art in the Indian subcontinent. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190U.) Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A, E.) *K. Thangavelu*

190O. Berlin: History and the Built Environment. *

Explores Berlin's urban and architectural history through themes: the meaning of memory in architecture; the political and cultural implications of preservation, globalization, and tourism. Because these questions are relevant beyond Berlin, course draws comparisons with other cities. This course can be taken for senior exit credit only by permission of the instructor. Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.) *D. Sandler*

190P. Death and Patriotism: The Case of the French Revolution. F

What are the relations between the mortal body and politics in times of crisis? What purposes can death, or the threat of death, serve? Examines representations of executions, assassinations, and funerals during the French Revolution, with an emphasis on the Terror. This course can be taken for senior exit credit only by permission of the instructor. Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.) *D. Hunter*

190Q. Portraiture: Europe and America, 1400–1990. *

Western portraiture and self-portraiture at certain key moments (early modern Italy, 16th-century Germany, 17th-century Holland, France from the reign of Louis XIV to the Revolution, contemporary U.S.) are explored by reading 20th-century interpretations and some primary sources. This course can be taken for senior exit credit only by permission of the instructor. Prerequisite(s): course 100A. Enrollment limited to 18. (General Education Code(s): A.) *D. Hunter*

190S. Critical Issues in Contemporary Art and Visual Culture. *

Explores how critical theory illuminates forms of cultural production, from art and cinema to popular culture. Considers how scholars, artists, and filmmakers use critical theory both creatively and in the study of aesthetic objects and experiences. Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art

and visual culture majors and minors. Enrollment limited to 18. *D. Murray*

190T. Topics in Pre- and Post-Columbian Visual Culture. *

Seminar on changing topics related to the current scholarship on pre-Hispanic and colonial Spanish American visual culture. This course can be taken for senior exit credit only by permission of the instructor. Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors. Juniors and seniors from other majors may enroll with permission of the instructor. Enrollment limited to 18. *The Staff*

190U. Word and Image in Illuminated Byzantine Manuscripts. W

Religious, scientific, and secular manuscripts of Byzantium: examines how words and images interacted to express and promote central concepts of Byzantine culture; serve liturgical needs of private devotion; reflect imperial ideals; diffuse moral values and knowledge; and proclaim social status and cultural affiliations. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190R.) Prerequisite(s): course 100A, and course 154 or permission of instructor. Enrollment restricted to juniors and seniors. Enrollment limited to 18. (General Education Code(s): A.) *M. Evangelatou*

190V. Cult of Mary in Byzantium. *

Why did the cult of the Virgin Mary become so important in Byzantine culture? Examines historical, cultural, theological, political, and social reasons for this development, seen through the interaction of Byzantine visual culture and literature. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 191X.) Prerequisite(s): courses 100A and 154. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.) *M. Evangelatou*

190W. Art and Culture Contact in Oceania. *

Examines impact of culture contact on Oceanic and Euro-American visual cultures in context of "discovery," colonialism, and "postcolonialism." Topics include 18th-century visual culture, colonial identities, primitivism, syncretism, impact of Christianity, contemporary art/market, media, tourism, transnationalism, and globalization. Course can be taken for senior exit credit only by permission of instructor. (Formerly course 190O.) Prerequisite(s): course 100A; prior course work related to Oceania recommended. Enrollment restricted to junior and senior history of art and visual culture majors and minors, or by instructor permission. Enrollment limited to 18. (General Education Code(s): A, E.) *S. Kamehiro*

190X. Art and Identity in Oceania. *

Theoretical discussions and Pacific Basin case studies on 1) definitions of cultural, ethnic, and national identities; 2) relationship between art, museums, and construction of historical and cultural narratives; 3) ways "tradition" defined in art practices and used by groups to assert an identity in their present. Participants first develop a theoretical framework and vocabulary for analyzing artistic production in a variety of cultures. Through specific case studies, will explore how art, architecture, and museums actively contribute to define and challenge ethnic and national identities. Course can be taken for senior exit credit only by permission of instructor. (Formerly course 191P, Art and Identity in the Pacific: Creating and Challenging Ethnic and National Identities.) Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors, or by permission. Enrollment limited to 18. (General Education Code(s): ER, A, E.) *S. Kamehiro*

191. Seminars in the History of Art and Visual Culture.

191A. Iconoclasm. *

What happens when, to control an object, it is destroyed? Examines destruction of art as a way of ending the object's life cycle, as a device of social tension/change, and as a colonial and post-colonial mechanism of religious/political control. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 191C.) Prerequisite(s): course 100A; and course 80 or permission of instructor. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A, E.) *E. Cameron*

191B. The Virgin of Guadalupe: Images and Symbolism in Spain, Mexico, and the U.S. *

Focus on the histories of miraculous images of *La Virgen de Guadalupe de Extremadura* (Spain) and *La Virgen de Guadalupe de Tepeyac* (Mexico). The foundations and growth of the cult of the Mexican Guadalupe during the colonial period is examined along with the multivalent symbolism of her image. Considers contemporary "appearances" of the Virgin of Guadalupe, from the miraculous images on a tree in central California and the compositions of Chicano artists, to mass-produced kitsch. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190B.) Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A, E.) *C. Dean*

191C. Subalternatives: Representing Others. *

Explores how visual representation (in fine art, popular art, film, and television) encodes difference in selected cultural and historical contexts. Considers (post)colonial image-making both as a strategy of domination as well as resistance. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190C.) Prerequisite(s): course 100A. Enrollment restricted to juniors and seniors. Enrollment limited to 18. (General Education Code(s): ER, A, E.)
C. Dean

191D. Semiotics and Visual Culture. S

How can visual culture be understood as the production, circulation, and recirculation of signs? This course offers a history of semiotics and its methodological application in the analysis of images in popular culture and within the discipline of art history. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190S.) Prerequisite(s): course 100A. Enrollment restricted to junior and senior students. Enrollment limited to 18. (General Education Code(s): A.)
J. Gonzalez

191E. Feminist Theory and Art Production. *

A close reading of works of art and theoretical texts by feminists working from 1970 to the present. The course encourages debate around the past, present, and future relevance of feminist theories to visual cultural studies, paying particular attention to issues of cultural and ethnic difference. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190T.) Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.)
J. Gonzalez

191F. Image and Gender. *

Examines what visual representations (feminine and masculine) reveal of gender in 19th- and 20th-century European and American culture; how images reflect norms of gender; and how we are conditioned to read images in gendered terms. Explores how femininity and masculinity were conceived during historical periods and how gender ideals changed in response to social, political, and economic pressures. Students encouraged to consider the fluid nature of 21st-century notions of ideal femininity and masculinity and possible alternatives. This course can be taken for senior exit credit only by permission of the instructor. (Formerly course 190Y.) Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18. (General Education Code(s): A.)
M. Berger

191G. Art, Cinema, and the Postmodern. F

Explores how theory can illuminate various forms of cultural production from art and cinema to popular and material cultures. Considers how scholars and visual producers utilize theory creatively and in the study of aesthetic objects and experiences. Prerequisite(s): course 100A. Enrollment restricted to junior and senior history of art and visual culture majors and minors. Enrollment limited to 18.
D. Murray

191H. History and Theories of Architectural Preservation. *

Examines the meanings of architectural preservation with relation to memory, identity, tourism, gentrification, and urban disasters. Combines the study of theories and concepts of preservation with examples of buildings and urban sites from the whole world. This course can be taken for senior exit credit only by permission of the instructor. Prerequisite(s): course 100A; and one of the following or permission of instructor: course 43, 143B, 143C, or 143D. Enrollment restricted to junior and senior history of art and visual culture majors. Enrollment limited to 18.
D. Sandler

191I. Topics in Architecture and Urban History. *

Focuses on selected topics in the history of art and visual culture. Topics vary depending on instructor. Can be taken for senior-exit credit only by permission of instructor. Prerequisite(s): course 100A. Enrollment restricted to juniors and seniors. Enrollment limited to 18. May be repeated for credit.
D. Sandler

191N. Topics in Renaissance Art and Visual Culture. W

Seminar on changing topics related to the current scholarship on the art and visual culture of the Renaissance. Pre-requisite(s): course 100A. Enrollment restricted to history of art and visual culture majors. Enrollment limited to 18. May be repeated for credit.
G. Langdale

195. Senior Thesis. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit.
The Staff

198. Independent Field Study. F,W,S

Independent field study away from the campus. Students submit petition to sponsoring agency.
The Staff

198F. Independent Field Study (2 credits). F,W,S

Independent field study away from the campus. Students submit petition to sponsoring agency. May be repeated for credit.
The Staff

199. Tutorial. F,W,S

Individual study in areas approved by sponsoring instructors. Students submit petition to

sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

201. Introduction to Visual Studies. F

Introduces the visual studies discipline and the History of Art and Visual Culture Department, providing students with an overview of the field's development, its issues of central concern, and its dominant research methods. Features intensive readings, student-led discussions, and exposure to some of the primary texts instrumental in the development of the field. Required seminar for all first-year visual studies graduate students. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Berger*

202. Theories of the Visual. W

Offers detailed theoretical readings to familiarize students with the methodological frameworks and debates that laid the groundwork for the field as well as those that have proven productive for practitioners of visual studies. (Formerly Critical Theory.) Enrollment restricted to graduate students. Enrollment limited to 15. *J. Gonzalez*

203. Theories and Histories of Seeing. S

Provides an in-depth case study of the visual practices and culture of a specific society. Builds on the foundation established by courses 201 and 202, offering sustained application of the general methods and theories to which students were previously introduced. The society under consideration rotates each year depending on the research interest of the faculty member teaching the course in any given spring. Prerequisite(s): courses 201 and 202. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *R. Birnbaum*

212. Yoruba Visualities and Aesthetics. *

Yoruba conceptions of visibility are explored and compared to seeing through Western eyes. Critical reading focuses on Western and Yoruba scholars' work on visualities and complementary theoretical writings on Yoruba aesthetics and philosophy. Enrollment restricted to graduate students. Enrollment limited to 15. *E. Cameron*

213. Theories and Visual Cultures of Iconoclasm. S

Examines theories that attempt to explain iconoclasm, the willful destruction of religious or political objects, by applying the theory to various case studies. The universal aspect of iconoclasm and the differences in understanding and practice are explored. Enrollment restricted to graduate students. Enrollment limited to 15. *E. Cameron*

222. The Image of Arhat in China. *

Indian Buddhist sage-monks (arhats) are portrayed in China in ways that represent a remarkable variety of visual/historical/practice traditions. This seminar examines these depictions and explores the ranges of means and functions attached to this theme. Enrollment restricted to graduate students. Enrollment limited to 15. *R. Birnbaum*

224. Engaged Buddhism and Visual Culture. *

Begins with an analysis of photography and films capturing the Gandhian and Dalit movement in India. Students then read key Buddhist texts on engaged Buddhism, and look at the rise of engaged Buddhism in Southeast Asia in the 1960s and how it impacted modern and contemporary art in Southeast Asia and its diaspora. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Ly*

232. The Monument Since 1750 in Relation to Nationhood and the Experience of War. *

Investigates modern monuments (1750 to present) and the creation or maintenance of a nation, especially in terms of war and its immediate aftermath. Destruction or alteration of monuments and production of anti- or counter-monuments are also examined. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Hunter*

240. Seeing Race. F

Investigates how discursive systems racialized the sight of various racial and ethnic groups in 19th- and 20th-century U.S. society. Focuses on the construction and maintenance of racial values systems and on the historically specific ways in which an eclectic assortment of visual artifacts have been read by groups over time. Considers the visual and material implications of race-based sight. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Berger*

243. Alternative Architecture. *

Focuses on what is commonly left out of architectural history: the ephemeral, informal, illegal, and uncertain. Topics include: anonymous and collective architecture; temporary interventions; everyday urbanism; and vestigial urban spaces. These topics are understood through theories of space as socially produced (Henri Lefebvre, Michel de Certeau, among others), and through cultural movements and manifestoes (Situationist International, Aesthetics of Hunger, etc.) Enrollment restricted to graduate students. Enrollment limited to 15. *D. Sandler*

245. Race and Representation. *

Explores how human subjects come to be visually defined and marked by "race" discourse. Covers

diverse theoretical literatures on the topic, primarily in visual studies, but also in cultural studies, post-colonial studies, and psychoanalysis. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Gonzalez*

250. The Cult of Mary in Byzantium. *

Why did the cult of the Virgin Mary become so important in Byzantine culture? Students examine historical, cultural, theological, political, and social reasons for this development seen through the interaction of Byzantine visual culture and literature. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Evangelatou*

260. Visual Literacy in Spanish America, 1500-1800. *

Visual literacy is considered as a particular predicament of colonial societies. Students consider the legibility of artifacts in colonial Spanish American contexts given its culturally diverse audiences and examine specific instances of (mis)interpreted images and transcultured representations. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Dean*

270. Colonial Cultures of Collecting and Display. W

Examines collections and exhibitions of colonized people, places, and objects through primary sources, theoretical texts, and analytical case studies (with some emphasis on Oceania). Focuses on visual discourses of race, science, religious conversion, colonial settlement, nation-building, education, and entertainment. Enrollment restricted to graduate students. Enrollment limited to 15. *S. Kamehiro*

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with the teaching of undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to course-sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study or research for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study (2 credits). F,W,S

Students submit petition to course-sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research.

Students submit petition to course sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

*Not offered in 2011-12

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

(There were no substantive changes to the History of Consciousness Program Description from the General Catalog 2010-12.)

Program Description

History of consciousness is an interdisciplinary graduate program centered in the humanities, with links to the social sciences, physical and biological sciences, and arts. It is concerned with forms of human expression and social action as they are manifested in specific historical, cultural, and political contexts. The program stresses flexibility and originality. Interest is focused on problems rather than disciplines. Although students are prepared to teach in particular fields, the emphasis is on questions that span a number of different approaches.

Over more than 30 years of existence, the history of consciousness program has become widely recognized as a leader of interdisciplinary scholarship. Program graduates are influential scholars at prominent universities, and dissertations have been published by major publishing houses and academic presses. Graduates currently find academic employment in a wide range of disciplines, including literature, feminist studies, science studies, anthropology, sociology, American studies, cultural studies, ethnic studies, communications, the study of religion, and philosophy. In addition, history of consciousness graduates work as filmmakers, museum researchers, free-lance writers, postdoctoral researchers, and academic administrators.

Since the curriculum concentrates on theoretical and methodological issues and is concerned with the integration of disciplines, candidates for admission are expected to have a relatively clear idea of the project they wish to pursue. Experience of advanced work in one or more fields is preferred, but not required.

History of consciousness emphasizes a variety of topics in its seminars and research pursuits. These areas of research include studies at the intersection of race, sexuality, and gender; global capitalism and cultural processes; psychoanalytic and semiotic theories of the image; science and technology studies; theories and histories of religion; social movements; and literary studies and poetics. Seminars are regularly offered in these and other areas of ongoing faculty research.

History of consciousness has strong cooperative relations with associated faculty from other campus programs, scholars who offer seminars and participate in advising, qualifying exams, and thesis committees. Within the limits of seminar size and faculty time, cross-disciplinary work in graduate courses offered by other departments is encouraged. The formal list of associated faculty is a non-exhaustive indication of advising possibilities beyond the program's core faculty. Campus research organizations, such as the UCSC Center for Cultural Studies, the Institute for Humanities Research, the Institute of Advanced Feminist Research, and the Chicano/Latino Research Center, also provide venues for collaborative work.

Requirements

Students are required to enroll in a minimum of two courses per quarter until advancement to candidacy (normally achieved no later than the fourth year).

Incoming students are required to take a minimum of five history of consciousness graduate seminars during the first two years. In the first year, students are required to take the introductory seminar, course 203A, *Approaches to History of Consciousness*. In the course of the first year, students must also take a writing intensive "B" seminar, either 203B, *Approaches*, or a "B" seminar following another seminar the student has taken. By the end of the first year, students are expected to complete a full seminar paper. Unless an exception is approved by the Director of Graduate Studies, "B" courses do not count toward the five seminars selected to fulfill the basic department requirement. The remainder of the courses taken to fulfill university enrollment requirements may include not only history of consciousness seminars but also independent study with specific faculty or graduate seminars offered in other departments. Additional requirements for the doctor of philosophy (Ph.D.) vary with individual disciplinary and

interdisciplinary needs and are determined in consultation with relevant faculty and the chair of the program.

Advancement to candidacy depends on the general quality of a student's work; demonstration of proficiency in a foreign language relevant to the student's area of work, either by passing a written examination administered by the department or successfully completing a language course approved by the department; success in the qualifying examination; and proposal of an acceptable thesis topic. The qualifying examination is centered on a qualifying essay that demonstrates the candidate's ability to do extended, dissertation-level research and analysis relevant to the proposed thesis topic and dissertation plan. The examination focuses on the student's research project and on the fields of scholarship it presupposes.

After advancement to candidacy, required by the end of the fourth year, students concentrate on the writing of the dissertation. The current normative time to degree limit of seven years means that a student usually has at least three years after advancement to candidacy for completion of the dissertation.

Students also have the option of doing advanced work in a traditional discipline and receiving a parenthetical degree notation of this specialization. In such cases, students must satisfy the appropriate department's criteria. Currently such degree notations may be negotiated with American studies, anthropology, literature, philosophy, sociology, and feminist studies. Students are expected to complete at least one year of supervised teaching as part of the degree requirements.

Applications

The deadline for applications to the History of Consciousness program is December 1 of each year. Admissions information and application materials are available online at graddiv.ucsc.edu. Applications are invited from students with backgrounds and interests in the humanities and social sciences and are especially encouraged from individuals with a clear idea of the project they wish to undertake. Strong preference is given to applicants working in areas for which the faculty resources in history of consciousness are appropriate and available. Graduate Record Examination (GRE) scores are required as is a writing sample of no more than 10 pages. Admission is for the fall quarter only.

It is important to note that in light of California's elimination of affirmative action as an admissions criterion, the history of consciousness department reaffirms its commitment to the principles of affirmative action. These principles mean a commitment to diversity, equal opportunity, and outreach to underrepresented communities. Further, this commitment underlines our understanding that the very fabric and quality of our scholarship depends on the representation and interplay of diverse experience and perspectives. So defined, affirmative action is reflected in every aspect of the history of consciousness program, including scholarship, teaching, admissions, hiring, and the process of departmental governance.

Faculty and Professional Interests

GOPAL BALAKRISHNAN, Associate Professor of History of Consciousness
Classics of political thought from Plato to Rousseau, early modern and modern European intellectual history, historical sociology, the history and future of capitalism, nationalism

BARBARA L. EPSTEIN, Professor of History of Consciousness
Social movements and theories of social movements, 20th-century U.S. politics and culture, Marxism and related theories of social change; modern Jewish history

CARLA FRECCERO, Distinguished Professor of French Literature and Feminist Studies
Renaissance studies, French and Italian language and literature, early modern studies, postcolonial theories and literature, contemporary feminist theories and politics, queer theory, U.S. popular culture

DAVID S. MARRIOTT, Professor of History of Consciousness
Literary theory, psychoanalysis, black cultural theory and philosophies of race, literary and visual cultures of modernism

ROBERT L. MEISTER, Professor of Politics
Political and moral philosophy, law and social theory, Marxian theory, institutional analysis, antidiscrimination law

ERIC PORTER Professor of American Studies and History of Consciousness
Black cultural and intellectual history; U.S. cultural history and cultural studies; comparative ethnic studies; popular music and jazz studies

VICTOR BURGIN, Professor Emeritus of History of Consciousness

JAMES T. CLIFFORD, Professor Emeritus of History of Consciousness

ANGELA Y. DAVIS, Professor Emerita of History of Consciousness and Feminist Studies

TERESA DE LAURETIS, Professor Emerita of History of Consciousness, Literature, and Film and Digital Media

DONNA J. HARAWAY, Professor Emerita of History of Consciousness and Feminist Studies

HAYDEN WHITE, Professor Emeritus of History of Consciousness

Affiliated Faculty

MARTIN BERGER Professor of History of Art and Visual Culture
Gender, race, and representation in U.S. culture

CHRISTOPHER CONNERY Professor of Literature
World literature and cultural studies, globalism and geographical thought, the 1960s, Marxism, pre-modern and modern Chinese cultural studies, cultural revolution

NATHANIEL DEUTSCH Professor of Literature and History
Hebrew Bible; rabbinic literature; Jewish mysticism; Hasidism; Eastern European Jewish life; ethnography

JENNIFER A. GONZALEZ Associate Professor of History of Art and Visual Culture
Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

DEBORAH GOULD, Assistant Professor of Sociology
Political emotion; social movements and contentious politics; classic and contemporary social theory; sexualities; lesbian/gay/queer studies; feminist and queer theory

MEGAN THOMAS Associate Professor of Politics
Political theory, especially of the 19th century; nationalist thought; Orientalism; comparative

colonialism; Southeast Asia

TYRUS MILLER Professor of Literature

Modernist, avant-garde, and postmodernist literature; the interrelations of the arts in the 20th century; aesthetics theory; communist and post-communist society, intellectual history, and culture, especially in East-Central and Southern Europe; cinema and film theory; the Frankfurt School; Gyrgy Lukcs; contemporary poetry and language arts

JENNIFER REARDON Associate Professor of Sociology

Issues of social identity as influenced by the new sciences of genetics and genomics; intersection of the sociology of science and knowledge and the sociology of race, gender, and class

VANITA SETH Associate Professor of Politics

Early modern and modern political theory, feminist theory, cultural history, race politics, postcolonial theory

Associated Faculty

ANJALI ARONDEKAR Associate Professor of Feminist Studies

South Asian studies, colonial historiography; feminist theories; queer theory; critical race studies; 19th-century interdisciplinary studies

KAREN BARAD Professor of Feminist Studies

Science studies, poststructuralist theory, feminist theory, queer theory, 20th-Century continental philosophy, philosophy of science, and physics

A. HUNTER BIVENS, Assistant Professor of Literature

Twentieth- and 21st-century German literature and film, Marxism and critical theory, psychoanalysis, lyric poetry, literary realism, the novel

VILASHINI COOPPAN Associate Professor of Literature

Postcolonial studies, comparative and world literature, literatures of slavery and diaspora, globalization studies, cultural theory of race and ethnicity

GINA DENT, Associate Professor of Feminist Studies, History of Consciousness, and Legal Studies

Africana literary and cultural studies, legal theory, popular culture

ROSA-LINDA FREGOSO Professor of Latin American and Latino Studies

Human-rights studies; intercultural and transborder feminism; cultural studies; Latina/o-Latin American film and media arts

SUSAN GILLMAN Professor of Literature

Nineteenth-century American literature and culture; theories of culture, race, and gender; world literature and cultural studies

WLAD GODZICH Professor of Literature

Theory of literature; philosophy and literature; emergent literature; translation theory; globalization and culture; European integration; knowledge society; literatures of Africa, the Caribbean, Europe (Central, Eastern, and Western), Brazil, Canada; detective and crime fiction; science fiction; medicine and literature

HERMAN S. GRAY, Professor of Sociology

Cultural studies, media and television studies, black cultural politics, social theory

JODY GREENE Associate Professor of Literature and Feminist Studies

Seventeenth- and 18th-century British and French literature and culture; pre- and early modern studies; critical theory; gay and lesbian cultural studies; gender studies; history of authorship; history of the book; human property

SUSAN HARDING, Professor of Anthropology

Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, and Spain

GAIL HERSHATTER Professor of History

Modern Chinese social and cultural history; labor history; gender history; history of sexuality; feminist theory; history, memory, and nostalgia

DAVID C. HOY, Professor of Philosophy

Kant, Hegel, Nietzsche, Heidegger, Derrida, Foucault, phenomenology, poststructuralism, and contemporary European philosophy

KIMBERLY JANNARONE Associate Professor of Theater Arts

Directing, dramaturgy, dramatic theory and criticism, theater history, acting

SHARON KINOSHITA Professor of Literature

Medieval Mediterranean studies (literary, historical, art historical); the Francophone Middle Ages; empires; postcolonial and globalization theory; Marco Polo; world literature and cultural studies

KIMBERLY LAU Professor of Literature

Feminism, discourse, and power; feminist theory; discourse, analysis, and ethnographic methods; folklore and narrative; globalization

HELENE MOGLEN, Professor Emerita of Literature and Feminist Studies

TRILOKI NATH PANDEY, Professor of Anthropology

Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons; native North America; tribal India; Nepal

RAVI RAJAN Associate Professor of Environmental Studies

Environmental history and political ecology, risk and disaster studies, science and technology studies, North-South environmental conflicts, environmental social theory, environmental ethics

B. RUBY RICH Professor of Community Studies

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

WARREN SACK Associate Professor of Film and Digital Media

Software design and media theory

DANIEL SELDEN Professor of Literature

Afroasiatic languages and literatures, Greek and Latin, Hellenistic culture, the classical tradition, history of criticism, literary theory

RICHARD TERDIMAN, Professor of Literature

Nineteenth- and 20th-century French and European literature and culture, literary and cultural theory, contemporary critical theory, cultural globalization

ANNA TSING, Professor of Anthropology

Culture and politics, feminist theory and gender in the U.S., social landscapes and tropical forest ethnoecologies, ethnicity, local power and relations to the state in Indonesia, Southeast Asia, and the U.S.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

80A. Culture and Ideology in the 20th Century. *

A survey of the principle ideological issues of the 20th century—attitudes toward sex, race, class, work, violence, and knowledge—viewed from the perspective of structuralist and semiological theories of culture. (General Education Code(s): T4-Humanities and Arts.) *A. Davis*

80B. Constructions of the Exotic. *

Analyzes ethnographic and auto-ethnographic representations of non-Western peoples. Films, video, ethnographies, novels, and journalism are considered, paying attention to specific histories of colonial and postcolonial contact which influence images of "culture" and "identity." (General Education Code(s): T4-Humanities and Arts.) *J. Clifford*

80C. Social Movements of the 1930s and 1960s in the U.S.. W

Examines the rise of a mass movement of the left in the U.S. during the 1930s, in the context of economic depression and the growing international threat of fascism. (Formerly "The 1930s Depression and Radicalism in the U.S.") (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *B. Epstein*

80H. Marxism. *

Advanced introduction to the main currents of Marxism from the 19th century to the present. Lectures and discussion address Marx's conceptions of capitalism, later attempts to theorize the political, and philosophical and aesthetic consequences of this critique. (General Education Code(s): T4-Humanities and Arts.) *G. Balakrishnan*

80J. Social Movements in the U.S. *

Traces the history of social movements in the late 19th- and 20th-century U.S., including populism, labor, socialism, Communism, the New Left, civil rights, feminism. Looks at the relationship between cultures of protest and mainstream popular and political cultures. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *B. Epstein*

80Q. Science as Culture and Practice. *

Using tools from the analysis of social history, visual and material culture, narrative, and laboratory and field practices, introduces students to modern science, technology, and medicine studies. Examples come especially from 20th- and 21st-century life and human and information sciences. May be repeated for credit. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *D. Haraway*

80U. Modernity and Its Discontents. F

Offers an introduction to the idea of modernity from Kant to Freud, Nietzsche to Fanon. (General Education Code(s): T4-Humanities and Arts.) *D. Marriott*

Upper-Division Courses

102. Philosophy and Poetics. *

Introduction to the relationship between philosophy and poetics in some major 19th- and 20th-century poets and thinkers. Enrollment restricted to juniors and seniors. Enrollment limited to 30. *D. Marriott*

105. Feminist Science Studies: Narratives and Reconfigurations. F

All knowledge, including scientific knowledge, is story-laden. Narratives, along with literary devices, tropes, figures, images, and the aesthetics of language, inhabit and inform even our most reliable knowledge-making practices. Rather than understanding stories as either narrative window dressing or as a threat to scientific objectivity, course examines storytelling as a consequential material practice that sustains and informs how scientists (and others) investigate the world. In this idiom, engaging well with science requires honing reading skills and looking for stories in unexpected places. Enrollment limited to 25. (General Education Code(s): TA.) *M. Kenney*

107. Freak Shows: Performing Difference and Dis/Order. F

Examines the complex politics of displaying so-called anomalous and hybrid subjects in relation to

producing "normal" ones. How are formations of race, gender, and dis/ability articulated in relation to normalcy, hybridity, and/or anomaly? What forms of "freakery" exist in the contemporary world? Enrollment limited to 25. *L. Gomoll*

111. States, War, Capitalism. S

Survey of seminal work on ancient origins of the state, diverse geo-political systems of war and diplomacy, and consequences of the formation of the world market on the evolution of geo-political systems up to and beyond the wars of today. Enrollment restricted to juniors and seniors. Enrollment limited to 35. *G. Balakrishnan*

112. Foundations in Critical Theory. S

Concentrates on the Marxist tradition of critical theory, centering on classical texts by Marx and by writers in the Marxist tradition up to the present. Enrollment limited to 150. (General Education Code(s): TA.) *G. Balakrishnan*

118. Jewish Social Movements. *

Jewish social movements of the late 19th and 20th centuries, in Europe (Eastern and Western) and the U.S.: the confrontation between Hasidism and Haskalah, tensions between socialism and Zionism, between religiosity and secularism, the mutual influences among these tendencies. (Also offered as History 185D. Students cannot receive credit for both courses.) Enrollment restricted to juniors and seniors. Enrollment limited to 20. (General Education Code(s): E.) *B. Epstein*

199. Tutorial. F,W,S

A program of individual study arranged between an undergraduate student and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

203A. Approaches to History of Consciousness. *

An introduction to history of consciousness required of all incoming students. The seminar concentrates on theory, methods, and research techniques. Major interpretive approaches drawn from cultural and political analysis are discussed in their application to specific problems in the history of consciousness. Prerequisite(s): first-year standing in the program. See the department office for more information. (Formerly course 203.) *The Staff*

203B. Approaches to History of Consciousness. *

Writing-intensive course based on readings in course 203A. Prerequisite(s): course 203A. Enrollment restricted to graduate students. Enrollment limited to 9. *G. Balakrishnan*

204A. Introduction to Cultural Studies. *

Classic texts from the British cultural studies tradition. Traces later developments in North America, Latin America, Australia, and elsewhere. Asks how class analysis has been complicated by work on race, ethnicity, gender, sexuality, and postcoloniality. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *J. Clifford*

204B. Introduction to Cultural Studies. *

Writing intensive course based on readings in course 204A. Prerequisite(s): course 204A. Enrollment restricted to graduate students. Enrollment limited to 20. *J. Clifford*

205A. Theories of Slavery. *

Explores philosophical, legal, and socio-historical analyses of slavery. Focus on Atlantic slavery and the production of race and gender formations, complemented by discussion on contemporary forms of slavery. Impact of historical slavery on prevailing discourses and institutions. (Also offered as Feminist Studies 225A. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *A. Davis*

205B. Theories of Slavery. *

Writing-intensive course based on readings in History of Consciousness 205A and Feminist Studies 225A. (Also offered as Feminist Studies 225B. Students cannot receive credit for both courses.) Prerequisite(s): course 205A or Feminist Studies 225A. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Davis*

208A. Radical Critiques of Penalty. *

Examines recent theories of imprisonment, focusing on the philosophical and criminological literature associated with scholarly and activist movements arguing for prison abolition. In considering the disarticulation of crime and punishment, race, class, and gender serve as principal analytical categories. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Davis*

208B. Radical Critiques of Penalty. *

Writing intensive course based on readings in course 208A. Prerequisite(s): course 208A. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Davis*

209A. Women of Color: Feminist Theories and Practices. *

Examination of feminist consciousness in the indigenous and diasporic cultural histories of women of color. Analysis of "feminist moments" in these histories and their epistemological implications for the construction of feminist theories that take into account intersections of gender, ethnicity, class, and sexual orientation. Discussion of possible paradigmatic shifts in feminist theory. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Davis*

209B. Women of Color: Feminist Theories and Practices. *

Writing intensive course based on readings in course 209A. Prerequisite(s): course 209A.
Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

210A. Cultural and Historical Studies of Race and Ethnicity. *

Explores the historical construction of racial and ethnic categories in the Americas, especially the U.S., in interaction with gender, sexuality, class, and nationality. Intended to introduce current work by UCSC faculty and Bay Area scholars and to stimulate graduate student research projects, the course is organized by intensive reading around key questions, followed by presentations by invited scholars. Emphasizes research resources and methodologies. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

210B. Cultural and Historical Studies of Race and Ethnicity. *

Writing intensive course based on readings in course 210A. Prerequisite(s): course 210A.
Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

211A. French Hegel. *

Introduces the "return to Hegel" in the work of some major 20th-century French thinkers.
Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

212. Feminist Theory and the Law. *

Interrogation of the relationship between law and its instantiating gendered categories, supported by feminist, queer, Marxist, critical race, and postcolonial theories. Topics include hypostasization of legal categories, the contest between domestic and international human rights frameworks, overlapping civil and communal codes, cultural explanations in the law, the law as text and archive, testimony and legal subjectivity. (Also offered as Feminist Studies 212. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *G. Dent*

215A. Critical Theory in the Marxist Tradition. *

An introduction to classic texts of the Frankfurt School, focusing on works by Adorno, Horkheimer, Benjamin, and Marcuse. Explores their uses and critiques of Marxism, emphasizing questions of the relation between philosophy and history, theory and praxis, aesthetics and politics, and identifying issues relevant to contemporary debates around race, class, and gender. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *A. Davis*

215B. Critical Theory in the Marxist Tradition. *

Writing intensive course based on readings in course 215A. Prerequisite(s): course 215A.
Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *A. Davis*

217A. Seminar: Topics in Feminist Theory. *

Studies in the theory and history of feminist consciousness; analysis of the main areas of a specifically feminist interest; determination of the theoretical bases for a distinctively feminist perspective on the principal problems of the life and human sciences; examination of relations of class, race, and gender in feminist theory and practice. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *The Staff*

217B. Seminar: Topics in Feminist Theory. *

Writing intensive course based on readings in course 217A. Prerequisite(s): course 217A.
Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *The Staff*

218A. Postcolonial Theory. *

Study of selected topics in postcolonial theory, including decolonizing critiques of Western knowledges and epistemologies, nationalism, gender and sexuality, cultural representations of neo-colonialism and imperialism, subalternity, history and historical transformation, and global relations of dominations. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

218B. Postcolonial Theory. *

Writing intensive course based on readings in course 218A. Prerequisite(s): course 218A.
Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

219A. Psychoanalysis and Cultural Criticism. *

Readings in Freudian psychoanalytic theory from Freud and his contemporaries to the present, with emphasis on concepts (such as the unconscious, sexuality, fantasy, narcissism) that have informed recent cultural criticism around questions of social identity, subjectivity, marginality, and power. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

219B. Psychoanalysis and Cultural Criticism. S

Writing intensive course based on readings in course 219A. Prerequisite(s): course 219A.
Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

220A. Globalization and Cultural Process. F

Discusses theories of globalization and its cultural effects. How are cultural forms destroyed, imposed, appropriated, hybridized, translated, invented, and reinvented at local, national, regional, and transnational levels? Historical and ethnographic focus on tourist encounters, museums, nativisms, film/media performances, etc. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

limited to 20. May be repeated for credit. *G. Van Den Abbeele*

220B. Globalization and Cultural Process. *

Writing intensive course based on readings in course 220A. Prerequisite(s): course 220A. Enrollment limited to 20. May be repeated for credit. *J. Clifford*

222A. Theories of Late Capitalism. *

Looks at the theoretical literature on what is variously called late capitalism/postindustrialism/postfordism, and in that context considers the rise of nationalism and identity politics in the latter part of the 20th century. The primary focus is on the U.S. and Western Europe, but questions of the globalization of capital and the transformation of relations between "the West" and "the Third World" are also considered. Written work for the course consists of weekly short papers. (Formerly Theories of Late Capitalism, Nationalism, and the Politics of Identity.) Enrollment restricted to graduate students. Enrollment limited to 15. *B. Epstein*

222B. Theories of Late Capitalism. *

Writing intensive course based on readings in course 222A. (Formerly Theories of Late Capitalism, Nationalism, and the Politics of Identity.) Prerequisite(s): course 222A. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Epstein*

223. Recent European Philosophy. *

Seminar on recent developments in European philosophy, with particular attention to German theorists such as Nietzsche, Heidegger, Gadamer, Horkheimer, Adorno, or Habermas. Theorists such as Sartre, Merleau-Ponty, Derrida, Foucault, Bourdieu, Levinas, Laclau, or Vattimo may be read as well. (Also offered as Philosophy 223. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. May be repeated for credit. *D. Hoy*

224. History of Consciousness. *

Examination of contemporary theories of consciousness in both analytic and continental traditions. Among those who deflate modern philosophy's preoccupation with consciousness are not only Dennett, Davidson, and Rorty, but also Heidegger, Foucault, and Derrida. Among those who argue for irreducibility of subjectivity are not only Searle, Nagel, and Chalmers, but also Sartre, Merleau-Ponty, and Levinas. Discussion of parallel readings from both philosophical perspectives. (Also offered as Philosophy 256. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *D. Hoy*

225. The Politics of Affect. *

Point of departure is the question of the political, posed with respect to psychoanalysis. The underlying question is what the political does to psychoanalysis, but also what the unconscious does to the political. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

226. Marxist Humanism and the Anti-Humanist Turn. *

Seminar in which texts are read in the tradition of Marxist humanism and in the turn toward an anti-humanist stance originating among French and other European intellectuals in the 1950s and 1960s, then taking hold widely among left intellectuals in the U.S. and elsewhere. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Epstein*

228. Fundamental Problems of Metapolitics. *

Focuses on seminal works of political thought: the first half devoted to ancient and modern classics; the second considering several major contemporary reflections. Aims to reconstruct and assess the claims regarding epistemic conditions and criteria of metapolitical judgment. Enrollment restricted to graduate students. Enrollment limited to 15. *G. Balakrishnan*

230A. Poetry, Language, Thought. *

Introduces the relation between philosophy and poetics in some major 20th-century poets and thinkers. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

230B. Poetry, Language, Thought. *

Writing-intensive course based on readings in course 230A. Prerequisite(s): course 230A, or permission of instructor. Enrollment limited to 15. *D. Marriott*

233A. Theories of Modernity and Postmodernity. *

Study of social and cultural theories of modernity and postmodernity; analysis of various conceptualizations of the modern and the postmodern and their relation to production, history, aesthetics, cultural identity, social struggle; texts from a variety of disciplines (literature, sociology, philosophy). Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

233B. Theories of Modernity and Postmodernity. *

Writing intensive course based on readings in course 233A. Prerequisite(s): course 233A. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

234A. Social Movements in the 20th-Century U.S. W

The history of major social movements in the 20th-century U.S., including populism, labor, socialism and communism, civil rights, the women's movement, the anti-nuclear movement. Various theoretical perspectives on the rise and fall of social movements. Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. May be repeated for credit. *B. Epstein*

234B. Social Movements in the 20th-Century U.S. S

Writing intensive course based on readings in course 234A. Prerequisite(s): course 234A.

Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *B. Epstein*

235A. Theory of Religion. *

The difficulty of defining religion (universal essence vs. local/individual experience), of specifying its categorical boundaries, and of generating a theory based on more traditional disciplines (anthropomorphism, societal, psychic, transcendent, cognitive/ritual, historical/cultural/political).

Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

235B. Theory of Religion. *

Writing intensive course based on readings in course 235A. Prerequisite(s): course 235A.

Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

237A. Historical Materialism. F

Students read landmark works of classical and contemporary Marxism. Writings from Marx, Lenin, Trotsky, Lukacs, Gramsci, Adorno, Benjamin, Sartre, Althusser, Anderson, Jameson, and Zizek are addressed. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *G. Balakrishnan*

237B. Historical Materialism. *

Writing-intensive seminar based on course 237A. Students read landmark works of classical and contemporary Marxism. Writings from Marx, Lenin, Trotsky, Lukacs, Gramsci, Adorno, Benjamin, Sartre, Althusser, Anderson, Jameson, and Zizek are discussed. Enrollment restricted to graduate students. Enrollment limited to 10. May be repeated for credit. *G. Balakrishnan*

239A. The Dialectical Legacy. *

From Adorno to Zizek rediscoveries of Hegel have provided the impetus for some of the most innovative currents of 20th-century Marxism. Examines the philosophical and historical problems that Marx inherited from Hegel through close readings of their major works. Enrollment restricted to graduate students. Enrollment limited to 15. *G. Balakrishnan*

239B. The Dialectical Legacy. *

From Adorno to Zizek rediscoveries of Hegel have provided the impetus for some of the most innovative currents of 20th-century Marxism. Examines the philosophical and historical problems that Marx inherited from Hegel through close readings of their major works. Enrollment restricted to graduate students. Enrollment limited to 15. *G. Balakrishnan*

240. Basic Principles of University-Level Pedagogy (1 credit). *

Provides training for graduate students in university-level pedagogy in general. Under the supervision of the department chair, coordinated by a graduate student with substantial experience as a teaching assistant. Enrollment restricted to graduate students. May be repeated for credit.

The Staff

242A. Violence and Phenomenology: Fanon/Hegel/Sartre. *

Study of the work and influence of Frantz Fanon from a range of viewpoints: existential, phenomenological, psychoanalytic, and political; a variety of genres: film, literature, case history, and critique; and a set of institutional histories: clinical, cultural, and intellectual. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

242B. Violence and Phenomenology: Fanon/Hegel/Sartre. *

Writing intensive course based on readings in course 242A. Prerequisite: course 242A. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

243A. Nationalism, Anti-Semitism, and Jewish Resistance in World War II. *

Jewish resistance to Nazism during World War II, in Eastern Europe, and its historical context. Includes the pre-war rise in nationalism and anti-Semitism in Poland and Lithuania, Jewish integration in the Soviet Union, and the consequences for wartime resistance. (Also offered as History 256. Students cannot receive credit for both courses.) Enrollment restricted to seniors and graduate students. Enrollment limited to 15. *B. Epstein*

250A. Foundations in Science Studies. *

Critical inquiry into topics in the history, sociology, anthropology, and philosophy of science and technology. Organized around the position that science is its practice, the seminar explores practices of representation, science studies and cultural studies, local/global tensions and networks, and the science question in feminism and antiracism. Enrollment restricted to graduate students. Enrollment limited to 15. *K. Barad*

250B. Foundations in Science Studies. *

Writing intensive course based on readings in course 250A. Prerequisite(s): course 250A. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Haraway*

251A. Readings in Science Studies. *

Focus is on recent literature in social, cultural, and historical studies of science, medicine, and technology. This seminar familiarizes students with current scholarly debates, research networks, national traditions, international exchanges, conference proceedings, interdisciplinary projects, and publication sites. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *D. Haraway*

251B. Readings in Science Studies. *

Second quarter of two-quarter course. Writing-intensive course based on the readings studied in course 251A. Prerequisite: course 251A. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Haraway*

252. Poststructuralism. *

French poststructuralism, with particular attention to the main philosophical texts of Jacques Derrida and Michel Foucault. Other representative theorists as well as critics of poststructuralism are studied as time permits. (Also offered as Philosophy 252. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

253A. Topics in Cultural Analysis. F

Advanced graduate seminar in which students do research on focused topics. Each quarter centered on single thematic area. Students read works of culture-theory and exemplary studies illustrating methodologies, problems, and current controversies. Prerequisite(s): minimum of second-year status in the history of consciousness program; instructor evaluates student's ability to participate. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Haraway*

255. Carl Schmitt: Political and Legal Order in Modern Thought. *

Students study the main translated texts of Carl Schmitt's work, as well as certain secondary commentary on his body of thought. (Formerly course 255A.) Enrollment restricted to graduate students. Enrollment limited to 15. *G. Balakrishnan*

256A. Theories of the Visual. F

Study of psychoanalytic theories of the visual including the emergence of psychoanalysis and cinema as parallel discourses and the mobilization of key psychoanalytic concepts—scopophilia, voyeurism, fetishism—in Freudian and Lacanian understandings of the gaze so central to film and photographic theory. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

256B. Theories of the Visual. W

Writing intensive course based on readings in course 256A. Prerequisite: course 256A. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

259A. Kant, Lacan, and the Ethics of Psychoanalysis. W

Offers an introduction to Jacques Lacan's "Return to Kant" and the response it provokes as a reading of sadism, politics, and ethics. Specific point of entry adopted for course is Lacan's seminar on "The Ethics of Psychoanalysis." Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

259B. Kant, Lacan, and the Ethics of Psychoanalysis. *

Writing-intensive course based on readings in course 259A. Prerequisite(s): course 259A. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Marriott*

261. Modern Intellectual History. F

Survey of 19th- and 20th-century intellectual history that focuses on a cross-section of major works from Hegel to Levi-Strauss. Enrollment restricted to graduate students. Enrollment limited to 15. *G. Balakrishnan*

264. The Idea of Africa. *

Examines the position of Africa in cultural studies and the simultaneous processes of over- and under-representation of the continent that mark enunciations of the global and the local. Themes include defining diaspora, the West as philosophy, and Africa in the global economy. (Also offered as Feminist Studies 264. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *G. Dent*

268A. Rethinking Capitalism. S

Readings include works by speakers at UCSC's "Rethinking Capitalism Initiative." Topics are: (1) financialization versus commodification (how options-theory has changed capitalism); (2) material markets (how this theory performs); and (3) valuation and contingency (how economies make worlds). (Also offered as Anthropology 268A. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *R. Meister*

268B. Rethinking Capitalism. F

Course 268A addressed changes in the theory and practice of capitalism as derivatives markets have become increasingly central to it. This course, which can be regarded as either background or sequel, concerns questions that surround recent debates about derivatives from the standpoint of broader developments in law, culture, politics, ethics, ontology, and theology. What would it mean to see questions of contingency and value as a challenge to late-modern understandings of these modes of thought? (Also offered as Anthropology 268B. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *R. Meister*

291. Advising (2 credits). F,W,S

Independent study formalizing the advisee-adviser relationship. Regular meetings to plan, assess and monitor academic progress, and to evaluate course work as necessary. May be used to develop general bibliography of background reading and trajectory of study in preparation for the qualifying examination. May be repeated for credit. *The Staff*

292. Practicum in Composition. *

A practicum in the genres of scholarly writing, for graduate students working on the *composition* of their qualifying essay or doctoral dissertation. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

293. Field Study. F,W,S

Research carried out in field settings, based on a project approved by the responsible faculty. The student must file a prospectus with the department office before undertaking the research and a final report of activities upon return. May be repeated for credit. *The Staff*

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with the teaching of undergraduates. Students submit petition to sponsoring agency. *The Staff*

295. Directed Reading. F,W,S

Systematic working through a prearranged bibliography which is filed as a final report at the end of the quarter with the signature of the instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

A seminar study group for graduate students focusing each quarter on various problems in the history of consciousness. A statement and evaluation of the work done in the course will be provided each quarter by the students who have participated in the course for that quarter, and reviewed by the responsible faculty. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

298. Doctoral Colloquium. *

Under the supervision of a History of Consciousness faculty member, students finishing their dissertation meet weekly or bi-weekly to read and discuss selected draft chapters, design difficulties and composition problems. May be repeated for credit. *The Staff*

*Not offered in 2011-12

(There were no substantive changes to the Program Description from the General Catalog 2010-12.)

Program Description

The humanities at UCSC includes the traditional humanistic disciplines of history, literature, and philosophy as well as interdisciplinary programs in feminist studies and American studies. The humanities is also the home for linguistics, languages, and writing. The humanities offers a range of courses in support of the campus' general education requirements.

At the undergraduate level, the following majors are offered: American studies, classical studies, feminist studies, German studies, history, Italian studies, Jewish studies, language studies, linguistics, literature, and philosophy. Several undergraduate minors are offered including the following: classical studies, East Asian studies, history, Italian studies, Jewish studies, language studies, linguistics, literature, and philosophy. Undergraduate students may also pursue individual majors. At the graduate level, five departments offer graduate degrees: History, History of Consciousness, Linguistics, Literature, and Philosophy. Instruction and testing to satisfy the campus' writing requirements is offered through the writing program.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

(There were no substantive changes to the Italian Program Description from the General Catalog 2010-12.)

Program Description

Students interested in acquiring proficiency in Italian can enroll in language courses from beginning to advanced levels. In addition, students may select from among the following programs: a major or minor in language studies, a major in literature with an emphasis in Italian literature, a major in global economics, or a major in Italian studies.

The sequence of lower-division courses 1-6 is aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing. Courses 1A and 1B offer lower-division intensive Italian language instruction equivalent to levels 1, 2, 3. The 1, 2, 3 sequence starts once a year in the fall quarter, while the 1A-1B sequence starts once a year in the winter quarter. Classes are taught in Italian from the beginning level.

Campus Language Laboratories and Placement Exams

Lower-Division Courses

1. Instruction in the Italian Language. F

Aural comprehension, speaking, reading, writing, and laboratory. Check the quarterly *Schedule of Classes* for exact quarter(s) of offering. Elementary sequence (1-2-3) begins in fall quarter. *The Staff*

1A. Intensive Elementary Italian. W

Intensive instruction in elementary Italian language emphasizing oral fluency. Taken in conjunction with Italian 1B, the two courses are equivalent to levels 1-2-3. Accelerated pace allows a rapid mastery of grammar and syntax, giving the student a basic knowledge of Italian in only two quarters. *The Staff*

1B. Intensive Elementary Italian. S

Sequential to course 1A, completes the equivalent instruction offered through Italian 1-2-3. May not be taken by students who have completed Italian 1 or Italian 3. Open to students who have successfully completed either 1A or Italian 2; for students completing course 2, course 3 is preferable. *The Staff*

2. Instruction in the Italian Language. W

Aural comprehension, speaking, reading, writing, and laboratory. Check the quarterly *Schedule of Classes* for exact quarter(s) of offering. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 1; or placement by examination. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. *The Staff*

3. Instruction in the Italian Language. S

Aural comprehension, speaking, reading, writing, and laboratory. Check the quarterly *Schedule of Classes* for exact quarter(s) of offering. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 2; or placement by examination. *The Staff*

4. Intermediate Italian. F

Short stories, articles, films, and newsclips are used as the basis for studying intermediate-level conversation and composition. Laboratory assignments involve use of the World Wide Web, conversations with native speakers, films and video clips. Students interested in this course who have not taken the prerequisite at UCSC should meet with the instructor, preferably prior to the first class meeting, and take the placement examination. Prerequisite(s): course 1B or 3, or placement by examination. Enrollment limited to 25. (General Education Code(s): CC, IH.) *The Staff*

5. Intermediate Italian. W

Reading of Italian short stories and a play are used as basis for further study and refinement of oral and written skills at the intermediate level. Particular emphasis is placed on oral/written discussion of abstract ideas and topics, and on the study of different language registers/contexts. Laboratory work is regularly assigned. Students interested in this course who have not taken the prerequisite at UCSC should meet with the instructor, preferably prior to the first class meeting and take the placement exam. Prerequisite(s): course 4 or placement by examination. Enrollment limited to 25. (General Education Code(s): CC, IH.) *The Staff*

6. Intermediate–Advanced Italian. S

Reading of first novel in the language and weekly viewing of Italian films serve as basis for oral reports and discussions on various aspects of Italian culture and civilization. Weekly assignments, three essays, and a paper on topics derived from or related to the text. Students interested in this course who have not taken the prerequisite at UCSC should meet with the instructor, preferably prior to the first class meeting, and take the placement examination. Prerequisite(s): course 5 or placement by examination. Enrollment limited to 25. (General Education Code(s): CC, IH.) *The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

106. Italian Culture Through Film. S

Film is used as a medium through which images of Italians and their culture are disseminated, perpetuated, and crystallized. Students focus on pivotal issues in Italian culture, society, history, and politics, and develop an informed opinion on relevant issues in Italian studies. Students cannot receive credit for this course and Languages 80D. Prerequisite(s): course 6. May be repeated for credit. (General Education Code(s): CC.) *G. Centineo*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#)

Program Description

Students interested in an interdisciplinary approach to Italian culture through the combined study of language, literature, history, art history, and other subjects may pursue a major or minor in Italian studies. The guidelines for the completion of the major may be obtained from Professor Deanna Shemek of the Literature Department. There are several options for study in Italy through the UC Education Abroad Program (EAP), either for a year (Bologna, Milan), for an intensive semester (Milan, Bologna, Rome, Florence), or for the summer (Florence). The Italian studies program is administered by the Literature Department.

Major Requirements

Each student must complete the lower-division language sequence (Italian 1-6, or equivalent). In addition, students are required to take 10, five-credit courses (one of which may be lower division), including a core unit of five courses which must be taken at UCSC: two Italian literature courses, Italian 106 (*Italian Culture Through Film*), one course in Italian history, and one course in Italian art history. A course featuring the work of Dante is recommended. A minimum of five courses must be taught substantially in Italian. Five may be approved elective courses, which may feature Italy in a European or global context. Up to five elective courses may be approved from UC EAP's yearlong study abroad in Italy. All students in the major must satisfy the Italian Studies senior exit requirement by writing a senior essay focused on Italian literature, history, or art history. This essay may be produced within an approved seminar, or (with faculty permission) by enrolling in a one-credit Italian Literature 191 course in conjunction with another upper-division course in Italian literature, history, or history of art and visual culture. This combination must be approved by a faculty advisor in Italian Studies.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. Italian Studies majors satisfy the DC Requirement through satisfactory completion of the senior essay, as described above. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Minor Requirements

Each student must complete the lower-division language sequence (Italian 1-6, or equivalent). Students must also complete five upper-division courses in Italian studies: two Italian literature courses, Italian 106 (*Italian Culture Through Film*), one course in Italian history, and one course in Italian art history. A course featuring the work of Dante is recommended. Three of the five upper-division courses must be completed at UCSC; three must be taught substantially in Italian. A maximum of two courses may be transferred from EAP.

Honors

Honors in the Italian studies major are awarded to graduating seniors who have earned a 3.70 to 3.89 grade point average in their upper-division Italian studies courses. Highest honors in the Italian studies major are awarded to graduating seniors who have earned a 3.90 or higher grade point average in their upper-division Italian Studies courses. Honors are not awarded in the minor.

Department of Literature

303 Humanities 1

(831) 459-4778

http://reg.ucsc.edu/catalog/html/programs_courses/itstPS.html***Program Description***

Students interested in an interdisciplinary approach to Italian culture through the combined study of language, literature, history, art history, and other subjects may pursue a major or minor in Italian studies. The guidelines for the completion of the major may be obtained from Professor ~~Cynthia Polecristi~~ [Deanna Shemek](#) of the ~~History Literature~~ Department. There are several options for study in Italy through the UC Education Abroad Program (EAP), either for a year (Bologna, Milan), for an intensive semester (Milan, Bologna, Rome, ~~Siena~~ Florence), or for the summer (~~Siena~~ [Florence](#)). The Italian studies program is administered by the Literature Department.

Major Requirements

Each student must complete the lower-division language sequence (Italian 1–6, or equivalent). In addition, students are required to take 10, [five-credit](#) courses (one of which may be lower division), including a core unit of five courses which must be taken at UCSC: ~~two three~~ Italian literature courses, [Italian 106 \(Italian Culture Through Film\)](#), one course in Italian history, and one course in Italian art history. A course featuring the work of Dante is ~~required~~ recommended. A minimum of five courses must be taught ~~principally~~ [substantially](#) in Italian. Five may be approved elective courses, which may feature Italy in a European or global context. ~~One Italian literature course may be replaced by an Italian culture course.~~ Up to five elective courses may be approved from UC EAP's yearlong study abroad in Italy. All students in the major must satisfy the Italian Studies senior exit requirement by writing a senior essay focused on Italian literature, history, or art history. This essay may be produced within an approved seminar, or (with faculty permission) by enrolling in a one-credit ~~senior exit course~~ [Italian Literature 191 course](#) in conjunction with another upper-division course in Italian literature, history, or history of art and visual culture. This combination must be approved by a faculty advisor in Italian Studies.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. Italian Studies majors satisfy the DC Requirement through satisfactory completion of the senior essay, as described above. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Minor Requirements

Each student must complete the lower-division language sequence (Italian 1–6, or

equivalent). Students must also complete five upper-division courses in Italian studies: ~~three-two~~ Italian literature courses, Italian 106 (*Italian Culture Through Film*), one course in Italian history, and one course in Italian art history. A course featuring the work of Dante is ~~required~~ recommended. ~~One Italian literature course may be replaced by an Italian culture course.~~ Three of the five upper-division courses must be completed at UCSC; three must be taught ~~principally~~ substantially in Italian. A maximum of two courses may be transferred from EAP.

