2014–15 General Catalog

Welcome to UC Santa Cruz. Congratulations on choosing this extraordinary university for your studies. Our talented faculty and dedicated staff stand ready to make your time here stimulating and rewarding.

At UCSC, we talk about the "transformational student experience." That phrase is rooted in the spirit of daring and adventure that students bring to this beautiful campus. Year after year, students—both undergraduate and graduate—embrace our founders' vision of UCSC as a special place that nurtures intellectual curiosity and encourages collaboration, all while fostering a sense of fun and community along the way.

Maybe it's our location. Nestled among the redwoods and overlooking the Monterey Bay, UCSC is a place of unmatched natural beauty. I still stop and marvel at the views. You may grow accustomed to meeting deer on campus footpaths, but I doubt you'll ever stop appreciating these impromptu encounters with the natural world. Let these surroundings inspire and uplift you.

Maybe it's the people. From the lecture hall to the soccer field, you will make new friends here. Your peers will sustain you, and our faculty will inspire you. As a major research university, UCSC is home to scholars who have not completed their own search for knowledge, meaning, and understanding. They are leaders in their fields and pioneers of interdisciplinary exploration. They are eager to partner with you in your quest—for discovery, creative expression, and, yes, transformation.

Maybe it's the opportunities. At UCSC, we are dedicated to providing challenging classroom experiences, robust opportunities to learn outside the classroom, and extracurricular activities that range from athletics and art to student government, sustainability, and service.

The truth is, it's all this and more. This is an extraordinary time in your life. I hope you will take advantage of everything the campus has to offer. Delve deep. The rewards are plentiful.

Again, welcome to UCSC. I look forward to seeing you on campus.

Sincerely,

GEORGE BLUMENTHAL
CHANCELLOR

OFFICE OF THE REGISTRAR

Introducing UCSC

[2014–15 General Catalog](#)

The University of California

The University of California was chartered as a land-grant college in 1868. From its rural beginning, the university has developed into one of the world's most distinguished universities, acclaimed for its research, scholarship, and dedication to undergraduate and graduate education. There are 10 University of California campuses located regionally throughout the state: Berkeley, Davis, Irvine, Los Angeles, Merced, Riverside, San Diego, San Francisco, Santa Barbara, and Santa Cruz. In addition, there are some 800 associated research institutes, laboratories, agricultural field stations, and extension centers serving California and the nation. The university is the primary state-funded academic agency for research. Its library collection, with 37 million volumes, is among the best in the country.

The University of California faculty, more than 16,000 in number, is distinctive in its 31 living Nobel Laureates and 419 members of the National Academy of Sciences—more than any other college or university system. Faculty membership in the American Academy of Arts and Sciences totals 489.

The University enrolls more than 183,000 undergraduates selected from the top 12.5 percent of the state's high school graduates and approximately 50,000 graduate students. The 1.7 million living alumni enrich the nation with public service and leadership.

The Santa Cruz Campus

Since its inception in 1965, the University of California, Santa Cruz, has been dedicated to excellence in undergraduate education, graduate studies, and research. UCSC students can take advantage of innovative academic planning combined with the research resources and scholarship strengths of the University of California system. At UC Santa Cruz, a program of general education is enhanced with opportunities for academic specialization.

Among the faculty and emeriti drawn to UC Santa Cruz by the opportunity for innovative teaching and scholarship are 14 members of the National Academy of Sciences, 26 members of the American Academy of Arts and Sciences, and 35 members of the American Association for the Advancement of Science. Numerous faculty have been awarded Guggenheim Fellowships, and several have been awarded national awards for distinguished teaching. Furthermore, three faculty members, three bachelor's degree recipients, and two Ph.D. recipients have been named MacArthur Fellows, and since 1972, when UC Santa Cruz began participating in the program, about 120 Fulbright scholarships have been awarded to UC Santa Cruz students and alumni. Five UC Santa Cruz alumni have been awarded Pulitzer Prizes; one has won the coveted journalism award twice.

Planned enrollment of the campus for the 2014–2015 academic year is approximately 17,100 students, of whom 1,550 will be graduate students. UCSC seeks and welcomes students, faculty, and staff of diverse ethnic and cultural experiences and the campus plans to increase both its enrollment and resources and to diversify its educational and research opportunities over the next few years. New facilities are being built to meet current and

future needs. The McHenry Library has been expanded by more than 75 percent, and the original building has been seismically reinforced. The 27,000-square-foot Digital Arts building was completed in 2010.

The residential colleges are an important part of the Santa Cruz undergraduate experience. The 10 colleges divide the university into smaller communities, each serving as a social and intellectual gathering place for 1,400 to 1,700 students and 30 to 110 faculty fellows from a variety of academic disciplines. Every undergraduate student affiliates with a particular college while participating in a campuswide academic program. All of the colleges are interdisciplinary, and all academic majors are open to students from all colleges.

Each college has a distinctive quality derived from its core course and extracurricular programs and from its faculty and their academic disciplines. Detailed descriptions of the 10 colleges can be found in [The Colleges](#) section of the catalog.

Undergraduate education. The campus offers 65 major programs within the arts, engineering, humanities, physical and biological sciences, and social sciences—as well as interdisciplinary-major programs and minors. A complete list of academic programs and concentrations appears on the [Fields of Study](#) chart, and detailed descriptions begin in the [Programs and Courses](#) section of the catalog.

The major and minor programs are administered by departments. In most cases, departments are composed of faculty in the same field, but interdisciplinary programs draw on faculty from several fields.

With few exceptions, letter grades are assigned in all credit courses. In addition, academic performance in each course may be recorded by a narrative performance evaluation. (See [Evaluating Academic Performance](#).)

Undergraduate education at Santa Cruz is focused on the individual student. UCSC's college core courses give first-year students a small-seminar experience in their first year; intensive work in writing, discussion, and critical reasoning; as well as an orientation to academic life. To fulfill UCSC's rigorous comprehensive requirement, every senior must pass a comprehensive examination or complete an equivalent body of work.

Individual research is encouraged, and hundreds of research papers coauthored by Santa Cruz undergraduates and their professors have been published in journals. Undergraduate research opportunities are highlighted at <http://ugr.ue.ucsc.edu/home>.

Annually, more than 500 Santa Cruz students broaden their academic careers through the UC [Education Abroad Program \(EAP\)](#), which allows students to incorporate full-time study abroad as UC credit toward their degrees. The EAP provides a vital international connection for academic and personal growth in an increasingly interdependent world (see [International Education Office](#)).

The UCSC campus strongly encourages undergraduate students to take advantage of the many opportunities for public service such as those provided through the campus's field programs, colleges, and Career Center. Individual studies, apprentice teaching, field studies, and internships can be important parts of the undergraduate experience (see [Field Programs](#)).

Graduate education. The UCSC campus offers graduate programs in more than 30 fields. Within the graduate programs, there are a range of options for concentrated study in a specialized field. Graduate study at Santa Cruz emphasizes close interaction between faculty and students, independent student research, supervised teaching experience, and interdisciplinary work. Further graduate information is provided in the [Graduate Education](#) section of the catalog.

Research. The UC Santa Cruz campus hosts a number of major research units. UC Observatories, the Santa Cruz Institute for Particle Physics (SCIPP), and the Institute of Marine Sciences conduct state-of-the-art research on topics ranging from the discovery of planets outside our solar system, to the detection of new sub-atomic particles, to the ecology of marine mammals. UC Santa Cruz is also a primary partner in inter-UC campus initiatives—such as the Institute for Quantitative Biomedical Research (QB3) and the Center for Information Technology Research in the Interest of Society (CITRIS)—which focus on human health and the use of information technology to solve social, environmental, and

health care problems. A range of topical centers, including the Center for Cultural Studies, the Center for Jewish Studies, the Center for Labor Studies, Feminist Critical Race and Ethnic Studies, the Linguistics Research Center, and the Dickens Project, promote interdisciplinary research in the humanities. Research enterprises within the arts benefit from the Arts Research Institute and the Center for Documentary Arts and Research. The Center for Agroecology and Sustainable Food Systems, the Center for Integrated Water Research, the Chicano/Latino Research Center, and the Santa Cruz Institute for International Economics provide pioneering directions for research in social sciences. Engineering at UCSC has focused on strategic initiatives that include the Institute for Scalable Scientific Data Management, the Institute for the Biology of Stem Cells, the Center for Games and Playable Media, the Center for Sustainable Energy and Power Systems, and the UCSC Genome Technology Center. Beyond these organized research enterprises, UCSC has a wide suite of investigator-driven research that spans the width and breadth of campus inquiry. For additional information see [Resources for Learning and Research](#).

The central UC Santa Cruz campus occupies 2,000 acres on the west side of the city of Santa Cruz, on Monterey Bay, about 75 miles south of San Francisco and 35 miles southwest of San José. Expansive meadows at the campus entrance gradually slope up to a redwood forest that covers most of the site. Each residential college is within easy access of the campus's central core, which includes an extensive library, science laboratories, lecture halls, art studios, theater arts and music centers, a student union, and athletic facilities. Although the campus is spread out over many acres of hilly terrain, its programs are accessible to people with mobility impairments (see [Disability Resource Center](#)).

The city of Santa Cruz is a well-known recreational area and center for the arts. Mild weather, miles of beaches, and many cultural opportunities combine to make Santa Cruz an enjoyable place to study and live.

Accreditation. The University of California, Santa Cruz, is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501, (510) 748-9001, an institutional accrediting body recognized by the Council for Higher Education and the U.S. Department of Education.

Specific degree programs at UC Santa Cruz are also accredited by the Accreditation Board for Engineering and Technology (Computer Engineering and Electrical Engineering), the American Chemical Society Committee on Professional Training (Chemistry), and the California State Commission on Teacher Credentialing (Education).

Persons interested in reviewing accreditation documents should contact the Office of the Vice Provost for Academic Affairs, Kerr Hall, (831) 459-2351, or vpaa@ucsc.edu.

About the Catalog

2014-15 General Catalog

UCSC General Catalog 2014-15

This catalog contains the basic information about UC Santa Cruz. A complete list of academic programs and concentrations, both graduate and undergraduate, appears in the [Fields of Study](#).

The next part of the catalog is divided into sections describing various aspects of the campus: [undergraduate admission and financial information](#), the [undergraduate academic program](#) (including advising and support services), [graduate education](#) (including information on graduate student admission, expenses, and financial support), [research programs and facilities](#), and the [10 residential colleges and student life](#).

The academic programs and courses offered at UCSC are described in detail in the [programs and courses](#) section. The listings are alphabetical, with appropriate cross-references.

The Santa Cruz teaching staff and their academic qualifications, the University of California administration, and the Santa Cruz campus administrative staff appear in the [teaching and administration](#) section.

The catalog constitutes the campus's document of record. While every effort is made to ensure the correctness and timeliness of information contained in this catalog, changes are likely to occur after publication. On an ongoing basis, the university is examining ways to bring the greatest possible efficiency to the delivery of its programs and curricula. This process may result in changes in services, teaching and administrative staff, and curricula and courses that could not be reflected in this catalog, which was prepared well in advance of the 2014-15 academic year. Updates to course information are available in the quarterly [Schedule of Classes](#) and the [Class Search](#). (Additional web sites are referenced throughout this catalog. However, they are maintained by individual units and may not reflect approved general information, curricula, or course information.) In addition, several publications are available that include detailed information about specific subjects such as graduate programs, housing, and financial aid.

It is the responsibility of the individual student to become familiar with the announcements and regulations of the university that are printed in this catalog and other campus publications. The catalog is the document of record for major and program requirements. It is updated annually [on the web](#).

4 Because California state law requires prospective teachers to earn a bachelor's degree in an academic discipline other than education, no undergraduate major is offered. All teaching credentials are earned postbaccalaureate. UCSC offers the professional clear Cross-cultural, Language and Academic Development (CLAD) and Bilingual Cross-cultural, Language and Academic Development (BCLAD) multiple subjects credentials, which are used in self-contained elementary classrooms (K–6) where all subjects are taught by the same teacher. UCSC also offers the CLAD and BCLAD single subjects credentials, which are used in departmentalized settings where the teacher is responsible for one subject (7–12). A Doctor of Education (Ed.D.) in collaborative leadership is also available.

5 An intensive major is also available.

6 B.M. degree in music also available. Doctorate of musical arts (D.M.A.) degree in composition also available.

Degrees

- B.A. = Bachelor of Arts
- B.M. = Bachelor of Music
- B.S. = Bachelor of Science
- D.M.A. = Doctor of Musical Arts
- Ed.D. = Doctor of Education
- M.A. = Master of Arts
- M.F.A. = Master of Fine Arts
- M.S. = Master of Science
- Ph.D. = Doctor of Philosophy

Undergraduate Admission

2014–15 General Catalog

Undergraduate admission to the University of California is based on academic achievement, as well as a wide range of personal accomplishments and educational contexts. Minimum admission qualifications are the same for each UC campus, but each campus uses faculty-approved selection criteria when the number of qualified applicants exceeds capacity.

If you are considering applying to UC Santa Cruz, the Office of Admissions wants to help you learn more about the campus and its distinctive educational programs. For more information, see admissions.ucsc.edu.

If you are able to visit the campus, you may wish to take a student-led tour. The Office of Admissions offers tours on weekdays, and reservations are required. Visit our web site at admissions.ucsc.edu/campustours for information and reservations for campus tours, including a link to a virtual tour for those unable to visit the campus in person. Please see admissions.ucsc.edu/transferworkshops for information and reservations for transfer information sessions.

The University of California, Santa Cruz, continues to take positive steps to increase the diversity of the student population, including applicants coming from low socioeconomic backgrounds, students with disabilities, current members of the military, military veterans, and non-traditionally aged students. In addition, the campus welcomes students from throughout the U.S. and the world. The university does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (pregnancy, childbirth, and medical conditions related to childbirth), disability, age, medical condition (cancer-related), ancestry, marital status, citizenship, sexual orientation, or status as a military veteran or special disabled veteran in admission to or participation in its programs, activities, or services.

Educational Opportunity Programs at UCSC are designed to encourage students from educationally and/or economically disadvantaged backgrounds to prepare for and enter the university. For a description of these programs, see [Educational Opportunity Programs](#).