Honors

Honors in the Italian studies major are awarded to graduating seniors who have earned a 3.70 to 3.89 grade point average in their upper-division Italian studies courses. Highest honors in the Italian studies major are awarded to graduating seniors who have earned a 3.90 or higher grade point average in their upper-division Italian Studies courses. Honors are not awarded in the minor.

Program Description

Students interested in acquiring proficiency in Japanese can enroll in language courses from beginning to advanced levels. The curriculum aims to build a solid foundation in all four aspects of linguistic skills (speaking, listening, reading, and writing) as well as sociolinguistic competence and cultural knowledge.

Students may use Japanese courses for the following major or minor in language studies: a major in linguistics; an East Asian minor or (individual major); a major in global economics; or a major in literature

Campus Language Laboratories and Placement Exams

Information about these topics can be found under Language Program.

Study Abroad

The Office of International Education (OIE) has information on study in Japan. There are study abroad centers in Yokohama, Tsuru, Kyoto, Tokyo, Sendai, Tsukuba, and Tohoku. Courses taken abroad can, with approval of an adviser, be applied to major requirements. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>. For information on credit applied to a major, contact the appropriate department.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**1. Instruction in the Japanese Language. F**

Students carry out beginning-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write Japanese scripts (hiragana, katakana, and about 40 kanji). *The Staff*

2. Instruction in the Japanese Language. W

Students carry out beginning-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 70 additional kanji. Prerequisite(s): course 1; or consent of instructor. *The Staff*

3. Instruction in the Japanese Language. S

Students carry out beginning-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 70 additional kanji. Prerequisite(s): course 2; or by consent of instructor. *The Staff*

4. Intermediate Japanese. F

Students carry out intermediate-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 70 additional kanji. Prerequisite(s): course 3; or by consent of instructor. (General Education Code(s): IH.) *The Staff*

5. Intermediate Japanese. W

Students carry out intermediate-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 70 additional kanji. Prerequisite(s): course 4; or by consent of instructor. (General Education Code(s): IH.) *The Staff*

6. Intermediate Japanese. S

Students carry out intermediate-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 100 additional kanji. Emphasis is placed on developing the student's cultural knowledge relevant to inter-cultural communication. Prerequisite(s): course 5; or by consent of instructor. (General Education Code(s): CC, IH.) *The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses**103. Advanced Japanese. F**

Students carry out advanced-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 100 additional kanji. Emphasis placed on developing the student's cultural knowledge about Japan as well as knowledge relevant to inter-cultural communication. Prerequisite(s): course 6; or by consent of instructor. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. *The Staff*

104. Advanced Japanese. W

Students carry out advanced-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 100 additional kanji. Emphasis placed on developing the student's cultural knowledge about Japan as well as knowledge relevant to inter-cultural communication. Prerequisite(s): course 103; or by consent of instructor. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. *The Staff*

105. Advanced Japanese. S

Students carry out advanced-level tasks that involve listening, speaking, reading, and/or writing, and learn how to read and write 100 additional kanji. Further development of cultural knowledge and understanding through critical examination of authentic Japanese materials in a variety of genres, including literary work, expository writing, and films. May be repeated for credit with consent of instructor. Prerequisite(s): course 104; or by consent of instructor. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. (General Education Code(s): TA.) *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

<http://jewishstudies.ucsc.edu>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The interdisciplinary program in Jewish studies introduces students to the study of classical, medieval, and modern Jewish cultures and to the range of disciplines that bear upon the field. The Jewish studies major and minor offer students the chance to gain knowledge and skills in a variety of contexts in various aspects of Jewish culture, with special reference (though not limited) to modern issues. The major and minor will help them prepare to move successfully into graduate programs in a variety of disciplines, especially in humanities, social sciences, and pre-professional programs, and will provide students with a grounding in materials fundamental to western culture and liberal education. This program connects with a range of disciplines and programs on the UCSC campus that explore the meanings of modernity; at the same time, this program will help students develop analytical tools, strategic versatility, and critical literacy.

Note that modernity here is not defined as Europe or North America; the Jewish studies program intends to speak to modernity as a global phenomenon, dealing with sites where Jews lived. In the 19th and 20th centuries Jews were widely spread across the globe and often played active and influential roles in their communities. These include such places as Shanghai, Tianjin, Harbin, India, Latin America, Egypt, Iran, and of course throughout Europe, Great Britain, and North America.

Students, especially those who plan to continue their studies in graduate school, may wish to gain proficiency in Yiddish, German, or Spanish, depending on their area of interest. The upper-division course Hebrew Bible (Pre- and Early-Modern Literature (LTPR) 144B) is strongly recommended, as is developing language proficiency in Hebrew.

Jewish studies is administered by the Department of History. For additional information on curriculum and advising, go to <http://jewishstudies.ucsc.edu>.

Study Abroad

Jewish studies encourages students to take advantage of the Education Abroad Program (EAP). The University of California has developed educational opportunities abroad in conjunction with the Jerusalem Study Center at The Hebrew University of Jerusalem. Students who participate in the UC Education Abroad Program may petition to apply up to three courses from EAP toward their Jewish studies major or minor requirements.

Requirements for the Major

A prerequisite for the Jewish studies major is the lower-division sequence in elementary Hebrew (Hebrew 1, Hebrew 2, and Hebrew 3) or equivalency. Transfer students who must take Hebrew 1, 2, and 3 are permitted to declare the major in the quarter immediately after taking Hebrew 1. Students are also encouraged to take Hebrew 4 and Hebrew 5. The major requires a minimum of 13 courses, including the comprehensive requirement. A minimum of 40 upper-division units must be completed within the Jewish studies major course requirements. In consultation with a faculty adviser, students will plan a program of study to fulfill the following distribution of courses:

- History 74, *An Introduction to Jewish History and Culture*, or Literature 61J, *An Introduction to Jewish Literature and Culture*
- History 80W/Literature 80L, *The Holocaust: The Destruction of European Jewry*, or History 75, *Film and the Holocaust*
- Jewish Studies 101, *Jewish Studies: Methods and Approaches*
- two upper-division history core courses
- two upper-division literature core courses
- five elective courses, four of which must be upper-division
- one comprehensive exit requirement (see below)
- among the 13 courses required for the major, one course must satisfy the Disciplinary Communications (DC) Requirement (see below)

Comprehensive Exit Requirement

Students may satisfy the Jewish studies comprehensive exit requirement by completing an approved exit seminar (offered by history or literature) or a senior thesis (Modern Literary Studies/Pre- and Early Modern Literature 195 or History 195 A and B). Please consult the Jewish studies web site for a more detailed description of these courses.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement is satisfied through taking a history exit seminar course in a field related to Jewish studies: History 196G, 196M, 196N, 196P, or 196R. Students may take a literature senior seminar courses to satisfy the comprehensive requirement but will be required to take an additional history exit seminar to satisfy the DC Requirement.

Chronological Distribution Requirements

Among the 13 courses required for the major, at least three must meet the following chronological distribution requirements:

- one course must satisfy the classical chronological distribution requirement
- one course must satisfy the modern chronological distribution requirement
- one course must satisfy the Holocaust chronological distribution requirement, which is accomplished by completing History 80W/Literature 80L, *The Holocaust: The Destruction of European Jewry* or History 75, *Film and the Holocaust*

Please consult the Jewish studies web site for a more detailed description of these courses.
Transfer Credits and Substitutions

Jewish studies majors must take a minimum of six regularly scheduled Jewish studies courses plus the comprehensive/DC requirement from members of the UCSC Jewish studies faculty. Subject to the limits indicated, courses from the following categories may be applied to the Jewish studies major:

- Courses taken at another institution (limit of 3)
- Education Abroad Program (limit of 3)
- Related courses not currently on the pre-approved Jewish studies course list (limit of 2)
- Independent and field studies (limit of 1)

Honors in the Jewish Studies Major.

All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The Jewish studies faculty advisers determine honors based upon courses applied toward the Jewish studies major. Performance in courses taken elsewhere and being transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most courses for honors, and excellence in all courses for highest honors.

Summer graduates are reviewed for honors in fall quarter.

Minor in Jewish Studies

Students whose major area of interest is not Jewish studies may nonetheless find that a minor in Jewish studies makes an invaluable contribution to their studies. This introduction to Jewish studies is helpful for students who plan to do graduate work in Jewish studies, whether through regular disciplines or in Jewish studies programs, and also for students who plan to attend rabbinical schools or to find work with Jewish communities. For others with an interest in Jewish topics, but without such plans, a minor in Jewish studies offers intellectual enrichment and a focus within the student's chosen field.

Requirements for the Minor

A minimum of 25 upper-division units must be completed within the Jewish studies minor course requirements. In consultation with a faculty adviser, students will plan a program of study to fulfill the following distribution of courses:

- one of the following courses:

History 74, *An Introduction to Jewish History and Culture*; Literature 61J, *An Introduction to Jewish Literature and Culture*; History 80W/Literature 80L, *The Holocaust: The Destruction of European Jewry*; or History 75, *Film and the Holocaust*;

- three upper-division core courses from the Jewish studies curriculum;
- four elective courses, two of which must be upper-division.

Faculty and Professional Interests

Principal Faculty

BETTINA APTHEKER, Professor of Feminist Studies
Women's history, feminist oral history and memoir, feminist pedagogy, African American women's history, queer studies, feminist Jewish studies, feminist critical race studies. Among her research interests the history of Jewish women in America

MURRAY BAUMGARTEN, Professor of English and Comparative Literature, Neufeld-Levin Co-Chair
Dickens, Victorian literature and culture, the Bible, translation, modern Jewish writing, the Holocaust

DORIAN BELL, Assistant Professor of Literature
Nineteenth- and 20th-century French literature and intellectual history; histories of empire and anti-Semitism; literature and science; film studies; digital humanities

MARGARET BROSE, Emerita Professor of Literature

MARK CIOC, Professor of History
German history, modern European history; environmental history

PAULA DACCARETT, Visiting Assistant Professor of History
Jewish modernity, Mediterranean Jewish history, Latin American Jewish history, Jewish women's history, Levantine cultures/spaces

NATHANIEL DEUTSCH, Professor of Literature and History
Hebrew Bible; rabbinic literature; Jewish mysticism; Hasidism; Eastern European Jewish life; ethnography

BARBARA EPSTEIN, Professor of History of Consciousness
Recently working in Minsk collecting testimonies in Yiddish and other languages on Jewish experiences during WWII

GILDAS HAMEL, SOE Lecturer in History and Classical Languages
History of Judaism and Christianity; Hebrew and Greek Bible; classical languages

JOHNATHAN LEVITOW, Lecturer in Yiddish
Yiddish language and literature

PETER KENEZ, Emeritus Professor of History, Neufeld-Levin Co-Chair
Russian history, Eastern Europe, 20th-century Europe, Soviet film, Jewish social history, the Holocaust

TAMMI ROSSMAN-BENJAMIN, Lecturer in Hebrew
Hebrew language and culture; biblical Hebrew syntax and semantics; the Hebrew Bible; Jewish thought; psycholinguistics; second language acquisition and bilingualism

DAN SELDEN, Professor of Literature
Research on Classical and Hellenistic Judaism and medieval Jewish mysticism

BRUCE THOMPSON, Continuing Lecturer in History
European intellectual and cultural history, French history, Jewish intellectual and cultural history, British and Irish history, history of cinema, history of espionage, environmental history

Faculty Advisers

MURRAY BAUMGARTEN, Professor of English and Comparative Literature

NATHANIEL DEUTSCH, Professor of Literature and History

BRUCE THOMPSON, Lecturer in History

GILDAS HAMEL, Lecturer in History

TAMMI ROSSMAN-BENJAMIN, Lecturer in Hebrew

RAOUL BIRNBAUM, Professor of History of Art and Visual Culture

Buddhist studies, especially Chinese practices from medieval times to the present; religion and visual culture in China

A. HUNTER BIVENS, Assistant Professor of Literature

Twentieth- and 21st-century German literature and film; Marxism and critical theory; psychoanalysis, lyric poetry; literary realism; the novel

BRIAN CATLOS, Associate Professor of History

Pre-modern Mediterranean; medieval Iberia and Europe and the Islamic world; Christian-Muslim-Jewish relations, ethnicity, minorities, social, and economic history; world history

RYAN COONERTY, Lecturer in Politics

American political history, law and international relations

MARIA EVANGELATOU, Assistant Professor of History of Art and Visual Culture

Medieval visual culture, with emphasis on Byzantium and its periphery; manuscript illumination, Marian cult and iconography; ancient Greek and Roman visual culture; Islamic visual culture; gender studies

LAUREL FOX, Professor of Ecology and Evolutionary Biology

Terrestrial population and community ecology, plant-animal interactions

ROBERT GOFF, Associate Professor Emeritus of Philosophy

MARGO HENDRICKS, Emerita Professor of Literature

Marc Mangel, Professor of Applied Mathematics and Statistics

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

WILLIAM NICKELL, Lecturer in Literature

Leo Tolstoy; Russian cultural history; 1920's-30's Soviet Russia; Russian/Soviet Film; Russian language and pedagogy

LOISA NYGAARD, Associate Professor of Literature

Eighteenth- and early 19th-century German literature; Goethe; Romantic fiction; landscape and landscape aesthetics; xenophobia in Germany

PAUL ROTH, Professor of Philosophy

Philosophy of social science, philosophy and sociology of science, epistemology, history of analytic philosophy, philosophy of history

AVI TCHAMNI, Lecturer in Music

Composition, Jewish music, computer and electronic music, Middle Eastern music, theory, algorithmic music and generative musical syntax, orchestration, ethnomusicology

Lower-Division Courses**12A. Service Learning (3 credits). F,W,S**

Students find a volunteer position with the instructor's assistance and perform community service in non-profit organizations, schools, unions, or local government agencies. Students meet weekly, keep a journal, and write a "social action witnessing" report of their experience. Enrollment restricted to college members. Enrollment limited to 15. May be repeated for credit. (General Education Code(s): PR-S.) **F. Williams**

12B. Service Learning (2 credits). S

Students find a volunteer position with the instructor's assistance and perform community service in non-profit organizations, schools, unions, or local government agencies. Students meet weekly, keep a journal, and write a "social action witnessing" report of their experience. Enrollment restricted to college members. Enrollment limited to 15. May be repeated for credit. (General Education Code(s): PR-S.) **F. Williams**

15A. The Writer as Witness (3 credits). *

Students are involved in a community service project to produce a portfolio of social-action writing that situates the writer as witness in the community. Enrollment restricted to college members. Enrollment limited to 20. **W. Cooper**

15B. The Writer as Witness (2 credits). *

Students are involved in a community-service project to produce a portfolio of social-action writing that situates the writer as witness in the community. Enrollment restricted to college members. Enrollment limited to 20. **W. Cooper**

24. Imagining Utopia (3 credits). S

Explores possible futures by studying several utopian visions, projects, and manifestos. Students imagine a future by writing a manifesto and other creative non-fiction pieces that embrace a utopian imagination. Enrollment restricted to college members. Enrollment limited to 20. **W. Cooper**

42. Student-Directed Seminar (no credit). F,W,S

Seminar taught by upper-division Kresge students under Kresge faculty supervision. (See course 192.) Students submit petition to sponsoring agency. **The Staff**

60C. Prison Narratives (3 credits). S

Seeks to ask hard questions about the role of the prison, its increasing use in our nation, and the use of torture by the U.S. government in Guantanamo, Abu Ghraib, and other prisons. Readings include J. James's **Imprisoned Intellectuals**, Alexander Berkman's **Prison Memoirs of an Anarchist**, and other writings by American prisoners. Eve Ensler's **What I Want My Words to Do to You** is shown. Course is primarily reading and discussion; students are asked to keep a reading journal and to write a critical/creative essay at the end of the quarter. (Formerly **Language of the Prison House**.)

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to college members. Enrollment limited to 20. **W. Cooper**

60F. Writer's Read (2 credits). *

Students attend weekly creative writing readings by fiction writers and poets, read excerpts from the writers' works, participate in question and answer sessions, and write short, creative and/or analytical responses to the readings and writings. Enrollment restricted to Kresge and Porter college members. Enrollment limited to 35. May be repeated for credit. **M. Perks**

60K. The Art of Comedy: Literature and Performance (3 credits). W

Students analyze comedic writing and practice writing comedy. Students develop pieces to be delivered in a performance at the end of the quarter. Enrollment restricted to college members. Enrollment limited to 22. **E. McKenzie**

62. Transformative Action. W

Introduces the most effective methods for social change. Examines social entrepreneurs, innovators, and visionaries. Reviews traditional methods of activism and new theories of nonviolent social change. Presents case studies of success in addressing problems of social injustice. Enrollment limited to 75. **C. King**

62A. Transformative Action (2 credits). S

Addresses the most effective methods of social change. Examines principles and strategies of transformative action and case studies of leaders solving world problems. Empowers students to be innovators in real-life community projects. Integrates nonviolence, psychology, sustainability, and social justice. **The Staff**

62B. Transformative Action (2 credits). S

For students who enrolled in the winter quarter Transformative Action course, to further investigate, research, and refine their Big Idea. Opportunity given to deepen and integrate Transformative Action principles into projects. Enrollment by instructor permission only. **C. King**

63. Kresge Garden Cooperative (2 credits). S

Offers hands-on gardening skills within a student-run space. Focuses on developing a strong cooperative garden on campus, with special attention to the documentation of this process. Enrollment limited to college members. Enrollment limited to 24. **D. Shaw**

65. Power and Representation Lab.

Enrollment limited to 20. **The Staff**

65A. Power and Representation: Food and Community (2 credits). F

Explores core themes of power and representation through the mediums of food, nature awareness, community, personal empowerment and sustainable living. Students will develop meaningful final projects in collaboration with Kresge Food Co-op, Kresge Garden Co-op, Kresge World Cafe, and projects of their own design. (Formerly Power and Representations: Food Systems.) Concurrent enrollment in course 80A or 80B is required. Enrollment limited to 20. **D. Shaw**

65B. Power and Representation: Photography (2 credits). F

Focuses on creating a final project individually, or in collaboration with others, that engages issues of power and representation through the medium of photography. Concurrent enrollment in course 80A or 80B is required. Enrollment limited to 20. **S. Graham**

65C. Power and Representation: Creative Writing (2 credits). *

For students who wish to supplement their core experience with creative writing. Students do in-class and out-of-class writing assignments; read and discuss texts; and work to develop their final project. Concurrent enrollment in course 80A or 80B is required. Enrollment limited to 20. **F. Fatemi**

65D. Power and Representation: Art and Visual Performance (2 credits). F

Students investigate the themes presented in the core course to arrive at a final creative project in pairs, groups, or individually. Concurrent enrollment in course 80A or 80B is required. Enrollment limited to 20. **K. Burton**

75. Sustainable Food Systems. *

Introduces students to fundamental food-system issues and opportunities. Topics include: hunger, environmental sustainability, race and gender, food and agricultural policy, local food systems, gardening and farming models, social movements, and approaches for analysis and change. Enrollment limited to 55. **S. Gillon**

76. Social Documentary Photography. *

History of social documentary photography with its practice. Includes analysis of historical and contemporary images from social documentary work; camera, darkroom, and digital skill development; an individual student documentary project; and collective project discussion. Enrollment restricted to Kresge College members. Enrollment limited to 20. **The Staff**

77. Food Memoir (2 credits). *

Workshop in writing memoir that connects to issues of multiculturalism, gender, and environment. Designed to hone skills in creative writing through stories that students will unify into a larger memoir. Enrollment restricted to Kresge and College Eight members or by permission of instructor. **R. Somers**

80A. Introduction to University Discourse: Power and Representation. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Explores relationships between individuals and their communities—communities as small as families and friends, colleges and cities; communities as large as nations and the world. Examines ways we constitute ourselves as individuals in relation to communities, focusing on representations of class, ethnicity, sexual orientation, gender, and race in several genres—critical theory, film, art, fiction, non-fiction, and theater. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): T5-Humanities and Arts or Social Sciences, C1.) **The Staff**

80B. Rhetoric and Inquiry: Power and Representation. F

Explores the intersections of investigations, interpretation, and persuasion, and hones strategies for writing and research. Explores relationships between individuals and their communities—communities as small as families and friends, colleges and cities; communities as large as nations and the world. Examines ways we constitute ourselves as individuals in relation to communities, focusing on representations of class, ethnicity, sexual orientation, gender, and race in several genres—critical theory, film, art, fiction, non-fiction, and theater. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. (General Education Code(s): T5-Humanities and Arts or Social Sciences, C2.) **The Staff**

80H. Reading Chinese Paintings. *

Introduces significant currents in Chinese cultural history and their visual expression through close examination of selected paintings. Readings focus on a rich variety of primary sources in translation. Course intended for honors students by permission of instructor. Enrollment limited to 20. (General Education Code(s): T5-Humanities and Arts or Social Sciences, A.) **R.**

Birnbaum

80T. Power and Representation (Kresge Core Course for Transfer Students). F

Explores the intersections of investigations, interpretation, and persuasion, and hones strategies for writing and research. Explores relationships between individuals and their communities—communities as small as families and friends, colleges and cities; communities as large as nations and the world.

Examines ways we constitute ourselves as individuals in relation to communities, focusing on representations of class, ethnicity, sexual orientation, gender, and race in several genres—critical theory, film, art, fiction, non-fiction, and theater. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to sophomore, junior, and senior college members. (General Education Code(s): T5-Humanities and Arts or Social Sciences, W.) **The Staff**

99. Tutorial. F,W,S

A program of directed study arranged between a freshman or sophomore student and a Kresge faculty member. Students submit petition to sponsoring agency. May be repeated for credit. **The Staff**

99F. Independent Study (2 credits). F,W,S

A program of directed study arranged between a student and a Kresge faculty member. Class time is less proportional to credit given. Students submit petition to sponsoring agency. May be repeated for credit. **The Staff**

99G. Independent Study (3 credits). S

A program of directed study arranged between a student and a Kresge faculty member. Students submit petition to sponsoring agency. May be repeated for credit. **The Staff**

Upper-Division Courses**192. Directed Student Teaching. F,W,S**

Teaching of a lower-division seminar under Kresge faculty supervision. (See course 42.) Prerequisite(s): upper-division standing in Kresge, a proposal supported by a Kresge faculty member willing to supervise, and college approval. **The Staff**

193. Field Study. F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a Kresge faculty supervisor. To be used primarily by upper-division students doing part-time, off-campus study. Prerequisite(s): approval of student's adviser and the college. May be repeated for credit. **The Staff**

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a Kresge faculty member. Students submit petition to sponsoring agency. May be repeated for credit. **The Staff**

195. Senior Thesis. F,W,S

Senior thesis or project for student doing individual major program. May be repeated twice for credit. Prerequisite(s): permission of sponsoring committee and college approval. **The Staff**

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus, for which Kresge faculty supervision is not in person (e.g., supervision is by correspondence.) Prerequisite(s): approval of the student's faculty sponsor and college approval. ***The Staff***

199. Tutorial. F,W,S

A program of individual study arranged between an upper-division student and a Kresge faculty member. Students submit petition to sponsoring agency. May be repeated for credit. ***The Staff***

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Understanding how language works is a crucial part of comprehending human consciousness and communication. Language is an intellectual tool basic to all disciplines. In today's communities, multicultural and global, learning a second language is not a refinement but a necessity—the key to understanding and communicating with others near and far. The goal of the Language Program at UCSC is to allow students to achieve a substantial level of proficiency in languages other than English. Since such proficiency always includes cultural as well as linguistic comprehension, the program requires investigating the complex relationship between language and culture.

The Language Program offers rigorous language training by professional language instructors. Most courses are taught in the target language from the very beginning. In 2010–11, the languages offered are Chinese, French, German, Greek, Hebrew, Italian, Japanese, Latin, Portuguese, Russian, Spanish, Spanish for Spanish speakers, and Yiddish.

Students with previous language preparation who wish to continue in that language take a placement examination to determine the course level appropriate for them. Each language's placement examination format is described in the quarterly *Schedule of Classes*, along with the time, date, and location of the examination.

Language learning at UCSC is supported by a variety of technologies. There is a campus language laboratory in the Media and Electronic Resource Center (MERC) at McHenry Library; the library also houses an abundance of print and audiovisual material in the languages taught at UCSC, including music recordings and videos. Television programs are received from countries around the world. Faculty in the Language Program are incorporating new technologies into their teaching on an ongoing basis, including computer software and web-based resources.

In addition to language courses, the program offers upper-division courses exploring history, sociology, literature, art, film, and other manifestations of culture. All courses are taught in the target language. The Literature Department also offers courses in French, German, Greek, Italian, Latin, Russian, and Spanish/Latin American/Latino literature, as well as Hebrew poetry.

Students of language interested in theater have the opportunity to participate in the annual International Playhouse, which every spring presents highly successful programs. To date, pieces have been performed in Chinese, French, German, Italian, Japanese, Latin, Portuguese, Russian, and Spanish.

Students are also encouraged to participate in foreign film series (e.g., Chinese, French, Italian, Japanese, Portuguese, Russian, Spanish), international music and dance festivals, and conferences on intercultural or international topics.

Students who wish to study a specific language in depth can major in language studies, which combines courses in language proficiency and culture with general and applied linguistics. Students may also use language courses for the following majors that have a language requirement: classical studies, East Asian studies, German studies, global economics, health sciences, Italian studies, Jewish studies, Latin American and Latino studies, linguistics, and literature. The History Department encourages students of Asian, Latin American, European, and classical history to study a second language and provides a variety of opportunities to make use of language skills in their studies.

Study abroad is an important component of language study at UCSC. Language students have various opportunities to study abroad, for a summer, quarter, semester, or year. Students may choose to study abroad through the Office of International Education (OIE), through the UCSC Summer Abroad Program, or through affiliate programs around the globe. OIE offers programs in Argentina, Australia, Barbados, Botswana, Brazil, Canada, Chile, China, Costa Rica, Denmark, Egypt, France, Germany, Ghana, Hong Kong, India, Ireland, Israel, Italy, Japan, Korea, Mexico, Netherlands, New Zealand, Russia, Singapore, South Africa, Spain, Sweden, Taiwan, Tanzania, Thailand, Turkey, United Kingdom, and Vietnam. There are programs available for students of all

levels of language ability, including Language and Culture programs for beginner or intermediate speakers, to full immersion programs for students with advanced language skills. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>.

Italian culture and civilization; history of Italian language; Italian linguistics, syntax, and semantics; language pedagogy

TONIA PRENCIPE

Technology and foreign language pedagogy; modern Italian culture, history, literature, and cinema; creative writing; promotion of Italian language and culture of K-12

Japanese

SAKAE FUJITA

Foreign language methodology, drama/theater/improvisation use in language learning, language and identity, foreign language literacy

SHIGEKO OKAMOTO

Sociolinguistics, discourse analysis, pragmatics, language and gender, foreign language pedagogy, Japanese linguistics

Latin

KAREN BASSI (LITERATURE)

Greek and Latin literatures, Greek drama, Hellenistic poetics, feminist interpretation, literary and cultural theory, pre- and early modern studies, historiography

MARY-KAY GAMEL (LITERATURE)

Performance studies, ancient Mediterranean performance, Greek and Latin literatures, myth, reception of Greek and Roman texts and artifacts, film, feminist approaches to literature and performance

GILDAS HAMEL (HISTORY)

History of Judaism and Christianity; Hebrew and Greek Bible; classical languages

CHARLES W. HEDRICK, JR. (HISTORY)

Greek and Roman history, epigraphy, historiography, political theory

JOHN P. LYNCH (LITERATURE), EMERITUS

JENNIFER LYNN

Later Roman Republic and Principate; Homeric epic; Hellenistic and Augustan poetry; Cicero

DANIEL SELDEN (LITERATURE)

Afroasiatic languages and literatures, Greek and Latin, Hellenistic culture, the classical tradition, history of criticism, literary theory

Portuguese

ANA MARIA SEARA

Portuguese language; literature, film, and music of Brazil and the Portuguese-speaking world; acquisition and teaching of foreign, second, and heritage languages

Russian

WILLIAM NICKELL

Leo Tolstoy, Russian cultural history, 1920s–1930s Soviet Russia, Russian Soviet film, Russian language and pedagogy

Spanish and Spanish for Spanish Speakers

BRENDA BARCELÓ

Medical and professional Spanish, language instruction technology, Latin American culture, Latin dance expressions, Spanish/English/Spanish translation and interpretation, Hispanic linguistics, Romance languages

CARLOS CALIERNO

Bilingualism and intercultural communication; Latin American culture; history of the conquest, music, art, and cinematography

VERÓNICA FELIU

Latin American literature of the 20th century; Chilean feminisms, politics, and culture; Latin American cultural studies; Spanish learning for both non-native and heritage speakers

MARÍA VICTORIA GONZÁLEZ-PAGANI

Language teaching methodology; Spanish syntax; computer-assisted foreign language learning; Latin American cultural studies, especially women's contributions

MARÍA MORRIS

Language learning styles and strategies, culture and technology in language training

MARTA NAVARRO

Latin American literature, Mexican/Chicano culture, Latina/Chicana issues

ARIEL A. PÉREZ

Language acquisition and teaching methodology, computer-assisted language learning, teaching

language for proficiency, oral proficiency assessment; Latin American current affairs

ALVARO ROMERO-MARCO

Spanish literature of the 19th- and 20th-centuries; film, cultural studies

EVE ZYZIK

Spanish linguistics, second language acquisition, cognitive linguistics, language pedagogy and curriculum design

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

80D. Italian Culture Through Cinema. S

Film is used as a medium through which images of Italians and their culture are disseminated, perpetuated, and crystallized. Whether these representations offer historical perspectives or stereotypes, they are important documents for the study of Italian culture, society, history, and politics. Students cannot receive credit for this course and Italian 106. May be repeated for credit. (General Education Code(s): CC, T4-Humanities and Arts.) *G. Centineo*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

109. Japanese Language, Culture, and Society. F

Examines the social and cultural aspects of the Japanese language. Topics include language planning; writing-system reform; standard Japanese; regional variation; honorifics; gender norms and practices; age variation; communication styles; loanwords and English; and minority languages and their speakers. (Formerly Japanese 110.) Prerequisite(s): Japanese 6, or consent of instructor. Enrollment limited to 25. *S. Okamoto*

150. Topics in Hispanic Linguistics: Introduction to Hispanic Linguistics. S

Taught in Spanish. Students learn the major properties of the Spanish language from a linguistics perspective. Topics covered include: phonetics/phonology, morphology, and syntax. Prerequisite(s): Linguistics 111 or Linguistics 112; and Spanish 6 or Spanish for Spanish Speakers 63. Enrollment limited to 30. *E. Zyzik*

151. Topics in Hispanic Linguistics: Varieties of Spanish. W

Taught in Spanish. Explores the linguistic variety of the Spanish language in the Iberian Peninsula, the former Spanish colonies, and the Americas from a descriptive, synchronic perspective. Issues of languages in contact, variation in speech communities, and bilingualism are also introduced. Prerequisite(s): Spanish 6, Spanish 56, Spanish for Spanish Speakers 63, or a score of 70 on the Spanish Placement Exam. Enrollment limited to 30. *M. Gonzalez Pagani*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

201. Second Language Teaching. S

Helps novice instructors learn about the theory and practice of language teaching and learning. Focuses on current methods used in communicatively oriented classrooms. Topics include: listening comprehension, grammar, vocabulary, reading, writing, and testing/assessment. Enrollment restricted to graduate students. Enrollment limited to 20. *E. Zyzik*

210. Oral Communication in the U.S. Classroom: Strategies for International T.A.s (2 credits). F

Seminar for international graduate students who speak English as a second or foreign language. Focuses on oral competency and serves to qualify students as graduate teaching assistants in UCSC classrooms or laboratories. Enrollment restricted to international graduate students; language assessment administered by the Graduate Division. *The Staff*

Language Studies

Linguistics Department

241 [and 243](#) Stevenson College

(831) 459-4988

~~<http://ling.ucsc.edu>~~ <http://linguistics.ucsc.edu>[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) |**Program Description**

Language studies is an interdisciplinary major offered by the Linguistics Department. It is designed to equip students with competence in one or more foreign languages and, at the same time, provide them with an understanding of the general nature of human language—its structure and use. It requires (1) acquisition of demonstrable competence in a language other than English, (2) grounding in linguistics, and (3) completion of a series of cultural context courses related to the language. Currently, majors may choose a concentration in Chinese, French, German, Modern Hebrew, Italian, Japanese, Russian, or Spanish. Interested students should contact the Linguistics Department office early in their college career to obtain essential information about requirements. ~~Students are also encouraged to download a current copy of the Handbook of Undergraduate Programs in Linguistics and Language Studies from our web site at <http://ling.ucsc.edu/>, which contains detailed information about the major.~~

~~A junior year abroad through the UC Education Abroad Program (EAP) in a country appropriate to the major language is recommended.~~ [Students interested in spending a portion of a year or a full year in study abroad should review the UCSC Programs Abroad web site at <http://oie.ucsc.edu/index.html>.](#) A senior year abroad is approved only when all of the language proficiency requirements have been satisfied and when it is clear that any remaining courses can be satisfactorily completed abroad. Courses taken abroad may be used to satisfy major requirements only if approved by the undergraduate director or a designated adviser.

Requirements for the Language Studies Major**Early Declaration**

It is important that prospective students declare the major as early as possible so that they can complete the advanced language, linguistics, and context requirements within the allowed period of enrollment.

Students who wish to include a [study abroad](#) ~~n-EAP~~ experience in their course of study will have to coordinate their choice of ~~year~~ [time](#) abroad with the scheduling of UCSC courses. Transfer students who have not made significant progress with the language requirements before entering UCSC may find it difficult to include an ~~n-EAP year~~ [time abroad](#) before completion of graduation requirements.

Course Requirements

Language studies majors must satisfy course requirements in languages, linguistics, and cultural context.

Language component: Language studies majors (in French, German, Modern Hebrew, Italian, Russian, and Spanish) must achieve a level equivalent to six quarters in the language of concentration. One advanced language course after level 6 is also required. Majors in Chinese and Japanese must achieve a level equivalent to eight quarters of language study.

- Six foundation courses in linguistics:

Linguistics 50, *Introduction to Linguistics: Sounds and Words*

Linguistics 53, *Semantics 1*

Linguistics 101, *Phonology 1*

Linguistics 112, *Syntax 1*; or Linguistics 111, *Syntactic Structures*

Two advanced linguistics courses

- Five elective courses in linguistics or cultural context:

Linguistics courses: any upper-division course offered by the Linguistics Department

Cultural context courses in the major language: to be selected from disciplines such as literature, history, and politics, subject to departmental approval.

Senior exit requirement: In their senior year, language studies majors must satisfy the senior exit requirement in one of two ways:

Option 1. Successful completion of a capstone course. Students may designate an appropriate upper-division course as their capstone course.

- _____ Language studies majors must have senior standing, achieved level-5 language competence, and must have completed Linguistics 101, *Phonology I* and 112/111, _____ *Syntax I* or *Syntactic Structures*.

Option 2. Senior thesis supervised by a faculty member.

- _____ The proposal for a senior thesis must be submitted for departmental approval at least three quarters prior to the quarter of graduation.
- _____ Students enroll in Linguistics 195, *Senior Thesis* with the approval of the faculty adviser. The senior thesis is an original investigation of the major language in _____ some relevant way, such as the linguistic structure or history of the language or its historical, literary, cultural, sociological, ethnographic, or political context.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in language studies is satisfied by completing course 101 and either course 111 or 112.

Requirements for the Minor

The minor requires completion of two years (six quarters) of language study (or demonstration of an equivalent level of ability) and eight additional linguistics and cultural context courses as follows:

- _____ Linguistics 50, *Introduction to Linguistics: Sounds and Words*

- Linguistics 101, *Phonology I*
- Linguistics 112, *Syntax I*; or Linguistics 111, *Syntactic Structures*
- Two ~~upper-division~~ ~~advanced~~ linguistics courses
- ~~Three elective/context courses (see handbook for details)~~ Three electives in a cultural context; cultural context courses in the major language to be selected from disciplines such as literature, history, and politics, subject to departmental approval.

There is no senior exit requirement for the minor.

Disqualification Policy

The Linguistics Department has adopted a major disqualification policy for linguistics and language studies majors that is intended to encourage students to take seriously their performance in the ~~introductory~~ foundation courses and to make a strong effort to pass those courses.

Students who receive more than one No Pass, D, W, and/or F in the following introductory courses will not be permitted to major in linguistics or language studies:

- Linguistics 50, *Introduction to Linguistics Sounds and Words*
- Linguistics 53, *Semantics 1*
- Linguistics 101, *Phonology I*
- Linguistics 111, *Syntactic Structures*
- Linguistics 112, *Syntax 1*

Students who fail one of these courses will be sent a letter reminding them of this policy and warning them that they are at risk of disqualification should they fail to pass a subsequent ~~introductory~~ foundation course.

Students may appeal their disqualification by writing a formal letter to the department ~~chair~~ undergraduate program director. This letter should explain any extenuating circumstances that influenced their poor performance in the ~~introductory~~ foundation courses. For example, if some event led to poor performance in multiple courses in a single quarter, a student has a potential case for appeal. In contrast, academic dishonesty or poor performance spanning multiple quarters will be considered evidence that a student is ill-suited for the majors.

The letter of appeal must be submitted to the Linguistics Department office (241 and 243 Stevenson College) no later than 15 days from the date the disqualification notice is mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The department will subsequently notify the student and the student's college of the appeal decision no later than 15 days after the submission of the appeal.

Honors

Students who wish to be considered for honors should meet the deadline posted by the Office of the Registrar for declaring the intent to graduate. Determination of honors is based on a close reading of (1) the student's ~~-grades~~ and narrative evaluations for all courses relevant to the major; (2) the results of the senior exit requirement; (3) other factors relevant to an assessment of academic excellence, such as research papers of professional quality. Generally, honors in the major are awarded to the top 10 percent of those graduating in the major. Only those students whose narratives are consistently excellent, and whose performance on the senior exit requirement is excellent, will qualify.

Highest honors are rarely awarded, and then only to students whose performance in coursework is outstanding and who have completed an outstanding senior thesis.

Latin American and Latino Studies

32 Merrill College
(831) 459-4284
<http://lals.ucsc.edu>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The Latin American and Latino Studies (LALS) Department prepares students for bilingual and multicultural participation in a rapidly changing and globalized world. LALS integrates the study of Chicano/a and Latino/a communities in the U.S. with analysis of the histories, politics, cultures, and societies of Latin America and the Caribbean. The field is inherently interdisciplinary, drawing on sociology, history, anthropology, political science, media studies, communications, cultural studies, economics, environmental studies, and literature.

LALS courses deal with changing political, social, economic, and cultural realities among Latin American and U.S. Latino and Latina communities in ways that recognize cross-cultural and transnational processes. Key concepts and processes studied include: immigration and transnational migration; gender, racial, sexual, and ethnic identities; social movements; diverse forms of cultural expression and cultural politics; ongoing political and economic restructuring in Latin America; and the challenges of political and economic empowerment for Latino/a communities in the U.S. Students learn to formulate thoughtful, critical and clear arguments on controversial topics and communicate effectively, including beyond the English language.

In addition to academic knowledge, LALS also provides opportunities for students to acquire practical, real-world skills. Through program-related internship and field-study experiences, students can acquire useful, pre-professional skills in any of the following key areas: community development/advocacy, public policy, education, journalism, media, performance, and research/writing, among others.

Latin American and Latino studies courses span a number of disciplines and are augmented by courses taught by participating faculty in various departments. A sample list appears at the end of the course descriptions. The Latin American and Latino Studies Department compiles a quarterly list of these courses offered by other departments that are pre-approved and count toward the major; this list appears on the department's web site under "courses" and is frequently updated.

Graduates of the LALS major have made careers in a wide variety of fields, including teaching, community organizing, community and government service, journalism and the media, environmental science, global economics, health care, legal services, library science, music, publishing, and research. Many have gone on to pursue advanced degrees in the U.S. or abroad in fields such as anthropology, bilingual education, communications, cultural studies, ecology, economics, geography, history, law, literature, media, public health, and sociology.

Major Requirements

Two lower-division courses are required for the major (see the list below). LALS 1, *Introduction to Latin American and Latino Studies*, and one Latin American and Latino Studies 80 course chosen from the list below. Ideally students (fresh and transfer) should take LALS 1, and two courses from the LALS 80s series, prior to taking LALS 100 *Concepts and Theories in Latin American and Latina/o Studies*, a required course to declare the major.

See the LALS lower-division course list below:

Latin American and Latino Studies

- | | |
|-----|--|
| 1 | <i>Introduction to Latin American and Latino Studies</i> |
| 80B | <i>Social Movements in Latin America</i> |
| 80D | <i>Political Change in Mexico</i> |
| 80E | <i>Latin American Philosophy</i> |
| 80F | <i>Latinos in the U.S.A. : Comparative Perspectives</i> |

- 80G *Race, Class, and Gender*
- 80H *Comparative Latina/o Histories*
- 80I *Gender and Global Cinema*
- 80J *Race, Nation, and War*
- 80K *Latinos and Organized Labor in the U.S.*
- 80P *Energy, Society and Environment in Latin America*
- 80Q *Música Latina*
- 80R *Organizing Across the Americas*
- 80S *Sexualities and Genders in Latin American and Latina/o Studies*
- 80T *Topics in Latin American and Latina/o Studies Cinema*
- 80W *Transnational Feminist Organizing in the Americas*
- 80X *Central American Peoples and Cultures*

Anthropology

- 80G *Barrio Popular Culture*
- 80I *Culture and Power in Latin America*

Environmental Studies

- 80A *The Future of Rain Forest*

History

- 11A *Latin America: Colonial Period*
- 11B *Latin America: National Period*
- 80N *Women at Work*

History of Art and Visual Culture

- 60 *Indigenous American Visual Culture*

Spanish /Latin American/Latino Literature

- 60 *Introduction to Literary Genres*
- 80N *Latino Expressions in the U.S.*

Music

- 4A and 4B *Latin American Ensembles (three quarters fulfill one lower-division elective)*
- 11D *Introduction to World Music*
- 80F *Music in Latin American Culture: Regional Traditions*

Philosophy

- 80E *Latin American Philosophy*

Sociology

- 15 *World Society*

Theater

- 80M *Chicano Teatro*

Other courses numbered 1–80 on Latin American and/or Latino/a subjects may be substituted with approval in advance from the Latin American and Latino Studies Department.

Courses with similar content taken at other institutions may be substituted with approval from the Latin American and Latino Studies Department.

In addition, all majors must complete 10 upper-division courses, including three required core courses, (no substitutions):

Latin American and Latino Studies

- 100 *Concepts and Theories in Latin American and Latina/o Studies*
- 100A *Politics and Society: Concepts and Methods*

100B *Culture and Society: Culture in a Global Context*

The remaining seven electives must meet the following criteria:

- A cluster of three LALS-related courses must be taken in a variety of areas of concentration.
- These may be LALS courses or courses from affiliated/participating departments.
- At least one course must concentrate on pre-WWII topics
- At least one course must center on Chicano/a-Latino/a issues
- At least two LALS upper-division courses must be taken in Spanish or Portuguese***

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

Additional Upper-Division Courses of Interest

American Studies

157 *Sexual Identities and Communities: Tracing Latina/o Theory*

Anthropology

130B *Brazil*

130F *African Diasporas in the Americas*

130L *Ethnographies of Latin America*

130M *Inside Mexico*

130U *Central America*

145X *Special Topics in Socio-Cultural Anthropology*

176B *Meso-American Archeology*

Economics

148 *Latin American Economies*

Education

128 *Immigrants and Education*

141 *Bilingualism and Schooling*

130E *Latin American Poetry Poetry*

131D *Chile*

131H *National Literatures of Latin America: Cuba*

134G *Popular Culture in Latin American Narrative*

134M *Literatura y Modernidad: El Boom de La Novela Latinoamericana Latinoamericana*

135 *The Picaresque Novel*

World Literature

127 *Chicano/Mexicano Geographies*

Politics

140C *Latin American Politics*

144 *Andean Politics*

190V *Problems in Latin American Politics*

Psychology

157 *Chicana Feminism* (also offered as Feminist Studies 151A)

159K *Advanced Topics in Chicana Feminism* (also offered as Feminist Studies 151B)

Sociology

156 *US Latina/o Identities: Centers and Margins*

177A *Latinos/as and the American Global City*

Spanish

156A *The language of Latin America Cinema*

156G *Spanish for the Professions*

Spanish for Spanish Speakers

125 *Mexico and the Southwest*

The above is a partial list of upper-division courses taught by Latin American and Latino Studies participating and affiliated faculty based in other departments. A complete list of interdisciplinary course offerings approved for the Latin American and Latino Studies major and minor is published prior to each academic quarter on the department web site: <http://lals.ucsc.edu>.

Language Requirements

All Latin American and Latino studies majors are expected to learn to speak, read, and write Spanish or Portuguese and to make use of these skills on a regular basis in their upper-division academic work.

Majors must take at least two upper-division courses taught in Spanish or Portuguese. Before taking upper-division course work taught in the language, students must demonstrate proficiency in

Spanish equivalent to the completion of Spanish 6 or 56, or Spanish for Spanish Speakers 63. Students who wish to pursue Portuguese may take the Portuguese 1A/1B or 60A/60B series.

Students who have achieved fluency in Spanish or Portuguese through life experience may be exempt from this recommended preparatory course work after demonstration of their proficiency. In addition to Latin American and Latino studies and affiliated department course offerings, the required two upper-division courses taught in Spanish or Portuguese*** may be fulfilled through study abroad with prior approval by the LALS Department. Students may also pursue internship or field study opportunities to satisfy one of the two required upper-division courses taught in Spanish or Portuguese; however, at least one of the two courses must be fulfilled in a classroom setting.

Field-Study and Internship Opportunities

All majors are encouraged to undertake either a field study in Latin America, the Caribbean, a Latino/a community in the U.S., or formal academic study abroad through the Education Abroad Program (EAP). These paths are the best ways to improve language skills, explore the nature and direction of specific academic and career interests in relation to Latin American and Latino studies, and deepen cross-cultural understanding and relationships based upon personal experience. Field studies are independent, community-based study projects for academic credit, done under faculty sponsorship and arranged on an individual basis. Local opportunities for internships and field study in Latino/a communities on California's Central Coast are numerous. Credit for up to three upper-division courses may be applied toward the major from field study; however, course credit from field study and study abroad combined may not exceed three upper-division courses. Students should check the Latin American and Latino Studies Department web site for further information regarding the field-study process and course credit. A listing of local field-study programs and petition forms are available at the Latin American and Latino Studies Department office, 32 Merrill.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Latin American and Latino studies and the combined majors with global economics, literature, politics, and sociology are met by completing courses 100A and 100B.

Study Abroad

Students may apply to study abroad through the Education Abroad Program (EAP), or independently. EAP offers opportunities for students to study in Mexico City, Mexico; Santiago, Chile; Rio de Janeiro or Bahia, Brazil; and Madrid, Córdoba, Granada, and Barcelona in Spain. In addition to language and culture and university immersion programs, EAP also offers a Field Research Program in Mexico, which is an experiential program geared toward juniors and seniors who want to explore the "real" Mexico outside the classroom and at the same time receive undergraduate research training. The program has research sites in states such as Jalisco, Yucatán, Oaxaca, and Michoacán (final site choice depends on the research topic). Application deadlines are generally about one year in advance of the program, so students should visit the UCSC International Education Office early to plan for study abroad and to begin the application process. The department will approve courses taken abroad, whether through EAP or on independent programs, that cover topics appropriate to the LALS curriculum for upper-division credit toward the major. All credit for EAP classes is fully incorporated into student's UCSC transcripts; students receive transfer credit for independent study abroad programs. Financial aid applies to all EAP programs and takes into account airfare and living costs in addition to tuition and fees; financial aid is not available for students who study abroad independently. Before departure, student should present an academic plan for courses abroad to the department advisor for review. Credit for up to three EAP courses can be applied toward the major. (A maximum of three courses of field study and EAP combined can be applied toward the major requirements.)

Senior Comprehensive Requirement

Every major must complete a senior exit requirement in order to graduate. The preparation and completion of this requirement is structured into the senior year. There are five options to choose from:

Enrollment in a Latin American and Latino Studies senior seminar (194 series), with good to excellent performance (grade of B or better). Students must write at least 30 pages cumulatively, during the course of the quarter, and must submit a final paper that is based on independent scholarly research, demonstrates advanced skills in critical analysis, and which has undergone revisions. Senior standing and completion of LALS 100A and 100B are required before taking a LALS 194 course for fulfillment of the Senior Exit Requirement.

An expanded research paper, a minimum of 20 pages in length. This paper often builds on related course work and requires approval from the relevant faculty adviser before the end of the winter quarter of the senior year. Students must be enrolled in an independent-study tutorial to complete this paper.

A senior thesis, generally between 40–60 pages, based on two or more quarters of sustained independent research under the supervision of the faculty adviser while enrolled in an independent study (done by petition to LALS, and with the approval of the faculty adviser). If the thesis option is selected by a combined major, it should be planned in consultation with an adviser from each

department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member is affiliated with both departments.

A senior project, which can be either a creative project or a community-action project. Creative projects include web site design, video, performance, slide show, photo exhibit, or other media work. A short written analysis of the student's experience in conducting the project is required. Community-action projects often involve sustained research and/or activity conducted in a community organization or public interest group, usually stemming from an internship. A 10-page description and analysis of the project is required.

The student-directed seminar option is available to unusually qualified students only. It requires three quarters of preparation directed by a faculty adviser and approval by the Academic Senate Committee on Educational Policy prior to teaching the course. The class is limited to 15 students. This option can be taken only by petition to LALS and with the approval of the faculty adviser. This process should be initiated a year prior to offering the course.

Latin American and Latino Studies Major Planners

The following are two recommended academic plans for undertaking basic preparation for the Latin American and Latino studies major. Plan One is a guideline for students who commit to the major early in their academic career. Plan Two is for transfer students.

Plan One—Frosh

Year	Fall	Winter	Spring
1st (frsh)	SPAN 1	SPAN 2	SPAN 3
	LALS 1	LALS 80	LALS 80
2nd (soph)	SPAN 4 or SPSS 61	SPAN 5 or SPSS 62	SPAN 6 or 56 or SPSS 63
	LALS 100	LALS 100A	LALS 100B
3rd (jr)	LALS upper-division course	LALS upper-division course	LALS upper-division course
4th (sr)	LALS upper-division course	LALS upper-division course	LALS 194 (Senior-Exit Requirement)
	LALS upper-division course	LALS upper-division course	LALS upper-division course

Plan Two—Junior Transfers

Year	Fall	Winter	Spring
3rd (jr)	SPAN 4 or SPSS 61	SPAN 5 or SPSS 62	SPAN 6 or 56 or SPSS 63
	LALS 100	LALS 100A	LALS 100B
	LALS 80	LALS 80	LALS upper-division course
4th (sr)	LALS upper-division course	LALS upper-division course	LALS upper-division course
	LALS upper-division course	LALS upper-division course	LALS 194 (Senior-Exit Requirement)

Combined Majors

The combined major options, requiring fewer courses than a double major, are established with the global economics, literature, politics, and sociology programs.

Latin American and Latino Studies/Global Economics

Students are required to take a total of 18 courses and to satisfy the senior comprehensive requirement. For the combined major in Latin American and Latino studies/global economics, students complete a total of seven lower-division course requirements for both the Latin American and Latino studies and global economics majors. Students are assigned a faculty adviser from each discipline. Lower-division requirements include Economics 1, 2, 11A, 11B, Applied Mathematics and Statistics 5, upper-division course requirements include Economics 100A, 100B, and 113; LALS 100, 100A, and 100B; and five additional elective courses, two from economics (104, 114, 120, 125, 126, 128, 130, 137, 140, 141, 142, 148, 149, 150, 160A, 160B, 165, 169, 170, 171, 175, 183, 184, 189, 195 or 199) and three from Latin American and Latino studies. Two of the upper-division courses must be taught in Spanish or Portuguese*** and two to four (at least one quarter) must be courses of academic study abroad, internship, or field study in a Spanish- or Portuguese-speaking country. The comprehensive requirement is met by the completion of a senior thesis on a topic suitable to both global economics and Latin American and Latino studies, supervised by a faculty member from either department and read and approved by the student's advisers from both departments.

Latin American and Latino Studies/Literature

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. Students complete a total of two lower-division course requirements. One of the lower-division LALS classes must be LALS 1 or LALS 80 and one of the lower-division classes must be Spanish Literature 60 or a Literature 80 series course in a relevant area of study. For transfer students, a petition can be made to replace the LALS 1 or 80 course with an appropriate course from another institution.

Upper-division requirements include five core courses, LALS 100, 100A, 100B, Spanish Literature 102A, and Spanish Literature 102B; and six additional elective courses, three from Spanish Literature and three from LALS. At least four of the upper-division courses must be taught in Spanish or Portuguese*** (with at least one taught by LALS core or participating faculty), and at least one of the Literature courses must address theoretical concerns. Up to three relevant courses taken through study abroad programs from which credits are transferable to UCSC may be credited toward the major when the content is deemed appropriate by both departments. To complete the comprehensive requirement, students can write a senior thesis (by petition), enroll in an appropriate LALS Seminar (194 series), or enroll in an appropriate Literature Senior Seminar in the area of concentration. If the thesis option is selected, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member belongs to both departments. Both departments must approve a study plan before the major can be declared.

Latin American and Latino Studies/Politics

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. For the combined major in Latin American and Latino studies/politics, students complete two lower-division course requirements. One of the lower-division courses must be LALS 1 or 80, the other one course from Politics 1-79. For transfer students, a petition may be made to substitute Latin American and Latino studies 1 or 80, or one course from Politics 1-79 with appropriate course work from another institution. The 11 upper-division courses include three core course from LALS (LALS 100, 100A and 100B), one from Politics (140C) and seven upper-division electives, five from politics (three politics core courses from the 105, 120, 140, and 160 series) and two from LALS (one must be taught in Spanish or Portuguese*** and the other must be on Chicano/a-Latino/a issues).

To complete the senior comprehensive requirement, students may take either a Politics (190) or LALS (194) senior seminar.

Latin American and Latino Studies/Sociology

Students are required to take a total of 14 courses and to satisfy a senior comprehensive requirement. There are three lower-division course requirements, two from the Sociology Department and one from Latin American and Latino Studies Department. The lower-division LALS courses must be LALS 1 or 80; transfer students may petition to replace the LALS 1 or 80 with an appropriate course from another institution. Upper-division requirements include seven core courses: LALS 100, 100A, 100B; Sociology 103A, 103B, 105A, and 105B; and four additional elective courses, two from sociology and two from Latin American and Latino studies. At least one of the Latin American and Latino studies upper-division courses must be taught in Spanish or Portuguese***, and at least one course in the sociology/Latin American and Latino studies combined major must be on Chicano/a-Latino/a issues. Up to three relevant courses taken through study abroad programs from which credits are transferable to UCSC may be credited toward the major when the content is deemed appropriate by the faculty advisers of both sociology and Latin American and Latino studies. Students can satisfy the comprehensive requirement in one of three ways: (1) writing a senior thesis, (2) passing an appropriate LALS Senior Seminar (194 series), or (3) completing two additional sociology upper-division courses in the area of Inequality and Social Change (refer to the sociology undergraduate adviser for the specific list of courses). If the thesis option is selected, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member belongs to both departments.

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

Honors in the Major

The LALS faculty considers awarding honors in the major based on overall student academic performance in courses that count towards the major. To be considered for honors, narrative evaluations must indicate either consistently excellent performance or a pattern of increasingly improved performance, which reaches and maintains consistent excellence during the last several quarters. For combined majors, student work must be judged honors-level in both departments; the LALS faculty cannot award honors in the major unless the other department also confers honors. To receive the strongest consideration for honors in the major the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7. Students with a 3.5–3.7 GPA in the major go under review, and a decision is made based on their grades in core courses and improvement over time.

LALS also awards honors for the thesis, creative or community action projects, or student taught

seminars, by the recommendation of the faculty adviser. Note that a thesis, a creative/community project, or a student-taught seminar are the only senior exit requirement options that qualify for this distinct honors designation. Expanded papers and senior seminars do not qualify for a separate honors designation, but students who choose these options may still qualify for honors in the major.

Minor Requirements

The minor in Latin American and Latino studies consists of seven courses, including two lower-division courses (LALS 1 or an 80s series course) and five upper-division courses (including LALS 100 or LALS 100A or 100B and any other four upper-division courses that count towards the major). Knowledge of Spanish and/or Portuguese is highly recommended, but not required for the minor.