Admission by Exception. Special consideration may be given to a limited number of applicants who do not meet the minimum UC requirements. Admission by Exception is granted to a very small percentage of those considered for admission. Such factors as academic accomplishments in light of a person's life experiences and/or special circumstances, socioeconomic background, special talents and/or achievements, contributions to the community, and the quality of the applicant's personal statement are taken into consideration when reviewing applicants seeking Admission by Exception.

Graduation rates. The following graduation-rate information is listed in compliance with the 1990 Title I: Federal Right-to-Know Act, Section 103. Fifty-five percent of the students who entered as first-year students in 2009 graduated in four years; 74 percent of those who entered in 2008 graduated in five years; and 72 percent of those who entered in 2007 graduated in six years. In recent years, those who entered as first-year students took an average of 4.2 years to graduate, and students transferring to UCSC as juniors averaged

2.4 years. These graduation rates are well above the national averages.

In accord with the Education Amendments of 1976, Section 493A, more detailed information regarding retention is available on the Institutional Research web site at planning.ucsc.edu/irps/retengrad.asp.

Admission Procedures

The University of California Application for Undergraduate Admission and Scholarships may be accessed beginning August 1 through admissions.ucsc.edu.

In addition to the application, the above site includes a wealth of information for prospective UC students about undergraduate education, admission, financial aid, and various topics of interest.

Application Filing Periods

Applications for the fall quarter must be submitted during the month of November. Applications for winter quarter admission are accepted only as enrollment allows. Check the Office of Admissions in mid-June to see whether UCSC is accepting applications for winter quarter. UCSC does not accept applications for spring quarter admission.

Quarter of Attendance	Application Filing Period
Fall quarter 2015	November 1–30, 2014
Winter quarter 2016	July 1–31, 2015
Fall quarter 2016	November 1–30, 2015
Winter quarter 2017	July 1–31, 2016

Application Fees

The application fee is \$70 (\$80 for international nonimmigrant applicants) to apply to one campus of the university. For each additional campus you select, you must pay an extra \$70 fee (\$80 for international nonimmigrant applicants). These fees are subject to change and are not refundable. The online application includes payment instructions.

Fee Waivers

The University of California will waive application fees for up to four campuses for certain students who otherwise would be unable to apply for admission. To qualify for the fee waiver, you must meet specific requirements related to your family income and size. The fee waiver is for U.S. citizens and permanent residents only.

Students who qualify for fee waivers and who select more than four campuses must pay \$70 for each additional choice. Methods of obtaining fee waivers are listed below.

An online fee waiver form is available to applicants when they apply. The application automatically determines if you are eligible for the fee waiver as soon as it is complete.

High school students: Use the College Board fee waiver. It is available from your school counselor.

EOPS community college students: If you are enrolled in Extended Opportunity Programs and Services (EOPS) at a California community college, obtain a fee waiver authorization from the EOPS Office.

Admission as a Freshman

The university considers you a freshman applicant if you have graduated from high school and have not enrolled in a regular session at any college or university. If you attend a summer session immediately after graduating from high school, you are still a freshman applicant.

The admission and selection process to UC Santa Cruz reflects the academic rigor and

preparation needed for admission to a major research institution. Meeting the minimum qualifications for the university does not guarantee you admission as a freshman. Students are encouraged to achieve well beyond the minimum qualifications to enhance their chances for selection.

UC Santa Cruz uses a holistic approach in selecting freshmen for admission. Applicants are thoroughly reviewed to determine the full spectrum of their academic and personal achievements, viewed in the context of their academic and personal opportunities. UCSC uses 14 faculty-approved criteria to determine an individualized, single score for each applicant.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on the minimum qualifications for the University of California for both residents and nonresidents of California, including international students (see also [Admission of Students from Outside California](#) and [Admission of International Students](#)).

High School Preparation for University Work

Carefully planned high school course work provides you with the best preparation for your undergraduate university studies, and allows for advanced preparation for your chosen field of study. Most important, students who master certain basic knowledge and skills in high school substantially increase their chances of success at the university. (Requirements for transfer students are explained in the [Admission as a Transfer Student](#) section.)

The basic foundation of UC qualifications is the completion of college preparatory courses required for admission (see "[a-g](#)" [Subject Requirement](#) below). However, you should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses that you may be expected to take freshman year.

A well-prepared student will have mastered the equivalent of four years of English composition and literature with a focus on expository writing; four years of mathematics, including a precalculus course in the senior year; two to three years of a language other than English; two to three years of laboratory science; two or more years of history and social sciences; and one or more years of visual or performing arts.

You should also give careful thought to the general field of study, and perhaps the specific major, you want to pursue at the university. By making this decision in advance, you can plan to take additional courses in high school related to the field.

Subject Requirement

- a. History/social science—two years required. Two years of history/social science, including one year of world history, cultures, and geography; and one year of U.S. history or one half year of U.S. history and one half year of civics or American government.
- b. English—four years required. Four years of college preparatory English that include frequent and regular writing, and reading of classic and modern literature. No more than one year of ESL-type courses can be used to meet this requirement.
- c. Mathematics—three years required, four years recommended. Three years of college preparatory mathematics that include the topics covered in elementary and advanced algebra and two- and three-dimensional geometry. Approved integrated math courses may be used to fulfill part or all of this requirement, as may math courses taken in the seventh and eighth grades that your high school accepts as equivalent to its own math courses.
- d. Laboratory science—two years required, three years recommended. Two years of laboratory science providing fundamental knowledge in at least two of these three foundational subjects: biology, chemistry, and physics. Advanced laboratory science courses that have biology, chemistry, or physics as prerequisites and offer substantial additional material may be used to fulfill this requirement. The last two years of an approved three-year integrated science program that provides rigorous coverage of at least two of the three foundational subjects may be used to fulfill this requirement.
- e. Language other than English—two years required, three years recommended. Two years

of the same language other than English. Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading, composition, and culture. American Sign Language and classical languages, such as Latin and Greek, are acceptable. Courses in languages other than English taken in the seventh and eighth grades may be used to fulfill part of this requirement if your high school accepts them as equivalent to its own courses.

f. Visual and performing arts discipline (VPA)—one year required. One year–long course of visual and performing arts chosen from the following: dance, drama/theater, music, or visual art.

g. College preparatory electives—one year required. One year (two semesters), in addition to those required in “a–f” above, chosen from the following areas: visual and performing arts (non–introductory level courses), history, social science, English, advanced mathematics, laboratory science, and a language other than English (a third year in the language used for the “e” requirement or two years of another language).

Reading. University students must be able to read and understand scholarly publications, analyze what they read, and question themselves about an author’s intentions, viewpoint, arguments, and conclusions. You should read commentaries and essays as well as textbooks, and a wide variety of other material—including literature, biography, nonfiction, and criticism—in addition to what you are required to read in class.

Writing. You must learn to write clearly and skillfully in English and to think critically and analyze what you learn in class and in your reading, so that you can present your ideas in a clear and persuasive manner.

University students proficient in composition must be able to understand the assigned topic, select and develop a theme by argument and example, use words and sentences that clearly and precisely express what they mean, demonstrate an understanding of the rules of standard English, and punctuate and spell correctly.

Mathematics. A number of fields of study require preparation in mathematics beyond the three years necessary for admission to UCSC. All majors in engineering and the physical, mathematical, and life sciences include courses in calculus, as do programs leading to professional degrees in medicine, dentistry, optometry, and pharmacy. Moreover, many majors in the social sciences, business, and economics require statistics and/or calculus.

The recommended four years of high school mathematics should include basic operations with numerical and algebraic functions; operations with exponents and radicals; linear equations and inequalities; polynomials and polynomial equations; functions and their graphs; trigonometry, logarithms, and exponential functions; and applications and word problems.

Senior–Year (12th–Grade) Program. The senior year should be used to prepare you for your first year at the university and should include honors and advanced courses, as well as courses that will strengthen overall preparation. A challenging, successfully completed senior–year program is a natural bridge between high school and university course work in the intended major. A strong senior program can enhance your chances for admission to UC Santa Cruz.

High School Proficiency Examination

While the University of California expects all freshman applicants to have graduated from high school, in lieu of the regular high school diploma, the university will accept the following:

- Certificate of Proficiency, awarded by the State Board of Education upon successful completion of the California High School Proficiency Examination
- General Educational Development (GED) Certificate
- Proficiency tests from other states and other countries

Transfer Credit

Transfer credit may be granted to a freshman applicant for acceptable college courses taken while still in high school if an official transcript is received from the college where the course work was completed.

Transfer credit is granted for specified College Board Advanced Placement Examinations completed with a score of 3, 4, or 5 and for specified International Baccalaureate Higher Level Exams completed with a score of 5, 6, or 7. A score of 30 or higher on the International Baccalaureate Diploma is also awarded transfer credit.

Transfer credit is granted for specified GCE and Hong Kong A-Level Examinations.

Students should be advised that college courses taken before or after attending UCSC may duplicate AP, IB, and/or A-Level Examinations. Additionally, exams may duplicate each other (for example, an AP or IB exam in the same subject area). If the student does duplicate an exam with another exam of the same subject content, and/or an exam with a college course, UCSC awards credit only once.

Admission as a Transfer Student

The University of California defines a transfer applicant as a student who has been a registered student in a college or university, or in college-level extension classes following high school graduation. Summer session attended immediately following high school graduation is excluded in this determination. If you are a transfer applicant, you cannot disregard your college record and apply for admission as a freshman.

The admission and selection process for transfers to UC Santa Cruz reflects the academic rigor and preparation needed for admission to a major research institution. Meeting the minimum qualifications for the university does not guarantee you admission as a transfer student. It is expected that students will have completed the lower-division courses required by their intended major prior to transfer.

Transfer applicants are thoroughly reviewed to determine their full spectrum of academic and personal achievements, including transfer course work completed for their intended major. UCSC uses faculty-approved criteria to determine which transfer students will be selected for admission. UC Santa Cruz gives the highest priority to junior-level transfer students coming from California community colleges.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on the minimum qualifications for the University of California for students in California, in other states, and outside the U.S.

UC Santa Cruz Transfer Admission Guarantee (TAG) Program

UC Santa Cruz's TAG (Transfer Admission Guarantee) Program is designed for California community college transfer students at the junior level. The benefits of participating in UCSC TAG include early review of academic records, notification that admission to UCSC is guaranteed (subject to the conditions of the program), opportunities for advising about major preparation and general education and/or Intersegmental General Education Transfer Curriculum (IGETC) requirements, informational mailings, and invitations to events. All California community colleges participate in the UC Santa Cruz TAG program.

The UC TAG application must be submitted online between September 1 and September 30, 2014, for fall 2015 consideration. UCSC accepts transfer admission agreements for fall quarter only.

Further information may be found at admissions.ucsc.edu/apply/transfer-students/tag.html.

UC Transfer Admission Planner (TAP)

The UC Transfer Admissions Planner is an online tool designed to help prospective UC students transferring from California community colleges track and plan their course work, including those students who are seeking a Transfer Admission Guarantee (TAG) with one of the seven participating UC campuses.

Further information may be found at uctap.universityofcalifornia.edu/students/index.cfm.

Credit for Courses Taken Elsewhere

The university gives unit credit to transfer students for courses they have completed at other accredited colleges and universities, including courses taken at recognized institutions outside of the U.S. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by the UC Santa Cruz Admissions Office. The UC Santa Cruz department sponsoring your major decides which transfer courses may be used to satisfy major requirements.

A total of 70 semester units (105 quarter units) of lower-division credit toward a university degree may be earned at other colleges/universities. Only subject credit will be granted for courses taken in excess of that cap. Please note that credit from another University of California campus is exempt from this limitation.

Applicants will not be considered for admission if they have completed 90 semester units (135 quarter units) or more of UC-transferable upper-division and lower-division combined credit. If students have earned all of their credits as lower-division credits, they are not affected by this limit. All course work completed at California community colleges is considered lower division. Advanced Placement (AP) or International Baccalaureate Higher Level (IBH) credit is permitted to exceed the 90 semester unit maximum by the number of AP or IBH units granted.

Opportunities to take courses at UC Santa Cruz as a nonmatriculated student are available through Summer Session, Open Campus/Concurrent Enrollment through UC Extension, and Intersegmental Cross-Enrollment.

UC Santa Cruz Transfer Services

The Office of Admissions provides information to all students who wish to transfer to UC Santa Cruz. For prospective transfer students and their families, the Office of Admissions offers Transfer Information Sessions. Transfer Information Sessions are small-group meetings in which an Admissions adviser presents information about transfer admissions matters and transfer-related student services. Please note that pre-evaluations of transcripts are not available as part of the sessions. These sessions are designed for students who have not yet applied to UCSC. Students and their families may make reservations at admissions.ucsc.edu/transferworkshops.

Student-led guided tours take place year-round and also require advance reservations. Please see admissions.ucsc.edu/campustours to make a reservation.

In addition, UCSC Admissions counselors visit many community colleges in California. Check with your counseling department or transfer center to determine whether a UCSC counselor will be visiting your community college.

UCSC Office of Admissions Transfer Preparation Program (TPP)

The UC Santa Cruz Transfer Preparation Program (TPP) supports prospective transfer students from California community colleges and assists them in enrolling at UC Santa Cruz, as well as at other campuses. TPP representatives work most closely with students who are attending one of the [13 community colleges in the region](#) to plan a successful transfer program, but will assist any California community college student who has questions.

The Transfer Preparation Program also collaborates with programs and initiatives that strengthen the transfer process and support individual students in making a successful transition to a four-year institution.

Further information may be found at admissions.ucsc.edu/apply/transfer-students/transfer-preparation-program/index.html.

Admission of U.S. Students from Outside California

UCSC welcomes students from across the U.S. to enhance our vibrant campus community. Out-of-state applicants must meet the same admission qualifications as California students, but with a higher GPA. Detailed information is provided at admissions.ucsc.edu/apply/out-of-state-students/index.html. Information for all nine general campuses of the University of California can be viewed at www.universityofcalifornia.edu/admissions/.

Students who are not California residents are assessed nonresident tuition in addition to educational and registration fees. Residency for fee purposes is determined after admission based on documentation provided in a Statement of Legal Residency:

registrar.ucsc.edu/fees/residency.

For more information about undergraduate out-of-state admissions, please see <http://admissions.ucsc.edu/apply/out-of-state-students/index.html> or e-mail outofstateadmissions@ucsc.edu.

Admission of International Students

The University of California welcomes students from countries throughout the world to enhance our vibrant campus community. The academic credentials of applicants from other countries are evaluated by Admissions specialists in accordance with UC faculty-approved regulations governing admission.