Graduate Studies

Graduate students may work toward a doctor of philosophy (Ph.D.) degree that notes a designated emphasis in Latin American and Latino studies on the graduation documents. Students wishing to pursue this option should consult with the chairs of their respective Ph.D. programs and are encouraged to apply in the first or second year of graduate study. The application and an annually updated list of regularly offered, approved graduate courses are available at : <http://lals.ucsc.edu>.

The following are required for the designated emphasis:

Committee Composition. The student must have a designated graduate adviser from among the Latin American and Latino studies core, participating, or affiliated faculty. This adviser will be in addition to the graduate adviser from the student's home department. The Latin American and Latino studies adviser must serve on the student's qualifying examination committee and/or on the student's dissertation committee.

Writing. The student must prepare a significant piece of writing in the area of Latin American and Latino studies. This writing may take the form of a substantial seminar paper, master's essay, or doctoral dissertation chapter.

Course requirements. The student must take five graduate courses in Latin American and Latino studies, including the required LALS 200 and LALS 297. The remainder can be selected from appropriate graduate offerings of any UCSC department, as long as they are taught by core, participating, or affiliated Latin American and Latino studies faculty.

Teaching. The student must serve as a teaching assistant in at least one Latin American and Latino studies course or teach a Latin American and Latino studies course independently in the regular curriculum or in Summer Session.

Courses. Graduate course work in Latin American and Latino studies is available both in the Latin American and Latino Studies Department and in other UCSC departments. Graduate courses to date in the Latin American and Latino Studies Department include

- 200 *Bridging Latin American and Latina/o Studies*
- 210 *Latina Feminisms: Theory and Practice*
- 212 *Latina/o Ethnographic Practice*
- 215 *Latina Cultural Studies; Transborder Feminist Imaginaries*
- 220 *Transnational Civil Society: Limits and Possibilities*
- 230 *Political Ecology in Latin America*
- 240 *Culture and Politics of Human Rights*
- 242 *Globalization, Transnationalism, and Gender in the Américas*
- 244 *U.S. Political Relations with Latin America*
- 297 *Independent Study*
- 299 *Thesis Research*

<http://lals.ucsc.edu>*Program Description*

The Latin American and Latino Studies (LALS) Department prepares students for bilingual and multicultural participation in a rapidly changing and globalized world. ~~The Latin American and Latino Studies Department~~ LALS integrates the study of Chicano/a and Latino/a communities in the U.S. with analysis of the histories, politics, cultures, and societies of Latin America and the Caribbean. The field is inherently interdisciplinary, drawing on sociology, history, anthropology, political science, media studies, communications, cultural studies, economics, environmental studies, and literature, ~~and urban planning~~ [do we have any urban planning influence?].

LALS courses deal with changing political, social, economic, and cultural realities, among Latin American and U.S. Latino and Latina communities in ways that recognize cross-cultural, ~~or~~ and transnational processes. Key concepts and processes studied include: immigration and transnational migration; gender, racial, sexual, and ethnic identities; social movements; diverse forms of cultural expression and cultural politics; ongoing political and economic restructuring in Latin America; and the challenges of political and economic empowerment for Latino/a communities in the U.S. Students learn to formulate thoughtful, critical and clear arguments on controversial topics and communicate effectively, including beyond the English language.

In addition to academic knowledge, LALS also provides opportunities for students to acquire practical, real-world skills. Through program-related internship and field-study experiences, students can acquire useful, pre-professional skills in any of the following key areas: community development/advocacy, public policy, education, journalism, media, performance, and research/writing, among others.

Latin American and Latino studies courses span a number of disciplines and are augmented by courses taught by participating faculty in various departments. A sample list appears at the end of the course descriptions. The Latin American and Latino Studies Department compiles a quarterly list of these courses offered by other departments that are pre-approved and count toward the major; this list appears on the department's web site under "courses" and is frequently updated.

Graduates of the LALS major have made careers in a wide variety of fields, including teaching, community organizing, community and government service, journalism and the media, environmental science, global economics, health care, legal services, library science, music, publishing, and research. Many have gone on to pursue advanced degrees in the U.S. or abroad in fields such as anthropology, bilingual education, communications, cultural studies, ecology, economics, geography, history, law, literature, media, public

health, and sociology ~~—to name a few.~~

Major Requirements

Two lower-division courses are required for the major [\(see the list below\)](#). ~~+~~LALS 1, *Introduction to Latin American and Latino Studies*, and one Latin American and Latino Studies 80 course ~~or two~~ chosen from the list below. Ideally students (frosh and transfer) should take LALS 1, ~~-and two courses from the LALS 80s series-~~, prior to taking LALS 100 *Concepts and Theories in Latin American and Latina/o Studies*, a required course to declare the major.

See the LALS lower-division course list below:

Latin American and Latino Studies

1 *Introduction to Latin American and Latino Studies*

80B *Social Movements in Latin America*

80D *Political Change in Mexico*

80E *Latin American Philosophy*

80F *Latinos in the U.S.A. : Comparative Perspectives*

80G *Race, Class, and Gender*

80H *Comparative Latina/o Histories*

80I *Gender and Global Cinema*

80J *Race, Nation, and War*

80K *Latinos and Organized Labor in the U.S.*

80P *Energy, Society and ~~Ecology~~ [Environment](#) in Latin America*

80Q *Música Latina*

80R *Organizing Across the Americas*

80S *Sexualities and Genders in Latin American and Latina/o Studies*

80T *Topics in Latin American and Latina/o Studies Cinema*

80W *Transnational Feminist Organizing in the Americas*

80X *Central American Peoples and Cultures*

Anthropology

80G *Barrio Popular Culture*

80I *Culture and Power in Latin America*

Environmental Studies

80A *The Future of Rain Forest*

History

11A *Latin America: Colonial Period*

11B *Latin America: National Period*

80N *Women at Work*

History of Art and Visual Culture

60 *Indigenous American Visual Culture*

Spanish /Latin American/Latino Literature

60 *Introduction to Literary Genres*

80N *Latino Expressions in the U.S.*

Music

4A and 4B *Latin American Ensembles* (three quarters fulfill one lower-division elective)

11D *Introduction to World Music*

80F *Music in Latin American Culture: Regional Traditions*

Philosophy

80E *Latin American Philosophy*

Sociology

15 *World Society*

Theater

80M *Chicano Teatro*

Other courses numbered 1–80 on Latin American and/or Latino/a subjects may be substituted with approval in advance from the Latin American and Latino Studies Department.

Courses with similar content taken at other institutions may be substituted with approval from the Latin American and Latino Studies Department.

In addition, all majors must complete 10 upper-division courses, including three required core courses, (no substitutions):

Latin American and Latino Studies

100 *Concepts and Theories in Latin American and Latina/o Studies*

100A *Politics and Society: Concepts and Methods*

100B *Culture and Society: Culture in a Global Context*

The remaining seven electives must meet the following criteria:

- A cluster of three LALS-related courses must be taken in ~~one of the following~~ a variety of -areas of concentration. These may be LALS courses or courses from affiliated/participating departments.
- ~~• : 1) transnational migrations; 2) social inequalities; 3) collective action and social movements; 4) cultural politics and cultural flows. Courses may be taken in any department, as long as they fit into the cluster and appear on the LALS list of course offerings. [don't we allow students to define their area of concentration?]~~
- At least one course must concentrate on pre-WWII topics
- At least one course ~~-must~~ center on Chicano/a-Latino/a issues
- At least two LALS upper-division courses must be ~~taught-taken~~ in Spanish or Portuguese***

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

Additional Upper-Division Courses of Interest

American Studies

157 *Sexual Identities and Communities: Tracing Latina/o Theory*

Anthropology

130B *Brazil*

130F *African Diasporas in the Americas*

130L *Ethnographies of Latin America*

130M *Inside Mexico* 130U *Central America*

130U *Central America*

145X *Special Topics in Socio-Cultural Anthropology*

176B *Meso-American Archeology*

Economics

148 *Latin American Economies*

Education

128 *Immigrants and Education*

141 *Bilingualism and Schooling*

181 *Race, Class, and Culture in Education*

Environmental Studies

122 *Tropical Ecology and Conservation*

143 *Sustainable Development: Economy, Policy, and the Environment*

Feminist Studies

115 *Gender, Sexuality, and Transnational Migration Across the Americas*

120 *Transnational Feminisms*

124 *Technology, Science, and Race Across the Americas*

194F *Chicana/Latina Cultural Production*

History

125 *California History*

126 *From Indigenous Colonial Borderlands to the U.S.-Mexico Border*

128 *Chicano/a History*

130 *History of Modern Cuba*

131 *Women in Colonial Latin American*

132 *History of the Caribbean: Colonial Period*

134B *History of Mexico, 1850 to Present*

190A *Slavery and Race in Latin America*

190B *Race and the Nation in Latin America*

190E *Topics in Chicana/o History*

190T *Latin America in the Cold War*

History of Art and Visual Culture

143C *Latin American Modern Architecture*

140D *Chicano/Chicana Art: 1970-Present*

160A *Topics in Pre-Hispanic Visual Culture: Mexico*

160B *Topics in Pre-Hispanic Visual Culture: The Andes*

162A *Advanced Studies in Pre-Hispanic Visual Culture: The Maya*

163 *The Native in Colonial Spanish America*

191B *The Virgin of Guadalupe: Images and Symbolism in Spain, Mexico, and the U.S.*

Spanish/Latin American/Latino Literature

102A *From the Conquest to Sor Juana*

102B *Introduction to Hispanic American Lit: Romanticism*

130E *Latin American Poetry Poetry*

131D *Chile*

131H *National Literatures of Latin America: Cuba*

134G *Popular Culture in Latin American Narrative*

134M *Literatura y Modernidad: El Boom de La Novela Latinoamericana Latinoamericana*

135 *The Picaresque Novel*

World Literature

127 *Chicano/Mexicano Geographies*

Politics

140C *Latin American Politics*

144 *Andean Politics*

190V *Problems in Latin American Politics*

Psychology

157 *Chicana Feminism (also offered as Feminist Studies 151A)*

159K *Advanced Topics in Chicana Feminism (also offered as Feminist Studies 151B)*

Sociology

156 *US Latina/o Identities: Centers and Margins*

177A *Latinos/as and the American Global City*

Spanish

156A *The language of Latin America Cinema*

Spanish for Spanish Speakers

125 Mexico and the Southwest

The above is a partial list of upper-division courses taught by Latin American and Latino Studies participating and affiliated faculty based in other departments. A complete list of interdisciplinary course offerings approved for the Latin American and Latino Studies major and minor is published prior to each academic quarter on the department web site: <http://lals.ucsc.edu>.

Language Requirements

All Latin American and Latino studies majors are expected to learn to speak, read, and write Spanish or Portuguese and to make use of these skills on a regular basis in their upper-division academic work.

Majors must take at least two upper-division courses taught in Spanish or Portuguese. Before taking upper-division course work taught in the language, students must demonstrate proficiency in Spanish equivalent to the completion of Spanish 6 or 56, or Spanish for Spanish Speakers 63. Students who wish to pursue Portuguese may take the Portuguese 1A/1B or 60A/60B series. Students who have achieved fluency in Spanish or Portuguese through life experience may be exempt from this recommended preparatory course work after demonstration of their proficiency. In addition to Latin American and Latino studies and affiliated department course offerings, the required two upper-division courses taught in Spanish or Portuguese*** may be fulfilled through study abroad with prior approval by [the LALS Department](#) ~~Latin American and Latino Studies~~. Students may also pursue internship or field study opportunities to satisfy one of the two required upper-division courses taught in Spanish or Portuguese; however, at least one of the two courses must be fulfilled in a classroom setting.

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

Field-Study and Internship Opportunities

All majors are ~~strongly~~ encouraged to undertake either a field study in Latin America, the Caribbean, a Latino/a community in the U.S., or formal academic study abroad through the Education Abroad Program (EAP). These paths are the best ways to improve language skills, explore the nature and direction of specific academic and career interests in relation to Latin American and Latino studies, and deepen cross-cultural understanding and relationships based upon personal experience.

Field studies are independent, community-based study projects for academic credit, done under faculty sponsorship and arranged on an individual basis. Local opportunities for internships and field study in Latino/a communities on California's Central Coast are numerous. Credit for up to three upper-division courses may be applied toward the major from field study; however, course credit from field study and study abroad combined may not exceed three upper-division courses. Students should check the Latin American and Latino Studies Department web site for further information regarding the field-study process and course credit. A listing of local field-study programs and petition forms are available at the Latin American and Latino Studies Department office, 32 Merrill.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary

Communication (DC) requirement. The DC requirement in Latin American and Latino studies and the combined majors with global economics, literature, politics, and sociology are met by completing courses 100A and 100B.

Study Abroad

Students may apply to study abroad through the Education Abroad Program (EAP), or independently. EAP offers opportunities for students to study in Mexico City, Mexico; Santiago, Chile; Rio de Janeiro or Bahia, Brazil; and Madrid, Córdoba, Granada, and Barcelona in Spain. In addition to language and culture and university immersion programs, EAP also offers a Field Research Program in Mexico, which is an experiential program geared toward juniors and seniors who want to explore the “real” Mexico outside the classroom and at the same time receive undergraduate research training. The program has research sites in states such as Jalisco, Yucatán, Oaxaca, and Michoacán (final site choice depends on the research topic). Application deadlines are generally about one year in advance of the program, so students should visit the UCSC International Education Office early to plan for study abroad and to begin the application process. The department will approve courses taken abroad, whether through EAP or on independent programs, that cover topics appropriate to the LALS curriculum for upper-division credit toward the major. All credit for EAP classes is fully incorporated into student’s UCSC transcripts; students receive transfer credit for independent study abroad programs. Financial aid applies to all EAP programs and takes into account airfare and living costs in addition to tuition and fees; financial aid is not available for students who study abroad independently. Before departure, student should present an academic plan for courses abroad to the department advisor for review. Credit for up to three EAP courses can be applied toward the major. (A maximum of three courses of field study and EAP combined can be applied toward the major requirements.)

~~Students may apply to study abroad through the Education Abroad Program (EAP). EAP offers opportunities for students to study in Mexico City, Mexico; Santiago, Chile; Rio de Janeiro or Bahia, Brazil; and Madrid, Córdoba, Granada, and Barcelona in Spain [check to see if any new programs offered. Also should mention possibility of going with non-EAP program and getting credit via petition?]. In addition to language and culture and university immersion programs, EAP also offers a Field Research Program in Mexico, an experiential program geared toward juniors and seniors who want to explore the “real” Mexico outside the classroom and at the same time receive undergraduate research training. The program has research sites in states such as Jalisco, Yucatán, Oaxaca, or Michoacán (final site choice depends on the research topic). Application deadlines are generally about one year in advance of the program, so students should visit the UCSC International Education Office early to plan for study abroad and to begin the application process. The department will approve courses taken abroad that cover topics appropriate to the LALS curriculum for upper-division credit toward the major. All credit for EAP classes is fully incorporated into students’ UCSC transcripts. Financial aid applies to all programs and takes into account airfare and living costs in addition to tuition and fees. Before departure, students should present an academic plan for courses abroad to the department adviser for review. Credit for up to three EAP courses can be applied toward the major. (A maximum of three courses of field study and EAP combined can be applied toward the major requirements.)~~

Senior Comprehensive Requirement

Every major must complete a senior exit requirement in order to graduate. The preparation and completion of this requirement is structured into the senior year. There are five options to choose from:

- Enrollment in a Latin American and Latino Studies senior seminar (194 series), with

good to excellent performance (grade of B or better). Students must write at least 30 pages cumulatively, including the submission of the required final research paper, a total of 25 pages written during the course of the quarter, and must submit a final paper that is based on independent scholarly research, demonstrates advanced skills in critical analysis, and which

- has undergone revisions. Senior standing and completion of LALS 100A and 100B are required before taking a LALS 194 course for fulfillment of the Senior Exit Requirement.
- An expanded research paper, a minimum of 20 pages in length. This paper often builds on related course work and requires approval from the relevant faculty adviser before the end of the winter quarter of the senior year. Students must be enrolled in an independent-study tutorial to complete this paper.
- A senior thesis, generally between 40–60 pages, based on two or more quarters of sustained independent research under the supervision of the faculty adviser while enrolled in an independent study (done by petition to LALS, and with the approval of the faculty adviser). If the thesis option is selected by a combined major, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member is affiliated with both departments.
- A senior project, which can be either a creative project or a community-action project. Creative projects include web site design, video, performance, slide show, photo exhibit, or other media work. A short written analysis of the student's experience in conducting the project is required. Community-action projects often involve sustained research and/or activity conducted in a community organization or public interest group, usually stemming from an internship. A 10-page description and analysis of the project is required.
- The student-directed seminar option is available to unusually qualified students only. It requires three quarters of preparation directed by a faculty adviser and approval by the Academic Senate Committee on Educational Policy prior to teaching the course. The class is limited to 15 students. This option can be taken only by petition to LALS and with the approval of the faculty adviser. This process should be initiated a year prior to offering the course. ~~well in advance of offering the course.~~

Latin American and Latino Studies Major Planners

The following are two recommended academic plans for undertaking basic preparation for the Latin American and Latino studies major. Plan One is a guideline for students who commit to the major early in their academic career. Plan Two is for transfer students.

Plan One—Frosh			
Year	Fall	Winter	Spring
1st (frsh)	SPAN 1	SPAN 2	SPAN 3
	LALS 1	LALS 80	LALS 80
2nd	SPAN 4	SPAN 5 or	SPAN 6 or 56

(soph)	or SPSS 61	SPSS 62	or SPSS 63
	LALS 100	LALS 100A	LALS 100B
3rd (jr)	LALS upper-division course	LALS upper-division course	LALS upper-division course
4th (sr)	LALS upper-division course	LALS upper-division course	LALS 194 (Senior-Exit Requirement)
	LALS upper-division course	LALS upper-division course	LALS upper-division course

Plan Two—Junior Transfers			
Year	Fall	Winter	Spring
3rd (jr)	SPAN 4 or SPSS 61	SPAN 5 or SPSS 62	SPAN 6 or 56 or SPSS 63
	LALS 100	LALS 100A	LALS 100B
	LALS 80	LALS 80	LALS upper-division course
4th (sr)	LALS upper-division course	LALS upper-division course	LALS upper-division course
	LALS upper-division course	LALS upper-division course	LALS 194 (Senior-Exit Requirement)

Combined Majors

The combined major options, requiring fewer courses than a double major, are established with the global economics, literature, politics, and sociology programs.

Latin American and Latino Studies/Global Economics

Students are required to take a total of 18 courses and to satisfy the senior comprehensive requirement. For the combined major in Latin American and Latino studies/global economics, students complete a total of seven lower-division course requirements for both the Latin American and Latino studies and global economics majors. Students are assigned a faculty adviser from each discipline. Lower-division requirements include Economics 1, 2, 11A, 11B, Applied Mathematics and Statistics 5, upper-division course requirements include Economics 100A, 100B, and 113; LALS 100, 100A, and 100B; and five additional elective courses, two from economics (104, 114, 120, 125, 126, 128, 130, 137, 140, 141, 142, 148, 149, 150, 160A, 160B, 165, 169, 170, 171, 175, 183, 184, 189, 195 or 199) and three from Latin American and Latino studies. Two of the upper-division courses must be taught in Spanish or Portuguese*** and two to four (at least one quarter) must be courses of academic study abroad, internship, or field study in a Spanish- or Portuguese-speaking country. The comprehensive requirement is met by the completion of a senior thesis on a topic suitable to both global economics and Latin American and Latino studies, supervised by a faculty member from either department and read and approved by the student's advisers from both departments.

~~Latin American and Latino Studies/Global Economics~~

~~Students are required to take a total of 18 courses and to satisfy a senior comprehensive requirement. For the combined major in Latin American and Latino Studies/Global Economics, students complete a total of seven lower-division course requirements for both the Latin American and Latino Studies and Global Economics majors. Students are assigned a faculty adviser from each discipline. Upper-division course requirements include Economics 100A, 100B, and 113; LALS 100, 100A, and 100B; and five additional elective courses, two from economics and three from Latin American and Latino studies. Two of the upper-division courses must be taught in Spanish or Portuguese*** and two to four (at least one quarter) must be courses of academic study abroad, internship, or field study in a Spanish- or Portuguese-speaking country. The comprehensive requirement is met by the completion of a senior thesis on a topic suitable to both global economics and Latin American and Latino studies, supervised by a faculty member from either department and read and approved by the student's advisers from both departments [update to reflect change in the senior thesis requirement].~~

~~***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.~~

Latin American and Latino Studies/Literature

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. Students complete a total of two lower-division course requirements. One of the lower-division LALS classes must be LALS 1 or LALS 80 and one of the lower-division classes must be Spanish Literature 60 or a Literature 80 series course in a relevant area of study. For transfer students, a petition can be made to replace the LALS 1 or 80 course with an appropriate course from another institution.

Upper-division requirements include five core courses, LALS 100, 100A, 100B, Spanish Literature 102A, and Spanish Literature 102B; and six additional elective courses, three from Spanish Literature and three from LALS. At least four of the upper-division courses must be taught in Spanish or Portuguese*** (with at least one taught by LALS core or participating faculty), and at least one of the Literature courses must address theoretical concerns. Up to three relevant courses taken through study abroad programs from which credits are transferable to UCSC may be credited toward the major when the content is deemed appropriate by both departments. To complete the comprehensive requirement,

students can write a senior thesis (by petition), enroll in an appropriate LALS Seminar (194 series), or enroll in an appropriate Literature Senior Seminar in the area of concentration. If the thesis option is selected, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member belongs to both departments. Both departments must approve a study plan before the major can be declared.

~~***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.~~

Latin American and Latino Studies/Politics

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. For the combined major in Latin American and Latino studies/politics, students complete two lower-division course requirements. One of the lower-division courses must be LALS 1 or 80, the other one course from Politics 1—79. For transfer students, a petition may be made to substitute Latin American and Latino studies 1 or 80, or one course from Politics 1—79} with appropriate course work from another institution. The 11 upper-division courses include three core course from LALS (LALS 100, 100A and 100B), one from Politics (140C) and seven upper-division electives, five from Ppolitics (three Ppolitics core courses from the 105, 120, 140, and 160 series) and two from LALS (one must be taught in Spanish or Portuguese*** and the other must be on Chicano/a-Latino/a issues).

~~Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. For the combined major in Latin American and Latino studies/politics, students complete two lower-division course requirements. One of the lower-division courses must be LALS 1 or 80, the other one course from Politics 1—79. For transfer students, a petition may be made to substitute Latin American and Latino studies—LALS 1 or 80, or one course from Politics 1—79) with appropriate course work from another institution. The 11 upper-division courses include three core course requirements (LALS 100, 100A and 100B), and Politics 100 and 140C, three courses from any Politics Department sequences (comparative, American, international, and theory), and four upper-division electives. At least one of the Latin American and Latino studies upper-division courses must be taught in Spanish or Portuguese***, and at least one course in the politics/Latin American and Latino studies combined major must be on Chicano/a-Latino/a issues.~~ To complete the senior comprehensive requirement, students may take either a Politics (190) or LALS (194) senior seminar.

~~***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.~~

Latin American and Latino Studies/Sociology

Students are required to take a total of 14 courses and to satisfy a senior comprehensive requirement. There are three lower-division course requirements, two from the Sociology Department and one from Latin American and Latino Studies Department. The lower-division LALS courses must be LALS 1 or 80; transfer students may petition to replace the LALS 1 or 80 with an appropriate course from another institution. Upper-division requirements include seven core courses: LALS 100, 100A, 100B; Sociology 103A, 103B, 105A, and 105B; and four additional elective courses, two from sociology and two from Latin American and Latino studies. At least one of the Latin American and Latino studies upper-division courses must be taught in Spanish or Portuguese***, and at least one course in the sociology/Latin American and Latino studies combined major must be on Chicano/a-Latino/a issues. Up to three relevant courses taken through study abroad programs from which credits are transferable to UCSC may be credited toward the major

when the content is deemed appropriate by the faculty advisers of both sociology and Latin American and Latino studies. Students can satisfy the comprehensive requirement in one of three ways: (1) writing a senior thesis, (2) passing an appropriate LALS Senior Seminar (194 series), or (3) completing ~~the sociology course option of~~ two additional sociology upper-division courses in the area of Inequality and Social Change (refer to the ~~Sociology u~~ndergraduate adviser for the specific list of courses). If the thesis option is selected, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member belongs to both departments.

-

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

~~***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.~~

Honors in the Major

Honors in the Major

The LALS faculty considers awarding honors in the major based on overall student academic performance in courses that count towards the major. To be considered for honors, narrative evaluations must indicate either consistently excellent performance or a pattern of increasingly improved performance, which reaches and maintains consistent excellence during the last several quarters. For combined majors, student work must be judged honors-level in both departments; the LALS faculty cannot award honors in the major unless the other department also confers honors. To receive the strongest consideration for honors in the major the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7. Students with a 3.5–3.7 GPA in the major go under review, and a decision is made based on their ~~evaluations~~, grades in core courses, and improvement over time.

LALS also awards honors for the thesis, creative or community action projects, or student taught seminars, by the recommendation of the faculty adviser. Note that a thesis, a creative/community project, or a student-taught seminar are the only senior exit requirement options that qualify for this distinct honors designation. Expanded papers and senior seminars do not qualify for a separate honors designation, but students who choose these options may still qualify for honors in the major.

Minor Requirements

The minor in Latin American and Latino studies consists of seven courses, including two lower-division courses (LALS 1 or an 80s series course) and five upper-division courses (including LALS 100 or LALS 100A or 100B and any other four upper-division courses that count towards the major). Knowledge of Spanish and/or Portuguese is highly recommended, but not required for the minor.

Graduate Studies

Graduate students may work toward a doctor of philosophy (Ph.D.) degree that notes a designated emphasis in ~~The Department of~~ Latin American and Latino ~~Studies~~ studies on the graduation documents. -Students wishing to pursue this option should consult with the chairs of their respective Ph.D. programs and are encouraged to apply in the first or second year of graduate study. The application and an annually updated list of regularly offered,

~~approved graduate courses are offers a designated emphasis in Latin American and Latino studies for Ph.D. students in anthropology, education, environmental studies, history, history of consciousness, literature, psychology, politics, and sociology. This designated emphasis in Latin American and Latino studies provides graduate students with opportunities for interdisciplinary study with faculty from across the campus. Completion of the program will be listed on the graduate degree as a designated emphasis. -available at :~~
The request must originate in the degree granting department. Students in other departments wishing to pursue a designated emphasis in Latin American and Latino studies should consult with the chairs of their respective Ph.D. programs and of Latin American and Latino studies. A list, updated annually, of regularly offered approved graduate courses is available in the Latin American and Latino Studies Department office and web site at <http://lals.ucsc.edu>.

-

~~The following are required for the designated emphasis: Graduate students are encouraged to complete the application to the designated emphasis, available at the Latin American and Latino Studies Department, no later than their third year.~~

~~[mention of the imminent grad program?]~~

Requirements for the Designated Emphasis

Committee Composition. The student must have a designated graduate adviser from among the Latin American and Latino studies core, participating, or affiliated faculty. This adviser will be in addition to the graduate adviser from the student's home department. The Latin American and Latino studies adviser must serve on the student's qualifying examination committee and/or on the student's dissertation committee.

Writing. The student must prepare a significant piece of writing in the area of Latin American and Latino studies. This writing may take the form of a substantial seminar paper, master's essay, or doctoral dissertation chapter.

Course requirements. The student must take five graduate courses in Latin American and Latino studies, including the required LALS 200 and LALS 297. The remainder can be selected from appropriate graduate offerings of any UCSC department, as long as they are taught by core, participating, or affiliated Latin American and Latino studies faculty.

Teaching. The student must serve as a teaching assistant in at least one Latin American and Latino studies course or teach a Latin American and Latino studies course independently in the regular curriculum or in Summer Session.

Courses. Graduate course work in Latin American and Latino studies is available both in the Latin American and Latino Studies Department and in other UCSC departments. Graduate courses to date in the Latin American and Latino Studies Department include

200 *Bridging Latin American and Latina/o Studies*

210 *Latina Feminisms: Theory and Practice*

212 *Latina/o Ethnographic Practice*

215 *Latina Cultural Studies; Transborder Feminist Imaginaries*

220 *Transnational Civil Society: Limits and Possibilities*

230 *Political Ecology in Latin America*

240 *Culture and Politics of Human Rights*

242 *Globalization, Transnationalism, and Gender in the Américas*

244 *U.S. Political Relations with Latin America*

297 *Independent Study*

299 *Thesis Research*

~~*Additional Upper-Division Courses of Interest*~~

~~*American Studies*~~

~~1122 — Immigration and Assimilation~~

~~157 — Sexual Identities and Communities: Tracing Latina/o Theory~~

~~*Anthropology*~~

~~1308B — Brazil~~

~~130F — African Diasporas in the Americas~~

~~130L — Latin American Ethnography ies of Latin America~~

~~130M — Inside Mexico~~

~~*Community Studies*~~

~~185 — Gender and Sexuality in Latin America~~

~~*Economics*~~

~~148 — Latin American Economics~~

~~*Education*~~

~~128 — Immigrants and Education~~

~~141 — Bilingualism and Schooling~~

~~181 — Race, Class, and Culture in Education~~

~~*Environmental Studies*~~

~~122 — Tropical Ecology and Conservation~~

~~143 — Sustainable Development: Economy, Policy, and the Environment~~

~~*Feminist Studies*~~

~~115 — Gender, Sexuality, and Transnational Migration Across the Americas~~

~~120 — Transnational Feminisms~~

~~194F — Chicana/Latina Cultural Productions~~

~~*History*~~

~~123B — U.S. Immigration: 1877 to Present~~

~~125 — California History~~

~~126 — History of the Southwest: Colonial Period to 1920 From Indigenous Colonial Borderlands to the U.S.-Mexico Border~~

~~128 — Chicano/a History~~

~~130 — History of Modern Cuba~~

~~131 — Women in Colonial Latin American History~~

~~132 — History of the Caribbean: Colonial Period~~

~~134B — History of Mexico, 1850 to Present~~

~~190A — Slavery and Race in Latin America~~

~~190B — Race and the Nation in Latin America~~

~~190C — American Race, Class, and Gender in CA History~~

~~190T — Latin America in the Cold War~~

~~History of Art and Visual Culture~~

~~143C — Latin American Modern Architecture~~

~~140D — Chicano/Chicana Art: 1970-Present~~

~~160A — Topics in Pre-Hispanic Visual Culture: Mexico~~

~~160B — Topics in Pre-Hispanic Visual Culture: The Andes~~

~~162A — Advanced Studies in Pre-Hispanic Visual Culture: The Maya~~

~~163 — The Native in Colonial Spanish America~~

~~191B — The Virgin of Guadalupe: Images and Symbolism in Spain, Mexico, and the U.S.~~

~~Spanish/Latin American/Latino Literature~~

~~102A — From the Conquest to Sor Juana~~

~~130E — Latin American Poetry~~

~~131H — National Literatures of Latin America: Cuba~~

~~134G — Popular Culture in Latin American Narrative~~

~~134M — Literatura y Modernidad: El Boom de La Novela Latinoamericana~~

~~Politics~~

~~140C — Latin American Politics~~

~~190V — Problems in Latin American Politics~~

~~Psychology~~

~~157 — Chicana Feminism (also offered as Feminist Studies 151A)~~

~~159K — Advanced Topics in Chicana Feminism (also offered as Feminist Studies 151B)~~

~~Sociology~~

~~122C — Chicanos/as and the Law~~

~~156 — US Latina/o Identities: Centers and Margins~~

~~165 — World Systems Perspective~~

~~177A — Latinos/as and the American Global City~~

~~Spanish~~

~~156A — Topics in Hispanic Language and Culture: Hispanic Culture Through Film The language of Latin America Cinema~~

~~156F — Topics in Hispanic Language and Culture: El Humor en Español~~

~~Spanish for Spanish Speakers~~

~~125 — Mexico and the Southwest~~

~~The above is a partial list of upper-division courses taught by Latin American and Latino Studies participating and affiliated faculty based in other departments. A complete list of interdisciplinary course offerings approved for the Latin American and Latino Studies major and minor is published prior to each academic quarter on the department web site:~~

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

Core Faculty

GABRIELA ARREDONDO, Associate Professor of Latin American and Latino Studies
Latina/o studies; Chicana/o history; U.S. immigration histories; U.S. social and cultural history; critical race and ethnicity theories; Chicana and Mexicana feminisms; borderlands studies; history of modern Mexico

JOHN G. BORREGO, Professor Emeritus of Latin American and Latino Studies

SYLVANNA FALCN, Assistant Professor of Latin American and Latino Studies
Human rights, racism/antiracism, globalization, gender, transnational feminism, Latin America (Mexico, Peru), United States

JONATHAN FOX, Professor of Latin American and Latino Studies
Latin American and Latino politics, including issues of democratization, accountability, social movements, transnational civil society, social and environmental policy, and immigration

ROSA-LINDA FREGOSO, Professor of Latin American and Latino Studies
Human-rights studies; intercultural and transborder feminism; cultural studies; Latina/o and Latin American film and media arts

SHANNON GLEESON, Assistant Professor of Latin American and Latino Studies
Migrant populations, the effects of documentation status, labor rights, civic engagement, inequality and stratification, political sociology, law and society, mixed methods and comparative approaches

WALTER L. GOLDFRANK, Professor Emeritus of Latin American and Latino Studies and Sociology

FLORA LU, Associate Professor of Latin American and Latino Studies
Ecological anthropology, human behavioral ecology, Amazon rainforest, indigenous peoples, conservation, Ecuador, culture change, market integration, indigenous resource management, political ecology, environmental justice

MANUEL PASTOR JR., Professor of Latin American and Latino Studies
Urban poverty and regional development, Latinos in the urban U.S., environmental justice, macroeconomic stabilization in Latin America; distribution and growth in the developing world; Cuban economic reform; Mexican economic reform

HECTOR PERLA, JR., Assistant Professor of Latin American and Latino Studies
International relations; Latin American studies; Latino politics; political psychology; Central America; U.S. foreign policy; social and revolutionary movements; asymmetric conflicts

CATHERINE RAMIREZ, Associate Professor of Latin American and Latino Studies
Chicana and U.S. Latino literature and history; gender studies and feminist theory; visual culture and style politics; cultural studies; popular and urban youth cultures; speculative fiction, comparative American studies

CECILIA M. RIVAS, Assistant Professor of Latin American and Latino Studies
Salvadoran transnationalism; media (Internet, newspapers); migration; globalization; race, ethnicity, and gender; bilingualism; consumption; El Salvador; Central America

PATRICIA ZAVELLA, Professor of Latin American and Latino Studies
Transnational migration by Mexicans, poverty, family, sexuality, labor, social networks, feminist studies, Chicana/o-Latina/o studies, ethnographic research methods

Participating Faculty

MARK D. ANDERSON, Associate Professor of Anthropology
Racial formation, diaspora, nationalism, transnationalism, indigeneity, consumption, Central America, Honduras, Latin America, African diaspora

JEFFREY T. BURY, Associate Professor of Environmental Studies

Political ecology; sustainable development; Latin American studies; international relations; institutional dimensions of natural resource conservation in the global south

PEDRO G. CASTILLO, Associate Professor of History

Chicano/a history and culture; American social and urban history; race, class, and gender in California history, immigration history, Latina/os in the U.S.

CYNTHIA CRUZ, Assistant Professor of Education

Street ethnography; community-based learning and pedagogies; decolonial feminist pedagogies; Chicana studies and epistemologies; U.S.-Third World Feminisms; cultural studies and education

KENT H. EATON, Professor of Politics

Comparative politics, international relations, political economy, public policy, territorial conflict, federalism, decentralization, party and electoral systems, Latin America, the Philippines

LISBETH HAAS, Professor of History

U.S.-Mexico borderlands, Chicano and Native American history; visual culture in the colonial Americas; the U.S. West and California; historical memory, theory, and historical methodology

NORMA KLAHN, Professor of Literature

Latin American literary and cultural studies (specialization: Mexico), Chicano/Latino literature and culture from a cross-border perspective, modernity/postmodernity, poetics and politics, genre theory (novel, poetry, autobiography), contemporary critical theories (i.e., border, ethnic, feminist, transnational/global)

LOURDES MARTNEZ-ECHAZBAL, Associate Professor of Latin American Literature

Latin American and Caribbean literatures; Afro-Latin American literatures, cultures, and societies; found[n]ational narratives; Brazilian literature; literatures of Cuba and the Cuban diaspora; critical race theory

EDUARDO MOSQUEDA, Assistant Professor of Education

Mathematics education of English learners; large-scale dataset quantitative analysis; urban education issues

OLGA NJERA-RAMREZ, Professor of Anthropology

Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

MARCIA OCHOA, Assistant Professor of Community Studies

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, multimedia production, Latin American studies Colombia and Venezuela, political philosophy, geography

JUAN POBLETE, Associate Professor of Literature

Latin(o) American literatures; transnational/global cultures (literature, radio, film); Latin(o) American cultural studies; 19th-century studies; the history of reading practices

RENYA K. RAMIREZ, Associate Professor of American Studies

Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

B. RUBY RICH, Professor of Community Studies

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

BARBARA ROGOFF, Professor of Psychology

Human development in sociocultural activity; informal and formal arrangements for learning; adult/child and peer communication in families and schools in diverse cultural communities (especially in Guatemala, Mexico, and the U.S.); learning through observation and collaboration

GABRIELA SANDOVAL, Assistant Professor of Sociology

Latino/a sociology, voting and representational politics, urban sociology, political sociology

FELICITY SCHAEFFER-GRABIEL, Assistant Professor of Feminist Studies

Transnational feminism, migration, Latin American/Latino studies, Chicana/o studies, Internet, technology and the body, sexuality, gender and globalization

HELEN SHAPIRO, Associate Professor of Sociology

Political economy, Latin American economic history and development (with an emphasis on Brazil), industrial policy, the auto industry, the state and transnational corporations

Affiliated Faculty

JORGE ALADRO FONT, Professor of Spanish Literature

Spanish mysticism, theory and historical developments of imagery in the Middle Ages to the baroque period, Renaissance and baroque Hispanic literature, Italian ideas in the Spanish

Renaissance, Cervantes

CHELSEA BLACKMORE, Assistant Professor of Anthropology
Pre-Columbian archaeology (Mesoamerican focus), identity formation, complex societies, class and state formation, gender, feminist/queer theory

CAROLYN DEAN, Professor of History of Art and Visual Culture
Cultural histories of the native Americas and colonial Latin America

MARIA ELENA DIAZ, Associate Professor of History
Atlantic world, Colonial Latin America and the Caribbean, Cuba; social and cultural, global and local histories; colonialism, slavery and freedom, race/ethnicity, gender and class; legal, political, popular, and religious culture

ROBERT W. FAIRLIE, Professor of Economics
Labor economics, public policy, entrepreneurship, applied econometrics

DANA FRANK, Professor of History
U.S. social and economic history; women, labor, and working-class history; contemporary political economy; modern Central America

GREGORY S. GILBERT, Professor of Environmental Studies
Tropical ecology and conservation, disease ecology

MARA VICTORIA GONZALEZ-PAGANI, Lecturer in Spanish Language
Language teaching methodology; Spanish syntax; computer-assisted foreign language learning; Latin American cultural studies, especially women's contributions

SHELLY GRABE, Assistant Professor of Psychology
Sexual objectification of women and womens bodies as a pervasive global phenomenon played out in different ways across different cultures; how embodied oppression affects womens psychological well-being and empowerment

MIRIAM GREENBERG, Associate Professor of Sociology
Media studies, cultural studies, globalization, political and cultural economies of global cities, video production, and ethnography

KIRSTEN SILVA GRUESZ, Professor of Literature
Chicano/Latino literatures and cultures, Comparative Americas studies, language ideologies and bilingualism in literature

DANIEL GUEVARA, Associate Professor of Philosophy
Kant, moral philosophy, moral psychology, environmental ethics, history of modern philosophy

CRAIG HANEY, Professor of Psychology
Applications of social psychological principles to legal settings, assessment of the psychological effects of living and working in institutional environments, social contextual origins of violence, development of alternative legal and institutional forms

KAREN D. HOLL, PEPPER-GIBERSON Professor, Environmental Studies
Restoration ecology, conservation biology, landscape ecology

REGINA D. LANGHOUT, Associate Professor of Psychology
School-community-university collaboration; how schooling and neighborhood experiences are informed by social class, race, and gender; participatory action research

JOHN LEAOS, Assistant Professor of Social Documentation
Social documentation, social art practice, community arts, documentary animation, Chicana/o art practice and cultural studies, media and cultural studies, subaltern studies, photography, installation art, public art and intervention

DEBORAH LETOURNEAU, Professor of Environmental Studies
Agroecology, tropical biology, insect-plant interactions, biological control as an alternative to chemical pesticides

DANIEL T. LINGER, Professor Emeritus of Anthropology
Self and identity, politics, cultural theory, cities, violence, transnational experience, Brazil, Japan

PAUL M. LUBECK, Professor of Sociology
Political sociology; political economy of development, globalization, labor and work; logics of methodology; religion and social movements; Islamic society and identities; information and networks

ANDREW SALVADOR MATHEWS, Assistant Professor of Anthropology
Environmental anthropology, science and technology studies, conservation and development

JUDIT MOSCHKOVICH, Professor of Mathematics Education
Mathematics cognition and learning; student conceptions of linear functions; discourse in mathematics and science classrooms; everyday mathematical practices; and bilingual mathematics

learners

MATTHEW D. OHARA, Assistant Professor of History

Modern Latin America and Mexico; late colonial Latin America; religion, spirituality, and ritual; urban history; race, ethnicity, and identity; political culture

LUCINDA PEASE-ALVAREZ, Associate Professor of Education

Language and literacy development, language-minority education, bilingualism, informal learning

JENNIFER POOLE, Assistant Professor of Economics

International trade, Latin American economics, applied microeconomics

MICHAEL ROTKIN, Lecturer in Community Studies

Marxist theory, capitalist system, community organizing, electoral politics, media, government programs, community power structure, institutional analysis, and affirmative action

DANIELA SANDLER, Assistant Professor of History of Art and Visual Culture

Modern and contemporary architecture and urbanism; visual and cultural studies; social inequality in space; architectural preservation; history and memory in the built environment; architecture and visual culture in Latin America and Europe, with foci on Brazil and Germany

ANA MARIA. SEARA, Lecturer, Portuguese Language

Portuguese language; literature, film, and music of Brazil and the Portuguese-speaking world; acquisition and teaching of foreign, second, and heritage languages

DANA Y. TAKAGI, Professor of Sociology

Social inequality and identity, research methods, race relations, nationalism and social movements

KIP TELLZ, Associate Professor of Education

Preparation of teachers for linguistic and cultural diversity, second language learning, studies of the school curriculum, educational assessment

GUSTAVO VAZQUEZ, Associate Professor of Film and Digital Media

Film and video production, directing drama, documentary and experimental cross-cultural experiences in film, film curator

RASMUS WINTHER, Assistant Professor of Philosophy

Philosophy of science, epistemology, metaphysics, philosophy of biology, American pragmatism, Latin American philosophy, evolutionary theory

THOMAS WU, Assistant Professor of Economics

International finance, macroeconomics, Brazilian macroeconomic policy

KAREN TEI YAMASHITA, Professor of Literature(Creative Writing)

History and anthropology of Japanese immigration to Brazil, Asian American literature, modern fiction, playwriting

Latin American and Latino Studies

32 Merrill College
(831) 459-4284
<http://lals.ucsc.edu>

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**1. Introduction to Latin American and Latino Studies. F,W**

Interdisciplinary introduction presenting the elements for studying Latin American culture, society, economics, and politics, as well as the dynamics of Latino communities in the U.S. Special attention paid to issues of race, gender, and class, to emerging political and economic shifts in the Americas, and to new local and transnational efforts for social change on the part of Latin America's peoples and Latinos in the U.S. (General Education Code(s): ER, IS, E.) *H. Perla*

42. Student-Directed Seminar.

Seminar taught by upper-division student under faculty supervision. Requires prior approval by Latin American and Latino Studies Department and two quarters (fall, winter) of supervised preparation prior to teaching in spring quarter. (See course 192). *The Staff*

80B. Social Movements in Latin America. *

Examines contemporary social movements in Latin America, especially those that arose from popular response to different forms of social exclusion and to authoritarian political systems. Explores a variety of popular movements, their successes and setbacks, including rural and urban uprisings, native nations and their descendants, women, African descendants, labor, environmental and grassroots movements. Enrollment limited to 60. (General Education Code(s): CC, T3-Social Sciences, E.) *H. Perla*

80D. Political Change in Mexico. W

Reviews broad trends in contemporary Mexican politics against the backdrop of long-term historical, social, and economic change throughout the 20th century, analyzing how power is both wielded from above and created from below. The course covers national politics, grassroots movements for social change and democratization, environmental challenges, indigenous movements, the media, and the politics of immigration and North American integration. (General Education Code(s): CC, T3-Social Sciences, E.) *J. Fox, The Staff*

80E. Latin American Philosophy. *

Is there a general school of philosophy endemic to Latin America? Would it have to appeal to quintessential Western philosophical questions regarding knowledge, values, and reality? If not, why not, and would it then still count as philosophy? What difference do ethnic and national diversity, as well as strong political and social inequality, make to the development of philosophical questions and frameworks? Course explores a variety of historically situated Latin American thinkers who investigate ethnic identity, gender, and socio-political inequality and liberation, and historical memory, and who have also made important contributions to mainstream analytical and continental philosophy. (Also offered as Philosophy 80E. Students cannot receive credit for both courses.) (General Education Code(s): T4-Humanities and Arts, E.) *R. Winther*

80F. Latinos in the U.S.: A Comparative Perspective. *

Analyzes the Latino experience in the U.S. with a special focus on strategies for economic and social empowerment. Stresses the multiplicity of the U.S. Latino community, drawing comparative lessons from Cuban-American, Puerto Rican, Chicano/Mexicano, and Central American patterns of economic participation and political mobilization. (General Education Code(s): ER, T3-Social Sciences, E.) *The Staff*

80G. Race, Class, and Gender. W

Examines the economic, social, political, and cultural experience of communities of color (Latinas/os, African Americans, Asian Americans, and Native Americans) and women in the U.S., through a sociological perspective. Using quantitative and qualitative methods, the relationship among individual actions, social institutions, societal forces, and social change are analyzed. Enrollment limited to 80. (General Education Code(s): ER, T3-Social Sciences, E.) *S. Gleeson*

80H. Comparative Latina/o Histories. W

Designed to survey recent works in the field of Latina and Latino histories, with particular emphasis on historiographical approaches and topics in the field. Readings are chosen to expose a selection of the varied histories and cultures of Latina/os in the U.S., and focus primarily on Mexicans, Puerto Ricans, and Cubans. (General Education Code(s): CC, T3-Social Sciences, E.) *G. Arredondo*

80I. Gender and Global Cinema. *

Applies critical and historical approaches to the study of gender in global cinema. Introduces

students to different aesthetic and cross-cultural approaches to representing gender in contemporary film. Focuses on films, documentaries, and video works from the Americas as well as from other regions of the global South. Enrollment limited to 80. (General Education Code(s): CC, T3-Social Sciences, E.) *R. Fregoso*

80J. Race, Nation, and War. F

Evaluates the relationship between processes of racial formation, war, and nationalism in Latin America. Case studies range from the wars of independence to more recent forms of transnational violence. Students engage historical and anthropological perspectives and critiques of modernity. Enrollment limited to 80. (General Education Code(s): ER, T3-Social Sciences, E.) *C. Rivas*

80K. Latinos and Organized Labor in the U.S. *

Students learn about the role of Latinos in different forms of U.S. organized labor (including, but not limited to, traditional unions). Focus is on organizing in several 20th-century, low-wage industries, as well as organizations representing Latino professionals. Enrollment limited to 80. (General Education Code(s): ER, T3-Social Sciences, E.) *S. Gleeson*

80P. Energy, Society, and Environment in Latin America. *

From petroleum extraction to hydroelectric power to ethanol production, Latin America is an important provider of the world's energy. Course examines the implications of this process for economic growth, climate change, environmental degradation, social inequality, and poverty. (Formerly Energy, Society, and Ecology in Latin America.) Enrollment limited to 80. (General Education Code(s): PE-E, T3-Social Sciences, E.) *F. Lu*

80Q. Musica Latina: Music of Latin America and the Caribbean. F

Surveys various musical forms and styles that have developed in Latin America and Latino communities in the U.S. Discusses concept of hybridity and grapples with this as a central issue in the evolution of Latin American/Latino music. Addresses migration of music, which not only contributes to its distribution but also to the evolution of musical practices of forms, styles and genres across borders. (Formerly Musica Latina.) (General Education Code(s): CC, T3-Social Sciences, E.) *The Staff*

80R. Organizing Across the Americas. *

Analyzes the range of theory and practice that emerged from and shaped significant social movements during the rise and fall of United States hegemony. Focuses on social struggles and revolutions in five distinct locations across the Americas: the United States (United Farm Workers--UFW), Cuba (Movimiento 26 de Julio--M26J), Nicaragua (Frente Sandinista de Liberacion Nacional--F.S.L.N.), Mexico (Zapatistas), and Brazil (Movimento dos Trabalhadores Rurais Sem Terra--MST). Enrollment limited to 80. (General Education Code(s): T3-Social Sciences, E.) *J. Borrego, The Staff*

80S. Sexualities and Genders in Latin American and Latina/o Studies. *

Introduction to issues and themes surrounding sexualities and genders within Latin American and Latina/o studies. Provides background in the basic theoretical and historical frameworks of gender and its relationship to sexuality. In addition to cross-border perspectives, course also examines how gender and sexuality are structured and experienced through other social categories. Enrollment limited to 80. (General Education Code(s): CC, T3-Social Sciences, E.) *The Staff*

80T. Topics in LALS Cinema. S

Lower-division offering on a topic of particular cultural, historical or contemporary interest in the field of Latin American and Latino/a cinema. Enrollment limited to 80. (General Education Code(s): T3-Social Sciences, E.) *The Staff*

80W. Transnational Feminist Organizing in the Americas. S

Explores key aspects of transnational feminist organizing in the Americas, including the genealogy of transnational feminist theory and feminist perspectives on development in Latin America and the Caribbean. Analyzes how women from Latin America organize in response to their living conditions across gender, race, ethnicity, and national borders. (General Education Code(s): CC.) *S. Falcon*

80X. Central American Peoples and Cultures. *

Examines contemporary societies and peoples of Central America considering how, in recent decades, media, history, war, cultural production, and migration have shaped Guatemala, Honduras, El Salvador, Nicaragua, and Costa Rica both as individual nations and as a region. Enrollment limited to 80. (General Education Code(s): CC, T5-Humanities and Arts or Social Sciences, E.) *C. Rivas*

ó

81A. Mexican Folklórico Dance (2 credits). F

Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. Students taught choreographed dances from various regions of Mexico and also learn dance techniques (técnica) and stage make-up application. Additional workshops and lectures offered to supplement class. Open to all students; no previous experience required. (Also offered as Anthropology 81A. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): PR-C, A.) *O. Najera Ramirez*

81B. Mexican Folklórico Dance (2 credits). W

Second course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. (Also offered as Anthropology 81B. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): PR-C, A.) *O. Najera Ramirez*

81C. Mexican Folklórico Dance (2 credits). S

Third course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. (Also offered as Anthropology 81C. Students cannot receive credit for both courses.) Prerequisite(s): course 81A or 81B. May be repeated for credit. (General Education Code(s): PR-C, A.) *O. Najera Ramirez*

Upper-Division Courses

100. Concepts and Theories Latin American and Latina/o Studies. F

Interdisciplinary exploration of transnational migrations; social inequalities; collective action and social movements; and cultural productions, products, or imaginaries. Examines how transnational migration and hemispheric integration are transforming Latin American studies and Chicana/o-Latina/o studies. Explores the influence of neoliberalism and globalization, especially the intersection of critical analysis and social-justice praxis. Completion of course 1 highly recommended. (Formerly course 10, Bridging Latin American and Latina/o Studies) Enrollment restricted to sophomores, juniors, and seniors. (General Education Code(s): ER, E.) *G. Arredondo*

100A. Politics and Society: Concepts and Methods. W

Focuses on social science issues through the interdisciplinary analysis of power relations. Compares diverse analytical strategies, assesses contending explanations, and builds practical research skills in the field of Latin American and Latino Studies. Topics change yearly, but can include environmental justice, access to education, political participation, gender, and migration. Prerequisite(s): course 100 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to sophomore, junior, and senior Latin American and Latino studies majors, minors, and combined majors or by permission. (General Education Code(s): E.) *F. Lu*

100B. Culture and Society: Culture in a Global Context. S

Focuses on transnational, regional, and local features of Latina/o and Latin American cultural production and artistic expression: how culture is shaped by historical, social, and political forces; how cultural and artistic practices shape the social world; and how culture is produced in an interconnected, postindustrial, and globalized economy. Prerequisite(s): courses 100 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to sophomore, junior, and senior Latin American and Latino studies majors, minors, and combined majors. (General Education Code(s): E.) *R. Fregoso*

100W. Politics and Society: Concepts and Methods (7 credits). W

Focuses on social science issues through the interdisciplinary analysis of power relations. Compares diverse analytical strategies, assesses contending explanations, and builds practical research skills in the field of Latin American and Latino Studies. Topics change yearly, but can include environmental justice, access to education, political participation, gender, and migration. Prerequisite(s): courses 100, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to sophomore, junior, and senior Latin American and Latino studies majors, minors, and combined majors with global economics, sociology, literature, and politics. Students cannot receive credit for this course and course 100A. (General Education Code(s): W, E.) *F. Lu*

101. Using Media. *

Hands-on survey of print, broadcast, audiovisual, and electronic media. Students complete and present a dozen different media production assignments as part of permanent portfolio. Assignments have Latino/Latin American focus. Peer critique of media projects. Prerequisite(s): concurrent enrollment in course 101L. (General Education Code(s): E.) *The Staff*

101L. Using Media: Video Laboratory (2 credits). *

Trains students in the fundamentals of video preparation, production and post-production through Social Sciences Media Laboratory. Prerequisite(s): concurrent enrollment in course 101. *The Staff*

102. Advanced Expository Writing Workshop. F,S

For Latin American and Latino studies students who wish to gain greater awareness of rhetorical modes and the academic essay. Students write several academic essays, each with a different purpose, and master the conventions of revising and editing. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. *E. Newberry*

111. The U.S.-Mexican Border Region. *

Global and national forces have transformed the 2,000-mile United States/Mexico border region into a site for world market factories. Analyzes how this transformation has affected workers and communities and systematically reviews subjective responses. (General Education Code(s): E.) *J. Borrego, The Staff*

121. Antropología de las juventudes. F

Taught in Spanish. Overview of the social construction of youth identities represented by intertwined liminal processes linked to the history of migration and ethnicity. Explores theoretical approaches on border youth and methodological strategies. Enrollment restricted to Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): CC.) *The Staff*

122. Media and Nationalism. W

Evaluates the links between media and the production of national identities in Latin America. Focuses on theories of nationalism, media, and globalization to examine the production of national histories and representations. Enrollment restricted to juniors and seniors. Enrollment limited to 40. (General Education Code(s): E.) *C. Rivas*

126A. Global Capitalism and Community Restructuring. *

Examines how Watsonville (U.S.) and Irapuato (Mexico) are being restructured by national development, North American economic integration (NAFTA), and global capitalism. Explores the relentless penetration of market imperatives, their impact on the communities, and community response; costs/benefits of being abandoned by or being attractive to global capital; and how people are surviving—scrambling to find jobs, keeping families together, and engaging in binational strategies for survival. Prerequisite(s): permission of instructor; concurrent enrollment in laboratory course 126B. Enrollment limited to 25. (General Education Code(s): IS, E.) *J. Borrego*

126B. Voices from the Watsonville Community. *

Weekly Wednesday evening seminar in Watsonville allows students to interact with local workers, organizers, immigration and citizenship NGO's, affordable housing non-profits, entrepreneurs, large commercial developers, county planners, city managers, PVUSD educators, health activists, politicians, commercial and organic farmers, food processing owners/plant managers, and environmentalists, in order to develop a deeper understanding of the past, present, and future of the community and the region. Class will present findings and interact with panel of community members on a Saturday morning during first weekend of spring quarter. Prerequisite(s): concurrent enrollment in course 126A. Enrollment limited to 25. (General Education Code(s): IS, E.) *J. Borrego*

127. Genero, Nacion Y Modernidad En El Cine. W

Taught in Spanish. Examines the relationship between cinema, gender, the nation, and modernity. Focuses on films by key Latino and Latin American women filmmakers to examine their engagement with identity, cultural imaginaries, coloniality, sexuality, and gender. (Formerly course 194T.) Enrollment restricted to Latin American and Latino studies majors, minors and combined majors. Enrollment limited to 40. *R. Fregoso*

128. Latino Media in the U.S. S

Explores the history and practice of Latino media in the U.S. with an emphasis on work created by, for, with, and about Latino constituencies. Course highlights the role that media plays in struggles for social change, political enfranchisement, creative self-expression, and cultural development. Course content varies with instructor. Enrollment limited to 39. (General Education Code(s): IM, E.) *The Staff*

129. Women Filmmakers: Latin American and Latina. *

Focuses on the work of a dozen major Latin American and Latina filmmakers from Argentina, Brazil, Venezuela, Mexico, and the U.S., including Maria Luisa Bemberg, Maria Navaro, Matilde Landeta, Lourdes Portillo. Examines contemporary films, from 1960 to present. (General Education Code(s): IM, E.) *R. Fregoso*

131. Latino Literatures: Assimilation and Assimilability. W

Explores cultural assimilation and assimilability in the United States, especially as related to the education and languages of Latinas/os, via literary forms, such as the memoir, novel, essay, short fiction, film, and/or poetry. Enrollment limited to 40. (General Education Code(s): TA.) *C. Ramirez*

132. Citizens, Denizens, and Aliens. *

Explores the theories and practices of citizenship and the roles citizens and non-citizens play in the state, civil society, and market, with a focus on the ways historical legacies and social forces produce inclusion, exclusion, sameness, and difference. (Formerly American Studies 113C) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 40. (General Education Code(s): ER.) *C. Ramirez*

140. Rural Mexico in Crisis. *

Focuses on political, social, economic, and environmental changes in rural Mexico from the 1910 revolution through the Zapatista rebellion. Emphasizes the interaction between the state, markets, and rural civil society, covering agrarian reform, agricultural policy, grassroots development initiatives, democratization, indigenous movements, natural resource management, and migration. Prerequisite(s): Previous completion of course 80D recommended. Enrollment restricted to juniors and seniors. Sophomores may enroll with permission from instructor. (General Education Code(s): CC, E.) *J. Fox*

143. Race and Ethnicity. F

Race and ethnicity have been—and continue to be—powerful forces shaping the U.S. experience. This course examines a range of conceptual approaches and monographic studies grounded in the history of the U.S. The readings provide various criteria for studying and understanding these phenomena. The course problematizes "race" by asking what the readings tell us about "race-making" and the reproduction of racial ideologies in specific historical contexts. Similarly, "ethnicity" is treated as a historically specific social construct. (General Education Code(s): ER, E.) *G. Arredondo*

143J. Global Political Economy. *

Analyzes the global, social, economic, and political forces that shape transnational, national, and regional societal formations and consequently the entire environment for social change. Examines the evolution of revolutionary struggle and its origins within and impact upon the evolving capitalist

system. *J. Borrego, The Staff*

144. Mexicana/Chicana Histories. *

Explores current historical and theoretical writings on the lived experiences of Chicanas and Mexicana women in U.S. history. Themes include domination/resistance politics, (re)presentations, contestation, social reproduction, identity and difference. (Formerly Chicanas/Mexicanas in the U.S.) (General Education Code(s): TA, E.) *G. Arredondo*

145. Grassroots Social Change in Latin America. *

Focuses on the analysis of collective action by underrepresented groups in Latin America. Concepts and issues include political participation and impact, gender, ethnicity and race, class, the environment, religion, non-governmental organizations, and social capital. Prerequisite(s): any two Latin American and Latino studies courses or permission of instructor; open to graduate students. Enrollment limited to 40. (General Education Code(s): CC, E.) *H. Perla*

149. Theories and Actors: U.S.-Latin American Policy Formation. F

Examines how domestic political considerations and transnational forces influence the formation of U.S. foreign policy, specifically in the context of relations with Latin America. Explores the impact of institutional, electoral, and psychological pressures, public opinion, interest groups, non-state actors, and the media on decision-making regarding U.S. foreign policy toward Latin America. Enrollment limited to 40. (General Education Code(s): PE-H.) *H. Perla*

150. Afro-Latinos/as: Social, Cultural, and Political Dimensions. F

Explores multiple aspects of African-descendant lives in the Americas and the Caribbean. Students obtain an in-depth introduction to the socio-political struggles of Afro-Latinos/as and develop the analytical skills to better understand the plight of Afro-Latinos/as today. Enrollment limited to 40. (General Education Code(s): ER.) *S. Falcon*

152. Consumer Cultures Between the Americas. *

Examines the circuits of media, commodities, and migration connecting the Americas in an age of globalization. Issues of states, transnational markets, social relations, and cultural representations addressed. Relationship between consumption, nationalism, and globalization is considered critically. (Formerly Media and Commodities Between the Americas.) Enrollment limited to 40. (General Education Code(s): CC, E.) *C. Rivas*

160. North American Integration: Post-NAFTA. *

Analyzes the multi-dimensional process of integration in North America via NAFTA. Covers issues of trade and investment flows between Canada, the U.S., and Mexico, including important legislative, scientific, technological, cultural, and political components, as well as social dislocations and political challenges associated with NAFTA. (General Education Code(s): E.) *J. Fox, J. Borrego*

161P. Theater in the "Chicano Power" Movement. *

Covers the rise of Teatro Chicano as a cultural-political force within the 1960's "Chicano Power" Movement starting with founding playwright Luis Valdez and El Teatro Campesino and covering Chicana/o playwrights inspired by the movement, e.g. Cherrie Moraga, Luis Alfaro, and Josefina Lopez. (Also offered as Theater Arts 161P. Students cannot receive credit for both courses.) (General Education Code(s): A, E.) *The Staff*

163. America in Flux: Population Dynamics in the U.S. *

Examines key theories of demographics change in important policy issues, such as the aging of America, racial categorization, and immigration. Explores political and economic factors that have led to the changing face of the U.S. over the last century and key legislative changes that have changed the experience of immigrants. Students use primary demographic data from the U.S. Census Bureau and learn basic tools for demographic data access and presentation. Prerequisite(s): course 100A or by permission of instructor. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 40. (General Education Code(s): PE-H, E.) *S. Gleeson*

164. Environmental Justice. S

Introduces students to participatory-action research, which both creates positive social-environmental change and contributes to scientific knowledge. Through collaboration with environmental justice organizations, students develop research skills, hone critical reflection abilities, and understand the connections between race, ethnicity, power, poverty, and environmental problems. (Formerly *Action-Research for Social Change, Environmental Quality: Lessons Learned from Latin America, U.S.*) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 35. (General Education Code(s): PE-E, E.) *F. Lu*

165. Contemporary Peru. F

Explores contemporary issues facing Peru, with a basic overview including its complex history with political and state violence. Students learn about Peru's multicultural/racial population and about ongoing indigenous land struggles in the Northern Amazon region. Enrollment limited to 40. (General Education Code(s): CC.) *S. Falcon*

166. Latino Families in Transition. *

Explores the complex nature of Latino families in the U.S., which like other American families are undergoing profound changes. Placing families within a historical context of post-1960s social transformations, such as feminism, migration, "reconstructed" or multiple-earner households, examines how family members adapt, resist, and/or construct alternative visions and practices of family life. Prerequisite(s): course 1. Enrollment limited to 40. (General Education Code(s): ER, E.) *P. Zavella*

167. Amazonian Societies and the Environment. S

Overview of Amazonian societies and the environment from both a historical and contemporary perspective. Topics include indigenous resource management, hunting and conservation, and the ecological impacts of culture and economic change. Enrollment limited to 40. (General Education Code(s): PE-E, E.) *F. Lu*

168. Economic History of Latin America. *

Sheds light on Latin America's contemporary social and economic developments by providing an appreciation of their historical roots. Focusing on the period from independence until WWII, evaluates contesting explanations for Latin America's relatively poor economic performance and divergent policy implications. Prerequisite(s): course 1. (General Education Code(s): E.) *H. Shapiro*

169. Latin American Industrialization in a Global Perspective: Past, Present, and Future. *

Analyzes the economic, political, and social aspects of the industrialization process in Latin America. Evaluates import substitution policies, the changing roles of the state and foreign and domestic capital, and the impact of recent trade liberalization. Compares Latin America's development with that of the East Asian newly-industrialized countries (NICs) and looks at the implications of globalization. (General Education Code(s): CC, E.) *H. Shapiro*

170. Indigenous Struggles in the Americas. *

Focuses on the way Natives of First Peoples have interacted voluntarily and involuntarily with nonindigenous cultures. Examines their perspectives, thoughts, frustrations, and successes. Touches on land issues and examines the way current indigenous cultures of Latin America face and adapt to social change. Focuses mainly on the Andes, lowland Amazon, Mesoamerica, and other areas. (General Education Code(s): CC, E.) *F. Lu*

171. Talleres de Poesía. *

Taught in Spanish. Develops creative writing skills through reading, discussion, and a progression of hands-on group poetry-writing sessions. Enrollment restricted to juniors and seniors. Enrollment limited to 25. (General Education Code(s): A.) *D. Zamora-Evans*

172. Visualizing Human Rights. F

Explores how visual artists take up the subject of human rights in response to urgent challenges facing Latina/o and Latin American communities across the Americas. Examines the imprint of film and media arts reshaping human-rights discourse. Considers persistent themes in Latina/o representation, including colonialism and state terrorism; self-representation and the rights of collectives (racial, ethnic, and sexual groups); social and economic rights. *R. Fregoso*

172L. Human Rights Media Laboratory (2 credits). F

Media laboratory (4 hours per week) for students enrolled in course 172. Students are trained in the use of electronic and photographic equipment in order to collaborate to create a media project that includes an oral presentation and research paper. Prerequisite(s): concurrent enrollment in course 172. Enrollment limited to 40. *R. Fregoso*

174. Comparative Migration and Citizenship Paradigms. *

Examines U.S. migration patterns in comparison to other major destinations. Class discusses relevant socio-economic and political factors and the various citizenship paradigms present. Readings draw on disciplinary foci, including quantitative and qualitative analysis. (General Education Code(s): PE-H.) *S. Gleeson*

175. Migration, Gender, and Health. F

Through an interdisciplinary, cross-border approach, examines complex nature of Latino health in relation to migration and how women and men experience health problems differently. Examines how health problems are created by economic and social conditions, how migrants experience access to care, and how agencies can design culturally sensitive programs. (General Education Code(s): ER, E.) *P. Zavella*

176. Gender, the Nation, and Latina Cinema. *

Applies critical and cultural theories of interculturality, coloniality of power and transnational feminism to the study of Latina cinematic imaginaries in the Americas. Explores images and self-representations of race, sexuality, and the nation; citizenship, diaspora, and belonging; gender violence and state violence; militarization, human rights, and gender justice. (General Education Code(s): IM, E.) *R. Fregoso, The Staff*

178. Gender, Transnationalism, and Globalization. *

Focuses on the impact of globalization and transnationalism on gender relations in the Americas. Examines gender and power in the context of neoliberalism, modernity, the nation, social movements, and activism. Explores local and transnational constructions of gender, and the intersection of gender with race, ethnicity, class, and sexuality. Enrollment limited to 40. (General Education Code(s): ER, E.) *R. Fregoso, The Staff*

180. Borders: Real and Imagined. *

Situates "The Border" historically and within the context of U.S. imperialism. Examines the formalization of political "borders," methods of enforcement, and intra-group conflicts. Examines the varied experiences of colonialism and immigration between Mexicans, Puerto Ricans, Native Americans, and Cubans. Explores how the tools of "The Border" and "Borderlands" are being used to untangle the roles of race prejudice and sexual and gender discrimination. (General Education

Code(s): TA, E.) *G. Arredondo*

190. Internship. F,W,S

Internships with campus or community organizations sponsored and evaluated by a Latin American and Latino studies faculty member. Students write an analytical paper or produce another major work agreed upon by student, faculty supervisor, and internship sponsor; sponsor must also provide review of experience. Students submit petition to sponsoring agency. *The Staff*

190F. Internship (2 credits). F,W,S

Internships with campus or community organizations sponsored and evaluated by a faculty member from Latin American and Latino studies. Students write a short (8-page) descriptive paper or produce another work agreed upon by student and faculty supervisor. Students submit petition to sponsoring agency. *The Staff*

191. Latin American Studies Teaching Apprenticeship. F,W,S

Advanced students serve as facilitators for small discussion groups or aid in reading of papers related to Latin American Studies courses. Students are expected to read all course assignments and meet with instructors to discuss the teaching process. May not be counted toward major requirements. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching under faculty supervision of a lower-division course in Latin American and Latino studies, normally done by majors in the final quarter of study as the senior project. (See course 42.) Students submit petition to sponsoring agency. *The Staff*

193. Field Study. F,W,S

Supervised off-campus study in local Spanish-speaking community. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Latino Civic Engagement in Comparative Perspective. *

Explores the role of Latinos in civic and political life in the U.S., focusing on specific avenues for participation such as religion, work, and transnational experiences. Examines barriers to participation experienced by Latinos in the U.S. as well as relationships between civic engagement and political incorporation and the ramifications for inequality for Latinos and other ethnic/racial groups in cities across America. Enrollment restricted to junior and senior Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): PE-H, E.) *S. Gleeson*

194G. Chile: Social and Political Change. *

Analysis of Chilean politics and society from the election of Salvador Allende in 1970 to the present. Particular emphasis is given to understanding the different forces, internal as well as external, that broke the Chilean tradition of democratic rule in 1973, and to the current configuration. Enrollment restricted to junior and senior Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): CC, E.) *W. Goldfrank*

194H. Central American Political Relations with the U.S. W

Writing-intensive senior seminar on U.S.-Central American relations. Students gain understanding of Central American political history; the region's relations with the United States; and the problems arising from this relationship. Completion of course 145 or 149 is highly recommended. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): W, E.) *H. Perla*

194I. Contemporary Ecuador. *

The Andean nation of Ecuador exemplifies cultural and biological diversity, rapid economic and social change, and increasing geopolitical influence as one of the current South American left-leaning countries. Course looks at Ecuador's recent history and future challenges. Enrollment restricted to junior and senior Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): CC.) *F. Lu*

194M. Twentieth-Century Revolutions. *

Treatment of 20th-century Latin American revolutions from Zapata to the Zapatistas. Focuses on the causes and consequences of revolutions rather than on their narrative histories. Enrollment restricted to junior and senior Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): CC, E.) *G. Arredondo, W. Goldfrank*

194P. Tale of Two Cities. F

A comparative study of the social, economic, cultural, political, and geographical development of Los Angeles and Mexico City in the 20th century. Emphasis on the diverse peoples, changing physical environment and various images/interpretations of these two world cities. (Also offered as History 190D. Students cannot receive credit for both courses.) Prerequisite(s): two upper-division history courses and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior Latin American and Latino studies and history majors. Enrollment limited to 20. (General Education Code(s): W, E.) *P. Castillo, L. Haas*

194Q. Globalization in the Américas. W

Introduces multiple dimension of globalization, including key theories, and globalization's wide-ranging impact on the Américas. Topics such as, development, inequalities, culture, postcolonialism, trade agreements, multilateral institutions, and the future of globalization are covered. Enrollment

restricted to junior, and senior Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): CC.) *S. Falcon*

194R. Violencia Cotidiana en las Americas. F

Senior seminar taught in Spanish. Engages a critical study of violence, social relations, and everyday life in contemporary Latin America. Focuses on the relationship between narratives and acts of violence, and the constitution and social effects of these representations. Requires proficiency in Spanish (written and spoken), and advanced reading knowledge of Spanish. Enrollment restricted to junior and senior Latin American and Latino studies majors, minors, and combined majors. Enrollment limited to 25. (General Education Code(s): E.) *C. Rivas*

194S. La Crisis del Campo Mexicano. S

Taught in Spanish. Analyzes both the causes and possible solutions to the challenges of rural poverty and democratization. Focuses on agrarian reform; agricultural development; protest movements; electoral change; local government; grassroots development initiatives; natural resources; the social construction of ethnicity, gender, and class; and the dynamics of migration. Mexico's regional diversity is highlighted as well, and students are encouraged to study a particular region in depth to accompany the course's national overview. (Formerly El Campo Mexicano en Crisis.) Enrollment restricted to junior, and senior Latin American and Latino studies majors, minors, and combined majors with global economics, sociology, literature, and politics. Enrollment limited to 25. *J. Fox*

195B. Senior Project. F,W,S

Senior thesis writing under direction of major adviser. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195C. Senior Project. F,W,S

Senior thesis writing under direction of major adviser. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

196. Field Study Seminar. *

Emphasizes ethnographic strategies of fieldwork. Primarily oriented to students interested in understanding the daily life of societies and cultures. Prepares students both to conduct fieldwork, and to process their fieldwork experience. Covers complexities related to the experience of "stepping out of" one's own culture. Prerequisite(s): concurrent enrollment in course 196L. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 25. *J. Borrego*

196L. Field Study Seminar Lab (2 credits). *

Media lab trains students in the use of electronic and photographic media for the acquisition of field data. Through lectures, demonstrations, hands-on field exercises and review of students' media exercises, students will learn the fundamentals of photography, video production, and audio recording in the field. Prerequisite(s): concurrent enrollment in course 196. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 25. *J. Borrego*

198. Field Study. F,W,S

Off-campus study in Latin America, the Caribbean, or nonlocal Spanish-speaking community in the U.S. Nature of proposed study/project to be discussed with sponsoring instructor(s) before undertaking field study; credit toward major (maximum of three courses per quarter) conferred upon completion of all stipulated requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Individual studies undertaken off-campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Supervised directed reading; weekly or biweekly meetings with instructor. Final paper or examination required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Supervised research and writing of an expanded paper, completed in conjunction with requisite writing for an upper-division course taken for credit in the major. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Bridging Latin American and Latina/o Studies. *

Explores social, cultural, economic, and political changes that connect Latin America and U.S. Latina/o communities. The objective of this interdisciplinary team-taught course is to bridge previously distinct research approaches of Latin American and Latina/o studies to better understand processes that link peoples and ideas across borders as well as help students to conceptually and methodologically identify and design new objects of study and revisit traditional approaches. Core requirement for students pursuing the Parenthetical Notation in Latin American and Latino studies. Enrollment restricted to graduate students. *G. Arredondo*

210. Latina Feminisms: Theory and Practice. *

Through an interdisciplinary approach, explores Latina feminist social theory and scholarly practice

—especially in representation and interpretation of Latina experiences. Examining key texts at different historical junctures, charts how Latinas of varied ethnic, class, sexual, or racialized social locations have constructed oppositional and/or relational theories and alternative epistemologies or political scholarly interventions and, in the process, have problematized borders, identities, cultural expressions, and coalitions. Enrollment restricted to graduate students. *P. Zavella*

212. Latina/o Ethnographic Practice. *

Interrogates the social construction of Latino cultures in their varied regional, national-ethnic, and gendered contexts. Assumes that culture is a dynamic process constructed within a context of hierarchical relations of group power, in which Latino groups have been structurally subordinated and socially oppressed. Focuses more on how power relations create a context for the creation of specific Latino cultural expressions and processes than on unraveling the structures of oppression. Enrollment restricted to graduate students. *P. Zavella*

215. Latina/o Cultural Studies: Culture, Power, and Coloniality. F

Examines the theories and practices informing the field of Latina/o cultural studies in the Americas. For students pursuing the Designated Emphasis in Latin American and Latino studies and students with interest in theories of coloniality of power, decolonialism, intercultural and transnational feminist methodologies. (Formerly Latina Cultural Studies: Transborder Feminist Imaginaries.) Enrollment restricted to graduate students. *R. Fregoso*

220. Transnational Civil Society: Limits and Possibilities. W

Analyzes social, civic, and political actors that come together across borders to constitute transnational civil society, drawing from political sociology, political economy, comparative politics, and anthropology to address collective identity formation, collective action, institutional impacts, and political cultures. Enrollment restricted to graduate students. *J. Fox*

225. Race in the Americas. S

Considers historical moments in the development of "race" in the Americas to understand how "race" is given meaning and actualized through practices, beliefs, and behaviors. Interrogates theories and racial dynamics in the 19th through 21st centuries to reveal interconnections with constructions of gender and nation. Enrollment restricted to graduate students. Enrollment limited to 15. *G. Arredondo*

230. Political Ecology in Latin America. *

Examines the foundations and current literature on political ecology, with emphasis on issues in Latin America. Topics include the appropriation of "Nature;" degradation and deforestation; conservation policies and politics; land distribution and property; and indigenous resistance. Enrollment restricted to graduate students. *F. Lu*

240. Culture and Politics of Human Rights. *

Examines cultural, philosophical, and political foundations for human rights and provides students with critical grounding in the major theoretical debates over conceptualizations of human rights in the Americas. Addresses the role of feminist activism and jurisprudence in the expansion of human rights since the Universal Declaration of Human Rights. Addresses challenges of accommodating gender rights, collective rights, and social and economic rights within international human rights framework. (Also offered as Feminist Studies 240. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *R. Fregoso*

242. Globalization, Transnationalism, and Gender in the Américas. *

Explores how globalization, transnationalism, and the social construction of gender are interrelated, contingent, and subject to human agency and resistance. Examines particular configurations of globalization, transnationalism, and gender through the Américas and their implications for race, space, work, social movements, migration, and construction of collective memory. Enrollment restricted to graduate students. *P. Zavella, R. Fregoso*

244. U.S. Political Relations with Latin America. *

Examines relations between the U.S. and Latin America. Emphasizes the domestic and global contexts within which U.S. leaders defined national economic, strategic, and ideological interests, and their regional policy objectives. Explores the impact of Latin Americans' nationalistic, anti-imperialist, class, racial, and gender struggles that often shaped policy outcomes in ways unanticipated by the U.S. Enrollment restricted to graduate students. *H. Perla*

297. Independent Study. F,W,S

Students submit a reading course proposal to a department faculty member who supervises independent study in the field. Faculty and student jointly agree upon reading list. Students expected to meet regularly with faculty to discuss readings. This independent study must focus on a subject not covered by current UCSC graduate curriculum. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Enrollment restricted to graduate students and permission of instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Legal Studies

27 Merrill College
(831) 459-2056
legalstudies@ucsc.edu

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Legal studies is an interdisciplinary major offered under the auspices of the Politics Department. It is designed for students who wish to use the methods and perspectives of various academic disciplines to study legal issues and to use the conceptual framework of the law to illuminate empirical and theoretical concerns in the various disciplines. For example, a student might use approaches from psychology and philosophy to study the legal problem of punishment; or draw on doctrinal categories from public and private law to study the changing historical role of market and nonmarket relations within ongoing institutions; or use approaches from critical race theory and feminist studies to better understand matters of civil rights and privacy.

To complete the major, students are required to take courses in legal institutions, constitutional law, and international law, as well as take courses in each of three broad themes: legal theory and philosophy, the role of law in society, and legal institutions. Each of these themes is intentionally broadly defined. Within legal theory, students may take courses in legal jurisprudence, logic, and theories of crime and punishment; within law and society, courses range from feminism and race to psychology and economics; within public law and institutions, courses range from environmental law to human rights law to an introduction to litigation. Students are also expected to take an introductory course in philosophy. To fulfill the senior exit requirement, students have the option to write a senior thesis or take a senior capstone seminar. The seminar topic changes quarterly.

Legal studies is intended to appeal to students who wish to take a concentration of courses on the law from a variety of disciplinary and methodological perspectives. The major is not intended as a substitute or preparation for any part of a law school curriculum but rather as a full field of study within the liberal arts curriculum. As such, it is a good preparation for a variety of future activities. Students graduating in legal studies are particularly well qualified to pursue graduate work on legal topics in humanities and social science disciplines or to attend professional school in fields such as public policy, business administration, social work, and law. Students are also encouraged to participate in field work and law-related internships in the community, and to develop their own extensive independent research projects.

Declaring the major in legal studies is a two-step process: 1) complete and pass course 10 with a grade of C or better; 2) attend a declaration orientation workshop.

The legal studies program offers a minor degree as well as the major degree.

Requirements for the Major

Lower-Division Course Requirements—2 courses

Legal Studies 10, *Introduction to Legal Process*. All students are required to complete and pass legal studies 10 as a prerequisite to upper-division courses in legal studies and prior to declaring the major.

A student who has not been able to satisfy the pre-declaration requirement (a passing grade in Legal Studies 10) may petition the department for an exception. The letter of petition must explain and document the circumstances that might justify an exception. The department will consider the request and notify the student of its decision within two weeks of receiving the petition or within 10 days of the start of the following quarter, whichever is later.

Philosophy 9, 22, or 24. All legal studies majors are required to take one of the three listed

Philosophy courses. (See the Philosophy section in this catalog for course descriptions.)

Upper-Division Course Requirements—2 courses

111A *Constitutional Law* or

111B *Civil Liberties*

173 *International Law*

Core Course Requirements—6 courses

Students are required to take six core courses, two in each of three concentrations: theory, public law and institutions, and law and society.

Theory

103 *Feminist Interventions (Politics course)*

105A *Ancient Political Thought*

105B *Early Modern Political Thought*

105C *Modern Political Thought*

105D *Late 20th-Century Political Thought*

106 *Marxism as a Method*

107 *Political Morality of Survivorship and Recovery*

109 *Legal Theory*

109 *Orientalism (Politics course)*

115 *Law and the Holocaust*

128J *The World Jury on Trial*

144 *Social and Political Philosophy*

146 *Philosophy of Law*

155 *Topics in American Legal History*

157 *Political Jurisprudence*

Public Law and Institutions

111A *Constitutional Law*

111B *Civil Liberties*

111C *Issues in Constitutional Law*

115 *Law and the Holocaust*

116 *Comparative Law*

120A *Congress, President, and the Court in American Politics*

120C *State and Capitalism in American Political Development*

125 *History of U.S. Penal Law*

128 *Poverty and Public Policy*

128M *International Law and Global Justice*

131 *Wildlife, Wilderness, and the Law*

132 *California Water Law and Policy*

133 *Law of Democracy*

135 *Native Peoples Law*

136 *Federal Indian Law and Tribal Sovereignty*

137 *International Environmental Law and Policy*

139 *War Crimes*

149 *Environmental Law and Policy*

152 *Courts and Litigation*

155 *Topics in American Legal History*

156 *Administrative Jurisprudence*

159 *Property and the Law*

171 *Law of War*

175 *Human Rights*

Law and Society

107 *Political Morality of Survivorship and Recovery*

110 *Law and Social Issues*

111B *Civil Liberties*

112 *Women and the Law (Politics)*

113 *Gay Rights and the Law*

114 *Jews, Anti-Semitism, and the American Legal System*

120B *Society and Democracy in American Political Development*

120C *State and Capitalism in American Political Development*

121 *Black Politics and Federal Social Policy*

122 *The Sociology of Law*

123 *Law, Crime, and Social Justice*

126 *Law and Politics in Contemporary Japan and East Asian Societies*

128I *Race and Criminal Justice*

127 *Drugs and Society*

135 *Native Peoples Law*

138 *Political Anthropology*

142 *Anthropology of Law*

147A *Psychology and Law*

147B *Psychology and Law*

150 *Children and the Law*

151 *Politics of Law*

154 *The Legal Profession*

155 *Topics in American Legal History*

160A *Industrial Organization*

162 *Legal Environment of Business*

169 *Economic Analysis of the Law*

180 *Power, Politics, and Protest*

183 *Women in the Economy*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in legal studies is satisfied by completing Legal Studies 196.

Comprehensive Requirement—1 course

Students can satisfy the comprehensive requirement in the legal studies major by successfully completing one of the following:

195ABC, *Senior Thesis*. Completion of a senior thesis project of a minimum of 50 pages with a substantial research content, supervised by a legal studies faculty member.

196, *Senior Capstone*. The capstone course is designed to provide an interdisciplinary integration of themes related to the study of law and includes a substantial writing requirement.

Honors

Honors in the legal studies major are awarded to graduating seniors, based primarily on a review of grades and to a lesser extent narrative evaluations, whose academic performance is judged to be consistently excellent by a faculty committee. Highest honors in the major are reserved for

students with consistently outstanding academic performance.

Transfer Students

A student transferring to UCSC must meet with the legal studies undergraduate adviser as early as possible to discuss declaring the major and course enrollment. This ensures a smooth transition. Students should bring a copy of their UCSC Transfer Credit Summary, which may be printed from the student portal.

Requirements for the Minor

To complete a minor in legal studies, a student must take Legal Studies 10 and any five upper-division legal studies core courses.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**10. Introduction to Legal Process. F**

Introduction to U.S. and comparative legal institutions and practices. Examines diverse areas of law from torts to civil rights to international human rights. Why is America portrayed as having an activist legal culture; why is law used to decide so many questions from presidential elections to auto accidents; can law resolve disputes that, historically, have led to war and violence; is the legal system fair and/or effective, and, if so, for whom and under what conditions? (General Education Code(s): IS.) *The Staff*

Upper-Division Courses**105A. Ancient Political Thought. S**

Ancient political ideas in context of tension between democracy and empire, emergence of the psyche, and shift from oral to written culture. Emphasis on Athens, with Hebrew, Roman, and Christian departures and interventions. Includes Sophocles, Thucydides, Socrates, Plato, Aristotle, Stoics, the Bible, and Augustine. (Also offered as Politics 105A. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority period. *D. Mathiowetz*

105B. Early Modern Political Thought. W

Studies republican and liberal traditions of political thought and politics. Authors studied include Hobbes, Locke, and Rousseau. Examination of issues such as authorship, individuality, gender, state, and cultural difference. (Also offered as Politics 105B. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority period. *V. Seth*

105C. Modern Political Thought. F

Studies in 19th- and early 20th-century theory, centering on the themes of capitalism, labor, alienation, culture, freedom, and morality. Authors studied include J. S. Mill, Marx, Nietzsche, Foucault, Hegel, Fanon, and Weber. (Also offered as Politics 105C. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. *M. Thomas*

105D. Late 20th Century Political Thought. *

The politics of identity and recognition as the basis for institutional legitimacy and social struggles in the late 20th century. Conflicting views of Hegel's master-slave dialectic are used to relate, e.g., Sartre, Fanon, Bataille, Merleau-Ponty, Foucault, Lacan, Levinas, Derrida, Deleuze, Zizek, and Badiou to present-day concerns. (Also offered as Politics 105D. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority period. *R. Meister*

106. Marxism as a Method. W

Examines Marx's use of his sources in political philosophy and political economy to develop a method for analyzing the variable ways in which social change is experienced as a basis for social action. Provides a similar analysis of contemporary materials. Contrasts and compares Marxian critiques of these materials and readings based on Nietzsche, psychoanalysis, cultural studies, and rational choice materialism. (Also offered as Politics 106. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

107. After Evil: Political Morality of Survivorship and Recovery. *

What are the continuing relationships between victims, perpetrators, and beneficiaries of a past that is recognized as evil? Focus on contrast between the competing moral logics of struggle and reconciliation, and various rationales for allowing beneficiaries to keep their gains in order to bring closure to the past. Theoretical perspectives drawn from law, philosophy, theology, and psychoanalysis. (Also offered as Politics 107. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment only. *R. Meister*

109. Legal Theory. *

Offers systematic exploration of alternative conceptions of the nature of law, including positivism, natural law, formalism, realism, pragmatism, and theories of justice. Additional focus on the nature of law; relation of law and morality, rights and other legal concepts; and philosophical debates such as critical legal studies and critical race theory. Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

110. Law and Social Issues. *

Examines current problems in law as it intersects with politics and society. Readings are drawn from legal and political philosophy, social science, and judicial opinions. (Also offered as Politics 110. Students cannot receive credit for both courses.) Enrollment restricted to politics, legal studies, and Latin American and Latino studies/politics combined majors during priority enrollment only. *The Staff*

111A. Constitutional Law. S

An introduction to constitutional law, emphasizing equal protection and fundamental rights as defined by common law decisions interpreting the 14th Amendment, and also exploring issues of federalism and separation of powers. Readings are primarily court decisions; special attention given to teaching how to interpret, understand, and write about common law. (Formerly *Problems in Constitutional Law*.) (Also offered as Politics 111A. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

111B. Civil Liberties. *

Explores the status of American civil liberties as provided by the Bill of Rights. Particular attention will be given to issues of concern relating to the aftermath of 9/11, including issues relating to detainees, freedom of information requests, wiretapping authority, watch lists, profiling, and creation of a domestic intelligence agency. Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

111C. Issues in Constitutional Law. W

Examines variety of topics in constitutional law that are not covered in courses 111A and 111B. Focuses primarily on Supreme Court decisions and common-law debates. Enrollment restricted to legal studies majors during priority enrollment. *R. Coonerty*

113. Gay Rights and the Law. *

Examines relevant court cases as well as local, state, and federal laws that define boundaries for legal recognition of sexual orientation and personal sexuality. Explores legal assumptions behind current and historical cases defining personal sexuality and sexual orientation and considers the social and political impetus in each era that drove the courts and legislatures to make such decisions. *The Staff*

114. Jews, Anti-Semitism, and the American Legal System. *

Explores how Jews have influenced and been impacted by the American legal system. Students explore significant cases, debates, and trends in the law as it relates to Jewish identity, religious freedom, and conceptions of justice. Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

115. Law and the Holocaust. *

Examines the Nazi philosophy of law, and how it was used to pervert Germany's legal system in order to discriminate against, ostracize, dehumanize, and ultimately eliminate certain classes of human beings, and the role of international law in rectifying the damage. Enrollment restricted to legal studies majors during priority enrollment only. Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

116. Comparative Law. *

Explores legal systems and legal rules around the world, for a better understanding of the factors that have shaped both legal growth and legal change. Particular attention given to differences between common and civil law systems, changes brought about by the European Union, and expansion of legal norms around the globe. (Also offered as Politics 116. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

118. Law and Literature. *

Explores variety of texts including novels, short stories, and essays as a source for reflection about the nature of law and legal practice. Readings include such writers as Herman Melville, Harper Lee, Richard Wright, Arthur Miller, Nadine Gordimer, and James Alan McPherson, among others. (Formerly course 138.) Enrollment restricted to legal studies majors during priority period. *The Staff*

120A. Congress, President, and the Court in American Politics. F

Study of political development, behavior, performance, and significance of central governmental institutions of the U.S. Emphasizes the historical development of each branch and their relationship to each other, including changes in relative power and constitutional responsibilities. (Also offered as Politics 120A. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Satisfies American History and Institutions Requirement. *D. Wirls*

120B. Society and Democracy in American Political Development. W

Examines role of social forces (e.g., race, class, and gender) in development of the American democratic processes and in the changing relationship between citizen and state. Course materials address ideas, social tensions, and economic pressures bearing on social movements, interest groups, and political parties. (Also offered as Politics 120B. Students cannot receive credit for both courses.) Enrollment restricted to sophomore, junior, and senior legal studies majors during priority period. Satisfies American History and Institutions Requirement. *The Staff*

120C. State and Capitalism in American Political Development. S

Examines the relationship between state and economy in the U.S. from the 1880s to the present, and provides a theoretical and historical introduction to the study of politics and markets. Focus is on moments of crisis and choice in U.S. political economy, with an emphasis on the rise of regulation, the development of the welfare state, and changes in employment policies. (Also offered as Politics 120C. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority period. Satisfies American History and Institutions Requirement. *E. Bertram*

121. Black Politics and Federal Social Policy. F

Examination of changes in the political and economic status of African Americans in the 20th century; particular focus on the role of national policies since 1933 and the significance of racism in 20th-century U.S. political development. (Also offered as Politics 121. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment. (General Education Code(s): E.) *M. Brown*

122. The Sociology of Law. W

Explores the social forces that shape legal outcomes and the ways law, in turn, influences social life. Traces the history and political economy of American law; the relation between law and social change; how this relation is shaped by capitalism and democracy; and how class, race, and gender are expressed in welfare and regulatory law. (Also offered as Sociology 122. Students cannot receive credit for both courses.) *C. Reinerman*

123. Law, Crime, and Social Justice. *

Blends the latest research in criminology with that from social stratification, inequality, and social welfare policy with the objective of exploring the relationship between levels of general social justice and specific patterns of crime and punishment. The focus is primarily on the U.S. although many other industrialized democracies are compared. An introductory course in sociology is recommended as preparation. (Also offered as Sociology 123. Students cannot receive credit for both courses.) *The Staff*

125. History of the U.S. Penal Culture. *

Explores the history and theory of U.S. state punishment from its 17th-century beginnings to the present and notes evolving models of criminal deviance, focusing on how punishment systems legitimate particular models of criminal deviance, crime, and its "correction." Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

126. Law and Politics in Contemporary Japan and East Asian Societies. W

Introduction to contemporary analysis of Japan's race relations, ethnic conflicts, and a government's failure to restore remedial justice for war victims in Japan, Asia, and the U.S. Specific issues include comfort women, national or state narratives on Hiroshima, forced labor during World War II, and Haydon legislation that allows war victims to sue Japanese government and corporations in California. (Also offered as Sociology 128. Students cannot receive credit for both courses.) Enrollment limited to 30. *H. Fukurai*

127. Drugs in Society. S

Explores the history of the use and abuse of consciousness-altering substances like alcohol and other drugs. Social-psychological theories of addiction are reviewed in tandem with political-economic analyses to identify the social conditions under which the cultural practices involved in drug use come to be defined as public problems. An introductory sociology course is recommended prior to taking this course. (Also offered as Sociology 127. Students cannot receive credit for both courses.) *C. Reinerman*

128. Poverty and Public Policy. F

Studies the causes, consequences, and governmental response to urban poverty in the U.S. Topics include how public policy, the macroeconomy, race, gender, discrimination, marriage, fertility, child support, and crime affect and are affected by urban poverty. Emphasizes class discussion and research. (Also offered as Economics 128. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; ECON 100A & 113 or consent of instructor. Enrollment restricted to economics, business management economics, global economics, legal studies, or economics combined major Enrollment limited to 35. (General Education Code(s): W, E.) *L. Kletzer, R. Fairlie*

128I. Race and Justice. F

An introduction to comparative and historical analyses of the relations between race and criminal justice in the U.S. Emphasis on examinations of structural mechanisms that help maintain and perpetuate racial inequality in law, criminal justice, and jury trials. (Formerly *Race and Criminal Justice*) (Also offered as Sociology 128I. Students cannot receive credit for both courses.) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 120. *H. Fukurai*

128J. The World Jury on Trial. *

Adoption of the jury and its varied forms in different nations provides ideal opportunities to examine differences between systems of popular legal participation. Course considers reasons why the right to jury trial is currently established in Japan or Asian societies, but abandoned or severely curtailed in others. American jury contrasted with other forms of lay participation in the legal process. (Also offered as Sociology 128J. Students cannot receive credit for both courses.) Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 30. *The Staff*

128M. International Law and Global Justice. S

Examines war crimes, crimes against humanity, and the evolution and role of the International Criminal Court (ICC). Examines the evolution of the concept of international law, the rationale for its birth and existence, roots of international conflicts and genocides, possible remedies available to victims, mechanisms for the creation and enforcement of international legal order, as well as the role of colonialism, migration, poverty, race/ethnic conflicts, gender, and international corporations in creating and maintaining conflicts and wars. (Also offered as Sociology 128M. Students cannot receive credit for both courses.) Enrollment restricted to juniors and seniors. Enrollment limited to 30. *H. Fukurai*

130. Race and the Law. *

Explores the complex relationship between race and the law in American society. Included subjects are critical race theory, civil rights and voting rights law, issues of the criminal justice system, intersections with issues of class and gender, and the social construction of race through law and legal decisions. Enrollment restricted to legal studies majors during priority enrollment. *The Staff*

131. Wildlife, Wilderness, and the Law. *

Introduction to wildlife, wilderness, and natural resources law, policy, and management. Examines rules governing resource allocation and use including discussion of fundamental legal concepts. Explores laws and management policies affecting wildlife and wilderness, including their origins and impacts. Examines how conflicts over natural resources are being negotiated today. Enrollment restricted to sophomore, junior, and senior legal studies majors during the priority period. *R. Langridge*

132. California Water Law and Policy. F

Explores the rich history and fundamental legal concepts surrounding water in California. Students identify, evaluate, and debate some critical water policy questions faced by Californians today and in the future. (Also offered as Politics 132. Students cannot receive credit for both courses.) *R. Langridge*

133. Law of Democracy. S

Explores the role of law in both enabling and constraining the actions of elected politicians in the U.S. Among issues examined are voting rights, redistricting, and campaign finance. Course asks how the law shapes and limits our ability to choose our elected leaders, and in turn, how the law is shaped by political forces. (Also offered as Politics 133. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment. *R. Coonerty*

135. Native Peoples Law. *

Explores the legal relationship between native peoples and the state. Examines the development of that relationship and several of the key legal issues currently confronting native peoples as they attempt to redress the injustices of the past. Enrollment restricted to legal studies majors during priority enrollment only. (General Education Code(s): E.) *The Staff*

136. Federal Indian Law and International Comparative Indigenous Peoples' Law. *

Indian law refers to the body of law dealing with the status of Indian tribes, their inherent powers of self-government, their special relationship to the federal government, and the actual or potential conflicts of governmental power. Primary objective will be to address tribal reassertion of aboriginal sovereignty over culture and land in the context of increasing world recognition of indigenous rights. Enrollment restricted to legal studies majors during priority period. (General Education Code(s): E.) *The Staff*

137. International Environmental Law and Policy. *

International environmental law (IEL) endeavors to control pollution and depletion of natural resources within a framework of sustainable development and is formally a branch of public international law—a body of law created by nation states for nation states, to govern problems between nation states. Examines landmark developments of IEL since 1972 within a historical continuum to better understand their strengths and weaknesses. Enrollment restricted to legal studies majors during priority period. *The Staff*

138. Political Anthropology. *

The ideas, in selected non-Western societies, about the nature of power, order, social cohesion, and the political organization of these societies. (Also offered as Anthropology 138. Students cannot receive credit for both courses.) Offered in alternate academic years. *T. Pandey*

139. War Crimes. *

Explores complex international human rights/humanitarian law issues surrounding genocide and other mass violence, beginning with the Nuremberg trials following World War II up to recent atrocities in Rwanda, Bosnia, and elsewhere. Covers basic legal framework of human rights law, examines specific situations on a case by case basis, and discusses what options the international community, the nations themselves, and individuals have in the wake of such catastrophes. Enrollment restricted to legal studies majors during priority period. *The Staff*

142. Anthropology of Law. F

An ethnographically informed consideration of law, dispute management, and social control in a range of societies including the contemporary U.S. Topics include conflict management processes, theories of justice, legal discourse, and relations among local, national, and transnational legal systems. (Also offered as Anthropology 142. Students cannot receive credit for both courses.) Enrollment restricted to anthropology and legal studies majors. *D. Brenneis*

144. Social and Political Philosophy. *

A study of selected classical and contemporary writings dealing with topics such as the nature and legitimacy of the liberal state, the limits of political obligation, and theories of distributive justice and rights. (Also offered as Philosophy 144. Students cannot receive credit for both courses.)
Prerequisite(s): one course in philosophy. Offered in alternate academic years. *D. Guevara*

146. Philosophy of Law. *

Exploration of selected problems in jurisprudence: "legal reasoning" and social policy, rules and individual cases, the mental element in the law, punishment and responsibility, causation and fault, liberty and paternalism, etc. (Also offered as Philosophy 146. Students cannot receive credit for both courses.) *J. Neu*

147A. Psychology and Law. W

Current and future relationships between law and psychology, paying special attention to gaps between legal fictions and psychological realities in the legal system. Topics include an introduction to social science and law, the nature of legal and criminal responsibility, the relationship between the social and legal concepts of discrimination, and the nature of legal punishment. (Also offered as Psychology 147A. Students cannot receive credit for both courses.) Psychology 3 or 100 and 40 are recommended prior to taking this course. Enrollment restricted to psychology, pre-psychology, and legal studies majors. *C. Haney*

147B. Psychology and Law. S

Continuing discussion of current and future relationships between law and psychology and to contrasting psychological realities with legal fictions. Special attention is given to the criminal justice system including crime causation, the psychology of policing and interrogation, plea bargaining, jury selection and decision making, eyewitness identification, and the psychology of imprisonment. (Also offered as Psychology 147B. Students cannot receive credit for both courses.)
Prerequisite(s): course 147A. *C. Haney*

149. Environmental Law and Policy. S

Surveys a wide range of topics in environmental law, including population control, state and federal jurisdiction, land and resources control, public land management, pollution control, and private rights and remedies. Students read a large number of judicial cases and other legal documents. (Also offered as Environmental Studies 149. Students cannot receive credit for both courses.)
Enrollment restricted to junior and senior legal studies majors. *T. Duane*

150. Children and the Law. *

Explores the legal rights of children. Topics may include juvenile justice, gang offenses, free speech and Internet censorship, religious rights, child custody and support, adoption, foster care, abuse and sexual harassment, special needs, public benefits, and medical care. Enrollment restricted to legal studies majors during priority period. *The Staff*

151. Politics of Law. F

Uncovers the important debates in politics and law around the functions of courts, litigation, and rights--and the political nature of law itself. Course is interdisciplinary, and draws from literature in political science, law, and sociology. (Also offered as Politics 151. Students cannot receive credit for both courses.) Enrollment restricted to politics, legal studies, and Latin American and Latino studies/politics combined majors during priority period. *The Staff*

152. Courts and Litigation. *

A study of the role of courts in society and the uses of litigation to address and deflect social problems. Focus is on recent developments in American litigation, but comparative materials may be considered. Enrollment restricted to legal studies majors during priority period. *The Staff*

154. The Legal Profession. *

Lawyers stand between the legal system and those who are affected by it. Examines this relationship descriptively and normatively, and from the point of view of sociological theory. Concentrates on the U.S. profession, with some comparative material. Enrollment restricted to legal studies majors during priority period. *The Staff*

156. Administrative Jurisprudence. *

The rise of the regulatory state brings with it a host of questions regarding the exercise of state power and separation of powers. Takes up some of these questions; in particular, questions about administrative agencies and their relationship to the judiciary, the legislature and private individuals and groups. Enrollment restricted to legal studies majors during priority period. *The Staff*

157. Political Jurisprudence. *

Explores some themes in legal and political theory, especially on the relationship of theories of justice, law, and ethics. Enrollment restricted to legal studies majors during priority period. *The Staff*

159. Property and the Law. W

Beginning with an examination of the concept of property, the class covers how different cultures characterize property and determine "ownership" and the laws and policies that define property in modern society. Topics include theories of property law, common property, property and natural resources, zoning, regulatory takings, and property on the Internet. Enrollment restricted to legal studies majors during priority period. *R. Langridge*

160A. Industrial Organization. S

The structure and conduct of American industry with strong emphasis on the role of government, regulation, anti-trust, etc. The evolution of present-day industrial structure. The problems of overall concentration of industry and of monopoly power of firms. Pricing, output decisions, profits, and waste. Approaches include case study, theory, and statistics. (Also offered as Economics 160A. Students cannot receive credit for both courses.) Prerequisite(s): Economics 100A or 100M. *The Staff*

160B. International Law. W

Origins and development of international law: international law is examined both as a reflection of the present world order and as a basis for transformation. Topics include jurisdiction and sovereignty, treaties, the use of force, and human rights. (Formerly course 173.) (Also offered as Politics 160B. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment. *The Staff*

169. Economic Analysis of the Law. W

The application of the theories and methods of neoclassical economics to the central institutions of the legal system, including the common law doctrines of negligence, contract, and property; bankruptcy and corporate law; and civil, criminal, and administrative procedure. (Also offered as Economics 169. Students cannot receive credit for both courses.) Prerequisite(s): Economics 100A or 100M or permission of instructor. *D. Wittman*

171. Law of War. *

Examines legal regulation of international violent conflict. Students examine development of normative standards within international law and creation of institutions to both adjudicate violations and regulate conduct. (Also offered as Politics 171. Students cannot receive credit for both courses.) Enrollment restricted to legal studies majors during priority enrollment only. *The Staff*

175. Human Rights. *

Embraces an interdisciplinary approach to the study of human rights. Captures the malleable nature of human rights and the contours of its dual role as both law and discourse. (Also offered as Politics 175. Students cannot receive credit for both courses.) Prerequisite(s): course 173 or Politics 173. Enrollment restricted to legal studies majors during priority enrollment. *M. Massoud*

183. Women in the Economy. *

Study of gender roles in economic life, past and present. Topics include occupational structure, human capital acquisition, income distribution, poverty, and wage differentials. The role of government in addressing economic gender differentials is examined. (Also offered as Economics 183. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; Economics 1, 2, and 100A; Economics 113 strongly recommended. (General Education Code(s): W.) *L. Kletzer*

193. Field Study. F,W,S

Field research performed off-campus, under the supervision of a member of the legal studies faculty. May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195A. Senior Thesis. F,W,S

Preparation of a senior thesis over one, two, or three quarters, beginning in any quarter. When taken as a multiple-term course extending over two or three quarters, the grade and evaluation submitted for the final quarter apply to each of the previous quarters. Students submit petition to sponsoring agency. *The Staff*

195B. Senior Thesis. F,W,S

Preparation of a senior thesis over one, two, or three quarters, beginning in any quarter. When taken as a multiple-term course extending over two or three quarters, the grade and evaluation submitted for the final quarter apply to each of the previous quarters. Students submit petition to sponsoring agency. *The Staff*

195C. Senior Thesis. F,W,S

Preparation of a senior thesis over one, two, or three quarters, beginning in any quarter. When taken as a multiple-term course extending over two or three quarters, the grade and evaluation submitted for the final quarter apply to each of the previous quarters. Students submit petition to sponsoring agency. *The Staff*

196. Senior Capstone. W

Examines related legal topics from an interdisciplinary perspective. Each focuses broadly on the relationship between law as a distinct system and law as an attempt to achieve justice, which requires that law remain open to claims of political morality generally. To what extent are legal norms internal to a separate system called "law" and to what extent are claims of political right in general relevant to question of what law is? Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior legal studies majors. (General Education Code(s): W.) *The Staff*

198. Independent Field Study. F,W,S

Individual studies undertaken off-campus for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Individual studies undertaken off-campus for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

A student normally approaches a faculty member and proposes a course 199 on a subject he or she has chosen. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

A student normally approaches a faculty member and proposes a course 199 on a subject he or she has chosen. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Linguistics

241 and 243 Stevenson College
(831) 459-2905
(831) 459-4988
<http://linguistics.ucsc.edu>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Linguistics is an exact and structured discipline. As the study of human language, it has connections to many other fields in the humanities (philosophy, literature), the social sciences (anthropology, psychology, sociology), the natural sciences (biology, neuroscience, acoustics), computer science, computer engineering, and artificial intelligence.

The central areas of linguistics investigate the knowledge that speakers of a language acquire about its structure. Syntax is concerned with the rules that combine words into larger units of phrases and sentences. Semantics studies the meanings of linguistic units and how they are combined to form the meanings of sentences. Phonetics deals with the physical properties of language sounds. Phonology investigates the ways in which these speech sounds pattern in the sound systems of particular languages. Morphology studies the way in which words are put together out of prefixes, roots, and suffixes. Pragmatics is the study of language use.

All faculty in the Linguistics Department have primary research and teaching interests in one or more of these areas. Other perspectives on language study represented include sociolinguistics, psycholinguistics, the study of poetic language, and the study of language change.

The programs offered by the Linguistics Department are designed to acquaint students with the central aspects of linguistic structure and the methodologies and perspectives of the field. The department offers two undergraduate majors, linguistics and language studies, and a graduate program in theoretical linguistics. The linguistics major leads to a bachelor of arts (B.A.) degree in linguistics; the language studies major leads to a B.A. degree in language studies (see Language Studies). The graduate program leads to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees in linguistics.

The department also offers a combined B.A./M.A. program which makes it possible for certain students to complete the requirements for both degrees in five years rather than the usual six.

Requirements for the Linguistics Major

All students are required to complete the following 12 courses in linguistics and related disciplines.

- Seven foundation courses in linguistics:

50, *Introduction to Linguistics: Sounds and Words*
53, *Semantics I*
101, *Phonology I*
102, *Phonology II*
112, *Syntax I*
113, *Syntax II*
116, *Semantics II*

- Five upper-division elective courses in linguistics

Students may petition the department to have elective courses offered through other institutions or other UC programs applied toward the major requirements. At most three such courses can be applied toward the major. Such courses must be upper-division and clearly fit into a coherent program of study in linguistics.

Foreign language/mathematics competency requirement: Linguistics majors are required to demonstrate either foreign-language or mathematics competency as follows:

- Foreign-language competency: students must successfully complete five quarters of language study at UCSC (three quarters for Latin or Greek)

or demonstrate an equivalent level of competence through a recognized language test or evidence of credit from another institution.

- Mathematics competency: alternatively, students with a strong formal background can choose to satisfy the mathematics competency requirement by demonstrating sufficient preparation in mathematics for advanced formal work in linguistics. This requirement is satisfied by passing two courses chosen from the following list: Mathematics 11A, 19A, or 21; Computer Science 5C, 5J, or 5P; Computer Engineering 16; Economics 11A; or any course which has one of these courses as a prerequisite.

Senior exit requirement: In their senior year, linguistics majors must satisfy the senior exit requirement in one of two ways:

- Option 1: Successful completion of a capstone course. Students may designate an appropriate upper-division linguistics course as their capstone course. Students must have senior standing and must have completed Linguistics 101, Phonology I, and 112, Syntax I.
- Option 2: Successful completion of a senior thesis supervised by a linguistics faculty member.

The proposal for a senior thesis must be submitted for departmental approval at least three quarters prior to the quarter of graduation.

Students enroll in Linguistics 195, *Senior Thesis*.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in linguistics is satisfied by completing course 101 and 112. Requirements for the Minor

To graduate with a minor in linguistics, students must complete eight linguistics courses:

- 50, Introduction to Linguistics: Sounds and Words
- 53, Semantics I
- 101, Phonology I
- 112, Syntax I
- Four upper-division elective courses in linguistics

There is no senior exit requirement and no foreign language/mathematics competency requirement for the minor.

Courses

The 80-level courses have no prerequisites. They are intended to introduce the concepts of linguistics through their relation to other areas of general interest.

Courses 50, *Introduction to Linguistics: Sounds and Words*; 112, *Syntax I*; 111, *Syntactic Structures*; and 53, *Semantics I*, are "disciplinary introductions." These courses have no linguistics prerequisites and serve as entry courses to the specialized upper-division sequences. Upper-division courses generally have at least one of these courses as a prerequisite.

Courses 101, *Phonology I*; 102, *Phonology II*; 113, *Syntax II*; and 116, *Semantics II* are the core upper-level courses in linguistic structure and are offered each year. The two phonology courses (101 and 102) provide an introduction to the study of the sound systems of languages. These courses use a problem-solving approach to developing understanding of phonological theory and phonological regularities in various languages. The intermediate syntax course (113), which has course 112, *Syntax I*, and course 53, *Semantics I*, as prerequisites, continues the development of syntactic theory begun in course 112, extending the range to more complex constructions and rules and introducing alternative theoretical approaches. The semantics course (116), which has as prerequisites course 53, *Semantics I*, and either course 112, *Syntax I*, or course 111, *Syntactic Structures*, addresses advanced problems in the analysis of meaning.

Several upper-division elective courses are offered each year. For a list of these courses, visit the department's web site, linguistics.ucsc.edu.

To enroll in the graduate (200-level) courses, undergraduates need special permission from the instructor. Permission is usually granted only to especially motivated undergraduates who have completed all the core course requirements for the major with excellent performance.

Disqualification Policy

The Linguistics Department has adopted a major disqualification policy for linguistics and language studies majors that is intended to encourage students to take seriously their performance in the foundation courses and to make a strong effort to pass those courses.

Students who receive more than one No Pass, D,W, and/or F in the following introductory courses will not be permitted to major in linguistics or language studies:

- Linguistics 50, Introduction to Linguistics Sounds and Words
- Linguistics 53, Semantics 1
- Linguistics 101, Phonology I
- Linguistics 111, Syntactic Structures
- Linguistics 112, Syntax 1

Students who fail one of these courses will be sent a letter reminding them of this policy and warning them that they are at risk of disqualification should they fail to pass a subsequent foundation course.