UC Santa Cruz accepts applications from international students for the fall quarter, and students should begin application inquiries a year before the quarter of desired admission. Openings for the winter quarter may be limited. If you are interested in applying for winter, check with the Office of Admissions. For information, write to admissions@ucsc.edu or the Office of Admissions, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064.

If your native language is not English, you must certify proficiency in English by one of the following methods: earning a score of 80 or higher on the Internet-based Test of English as a Foreign Language (a minimum score of 550 on the paper-based TOEFL), or earning a minimum score of 7.0 on the International English Language Testing System (IELTS) exam, earning a score of 560 or higher on the Writing section of the SAT Assessment test, or completing two transferable English composition courses with grades of B or higher in a U.S. college or university.

A financial certificate and official academic records will be required if you are admitted to the university. Generally, nonimmigrant students must provide documentation that sufficient funds will be available to cover nonresident tuition, educational fees, and living expenses. The university does not offer need-based financial assistance to international students.

For more information about undergraduate international admissions, please see admissions.ucsc.edu/apply/international-students/index.html or send e-mail to internationaladmissions@ucsc.edu.

For information about services for international students, see the International Education Office at ieo.ucsc.edu/intl-students/index.html.

Readmission

If you are an undergraduate who wants to return to UC Santa Cruz after an absence of a portion of a quarter or more, you must file an Application for Readmission. The application form is available online at advising.ucsc.edu/student/read. The completed application should be filed, along with the nonrefundable \$70 application fee, with the Office of Admissions during the appropriate period:

Quarter of Attendance Application Filing Period

Fall quarter	November 1–April 1
--------------	--------------------

Winter quarter	July 1–October 1
----------------	------------------

Spring quarter	October 1–January 2
----------------	---------------------

If during your absence you attended another UC campus, an official transcript must be submitted to the Office of Admissions before your application will be sent to your college for approval. If you attended another collegiate institution, your UC Santa Cruz college may require a transcript. If you left for health reasons, clearance from the Cowell Student Health

Center is required. You must pay all outstanding bills owed to the university before you will be permitted to register.

Admission to Special Categories

For information on applying for admission in the categories described below, please contact the Office of Admissions at admissions@ucsc.edu.

Second Bachelor's Degree

If your educational goals have changed substantially since receiving your bachelor's degree, you may be eligible to pursue a second undergraduate degree at UCSC. Applications from students interested in pursuing a second baccalaureate program will be considered as campus enrollment allows. Priority is given to applicants who have not yet had the opportunity to complete a bachelor's degree.

You must meet regular university admission qualifications, and your experience or previous scholarship record must show potential for academic success in your proposed area of study. Additional selection criteria will be applied, and admission is subject to approval by the appropriate department.

For a second degree, you must fulfill major and residence requirements, as well as system-wide requirements in American History and Institutions and the [Entry Level Writing Requirement](#). You must enroll for at least three quarters and are usually restricted to six quarters total.

Limited Status

If you have already completed an undergraduate degree and you have a particular reason to take specific undergraduate university classes, you may be eligible to enroll in a nondegree program as a limited-status student. Applications from students interested in limited-status enrollment are permitted as campus enrollment allows. Priority is given to applicants who have not yet had the opportunity to complete a bachelor's degree.

Your proposed program of study must either prepare you for graduate or professional school or satisfy some definite educational need or interest. Participants generally enroll full-time for a specified period that does not exceed three quarters. You must meet regular university admission qualifications, and your experience or previous academic record must show potential for success in your proposed program. Additional selection criteria will be applied, and admission is subject to approval by the appropriate department.

Nondiscrimination and Affirmative Action Policies

The University of California, in accordance with applicable federal and state law and university policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy [see [note 1](#)], physical or mental disability, medical condition (cancer related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services [see [note 2](#)].

The University also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in University programs and activities. University policy also prohibits retaliation for bringing a complaint of discrimination or participating a complaint process or investigation pursuant to this policy.

Inquiries regarding the University's student-related nondiscrimination policies may be directed to Student Judicial Affairs, (831) 459-1738, or e-mail sja@ucsc.edu.

Inquiries regarding the University's affirmative action, equal employment opportunity, and nondiscrimination policies as they relate to student employment may be directed to the Office for Diversity, Equity, and Inclusion, (831) 459-3676 or e-mail cbene@ucsc.edu.

Inquiries regarding UCSC's Policy on Sexual Assault, the UC Policy on Sexual Harassment and Procedures for Reports of Sexual Assault(s) and Sexual Harassment and/or violations of Title IX may be directed to Title IX Coordinator/Sexual Harassment Officer Tracey Tsugawa, (831) 459-2462, or e-mail tsugawa@ucsc.edu.

Student inquiries regarding disability or disability accommodations may be addressed to the

Director, Disability Resource Center, (831) 459-2089; or e-mail drc@ucsc.edu.

Students with disabilities who are unable to resolve accommodation or discrimination concerns may contact the campus ADA Compliance Officer by phone, (831) 459-4380, or e-mail ashish@ucsc.edu.

For additional information about University policies related to nondiscrimination and affirmative action, see the [Nondiscrimination Policies](#) section of the catalog.

NOTES:

1 Pregnancy includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth.

2 Service in the uniformed services includes membership, application for membership, performance of service, application for service, or obligation for service in the uniformed services.

Expenses and Financial Resources

2014–15 General Catalog

Expenses

In determining the cost of attending UCSC each quarter, students should consider both required fees and personal expenses. The figures below are provided to help you draw up a realistic personal budget. If you then conclude you will need financial assistance in order to attend UCSC, you should read the Financial Aid section below. Fees and additional financial information for graduate students appear in the [Graduate Studies](#) section. Tuition, fees, and other charges are subject to change without notice by the UC Regents. For the most current fee information, check [Undergraduate Student Fees](#).

Required Fees

Required fees are due and payable before the start of each quarter. At the beginning of each quarter, you will need sufficient funds to cover housing, charges, and book costs. For many financial aid recipients who are enrolled at least half time, tuition and fees on the student account are paid automatically with approved student aid funds. If you are a financial aid recipient, please note that checks and direct deposits for scholarships, grants, and loans in excess of university charges are not available to you until after enrollment each quarter.

The Student Services Fee funds student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well-being of students; social and cultural activities and programs; services related to campus life; and educational and career support.

Tuition helps support student financial aid and related programs; administration; libraries; operation and maintenance of facilities; the university's operating budget; and all costs related to instruction, including faculty salaries.

Santa Cruz Campus Fees help support a wide range of student services, including college and campuswide student government, extracurricular programs and recreation facilities, campus child care, community and public service projects, Educational Opportunity Programs and scholarships, and free-fare use of the local transit systems. Campus fees paid by graduate students are provided on the web at [Student Fees](#).

In addition, all students, including international students, are assessed a mandatory Health Insurance Premium. The Cowell Student Health Center provides the primary care services for the plan while a contracted insurance company provides major medical and hospitalization insurance. Dependent coverage is also available. Detailed information is available at the [Health Center web site](#) or by contacting the Student Health Insurance Office, (831) 459-2389.

Waivers from the mandatory health insurance premium are available if you can show that your private insurance provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the [Schedule of Classes](#).