Students may appeal their disqualification by writing a formal letter to the department undergraduate program director. This letter should explain any extenuating circumstances that influenced their poor performance in the foundation courses. For example, if some event led to poor performance in multiple courses in a single quarter, a student has a potential case for appeal. In contrast, academic dishonesty or poor performance spanning multiple quarters will be considered evidence that a student is ill suited for the majors.

The letter of appeal must be submitted to the Linguistics Department office (Stevenson 241 and 243) no later than 15 days from the date the disqualification notice was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The department will subsequently notify the student and the student's college of the appeal decision no later than 15 days after the submission of the appeal.

Honors

Students who wish to be considered for honors should meet the deadline posted by the Office of the Registrar for declaring the intent to graduate. Determination of honors is based on a close reading of (1) the student's grades and narrative evaluations for all courses relevant to the major; (2) the results of the senior exit requirement; (3) other factors relevant to an assessment of academic excellence, such as research papers of professional quality. Generally, honors in the major are awarded to the top 10 percent of those graduating in the major. Only those students whose narratives are consistently excellent, and whose performance on the senior exit requirement is excellent, will qualify. Highest honors are rarely awarded, and then only to students whose performance in coursework is outstanding and who have completed an outstanding senior thesis.

Preparation for the UCSC Master's Degree

Each year a number of UCSC students who have B.A. degrees in linguistics or language studies are admitted into the graduate program to pursue the M.A. in theoretical linguistics. Interested students should discuss the possibility with one or more faculty members and formally apply online to the graduate program during the fall quarter of the senior year. For up-to-date information about the application process, consult our web site (<http://linguistics.ucsc.edu>); and see the Linguistics Department manager. The combined B.A./M.A. program (see below) provides another pathway to the M.A. program.

Graduate Program

The graduate program in linguistics at UCSC is a small, focused five-year program in linguistic theory leading to the degree of doctor of philosophy (Ph.D.). The research interests of faculty and students draw on the framework of generative grammar, with a primary focus on theoretical and experimental approaches to syntax, semantics, phonetics, and phonology. Research strengths also include the structure of various languages, theoretical and computational morphology, mathematical foundations, and the philosophy of linguistics.

Each year the department admits approximately five new students to the doctoral program and a smaller number of new students to the M.A. program. The master's degree can be completed in one or two years, depending on the student's previous background in linguistics.

While committed to training in theoretical depth, the program makes possible an unusual breadth of theoretical and experimental understanding. Research in syntax focuses on ways in which generative theory and language-particular analysis inform one another. Faculty expertise covers principles and parameters theory, minimalism, optimality theoretic syntax, and experimental approaches. Research in phonetics and phonology is pursued in various current frameworks, including optimality theory and dispersion theory. It ranges from issues in phonetics and the phonetics-phonology relationship to prosodic theory, prosodic morphology and the syntax-phonology relationship. Research in semantics applies formal, model-theoretic techniques to illuminate the interface between syntactic structure and interpretation and the role of semantic competence in the pragmatics of utterance interpretation. Experimental research in these areas reaches out to a broad range of issues in psycholinguistics and cognitive science.

The faculty have expertise in a variety of languages, including Chamorro, German, Hungarian, Irish, Japanese, Latin, Nez Perce, Rumanian, Russian, Spanish, Turkish, and Tzotzil.

From the beginning of their studies, students are engaged in original research and critical evaluation since the aim of the program is to provide sophisticated training as a foundation for a career in academic research and teaching. The program begins with a sequence of foundation and core courses in linguistic theory. Subsequent coursework emphasizes theoretical depth; it is increasingly centered around the doctoral student's own research, culminating in the presentation of a dissertation on some aspect of linguistic theory and analysis.

Undergraduate Preparation

Applications are invited from students who have completed an undergraduate linguistics major or who have demonstrated excellence in some related discipline (psychology, mathematics, computer science, anthropology) and have the equivalent of a minor in linguistics. A student applying for admission to this program should, in any case, have a good foundation in at least one of the central fields of linguistic structure: phonetics, phonology, morphology, syntax, or semantics. Students entering the program with a deficiency in one or more areas will make up the deficiency by taking appropriate undergraduate courses at UCSC during the first year of graduate study.

Requirements for the M.A.

Courses. A minimum of 45 credits of graduate-level work. This must include the core courses in phonetics, phonology, syntax, and semantics. Electives are chosen from upper-division or graduate courses offered by linguistics and related disciplines, in addition to independent study with linguistics faculty.

Languages. Reading competence in one foreign language, to be demonstrated by examination. *Research paper.* Submission of a research paper in a core area of theoretical linguistics and approval of a committee of two faculty.

Requirements for the Ph.D.

Courses. A minimum of 65 credits of graduate-level work. This includes foundation sequences in phonetics, phonology, syntax, and semantics.

Languages. Reading competence in one foreign language, to be demonstrated by examination.

Qualifying papers and examination. By the end of the third year, two research papers, one in phonetics/phonology/morphology and one in syntax/semantics/pragmatics, are to be presented as part of the requirements for admission to candidacy. At this time, the prospective candidate is examined by the faculty on topics related to the student's major area of research, as part of the qualifying examination. The student is expected to defend a dissertation prospectus by the end of the fourth year.

Dissertation. The final requirement for the Ph.D. degree is the presentation of a dissertation representing a significant contribution in some central area of linguistic research.

Application and Admission

To apply, please consult the Department of Linguistics web site (<http://linguistics.ucsc.edu>).

The B.A./M.A. Program

The B.A./M.A. program in linguistics is a demanding and selective option, which allows students who are well prepared and well motivated to complete the requirements for both degrees in five years rather than the usual six.

Admission to the program has two stages. In the first stage, interested students apply to be admitted to the program in consultation with the undergraduate advisor no later than the first quarter of their junior year. Transfer students must apply for admission by the end of their second quarter at UCSC. In order to be accepted at this first stage, students must have demonstrated excellence in the undergraduate major in at least three courses that are named requirements for the linguistics major.

Students accepted at this initial stage are assigned a faculty mentor who monitors their progress closely.

At the second stage of the admission procedure, students apply in their senior year to be admitted through UCSC's normal graduate admissions process. If accepted, ideally they complete the course requirements for the M.A. and write and defend the M.A. paper by the end of the fifth year. Students in the B.A./M.A. program take a number of graduate courses in their senior year, which are selected in close consultation with the faculty mentor. Performance in these courses forms a central part of the ongoing evaluation process. If a student's performance does not meet the standards set for the program, he or she completes the B.A. at the end of the senior year in the normal way and does not proceed to the M.A.

Graduate courses required for the M.A. are taken partly in the senior year and partly in the fifth year. The M.A. paper is written in the fifth year. Thus, by the end of their fifth year, the students in the program will have fulfilled the requirements for both the B.A. and the M.A. degrees. However, students who need additional time may still stay in the program until the M.A. paper is completed.

<http://linguistics.ucsc.edu>[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)***Program Description***

Linguistics is an exact and structured discipline. As the study of human language, it has connections to many other fields in the humanities (philosophy, literature), the social sciences (anthropology, psychology, sociology), the natural sciences (biology, neuroscience, acoustics), computer science, computer engineering, and artificial intelligence.

The central areas of linguistics investigate the knowledge that speakers of a language acquire about its structure. Syntax is concerned with the rules that combine words into larger units of phrases and sentences. Semantics studies the meanings of linguistic units and how they are combined to form the meanings of sentences. Phonetics deals with the physical properties of language sounds. Phonology investigates the ways in which these speech sounds pattern in the sound systems of particular languages. Morphology studies the way in which words are put together out of prefixes, roots, and suffixes. Pragmatics is the study of language use.

All faculty in the Linguistics Department have primary research and teaching interests in one or more of these areas. Other perspectives on language study represented include sociolinguistics, psycholinguistics, the study of poetic language, and the study of language change.

The programs offered by the Linguistics Department are designed to acquaint students with the central aspects of linguistic structure and the methodologies and perspectives of the field. The department offers two undergraduate majors, linguistics and language studies, and a graduate program in theoretical linguistics. The linguistics major leads to a bachelor of arts (B.A.) degree in linguistics; the language studies major leads to a B.A. degree in language studies (see Language Studies, page XXX). The graduate program leads to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees in linguistics.

The department also offers a combined B.A./M.A. program which makes it possible for certain students to complete the requirements for both degrees in five years rather than the usual six.

Requirements for the Linguistics Major

All students are required to complete the following 12 courses in linguistics and related disciplines.

- Seven foundation courses in linguistics:

____50, *Introduction to Linguistics: Sounds and Words*

____53, *Semantics I*

____101, *Phonology I*

____102, *Phonology II*

____112, *Syntax I*

____113, *Syntax II*

____116, *Semantics II*

- ____Five upper-division elective courses in linguistics

Students may petition the department to have elective courses offered through other institutions or other UC programs applied toward the major requirements. At most three such courses can be applied toward the major. Such courses must be upper-division and clearly fit into a coherent program of study in linguistics.

Foreign language/mathematics competency requirement: Linguistics majors are required to demonstrate either foreign-language or mathematics competency as follows:

- ____*Foreign-language competency:* students must successfully complete five quarters of language study at UCSC (three quarters for Latin or Greek) or demonstrate an equivalent level of competence through a recognized language test or evidence of credit from another institution.
- ____*Mathematics competency:* alternatively, students with a strong formal background can choose to satisfy the mathematics competency requirement by demonstrating sufficient preparation in mathematics for advanced formal work in linguistics. This requirement is satisfied by passing two courses chosen from the following list: Mathematics 11A, 19A, or 21; Computer Science 5C, 5J, or 5P; Computer Engineering 16; Economics 11A; or any course which has one of these courses as a prerequisite.

Senior exit requirement: In their senior year, linguistics majors must satisfy the senior exit requirement in one of two ways:

- Option 1: Successful completion of a capstone course. Students may designate an appropriate upper-division linguistics course as their capstone course. Students must have ____senior standing and must have completed Linguistics 101, *Phonology I*, and 112, *Syntax I*.
- ____Option 2: Successful completion of a senior thesis supervised by a linguistics faculty member.

The proposal for a senior thesis must be submitted for departmental approval at least three quarters prior to the quarter of graduation.

Students enroll in Linguistics 195, *Senior Thesis*.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in linguistics is satisfied by completing courses 101 and 112.

Requirements for the Minor

To graduate with a minor in linguistics, students must complete eight linguistics courses:

- 50, *Introduction to Linguistics: Sounds and Words*
- 53, *Semantics I*
- 101, *Phonology I*
- 112, *Syntax I* ~~or 111, *Syntactic Structures*~~
- Four upper-division elective courses ~~s~~ in linguistics

There is no senior exit requirement and no foreign language/mathematics competency requirement for the minor.

Courses

~~Courses numbered 80 are lower-division courses, which treat the phenomenon of language from a variety of perspectives:~~

- ~~• 80B, *Modern English Grammar*. A modern non-prescriptive approach to English grammar.~~
- ~~• 80C, *Language, Society, and Culture*. An exploration of ways in which language structure and use reflect societal distinctions and cultural practice.~~
- ~~• 80D, *Language and Mind*. A critical examination of the view of human language underpinning the research program initiated by Noam Chomsky and of its implications for theories of the human mind and brain.~~
- ~~• 80V, *Structure of the English Vocabulary*. A systematic study of the elements of English words: their historical origins and their sound, meaning, spelling, and function.~~

The 80-level ~~These~~ courses have no prerequisites. They are intended to introduce the concepts of linguistics through their relation to other areas of general interest.

Courses 50, *Introduction to Linguistics: Sounds and Words*; 112, *Syntax I*; 111, *Syntactic Structures*; and 53, *Semantics I* are "disciplinary introductions." These courses have no linguistics prerequisites and serve as entry courses to the specialized upper-division sequences. Upper-division courses generally have at least one of these courses as a prerequisite.

Courses 101, *Phonology I*; 102, *Phonology II*; 113, *Syntax II*; and 116, *Semantics II* are the core upper-level courses in linguistic structure and are offered each year. The two phonology courses (101 and 102) provide an introduction to the study of the sound systems of languages. These courses use a problem-solving approach to developing understanding of phonological theory and phonological regularities in various languages. The intermediate syntax course (113), which has course 112, *Syntax I*, and course 53, *Semantics I*, as prerequisites, continues the development of syntactic theory begun in course 112, extending the range to more complex constructions and rules and introducing alternative theoretical approaches. The semantics course (116), which has as prerequisites course 53, *Semantics I*, and either course 112, *Syntax I*, or course 111, *Syntactic Structures*, addresses advanced problems in the analysis of meaning.

Several upper-division elective courses are offered each year. For a list of these courses, ~~contact the Linguistics Department~~ visit the department's web site, linguistics.ucsc.edu.

To enroll in the graduate (200-level) courses, undergraduates need special permission from the instructor. Permission is usually granted only to especially motivated undergraduates who have completed all the core course requirements for the major with excellent performance.

Disqualification Policy

The Linguistics Department has adopted a major disqualification policy for linguistics and language studies majors that is intended to encourage students to take seriously their performance in the ~~introductory~~-foundation courses and to make a strong effort to pass those courses.

Students who receive more than one No Pass, D,W, and/or F in the following introductory courses will not be permitted to major in linguistics or language studies:

- Linguistics 50, *Introduction to Linguistics Sounds and Words*
- Linguistics 53, *Semantics 1*
- Linguistics 101, *Phonology I*
- Linguistics 111, *Syntactic Structures*
- Linguistics 112, *Syntax 1*

Students who fail one of these courses will be sent a letter reminding them of this policy and warning them that they are at risk of disqualification should they fail to pass a subsequent ~~introductory~~-foundation course.

Students may appeal their disqualification by writing a formal letter to the department ~~chair~~undergraduate program director. This letter should explain any extenuating circumstances that influenced their poor performance in the ~~introductory~~-foundation courses. For example, if some event led to poor performance in multiple courses in a single quarter, a student has a potential case for appeal. In contrast, academic dishonesty or poor performance spanning multiple quarters will be considered evidence that a student is ill suited for the majors.

The letter of appeal must be submitted to the Linguistics Department office (Stevenson 241 and 243) no later than 15 days from the date the disqualification notice was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The department will subsequently notify the student and the student's college of the appeal decision no later than 15 days after the submission of the appeal.

Honors

Students who wish to be considered for honors should meet the deadline posted by the Office of the Registrar for declaring the intent to graduate. Determination of honors is based on a close reading of (1) the student's grades and narrative evaluations for all courses relevant to the major; (2) the results of the senior exit requirement; (3) other factors relevant to an assessment of academic excellence, such as research papers of professional quality. Generally, honors in the major are awarded to the top 10 percent of those graduating in the major. Only those students whose narratives are consistently excellent, and whose performance on the senior exit requirement is excellent, will qualify. Highest honors are rarely awarded, and then only to students whose performance in coursework is outstanding and who have completed an outstanding senior thesis.

Preparation for the UCSC Master's Degree

Each year a number of UCSC students who have B.A. degrees in linguistics or language studies are admitted into the graduate program to pursue the M.A. in theoretical linguistics. Interested students should discuss the possibility with one or more faculty members and formally apply online to the graduate program during the fall quarter of the senior year. For up-to-date information about the application process, consult our web site (~~<http://ling.ucsc.edu/>~~<http://linguistics.ucsc.edu/>); and see the Linguistics Department manager.

The combined B.A./M.A. program (see below) provides another pathway to the M.A. program.

Graduate Program

The graduate program in linguistics at UCSC is a small, focused five-year program in linguistic theory leading to the degree of doctor of philosophy (Ph.D.). The research interests of faculty and students draw on the framework of generative grammar, with ~~a~~ primary focus on theoretical and experimental approaches to syntax, semantics, phonetics, and phonology. Research strengths also include the structure of various languages, theoretical and computational morphology, mathematical foundations, and the philosophy of linguistics.

Each year the department admits approximately five new students to the doctoral program and a smaller number of new students to the M.A. program. The master's degree can be completed in one or two years, depending on the student's previous background in linguistics.

While committed to training in theoretical depth, the program makes possible an unusual breadth of theoretical and experimental understanding. Research in syntax focuses on ways in which generative theory and language-particular analysis inform one another. Faculty expertise covers principles and parameters theory, minimalism, optimality theoretic syntax, and experimental approaches. Research in phonetics and phonology is pursued in various current frameworks, including optimality theory and dispersion theory. It ranges from issues in phonetics and the phonetics-phonology relationship to prosodic theory, prosodic morphology and the syntax-phonology relationship. Research in semantics applies formal, model-theoretic techniques to illuminate the interface between syntactic structure and interpretation and the role of semantic competence in the pragmatics of utterance interpretation. Experimental research in these areas reaches out to a broad range of issues in psycholinguistics and cognitive science.

The faculty have expertise in a variety of languages, including Chamorro, German, Hungarian, Irish, Japanese, Latin, Nez Perce, Rumanian, Russian, Spanish, Turkish, and Tzotzil.

From the beginning of their studies, students are engaged in original research and critical evaluation since the aim of the program is to provide sophisticated training as a foundation for a career in academic research and teaching. The program begins with a sequence of foundation and core courses in linguistic theory. Subsequent coursework emphasizes theoretical depth; it is increasingly centered around the doctoral student's own research, culminating in the presentation of a dissertation on some aspect of linguistic theory and analysis.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

50. Introduction to Linguistics: Sounds and Words. W

An introduction to the major areas, problems, and techniques of modern linguistics. (General Education Code(s): SI, IH.) *G. McGuire*

53. Semantics I. F,W

Introduction to the logical foundations of natural language semantics. Logical and semantic relations, simple set theory, logical representations (propositional and predicate calculi, modal and tense logics) and their interpretations. A basic literacy course in the language of logical representation. (General Education Code(s): IH.) *P. Anand, D. Farkas*

80B. Modern English Grammar. *

Elementary introduction to modern standard English grammar, both formal and informal, both written and spoken. Stresses the importance of linguistic evidence in understanding grammatical correctness; offers a demystification and critique of older traditional grammar in the light of recent research. (General Education Code(s): T4-Humanities and Arts.) *The Staff*

80C. Language, Society, and Culture. S

The study of language from a sociological perspective. Multilingualism, language change and variation, pidgins and creoles, the origin and diversification of dialects. (General Education Code(s): CC, T5-Humanities and Arts or Social Sciences.) *J. Padgett*

80D. Language and Mind: Chomsky's Program. *

A critical overview of the research program initiated by Noam Chomsky and its implications for theories of the human mind and brain. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *The Staff*

80G. Introduction to Unix. *

Introduction to computing, the Internet, and the World Wide Web through the language of the Unix operating system. Oriented to the beginner, the course presupposes no previous acquaintance with any particular sort of computer. It covers the basic concepts of text editing and formatting, writing Web pages in basic HTML, and promotes a rigorous understanding of Unix commands and shell scripts. Views communication with a computer as a matter of learning a few simple though powerful languages. (Also offered as Computer Science 80G. Students cannot receive credit for both courses.) (General Education Code(s): T2-Natural Sciences.) *A. Van Gelder*

80V. Structure of the English Vocabulary. *

A systematic study of the elements of English words: besides the practical goal of vocabulary consolidation and expansion, explores the historical origin and development of word elements, as well as their sound, meaning, and function in the contemporary language. Offered in alternate academic years. (General Education Code(s): T4-Humanities and Arts.) *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. *The Staff*

Upper-Division Courses

101. Phonology I. W,S.

Introduction to how sounds pattern in grammars—why they vary, how they combine, etc. Emphasis is on developing theories to explain the patterns. Topics include distinctive feature theory, phonemic analysis, autosegmental phonology, and principles of syllabification and stress. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 50. (General Education Code(s): W.) *R. Mester*

102. Phonology II. F

Advanced phonological theory. Topics include markedness; underspecification theories; advanced topics in feature geometry, syllable theory, and stress theory; and optimality theory. Readings include published articles. Emphasis on theory construction and argumentation based on data. Prerequisite(s): course 101. *J. Padgett*

105. Morphology. W

Study of the principles of word formation: derivation, inflection, and compounding; cross-linguistic study of morphological processes, morphological investigation and analysis. Prerequisite(s): course 111or 112, and course 101. Offered in alternate academic years. *J. Hankamer*

108. Poetry and Language. W

An introduction to the linguistic aspects of poetry, e.g., rhyme, meter, and larger-scale organization of poetic form. The emphasis is on English poetry, complemented by brief sketches of other poetic traditions. Students taking this course should have some basic knowledge of language structure (e.g., as provided by course 50). Offered in alternate academic years. (General Education Code(s): TA.) *S. Chung*

111. Syntactic Structures. S

Provides a basic introduction to the methods and results of generative grammar. It simultaneously provides an overview of the major syntactic constructions of English. (Formerly course 55.)

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): IH.) *J. Hankamer*

112. Syntax I. F,W

An introduction to syntactic investigation, developed through the study of central aspects of English syntax. A major purpose is to introduce students to the study of language as an empirical science. (Formerly course 52.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): IH.) *S. Chung, M. Wagers, J. McCloskey*

113. Syntax II. S

Further aspects of English syntax; universal and language-particular constraints on syntactic structures and rules. Further developments and extensions of generative theory. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 53 and 112. (General Education Code(s): W.) *J. Hankamer*

114. Syntax III. F

Advanced topics in syntax and semantics. Prerequisite(s): course 113 and satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *J. Hankamer, J. McCloskey*

116. Semantics II. W

Major issues in natural language semantics: nature of lexical entries, thematic relations, propositional representation or "logical form"; relation between semantic interpretation and syntactic representations, quantification and scope relations, reference and presupposition, coreference and anaphoric relations. Prerequisite(s): course 53, and either course 111 or 112. *D. Farkas*

117. Pragmatics. S

Covers topics central in the study of pragmatics, the interpretation of language use. Topics include conversational implicature, speech acts and discourse understanding, and social deixis. Prerequisite(s): course 53. Offered in alternate academic years. *P. Anand*

118. Semantics III. *

Uses the tools learned in courses 53 and 116 (*Semantics I* and *Semantics II*), giving students the opportunity to explore important topics with heavy emphasis placed on reading primary-source literature. Readings form the basis for weekly lectures and the discussion section. Prerequisite(s): course 116. Enrollment limited to 25. *The Staff*

120. Structure of English. F

Survey of grammatical structure of English and terminology of grammatical description. Covers phonological, morphological, and syntactic structure of English and contrasts it with other languages. Prerequisite(s): course 111 or 112, and 101. *The Staff*

124. Language Typology. S

Introduces the branch of linguistics whose goal is to describe and explain the structural diversity of the world's languages. Focuses on what is known about variation in particular domains (e.g., syllable structure, word order, evidentiality), and how it might be explained. Prerequisite(s): course 111or 112, and course 101. Enrollment limited to 40. *The Staff*

125. Foundations of Linguistic Theory. *

Survey of some of the history and foundational assumptions of generative grammar; also looks at some of the influence of generative linguistic theorizing on disciplines outside linguistics, notably psychology and philosophy. Prerequisite(s): course 113 or 116. Enrollment limited to 25. *The Staff*

140. Language Change. S

Methods and problems in the study of change in linguistic systems. Reconstruction of proto-languages; the comparative method. Theories of change and implications for the theory of grammar. Prerequisite(s): course 102. Enrollment limited to 25. *R. Mester*

145. Native Languages of North America. *

Survey of the indigenous languages of North America, including a formal/structural component and an historical/social component. Topics include: typological properties of these languages, current status, and revitalization efforts. Prerequisite(s): course 101, and either course 111 or 112.

Enrollment limited to 30. *J. Kirchner*

151. Phonetic Analysis. F

Introduction to instrumental phonetic analysis—analysis using experimental methods. Emphasis is on the acoustics and perception of speech. Prerequisite(s): course 101. *J. Padgett*

152. Applied Phonetics. *

Examines areas in which phonetic analysis and experimentation are used in practice. Emphasizes problem-solving, experiments, and analytical tasks. Prerequisite(s): course 151. Enrollment limited to 25. *The Staff*

154. Language and Social Identity. F

Introduction to sociolinguistics exploring the relationship between language and such social parameters as social status, ethnicity, race, gender, etc., including the role of language differences in the creation of social stereotypes. Emphasis on gathering, examining, and reporting data. Prerequisite(s): course 101, and either course 111 or 112. Enrollment restricted to senior language studies majors. Enrollment limited to 25. *G. McGuire*

155. Language and Cognition. *

Introduces and examines some of the foundational assumptions, practices, and methods of generative grammar in comparison to those of other areas of cognitive science, notably psychology and philosophy. Prerequisite(s): course 111 or 112, 53, and 101. *J. McCloskey*

157. Psycholinguistics and Linguistic Theory. *

Theory and methods in psycholinguistics, covering perception, production, and acquisition of language and linguistic structure. A hands-on, laboratory-style introduction to the topic, focusing on the relation between experimental findings and linguistic theory. Students cannot receive credit for this course and course 257. Prerequisite(s): course 102 or 105 or 113 or 116. Enrollment restricted to linguistics and language studies majors. Enrollment limited to 20. (General Education Code(s): SR.) *M. Wagers*

158. Advanced Psycholinguistics. *

Advanced topics in psycholinguistics and experimental linguistics, contemporary memory models, computational models of comprehension and production, and neurolinguistic findings and methodologies. Student work revolves around an extended research project in which students learn to apply advanced analytical techniques. Prerequisite(s): course 157. Enrollment restricted to linguistics and language studies majors. Enrollment limited to 12. *The Staff*

160. Language Engineering. *

Addresses a particular problem in language engineering, chosen for its practical and theoretical interest and its tractability. The entire course focuses on a team project to design a solution to the problem. Permission of instructor required. *P. Anand*

181. Structure of Romance Languages. S

Examines the phonological and syntactic structures of Romance languages. Some knowledge of Italian, French, or Spanish is required. Prerequisite(s): course 111 or 112, and course 101. *A. Brasoveanu*

182. Structure of Spanish. *

The phonology and syntax of Spanish, studied from a modern linguistic perspective. Some knowledge of Spanish is required. Prerequisite(s): course 111 or 112, and course 101. *The Staff*

183. Structure of French. *

The phonology, morphology, and syntax aspects of French. Some knowledge of French is helpful. Prerequisite(s): course 111 or 112, and 101. *The Staff*

184. Structure of Irish. *

Integrated Irish-language course for beginners, combining both instruction in the language itself (linguistic) and seminars about the current social, political, and cultural state of the language (sociolinguistic). Enrollment by permission of instructor. Enrollment limited to 25. *The Staff*

185. Structure of Russian. *

The phonology, morphology, and syntax of Russian. Some knowledge of Russian is helpful. Prerequisite(s): course 111 or 112, and course 101. Enrollment limited to 30. Offered in alternate academic years. *The Staff*

186. Structure of German. *

Phonological, morphological, and syntactic aspects of the structure of the German language. Some knowledge of German is required. Prerequisite(s): course 111 or 112, and course 101. *The Staff*

187. Structure of Japanese. *

The phonology, morphology, and syntax of Japanese. Some knowledge of Japanese is required. Prerequisite(s): course 111 or 112, and course 101. Offered in alternate academic years. *J. Ito*

188. Structure of Turkish. *

The phonology, morphology, and syntax of Turkish. Prerequisite(s): course 111 or 112, and course 101. *The Staff*

189. Structure of Arabic. *

The phonology, morphology, and syntax of Arabic. (Mainly modern standard, but also some regional dialects.) No knowledge of Arabic is required. Pre-requisite(s): course 101, and course 111 or 112. *The Staff*

190. Senior Research (2 credits). *

Students produce a research paper or other significant project to satisfy the capstone requirement. Prerequisite(s): course 101, and either course 111 or 112. Concurrent enrollment in a specified upper-division course is required. Enrollment restricted to senior linguistics and language studies majors. *The Staff*

193. Field Study. *

Students submit petition to sponsoring agency. *The Staff*

195. Senior Thesis. F,W,S

Deadline for submission of thesis proposal is one year in advance of proposed completion. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision by correspondence). Preparation and approval must be completed by the fifth day of instruction of any given quarter. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

211. Phonology A. F

First part of a three quarter introduction to phonology. Topics of the sequence include fundamentals of acoustic phonetics; introduction to optimality theory; theories of syllabification, stress, and prosodic organization; prosodic morphology; advanced issues in faithfulness and correspondence; segmental and suprasegmental processes. Enrollment restricted to graduate standing or consent of instructor. *G. McGuire*

212. Phonology B. W

Second part of a three quarter introduction to phonology. Topics of the sequence include fundamentals of acoustic phonetics; introduction to optimality theory; theories of syllabification, stress, and prosodic organization; prosodic morphology; advanced issues in faithfulness and correspondence; segmental and suprasegmental processes. Prerequisite(s): course 211. Enrollment restricted to graduate standing or consent of instructor. *J. Ito*

213. Phonology C. S

Third part of a three quarter introduction to phonology. Topics of the sequence include fundamentals of acoustic phonetics; introduction to optimality theory; theories of syllabification, stress, and prosodic organization; prosodic morphology; advanced issues in faithfulness and correspondence; segmental and suprasegmental processes. Prerequisite(s): course 212. Enrollment restricted to graduate standing or consent of instructor. May be repeated for credit. *R. Mester*

216. Phonology Proseminar. *

One or more topics in phonological theory. Topics vary from year to year, covering literature and current research in phonology. Prerequisite(s): course 212. Enrollment restricted to graduate standing or consent of instructor. May be repeated for credit. *The Staff*

219. Phonology Seminar. W

Advanced topics in phonology drawn from the current research interests of the instructor. Prerequisite(s): course 212. Enrollment restricted to graduate standing or consent of instructor. May be repeated for credit. *W. Kimper*

221. Syntax A. F

Introduction to syntactic theory. Phrase structure; subcategorization; lexical entries; passive; infinitival constructions. Enrollment restricted to graduate standing or consent of instructor. *J. Hankamer*

222. Syntax B. W

Continuation of Syntax A. The syntax of unbounded dependencies, including constituent questions, relative clauses, clefts, topicalization. Constraints on extraction; unbounded versus successive cyclic movement; the licensing of gaps. Prerequisite(s): course 221. Enrollment restricted to graduate standing or consent of instructor. *A. Deal*

223. Syntax C. *

Continuation of Syntax B. The syntax of anaphora. Topics vary from year to year, and may include the following: coreference in antecedent-pronoun relations; reflexives and reciprocals; disjoint reference; bound-variable anaphora; ellipsis; semantic and pragmatic constraints on anaphora. Prerequisite(s): course 222. Enrollment restricted to graduate standing or consent of instructor. *J. Hankamer*

226. Proseminar in Syntax. F

In-depth investigation of some topic in syntactic theory. Topics vary from year to year, covering literature and current research in grammatical structure from varying theoretical perspectives. Prerequisite(s): course 222. *J. McCloskey*

229. Syntax Seminar. S

Advanced topics in syntax drawn from the current research interests of the instructor.

Prerequisite(s): course 222. Enrollment restricted to graduate standing or consent of instructor. May be repeated for credit. *A. Deal*

231. Semantics A. F

Introduction to linguistic semantics: nature of lexical entries, thematic relations, representation of logical form; relation between semantic interpretation and syntactic representation, quantification and scope relations, reference and presupposition. Enrollment restricted to graduate standing or consent of instructor. *D. Farkas*

232. Semantics B. W

Model-theoretic semantics for natural language. Truth-conditional, compositional semantics. Various logical ontologies and their application to natural language categories. Dynamic interpretation of discourse and anaphoric relations. Treatment of illocutionary force. Prerequisite(s): course 231. Enrollment restricted to graduate standing or consent of instructor. *A. Brasoveanu*

233. Semantics C. S

Third and final course in the graduate introduction to semantics, focusing on questions at the border between semantics and pragmatics. Concerns include: modality, conditionals, non-declarative meaning, and context and context structure viewed from a dynamic perspective. Prerequisite(s): course 232. Enrollment restricted to graduate students. *P. Anand*

236. Proseminar in Semantics. *

In-depth investigation of some topic in semantics and pragmatics. Topics vary from year to year, covering literature and current research in linguistic semantics and pragmatics. Prerequisite(s): course 231. Enrollment restricted to graduate standing or consent of instructor. *The Staff*

239. Semantics Seminar. W

Advanced topics in semantics drawn from the current research interests of the instructor.

Prerequisite(s): course 232. Enrollment restricted to graduate standing or consent of instructor. May be repeated for credit. *A. Brasoveanu*

240. The Pedagogy of Linguistics (1 credit). F,W

Provides training for graduate students in university-level pedagogy in general and in the pedagogy of linguistics specifically. Under the supervision of a faculty member, coordinated by a graduate student with substantial experience as a teaching assistant. May be repeated for credit. *The Staff*

245. Computational Models of Discourse and Dialogue. S

Focuses on classic and current theories and research topics in the computational modeling of discourse and dialogue, with applications to human-computer dialogue interactions; dialogue interaction in computer games and interactive story systems; and processing of human-to-human conversational and dialogue-like language such as e-mails. Topics vary depending on the current research of the instructor(s) and the interests of the students. Students read theoretical and technical papers from journals and conference proceedings and present class lectures. A research project is required. (Also offered as Psychology 245. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. May be repeated for credit. *The Staff*

249. Morphology Seminar. *

Presents theoretical and descriptive issues, particularly those raised by the framework of distributed morphology and its current competitors. Course work consists of readings, squibs, and a term paper. Enrollment restricted to graduate students. *The Staff*

257. Psycholinguistics and Linguistic Theory. F

Theory and methods in psycholinguistics, covering perception, production, and acquisition of language and linguistic structure. A hands-on, laboratory-style introduction to the topic, focusing on the relation between experimental findings and linguistic theory. Graduate students have separate evaluation criteria. Students cannot receive credit for this course and course 157. Enrollment restricted to graduate students. *M. Wagers*

258. Advanced Psycholinguistics. S

Advanced topics in psycholinguistics and experimental linguistics. Contemporary memory models. Computational models of comprehension and production. Neurolinguistic findings and methodologies. Student work revolves around an extended research project in which students learn to apply advanced analytical techniques. Graduate students have separate evaluation criteria. Prerequisite(s): course 257. Enrollment restricted to graduate students. *M. Wagers*

259. Phonetics Seminar. F

Advanced topics in acoustic and articulatory phonetics. Prerequisite(s): course 213. Enrollment restricted to graduate students. *G. McGuire*

265. Mathematical Foundations of Linguistics. *

A survey of the basic mathematical notions fundamental to the understanding of work in theoretical syntax, semantics, and phonology. Topics covered include basic set theory, formal logic, boolean algebra, graph theory, and formal language theory. Enrollment restricted to graduate standing or consent of instructor. *The Staff*

280. Proseminar in Experimental Linguistics. *

Examines experimental design and analysis for gathering linguistic data; the advantages and disadvantages of major response measures, including reaction times; interaction with extra-grammatical factors; and statistics on categorical and continuous measures. Students present results in research papers. Enrollment restricted to graduate students. *M. Wagers*

290. Research Seminar. W

A research seminar for undergraduate and graduate students to develop the skills of the profession. Critical reading, reviewing, teaching, presentation, and writing. Students submit petition to sponsoring agency. Enrollment restricted to graduate standing or consent of instructor. Enrollment limited to 10. *P. Anand*

295. Directed Reading. F,W,S

Directed reading which does not involve a term paper. Enrollment restricted to graduate standing or consent of instructor. *The Staff*

296. Linguistics Colloquium (2 credits). F,W,S

Independent graduate-level activities and assignments relating to development of familiarity with professional activities in academic linguistics: organizing and attending colloquia and conferences, both on- and off-campus; participation in discussions at such events; and preparation of commentaries on academic papers and other papers. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Enrollment restricted to graduate standing or consent of instructor. *The Staff*

299. Thesis Research. F,W,S

The Staff

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The study of literature at UCSC is organized as an interdisciplinary field coordinated through a single Department of Literature, rather than through separate departments of English, modern languages, and classics. This structure fosters innovative and comparative approaches to literature among both faculty and students. Courses in the major encompass traditional literary history and interpretation as well as cross-cultural inquiry and current theoretical debates.

The literature major permits focused work in national literary traditions. Students may concentrate in English-language literatures; in French, German, or Italian; in Latin and/or Greek; or in Spanish/Latin American/Latino literatures. Alternatively, students may organize their studies by historical period. Students who choose pre- and early modern studies focus on early literary traditions from antiquity through the Middle Ages, the Renaissance, and the neo-classical period, while those engaged in modern literary studies concentrate on literature of the 18th, 19th, 20th, and 21st centuries. In addition, the world literature and cultural studies concentration emphasizes non-Western literatures, literature in a global context, as well as non-literary forms of cultural production. Finally, the Literature Department also offers a concentration in creative writing in which, in addition to studying literature, students work with faculty in upper-division workshops to improve their own creative writing skills.

Literature majors at UCSC are trained in critical reading, writing, and thinking, as well as in literary interpretation. These skills have wide applicability: they may lead to careers in other media such as film, theater, video, the visual arts, and electronic media; and they offer avenues into related disciplines such as history, philosophy, psychology, sociology, anthropology, politics, and history of art and visual culture. Literature majors traditionally enter a wide variety of careers ranging from law and journalism to management, government, international studies, publishing, technical writing, and teaching at all levels.

The Literature Department faculty requires that all literature majors have proficiency in a second language. Proficiency in more than one language enhances understanding of any literature and culture. Graduate programs in literature and other humanities disciplines generally require competence in a language other than English.

Letter Grade Requirement

Letter grades are required for 75 percent of courses applied toward the literature major, including the senior seminar or thesis, which must be taken for a letter grade.

Declaring the Major or Minor

Students must complete Literature 1 or its equivalent prior to declaring the major or minor. Students declare a major or minor in literature by completing and submitting a Proposed Study Plan and Declaration of Major/Minor petition. All students considering a literature major or minor should consult with staff and/or faculty advisers as early as possible and declare the major or minor before the end of their sophomore year. Transfer students are urged to declare the major or minor in the first quarter at UCSC.

Literature Major Options

Students wishing to major in literature may choose either the standard literature major or the intensive literature major. The intensive literature major is recommended particularly for students who plan to continue their studies in graduate school. The requirements for the intensive major include the study of literature in two languages; proficiency in a second language is therefore required.

The Standard Literature Major

The literature major requires: (1) proficiency in a second language; and (2) 12 courses in literature.

- *Language proficiency*: One year (three quarters or equivalent) of college level study of a non-English language or demonstrated reading ability at this level.
- The 12 required courses must include two lower-division and 10 upper-division courses.

Lower-Division Courses

Lower-division courses are introductions to critical reading and writing. Students should complete their lower-division coursework before beginning upper-division work.

Two lower-division courses are required:

- Literature 1, *Literary Interpretation*: close reading and analysis of literary texts
- One Literature 61-series course: categories, methodologies, and problems of literary study, or one Literature 80-series course: topical, thematic, and comparative studies of literary texts

Language proficiency: One year (three quarters or equivalent) of college level study of a non-English language or demonstrated reading ability at this level

Upper-Division Courses

Upper-division courses provide more detailed treatment of literary and theoretical problems, themes, and periods. Students are strongly encouraged to take courses across chronological periods and national boundaries. Students must successfully complete the language proficiency requirement before enrolling in Literature 102.

Ten upper-division courses are required:

- Literature 101, *Theory and Interpretation*: approaches to literary and cultural theories
- Literature 102, *Translation Theory*: approaches to literary and cultural translation, or one upper-division non-English literature course studied in the original language. Students must successfully complete the language proficiency requirement before enrolling in Literature 102
- Six upper-division courses in an area of concentration (described below)
- Two upper-division electives in literature

Distribution requirements. Among the 10 upper-division courses, at least two must focus on literature written prior to the year 1750; one course must focus on non-Western literature or literature in a global perspective; and one course must focus on poetry. One of the upper-division courses may be a senior seminar, which can be used to satisfy the campus comprehensive (exit) requirement. Some courses fulfill more than one distribution requirement. A list of annual course offerings indicating distribution codes for each course is available in the department office and on the Literature Department web page at <http://literature.ucsc.edu/courses>.

With prior permission from the literature undergraduate program director, one upper-division literature elective may be replaced by an upper-division course related to the student's area of concentration and chosen from another program in the humanities, arts, or social sciences.

The Intensive Literature Major

The Intensive Literature major requires (1) proficiency in a second language, and (2) 14 courses in literature.

- *Language proficiency*: in addition to the Standard Literature major requirement of one-year (three quarters or equivalent) of college-level study of a non-English language, or demonstrated reading ability at this level, students must complete at least two upper-division courses in a second-language literature studied in the original language. In many languages, two years of college-level study (or comparable ability) are needed before a student is prepared to enter an upper-division course. In a few languages (Greek, Latin, Middle Egyptian Hieroglyphs), less time is needed for this purpose.
- The 14 required courses must include two lower-division and 12 upper-division courses.

Lower-Division Courses

The same requirements apply as for the standard literature major. Students who choose the intensive literature major are required to achieve competence in a second-language literature. Upper-division literature coursework requires completion of a lower-division language sequence or the equivalent.

Upper-Division Courses

The intensive major requires 12 upper-division courses. Distribution requirements for the intensive major are the same as those for the standard literature major. In addition, students must complete at least two courses in a second-language literature studied in the original language. As in the standard major, with prior permission from the literature undergraduate program director, one upper-division literature elective may be replaced by an upper-division course related to the student's area of concentration and chosen from another program in the humanities, arts, or social

sciences.

The Concentrations

The purpose of the upper-division area of concentration is to help students shape a coherent program of study. The department provides several defined concentrations, described below. For all concentrations except national/transnational literatures, texts may be read in the original or in translation.

National/Transnational Literatures

These concentrations examine literature within the frameworks of particular languages or national and regional traditions. National/transnational concentrations require that texts be read in the original language.

- English-language literatures
The study of American and British literature, as well as literatures of other English-speaking peoples around the world.
- French literature
The study of French and Francophone literatures, languages, and cultural practices of France, Africa, and the Caribbean.
- German literature
The study of the literature, language, and cultural practices of the German-speaking areas of central Europe including Germany, Austria, and Switzerland.
- Greek and Latin literature
The study of the literature, languages, and cultural practices of ancient Greece and Rome. Students may choose to concentrate in Greek or Latin or both.
- Italian literature
The study of Italian literature, language, and cultural practices from the Middle Ages to the present.
- Spanish/Latin American/Latino literatures
The study of literatures, language, and cultural practices of Spain, Latin America, and Latino populations in the United States.

Creative Writing

The Department of Literature offers a sequence of workshops from introductory through advanced levels in both poetry and fiction. Other activities available to interested students include participation in the production of literary journals on campus, attendance at readings by visiting writers, and use of a creative writing reading room.

Admission to this concentration is selective. Interested students are required to take one lower-division creative writing workshop at UCSC before applying to the creative writing concentration; however, students are strongly encouraged to complete two lower-division workshops (at least one at UCSC) before applying.

Students accepted into the concentration must complete three advanced writing workshops and a senior project (e.g., a group of stories, a significant portion of a novel, a collection of poems). To apply for admission to the creative writing concentration, students should submit a completed application form (available at the Literature Department office) and a thoughtful selection from their work (8–10 pages of poetry or fiction). Once accepted into the concentration, students are required to declare (or redeclare) the major in literature. At that time, students should meet with their adviser to discuss plans for a senior project.

Pre- and Early Modern Studies

The interdisciplinary study of literatures and cultures from antiquity through the early eighteenth century, especially in Europe. This concentration includes the study of popular culture and everyday life as well as readings in masterpieces of classical, medieval, early modern (Renaissance), and neo-classical literature.

Modern Literary Studies

The study of literature of the eighteenth, nineteenth, twentieth, and twenty-first centuries. This concentration examines ways in which modernity in general and literary modernism and postmodernism in particular emerge and develop in different countries and cultures.

World Literature and Cultural Studies

The study of literature and cultural production both within a global context and within specific histories and economies. Courses move beyond the literary text to include nonverbal forms of representation such as social movements and everyday life practices.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Literature majors must satisfy the Disciplinary Communication requirement by passing Literature 101.

Comprehensive Requirement

Students must successfully complete Literature 101 before taking any comprehensive requirement.

Seniors must select one of the following options to satisfy the campus exit requirement:

- Senior seminar. The senior seminar may be counted as one of the required upper-division courses. The senior seminar need not be in the student's area of concentration. Several senior seminars are offered each quarter; extensive writing is required in all seminars.
- Senior thesis. A student who wishes to propose a senior thesis (30–40 pages) must apply to a Literature Department faculty sponsor at least two quarters before the projected date of graduation. The application must include a proposed subject, a brief outline, a bibliography, and a sample of previous written work. Only those students who have received written permission from a faculty supervisor may complete a thesis to satisfy the senior exit requirement. A student whose application has been approved may receive course credit toward the major for one independent study (course 195) in a literature concentration.

For students in the creative writing concentration, a creative writing project under the supervision of a faculty member (Literature/Creative Writing 194 or 195) is required.

The Literature Minor

The minor in literature requires seven courses.

Two lower-division courses are required:

- Literature 1, *Literary Interpretation*: close reading and analysis of literary texts
- One Literature 61-series course: categories, methodologies, and problems of literary study, or one Literature 80-series course: topical, thematic, and comparative studies of literary texts

Five upper-division courses are required:

- Literature 101, *Theory and Interpretation*
- Four other upper-division literature courses (except Creative Writing)

The Literature minor does not require second-language proficiency or a senior seminar.

General Information

Transfer Credit

A student may petition to receive credit toward the lower-division requirements of the major or minor for up to two courses taken at other institutions. An introduction to literature course may be used to satisfy the Literature 1 course requirement. Any other literature course may be applied toward the Literature 61 or the Literature 80 course requirement.

Transfer students planning to major in literature are urged to complete the equivalent of one year of college-level study of a language other than English before entering UCSC.

Creative Writing Courses

Any qualified student may take creative writing courses for credit toward graduation. Only students accepted into the creative writing concentration, however, may use Literature/Creative Writing 180, 183, 194, and 195 to satisfy major requirements.

Credit For Repeated Courses

Courses that vary significantly in material or methodology from one presentation to the next may be repeated for credit and are so designated in the course description in the UCSC General Catalog.

Advising

Faculty advisers are available in the Literature Department office throughout each academic term; students may make appointments in advance to meet with them. Staff advisers are available by appointment and on a drop-in basis. Students are encouraged to consult with a faculty adviser once a quarter.

Senior Checklist

Three quarters before anticipated graduation, all literature majors must complete a checklist in collaboration with a department adviser. The purpose of the checklist is to confirm progress toward graduation and the satisfaction of all major requirements. Completion and approval of a senior checklist are required for graduation.

Honors

Honors in the literature major are awarded to graduating seniors who have earned a 3.70 to 3.89 grade-point average in their upper-division literature courses. Highest honors in the literature

major are awarded to graduating seniors who have earned a 3.90 or higher grade- point average in their upper-division literature courses. Honors are not awarded in the minor.

Opportunities for Study Abroad

The University of California's Education Abroad Program (EAP) operates study centers in countries throughout the world, all associated with host institutions of high academic standing. EAP serves over 1500 upper-division students from the nine UC campuses every year. Students who participate in a UC Education Abroad Program study year may petition to apply up to three upper-division courses from EAP toward the literature major, or two upper-division courses toward the literature minor.

Latin American and Latino Studies and Literature Combined Major

The departments of Latin American and Latino Studies and Literature offer a combined major. See Latin American and Latino Studies for additional information.

The Graduate Programs

The Doctoral Program

The UCSC doctoral program in Literature offers an innovative multilingual and multidisciplinary approach to literary studies. The program is relatively small; students are able to work closely with faculty throughout their graduate careers. They are encouraged to take advantage of the rich array of intellectual and cultural events, research clusters, and lectures offered on campus.

The doctoral program combines critical and independent thought with multilingual and global perspectives. Students work within and across five areas, each of which cuts across linguistic, national, and period boundaries: technologies of narrative; trans/post/emergent nationalisms; poetics, poetry, and experimental writing; materialism and material culture; and critical theory. In combination they allow students to blend critical approaches, literary traditions, and/or cultural archives in comparative, multilingual, and interdisciplinary projects. Students may elect to participate in cooperative programs between literature and feminist studies, Latin American and Latino studies, or American studies and receive a designated emphasis on their doctoral degree. Applications and requirements are available at the respective department offices.

The program requires significant literary work in two languages. All students are required to complete a minimum of two courses in a second-language literature in which 50 percent or more of the reading is done in the original language. The second literature must serve as a component of the qualifying examination.

The common requirements are:

- Literature 200, *Proseminar*, to be taken in fall quarter of the first year;
- A one-quarter Literature 201, *Pedagogy of Teaching/Teaching Assistant Training*, to be taken prior to or in conjunction with the first teaching assistant appointment;
- Twelve courses leading to the definition of an area of concentration. At least two of these must be in a second-language literature; at least one must focus on pre-1750 literature and culture. Up to four courses may be taken in other departments; up to three may be independent studies;
- One two-credit advising course, Literature 291F, per quarter;
- Three quarters of supervised teaching experience;
- The Literature Department's intensive three-week Graduate Summer Language Program or equivalent;
- A qualifying examination (with written, oral, and translation components);
- A prospectus outlining and defining the dissertation project;
- A dissertation (written in conjunction with Literature 299, *Thesis Research*).

A master of arts (M.A.) degree is conferred upon request to doctor of philosophy (Ph.D.) candidates who have successfully completed the literature Ph.D. qualifying examination or who have completed the coursework required for the doctorate (teaching assistant training and supervised teaching experience exempted) and written a master's thesis under the supervision of a faculty adviser.

More detailed information for prospective graduate students, including procedures for application and admission to graduate studies, examinations, and requirements for the doctor of philosophy degree, is available from the Division of Graduate Studies (<http://graddiv.ucsc.edu>) and on the department web site: <http://literature.ucsc.edu/>.

The Master's Program

A separate master of arts degree program is intended for students whose aim is to deepen and expand their literary/critical training and to prepare for entry into a Ph.D. program at another institution. Priority for admission is given to students interested in underrepresented areas of study within the Literature Department's offerings, such as the non-English language literatures and, more broadly, critical theory.

The M.A. program requirements may not be completed in less than one year; the maximum time to obtain a degree is two years.

The common requirements are as follows:

- Literature 200, *Proseminar*, to be taken in fall quarter of the first year;
- Seven courses leading to the definition of an area of concentration. Up to two of these may be taken in other departments. One may be an independent study course;
- One two-credit advising course, Literature 291F, per quarter;
- A thesis (written in conjunction with Literature 299, *Thesis Research*). Typically, a thesis will range in length from 35–50 pages, plus a bibliography.

The Literature Department does not normally provide financial support to students pursuing the M.A. degree; however, teaching assistantships are sometimes available. Admission to the M.A. program does not constitute admission to the Ph.D. program. Students may not automatically transfer from the M.A. program into the Ph.D. program, but must reapply. Further information and application materials are available from the Division of Graduate Studies (<http://graddiv.ucsc.edu>) and on the department web site (<http://literature.ucsc.edu/>).

303 Humanities 1
(831) 459-4778
<http://literature.ucsc.edu>

Program Description

The study of literature at UCSC is organized as an interdisciplinary field coordinated through a single Department of Literature, rather than through separate departments of English, modern languages, and classics. This structure fosters innovative and comparative approaches to literature among both faculty and students. Courses in the major encompass traditional literary history and interpretation as well as cross-cultural inquiry and current theoretical debates.

The literature major permits focused work in national literary traditions. Students may concentrate in English-language literatures; in French, German, or Italian; in Latin and/or Greek; or in Spanish/Latin American/Latino literatures. Alternatively, students may organize their studies by historical period. Students who choose pre- and early modern studies focus on early literary traditions from antiquity through the Middle Ages, the Renaissance, and the neo-classical period, while those engaged in modern literary studies concentrate on literature of the 18th, 19th, 20th, and 21st centuries. In addition, the world literature and cultural studies concentration emphasizes non-Western literatures, literature in a global context, as well as non-literary forms of cultural production. Finally, the Literature Department also offers a concentration in creative writing in which, in addition to studying literature, students work with faculty in upper-division workshops to improve their own creative writing skills.

Literature majors at UCSC are trained in critical reading, writing, and thinking, as well as in literary interpretation. These skills have wide applicability: they may lead to careers in other media such as film, theater, video, the visual arts, and electronic media; and they offer avenues into related disciplines such as history, philosophy, psychology, sociology, anthropology, politics, and history of art and visual culture. Literature majors traditionally enter a wide variety of careers ranging from law and journalism to management, government, international studies, publishing, technical writing, and teaching at all levels.

The Literature Department faculty requires that all literature majors have proficiency in a second language. Proficiency in more than one language enhances understanding of any literature and culture. Graduate programs in literature and other humanities disciplines generally require competence in a language other than English.

Letter Grade Requirement

Letter grades are required for 75 percent of courses applied toward the literature major, including the senior seminar or thesis, which must be taken for a letter grade.

Declaring the Major or Minor

Students must complete Literature 1 or its equivalent prior to declaring the major or minor. Students declare a major or minor in literature by completing and submitting a Proposed Study Plan and Declaration of Major/Minor petition. All students considering a literature major or minor should consult with staff and/or faculty advisers as early as possible and declare the major or minor before the end of their sophomore year. Transfer students are urged to declare the major or minor in the first quarter at UCSC.

Literature Major Options

Students wishing to major in literature may choose either the standard literature major or the intensive literature major. The intensive literature major is recommended particularly for students who plan to continue their studies in graduate school. The requirements for the intensive major include the study of literature in two languages; proficiency in a second language is therefore required.

The Standard Literature Major

The literature major requires: (1) proficiency in a second language; and (2) 12 courses in literature.

- *Language proficiency*: One year (three quarters or equivalent) of college level study of a non-English language or demonstrated reading ability at this level.
- The 12 required courses must include two lower-division and 10 upper-division courses.

Lower-Division Courses

Lower-division courses are introductions to critical reading and writing. Students should complete their lower-division coursework before beginning upper-division work.

Two lower-division courses are required:

- Literature 1, *Literary Interpretation*: close reading and analysis of literary texts
- One Literature 61-series course: categories, methodologies, and problems of literary study, or one Literature 80-series course: topical, thematic, and comparative studies of literary texts

Language proficiency: One year (three quarters or equivalent) of college level study of a non-English language or demonstrated reading ability at this level

Upper-Division Courses

Upper-division courses provide more detailed treatment of literary and theoretical problems, themes, and periods. Students are strongly encouraged to take courses across chronological periods and national boundaries. Students must successfully complete the language proficiency requirement before enrolling in Literature 102.

Ten upper-division courses are required:

- Literature 101, *Theory and Interpretation*: approaches to literary and cultural theories
- Literature 102, *Translation Theory*: approaches to literary and cultural translation, or one upper-division non-English literature course studied in the original language. Students must successfully complete the language proficiency requirement before enrolling in Literature 102
- Six upper-division courses in an area of concentration (described below)
- Two upper-division electives in literature

Distribution requirements. Among the 10 upper-division courses, at least two must focus on literature written prior to the year 1750; one course must focus on non-Western

literature or literature in a global perspective; and one course must focus on poetry. One of the upper-division courses must be a senior seminar, which ~~can~~ may be used to satisfy the campus comprehensive (exit) requirement. Some courses fulfill more than one distribution requirement. A list of annual course offerings indicating distribution codes for each course is available in the department office and on the Literature Department web page at <http://literature.ucsc.edu/courses>.

With prior permission from the literature undergraduate program director, one upper-division literature elective may be replaced by an upper-division course related to the student's area of concentration and chosen from another program in the humanities, arts, or social sciences.

The Intensive Literature Major

The Intensive Literature major requires (1) proficiency in a second language, and (2) 14 courses in literature.

- *Language proficiency*: in addition to the Standard Literature major requirement of one-year (three quarters or equivalent) of college-level study of a non-English language, or demonstrated reading ability at this level, students must complete at least two upper-division courses in a second-language literature studied in the original language. In many languages, two years of college-level study (or comparable ability) are needed before a student is prepared to enter an upper-division course. In a few languages (Greek, Latin, Middle Egyptian Hieroglyphs), less time is needed for this purpose.
- The 14 required courses must include two lower-division and 12 upper-division courses.

Lower-Division Courses

The same requirements apply as for the standard literature major. Students who choose the intensive literature major are required to achieve competence in a second-language literature. Upper-division literature coursework requires completion of a lower-division language sequence or the equivalent.

Upper-Division Courses

The intensive major requires 12 upper-division courses. Distribution requirements for the intensive major are the same as those for the standard literature major. In addition, students must complete at least two courses in a second-language literature studied in the original language. As in the standard major, with prior permission from the literature undergraduate program director, one upper-division literature elective may be replaced by an upper-division course related to the student's area of concentration and chosen from another program in the humanities, arts, or social sciences.

The Concentrations

The purpose of the upper-division area of concentration is to help students shape a coherent program of study. The department provides several defined concentrations, described below. For all concentrations except national/transnational literatures, texts may be read in the original or in translation.

National/Transnational Literatures

These concentrations examine literature within the frameworks of particular languages or national and regional traditions. National/transnational concentrations require that texts be read in the original language.

- English-language literatures
The study of American and British literature, as well as literatures of other English-speaking peoples around the world.
- French literature
The study of French and Francophone literatures, languages, and cultural practices of France, Africa, and the Caribbean.

- German literature
The study of the literature, language, and cultural practices of the German-speaking areas of central Europe including Germany, Austria, and Switzerland.
- Greek and Latin literature
The study of the literature, languages, and cultural practices of ancient Greece and Rome. Students may choose to concentrate in Greek or Latin or both.
- Italian literature
The study of Italian literature, language, and cultural practices from the Middle Ages to the present.
- Spanish/Latin American/Latino literatures
The study of literatures, language, and cultural practices of Spain, Latin America, and Latino populations in the United States.

Creative Writing

The Department of Literature offers a sequence of workshops from introductory through advanced levels in both poetry and fiction. Other activities available to interested students include participation in the production of literary journals on campus, attendance at readings by visiting writers, and use of a creative writing reading room.

Admission to this concentration is selective. Interested students are required to take one lower-division creative writing workshop at UCSC before applying to the creative writing concentration; however, students are strongly encouraged to complete two lower-division workshops (at least one at UCSC) before applying.

Students accepted into the concentration must complete three advanced writing workshops and a senior project (e.g., a group of stories, a significant portion of a novel, a collection of poems). To apply for admission to the creative writing concentration, students should submit a completed application form (available at the Literature Department office) and a thoughtful selection from their work (8–10 pages of poetry or fiction). Once accepted into the concentration, students are required to declare (or redeclare) the major in literature. At that time, students should meet with their adviser to discuss plans for a senior project.

Pre- and Early Modern Studies

The interdisciplinary study of literatures and cultures from antiquity through the early eighteenth century, especially in Europe. This concentration includes the study of popular culture and everyday life as well as readings in masterpieces of classical, medieval, early modern (Renaissance), and neo-classical literature.

Modern Literary Studies

The study of literature of the 18th, 19th, 20th, and 21st centuries. This concentration examines ways in which modernity in general and literary modernism and postmodernism in particular emerge and develop in different countries and cultures.

World Literature and Cultural Studies

The study of literature and cultural production both within a global context and within specific histories and economies. Courses move beyond the literary text to include nonverbal forms of representation such as social movements and everyday life practices.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Literature majors must satisfy the Disciplinary Communication requirement by passing Literature 101.

Comprehensive Requirement

Students must successfully complete Literature 101 before taking any comprehensive

requirement.

Seniors must select one of the following options to satisfy the campus exit requirement:

- Senior seminar. The senior seminar may be counted as one of the required upper-division courses. The senior seminar need not be in the student's area of concentration. Several senior seminars are offered each quarter; extensive writing is required in all seminars.
- Senior thesis. A student who wishes to propose a senior thesis (30–40 pages) must apply to a Literature Department faculty sponsor at least two quarters before the projected date of graduation. The application must include a proposed subject, a brief outline, a bibliography, and a sample of previous written work. Only those students who have received written permission from a faculty supervisor may complete a thesis to satisfy the senior exit requirement. A student whose application has been approved may receive course credit toward the major for one independent study (course 195) in a literature concentration.

For students in the creative writing concentration, a creative writing project under the supervision of a faculty member (Literature/Creative Writing 194 or 195) is required.

The Literature Minor

The minor in literature requires seven courses.

Two lower-division courses are required:

- Literature 1, *Literary Interpretation*: close reading and analysis of literary texts
- One Literature 61-series course: categories, methodologies, and problems of literary study, or one Literature 80-series course: topical, thematic, and comparative studies of literary texts

Five upper-division courses are required:

- Literature 101, *Theory and Interpretation*
- Four other upper-division literature courses (except Creative Writing)

The Literature minor does not require second-language proficiency or a senior seminar.

General Information

Transfer Credit

A student may petition to receive credit toward the lower-division requirements of the major or minor for up to two courses taken at other institutions. An introduction to literature course may be used to satisfy the Literature 1 course requirement. Any other literature course may be applied toward the Literature 61 or the Literature 80 course requirement.

Transfer students planning to major in literature are urged to complete the equivalent of one year of college-level study of a language other than English before entering UCSC.

Creative Writing Courses

Any qualified student may take creative writing courses for credit toward graduation. Only students accepted into the creative writing concentration, however, may use Literature/Creative Writing 180, 183, 194, and 195 to satisfy major requirements.

Credit For Repeated Courses

Courses that vary significantly in material or methodology from one presentation to the next may be repeated for credit and are so designated in the course description in the UCSC General Catalog.

Advising

Faculty advisers are available in the Literature Department office throughout each academic term; students may make appointments in advance to meet with them. Staff advisers are available by appointment and on a drop-in basis. Students are encouraged to consult with a faculty adviser once a quarter.

Senior Checklist

Three quarters before anticipated graduation, all literature majors must complete a checklist in collaboration with a department adviser. The purpose of the checklist is to confirm progress toward graduation and the satisfaction of all major requirements. Completion and approval of a senior checklist are required for graduation.

Honors

Honors in the literature major are awarded to graduating seniors who have earned a 3.70 to 3.89 grade--point average in their upper-division literature courses. Highest honors in the literature major are awarded to graduating seniors who have earned a 3.90 or higher grade--point average in their upper-division literature courses. Honors are not awarded in the minor.

Opportunities for Study Abroad

The University of California's Education Abroad Program (EAP) operates study centers in countries throughout the world, all associated with host institutions of high academic standing. EAP serves over 1500 upper-division students from the nine UC campuses every year. Students who participate in a UC Education Abroad Program study year may petition to apply up to three upper-division courses from EAP toward the literature major, or two upper-division courses toward the literature minor.

Latin American and Latino Studies and Literature Combined Major

The departments of Latin American and Latino Studies and Literature offer a combined major. See Latin American and Latino Studies for additional information.

The Graduate Programs

The Doctoral Program

The UCSC doctoral program in Literature offers an innovative multilingual and multidisciplinary approach to literary studies. The program is relatively small; students are able to work closely with faculty throughout their graduate careers. They are encouraged to take advantage of the rich array of intellectual and cultural events, research clusters, and lectures offered on campus.

The doctoral program combines critical and independent thought with multilingual **training** and global perspectives. Students work within and across five areas, each of which cuts across linguistic, national, and period boundaries: technologies of narrative; trans/post/emergent nationalisms; poetics, poetry, and experimental writing; materialism and material culture; and critical theory. In combination they allow students to blend critical approaches, literary traditions, and/or cultural archives in comparative, multilingual, and interdisciplinary projects. Students may elect to participate in cooperative programs between literature and feminist studies, Latin American and Latino studies, or American studies and receive a designated emphasis on their doctoral degree. Applications and requirements are available at the respective department offices.

The program requires significant literary work in two languages. All students are required to complete a minimum of two courses in a second-language literature in which 50 percent or more of the reading is done in the original language. The second literature must serve as a component of the qualifying examination.

The common requirements are:

- Literature 200, *Proseminar*, to be taken in fall quarter of the first year;
- A one-quarter Literature 201, *Pedagogy of Teaching/Teaching Assistant Training*, to be taken prior to or in conjunction with the first teaching assistant appointment;
- Twelve courses leading to the definition of an area of concentration. At least two of these must be in a second-language literature; at least one must focus on pre-1750 literature and culture. Up to four courses may be taken in other departments; up to three may be independent ~~studies~~ studies;
- One two-credit advising course, Literature 291F, per quarter;
- Three quarters of supervised teaching experience;
- The Literature Department's intensive three-week Graduate Summer Language Program or equivalent;
- A qualifying examination (with written, oral, and translation components);
- A prospectus outlining and defining the dissertation project;
- A dissertation (written in conjunction with Literature 299, *Thesis Research*).

A master of arts (M.A.) degree is conferred upon request to doctor of philosophy (Ph.D.) candidates who have successfully completed the literature Ph.D. qualifying examination or who have completed the coursework required for the doctorate (teaching assistant training and supervised teaching experience exempted) and written a master's thesis under the supervision of a faculty adviser.

More detailed information for prospective graduate students, including procedures for application and admission to graduate studies, examinations, and requirements for the doctor of philosophy degree, is available from the Division of Graduate Studies (<http://graddiv.ucsc.edu>) and on the department web site: <http://literature.ucsc.edu/>.

The Master's Program

A separate master of arts degree program is intended for students whose aim is to deepen and expand their literary/critical training and to prepare for entry into a Ph.D. program at another institution. Priority for admission is given to students interested in underrepresented areas of study within the Literature Department's offerings, such as the non-English language literatures and, more broadly, critical theory.

The M.A. program requirements may not be completed in less than one year; the maximum time to obtain a degree is two years.

The common requirements are as follows:

- Literature 200, *Proseminar*, to be taken in fall quarter of the first year;
- Seven courses leading to the definition of an area of concentration. Up to two of these may be taken in other departments. One may be an independent study course;
- One two-credit advising course, Literature 291F, per quarter;
- A thesis (written in conjunction with Literature 299, *Thesis Research*). Typically, a thesis will range in length from 35–50 pages, plus a bibliography.

The Literature Department does not normally provide financial support to students pursuing the M.A. degree; however, teaching assistantships are sometimes available. Admission to the M.A. program does not constitute admission to the Ph.D. program. Students may not automatically transfer from the M.A. program into the Ph.D. program, but must reapply. Further information and application materials are available from the Division of Graduate Studies (<http://graddiv.ucsc.edu>) and on the department web site (<http://literature.ucsc.edu/>).

Faculty and Professional Interests

Professor

JORGE ALADRO FONT

Spanish mysticism; theory and historical developments of imagery in the Middle Ages to the baroque period; Renaissance and baroque Hispanic literature; Italian ideas in the Spanish Renaissance; Cervantes

GEORGE T. AMIS, Emeritus

KAREN BASSI

Greek and Latin literatures; gender; literary and cultural theory; pre- and early modern studies; historiography; visual and performance studies

MURRAY BAUMGARTEN

Dickens; Victorian literature and culture; the Bible; translation; modern Jewish writing; the Holocaust

HARRY BERGER, JR., Emeritus

MARGARET R. BROSE, Emerita

JULIANNE BURTON-CARVAJAL, Emerita

CHRISTOPHER CONNERY

World literature and cultural studies; globalism and geographical thought; the 1960s; Marxism; pre-modern and modern Chinese cultural studies; cultural revolution

NATHANIEL DEUTSCH

Hebrew Bible; rabbinic literature; Jewish mysticism; Hasidism; Eastern European Jewish life; ethnography

ROBERT M. DURLING, Emeritus

JOHN M. ELLIS, Emeritus

CARLA FRECCERO

Renaissance studies; French and Italian language and literature; early modern studies; postcolonial theories and literature; contemporary feminist theories and politics; queer theory; U.S. popular culture; posthumanism; animal studies

PASCALE GAITET, Emerita

MARY-KAY GAMEL

Performance studies; ancient Mediterranean performance; Greek and Latin literatures; myth; reception of Greek and Roman texts and artifacts; film; feminist approaches to literature and performance

SUSAN GILLMAN

Nineteenth-century American literature and culture; theories of culture, race, and gender; world literature and cultural studies

WLAD GODZICH

Theory of literature; philosophy and literature; emergent literature; translation theory; globalization and culture; European integration; knowledge society; literatures of Africa, the Caribbean, Europe (Central, Eastern, and Western), Brazil, Canada; detective and crime fiction; science fiction; medicine and literature

KIRSTEN SILVA GRUESZ

Transnational Americas studies; Chicano/Latino literatures and cultures; 19th-century U.S. and Latin American literature; poetry; history of the book; reading and literacy; bilingualism

MARGO HENDRICKS, Emerita

JOHN O. JORDAN

Dickens; Victorian literature and culture; the English novel; literature of South Africa; narrative theory

SHARON KINOSHITA

Medieval Mediterranean studies (literary, historical, art historical); the Francophone Middle Ages; empires; postcolonial and globalization theory; Marco Polo; world literature and cultural studies

NORMA KLAHN

Latin American literary and cultural studies (specialization: Mexico); Chicano/Latino literature and culture from a cross-border perspective; modernity/postmodernity; poetics and politics; genre theory (novel, poetry, autobiography); contemporary critical theories (i.e.; border, ethnic, feminist, transnational/global)

KIMBERLY J. LAU

Feminism, discourse, and power; feminist theory; discourse, analysis, and ethnographic methods; folklore and narrative; globalization

H. MARSHALL LEICESTER, JR.

Psychoanalysis; poststructuralism; gender theories; theory of cultural change; cultural studies and popular culture: opera, film, American country music

JOHN P. LYNCH, Emeritus

NATHANIEL E. MACKEY, Emeritus

LOURDES MARTÍNEZ-ECHAZÁBAL

Latin American and Caribbean literatures; Afro-Latin American literatures, cultures, and societies; found[n]ational narratives; Brazilian literature; literatures of Cuba and the Cuban diaspora; critical race theory

TYRUS MILLER

Modernist, avant-garde, and postmodernist literature; the interrelations of the arts in the 20th century; aesthetics theory; communist and post-communist society, intellectual history, and culture, especially in East-Central and Southern Europe; cinema and film theory; the Frankfurt School; Gyrgy Lukcs; contemporary poetry and language arts

HELENE MOGLEN, Emerita

MADELINE MOORE, Emerita

DANIEL SELDEN

Afroasiatic languages and literatures; Greek and Latin; Hellenistic culture; the classical tradition; history of criticism; literary theory

PRISCILLA W. SHAW, Emerita

DEANNA SHEMEK

Early modern Italian literature and culture; Renaissance feminism; humanism and gender production; letter-writing and epistolary culture; early modern literacy; historical ideas of the Renaissance; Renaissance drama; the northern court circles

PAUL N. SKENAZY, Emeritus

GRETA SLOBIN, Emerita

S. PAGE STEGNER, Emeritus

RICHARD TERDIMAN

Nineteenth- and 20th-century French and European literature and culture; literary and cultural theory; contemporary critical theory; cultural globalization; digital humanities and digital publication

GEORGES VAN DEN ABBEELE

Early modern French philosophy, literature, and culture; Francophone literature; travel narrative and tourism studies; relations between philosophy and literature; poststructuralist and postmodernist critical theory; film and film theory; East-West literary relations; West Coast regional history and literature

THOMAS A. VOGLER, Emeritus

MICHAEL J. WARREN, Emeritus

ROB WILSON

Transnational and postcolonial literatures; especially as located in Asia/Pacific emergences as posited against American empire of globalization; cultural poetics of America; the sublime; Longinus to Hiroshima; mongrel poetics of experimental writing, especially poetry

KAREN TEI YAMASHITA

History and anthropology of Japanese immigration to Brazil Asian American literature; modern fiction; playwriting

Associate Professor

VILASHINI COOPAN

Postcolonial studies; comparative and world literature; literatures of slavery and diaspora; globalization studies; cultural theory of race and ethnicity

JODY GREENE

Seventeenth- and 18th-century British and French literature and culture; pre- and early modern studies; critical theory; gay and lesbian cultural studies; gender studies; history of authorship; history of the book; human property

LOISA NYGAARD

Eighteenth- and early 19th-century German literature; Goethe; Romantic fiction; landscape and landscape aesthetics; xenophobia in Germany

MICAH PERKS

Reading and writing contemporary fiction; memoir and historical fiction; alternative communities

JUAN POBLETE

Latin(o) American literatures; transnational/global cultures (literature, radio, film); Latin(o) American cultural studies; 19th-century studies; the history of reading practices

Assistant Professor

DORIAN BELL

Nineteenth- and 20th-century French literature and intellectual history; histories of empire and anti-Semitism; literature and science; film studies; digital humanities

A. HUNTER BIVENS

Twentieth- and 21st-century German literature and film; Marxism and critical theory; psychoanalysis; lyric poetry; literary realism; the novel

CHRISTINE HONG

Asian American literature and cultural criticism; African American literature and black freedom studies; Korean diasporic cultural production; Pacific Rim studies; postcolonial theory; critical race theory; human rights discourse; law and literature; narrative theory; film and visual studies

G.S. SAHOTA

Post-colonial studies, world literature; Indian literary and intellectual history (especially in Urdu, Sanskrit, Punjabi, Hindi, and English); religion and modernity (Islam, Hinduism, Sikhism); romanticism; Marxism; translation

Professor

CHARLES W. HEDRICK JR. (History)

Greek and Roman history; epigraphy; historiography; political theory

FORREST G. ROBINSON (Humanities)

Nineteenth- and 20th-century American literature; including Mark Twain; the American West; and popular culture; biography and American culture theory

Literature**Lower-Division Courses****1. Literary Interpretation. F,S**

Close reading and analysis of literary texts, including representative examples of several different genres and periods. An introduction to practical criticism required of all literature majors; should be completed prior to upper-division work in literature. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to first-year students and sophomores, or literature and proposed literature majors and literature minors. (General Education Code(s): TA, IH, W.) *W. Godzich, K. Bassi*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.)

61. Introduction to Literary Genres.**61F. Introduction to Reading Fiction. ***

Close reading of short stories and some novels with the aim of developing critical methods for the analysis and interpretation of prose fiction. Topics include character, plot, narrative structure, and the poetics of prose. (General Education Code(s): IH.)
The Staff

61J. Introduction to Jewish Literature and Culture. W

Surveys 3,000 years of Jewish literature and culture. Themes include origins of the Jews in the ancient world; formation and persistence of the Jewish diaspora; coherence and diversity of Jewish experience; Jewish narrative and textual traditions; interaction between Jews and other cultures; tensions between tradition and modernity. (General Education Code(s): ER, IH, E.) *M. Baumgarten*

61M. Approaches to Classical Myth. *

Introduction to Greek myths, including selected ancient texts and visual artifacts, historical and cultural context of their creation and reception, modern theoretical approaches such as structuralism and psychoanalysis, and interpretations in various media. (General Education Code(s): TA, IH.) *M. Gamel*

80. Topics in Literature.**80G. Studies In Modernism. ***

This introductory course explores literature and culture of the first half of the 20th century. Course materials may include literary texts, films, philosophy, visual arts, and critical essays. (General Education Code(s): TA, T4-Humanities and Arts.) *The Staff*

80I. Topics in American Culture. F

A history of one or more cultural genres in written, visual, and/or musical forms. Course topic changes; please see the Schedule of Classes for the current topic. (Formerly "Topics in American Popular Culture") (General Education Code(s): T4-Humanities and Arts.) *F. Robinson*

80L. The Holocaust: The Destruction of European Jewry. *

Focus is on the destruction of the Jews of Europe by Nazi Germany. Issues are historically grounded, and include works of literature, social sciences, philosophy, and film. (Also offered as History 80W. Students cannot receive credit for both courses.) (General Education Code(s): ER, T4-Humanities and Arts, E.) *M. Baumgarten, P. Kenez*

80N. Latino Expressions in the U.S. *

An introduction to Latino literature and culture in the U.S. A study of the creative

expressions of Chicanos/as, Nuyoricans, Cuban Americans, and other Latin Americans in the U.S. (General Education Code(s): ER, T4-Humanities and Arts, E.)
K. Gruesz

80Z. Introduction to Shakespeare. S

Study of representative plays. No previous experience with Shakespeare is assumed. (General Education Code(s): TA, T4-Humanities and Arts.) *M. Ursell*

99. Tutorial. F,W,S

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. *The Staff*

Upper-Division Courses

101. Theory and Interpretation. W,S

Contemporary approaches to literary and cultural theory, with emphasis on how theoretical perspectives advance and broaden the reading of literary texts. Introduction to important new theoretical developments and their antecedents. Literature majors should complete this course as early as possible. Course topic changes; see the *Schedule of Classes* for current topic.

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to literature and proposed literature majors and literature minors. May be repeated for credit. (General Education Code(s): W.) *A. Bivens, V. Cooppan*

102. Translation Theory. W

Promotes the understanding of translation and its role in redefining meanings across epochs and cultures, in establishing common norms, and in advancing mutual intelligibility; but also providing encounters with absolute alterity. Actual translations are used as case studies. One year of college-level, non-English language study or the equivalent reading ability in a non-English language required. (General Education Code(s): TA.) *S. Gillman*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. *The Staff*

Graduate Courses

200. Proseminar. F

The proseminar provides a common experience for entering students, facilitates exchange of ideas and approaches to literary and extra-literary texts, critical issues, and theoretical problems. It focuses on broad aspects of the history of theory and criticism, on the students' critical writing, and on aspects of professional development. Enrollment restricted to graduate students. *D. Selden*

201. The Pedagogy of Literature (1 credit). F

Provides training for graduate students in university-level pedagogy in general and in the pedagogy of literature specifically. Coordinated by a graduate student who has had substantial experience as a teaching assistant, under the supervision of a faculty member. Enrollment restricted to graduate students. May be repeated for credit. *S. Kinoshita*

202. Colloquium (2 credits). F,W,S

Student receives credit for attending a designated number of freestanding lectures, colloquia, symposia, or conferences during the term and reports orally, or in writing, to instructor. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

204. Readings in Literature (2 credits). *

Focuses on selected texts or authors in literature and/or theory. Students meet with instructor to discuss readings and deepen their knowledge on a particular author, critic, theorist, or text. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

205. Dissertation Writing Practicum (2 credits). *

Introduces the methods and practice of dissertation writing in literature. Workshop format. Meets one hour per week. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

291F. Advising (2 credits). F,W,S

Independent study formalizing the advisee-advisor relationship. Regular meetings to plan, assess, and monitor academic progress and to evaluate course work as necessary. May be used to develop general bibliography of background reading and trajectory of study. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Creative Writing

Lower-Division Courses

10. Introduction to Creative Writing. F,W,S

Introduction to the crafts and techniques of poetry, fiction, and creative non-fiction, identifying and exploring traditional and non-traditional literary forms and genres while working on individual creative writing projects. An author reading and two workshop sections per week. Prerequisite: satisfaction of the Entry Level Writing requirement. Enrollment restricted to first-year students, sophomores, and juniors. May be repeated for credit. (General Education Code(s): PR-C, A.) *The Staff*

52. Intermediate Fiction Writing. F,W,S

An intermediate-level course in fiction designed for prospective creative writing majors. Prerequisite(s): submission of writing at first class meeting. May be repeated for credit. (General Education Code(s): PR-C, A.) *R. Wilson, T. Yamamura*

53. Intermediate Poetry Writing. F,W,S

An intermediate-level course in poetry designed for prospective creative writing majors. Prerequisite(s): submission of writing at first class meeting. May be repeated for credit. (General Education Code(s): PR-C, A.) *R. Wilson, R. Wilson, G. Young*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. *The Staff*

Upper-Division Courses**170. Methods and Materials. F,W,S**

Focuses on a particular process or subject used in the production of a literary text. Course is intended to work as a bridge between invention and scholarship. Course topic changes; please see the Schedule of Classes for current topic. Satisfies the Creative Writing Literature concentration. Enrollment restricted to creative writing literature majors. May be repeated for credit. (General Education Code(s): A.) *M. Baumgarten, M. Perks, R. Wilson*

180. Advanced Writing: Fiction. F,W,S

Intensive work in writing fiction. Satisfies the Creative Writing Literature concentration. Enrollment restricted to creative writing literature majors. May be repeated for credit. (General Education Code(s): A.) (W) *M. Sanders-Self*, (FS) *K. Yamashita*

183. Advanced Writing: Poetry. F,W,S

Intensive work in writing poetry. Satisfies the Creative Writing Literature concentration. Enrollment restricted to creative writing literature majors. May be repeated for credit. (General Education Code(s): A.) (W) *G. Young*, (FS) *R. Wilson*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) *The Staff*

194. Creative Project Seminar.

Seminar for students beginning work on their creative writing senior project. Led by a faculty member, the seminar helps prepare each student to complete the project. Attention is given to focusing of creative topics, review of work in progress, work rhythms, and revision.

194A. Poetry. S

Satisfies the Creative Writing Literature concentration. Prerequisite(s): Literature 101. Enrollment restricted to senior creative writing literature majors. *G. Young*

194B. Fiction. S

Satisfies the Creative Writing Literature concentration. Prerequisite(s): Literature 101. Enrollment restricted to senior creative writing literature majors. *K. Yamashita*

195. Senior Essay. F,W,S

Prerequisite(s): Literature 101. Students submit petition to sponsoring agency. *The Staff*

198. Group Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

English-Language Literatures

Upper-Division Courses**102. Canons.****102A. The Traditional British Canon, Part I. S**

The constitution of the "canon" of English literature from Chaucer to Cowper. Satisfies the English and Pre- and Early Modern Studies Literature concentrations;

also satisfies the Poetry and Pre- and Early Modern distribution requirements.
(General Education Code(s): TA.) *J. Greene*

102D. The Traditional U.S. Canon, 1900 to the Present. *

Major works from 1900 to the present, with attention to their social and cultural context. Satisfies the English and Modern Literature concentrations. *The Staff*

103. Periods and Movements.

103A. British Literature and Culture to 1740. W

Literature and society to 1740. Satisfies the English and Pre- and Early Modern Studies Literature concentrations; also satisfies the Pre- and Early Modern Studies distribution requirement. May be repeated for credit. (General Education Code(s): TA.) *M. Ursell*

103E. Studies in Romanticism. F

A survey of major romantic themes and authors between 1780 and 1820. Explores relationships to preromantic and postromantic authors. The main goal is to achieve familiarity with a wide range of individual poems in the general context of romanticism. Satisfies the English and Modern Literature concentrations; also satisfies the Poetry distribution requirement. (General Education Code(s): TA.) *H. Leicester*

103J. Contemporary American Literature. F

A selective examination of major writings since WWII, with attention to both literary issues and historical context. Satisfies the English and Modern Literature concentrations. May be repeated for credit. *C. Hong*

110. Prose.

110A. Studies in the English Novel. *

From the 18th to the 20th century. Texts include work by Fielding, Austen, Brontë, Dickens, Conrad, and Woolf. Satisfies the English and Modern Literature concentrations. (General Education Code(s): TA.) *J. Jordan*

120. Poetry.

120B. Victorian Poetry. S

A reading of the major Victorian poets from Tennyson to early Yeats. (Formerly British Literature 110C.) (General Education Code(s): TA.) *J. Jordan*

120H. Beat Literature and the World. *

Explores the sources and context of Beat writing, emphasizing the Beats' intense interest in and engagement with the world at large. Includes works by major and minor Beat writers. Satisfies the English and Modern Literary Studies concentration; also satisfies the Poetry distribution requirement. (General Education Code(s): TA.) *R. Wilson*

140. Visual Media/Popular Culture.

140I. British Film. *

Films are considered both as texts in their own right and as expressions and contributions to larger social discourses around the specific tensions of British society and culture. Course topic changes; see the Schedule of Classes for current topic. Satisfies the English and Modern Literature concentrations. May be repeated for credit. (General Education Code(s): IM.) *H. Leicester*

150. Ethnic Writing.

150A. Afro-American Literature. *

Examination of Afro-American writing and cultural representations, with attention to the historical, cultural, and general literary contexts out of which they emerged and upon which they commented. Course topic changes; please see the Schedule of Classes for the current topic. Satisfies the English and Modern Literature concentrations. May be repeated for credit. (General Education Code(s): ER, E.) *C. Hong*

150C. Asian American Literature. *

Examination of Asian American literary works (fiction, poetry, dramatic essays) in the context of the historical presence of Asian Americans in the United States from the 1850s. Emphasis on comparison of select works from ethnic Asian writings. Satisfies the English and Modern Literature concentrations. (General Education Code(s): ER, E.) *K. Yamashita*

155. Regional Writing.

155B. Regions in American Literature. F

Examines development of regional writing in the U.S. Course topic changes; see the Schedule of Classes for current topic. Satisfies the English and Modern Literature concentrations. May be repeated for credit. *R. J. Wilson*

155D. Studies in South African Literature. *

A survey of writing from South Africa since 1948, focusing on social and political themes. Authors include Paton, Gordimer, Mphahlele, Fugard, Ndebele, Head, Brutus, Coetzee, and others. Satisfies the English, Modern, and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): ER, E.) *J. Jordan*

160. Transnational Writing.

160A. American Writers Abroad. *

Focuses on American modernist expatriate writers and travelers including Gertrude Stein, Henry Miller, Djuna Barnes, Paul and Jane Bowles, James Baldwin, Langston Hughes, John Reed, and H.D. (Hilda Doolittle). Satisfies the English and Modern Literary Studies concentrations. *T. Miller*

170. Individual Authors.

170A. Geoffrey Chaucer. *

Close study of Chaucer's poetry, with some attention to relevant cultural, philosophical, and historical issues in the context of the late medieval period. Particular emphasis on *The Canterbury Tales*. Satisfies the English and Pre- and Early Modern Studies Literature concentrations; also satisfies the Poetry and Pre- and Early Modern distribution requirements. (General Education Code(s): TA.) *H. Leicester*

170C. William Shakespeare. F

Satisfies the English and Pre- and Early Modern Studies Literature concentrations; also satisfies the Pre- and Early Modern distribution requirement. May be repeated for credit. (General Education Code(s): TA.) *M. Ursell*

170F. Charles Dickens. *

Study of representative work by Charles Dickens. Satisfies the English and Modern Literary Studies concentrations. May be repeated for credit. (General Education Code(s): TA.) *J. Jordan*

170H. Dickinson and American Women Poets. F

Focuses on Emily Dickinson's letters and poems with emphasis on genre, audience, art and the erotic, and on current textual editing issues, including development of the Dickinson Electronic Archives. Also connections to other poets: Anne Bradstreet, Gwendolyn Brooks, Sandra Cisneros, Sylvia Plath, and Adrienne Rich. (Formerly American Literature 120P.) (General Education Code(s): TA.) *J. Beard*

180. Topics.

180B. The Gothic Imagination in Fiction, Film, and Theory. W

Readings include theoretical essays by Freud and Lacan and such fictions as "The Monk," "Frankenstein," "Dracula," "Maus," "The Yellow Wallpaper," and "Beloved." Films change each year, but may include "Alien" and "Blue Velvet." Satisfies the English and Modern Literature concentrations. May be repeated for credit. (General Education Code(s): TA.) *H. Moglen*

180E. Literature and Culture of the American Left. *

Survey of literature, music, and film associated with leftist social movements and culture. Situates literary and cultural representations in an historical context. Course topic changes; please see the Schedule of Classes for the current topic. Satisfies the English and Modern Literary Studies concentrations. (Formerly The 1930s: Literature and Culture of the American Left.) May be repeated for credit. *C. Hong*

180H. Women's Literature. *

Works by women from the 18th century to the present, with special attention to the relationship of literature to history, psychology, and aesthetics. Course topic changes; please see the Schedule of Classes for the current topic. Satisfies the English and Modern Literature concentrations. May be repeated for credit. (General Education Code(s): TA.) *The Staff*

180K. War in Contemporary American Culture. *

Considers the treatment of war in American literature since World War II. Close attention paid to both literary form and relevant historical context. Also provides perspectives on, and critical tools for thinking about, contemporary armed conflict. Course topic changes; please see the Schedule of Classes for the current topic. Satisfies the English and Modern Literature concentrations. (General Education Code(s): TA.) *The Staff*

190. Senior Seminars.

190A. Individual Authors. S

Intensive examination of works by individual authors. Course topic changes; see the Schedule of Classes for current topic. Satisfies the English Literature concentration; also satisfies the Senior Seminar distribution requirement. Prerequisite(s): Literature 101. Enrollment restricted to senior literature majors. May be repeated for credit. *F. Robinson*

190K. Studies in Poetry. *

Studies in English-language poetry. Course topic changes; see the Schedule of Classes for current topic. Satisfies the English concentration; also satisfies the poetry and senior seminar distribution requirements. Prerequisite(s): Literature 101. Enrollment restricted to senior literature majors. *The Staff*

190L. Studies in English Language Literature. F

Studies of selected authors or issues in English language literature. Course topic changes; see the Schedule of Classes for current topic. Satisfies the English Literature concentration; also satisfies the senior seminar distribution requirement. Prerequisite(s): Literature 101. Enrollment restricted to senior Literature majors. *H. Berger, C. Hong, H. Leicester*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

195. Senior Essay. F,W,S

Students submit petition to sponsoring agency. Prerequisite(s): Literature 101. *The Staff*

198. Group Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. *The Staff*

Graduate Courses**203. Periods and Movements. S**

Examines a particular historical period or literary movement. Course topic changes; see the Schedule of Classes for current topic. Enrollment restricted to graduate students. May be repeated for credit. *S. Gillman*

280. Topics in English Language Literature. S

Course topic changes; see the Schedule of Classes for current topic. Enrollment restricted to graduate students. May be repeated for credit. *J. Greene*

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with teaching of undergraduates. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

French Literature

Upper-Division Courses**131. The Middle Ages. W**

Speaking, reading, and writing proficiency in French required. Study of 12th- and 13th-century texts, with attention to problems of history and social change. In modern translations with selected readings in Old French or Provençal. Course topic changes; see the Schedule of Classes for current topic. Satisfies the French and Pre- and Early Modern Studies Literature concentrations; also satisfies the Poetry and Pre- and Early Modern distribution requirements. May be repeated for

credit. *S. Kinoshita*

141. Studies in Narrative. F

Speaking, reading, and writing proficiency in French required. Course topic changes; see the Schedule of Classes for current topic. Satisfies the French and Modern Literary Studies concentrations. May be repeated for credit. *A. Khorev*

152. Texts and Contexts. S

Speaking, reading, and writing proficiency in French required. Examines implications of social and political change in terms of literary theory and practice. Places equal emphasis on literary and other kinds of cultural texts: historical, political, and cinematic. Satisfies the French Literature concentration. May be repeated for credit. *C. Freccero*

195. Senior Essay. F,W,S

Speaking, reading, and writing proficiency in French required. Prerequisite(s): Literature 101. Students submit petition to sponsoring agency. *The Staff*

198. Group Tutorial. F,W,S

Speaking, reading, and writing proficiency in French required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Speaking, reading, and writing proficiency in French required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Speaking, reading, and writing proficiency in French required. Students submit petition to sponsoring agency. *The Staff*

Graduate Courses

230. Studies in Literary and Cultural History. *

In-depth examination of one period of French literature. Course topic changes; see the Schedule of Classes for current topic. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

252. Texts and Contexts. W,S

The implications of social and political change examined in terms of literary theory and practice. Equal emphasis placed on literary and other kinds of cultural texts: historical, political, cinematic. Enrollment restricted to graduate students. May be repeated for credit. *C. Freccero, S. Kinoshita*

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with the teaching of undergraduates. Students submit petition to sponsoring agency. *The Staff*

295. Directed Reading. F,W,S

Directed reading which does not involve a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

German Literature

Upper-Division Courses

102. Introduction to German Literature. *

Speaking, reading, and writing proficiency in German required. Wide reading of works representing the major authors, periods, and genres of German literature. Satisfies the German and Modern Literature concentrations. *L. Nygaard*

120. Fear of the Foreign: Xenophobia in German Literature and Culture. S

Speaking, reading, and writing proficiency in German required. Considers recent violence against immigrants and asylum-seekers in Germany, and moves on to examine images of people perceived as "foreign" or alien in German literature and culture from early times to the present. Satisfies the German and Modern Literature concentrations. *L. Nygaard*

150. German Romanticism. *

Speaking, reading, and writing proficiency in German required. A study of the emergence and

development of German Romanticism. Central concerns are the Romantics' attitude toward the role of the imagination in literature and their attempts to revitalize myth and folklore in their works. Authors read include Tieck, Novalis, Hoffmann, Eichendorff, and Heine. Satisfies the German and Modern Literature concentrations. *L. Nygaard*

Speaking, reading, and writing proficiency in German required. A survey of contemporary German culture in the context of the current debate on postmodernism and the avant-garde. Course topic changes; please see the Schedule of Classes for current topic. Satisfies the German and Modern Literature concentrations. May be repeated for credit. *A. Bivens*

195. Senior Essay. F,W,S

Speaking, reading, and writing proficiency in German required. Prerequisite: Literature 101. *The Staff*

198. Group Tutorial. F,W,S

Speaking, reading, and writing proficiency in German required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Speaking, reading, and writing proficiency in German required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. *The Staff*

Graduate Courses

275. Special Topics in German Literature. *

Examination of topics within German literature. Course topic changes; see the Schedule of Classes for current topic. May be repeated for credit. Enrollment restricted to graduate students. *A. Bivens*

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with the teaching of undergraduates. Students submit petition to sponsoring agency. *The Staff*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Greek Literature

Upper-Division Courses

100. Introduction to Greek Literature. S

Reading proficiency in Ancient Greek required. Satisfies the Greek and Pre- and Early Modern Studies Literature concentrations; also satisfies the Pre- and Early Modern distribution requirement. May be repeated for credit. (General Education Code(s): IH.) *K. Bassi*

102. Greek Poetry. *

Reading proficiency in Ancient Greek required. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Greek and Pre- and Early Modern Studies Literature concentrations; also satisfies the Poetry and Pre- and Early Modern distribution requirements. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. May be repeated for credit. *K. Bassi*

103. Greek Drama. W

Reading proficiency in Ancient Greek required. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Greek and Pre- and Early Modern Studies Literature concentrations; also satisfies the Pre- and Early Modern Studies distribution requirement. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. May be repeated for credit.

104. Prose Authors. F

Reading proficiency in Ancient Greek required. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Greek and Pre- and Early Modern Literature concentrations; also satisfies the Pre- and Early Modern distribution requirement. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. May be repeated for credit. *C. Hedrick*

105. Special Topics in Greek Literature.

Readings in selected ancient Greek texts. Course topic changes; see the Schedule of Classes for current topic. Focus is on translation and interpretation; requirements normally include translation exams and interpretive essays. Satisfies the Greek and Pre- and Early Modern Literature concentrations; also satisfies the Global and Pre- and Early Modern distribution requirement. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. May be repeated for credit. *The Staff*

193. Field Study. F,W,S

Provides for an individual program of study sponsored by a faculty member and carried on off campus. May be taken concurrently or consecutively for up to three courses of credit. Designed for upper-division students, with proposal supported by a faculty member willing to supervise, and approval of the chair of the Literature Department. Students submit petition to sponsoring agency. *The Staff*

195. Senior Thesis. F,W,S

Reading proficiency in Ancient Greek required. Prerequisite(s): Literature 101. *The Staff*

198. Group Tutorial. F,W,S

Reading proficiency in Ancient Greek required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Reading proficiency in Ancient Greek required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Reading proficiency in Ancient Greek required. Students submit petition to sponsoring agency. *The Staff*

Graduate Courses

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with the teaching of undergraduates. *The Staff*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Italian Literature

Upper-Division Courses

102. Italian Literary Genres. *

Close readings of a small number of texts representing major authors, periods, and genres (lyric, dramatic, narrative) of Italian literature. Intensive practice in spoken and written Italian. Satisfies the Italian and Modern Literature concentrations. May be repeated for credit. *D. Shemek*

130. Author and Contexts.

Designed to give an in-depth study of a given author's literary production and its cultural context.

130D. Dante's Divine Comedy. *

Speaking, reading, and writing proficiency in Italian required. Reading of the "Inferno," the "Purgatorio," and selected canti of the "Paradiso," along with selections from Dante's lyrics and from medieval Italian and French poetry. Taught in conjunction with LTPR 183. Satisfies the Italian and Pre- and Early Modern Studies Literature concentrations; also satisfies the Poetry and Pre- and Early Modern distribution requirements. *M. Brose*

165. Studies in Italian Literature and Culture. W

Speaking, reading, and writing proficiency in Italian required. In-depth examination of a topic in Italian literary and cultural studies. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Italian and Modern Literary Studies concentrations. May be repeated for credit. *R. Welch*

170. Studies in Italian Poetry. ***170A. Modern Italian Poetry. ***

Speaking, reading, and writing proficiency in Italian required. Study of development of the Italian lyric from romanticism to present, with close stylistic and thematic analyses of works of Leopardi, D'Annunzio, Ungaretti, Quasimodo, Pavese, and Montale. Satisfies the Italian and Modern Literature concentrations; also satisfies the Poetry distribution requirement. *The Staff*

180. Women in Italy: Nineteenth and Twentieth Centuries. *

Speaking, reading, and writing proficiency in Italian required. Explores the specificity of Italian women's writing and studies their literary activities in historical and social context. Readings include Italian feminist and some history as well as literary texts. Satisfies the Italian and Modern Literature concentrations. *D. Shemek*

191. Italian Studies Writing in the Discipline (1 credit). F,W,S

Concurrent enrollment in an approved upper-division course in Italian literature, history of art and visual culture, or history satisfies the Disciplinary Communication requirement in Italian studies. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to Italian studies majors and by permission of instructor. *The Staff*

195. Senior Thesis. F,W,S

Speaking, reading, and writing proficiency in Italian required. Prerequisite(s): Literature 101. Students submit petition to sponsoring agency. *The Staff*

198. Group Tutorial. F,W,S

Speaking, reading, and writing proficiency in Italian required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Speaking, reading, and writing proficiency in Italian required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. *The Staff*

Graduate Courses**294. Teaching-Related Independent Study. F,W,S**

Directed graduate research and writing coordinated with the teaching of undergraduates. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Modern Literary Studies

Upper-Division Courses

103. Constructions of the Modern. *

Definitions of the "modern" (after 1750) are developed within historically and culturally specific contexts. Satisfies the Modern Literature concentration. (General Education Code(s): TA.) *The Staff*

124. The European Novel.

124A. Eighteenth Century to Modernism. *

Major works of European fiction in their social, cultural, and intellectual contexts. Works are read in translation. Course topic changes; please see the Schedule of Classes for current topic. Satisfies the Modern Literature concentration. May be repeated for credit. (General Education Code(s): TA.) *The Staff*

125. Modern Cinema.

125J. Cinema and Subjectivity. S

An examination of the ways in which the technological and institutional practices of cinema construct modes of modern and contemporary subjectivity. Course topic changes; please see the Schedule of Classes for current topic. Satisfies the Modern Literary Studies concentration. May be repeated for credit. *D. Selden*

125N. The Horror Film. W

Shifting definitions of horror in the movies from the late silent period to the present through close analysis of representative films and critical texts. Course topic changes; please see the Schedule of Classes for the current topic. Satisfies the Modern Literary Studies concentration. (General Education Code(s): IM.) *H. Leicester*

144. Modern Jewish Cultures.

Modernity transformed Jewish culture: we will explore the ways in which changed social, political, and economic conditions produced new gender roles; professional, personal, communal, and cultural experiences; and generated powerful fictions, autobiographies, films and poems. Among the writers we will read are Isaac Bashevis Singer, Rebecca Goldstein, Saul Bellow, Martin Buber, Hannah Arendt, and S.Y. Agnon.

144A. Jewish Diaspora, Ethnicity, and Urban Life. F

Focuses on modern Jewish diaspora, ethnicity, and urban life. Satisfies the Modern Literature concentration. (General Education Code(s): ER, E.) *B. Thompson*

144B. Modernity as Jewish Challenge and Catastrophe: The American Experience. *

Examines modernity as Jewish challenge and catastrophe, and focuses on the American experience. Satisfies the English and Modern Literature concentrations. (General Education Code(s): ER, E.) *B. Thompson*

144D. Jewish Writers and the American City. *

An examination of some major Jewish writers and their responses to the American city. Major writers: Henry Roth, Saul Bellow, Bernard Malamud, J. Kaplan, Philip Roth. A look at Yiddish and other minority writers, and including sociological and historical materials on the American city. Satisfies the English and Modern concentrations. (General Education Code(s): ER, E.) *B. Thompson*

144H. Jewish Writers and the European City. S

Interrogates the master narrative of a specific European city and discusses the ways in which Jewish life and Jewish actions helped to shape that story and were shaped by it. Satisfies the Modern Literary Studies concentration. May be repeated for credit. (General Education Code(s): ER.) *M. Baumgarten*

144J. Jewish Travel Narratives. *

Exploration of the idea of the Diaspora as a "moving" condition, and of the multi-dimensional character of global Jewish culture, covering authors who traveled across the Jewish world from medieval times to the present. Satisfies the Modern Literary Studies and Pre- and Early Modern Studies Literature concentrations; also satisfies the Pre- and Early Modern distribution requirement. *The Staff*

144M. Jewish Comedy. *

Examines literary, theatrical, cinematic, and televised representations of Jewish culture, focusing on the ways in which Jews have negotiated the transition to modernity via comedy and humor. Satisfies the Modern Literature concentration. (General Education Code(s): ER.) *B. Thompson*

145. Special Topics in Modern Literature.

145A. Modern Poetry. *

Survey of modern poetry; includes a variety of poetic forms. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Modern Literary Studies concentration; also satisfies the Poetry distribution requirement. May be repeated for credit. (General Education Code(s): TA.) *The Staff*

145B. Modern Literature. W

Study of 19th- and/or 20th-century literature, with attention to its literary and historical context. Course topic changes; please see the Schedule of Classes for current topic. Satisfies the Modern Literary Studies concentration. May be repeated for credit. (General Education Code(s): TA.) *E. Bachman, L. Martínez-Echazabal*

145C. Modern Fiction and Poetry. F

Survey of modern fiction and poetry. Course topic changes; please see the Schedule of Classes for the current topic. Satisfies the Modern Literary Studies concentration; also satisfies the Poetry distribution requirement. May be repeated for credit. *R. V. Wilson*

145H. Detective Fiction. W

Representative works of 19th- and 20th-century detective fiction, including works by Poe, Conan Doyle, Christie, Sayers, Hammett, Chandler, P.D. James, Paretsky, and others. Satisfies the English and Modern Literary Studies concentrations. (General Education Code(s): TA.) *J. Jordan*

155. Russian Literature in Translation.

155A. Nineteenth-Century Russian Fiction in Translation. *

Masterpieces of poetry and prose from the Golden Age of Russian literature, from Pushkin to Chekhov. Satisfies the Modern and World Literature concentrations; also satisfies the Global distribution requirement. *The Staff*

155B. Russian Literature in Revolution. *

Survey of 20th-century Soviet literature, from the revolution to the death of Stalin. Readings include modernist and avant-garde texts of the 1920s and socialist realism. Satisfies the Modern and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): CC.) *The Staff*

155E. The Classic Russian Novel. *

Detailed literary analysis of novels by Gogol, Goncharov, Tolstoy, Dostoevsky, and Pasternak. Focus upon aesthetic devices of texts, as well as upon ethical and philosophical issues that inform them. Satisfies the Modern and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): CC.) *The Staff*

155J. Soviet Everyday Life. *

Examines the theories, realities, and representations of everyday Soviet life, beginning with the utopian designs of the 1920s and concluding with the dystopian, postmodern iterations of the 1980s and 1990s. Satisfies the Modern and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): CC.) *The Staff*

160C. French Philosophical Writers. *

Analysis of leading figures, periods, and problems in French philosophy. Satisfies the Modern Literary Studies concentration. May be repeated for credit. *The Staff*

167. German Authors in Translation.

167G. Goethe's "Faust". *

An intensive study of Goethe's "Faust," Parts I and II. All works are read in English. Satisfies the Modern Literature concentration; also satisfies the Poetry distribution requirement. *L. Nygaard*

187. Modern Literature.

Students may count any combination of 2-credit or 3-credit literature courses, together totaling at least 5 credits, toward satisfaction of the literature major requirements.

187E. Heidegger and Poetry (2 credits). *

Focuses on reading and discussion of Martin Heidegger's major texts on poetry. *W. Godzich*

190. Senior Seminar.

Seminar offered to literature majors as a way to satisfy the senior exit requirement. Offered at different times by different instructors, focus is on topics of interest in modern literary studies. All students are required to complete an essay of significant length as part of the seminar course work. Prerequisite: Literature 101. May be repeated for credit.

190A. Proust and Contemporary Criticism. *

Read substantial portion of Proust's "In Search of Lost Time" in English translation and examines important body of contemporary criticism on Proust that both illuminates the novel and raises significant critical and theoretical issues. Satisfies the Modern Literature concentration; also satisfies the Senior Seminar distribution requirement. Prerequisite(s): Literature 101. Enrollment restricted to senior literature majors. *The Staff*

190K. Readings in Tolstoy. *

Intensive study of Tolstoy's major work *War and Peace*. Satisfies the Modern and World Literature concentrations; also satisfies the Global and Senior Seminar distribution requirements. Prerequisite(s): Literature 101. Enrollment restricted to senior literature majors. *The Staff*

190N. Topics in Modern Literary Studies. W

Selected authors or issues in modern literary and cultural studies. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Modern Literature concentration; also satisfies the Senior Seminar distribution requirement. Enrollment restricted to senior literature majors. May be repeated for credit. *K. Lau*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) *The Staff*

195. Senior Essay. F,W,S

Prerequisite(s): Literature 101. *The Staff*

198. Group Tutorial. F,W,S

May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. *The Staff*

Graduate Courses**230. Texts and Bodies: Representations of Desire in Four Texts, Three Media. ***

1. Psychoanalysis: Barthes and Lacan; 2. Chaucer and fabliau: "The Miller's Tale;" 3. Verdian opera; 4. Films of John Carpenter. Enrollment restricted to graduate students. Enrollment limited to 20. *H. Leicester*

231. Studies in Literary and Cultural History. F,W,S

Course topic changes; see the Schedule of Classes for current topic. Enrollment restricted to graduate students. May be repeated for credit. (F) *A. Bivens*, (F) *R. Terdiman*, (W) *T. Miller*, (S) *L. Nygaard*, (S) *N. Klahn*

280. Topics in Theory. W

Explores issues arising in both the modern practice of criticism and in writings on the theory of criticism. Course topic changes; see the Schedule of Classes for current topic. Taught in conjunction with Spanish, Latin American and Latino Literatures 226. Enrollment restricted to graduate students. May be repeated for credit. *J. Poblete*

287. Modern Literary Studies (2 credits). W

Course topic changes; please see the Schedule of Classes for the current topic. Enrollment restricted to graduate students. May be repeated for credit. *W. Godzich*

288. Modern Literary Studies (3 credits). W

Course topic changes; please see the Schedule of Classes for the current topic. Three-credit seminar which is companion to the two-credit course 287, Modern Literary Studies. Prerequisite(s): concurrent enrollment in course 287. Enrollment restricted to literature graduate students. Enrollment limited to 12. May be repeated for credit. *W. Godzich*

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with the teaching of undergraduates. Students submit petition to sponsoring agency. *The Staff*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Pre- and Early Modern Literature

Upper-Division Courses**102. Ancient Literature in Cross-Cultural Perspective. W**

Comparative approaches to the study of ancient literature and culture. Topic changes; see the Schedule of Classes for current topic. Satisfies the Pre- and Early Modern and World Literature concentration; also satisfies the Global and Pre- and Early Modern distribution requirements. May be repeated for credit. (General Education Code(s): CC.) *D. Selden*

107A. Reading Egyptian Hieroglyphs, Part 1. *

Introduction to Egyptian hieroglyphs as a graphic, conceptual, and communicative system. Covers the basic elements of classical Egyptian grammar, drawing primarily on inscriptions from extant Egyptian monuments. Students read one prose and one poetical text from the Middle Kingdom. Satisfies the Pre- and Early Modern Studies and World Literature concentrations; also satisfies the Global and Pre- and Early Modern distribution requirements. Strongly recommended: two years previous study of a foreign language at the college level or the equivalent. (General Education Code(s): CC.) *D. Selden*

107B. Reading Egyptian Hieroglyphs, Part 2. *

Advanced Middle Egyptian grammar (2 weeks). Close reading of the *Tale of Sinuhe* in Egyptian, selected hymns and love poetry from the New Kingdom. Satisfies the Pre- and Early Modern Studies and World Literature concentrations; also satisfies the Global, Pre- and Early Modern, and Poetry

distribution requirements. Together, *Egyptian Hieroglyphs 1* and *2* fulfill the language requirements for the intensive major. Prerequisite(s): course 107A or permission of instructor. (General Education Code(s): CC.) *D. Selden*

123. The Comedy of Sex on Stage and Screen. S

Surveys the theory and practice of comedy in several contexts and media including stage, film, and television, with special attention to questions of gender and sexuality. Texts include Aristophanes, Plautus, Shakespeare, Moliere, Orton, Chaplin, Seinfeld, Freud, Bakhtin. Satisfies the Pre- and Early Modern Studies and Modern Literary Studies concentrations; also satisfies the Pre- and Early Modern distribution requirement. (General Education Code(s): IM.) *M. Gamel*

134. The Idea of Poetry. F

Focus is on the theories of rhetoric and poetry written between 1580 and 1620. Texts include English, Italian, French, and Spanish works. Satisfies the Pre- and Early Modern Studies concentration; also satisfies the Poetry and Pre- and Early Modern Studies distribution requirements. (General Education Code(s): TA.) *M. Ursell*

137. Modern Ancient Drama. *

The study of 20th- and 21st-century productions and adaptations of ancient Greek drama in theater, dance, music, and film, including Stravinsky, Graham, Pasolini, Breuer, and von Trier, discussing artists' goals, the sociopolitical context, ideas of authenticity, and audience response. Satisfies the Pre- and Early Modern Studies Literature concentration; also satisfies the Pre- and Early Modern distribution requirement. (General Education Code(s): IM.) *M. Gamel*

144. Pre- and Early Modern Jewish Cultures.

144B. Hebrew Bible. W

Introduction to textual, source, redaction, historical, and literary criticism of individual books of the Hebrew Bible and to exegesis as science and ideology. Covers texts and iconography of neighboring mythological traditions (Mesopotamian, Ugaritic, Egyptian, Greek) when appropriate. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Pre- and Early Modern Studies Literature concentration; also satisfies the Pre- and Early Modern distribution requirement. May be repeated for credit. (General Education Code(s): TA.) *N. Deutsch*

150. Studies in Italian Theater.

150C. Italian Renaissance. S

Study of Renaissance in Italy as concept and educational/artistic revolution, with special attention to literary works and to dialogue among the arts and sciences. Authors vary but may include Boccaccio, Petrarch, Machiavelli, and Michelangelo. Satisfies the Pre- and Early Modern Studies concentration; also satisfies Pre- and Early Modern distribution requirement. *D. Shemek*

154. The Seventeenth Century. S

Discussion of selected major works of 17th-century European literature in their historical and philosophical context. Satisfies the Pre- and Early Modern Studies concentration; also satisfies the Pre- and Early Modern Studies distribution requirement. *W. Godzich*

167. Spanish Literature in Translation.

An introduction to great works of Spanish literature from various genres that provide a profound and enduring experience of Hispanic life transfigured by the literary artist into what may be interpreted as formal and exemplary perfection.