Some courses charge an additional Course Materials Fee. These fees recover the cost of

materials, supplies, equipment, and support services not covered by the normal instructional budget. The fees are reviewed and approved annually by the Miscellaneous and Course Materials Fee Advisory Committee. The list of specific courses charging fees in 2013–14 is available in the quarterly Schedule of Classes and on the web at [Course Fees](#).

Nonresident Tuition

If you are a resident of a state other than California or of another country, you must also pay nonresident tuition, the nonresident educational fee, and other required fees (university registration and Santa Cruz campus fees). The criteria for residency appear in [Appendix A](#).

Non-U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

Undergraduate Budget, 2014–15

	California Residents		Nonresidents	
	One Quarter	F–W–S Quarters	One Quarter	F–W–S Quarters
Required Tuition and Fees				
Student Services Fee (formerly University Registration Fee)	\$324.00	\$972.00	\$324.00	\$972.00
Tuition (formerly Educational Fee) (a)	3,740.00	11,220.00	11,366.00	34,098.00
Campus Based Fees	401.62	1,204.86	401.62	1,204.86
USHIP Health Insurance (waivable) (see above)	805.00	2,415.00	805.00	2,415.00
Subtotal	\$5,720.62	\$15,811.86	\$12,896.62	\$38,689.86
Estimated Personal Expenses (b)				
Room and board	\$4,910.00	\$14,730.00	\$4,910.00	\$14,730.00
Books and supplies	480.00	1,440.00	480.00	1,440.00
Personal Expenses	600.00	1,800.00	600.00	1,800.00
Transportation	191.00	573.00	191.00	573.00
Subtotal	6,181.00	18,543.00	6,181.00	18,543.00
Total Budget	\$11,901.62	\$34,354.86	\$19,077.62	\$57,232.86

a) Undergraduates who are unable to maintain a full-time program of study because of employment responsibilities, family obligations, or health problems may be eligible for a 50 percent reduction in tuition. One quarter at \$1,870; two quarters at \$3,740.

b) Estimated personal expenses for students living off campus total \$4,790 per quarter or \$14,370 for three quarters. Estimated personal expenses for students living with family total \$3,286 per quarter or \$9,858 for three quarters.

Late Fees

You may be assessed late fees if you fail to make university payments or enroll by the specified deadlines. For example, late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account. Late fee amounts of \$50 each are assessed for a late registration payment and/or late enrollment, \$25 for a late housing

payment, and \$12.50 for miscellaneous fees. Deadlines are published in [The Navigator](#) (the undergraduate campus handbook) and the [Schedule of Classes](#), both of which are online, and they appear on the Statement of Account.

Estimated Personal Expenses

The figures given for estimated personal expenses are for a single undergraduate living on campus. Expenses will be higher for married students, students with children, and graduate students. The information is as current and as realistic as possible; however, expenses for students vary in accordance with lifestyles, priorities, and obligations.

Room and board (in college residences). Rates for room and board in the college residence halls depend on the type of accommodation and meal plan. The current rates may be found on the campus Housing Office website (<http://housing.ucsc.edu/>). The room and board amount of \$14,730 in the Undergraduate Budget table above is the average cost for an on-campus student with the average meal plan and additional flexi dollars.

Personal Expenses. This budget item covers a broad range of expenses including clothing, laundry, personal grooming, recreation, and health maintenance. It also covers minimum expenses for modest travel to visit family.

Rates are paid quarterly. The rate ranges listed above do not cover periods of academic recess, nor does the budget above. Housing charges are normally payable at the beginning of each quarter. However, students may arrange with the Campus Housing Office to pay monthly.

More detailed information on room and board expenses for the individual colleges appears in a brochure distributed as part of the admission process or available from the Campus Housing Office, 104 Hahn Student Services Building, (831) 459-2394.

Fee Refunds

Students who cancel their registration before the first day of instruction in a given quarter are refunded all required fees minus a \$10 service charge. New undergraduate students who cancel their registration before the first day of instruction are entitled to a refund of all required fees except the nonrefundable \$100 undergraduate Statement of Intent to Register (SIR) Fee (applied toward the Student Services Fee).

Once the quarter has begun, students must petition for withdrawal. The percentage of fees refunded is determined by the effective date of the withdrawal, according to the schedule at the left, in which day 1 is the first day of instruction. A student is not eligible for university services after the effective date of withdrawal.

A student entering the armed forces before the sixth week of the quarter is entitled to a full refund of the Student Services Fee—provided no course credit is received.

More detailed information on withdrawal and refund procedures is included in the quarterly [Schedule of Classes](#) and [The Navigator](#), both online at the Registrar's web site, and in the [Graduate Student Handbook](#). Information on refunds of room and board charges is contained in the campus housing contract, provided to all applicants for on-campus housing. For more information on how withdrawing affects your financial aid, refer to the Financial Aid and Scholarship Office web site at financialaid.ucsc.edu.

Schedules of Refunds

All Continuing and Readmitted Students and New Students Not Receiving Federal Financial Aid

Number of calendar days	Percentage of fees refunded*
1st day of instruction	100
2-7	90
8-18	50
19-35	25

36 and over	0
New Students Who Receive Federal Financial Aid and Withdraw during Their First Academic Term	
Number of calendar days	Percentage of fees refunded*
1st day of instruction	100
2-7	90
8-14	80
15-21	70
22-28	60
29-35	50
36-42	40
43 and over	0

* For new students, the nonrefundable \$100 Undergraduate Statement of Intent to Register Fee is withheld from the University Registration Fee; the schedule of refunds applies to the balance of fees. Percentages listed (days 1-35 or days 1-42) should be applied individually to Nonresident Tuition, the Educational Fee, the University Registration Fee, and Santa Cruz campus fees. The Health Insurance Fee is nonrefundable.

Deferred Payment Plan

The Deferred Payment Plan (DPP) provides an alternative method of budgeting and paying registration fees. Fees not covered by scholarships, loans, or other financial aid, can be paid in monthly installments. Students have a choice of applying for a three-month plan for individual quarterly fees, or, at the beginning of the fall quarter only, for a nine-month plan to be used for the fall, winter, and spring quarters. A nonrefundable application fee of \$25 for the three-month plan, or \$60 for the nine-month plan, is billed to the student account upon receipt of the DPP application. Any student in good financial and academic standing may apply for DPP. Students receiving financial aid sufficient to cover registration fees in full are not eligible for this plan. For more information about how to apply for DPP, application deadlines, and campus policies regarding the program, contact the Office of Student Business Services, 203 Hahn Student Services Building, (831) 459-2107, e-mail oarinfo@ucsc.edu, or visit sbs.ucsc.edu.

Financial Aid

The university maintains a robust financial aid program of grants, scholarships, loans, and part-time employment for undergraduate students who require financial assistance. The Financial Aid and Scholarship Office administers these resources to help bridge the gap between the cost of education and what parents and students can reasonably contribute.

If you are a dependent student, the contribution expected from you and your parents is determined through an analysis of your family's financial strength, considering such variables as income, number of dependents, living expenses, and savings and investments (excluding your primary residence). Federal, state, and university policies and procedures are applied. The same analysis is used for married and independent students with the exception of parent information. The federal definition of an "independent student" is used to determine your dependency when you complete the Free Application for Federal Student Aid (FAFSA).