167C. Don Quixote de la Mancha.*

A close study of Books I and II of the Cervantes novel together with an examination of some of the criticism on this work written in English throughout the centuries. Satisfies the Pre- and Early Modern Literature concentration; also satisfies the Pre- and Early Modern distribution requirement. (General Education Code(s): CC.) *J. Aladro Font*

183. Dante's Divine Comedy.*

Reading of the *Inferno*, the *Purgatorio*, and selected canti of the *Paradiso*, along with selections from Dante's lyrics and from medieval Italian and French poetry. Satisfies the Pre- and Early Modern Literature concentration; also satisfies the Poetry and Pre- and Early Modern distribution requirements. (General Education Code(s): TA.) *M. Brose*

190. Senior Seminar.

Seminar offered to literature majors as a way to satisfy the senior exit requirement. Offered at different times by different instructors, focus is on topics of interest in pre- and early modern studies. All students are required to complete an essay of significant length as part of the seminar course work. Prerequisite: Literature 101. May be repeated for credit. *The Staff*

190C. Frame Tale Fictions. W

Introduces several major works of world literature through their shared employment of the frame tale. Topics: permutations of stories as they pass from collection to collection, frames narrative structure, meaning of storytelling within such collections. Readings: The Arabian Nights, The Decameron and selected modern texts. Satisfies the Pre- and Early Modern Literature

concentration; also satisfied the Pre- and Early Modern and Senior Seminar distribution requirements. Prerequisite(s): Literature 101. Enrollment restricted to senior literature majors. *D. Shemek*

190P. Topics in Pre- and Early Modern Studies. S

Examination of individual authors or critical problems in ancient, medieval, or early modern/Renaissance literature. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Pre- and Early Modern Literature concentration; also satisfies the Pre- and Early Modern and Senior Seminar distribution requirements. Prerequisite(s): Literature 101. Enrollment restricted to senior literature majors. May be repeated for credit. *M. Ursell*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students submit petition to sponsoring agency. *The Staff*

195. Senior Essay. F,W,S

Prerequisite(s): Literature 101. Students submit petition to sponsoring agency. *The Staff*

198. Group Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

230. Early Modern Colonial Encounters. *

This course will examine primary texts and interpretations, both fictional and archival, of the "encounter" between western Europe and non-European populations affected by European expansion from the 15th through the 18th centuries. Enrollment restricted to graduate students. *The Staff*

294. Teaching-Related Independent Study. F,W,S

Directed graduate research and writing coordinated with the teaching of undergraduates. Students submit petition to sponsoring agency. *The Staff*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

Russian Literature

Lower-Division Courses

199. Tutorial. F,W,S

Speaking, reading, and writing proficiency in Russian required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

199F. Tutorial (2 credits). F,W,S

Speaking, reading, and writing proficiency in Russian required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Spanish, Latin American, and Latino Literature

Lower-Division Courses

60. Introduction to Literary Genres. F

Speaking, reading, and writing proficiency in Spanish required. The study of poetry, drama, and prose in Spain and Latin America. (General Education Code(s): TA, IH, E.) *J. Aladro Font*

Upper-Division Courses

102. Introduction to Hispanic American Literature.

102A. From the Conquest to Sor Juana. F

Speaking, reading, and writing proficiency in Spanish required. A study of Hispanic American literature from the chronicles of the conquest through the 17th century. Readings deal with transformations in both the idea of empire and the rights of the conquered. Includes the works of Colon, Cortes, El Inca Garcilaso de la Vega, Sor Juana Ines de la Cruz, and others. Satisfies the Global, Pre- and Early Modern Studies and Spanish Literature concentrations; also satisfies the Global and Pre- and Early Modern distribution requirements. (General Education Code(s): CC.) *N. Klahn*

102B. Romanticism to Modernism. W

Speaking, reading, and writing proficiency in Spanish required. Follows the literary manifestations of the growing consciousness of the Latin American writer: discovery of native themes, imitation of European models, search for a "new language" literally and figuratively. Relates historical events with literary movements. Satisfies the Modern, Spanish, and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): CC, E.) *L. Martínez-Echazábal*

130. Studies in Latin American Literary Genres.

130E. Latin American Poetry. *

Speaking, reading, and writing proficiency in Spanish required. Poets from "modernismo" to the present in Spanish America. Studies how this poetry attempts to define Latin America, its past, its present history, and its vision for the future. Satisfies the Modern, Spanish, and World Literature concentrations; also satisfies the Global and Poetry distribution requirements. (General Education Code(s): CC, E.) *N. Klahn*

130F. U.S. Latino/a Writing in Spanish/English and Spanglish. S

Speaking, reading, and writing proficiency in Spanish required. Spanish-based, English/bilingual inclusive overview of Latino/a writing in the U.S. Satisfies the Modern, Spanish, and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): ER, E.) *J. Poblete*

131. National Literatures of Latin America.

Speaking, reading, and writing proficiency in Spanish required. A study of the literary expression of a particular Latin American country or region, with texts representing a variety of authors, periods, and genres.

131A. Mexico. S

Speaking, reading, and writing proficiency in Spanish required. Satisfies the Modern, Spanish, and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): CC, E.) *N. Klahn*

131B. The Novel of the Mexican Revolution. *

Speaking, reading, and writing proficiency in Spanish required. A study of the literary depiction of the Mexican Revolution as seen in six novels that span the 20th century. (General Education Code(s): CC, E.) *N. Klahn*

131H. Cuba. *

Speaking, reading, and writing proficiency in Spanish required. Satisfies the Modern, Spanish, and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): CC, E.) *L. Martínez-Echazábal*

134. Special Topics in Latin American Literature.

134G. Popular Culture in Latin American Narrative. F

Speaking, reading, and writing proficiency in Spanish required. Explores short stories and novels that have been greatly influenced by popular culture, not only in theme, but also by appropriation of popular forms of language and modes of representation. Includes works by authors from Mexico, Argentina, Cuba, and Colombia. Satisfies the Modern, Spanish, and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): CC, E.) *J. Poblete*

135F. Cine y Literatura. F

Speaking, reading, and writing proficiency in Spanish required. Analysis and interpretation of Spanish-language films derived from literary works by Latin American and Spanish authors. Topic changes; see the Schedule of Classes for the current topic. Satisfies the Spanish and World Literature concentrations; also satisfies the Global distribution requirement. May be repeated for credit. (General Education Code(s): IM.) *L. Martínez-Echazábal*

152. Spanish Golden Age Theater. W

Speaking, reading, and writing proficiency in Spanish required. Studies in Spanish Golden Age theater. Satisfies the Pre- and Early Modern Studies and Spanish Literature concentrations; also satisfies the Pre- and Early Modern distribution requirement. *J. Aladro Font*

153. The Picaresque Novel. *

Speaking, reading, and writing proficiency in Spanish required. The picaresque novel of 16th-century Spain considers the fictive environment as reality in order to introduce its protagonist as a rebel against social dominion. The picaresque novel is the only literary genre comparable to what is now called "literature of social protest." Satisfies the Pre- and Early Modern and Spanish Literature concentrations; also satisfies the Pre- and Early Modern distribution requirement. (General Education Code(s): CC.) *J. Aladro Font*

195. Senior Essay. F,W,S

Speaking, reading, and writing proficiency in Spanish required. Prerequisite(s): Literature 101. Students submit petition to sponsoring agency. *The Staff*

198. Group Tutorial. F,W,S

Speaking, reading, and writing proficiency in Spanish required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Speaking, reading, and writing proficiency in Spanish required. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Speaking, reading, and writing proficiency in Spanish required. Students submit petition to sponsoring agency. *The Staff*

Graduate Courses

213. Latin American Film and Cultural Theory. *

An examination of Latin American and Latino films in connection with relevant social and cultural issues and theories. Reading knowledge of Spanish is required. Enrollment restricted to graduate students. May be repeated for credit. *J. Poblete*

222. Reconstructing Spain. F

Construction of new discourses of "Spanishness" after 1975, their negotiation in the context of European integration/globalization and against historical memories. Enrollment restricted to graduate students. May be repeated for credit. *J. Aladro Font*

225. Surrealism in the Americas: An Aesthetic in Motion. S

Emerging from a Europe in crisis, this 20th-century avante-garde movement opened a space in Latin/o American literature for the emergence of a post-western aesthetic exploring a cultural identity in difference. A deconstruction of vanguardismo, lo real maravilloso, lo fantástico, lo mítico-antropológico, and realismo mágico. Enrollment restricted to graduate students. *N. Klahn*

226. Teoría Crítica en América Latina. W

Overview of contemporary theoretical issues in Latin American cultural critique. Course topic changes; please see the Schedule of Classes for the current topic. Enrollment restricted to graduate students. May be repeated for credit. *J. Poblete*

231. National Literatures of Latin America.

231A. Cuba. *

Course topic changes; please see the Schedule of Classes for the current topic. Enrollment restricted to graduate students. May be repeated for credit. *L. Martínez-Echazábal*

295. Directed Reading. F,W,S

Directed reading that does not involve a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

World Literature and Cultural Studies

Upper-Division Courses

109. Topics in Cultural Studies. F,W,S

Studies in the theory of cultural studies. Course topic changes; see the Schedule of Classes for

current topic. Satisfies the World Literature concentration; also satisfies the Global distribution requirement. May be repeated for credit. (General Education Code(s): E.) (F) *A. Athens, (W) G. Sahota, (W) J. Greene, (S) W. Godzich*

115. Modern Literature in a Global Context.

115A. Fiction in a Global Context. W

Comparative examination of fiction in the modern world and of fictional responses to social change and crisis. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Modern and World Literature concentrations; also satisfies the Global distribution requirement. May be repeated for credit. (General Education Code(s): TA.) *C. Hong*

118. Literature of the Asian Diaspora. *

Study of literature of the Asian diaspora, attempting to discover and define a growing body of contemporary writing under this rubric, including immigrant/migrant histories, memories of exile and refuge, as well as the fiction of imagined homelands. Satisfies the Modern and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): E.) *K. Yamashita*

124. Cultural Theory in Historical Perspective. F

Examination of representations of medieval and early modern Mediterranean history. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Pre- and Early Modern Studies and World Literature concentrations; also satisfies the Global and Pre- and Early Modern distribution requirements. May be repeated for credit. (General Education Code(s): E.) *S. Kinoshita*

126. Metamorphoses: Pre/Post Modern Transformations. W

Examines transformations between god, human, and animal from ancient literature to medieval, renaissance, modern, and postmodern (especially science) fiction and poetry. Satisfies the Pre- and Early Modern Studies and World Literature concentrations; also satisfies the Poetry, Pre- and Early Modern, and Global distribution requirements. *C. Freccero*

127. Chicano/Mexicano Geographies. *

Considers the historical, current, and future directions of Chicano/a literary culture within the context of the long-standing exchanges of culture and politics across the U.S.-Mexican border and the challenges of globalization. Includes novels, essays, and films. Satisfies the English, Modern, and World Literature concentrations; also satisfies the Global distribution requirement. (General Education Code(s): ER, E.) *K. Gruesz*

133. Culture and Nation. F

Course explores the role of literature and culture in the production of national communities. Course topic changes; please see the Schedule of Classes for the current topic. Satisfies the Modern Literary Studies and World Literature concentrations; also satisfies the Global distribution requirement. May be repeated for credit. *G. Sahota*

136. Classical Chinese Culture and Literature, Sixth Century through 16th Century. *

Survey of writing and culture from the Tang through early Ming dynasties (sixth century C.E. through 16th century C.E.). Themes include literary, religious, and philosophical innovation; courtly life; cultural contacts with non-Chinese people; and transformations of state and society. Satisfies the Pre- and Early Modern Studies and World Literature concentrations; also satisfies the Global, Poetry, and Pre- and Early Modern distribution requirements. (Also offered as History 141B. Students cannot receive credit for both courses.) (General Education Code(s): E.) *The Staff*

150. World Literature and Cultural Studies Core Sequence.

150A. Worldings. F

How to think about the world as a whole: representations, networks, systems, taxonomies, versions of globalization. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Modern and World Literature concentrations; also satisfies the Global Distribution requirement. May be repeated for credit. *V. Cooppan*

150C. Problems. *

Considers a range of phenomena from a critical world perspective: subject formation; human activity on a global scale; questions that demand a worlded answer. Course topic changes; see the Schedule of Classes for current topic. Satisfies the Modern and World literature concentrations; also satisfies the Global requirement. May be repeated for credit. *The Staff*

188. World Literature and Cultural Studies.

Students may count any combination of 2-credit or 3-credit literature courses, together totaling at least 5 credits, toward satisfaction of the literature major requirements.

188A. Twenty-First Century Novels (3 credits). *

Examines novels from around the world published since 2000. Class discussion focuses on the novel form and its condition at the beginning of the new millennium. *W. Godzich*

190. Senior Seminar.

Seminar offered to literature majors as a way to satisfy the senior exit requirement. Offered at different times by different instructors; focus is on topics of interest in world literature and cultural studies. All students are required to complete an essay of significant length as part of the seminar course work. Prerequisite(s): Literature 101.

190A. Topics in World Literature and Cultural Studies. F,W,S

Course topic changes; see the Schedule of Classes for current topic. Satisfies the Modern and World Literature concentrations; also satisfies the Global and Senior Seminar distribution requirements. Prerequisite(s): Literature 101. Enrollment restricted to senior literature majors. May be repeated for credit. (General Education Code(s): E.) *N. Klahn, V. Cooppan, G. Sahota*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

195. Senior Essay. F,W,S

Prerequisite(s): Literature 101. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Group Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses**201. Theory and Methods. F**

Global theories of history and cultural production. Course topic changes; see the Schedule of Classes for current topic. Enrollment restricted to graduate students. May be repeated for credit. *V. Cooppan*

209. Topics in Cultural Studies. S

Course topic changes; see the Schedule of Classes for current topic. Enrollment restricted to graduate students. May be repeated for credit. *R.J. Wilson*

287. World Literature and Cultural Studies. W**287A. Analytics of Power After Foucault (2 credits). ***

Examines the nexus formed by theories of action and narrative and theories of power. Describes the situation prior to Michel Foucault's discussion of power and examines the incidence of his intervention in the field. Enrollment restricted to graduate students. *W. Godzich*

288. World Literature and Cultural Studies.**288A. Analytics of Power After Foucault (3 credits). ***

Three-credit seminar which is companion to the two-credit course 287A, Analytics of Power After Foucault. Concurrent enrollment in course 287A required. Enrollment restricted to graduate students. Enrollment limited to 12. *W. Godzich*

295. Directed Reading. F,W,S

Directed reading which does not require a term paper. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

*Not offered in 2011-12

**UCSC General Catalog**[2011-12 Updates](#)[2010-12 General Catalog](#)[2009-10 Updates](#)[2008-10 General Catalog](#)[2007-08 Updates](#)[2006-08 General Catalog](#)

Mathematics

194 Baskin Engineering
(831) 459-2969
<http://www.math.ucsc.edu>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Mathematics is both a fundamental discipline and an essential tool for students of biology, chemistry, computer engineering, computer science, Earth sciences, economics, electrical engineering, information systems management, physics, and psychology. Researchers in all these areas are constantly developing new and cutting-edge ways of applying mathematics to their fields. A strong mathematics background is vital to the advanced study of the physical and biological sciences and plays an integral role in studying the social sciences.

The UCSC mathematics program offers a wide variety of undergraduate mathematics courses:

- Courses 2 and 3 do not require thorough preparation in mathematics at the high school level. However, students interested in studying mathematics are strongly encouraged to take algebra, geometry, and trigonometry before entering the university. Students requiring mathematics courses are encouraged to take the mathematics placement examination (MPE) as early as possible. Students concerned about their ability to place into courses above Mathematics 2 or Mathematics 3 should consider taking these courses before they enter UCSC. Failure to begin the calculus series in the fall could delay progress in some majors.
- Lower-division courses with numbers in the range 11A-B through 30 (calculus, linear algebra, multivariable calculus, differential equations, and problem solving) prepare students for further study in mathematics, the physical and biological sciences, or quantitative areas of the social sciences. Science majors take a combination of these courses as part of their undergraduate studies.
- Upper-division courses, with numbers in the range 100-199, are intended for majors in mathematics and closely related disciplines. Some of these courses provide students with a solid foundation in key areas of mathematics such as algebra, analysis, geometry, and number theory, whereas others introduce students to more specialized areas of mathematics. Calculus, linear algebra, multivariable calculus, and proof and problem solving are prerequisite to most of these advanced courses.

Within the major, there are three concentrations leading to the bachelor of arts (B.A.) degree: pure mathematics, computational mathematics, and mathematics education. These programs are designed to give students a strong background for graduate study, for work in industry or government, or for teaching. Each concentration requires nine courses, one of which must be a senior thesis or senior seminar. Please read the pure mathematics, computational mathematics, and mathematics education program descriptions below for specific information about course requirements. A minor in mathematics is also offered.

The mathematics program also provides an excellent liberal arts background from which to pursue a variety of career opportunities. UCSC graduates with degrees in mathematics hold teaching posts at all levels, as well as positions in law, government, civil service, insurance, software development, business, banking, actuarial science, forensics, and other professions where skills in logic, numerical analysis, and computing are required. In particular, students of mathematics are trained in the art of problem-solving, a skill absolutely essential to all professions.

Academic Advising

Academic advising is available at the Undergraduate Affairs office. The undergraduate adviser provides information about requirements, prerequisites, policies and procedures, learning support, scholarships, and special opportunities for undergraduate research. In addition, the adviser assists with the drafting of study plans, as well as certifying degrees and minors. Students are urged to stay informed and involved with their major, as well as to seek advice should problems arise.

The Undergraduate Affairs web site (<http://undergrad.pbsci.ucsc.edu>) is a critical resource for students. Here you will find a link to the undergraduate program; the materials at that link constitute the undergraduate handbook. Students should visit this first to seek answers to their questions, because it hosts a wealth of information. Each student in the major is encouraged to

regularly review the materials posted to stay current about requirements, course curriculum, and departmental policy.

Requirements

Students who plan to take a mathematics course at UCSC must demonstrate sufficient preparation by their score on either the mathematics placement examination (MPE), the College Entrance Examination Board Advanced Placement (AP) calculus examination, the International Baccalaureate Higher Level Mathematics Examination, or by passing the appropriate prerequisite course.

UCSC Mathematics Placement Examination

Mathematics placement examination scores are valid for one year. Students may take the examination a maximum of two times during the course of their academic career. Additionally, if a student receives a D, F, or NP in a course, the placement examination may not be used to place them out of that course. Students whose areas of study require precalculus or calculus courses are strongly advised to take the placement examination and the required courses early in their academic careers. The placement examination is given at the beginning of each quarter and at prospective-student orientations. Bring photo identification for entry into the placement examination. Calculators are not permitted. See

<http://undergrad.pbsci.ucsc.edu/advising/exams/mpe.html> for more information.

If your MPE score is	May enroll in this course
1-19	2
20-30	3
31-39	11A*
40-45	19A
46 or higher	19A or 20A

* Students who plan to major in computer engineering, computer science, electrical engineering, information systems management, mathematics, or physics and who receive a score in the range 31-39 on the MPE should take courses 3 and 19A-B rather than courses 11A-B.

College Board Advanced Placement Calculus Examinations

Students who have received 4 credits for the College Entrance Examination Board Advanced Placement (AP) calculus examination should normally enroll in course 19B, and those with 8 credits should normally enroll in course 23A. However, students who received a score of 3 on the calculus AB or BC AP examination, should enroll in course 19A or 19B, respectively, to improve their knowledge of calculus before continuing their studies. Students who wish to challenge themselves, and who received a score of 4 or 5 on the AB or a score of 3, 4, or 5 on the BC examination may choose course 20A, *Honors Calculus*. Non-mathematics majors should consult their major departments before enrolling in a mathematics course.

If your AP AB score is	May enroll in this course
3	Mathematics 11A or 19A
4 or 5	Mathematics 20A or 11B or 19B

If your AP BC score is	May enroll in this course
3	Mathematics 11B or 19B or 20A
4 or 5	Mathematics 20A or 22 or 23A

International Baccalaureate Higher Level Examination in Mathematics

Students who have received a score of 5, 6, or 7 on the International Baccalaureate (IB) Higher Level Examination in Mathematics may enroll in course 20A, *Honors Calculus*; 22, *Calculus of Several Variables*; or 23A, *Multivariable Calculus*. Non-mathematics majors should consult their major departments before enrolling in a mathematics course.

Prerequisite Courses

Students who have passed course 2 may enroll in course 3. Students who have passed course 3 may enroll in course 11A or 19A. Students who have passed an articulated precalculus course at a college or university may enroll in course 11A or 19A, but they must verify eligibility of the course and course completion with the Mathematics Department staff.

Introductory Requirements

Introductory requirements for all concentrations in the major are courses 20A-B, *Honors Calculus*; or 19A-B, *Calculus for Science, Engineering, and Mathematics*; 21, *Linear Algebra*; and 23A-B, *Multivariable Calculus*. The mathematics education concentration has one additional introductory requirement, Applied Mathematics and Statistics (AMS) 5, *Statistics*. For some non-mathematics majors, courses 11A-B can be substituted for 19A-B, but they are not recommended for students planning to major in computer engineering, computer science, electrical engineering, information systems management, or physics. Although not considered an introductory requirement, course 100 is a prerequisite for most upper-division mathematics courses.

It should be emphasized that the nature of mathematics changes dramatically between lower-division and upper-division courses. Students often find that the material becomes far more abstract and theoretical. In addition, the role of computation in assignments diminishes and a greater weight is placed on deductive reasoning and the integral role of mathematical proofs. Therefore, it is strongly recommended that only students who earn grades of B- or better in Mathematics 100 consider applying to the major in mathematics.

Major Requirements

Pure Mathematics

This concentration is intended for students who desire a comprehensive understanding of mathematics, including those considering graduate studies in the natural sciences. Students are required to complete at least nine courses (with laboratories, if appropriate) from among those numbered 100 or higher.

Seven of these courses must be:

- Mathematics 100, *Introduction to Proof and Problem Solving*;
- Mathematics 103, *Complex Analysis*;
- Mathematics 105A, *Real Analysis*;
- Mathematics 111A, *Algebra*;
- Mathematics 117, *Advanced Linear Algebra*;
- one of Mathematics 121A, *Differential Geometry*, Mathematics 124, *Introduction to Topology*, or Mathematics 128A, *Classical Geometry: Euclidean and Non-Euclidean*;
- and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

The remaining two courses are selected by the student from among Mathematics 24 and any mathematics course numbered above 100 (excluding Mathematics 188 or Mathematics 189).

A typical program for a pure mathematics major might include the following:

1st year Mathematics 20A-B or 19A-B, 21, 23A
2nd year Mathematics 23B, 24, 100, 103, 110 or 128A
3rd year Mathematics 105A-B, 111A-B, 106
4th year Mathematics 107, 117, 121A, 194

The first two years of a typical program for a pure mathematics major who begins mathematics studies with precalculus might include the following:

1st year Mathematics 3, 19A-B
2nd year Mathematics 21, 23A-B, 24, 100

Computational Mathematics

This concentration is intended to prepare students for technical careers in industry or government while providing a solid mathematical background. Students are required to complete a minimum of seven mathematics courses (with laboratories, if appropriate) as follows:

- Mathematics 24, *Ordinary Differential Equations*;
- Mathematics 100, *Introduction to Proof and Problem Solving*;
- Mathematics 103, *Complex Analysis*, or Mathematics 105A, *Real Analysis*;
- Mathematics 110, *Introduction to Number Theory*;
- Mathematics 111A, *Algebra*;
- Mathematics 145, *Introductory Chaos Theory*, or *Applied Mathematics and Statistics* 114, *Introduction to Dynamical Systems*, or *Applied Mathematics and Statistics* 147, *Computational Methods and Applications*;
- and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

In addition, students must complete two courses selected from the following:

- Applied Mathematics and Statistics 113, 131, 147, 162
- Biomolecular Engineering 110
- Computer Engineering 107, 108, 117, 153, 177
- Computer Science 101, 102, 104A, 109, 112, 122, 130, 132, 142
- Economics 113
- Electrical Engineering 103, 130, 135, 151, 154

Mathematics majors who wish to enroll in Computer Science 101 or Computer Science 122 should contact the instructor to request a permission code.

A typical program for a computational mathematics major might include the following:

1st year 19A-B, 23A, CMPS 12A/L and 12B/M
2nd year 21, 23B, 24, 100, 110, CMPE 16

3rd year 103; 105A; 145 or AMS 147; CMPS 101
4th year 106, 111A, CMPS 109, 194

Mathematics Education

This concentration is intended to prepare students for teaching kindergarten through high school (K-12) mathematics. In addition to the pre-major requirements (which for this track include Applied Mathematics and Statistics 5, Statistics), students are required to complete the following nine courses:

- Mathematics 100, *Introduction to Proof and Problem Solving*;
- either Mathematics 103, *Complex Analysis*, or 105A, *Real Analysis*;
- Mathematics 110, *Introduction to Number Theory*;
- Mathematics 111A, *Algebra*;
- Mathematics 128A, *Classical Geometry: Euclidean and Non-Euclidean*;
- Applied Mathematics and Statistics 131, *Introduction to Probability Theory*;
- Mathematics 181, *History of Math*;
- Mathematics 188, *Supervised Teaching Experience*;
- and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

UCSC students can pursue a degree in mathematics while preparing to teach at the secondary level. In California, students seeking a single-subject credential (for secondary teaching) in mathematics are required to take the CSET, a series of examinations that must be passed in order to enter a teaching-credential program (formerly The National Teachers Examination). Students who complete the mathematics education track, plus three additional specified courses, qualify for the California Single Subject Program, exempting themselves from the CSET. Both the Mathematics Department undergraduate adviser and the Education Department advising office have more information about the additional required courses.

A typical program for a mathematics education major might include the following:

1st year Mathematics 19A-B, 23A
2nd year Mathematics 21, 23B, 100; Applied Mathematics and Statistics 5
3rd year Mathematics 30, 103, 110, 181; Applied Mathematics and Statistics 131
4th year Mathematics 111A, 128A, 188, 194

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in mathematics is satisfied by Mathematics 100, *Introduction to Proof and Problem Solving*, and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

Honors

Honors in the Mathematics Department are awarded to graduating students whose academic performance in the major demonstrates excellence at a GPA of 3.5 or above. Highest Honors are determined by review of departmental narrative evaluations for all students considered for honors. Highest Honors will be awarded to those students whose performance demonstrates the highest level of excellence in the major as reflected in their narrative evaluations.

Minor Requirements

The minor is intended for students who are interested in mathematics and want a strong mathematical foundation for studying in areas that rely heavily on analytical skills. Students are required to complete at least eight courses as follows:

- Mathematics 21, *Linear Algebra*;
- Mathematics 23A and 23 B, *Multivariable Calculus*;
- and any five courses numbered 100 and above.

No senior seminar or thesis is required.

A typical mathematics minor program for a physics major might be:

1st year Mathematics 19A-B, 23A
2nd year Mathematics 21, 23B, 24, 100
3rd year Mathematics 103, 105A, 106A, 121A or 124
4th year Mathematics 107, 145 or Applied Mathematics and Statistics 114

Disqualification from the Major or Minor

The Mathematics Department has adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass these courses.

Students who receive more than one No Pass, D, and/or F in the following introductory requirements will not be permitted to major in any concentration of the mathematics major.

Introductory Requirements

- Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*
- Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*
- Mathematics 21, *Linear Algebra*
- Mathematics 23A, *Multivariable Calculus*
- Mathematics 23B, *Multivariable Calculus*
- Mathematics 100, *Introduction to Proof and Problem Solving*

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Combined Majors

The combined major, requiring fewer courses than a double major, is administered through the Economics Department.

Economics and Mathematics

The major in economics and mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both economics and mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for a modern economics Ph.D. program, or for technically demanding professional careers. A full description can be found in the economics section of this catalog.

Graduate Program

The Mathematics Department offers programs leading to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees. Contact the Division of Graduate Studies for further information on the M.A. and Ph.D. programs, as well as on university application procedures.

M.A. Degree Requirements

Students are required to complete two of Mathematics 200, 201, 202, 203; two of Mathematics 204, 205, 206; one of Mathematics 208, 209, 210; and complete five additional courses in mathematics or a related subject by approval. In addition, students must do one of the following:

- pass an M.A.-level preliminary examination;
- write a master's thesis.

Ph.D. Degree Requirements

All of the following are required:

- obtain a Ph.D.-level pass on two of the three written preliminary examinations, or a Ph.D.-level pass on one and a master's-level pass on the remaining two. Students who opt for the Ph.D.-level pass on two of the three preliminary examinations must complete the full sequence in the track associated with the preliminary examination they did not pass;
- satisfy the foreign-language requirement;
- pass the oral qualifying examination;
- complete three quarters as a teaching assistant;
- complete six graduate courses in mathematics other than Mathematics 200, 201, 202, 203, 204, 205, and 206. No more than three courses may be independent study or thesis research courses;
- write a Ph.D. thesis and present the thesis defense.

Students admitted to the Ph.D. program may receive an M.A. degree en route to the Ph.D.; students admitted to the M.A. program may transfer to the Ph.D. program upon passing the required preliminary examinations at the Ph.D. level.

Course Information

Mathematics 2, *College Algebra for Calculus*, is designed for students who do not meet the requirements for admission to Mathematics 3, *Precalculus*, and who need comprehensive and careful preparation for calculus. Mathematics 2 emphasizes algebra, graphs, and functions. The prerequisite for course 2 is a minimum placement examination score of 12.

Mathematics 3, *Precalculus*, is recommended for students who need some preparation in algebra and trigonometry prior to taking calculus. This course covers functions and their inverse, exponentials, logarithms, and trigonometry.

Mathematics 11A and 11B, *Calculus with Applications*, are intended for biology and Earth sciences majors. However, students in these majors who score 40 or more points on the mathematics placement examination are strongly encouraged to take the 19A-B sequence, which is required for most upper-division mathematics courses. Laboratory sections are strongly advised.

Mathematics 19A and 19B, *Calculus for Science, Engineering, and Mathematics*, are intended for chemistry, computer engineering, computer science, electrical engineering, information systems management, mathematics, and physics majors. Laboratory sections are strongly advised.

Mathematics 20A and 20B, *Honors Calculus*, are intended for students who would enjoy delving particularly deeply into the foundational and theoretical issues of calculus. Laboratory sections are strongly advised.

Mathematics 21, *Linear Algebra*, covers vector spaces, matrices, determinants, systems of linear equations, and eigenvalues. It is intended for students in the physical and biological and social sciences and is prerequisite to Mathematics 111A.

Mathematics 22, *Introduction to Calculus of Several Variables*, is intended for science students whose schedules do not permit a full and comprehensive two quarters of multivariable calculus. Students who intend to pursue further studies in mathematics must take Mathematics 23A-B and not 22. Laboratory sections are strongly advised.

Mathematics 23A and 23B, *Multivariable Calculus*, are intended for mathematics majors and minors and students in computer engineering, computer science, electrical engineering, information systems management, and physics majors which require more rigorous mathematical training. Laboratory sections are strongly advised.

Mathematics 100, *Introduction to Proof and Problem Solving*, is an introduction to the methodology of advanced mathematics, emphasizing proof techniques. Basic areas such as set theory and logic are introduced, together with extensive applications within mathematics. This course serves as a prerequisite for nearly all upper-division courses.

Mathematics 200+, Graduate-level courses. All graduate courses are open to undergraduates who have taken the recommended prerequisites; students should consult with the course instructor. Advanced undergraduates are strongly advised to take or audit graduate courses that interest them.

<http://www.math.ucsc.edu>***Program Description***

Mathematics is both a fundamental discipline and an essential tool for students of biology, chemistry, computer engineering, computer science, Earth sciences, economics, electrical engineering, information systems management, physics, and psychology. Researchers in all these areas are constantly developing new and cutting-edge ways of applying mathematics to their fields. A strong mathematics background is vital to the advanced study of the physical and biological sciences and plays an integral role in studying the social sciences.

The UCSC mathematics program offers a wide variety of undergraduate mathematics courses:

- Courses 2 and 3 do not require thorough preparation in mathematics at the high school level. However, students interested in studying mathematics are strongly encouraged to take algebra, geometry, and trigonometry before entering the university. Students requiring mathematics courses are encouraged to take the mathematics placement examination (MPE) as early as possible. Students concerned about their ability to place into courses above Mathematics 2 or Mathematics 3 should consider taking these courses before they enter UCSC. Failure to begin the calculus series in the fall could delay progress in some majors.
- Lower-division courses with numbers in the range 11A-B through 30 (calculus, linear algebra, multivariable calculus, differential equations, and problem solving) prepare students for further study in mathematics, the physical and biological sciences, or quantitative areas of the social sciences. Science majors take a combination of these courses as part of their undergraduate studies.
- Upper-division courses, with numbers in the range 100-199, are intended for majors in mathematics and closely related disciplines. Some of these courses provide students with a solid foundation in key areas of mathematics such as algebra, analysis, geometry, and number theory, whereas others introduce students to more specialized areas of mathematics. Calculus, linear algebra, multivariable calculus, and proof and problem solving are prerequisite to most of these advanced courses.

Within the major, there are three concentrations leading to the bachelor of arts (B.A.) degree: pure mathematics, computational mathematics, and mathematics education. These programs are designed to give students a strong background for graduate study, for work in industry or government, or for teaching. Each concentration requires nine courses, one of which must be a senior thesis or senior seminar. Please read the pure mathematics, computational mathematics, and mathematics education program descriptions below for specific information about course requirements. A minor in mathematics is also offered.

The mathematics program also provides an excellent liberal arts background from which to pursue a variety of career opportunities. UCSC graduates with degrees in mathematics hold teaching posts at all levels, as well as positions in law, government, civil service,

insurance, software development, business, banking, actuarial science, forensics, and other professions where skills in logic, numerical analysis, and computing are required. In particular, students of mathematics are trained in the art of problem-solving, a skill absolutely essential to all professions.

Academic Advising

Academic advising is available at the Undergraduate Affairs office. The undergraduate adviser provides information about requirements, prerequisites, policies and procedures, learning support, scholarships, and special opportunities for undergraduate research. In addition, the adviser assists with the drafting of study plans, as well as certifying degrees and minors. Students are urged to stay informed and involved with their major, as well as to seek advice should problems arise.

The Undergraduate Affairs web site (<http://undergrad.pbsci.ucsc.edu>) is a critical resource for students. Here you will find a link to the undergraduate program; the materials at that link constitute the undergraduate handbook. Students should visit this first to seek answers to their questions, because it hosts a wealth of information. Each student in the major is encouraged to regularly review the materials posted to stay current about requirements, course curriculum, and departmental policy.

Requirements

Students who plan to take a mathematics course at UCSC must demonstrate sufficient preparation by their score on either the mathematics placement examination (MPE), the College Entrance Examination Board Advanced Placement (AP) calculus examination, the International Baccalaureate Higher Level Mathematics Examination, or by passing the appropriate prerequisite course.

UCSC Mathematics Placement Examination

Mathematics placement examination scores are valid for one year. Students may take the examination a maximum of two times during the course of their academic career. Additionally, if a student receives a D, F, or NP in a course, the placement examination may not be used to place them out of that course. Students whose areas of study require precalculus or calculus courses are strongly advised to take the placement examination and the required courses early in their academic careers. The placement examination is given at the beginning of each quarter ~~and in the sixth or seventh week of each quarter~~ and at prospective-student orientations. Bring photo identification for entry into the placement examination. Calculators are not permitted. [See http://undergrad.pbsci.ucsc.edu/advising/exams/mpe.html for more information.](http://undergrad.pbsci.ucsc.edu/advising/exams/mpe.html)

If your MPE score is May enroll in this course

12 <u>1</u> -19	2
20-30	3
31-39	11A*
40-45	19A
46 or higher	19A or 20A

* Students who plan to major in computer engineering, computer science, electrical engineering, information systems management, mathematics, or physics and who receive a score in the range 31-39 on the MPE should take courses 3 and 19A-B rather than courses 11A-B.

College Board Advanced Placement Calculus Examinations

Students who have received 4 credits for the College Entrance Examination Board Advanced Placement (AP) calculus examination should normally enroll in course 19B, and those with 8 credits should normally enroll in course 23A. However, students who received a score of 3 on the calculus AB or BC AP examination, should enroll in course 19A or 19B, respectively, to improve their knowledge of calculus before continuing their studies. Students who wish to challenge themselves, and who received a score of 4 or 5 on the AB or a score of 3, 4, or 5 on the BC examination may choose course 20A, *Honors Calculus*. Non-mathematics majors should consult their major departments before enrolling in a mathematics course.

If your AP AB score is May enroll in this course

3 Mathematics 11A or 19A

4 or 5 Mathematics 20A or 11B or 19B

If your AP BC score is May enroll in this course

3 Mathematics 11B or 19B or 20A

4 or 5 Mathematics 20A or 22 or 23A

International Baccalaureate Higher Level Examination in Mathematics

Students who have received a score of 5, 6, or 7 on the International Baccalaureate (IB) Higher Level Examination in Mathematics may enroll in course 20A, *Honors Calculus*; 22, *Calculus of Several Variables*; or 23A, *Multivariable Calculus*. Non-mathematics majors should consult their major departments before enrolling in a mathematics course.

Prerequisite Courses

Students who have passed course 2 may enroll in course 3. Students who have passed course 3 may enroll in course 11A or 19A. Students who have passed an articulated precalculus course at a college or university may enroll in course 11A or 19A, but they must verify eligibility of the course and course completion with the Mathematics Department staff.

Introductory Requirements

Introductory requirements for all concentrations in the major are courses 20A-B, *Honors Calculus*; or 19A-B, *Calculus for Science, Engineering, and Mathematics*; 21, *Linear Algebra*; and 23A-B, *Multivariable Calculus*. The mathematics education concentration has one additional introductory requirement, Applied Mathematics and Statistics (AMS) 5, *Statistics*. For some non-mathematics majors, courses 11A-B can be substituted for 19A-B, but they are not recommended for students planning to major in computer engineering, computer science, electrical engineering, information systems management, or physics. Although not considered an introductory requirement, course 100 is a prerequisite for most upper-division mathematics courses.

It should be emphasized that the nature of mathematics changes dramatically between lower-division and upper-division courses. Students often find that the material becomes far more abstract and theoretical. In addition, the role of computation in assignments diminishes and a greater weight is placed on deductive reasoning and the integral role of mathematical proofs. Therefore, it is strongly recommended that only students who earn grades of B- or better in Mathematics 100 consider applying to the major in mathematics.

Major Requirements

Pure Mathematics

This concentration is intended for students who desire a comprehensive understanding of

mathematics, including those considering graduate studies in the natural sciences. Students are required to complete at least nine courses (with laboratories, if appropriate) from among those numbered 100 or higher.

Seven of these courses must be:

- Mathematics 100, *Introduction to Proof and Problem Solving*;
- Mathematics 103, *Complex Analysis*;
- Mathematics 105A, *Real Analysis*;
- Mathematics 111A, *Algebra*;
- Mathematics 117, *Advanced Linear Algebra*;
- one of Mathematics 121A, *Differential Geometry*, Mathematics 124, *Introduction to Topology*, or Mathematics 128A, *Classical Geometry: Euclidean and Non-Euclidean*;
- and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

The remaining two courses are selected by the student from among Mathematics 24 and any mathematics course numbered above 100 (excluding Mathematics 188 [or Mathematics 189](#)).

A typical program for a pure mathematics major might include the following:

1st year	Mathematics 20A-B or 19A-B, 21, 23A
2nd year	Mathematics 23B, 24, 100, 103, 110 or 128A
3rd year	Mathematics 105A-B, 111A-B, 106
4th year	Mathematics 107, 117, 121A, 194

The first two years of a typical program for a pure mathematics major who begins mathematics studies with precalculus might include the following:

1st year	Mathematics 3, 19A-B
2nd year	Mathematics 21, 23A-B, 24, 100

Computational Mathematics

This concentration is intended to prepare students for technical careers in industry or government while providing a solid mathematical background. Students are required to complete a minimum of seven mathematics courses (with laboratories, if appropriate) as follows:

- Mathematics 24, *Ordinary Differential Equations*;
- Mathematics 100, *Introduction to Proof and Problem Solving*;
- Mathematics 103, *Complex Analysis*, or Mathematics 105A, *Real Analysis*;
- Mathematics 110, *Introduction to Number Theory*;
- Mathematics 111A, *Algebra*;
- Mathematics 145, *Introductory Chaos Theory*, or Applied Mathematics and Statistics 114, *Introduction to Dynamical Systems*, or Applied Mathematics and Statistics 147, *Computational Methods and Applications*;
- and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

In addition, students must complete two courses selected from the following:

- Applied Mathematics and Statistics 113, 131, 147, 162
- Biomolecular Engineering 110
- Computer Engineering 107, 108, 117, 153, 177
- Computer Science 101, 102, 104A, 109, 112, 122, 130, 132, 142
- Economics 113

- Electrical Engineering 103, 130, 135, 151, 154

Mathematics majors who wish to enroll in Computer Science 101 or Computer Science 122 should contact the instructor to request a permission code.

A typical program for a computational mathematics major might include the following:

<i>1st year</i>	<i>19A-B, 23A, CMPS 12A/L and 12B/M</i>
<i>2nd year</i>	<i>21, 23B, 24, 100, 110, CMPE 16</i>
<i>3rd year</i>	<i>103; 105A; 145 or AMS 147; CMPS 101</i>
<i>4th year</i>	<i>106, 111A, CMPS 109, 194</i>

Mathematics Education

This concentration is intended to prepare students for teaching kindergarten through high school (K-12) mathematics. In addition to the pre-major requirements (which for this track include Applied Mathematics and Statistics 5, *Statistics*), students are required to complete the following nine courses:

- Mathematics 100, *Introduction to Proof and Problem Solving*;
- either Mathematics 103, *Complex Analysis*, or 105A, *Real Analysis*;
- Mathematics 110, *Introduction to Number Theory*;
- Mathematics 111A, *Algebra*;
- Mathematics 128A, *Classical Geometry: Euclidean and Non-Euclidean*;
- Applied Mathematics and Statistics 131, *Introduction to Probability Theory*;
- Mathematics 181, *History of Math*;
- Mathematics 188, *Supervised Teaching Experience*;
- and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

UCSC students can pursue a degree in mathematics while preparing to teach at the secondary level. In California, students seeking a single-subject credential (for secondary teaching) in mathematics are required to take the CSET, a series of examinations that must be passed in order to enter a teaching-credential program (formerly The National Teachers Examination). Students who complete the mathematics education track, plus three additional specified courses, qualify for the California Single Subject Program, exempting themselves from the CSET. Both the Mathematics Department undergraduate adviser and the Education Department advising office have more information about the additional required courses.

A typical program for a mathematics education major might include the following:

<i>1st year</i>	<i>Mathematics 19A-B, 23A</i>
<i>2nd year</i>	<i>Mathematics 21, 23B, 100; Applied Mathematics and Statistics 5</i>
<i>3rd year</i>	<i>Mathematics 30, 103, 110, 181; Applied Mathematics and Statistics 131</i>
<i>4th year</i>	<i>Mathematics 111A, 128A, 188, 194</i>

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in mathematics is satisfied by Mathematics 100, *Introduction to Proof and Problem Solving*, and either Mathematics 194, *Senior Seminar*, or Mathematics 195, *Senior Thesis*.

Honors

Honors in the Mathematics Department are awarded to graduating students whose academic performance in the major demonstrates excellence at a GPA of 3.5 or above. Highest Honors are determined by review of departmental narrative evaluations for all students considered for honors. Highest Honors will be awarded to those students whose performance demonstrates the highest level of excellence in the major as reflected in their narrative evaluations.

Minor Requirements

The minor is intended for students who are interested in mathematics and want a strong mathematical foundation for studying in areas that rely heavily on analytical skills. Students are required to complete at least eight courses as follows:

- Mathematics 21, *Linear Algebra*;
- Mathematics 23A and 23 B, *Multivariable Calculus*;
- any five courses numbered 100 and above.

No senior seminar or thesis is required.

A typical mathematics minor program for a physics major might be:

1st year Mathematics 19A-B, 23A

2nd year Mathematics 21, 23B, 24, 100

3rd year Mathematics 103, 105A, 106A, 121A or 124

4th year Mathematics 107, 145 or Applied Mathematics and Statistics 114

Disqualification from the Major or Minor

The Mathematics Department has adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass these courses.

Students who receive more than one No Pass, D, and/or F in the following introductory requirements will not be permitted to major in any concentration of the mathematics major.

Introductory Requirements

- Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*
- Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*
- Mathematics 21, *Linear Algebra*
- Mathematics 23A, *Multivariable Calculus*
- Mathematics 23B, *Multivariable Calculus*
- Mathematics 100, *Introduction to Proof and Problem Solving*

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making

normal progress in the major.

Combined Majors

The combined major, requiring fewer courses than a double major, is administered through the Economics

Department.

Economics and Mathematics

The major in economics and mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both economics and mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for a modern economics Ph.D. program, or for technically demanding professional careers. A full description can be found in the economics section of this catalog.

Graduate Program

The Mathematics Department offers programs leading to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees. Contact the Division of Graduate Studies for further information on the M.A. and Ph.D. programs, as well as on university application procedures.

M.A. Degree Requirements

Students are required to complete two of Mathematics 200, 201, 202, 203; two of Mathematics 204, 205, 206; one of Mathematics 208, 209, 210; and complete five additional courses in mathematics or a related subject by approval. In addition, students must do one of the following:

- pass an M.A.-level preliminary examination;
- write a master's thesis.

Ph.D. Degree Requirements

All of the following are required:

- obtain a Ph.D.-level pass on two of the three written preliminary examinations, or a Ph.D.-level pass on one and a master's-level pass on the remaining two. Students who opt for the Ph.D.-level pass on two of the three preliminary examinations must complete the full sequence in the track associated with the preliminary examination they did not pass;
- satisfy the foreign-language requirement;
- pass the oral qualifying examination;
- complete three quarters as a teaching assistant;
- six graduate courses in mathematics other than Mathematics 200, 201, 202, 203, 204, 205, and 206. No more than three courses may be independent study or thesis research courses;
- write a Ph.D. thesis and present the thesis defense.

Students admitted to the Ph.D. program may receive an M.A. degree en route to the Ph.D.; students admitted to the M.A. program may transfer to the Ph.D. program upon passing the required preliminary examinations at the Ph.D. level.

Course Information

Mathematics 2, *College Algebra for Calculus*, is designed for students who do not meet the requirements for admission to Mathematics 3, *Precalculus*, and who need comprehensive

and careful preparation for calculus. Mathematics 2 emphasizes algebra, graphs, and functions. The prerequisite for course 2 is a minimum placement examination score of 12.

Mathematics 3, *Precalculus*, is recommended for students who need some preparation in algebra and trigonometry prior to taking calculus. This course covers functions and their inverse, exponentials, logarithms, and trigonometry.

Mathematics 11A and 11B, *Calculus with Applications*, are intended for biology and Earth sciences majors. However, students in these majors who score 40 or more points on the mathematics placement examination are strongly encouraged to take the 19A-B sequence, which is required for most upper-division mathematics courses. Laboratory sections are strongly advised.

Mathematics 19A and 19B, *Calculus for Science, Engineering, and Mathematics*, are intended for chemistry, computer engineering, computer science, electrical engineering, information systems management, mathematics, and physics majors. Laboratory sections are strongly advised.

Mathematics 20A and 20B, *Honors Calculus*, are intended for students who would enjoy delving particularly deeply into the foundational and theoretical issues of calculus. Laboratory sections are strongly advised.

Mathematics 21, *Linear Algebra*, covers vector spaces, matrices, determinants, systems of linear equations, and eigenvalues. It is intended for students in the physical and biological and social sciences and is prerequisite to Mathematics 111A.

Mathematics 22, *Introduction to Calculus of Several Variables*, is intended for science students whose schedules do not permit a full and comprehensive two quarters of multivariable calculus. Students who intend to pursue further studies in mathematics must take Mathematics 23A-B and not 22. Laboratory sections are strongly advised.

Mathematics 23A and 23B, *Multivariable Calculus*, are intended for mathematics majors and minors and students in computer engineering, computer science, electrical engineering, information systems management, and physics majors which require more rigorous mathematical training. Laboratory sections are strongly advised.

Mathematics 100, *Introduction to Proof and Problem Solving*, is an introduction to the methodology of advanced mathematics, emphasizing proof techniques. Basic areas such as set theory and logic are introduced, together with extensive applications within mathematics. This course serves as a prerequisite for nearly all upper-division courses.

Mathematics 200+, Graduate-level courses. All graduate courses are open to undergraduates who have taken the recommended prerequisites; students should consult with the course instructor. Advanced undergraduates are strongly advised to take or audit graduate courses that interest them.

Faculty and Professional Interests

Professor

ROBERT BOLTJE

Group theory, representation theory, algebraic number theory

BRUCE N. COOPERSTEIN

Groups of Lie type, incidence geometry

CHONGYING DONG

Infinite-dimensional Lie algebras and their representations, conformal field theory

ALEXANDER GAMBURD

Spectral problems in number theory, probability, and combinatorics

VIKTOR GINZBURG

Global analysis, symplectic topology; Hamiltonian dynamical systems, Poisson geometry, symmetries, and group actions

DEBRA LEWIS

Geometric Hamiltonian mechanics, geometric integration, bifurcation theory, applications of variational methods, control theory

GEOFFREY MASON

Vertex operator algebras and applications to conformal field theory and string theory; modular forms; group theory; quasi-Hopf algebras

RICHARD MONTGOMERY

Celestial mechanics, differential geometry, gauge theory, mechanics (quantum and classical), and singularity theory

JIE QING

Nonlinear analysis, harmonic analysis, partial differential equations with applications to differential geometry, mathematical physics

MARIA SCHONBEK

Nonlinear partial differential equations, with emphasis on fluid equations

HIROTAKA TAMANOI

Algebraic topology, string topology, topological quantum field theory, mathematical aspects of string theory

ANTHONY J. TROMBA

Global nonlinear analysis, calculus of variations, minimal surfaces and Plateaus problem, Riemann surfaces

Associate Professor

TORSTEN EHRHARDT

Functional analysis, Operator theory, Random matrix theory, Banach algebras, Wiener-Hopf factorization, Toeplitz and Hankel operators

Assistant Professor

SAMIT DASGUPTA

Algebraic number theory, arithmetic geometry, special values of L-functions

MARTIN H. WEISSMAN

Representation theory, automorphic forms, number theory

Emeriti

RALPH H. ABRAHAM
NICHOLAS BURGOYNE
ARTHUR E. FISCHER
MARVIN J. GREENBERG
AL KELLEY

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

2. College Algebra for Calculus. F,W

Operations on real numbers, complex numbers, polynomials, and rational expressions; exponents and radicals; solving linear and quadratic equations and inequalities; functions, algebra of functions, graphs; conic sections; mathematical models; sequences and series. Prerequisite(s): placement exam required. *The Staff*

2S. College Algebra for Calculus (2 credits). F

This two-credit, stretch course offers students two quarters to master material covered in course 2: operations on real numbers, complex numbers, polynomials, and rational expressions; exponents and radicals; solving linear and quadratic equations and inequalities; functions, algebra of functions, graphs; conic sections; mathematical models; sequences and series. After successful completion of this course in the first quarter, students enroll in course 2 the following quarter to complete the sequence and earn an additional 5 credits. Prerequisite(s): placement exam required. *N. Bhattacharya*

3. Precalculus. F,W,S

Inverse functions and graphs; exponential and logarithmic functions, their graphs, and use in mathematical models of the real world; rates of change; trigonometry, trigonometric functions, and their graphs; and geometric series. Students cannot receive credit for both course 3 and Applied Mathematics and Statistics 3. Applied Mathematics and Statistics 3 can substitute for course 3. Prerequisite(s): course 2 or placement exam score of 20 or higher. (General Education Code(s): MF, Q.) *The Staff*

4. Mathematics of Choice and Argument. *

Techniques of analyzing and creating quantitative arguments. Application of probability theory to questions in justice, medicine, and economics. Analysis and avoidance of statistical bias. Understanding the application and limitations of quantitative techniques. Prerequisite(s): course 2, or placement exam score of 12 or higher, or AP Calculus AB exam score of 3 or higher. Enrollment limited to 54. (General Education Code(s): SR, Q.) *The Staff*

11A. Calculus with Applications. F,W,S

A modern course stressing conceptual understanding, relevance, and problem solving. The derivative of polynomial, exponential, and trigonometric functions of a single variable is developed and applied to a wide range of problems involving graphing, approximation, and optimization. Students cannot receive credit for both this course and course 19A or Applied Mathematics and Statistics 11A and 15A, or Economics 11A. Prerequisite(s): course 3 or Applied Mathematics and Statistics 3; or placement exam score of 31 or higher; or AP Calculus AB exam score of 3 or higher. (General Education Code(s): MF, IN, Q.) *The Staff*

11B. Calculus with Applications. F,W,S

Starting with the fundamental theorem of calculus and related techniques, the integral of functions of a single variable is developed and applied to problems in geometry, probability, physics, and differential equations. Polynomial approximations, Taylor series, and their applications conclude the course. Students cannot receive credit for this course and course 19B, or Applied Mathematics and Statistics 11B and 15B, or Economics 11B. Prerequisite(s): course 11A or Applied Mathematics and Statistics 15A or AP Calculus AB exam score of 4 or 5, or BC exam score of 3 or higher, or IB Mathematics Higher Level exam score of 5 or higher. (General Education Code(s): MF, IN, Q.) *The Staff*

19A. Calculus for Science, Engineering, and Mathematics. F,W,S

The limit of a function, calculating limits, continuity, tangents, velocities, and other instantaneous rates of change. Derivatives, the chain rule, implicit differentiation, higher derivatives. Exponential functions, inverse functions, and their derivatives. The mean value theorem, monotonic functions, concavity, and points of inflection. Applied maximum and minimum problems. Students cannot receive credit for both this course and course 11A or Applied Mathematics and Statistics 11A and 15A, or Economics 11A. Prerequisite(s): course 3 or Applied Mathematics and Statistics 3 or placement exam score of 40 or higher or AP Calculus AB exam score of 3 or higher. (General Education Code(s): MF, IN, Q.) *The Staff*

19B. Calculus for Science, Engineering, and Mathematics. F,W,S

The definite integral and the fundamental theorem of calculus. Areas, volumes. Integration by parts, trigonometric substitution, and partial fractions methods. Improper integrals. Sequences, series, absolute convergence and convergence tests. Power series, Taylor and Maclaurin series. Students cannot receive credit for both this course and course 11B, Applied Math and Statistics 11B and 15B, or Economics 11B. Prerequisite(s): course 19A or AP Calculus AB exam score of 4 or 5, or BC exam score of 3 or higher, or IB Mathematics Higher Level exam score of 5 or higher. (General Education Code(s): MF, IN, Q.) *The Staff*

20A. Honors Calculus. F

Challenging course designed to approach single-variable calculus from the perspective of modern mathematics. Emphasis is on the evolution and historical development of core concepts underlying calculus and analysis. Prerequisite(s): placement exam score of 46 or higher; or AP Calculus AB exam score of 4 or 5; or BC exam of 3 or higher; or IB Mathematics Higher Level exam score of 5 or higher. Enrollment limited to 60. (General Education Code(s): MF, IN, Q.) *The Staff*

20B. Honors Calculus. W

Challenging course designed to approach single-variable calculus from the perspective of modern mathematics. Emphasis is on the evolution and historical development of core concepts underlying calculus and analysis. Prerequisite(s): course 20A. Enrollment limited to 60. (General Education Code(s): MF, IN, Q.) *The Staff*

21. Linear Algebra. F,W,S

Systems of linear equations, matrices, determinants. Introduction to abstract vector spaces, linear transformation, inner products, geometry of Euclidean space, and eigenvalues. One quarter of college mathematics is recommended as preparation. Prerequisite(s): course 2 or above, or placement exam score of 20 or higher. (General Education Code(s): MF, Q.) *The Staff*

22. Introduction to Calculus of Several Variables. W,S

Functions of several variables. Continuity and partial derivatives. The chain rule, gradient and directional derivative. Maxima and minima, including Lagrange multipliers. The double and triple integral and change of variables. Surface area and volumes. Applications from biology, chemistry, earth sciences, engineering, and physics. Students cannot receive credit for this course and course 23A. Prerequisite(s): course 11B or 19B or 20B or Applied Mathematics and Statistics 15B or AP calculus BC exam score of 4 or 5. (General Education Code(s): MF.) *The Staff*

23A. Multivariable Calculus. F,W,S

Vectors in n-dimensional Euclidean space. The inner and cross products. The derivative of functions from n-dimensional to m-dimensional Euclidean space is studied as a linear transformation having matrix representation. Paths in 3-dimensions, arc length, vector differential calculus. Taylor's theorem in several variables, extrema of real-valued functions, constrained extrema and Lagrange multipliers, the implicit function theorem, some applications. Students cannot receive credit for this course and course 22. Prerequisite(s): course 19B or 20B or AP calculus BC exam score of 4 or 5. (General Education Code(s): MF.) *The Staff*

23B. Multivariable Calculus. F,W,S

Double integral, changing the order of integration. Triple integrals, maps of the plane, change of variables theorem, improper double integrals. Path integrals, line integrals, parametrized surfaces, area of a surface, surface integrals. Green's theorem, Stokes theorem, conservative fields, Gauss' theorem. Applications to physics and differential equations, differential forms. Prerequisite(s): course 23A. (General Education Code(s): MF.) *The Staff*