The UC Blue and Gold Opportunity Plan is a Financial Aid Initiative that ensures that undergraduate California residents whose families earn a total income less than \$80,000,

meet application deadlines, and who demonstrate enough financial need are guaranteed to receive gift aid from all sources to cover UC system-wide tuition and fees. Qualified students must be in their first four years of attendance (first two for transfer students).

No student will receive more scholarship and grant support than the calculated financial need. All sources of scholarship and grant awards (federal, state, institutional, and private sources, including outside agency scholarships) will count toward covering fees and meeting the Blue and Gold Opportunity Plan commitment. The majority of students who meet the income eligibility standard receive much more grant and scholarship funding than the plan covers.

In addition to the minimum funding under the Blue and Gold Opportunity Plan, undergraduates with sufficient financial need will receive additional grant support to help defray other educational expenses (e.g., books, living expenses, and transportation).

Application Deadlines

The Free Application for Federal Student Aid (FAFSA) may be submitted online at <http://www.fafsa.ed.gov/> on or after January 1 preceding the academic year you wish to receive aid. Submit the FAFSA each year before the priority deadline of March 2 to be eligible for all types of aid. A “FAFSA on the Web Worksheet” is available at the same web site to help you prepare for completing the FAFSA.

Students admitted for fall quarter will receive an estimated financial aid award in April.

The Financial Aid and Scholarship Office may require additional documentation from applicants. These applicants will be sent an e-mail instructing them to login to [MyUCSC](#) and view their “To Do List,” where required documents are requested (e.g., copies of student and parent tax returns or other forms). These documents must be received by the deadline on the “To Do List” for a student to be considered for all sources of aid administered by UC Santa Cruz. Cruz. The deadline for 2014–15 is June 2.

Conditional awards for admitted students may change as a result of our review of documentation.

Applicants who submit documents after our deadlines will be considered for aid based on availability.

Students admitted for winter quarter must have submitted a FAFSA by their admission notification date. Items requested on your [MyUCSC](#) “To Do List” must be submitted by December 2. Award notifications will be made as soon as possible after you are admitted/readmitted and all requested financial aid documents are received.

Types of Aid

If you apply for financial aid and meet the application deadlines, you are considered for all types of aid described below. Based on your financial need, your financial aid package may include a combination of grants, scholarships, loans, and work opportunities.

Grants

- UC Santa Cruz Grants are awarded to students based on financial need.
- Cal Grant A & B (eligible California residents) are awarded by the California Student Aid Commission to California residents who meet eligibility requirements and who demonstrate financial need and academic achievement. In addition to submitting a FAFSA or Dream Application*, first time applicants must also complete and submit the Cal Grant GPA Verification Form no later than March 2. Cal Grant A and B awards pay Tuition and Student Services Fees at UC and are \$12,192 for 2014–15. Cal Grant B Access awards are \$1,473.

*Note: The passage of California Dream Acts—AB130 and AB131—extended eligibility for certain types of institutional and state aid to students, including undocumented students, who qualify for benefits under another California law—AB540—which exempts students from paying nonresident supplemental tuition. We refer to our students as “Dreamers” and encourage applying for financial aid using the [CA Dream Application](#).

- Federal Pell Grants are offered to eligible undergraduate students who demonstrate

significant financial need based on the expected family contribution (EFC). Awards are variable depending upon the EFC; the maximum Pell Grant for 2014–15 is \$5,730.

- Federal Supplemental Educational Opportunity Grants are awarded to undergraduate students who demonstrate significant financial need. These grants supplement the UC Santa Cruz Grant program. Students must meet application deadlines to be considered. The maximum award is \$3,000.

Scholarships

- UC Santa Cruz Scholarships range from \$250 to \$10,000 per year. (The average award is about \$1,500.) Funding comes from private donors, alumni, and the university. Entering UCSC students are considered for scholarships based on responses to scholarship questions on the UC Application for Undergraduate Admission. Your application essay will serve as your scholarship essay. Selected students are notified throughout the academic year. All continuing students are automatically considered for scholarships based on various factors including cumulative GPA.
- Regents Scholarships are the most prestigious merit scholarships awarded to undergraduates. Freshman Regent Scholars receive a total of \$20,000 paid over four years. New junior transfers and continuing students selected in the junior year receive the Regents Scholarship for a total of \$10,000 paid over two years. The scholarship amount varies for continuing students based on the year in college and year appointed.
- Other Scholarships: Some campus scholarships are restricted to students from particular geographic areas, family backgrounds, or are limited to students in particular majors, classes, or colleges. The donors have different reasons for giving, and their varied interests are reflected in the wide range of scholarships available. Merit and restricted scholarship awards range up to \$5,000.

Need-Based Loans

- Federal Perkins Loans are offered to first-year students. Repayment begins nine months after a student falls below half time enrollment or graduates from the university. During repayment, the interest rate accrues at 5 percent annually.
- Federal Direct Subsidized Student Loans are funded by the federal government and can be borrowed up to the federal limits based on student status (please see Direct Loan Limit Chart below). Students pay an origination fee of up to 1.073 percent in 2014–15, which is deducted from the total accepted amount of the loan. Repayment begins six months after a student falls below half time enrollment. Interest rates for 2013–14 are fixed at 3.86 percent for subsidized loans. Interest rates on new loans are determined by the Department of Education in July.

Non-Need-Based Loans

The following loans are available to both undergraduate and graduate students:

- Federal Direct Unsubsidized Student Loans are funded by the federal government and can be borrowed up to the federal limits based on student status (please see Direct Loan Limit Chart below). Unsubsidized loans are offered to students who do not demonstrate financial need or who have exhausted all need based aid. Interest accrues on unsubsidized loans from the date the loan is disbursed. The 2013–14 interest rate was fixed at 3.86 percent for undergraduate students. The student pays an origination fee of up to 1.073 percent in 2014–15 which is deducted from the total accepted amount of the loan. Students may begin repaying principal and interest on Federal Direct Unsubsidized Student Loans immediately, pay only interest immediately, or defer both principal and interest until they are no longer enrolled in school at least half time.
- Federal Direct Parent Loans for Undergraduate Students (PLUS). Parents of dependent students can apply for a PLUS loan and may borrow up to the full cost of attendance as defined by the UCSC Financial Aid and Scholarships Office. Applicants must pass a modest credit check through the Department of Education for the loan to be approved. The 2014 interest rate is fixed at 6.41 percent. Borrowers pay an origination fee of 4.288 percent that is deducted from the loan amount. Loan repayments begin 60 days after the last disbursement for the academic year (the last disbursement is typically the first day of spring quarter). Parents do have the option to defer payment, similar to the student's ability to defer on their Federal Direct loan above. See your loan servicer for more

information.

Annual and Lifetime Federal Direct Student Loan Limits

	Subsidized Loans	Unsubsidized Loans	Combined Subsidized and Unsubsidized Loans
Dependent Students			
Freshman	\$3,500	\$2,000	\$5,500
Sophomores	\$4,500	\$2,000	\$6,500
Juniors and Seniors	\$5,500	\$2,000	\$7,500
Lifetime Loan Limits	\$23,000	\$31,000	
Independent Students¹			
Freshman	\$3,500	\$6,000	\$9,500
Sophomores	\$4,500	\$6,000	\$10,500
Juniors and Seniors	\$5,500	\$7,000	\$12,500
Lifetime Loan Limits	\$23,000	\$57,000	
Graduate Students	N/A	\$20,500	\$20,500
Lifetime Loan Limits		\$138,500	

Refers to students who answered "yes" to any dependency status question on the FAFSA. These loan limits also apply to dependent undergraduate students whose parents were denied a PLUS loan due to adverse credit history.