24. Ordinary Differential Equations. S

First and second order ordinary differential equations, with emphasis on the linear case. Methods of integrating factors, undetermined coefficients, variation of parameters, power series, numerical computation. Students cannot receive credit for this course and Applied Mathematics and Statistics 27. Prerequisite(s): course 22 or 23A; course 21 is recommended as preparation. *The Staff*

30. Mathematical Problem Solving. F

Students learn techniques of problem solving such as induction, contradiction, exhaustion, dissection, analogy, generalization, specialization, and others in the context of solving problems drawn from number theory, probability, combinatorics, graph theory, geometry, and logic. Prerequisite(s): course 11A or 19A or 20A or Math Placement Exam score of 40 or higher. (General Education Code(s): PR-E.) *B. Cooperstein*

99. Tutorial. F,W,S

The Staff

99F. Tutorial (2 credits). F,W,S

May be repeated for credit. *The Staff*

Upper-Division Courses

100. Introduction to Proof and Problem Solving. F,W,S

Students learn the basic concepts and ideas necessary for upper-division mathematics and techniques of mathematical proof. Introduction to sets, relations, elementary mathematical logic, proof by contradiction, mathematical induction, and counting arguments. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 11A and 11B or 19A

and 19B or 20A and 20B. Enrollment limited to 50. (General Education Code(s): MF.) *The Staff*

103A. Complex Analysis. W,S

Complex numbers, analytic and harmonic functions, complex integration, the Cauchy integral formula, Laurent series, singularities and residues, conformal mappings. (Formerly course 103.) Prerequisite(s): course 23B; and either course 100 or Computer Science 101. *The Staff*

103B. Complex Analysis II (2 credits). *

Conformal mappings, the Riemann mapping theorem, Mobius transformations, Fourier series, Fourier and Laplace transforms, applications, and other topics as time permits. Prerequisite(s): course 103A. *The Staff*

105A. Real Analysis. F,W

The basic concepts of one-variable calculus are treated rigorously. Set theory, the real number system, numerical sequences and series, continuity, differentiation. Prerequisite(s): course 23B and either course 100 or Computer Science 101. *The Staff*

105B. Real Analysis. S

Metric spaces, differentiation and integration of functions. The Riemann-Stieltjes integral. Sequences and series of functions. Prerequisite(s): course 105A. *The Staff*

105C. Real Analysis. *

The Stone-Weierstrass theorem, Fourier series, differentiation and integration of functions of several variables. Prerequisite(s): course 105B. *The Staff*

106. Systems of Ordinary Differential Equations. F

Linear systems, exponentials of operators, existence and uniqueness, stability of equilibria, periodic attractors, and applications. (Formerly course 106A.) Prerequisite(s): courses 21 and 24 (preferred) or Applied Mathematics and Statistics 10 and 20; and either course 100 or Computer Science 101. *The Staff*

107. Partial Differential Equations. W

Topics covered include first and second order linear partial differential equations, the heat equation, the wave equation, Laplace's equation, separation of variables, eigenvalue problems, Green's functions, Fourier series. (Formerly course 106B.) Prerequisite(s): courses 21 and 24 (preferred) or Applied Mathematics and Statistics 10 and 20; and either course 100 or Computer Science 101; course 106 is recommended as preparation. *The Staff*

110. Introduction to Number Theory. F,W

Prime numbers, unique factorization, congruences with applications (e.g., to magic squares). Rational and irrational numbers. Continued fractions. Introduction to Diophantine equations. An introduction to some of the ideas and outstanding problems of modern mathematics. Prerequisite(s): course 100 or Computer Science 101. (General Education Code(s): Q.) *The Staff*

111A. Algebra. F,W

Group theory including the Sylow theorem, the structure of abelian groups, and permutation groups. Prerequisite(s): course 21 or Applied Mathematics and Statistics 10 and either course 100 or Computer Science 101. *The Staff*

111B. Algebra. S

Introduction to rings and fields including polynomial rings, factorization, the classical geometric constructions, and Galois theory. Prerequisite(s): course 111A. *The Staff*

114. Introduction to Financial Mathematics. *

Financial derivatives: contracts and options. Hedging and risk management. Arbitrage, interest rate, and discounted value. Geometric random walk and Brownian motion as models of risky assets. Itô's formula. Initial boundary value problems for the heat and related partial differential equations. Self-financing replicating portfolio; Black-Scholes pricing of European options. Dividends. Implied volatility. American options as free boundary problems. Corequisite(s): Applied Mathematics and Statistics 131 or Computer Engineering 107. *The Staff*

115. Graph Theory. *

Graph theory, trees, vertex and edge colorings, Hamilton cycles, Eulerian circuits, decompositions into isomorphic subgraphs, extremal problems, cages, Ramsey theory, Cayley's spanning tree formula, planar graphs, Euler's formula, crossing numbers, thickness, splitting numbers, magic graphs, graceful trees, rotations, and genus of graphs. Prerequisite(s): course 21 or Applied Mathematics and Statistics 10 and either course 100 or Computer Science 101. *The Staff*

117. Advanced Linear Algebra. S

Review of abstract vector spaces. Dual spaces, bilinear forms, and the associated geometry. Normal forms of linear mappings. Introduction to tensor products and exterior algebras. Prerequisite(s): course 21 or Applied Mathematics and Statistics 10 and either course 100 or Computer Science 101. *The Staff*

118. Advanced Number Theory. W

Topics include divisibility and congruences, arithmetical functions, quadratic residues and quadratic reciprocity, quadratic forms and representations of numbers as sums of squares, Diophantine approximation and transcendence theory, quadratic fields. Additional topics as time permits. Prerequisite(s): course 110 or 111A. *The Staff*

120. Coding Theory. *

An introduction to mathematical theory of coding. Construction and properties of various codes, such as cyclic, quadratic residue, linear, Hamming, and Golay codes; weight enumerators; connections with modern algebra and combinatorics. Prerequisite(s): course 21. *The Staff*

121A. Differential Geometry. W

Topics include Euclidean space, tangent vectors, directional derivatives, curves and differential forms in space, mappings. Curves, the Frenet formulas, covariant derivatives, frame fields, the structural equations. The classification of space curves up to rigid motions. Vector fields and differentiable forms on surfaces; the shape operator. Gaussian and mean curvature. The theorem Egregium; global classification of surfaces in three space by curvature. Prerequisite(s): courses 21 and 23B and either course 100 or Computer Science 101. Course 105A strongly recommended. *The Staff*

121B. Differential Geometry and Topology. S

Examples of surfaces of constant curvature, surfaces of revolutions, minimal surfaces. Abstract manifolds; integration theory; Riemannian manifolds. Total curvature and geodesics; the Euler characteristic, the Gauss-Bonnet theorem. Length-minimizing properties of geodesics, complete surfaces, curvature and conjugate points covering surfaces. Surfaces of constant curvature; the theorems of Bonnet and Hadamard. Prerequisite(s): course 121A. *The Staff*

124. Introduction to Topology. F

Topics include introduction to point set topology (topological spaces, continuous maps, connectedness, compactness), homotopy relation, definition and calculation of fundamental groups and homology groups, Euler characteristic, classification of orientable and nonorientable surfaces, degree of maps, and Lefschetz fixed-point theorem. Prerequisite(s): course 100; course 111A recommended. *The Staff*

128A. Classical Geometry: Euclidean and Non-Euclidean. F

Rigorous foundations for Euclidean and non-Euclidean geometries. History of attempts to prove the parallel postulate and of the simultaneous discovery by Gauss, J. Bolyai, and Lobachevsky of hyperbolic geometry. Consistency proved by Euclidean models. Classification of rigid motions in both geometries. Prerequisite(s): either course 100 or Computer Science 101. *The Staff*

128B. Classical Geometry: Projective. *

Theorems of Desargue, Pascal, and Pappus; projectivities; homogeneous and affine coordinates; conics; relation to perspective drawing and some history. Prerequisite(s): course 21. *The Staff*

129. Algebraic Geometry. F

Algebraic geometry of affine and projective curves, including conics and elliptic curves; Bezout's theorem; coordinate rings and Hilbert's Nullstellensatz; affine and projective varieties; and regular and singular varieties. Other topics, such as blow-ups and algebraic surfaces as time permits. Prerequisite(s): courses 21 and 100. Enrollment limited to 40. *The Staff*

130. Celestial Mechanics. *

Solves the two-body (or Kepler) problem, then moves onto the N-body problem where there are many open problems. Includes central force laws; orbital elements; conservation of linear momentum, energy, and angular momentum; the Lagrange-Jacobi formula; Sundman's theorem for total collision; virial theorem; the three-body problem; Jacobi coordinates; solutions of Euler and of Lagrange; and restricted three-body problem. Prerequisite(s): courses 19A-B and course 23A or Physics 5A or 6A; courses 21 and 24 strongly recommended. Enrollment limited to 35. *The Staff*

134. Cryptography. *

Introduces different methods in cryptography (shift cipher, affine cipher, Vigenere cipher, Hill cipher, RSA cipher, ElGamal cipher, knapsack cipher). The necessary material from number theory and probability theory is developed in the course. Common methods to attack ciphers discussed. Prerequisite(s): course 100; course 110 recommended as preparation. *The Staff*

140. Industrial Mathematics. *

Introduction to mathematical modeling of industrial problems. Problems in air quality remediation, image capture and reproduction, and crystallization are modeled as ordinary and partial differential equations then analyzed using a combination of qualitative and quantitative methods. Prerequisite(s): course 24 and either course 100 or Computer Science 101, and course 105A. *The Staff*

145. Introductory Chaos Theory. *

The Lorenz and Rossler attractors, measures of chaos, attractor reconstruction, applications from the sciences. Students cannot receive credit for this course and Applied Mathematics and Statistics 146. Prerequisite(s): course 22 or 23A; course 21; course 100 or Computer Science 101. Concurrent enrollment in course 145L is required. *The Staff*

145L. Introductory Chaos Laboratory (1 credit). *

Laboratory sequence illustrating topics covered in course 145. One three-hour session per week in microcomputer laboratory. Concurrent enrollment in course 145 is required. *The Staff*

148. Numerical Analysis. *

The theory of constructive methods in mathematical analysis and its application with scientific

computation. Some typical topics are difference equations, linear algebra, iteration, Bernoulli's method, quotient difference algorithm, the interpolating polynomial, numerical differentiation and integration, numerical solution of differential equations, finite Fourier series. Prerequisite(s): course 22 or 23A; course 21 and 24 or Applied Mathematics and Statistics 10 and 20; course 100 or Computer Science 101. Concurrent enrollment in course 148L is required. *The Staff*

148L. Numerical Analysis Laboratory (1 credit). *

Laboratory sequence illustrating topics covered in course 148. One three-hour session per week in microcomputer laboratory. Concurrent enrollment in course 148 is required. *The Staff*

160. Mathematical Logic I. *

Propositional and predicate calculus. Resolution, completeness, compactness, and Lowenheim-Skolem theorem. Recursive functions, Godel incompleteness theorem. Undecidable theories. Hilbert's 10th problem. Prerequisite(s): course 100 or Computer Science 101. *The Staff*

161. Mathematical Logic II. S

Naive set theory and its limitations (Russell's paradox); construction of numbers as sets; cardinal and ordinal numbers; cardinal and ordinal arithmetic; transfinite induction; axiom systems for set theory, with particular emphasis on the axiom of choice and the regularity axiom and their consequences (such as, the Banach-Tarski paradox); continuum hypothesis. Prerequisite(s): course 100 or equivalent, or by permission of instructor. Enrollment limited to 45. *The Staff*

181. History of Mathematics. W

A survey from a historical point of view of various developments in mathematics. Specific topics and periods to vary yearly. (General Education Code(s): TA.) *The Staff*

188. Supervised Teaching. F,W,S

Supervised tutoring in self-paced courses. May not be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

189. ACE Program Service Learning (2 credits). F

Students participate in training and development to co-facilitate collaborative learning in ACE chemistry discussion sections and midterm/exam review sessions. Students are role models for students pursuing science- and math-intensive majors. Prerequisite(s): Prior participation in ACE; good academic standing; no non-passing grades in prior quarter. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 10. (General Education Code(s): PR-S.) *The Staff*

194. Senior Seminar. W,S

Designed to expose the student to topics not normally covered in the standard courses. The format varies from year to year. In recent years each student has written a paper and presented a lecture on it to the class. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 103 or 105A or 111A. Enrollment priority given to seniors. *The Staff*

195. Senior Thesis. F,W,S

Students research a mathematical topic under the guidance of a faculty sponsor and write a senior thesis demonstrating knowledge of the material. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Algebra I. F

Group theory: subgroups, cosets, normal subgroups, homomorphisms, isomorphisms, quotient groups, free groups, generators and relations, group actions on a set. Sylow theorems, semidirect products, simple groups, nilpotent groups, and solvable groups. Ring theory: Chinese remainder theorem, prime ideals, localization. Euclidean domains, PIDs, UFDs, polynomial rings. Prerequisite(s): courses 111A and 117 are recommended as preparation. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

201. Algebra II. W

Vector spaces, linear transformations, eigenvalues and eigenvectors, the Jordan canonical form, bilinear forms, quadratic forms, real symmetric forms and real symmetric matrices, orthogonal transformations and orthogonal matrices, Euclidean space, Hermitian forms and Hermitian matrices, Hermitian spaces, unitary transformations and unitary matrices, skewsymmetric forms, tensor products of vector spaces, tensor algebras, symmetric algebras, exterior algebras, Clifford algebras and spin groups. Prerequisite(s): Course 200 is recommended as preparation. Enrollment restricted to graduate students. *The Staff*

202. Algebra III. S

Module theory: Submodules, quotient modules, module homomorphisms, generators of modules, direct sums, free modules, torsion modules, modules over PIDs, and applications to rational and Jordan canonical forms. Field theory: field extensions, algebraic and transcendental extensions, splitting fields, algebraic closures, separable and normal extensions, the Galois theory, finite fields, Galois theory of polynomials. Prerequisite(s): Course 201 is recommended as preparation.

Enrollment restricted to graduate students. *The Staff*

203. Algebra IV. F

Topics include tensor product of modules over rings, projective modules and injective modules, Jacobson radical, Wedderburns' theorem, category theory, Noetherian rings, Artinian rings, affine varieties, projective varieties, Hilbert's Nullstellensatz, prime spectrum, Zariski topology, discrete valuation rings, and Dedekind domains. Prerequisite(s): courses 200, 201, and 202. Enrollment restricted to graduate students. *The Staff*

204. Analysis I. F

Completeness and compactness for real line; sequences and infinite series of functions; Fourier series; calculus on Euclidean space and the implicit function theorem; metric spaces and the contracting mapping theorem; the Arzela-Ascoli theorem; basics of general topological spaces; the Baire category theorem; Urysohn's lemma; and Tychonoff's theorem. Prerequisite(s): course 105A or equivalent; course 105B is recommended as preparation. Enrollment restricted to graduate students. *The Staff*

205. Analysis II. W

Lebesgue measure theory, abstract measure theory, measurable functions, integration, space of absolutely integrable functions, dominated convergence theorem, convergence in measure, Riesz representation theorem, product measure and Fubini's theorem. L_p spaces, derivative of a measure, the Radon-Nikodym theorem, and the fundamental theorem of calculus. Prerequisite(s): course 204. Enrollment restricted to graduate students. *The Staff*

206. Analysis III. S

Banach spaces, Hahn-Banach theorem, uniform boundedness theorem, the open mapping and closed graph theorems, weak and weak* topology, the Banach-Alaoglu theorem, Hilbert spaces, self-adjoint operators, compact operators, spectral theory, Fredholm operators, spaces of distributions and the Fourier transform, and Sobolev spaces. Prerequisite(s): Courses 204 and 205 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

207. Complex Analysis. F

Holomorphic and harmonic functions, Cauchy's integral theorem, the maximum principle and its consequences, conformal mapping, analytic continuation, the Riemann mapping theorem. Prerequisite(s): Course 103 is recommended as preparation. Enrollment restricted to graduate students. *The Staff*

208. Manifolds I. F

Definition of manifolds; the tangent bundle; the inverse function theorem and the implicit function theorem; transversality; Sard's theorem and the Whitney embedding theorem; vector fields, flows, and the Lie bracket; Frobenius's theorem. Course 204 recommended for preparation. Enrollment restricted to graduate students. *The Staff*

209. Manifolds II. W

Tensor algebra. Differential forms and associated formalism of pullback, wedge product, exterior derivative, Stokes theorem, integration. Cartan's formula for Lie derivative. Cohomology via differential forms. The Poincaré lemma and the Mayer-Vietoris sequence. Theorems of deRham and Hodge. Prerequisite(s): course 208. Course 201 is recommended as preparation. Enrollment restricted to graduate students. *The Staff*

210. Manifolds III. S

The fundamental group, covering space theory and van Kampen's theorem (with a discussion of free and amalgamated products of groups), CW complexes, higher homotopy groups, cellular and singular cohomology, the Eilenberg-Steenrod axioms, computational tools including Mayer-Vietoris, cup products, Poincaré duality, the Lefschetz fixed point theorem, the exact homotopy sequence of a fibration and the Hurewicz isomorphism theorem, and remarks on characteristic classes. Prerequisite(s): Courses 208 and 209 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

211. Algebraic Topology. F

Continuation of course 210. Topics include theory of characteristic classes of vector bundles, cobordism theory, and homotopy theory. Prerequisite(s): Courses 200, 201, and 202 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

212. Differential Geometry. S

Principal bundles, associated bundles and vector bundles, connections and curvature on principal and vector bundles. More advanced topics include: introduction to cohomology, the Chern-Weil construction and characteristic classes, the Gauss-Bonnet theorem or Hodge theory, eigenvalue estimates for Beltrami Laplacian, and comparison theorems in Riemannian geometry. Prerequisite(s): course 208. Enrollment restricted to graduate students. *The Staff*

213A. Partial Differential Equations I. F

First of the two PDE courses covering basically Part I in Evans' book; *Partial Differential Equations*; which includes transport equations; Laplace equations; heat equations; wave equations; characteristics of nonlinear first-order PDE; Hamilton-Jacobi equations; conservation laws; some methods for solving equations in closed form; and the Cauchy-Kovalevskaya theorem. Courses 106 and 107 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

213B. Partial Differential Equations II. *

Second course of the PDE series covering basically most of Part II in Evans' book and some topics in nonlinear PDE including Sobolev spaces, Sobolev inequalities, existence, regularity and a priori estimates of solutions to second order elliptic PDE, parabolic equations, hyperbolic equations and systems of conservation laws, and calculus of variations and its applications to PDE. Prerequisite(s): Courses 106, 107, and 213A are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

214. Theory of Finite Groups. *

Nilpotent groups, solvable groups, Hall subgroups, the Frattini subgroup, the Fitting subgroup, the Schur-Zassenhaus theorem, fusion in p-subgroups, the transfer map, Frobenius theorem on normal p-complements. Prerequisite(s): Courses 200 and 201 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

215. Operator Theory. *

Operators on Banach spaces and Hilbert spaces. The spectral theorem. Compact and Fredholm operators. Other special classes of operators. Prerequisite(s): Courses 204, 205, 206, and 207 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

216. Advanced Analysis. *

Topics include: the Lebesgue set, the Marcinkiewicz interpolation theorem, singular integrals, the Calderon-Zygmund theorem, Hardy Littlewood-Sobolev theorem, pseudodifferential operators, compensated compactness, concentration compactness, and applications to PDE. Prerequisite(s): Courses 204, 205, and 206 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

217. Advanced Elliptic Partial Differential Equations. *

Topics include elliptic equations, existence of weak solutions, the Lax-Milgram theorem, interior and boundary regularity, maximum principles, the Harnack inequality, eigenvalues for symmetric and non-symmetric elliptic operators, calculus of variations (first variation: Euler-Lagrange equations, second variation: existence of minimizers). Other topics covered as time permits. Prerequisite(s): Courses 204, 205, and 206 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

218. Advanced Parabolic and Hyperbolic Partial Differential Equations. *

Topics include: linear evolution equations, second order parabolic equations, maximum principles, second order hyperbolic equations, propagation of singularities, hyperbolic systems of first order, semigroup theory, systems of conservation laws, Riemann problem, simple waves, rarefaction waves, shock waves, Riemann invariants, and entropy criteria. Other topics covered as time permits. Prerequisite(s): courses 205 and 206. Enrollment restricted to graduate students. *The Staff*

219. Nonlinear Functional Analysis. *

Topological methods in nonlinear partial differential equations, including degree theory, bifurcation theory, and monotonicity. Topics also include variational methods in the solution of nonlinear partial differential equations. Enrollment restricted to graduate students. *The Staff*

220A. Representation Theory I. *

Lie groups and Lie algebras, and their finite dimensional representations. Prerequisite(s): courses 200, 201, and 202. Courses 225A and 227 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

220B. Representation Theory II. *

Lie groups and Lie algebras, and their finite dimensional representations. Prerequisite(s): course 220A. Enrollment restricted to graduate students. *The Staff*

222A. Algebraic Number Theory. S

Topics include algebraic integers, completions, different and discriminant, cyclotomic fields, parallelotopes, the ideal function, ideles and adèles, elementary properties of zeta functions and L-series, local class field theory, global class field theory. Courses 200, 201, and 202 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

222B. Algebraic Number Theory. *

Topics include geometric methods in number theory, finiteness theorems, analogues of Riemann-Roch for algebraic fields (after A. Weil), inverse Galois problem (Belyi theorem) and consequences. Enrollment restricted to graduate students. *The Staff*

223A. Algebraic Geometry I. *

Topics include examples of algebraic varieties, elements of commutative algebra, local properties of algebraic varieties, line bundles and sheaf cohomology, theory of algebraic curves. Weekly problem solving. Courses 200, 201, 202, and 208 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

223B. Algebraic Geometry II. *

A continuation of course 223A. Topics include theory of schemes and sheaf cohomology, formulation of the Riemann-Roch theorem, birational maps, theory of surfaces. Weekly problem solving. Course 223A is recommended as preparation. Enrollment restricted to graduate students. *The Staff*

225A. Lie Algebras. F

Basic concepts of Lie algebras. Engel's theorem, Lie's theorem, Weyl's theorem are proved. Root space decomposition for semi-simple algebras, root systems and the classification theorem for semi-simple algebras over the complex numbers. Isomorphism and conjugacy theorems. Prerequisite(s): Courses 201 and 202 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

225B. Infinite Dimensional Lie Algebras. *

Finite dimensional semi-simple Lie algebras: PBW theorem, generators and relations, highest weight representations, Weyl character formula. Infinite dimensional Lie algebras: Heisenberg algebras, Virasoro algebras, loop algebras, affine Kac-Moody algebras, vertex operator representations. Prerequisite(s): course 225A. Enrollment restricted to graduate students. *The Staff*

226A. Infinite Dimensional Lie Algebras and Quantum Field Theory I. S

Introduction to the infinite-dimensional Lie algebras that arise in modern mathematics and mathematical physics: Heisenberg and Virasoro algebras, representations of the Heisenberg algebra, Verma modules over the Virasoro algebra, the Kac determinant formula, and unitary and discrete series representations. Enrollment restricted to graduate students. *The Staff*

226B. Infinite Dimensional Lie Algebras and Quantum Field Theory II. *

Continuation of course 226A: Kac-Moody and affine Lie algebras and their representations, integrable modules, representations via vertex operators, modular invariance of characters, and introduction to vertex operator algebras. Enrollment restricted to graduate students. *The Staff*

227. Lie Groups. S

Lie groups and algebras, the exponential map, the adjoint action, Lie's three theorems, Lie subgroups, the maximal torus theorem, the Weyl group, some topology of Lie groups, some representation theory: Schur's Lemma, the Peter-Weyl theorem, roots, weights, classification of Lie groups, the classical groups. Prerequisite(s): courses 200, 201, 204, and 208. Enrollment restricted to graduate students. *The Staff*

228. Lie Incidence Geometries. *

Linear incidence geometry is introduced. Linear and classical groups are reviewed, and geometries associated with projective and polar spaces are introduced. Characterizations are obtained. Enrollment restricted to graduate students. *The Staff*

229. Kac-Moody Algebras. *

Theory of Kac-Moody algebras and their representations. The Weil-Kac character formula. Emphasis on representations of affine superalgebras by vertex operators. Connections to combinatorics, PDE, the monster group. The Virasoro algebra. Enrollment restricted to graduate students. *The Staff*

232. Morse Theory. W

Classical Morse Theory. The fundamental theorems relating critical points to the topology of a manifold are treated in detail. The Bolt Periodicity Theorem. A specialized course offered once every few years. Prerequisite(s): Courses 208, 209, 210, 211, and 212 recommended as preparation. Enrollment restricted to graduate students. Offered in alternate academic years. *The Staff*

233. Random Matrix Theory. *

Classical matrix ensembles; Wigner semi-circle law; method of moments. Gaussian ensembles. Method of orthogonal polynomials; Gaudin lemma. Distribution functions for spacings and largest eigenvalue. Asymptotics and Riemann-Hilbert problem. Painleve theory and the Tracy-Widom distribution. Selberg's Integral. Matrix ensembles related to classical groups; symmetric functions theory. Averages of characteristic polynomials. Fundamentals of free probability theory. Overview of connections with physics, combinatorics, and number theory. Prerequisite(s): courses 103, 204, and 205; course 117 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

234. Riemann Surfaces. *

Riemann surfaces, conformal maps, harmonic forms, holomorphic forms, the Reimann-Roch theorem, the theory of moduli. Enrollment restricted to graduate students. *The Staff*

235. Dynamical Systems Theory. *

An introduction to the qualitative theory of systems of ordinary differential equations. Structural stability, critical elements, stable manifolds, generic properties, bifurcations of generic arcs. Prerequisite(s): courses 106A, 203, and 208. Enrollment restricted to graduate students. *The Staff*

238. Elliptic Functions and Modular Forms. *

The course, aimed at second-year graduate students, will cover the basic facts about elliptic functions and modular forms. The goal is to provide the student with foundations suitable for further work in advanced number theory, in conformal field theory, and in the theory of Riemann surfaces. Successful completion of graduate algebra sequence (courses 200-202) and either 207 or 103 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

239. Homological Algebra. *

Homology and cohomology theories have proven to be powerful tools in many fields (topology, geometry, number theory, algebra). Independent of the field, these theories use the common language of homological algebra. The aim of this course is to acquaint the participants with basic concepts of category theory and homological algebra, as follows: chain complexes, homology, homotopy, several (co)homology theories (topological spaces, manifolds, groups, algebras, Lie

groups), projective and injective resolutions, derived functors (Ext and Tor). Depending on time, spectral sequences or derived categories may also be treated. Courses 200 and 202 strongly recommended. Enrollment restricted to graduate students. *The Staff*

240A. Representations of Finite Groups I. *

Introduces ordinary representation theory of finite groups (over the complex numbers). Main topics are characters, orthogonality relations, character tables, induction and restriction, Frobenius reciprocity, Mackey's formula, Clifford theory, Schur indicator, Schur index, Artin's and Brauer's induction theorems. Recommended: successful completion of courses 200-202. Enrollment restricted to graduate students. *The Staff*

240B. Representations of Finite Groups II. *

Introduces modular representation theory of finite groups (over a field of positive characteristic). Main topics are Grothendieck groups, Brauer characters, Brauer character table, projective covers, Brauer-Cartan triangle, relative projectivity, vertices, sources, Green correspondence, Green's indecomposability theorem. Recommended completion of courses 200-203 and 240A.

Prerequisite(s): Courses 200, 201, 202, 203, and 240A recommended. Enrollment restricted to graduate students. *The Staff*

246. Representations of Algebras. *

Material includes associative algebras and their modules; projective and injective modules; projective covers; injective hulls; Krull-Schmidt Theorem; Cartan matrix; semisimple algebras and modules; radical, simple algebras; symmetric algebras; quivers and their representations; Morita Theory; and basic algebras. Prerequisite(s): courses 200, 201, and 202. Enrollment restricted to graduate students. *The Staff*

248. Symplectic Geometry. *

Basic definitions. Darboux theorem. Basic examples: cotangent bundles, Kähler manifolds and coadjoint orbits. Normal form theorems. Hamiltonian group actions, moment maps. Reduction by symmetry groups. Atiyah-Guillemin-Sternberg convexity. Introduction to Floer homological methods. Relations with other geometries including contact, Poisson, and Kähler geometry.

Prerequisite(s): course 204; courses 208 and 209 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

249A. Mechanics I. W

Covers symplectic geometry and classical Hamiltonian dynamics. Some of the key subjects are the Darboux theorem, Poisson brackets, Hamiltonian and Lagrangian systems, Legendre transformations, variational principles, Hamilton-Jacobi theory, geodesic equations, and an introduction to Poisson geometry. Courses 208 and 209 are recommended as preparation. Courses 208 and 209 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

249B. Mechanics II. *

Hamiltonian dynamics with symmetry. Key topics center around the momentum map and the theory of reduction in both the symplectic and Poisson context. Applications are taken from geometry, rigid body dynamics, and continuum mechanics. Course 249A is recommended as preparation. Enrollment restricted to graduate students. *The Staff*

249C. Mechanics III. *

Introduces students to active research topics tailored according to the interests of the students. Possible subjects are complete integrability and Kac-Moody Lie algebras; Smale's topological program and bifurcation theory; KAM theory, stability and chaos; relativity; quantization. Course 249B is recommended as preparation. Enrollment restricted to graduate students. Offered in alternate academic years. *The Staff*

252. Fluid Mechanics. *

First covers a basic introduction to fluid dynamics equations and then focuses on different aspects of the solutions to the Navier-Stokes equations. Prerequisite(s): courses 106 and 107 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

254. Geometric Analysis. *

Introduction to some basics in geometric analysis through the discussions of two fundamental problems in geometry: the resolution of the Yamabe problem and the study of harmonic maps. The analytic aspects of these problems include Sobolev spaces, best constants in Sobolev inequalities, and regularity and a priori estimates of systems of elliptic PDE. Courses 204, 205, 209, 212, and 213 recommended as preparation. Enrollment restricted to graduate students. *The Staff*

256. Algebraic Curves. *

Introduction to compact Riemann surfaces and algebraic geometry via an in-depth study of complex algebraic curves. Courses 200, 201, 202, 203, 204, and 207 are recommended as preparation. Enrollment restricted to graduate mathematics and physics students. *The Staff*

260. Combinatorics. *

Combinatorial mathematics, including summation methods, binomial coefficients, combinatorial sequences (Fibonacci, Stirling, Eulerian, harmonic, Bernoulli numbers), generating functions and their uses, Bernoulli processes and other topics in discrete probability. Oriented toward problem solving applications. Applications to statistical physics and computer science. Enrollment restricted to graduate students. *The Staff*

280. Topics in Analysis. S

Enrollment restricted to graduate students. *The Staff*

281. Topics in Algebra. *

Enrollment restricted to graduate students. *The Staff*

282. Topics in Geometry. *

Enrollment restricted to graduate students. *The Staff*

283. Topics in Combinatorial Theory. *

Enrollment restricted to graduate students. *The Staff*

284. Topics in Dynamics. *

Enrollment restricted to graduate students. *The Staff*

285. Topics in Partial Differential Equations. *

Topics such as derivation of the Navier-Stokes equations. Examples of flows including water waves, vortex motion, and boundary layers. Introductory functional analysis of the Navier-Stokes equation. Enrollment restricted to graduate students. *The Staff*

286. Topics in Number Theory. *

Topics in number theory, selected by instructor. Possibilities include modular and automorphic forms, elliptic curves, algebraic number theory, local fields, the trace formula. May also cover related areas of arithmetic algebraic geometry, harmonic analysis, and representation theory. Courses 200, 201, 202, and 205 are recommended as preparation. Enrollment restricted to graduate students. *The Staff*

287. Topics in Topology. *

Topics in topology, selected by the instructor. Possibilities include generalized (co)homology theory including K-theory, group actions on manifolds, equivariant and orbifold cohomology theory. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

292. Seminar (no credit). F,W,S

A weekly seminar attended by faculty, graduate students, and upper-division undergraduate students. All graduate students are expected to attend. Enrollment restricted to graduate students. *The Staff*

296. Special Student Seminar. F,W,S

Students and staff studying in an area where there is no specific course offering at that time. Enrollment restricted to graduate students. *The Staff*

297. Independent Study. F,W,S

Either study related to a course being taken or a totally independent study. Enrollment restricted to graduate students. Enrollment restricted to graduate students. *The Staff*

298. Master's Thesis Research. F,W,S

Enrollment restricted to graduate students. *The Staff*

299. Thesis Research. F,W,S

Enrollment restricted to graduate students. Enrollment restricted to graduate students. *The Staff*

*Not offered in 2011-12

For college description and list of faculty, see [Merrill College](#)

Lower-Division Courses**10. Becoming a Successful Student (2 credits). ***

An interactive course providing the opportunity to assess and revise methods of and purposes in studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are explored. Contact college office for interview-only criteria. Enrollment limited to 30. *The Staff*

20N. Re-Evaluation Counseling. W

Class introduces the fundamentals of re-evaluation counseling (co-counseling) and focuses on those aspects of the theory and practice which facilitate living in a diverse world. Interview with instructor before first class meeting. Enrollment limited to 20. Offered in alternate academic years. *P. Roby*

28. Peer Leadership in Co-Curricular Settings (2 credits). S

Introductory course for student leaders combining theoretical background and practical applications. Topics include: student-development theory; communication strategies; leadership-skills assessment; and intergroup relations. Includes readings, discussions, self-reflection, and lectures. Resident assistant (RA) pre-employment training course. Enrollment by interview only: approval of instructor required. Enrollment restricted to selection as resident assistant (RA), program assistant, or alternate for Merrill College. Enrollment limited to 30. May be repeated for credit. *The Staff*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80A. Introduction to University Discourse: Cultural Identities and Global Consciousness. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Examines world poverty, imperialism, and nationalism; peoples' need to assert their cultural identities; and the benefits of individuals' absorption in worthy causes. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): T3-Social Sciences, C1, E.) *L. Martinez-Echazabal*

80B. Rhetoric and Inquiry: Cultural Identities and Global Consciousness. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for writing and research. Examines world poverty, imperialism, and nationalism; peoples' need to assert their cultural identities; and the benefits of individuals' absorption in worthy causes. Incorporates outside research. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. (General Education Code(s): T3-Social Sciences, C2, E.) *L. Martinez-Echazabal*

80C. Merrill Seminar. S

Research-based seminar on a topic of particular cultural, historical, or contemporary interest, open to all undergraduate students, taught by either a Merrill College Fellow or other member of the UCSC faculty. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *The Staff*

80L. Merrill Core Visual Laboratory (2 credits). *

Visual laboratory designed to work in tandem with the Merrill Core Course to enhance learning for students with diverse skills and learning styles. Open to first-year Merrill students currently enrolled in course 80A, 80B, or 80X. Required of students in the Merrill Frosh Scholars Program. Concurrent enrollment in course 80A, 80B, or 80X is required. *C. Gerster*

80X. Introduction to University Discourse: Cultural Identities and Global Consciousness(Frosh Scholar). *

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Examines world poverty, imperialism, and nationalism; people's need to assert their cultural identities; and the benefits of individuals' absorption in worthy causes. Permission of instructor required; selection for this year-long scholars program based on application submitted prior to fall quarter. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C1, E.) *L. Martinez-Echazabal*

80Z. Merrill Scholars Seminar. *

Research-based, writing-intensive seminar focusing on the construction of persuasive arguments. Explores topics of cultural, historical, and/or political interest, taught by a Merrill College Fellow. Topic will change yearly. Enrollment restricted to Merrill Frosh Scholars program participants. Enrollment limited to 22. (General Education Code(s): T5-Humanities and Arts or Social Sciences, C2.) *The Staff*

85B. Merrill Classroom Connection Field Study (3 credits). F,W,S

Supervised hands-on experience assisting in local elementary classrooms. Students attend UCSC class meetings, complete relevant readings in educational theory, and present a final assignment. Priority enrollment restricted to Merrill College members. May be repeated for credit. (General Education Code(s): PR-S.) *L. Martinez-Echazabal*

85C. Merrill Classroom Connection Field Study (2 credits). F,W,S

Supervised hands-on experience assisting in local elementary school classrooms. Students also attend UCSC course meetings, complete relevant readings in educational theory, and present a final assignment. Priority enrollment restricted to Merrill College members. May be repeated for credit. (General Education Code(s): PR-S.) *L. Martinez-Echazabal*

93. Field Study. F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser and provost required. *The Staff*

93F. Field Study (2 credits). F,W,S

Provides for individual program of study sponsored by the college and performed off campus. Approval of instructor required. May be repeated for credit. *The Staff*

93G. Field Study (3 credits). F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Approval of instructor required. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency. *The Staff*

99F. Tutorial (2 credits). F,W,S

Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency. *The Staff*

Upper-Division Courses

120. Personal Empowerment. W

Intensive course on individual goal-oriented behavior, commonly called problem solving. Focus on purpose, goals, meaning, emotions, languages, model-building, reality, thinking, logic, creativity, the steps of problem solving, common blocks, and techniques of unblocking. Meet with instructor prior to advance enrollment; priority given to upper-level students. Enrollment limited to 20. *F. Andrews*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar by an upper-division student under faculty supervision. (See course 42.) Students submit petition to sponsoring agency, supported by faculty member willing to supervise. *The Staff*

193. Field Study. F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Up to three such courses may be taken for credit in one quarter. Approval of student's adviser and provost required. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Up to three such courses may be taken for credit in one quarter. Approval of student's adviser and provost required. May be repeated for credit. *The Staff*

193G. Field Study (3 credits). F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Up to three such courses may be taken for credit in one quarter. Approval of student's adviser and provost required. May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. *The Staff*

195. Senior Research Project. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus, for which faculty supervision is not in person (e.g., supervision is by correspondence). Up to three such courses may be taken for credit in any one quarter. This may be a multiple-term course extending over two or three quarters; in this case the grade and evaluation submitted for the final quarter apply to all previous quarters. Petitions may be obtained at the Merrill College Office. Approval of student's adviser, certification of adequate preparation, and approval by the Merrill Provost required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The Microbiology and Environmental Toxicology Department (formerly the Environmental Toxicology Department) sponsors undergraduate and graduate courses in microbiology and environmental toxicology, both within the department and through affiliated departments. The curriculum offers a strong foundation in fundamental and applied toxicology and microbiology to provide the breadth and depth of perspective required for this interdisciplinary science. Research interests of students and faculty in microbiology and environmental toxicology span the fields of biology, microbiology, chemistry, Earth sciences, ocean sciences, environmental studies, and human health.

Undergraduate Programs

While the Microbiology and Environmental Toxicology Department only awards graduate degrees, it does offer a select number of undergraduate courses to prepare and attract promising undergraduates for advanced studies in microbiology and environmental toxicology or related disciplines. Students interested in microbiology and environmental toxicology should major in a field such as biology; marine biology; molecular, cell, and developmental biology; biochemistry; chemistry; Earth sciences; engineering; or environmental studies while taking microbiology and environmental toxicology electives.

In addition, the program provides unique opportunities for exceptional undergraduates to conduct research in microbiology and environmental toxicology. These opportunities are limited to students who have demonstrated their potential in undergraduate courses in the basic sciences and environmental toxicology. With department approval, these undergraduates may also take graduate courses in microbiology and environmental toxicology. That coursework will be applied toward a graduate degree in microbiology and environmental toxicology if they are accepted into the program.

Graduate Programs

Graduate training in the Department of Microbiology and Environmental Toxicology (METX) prepares students to solve important problems in the field of environmental health by providing stimulating coursework, extensive scientific presentation training, and in-depth research that culminates in a thesis. Our department is housed on one floor of a new building, allowing extensive interactions between all members. There is no other program in the world that educates students to appreciate the interplay between microbes, chemical toxins, and health, providing the training students require to work effectively in a complex world. Graduate training in the METX department prepares students to become leaders in the field, following career paths in academia, teaching, industry, and government. Master of science (M.S.) students typically finish in two years and doctor of philosophy (Ph.D.) students in four to six years.

Key components of our graduate training include:

- Core course utilizing a case study format: METX 200, Interdisciplinary Approaches to Problems at the Interface of Microbiology and Environmental Toxicology.
- Core course devoted to grant-writing skills: METX 205, Scientific Skills, Ethics, and Writing.
- Personalized class plan for the remaining three courses to fit the student's background and research goals. Possible courses include METX 201, Sources and Fates of Pollutants, METX 202, Cellular and Organismal Toxicology, METX 206A, Advanced Microbiology, METX 210, Molecular and Cellular Basis of Bacterial Pathogenesis, METX 238, Pathogenesis: Molecular Mechanisms of Disease, and METX 250, Environmental Microbiology, as well as courses in other departments such as Ocean Sciences 220, Chemical Oceanography, and Molecular Cell and Developmental Biology 200B, Advanced Molecular Genetics.
- Speaking presentation skills training through coursework and yearly departmental presentations.

Scientific writing and literature mastery through the writing of a literature review in the first year.

Weekly seminars expose students to the breadth of our fields and provide students with opportunities to interact closely with speakers to form connections and collaborations.

- Qualifying examinations designed to perfect the student's ability to craft research plans.
- Extensive laboratory research training that starts immediately upon entering the program and culminates in the student's master's thesis or Ph.D. dissertation.

Sample Pathways

Pathways within the microbiology and environmental toxicology graduate program focus on interdisciplinary approaches to addressing problems in environmental and public health. We offer several defined training pathways, and also encourage students to create their own.

Metals in the Environment

Research includes how organisms are exposed to metals, how these metals cause toxicity, and investigating the concentration, speciation, and isotopic composition of contaminant metals and metalloids.

Microbiology

Microbiology provides research training on molecular genetic analysis of both non-pathogenic and pathogenic microbes. Students study host-pathogen interactions, ecology and evolution of pathogenic microorganisms, adaptation of pathogenic and non-pathogenic microorganisms to environmental stresses, and mechanisms of microbial biotransformation of pollutants and toxic metals.

Cellular and Organismal Toxicology

This pathway provides training in the biochemical, molecular, cellular, and physiological processes that are impacted by exposures to such contaminants as toxic metals. Research includes exposure pathways and toxicity of contaminants and pathogens within humans, with emphasis on the molecular and cellular mechanisms underlying toxicity.

Program Requirements

The microbiology and environmental toxicology student's curriculum (courses METX) is tailored to the individual, creating a graduate experience that combines essential background material with coursework at the frontiers of science. The student, in conjunction with a faculty committee, chooses classes to complement the Ph.D. or master's thesis work that each student is performing. Students are encouraged to explore new areas and bring this expertise back to their thesis research.

Requirements for both Master's and Ph.D. Students in Microbiology and Environmental Toxicology

1. Core coursework. METX 200, *Interdisciplinary Approaches to Problems at the Interface of Microbiology and Environmental Toxicology*, and METX 205, *Scientific Skills, Ethics, and Writing*, must be taken and passed with at least a B.
2. Additional coursework. Two courses from the following: METX 201, 202, 206A, 210, 238, 250, and at least one additional approved graduate-level course within Microbiology and Environmental Toxicology or another department. Students must enroll in METX 281, 292, and 297 each quarter. Additional courses as recommended by your first-year advising committee. Must be passed with at least a B.
3. Literature review. Under direction of the student's adviser, write a literature review of the current state of the field of the proposed dissertation research. The written review will be handed in to the student's adviser at the end of the summer of the first year.
4. Department seminar. Give a 20-minute departmental seminar each academic year, and one 50-minute departmental seminar during the fall quarter of the third year if a doctoral student, or in spring of the second year if a master's student.

Requirements specific to the Ph.D. degree

1. Teaching assistant. Doctoral students are required to work as teaching assistants (TA) for at least one quarter. Priority for TA positions is given to first-year doctoral students, then to current doctoral students who have not yet worked as a teaching assistant.
2. Ph.D. qualifying examination (QE1—microbiology and environmental toxicology internal). Part I of the qualifying examination consists of two portions: preparation and defense of an independent research proposal, and knowledge of material presented in the microbiology and environmental toxicology core courses taken by the student. The student must complete QE1 no later than spring quarter of the second year.
3. Third-year seminar and thesis proposal. The student will present a 50-minute seminar on his/her dissertation research proposal no later than the end of fall quarter in the third year.
4. Ph.D. qualifying examination (QE2). Present and defend a dissertation research proposal to the student's Ph.D. qualifying examination (QE) committee. The student must complete QE2 no later than spring quarter of the third year.
5. Advancement to candidacy. The student advances to candidacy after completing all

- coursework, completing the literature review, giving a second-year seminar and passing the Ph. D. qualifying examination parts I and II.
6. Dissertation defense. The student must submit their doctoral dissertation to the dissertation committee for tentative approval at least one month before presenting a formal, public doctoral research seminar.

Requirements specific to the Master's degree

1. Master's comprehensive examination. The master's comprehensive exam is a presentation and defense of the student's master's research proposal, including relevant background knowledge. The examination will not be specifically course-based, but will draw on knowledge from courses. This examination is taken in the fall quarter of the second year.
2. Second-year seminar. The student will present a 50-minute seminar on his/her thesis work in spring quarter of the second year.
3. Thesis. Students are required to submit a thesis for fulfillment of the degree requirements. The thesis should be submitted to the student's master's reading committee one month before the due date.

Students must enroll in METX 281, 292, and 297 each quarter. Additional courses as recommended by your first-year advising committee. Must be passed with at least a B.

Literature review: Under direction of the student's adviser, write a literature review of the current state of the field of the proposed dissertation research. The written review will be handed in to the student's adviser at the end of the summer of the first year.

Department seminar: Give a ~~25~~20-minute departmental seminar each academic year, and one ~~one-hour~~50-minute departmental seminar during the ~~spring~~ fall quarter of the ~~second~~ third year if a doctoral student, or in spring of the second year if a master's student, presenting the student's research.

Requirements specific to the Ph.D. degree

Teaching assistant: Doctoral students are required to work as teaching assistants (TA) for at least one quarter. Priority for TA positions is given to first-year doctoral students, then to current doctoral students who have not yet worked as a teaching assistant.

Ph.D. qualifying examination (~~part I~~QE1—microbiology and environmental toxicology internal). Part I of the qualifying examination consists of two portions: preparation and defense of an independent research proposal, and knowledge of material presented in the microbiology and environmental toxicology core courses taken by the student. The student must complete ~~part I~~QE1 no later than spring quarter of the second year.

Third-year seminar and thesis proposal. The student will present a 50-minute seminar on his/her dissertation research proposal no later than the end of fall quarter in the third year.

Ph.D. qualifying examination (~~part II~~QE2). Present and defend a dissertation research proposal to the student's Ph.D. qualifying examination (QE) committee. The student must complete ~~part II~~QE2 no later than spring quarter of the third year.

Advancement to candidacy. The student advances to candidacy after completing all coursework, completing the literature review, giving a second-year seminar and passing the Ph. D. qualifying examination parts I and II.

Dissertation defense. The student must submit their doctoral dissertation to the dissertation committee for tentative approval at least one month before presenting a formal, public doctoral research seminar.

Requirements specific to the Master's degree

Master's comprehensive examination. The master's comprehensive exam is a presentation and defense of the student's master's research proposal, including relevant background knowledge. The examination will not be specifically course-based, but will draw on knowledge from courses. ~~The comprehensive examination tests knowledge of the material presented in the microbiology and environmental toxicology core courses taken by the student, as well as general knowledge related to the student's master's research. In general, t~~his oral examination is taken in the fall quarter of the second year.

Second-year seminar. The student will present a 50-minute seminar on his/her thesis work in spring quarter of the second year.

Thesis. Students are required to submit a thesis for fulfillment of the degree requirements. The thesis should be submitted to the student's master's reading committee ~~by the second week of the final quarter of work, generally, spring of the second year.~~one month before the due date.

Faculty and Professional Interests

Professor

VICTORIA AUERBUCH STONE, Assistant Professor

Interactions between the pathogen *Yersinia pseudotuberculosis* and the innate immune system

MANEL CAMPS, Assistant Professor

Molecular mechanisms of reactive DNA methylation toxicity

A. RUSSELL FLEGAL, Professor

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

KAREN OTTEMANN, Professor

Environmental responses of pathogenic bacteria

CHAD SALTIKOV, Associate Professor

Microbial anaerobic respiratory processes that influence the biotransformation of pollutants in the environment

DONALD R. SMITH, Professor

Neurotoxicity, cellular and organismal responses to environmental toxins

FITNAT YILDIZ, Professor

Microbiology, molecular genetics, genomics; the mechanism of persistence of survival of *Vibrio cholerae*

Affiliated Faculty Who Sponsor METX Students

ROBERTO BOGOMOLNI (Chemistry and Biochemistry)

Biophysical chemistry, photobiology, light energy conversion and signal transduction in biological systems

ADINA PAYTAN, Associate Professor, Earth and Planetary Sciences; Assistant Research Scientist, Institute of Marine Sciences

Biogeochemistry, paleoceanography, environmental and aquatic chemistry

JONATHAN ZEHR (Ocean Sciences)

Aquatic microbial ecology, biological oceanography

Additional Affiliated Faculty

Environmental Toxicology

KENNETH W. BRULAND (Ocean Sciences)

Biogeochemistry of trace metals

DON CROLL (Ecology and Evolutionary Biology)

Foraging ecology of marine sea birds and mammals, island conservation/ecology

ANDREW FISHER (Earth and Planetary Sciences)

Hydrology, crustal studies, heat flow modeling

RAPHAEL KUDELA (Ocean Sciences)

Ecological modeling and remote sensing, satellite oceanography, phytoplankton ecology and harmful algal blooms

MARK MANGEL (Applied Mathematics and Statistics)

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth,

aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

MATTHEW MCCARTHY (Ocean Sciences)

Organic geochemistry, marine organic geochemistry, global biogeochemical cycles

PETER T. RAIMONDI (Ecology and Evolutionary Biology)

Applied marine ecology

MARY SILVER (Ocean Sciences)

Biological oceanography, marine plankton, midwater ecology

Cellular Toxicology

LINDSAY HINCK (Molecular, Cell, and Developmental Biology)

Neurobiology, cell biology, development

TED HOLMAN (Chemistry and Biochemistry)

Bioinorganics and biological chemistry

PRADIP K. MASCHARAK (Chemistry and Biochemistry)

Bioinorganic chemistry

GLENN MILLHAUSER (Chemistry and Biochemistry)

Peptide structure and dynamics, electron spin resonance spectroscopy, nuclear magnetic resonance, agouti proteins

MARTHA ZUNIGA (Molecular, Cell, and Developmental Biology)

Molecular, cellular, and developmental biology of the immune system

Microbiology

GRANT HARTZOG (Molecular, Cell, and Developmental Biology)

Biochemistry, genetics, chromatin and transcriptional regulation

DOUGLAS R. KELLOGG (Molecular, Cell, and Developmental Biology)

Coordination of cell growth and cell division

ROGER LININGTON (Chemistry and Biochemistry)

Marine Natural Products, Drugs for Neglected Diseases, Chemical Biology, Chemical Probes

TODD LOWE (Biomolecular Engineering)

Experimental and computation genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

NADER POURMAND (Biomolecular Engineering)

Development of new tools and technologies that integrate biology, electronics, and nanofabrication for the detection and study of genes and proteins

JOSHUA STUART (Biomolecular Engineering)

Computational genomics

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

80E. Aquatic Toxicology. *

An introduction to the sources, cycling, and impacts of toxicants in aquatic systems, including acid rain, ground water, fresh water rivers and lakes, estuaries, and the ocean. Emphasis is on the properties of toxic chemicals that influence their biogeochemical cycles and factors that influence their toxicity to aquatic organisms and humans. (General Education Code(s): T2-Natural Sciences.)
A. Flegal

Upper-Division Courses

101. Sources and Fates of Pollutants. S

Presents in-depth important principles of environmental toxicology related to the introduction, transport, and fate of toxicants in aquatic and terrestrial environments, including environmental chemistry and biogeochemical cycles as well as exposure to pathways and uptake by organisms. Additional emphasis placed on susceptibility and effects of toxicants across organ systems, toxicokinetic and biomarkers of exposure, and effects at the ecosystem level. Students cannot receive credit for this course and course 201. *A. Flegal*

102. Cell and Molecular Toxicology. F

Emphases of biochemical, cellular, and organ system basis of intoxication, including dose-response relationships, biotransformation of toxicants, biochemical mechanisms underlying toxicity, factors influencing toxic action, and biomarkers of exposure. Emphasizes effects of various classes of toxins, including heavy metals and persistent synthetic organics, with a focus on susceptible biochemical/cellular processes of the central nervous, immune, hepatic, and renal target organ systems. Designed for advanced undergraduates. Students cannot receive credit for this course and course 202. (Formerly Cellular and Organismal Toxicology.) Prerequisite(s): Biology 20A and 20B or equivalent; Biology 100, Biochemistry, and 110, Cell Biology, are recommended. Enrollment restricted to juniors and seniors. *D. Smith*

119. Microbiology. F,W

Cell and molecular biology of bacteria and their viruses, including applications in medicine, public health, agriculture, and biotechnology. (Also offered as Biology: Molecular Cell & Dev 119. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 100 or BIOC 100A. *V. Stone, F. Yildiz*

119L. Microbiology Laboratory. F,W,S

An introduction to the principles and practices of laboratory microbiology, with a substantial presentation of optical microscopy. Students are billed a materials fee. (Also offered as Biology: Molecular Cell & Dev 119L. Students cannot receive credit for both courses.) Prerequisite(s): previous or concurrent enrollment in course 119 is required; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by permission. (General Education Code(s): W.) *C. Saltikov, K. Ottemann*

125. Practicing Safe Science (2 credits). W

Introduces research safety principles and practices. Instructors and guest experts discuss research hazards and control measures. Students explore the safe use of research methods and materials via hands-on and outside exercises. Issues include compliance with hazardous waste and other environmental safety regulations. *J. Schoonover*

138. Pathogenesis: Molecular Mechanisms of Disease. *

Overview of the pathogenic mechanisms underlying human disease at the physiological and molecular levels, with their implications for epidemiology, diagnosis, and treatment. Includes discussion of clinical cases and of emerging areas of research. Geared toward students interested in future research or clinical careers in the area of human or animal health. Students cannot receive credit for this course and Microbiology and Environmental Toxicology 238. (Also offered as Biology: Molecular Cell & Dev 118. Students cannot receive credit for both courses.) Prerequisite(s): Biology 130. Enrollment restricted to students majoring in biology; health sciences; molecular, cell, and developmental biology; biochemistry and molecular biology; or neuroscience and behavior. Offered in alternate academic years. *M. Camps*

140. Molecular Biology of Prokaryotes. *

Focuses on several aspects of prokaryotic molecular biology. Covers transcriptional regulation, translational regulation, DNA replication and segregation, protein secretion, transport of small molecules, control of metabolism, stress response, bacterial differentiation, signal transduction, biofilm formation, and motility. Strong focus on experimental techniques and approaches used in prokaryotic molecular biology. Focus on model bacteria such as *Escherichia coli* and *Bacillus subtilis*. Students cannot receive credit for this course and course 240. Prerequisite(s): Biology 119. *K. Ottemann*

144. Groundwater Contamination. S

Analyses of contemporary problems in groundwater contamination, based on current scientific understanding of contaminant transport in aquifers. Topics include both theoretical concepts and case studies. To be offered in alternate academic years. Prerequisite(s): Earth Science 110B. Offered in alternate academic years. *A. Flegal*

145. Medical Geology. *

An interdisciplinary analysis of natural geochemical processes that impact human health and of anthropogenic processes that exacerbate those impacts. Prerequisite(s): Chemistry 1A, 1B, 1C, 1M, and 1N. *A. Flegal*

150. Introduction to Research and Experimental Design. *

Lecture-based course for advanced undergraduates actively engaged in undergraduate research (e.g., independent study or senior thesis). Emphasizes basic lab skills, including laboratory safety and handling of laboratory equipment; experimental design; scientific record keeping; and literature searching, review, and management. *K. Ottemann, (FWS) The Staff*

151. Scientific Writing and Presentation. *

For advanced undergraduates who are actively engaged in undergraduate research (e.g., independent study or senior thesis). Emphasizes the collection, reduction, analysis, management, and interpretation of scientific data; the presentation of scientific data in written and oral formats; and further development of critical thinking. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *The Staff*

160. Coastal Environmental Toxicology and Policy (3 credits). *