Other Loans

The University of California develops and publishes lists of private lenders who offer the most favorable terms for UC borrowers. Lender lists may be found on UCSC's [Financial Aid and Scholarships](#) web site under [Private Loans](#).

Federal Work–Study

Federal Work–Study gives students the opportunity to work part–time to earn money to help cover expenses while enrolled at UC Santa Cruz. Students who demonstrate financial need may be offered Work–Study.

Some on–campus and community jobs are posted online at the Career Center web site <http://careers.ucsc.edu/>. Not all campus jobs are posted with the Career Center. Another way to locate on–campus jobs is through networking. Examples include talking to students, staff, and faculty at your college, in your dorm and dining hall, and in the academic departments. The Career Center can help you with résumé writing and job–search strategies. Jobs are competitive, and this award does not guarantee a position.

Loan Forgiveness Programs

The federal government will forgive all or part of a student loan under certain circumstances. Examples of these include performing volunteer work or military service and practicing medicine in certain communities. For a summary of such exemptions, visit <http://www.studentaid.ed.gov/repay-loans/forgiveness-cancellation>.

More Information

For more information about applying for financial aid, application, rights and responsibilities, and document deadlines contact the Financial Aid and Scholarship Office at (831) 459–2963 or visit us at 205 Hahn Student Services Building.

Veteran Services

The Veteran Services staff in the Office of the Registrar acts as a liaison between the Department of Veterans Affairs and students who as veterans, veterans' dependents, or reservists receive education benefits. The staff also assists with the California Department of Veterans Affairs' college fee–waiver program for children of veterans who have service–

connected disabilities or who have died from service-related causes. Students who are California residents apply for the college fee-waiver program through their home county Veterans Services Office.

Students who are veterans or veterans' dependents should contact the Veteran Services office at UCSC as soon as they receive notification of admission to UCSC to ensure timely processing of their benefit claims.

Veteran Services staff members are located at 190 Hahn Student Services Building. For more information, visit the [Veteran Services web site](#), call (831) 459-2709, or e-mail vets_benefits@ucsc.edu.

During their transition to the university and while they are enrolled as UCSC students, military veteran students are provided a broad range of academic and support services by the Veterans Education Team Support (VETS) through Services for Transfer and Re-Entry Students (STARS). The Veterans Center is located at Kresge College right inside the entrance, off the main parking lot. Contact the VETS staff at (831) 459-1520, or send an e-mail to vets@ucsc.edu, or visit the [STARS web site](#).

Planning Your Academic Program

Planning Your Academic Program

At UC Santa Cruz, the academic year is organized on the quarter system. Three quarters—fall, winter, and spring—constitute the regular academic year. Most UCSC courses are equivalent to 5 quarter credits and require approximately equal amounts of work: about 15 hours per week per course. You are normally expected to enroll in 15 credits each quarter; enrolling in a reduced or expanded course load requires special approval. If you maintain a B average at UCSC, you may enroll in more courses without special approval. For specific information on how courses are organized, see [programs and courses](#).

Statement

PDF of 2014-15
General Catalog

You are normally expected to graduate in four years. To do so, you must pass an average of 45 credits per year, for a total of 180 credits. In order to complete certain majors with extensive course requirements, junior transfer students may need to spend more than two years at UC Santa Cruz.

The requirements for a bachelor's degree are explained in the following section. Your adviser can help you plan a program that fulfills these requirements efficiently while meeting your own educational goals (see [Advising: From Course Selection to Careers](#)).

Here is what you can expect during four years at Santa Cruz:

During your freshman year, you complete your college core course and satisfy the Entry Level Writing Requirement. You also begin to take foundation courses for potential majors, along with courses that satisfy general education requirements.

If you are uncertain about your choice of major, you may intentionally explore different fields of study during your first two years at Santa Cruz by taking foundation courses that will help you both identify whether a major is a good fit for you and will satisfy prerequisites for declaring the major. You are expected to be declared in a major by the end of your second (sophomore) year; transfer students are expected to be declared in a major by the deadline in their second quarter at UCSC. Students interested in majors requiring heavy course prerequisites, such as music and most majors in the physical and biological sciences and engineering, should be certain they start the appropriate sequences in the first year; information is available through your major advising office.

During your junior and senior years at Santa Cruz, you concentrate on the upper-division requirements for your major and complete your comprehensive requirement, as well as complete your general education requirements. If you entered UCSC without having fulfilled the requirement in American history and institutions, you will need to do so before you graduate.

Transfer students should complete any lower-division requirements for their intended major that are offered at their current campus and may also find it helpful to complete courses that fulfill campus general education requirements. The Office of Admissions can help you select appropriate courses, and you should also consult with your community college adviser.

Graduation Requirements

To qualify for a bachelor's degree, you must meet the following conditions, which are explained in more detail in the following sections:

- Earn a minimum of 180 credits, each with a grade of D or better (or Pass)
- Satisfy the university requirements in American history and institutions and in Entry Level Writing (English composition)
- Meet the UCSC residence requirement
- Satisfy each of the campus general education requirements with a course grade of C or better (or Pass)
- Satisfy requirements of your UCSC college
- Complete an approved major program, including its comprehensive requirement, with grades of Pass, C, or better in all courses satisfying major requirements. Some majors require grades higher than C to qualify to declare the major. In some majors, courses graded Pass may not be used to satisfy major requirements.
- Have a grade-point average of at least 2.0 in all letter-graded courses taken at UCSC and other University of California campuses
- Have no more than 25 percent of your UCSC credits graded on a Pass/NoPass basis. This includes any credits completed in the Education Abroad Program or on another UC campus in an intercampus exchange program. Departments may require that some or all courses used to satisfy the major must be taken for a letter grade.

As a UC Santa Cruz student, you are responsible for selecting the courses necessary to fulfill graduation requirements and prepare for advanced study or a career. It is essential that you consult regularly with academic advisers about course selection.

Keep your own records, including not only records of your UCSC courses, grades, and progress, but also your transcripts from other institutions, admission test scores, transfer credit information, and performance evaluations.

Transfer students may be able to use some of the courses they completed at other schools to help meet the 180-credit requirement. (Semester-

system credits can be multiplied by 1.5 to derive equivalent quarter-system credit.) The UCSC Office of Admissions determines which courses are transferable.

University Requirements

The Santa Cruz campus administers three requirements for graduation from the University of California: (1) American history and institutions, (2) Entry level writing requirement, and (3) UCSC residence. These requirements are described in detail below.

American History and Institutions

Every candidate for a bachelor's degree must demonstrate knowledge of American history and institutions. You may fulfill this requirement in one of the following ways:*

- By achieving a score of 550 or higher on the SAT Subject Examination in U.S. History
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in U.S. History, or by achieving a score of 5, 6, or 7 on the IBH History of the Americas Examination
- By satisfactorily completing a college-level course in U.S. history and institutions
- By certification of completion of the requirement on a transcript from an accredited California institution of higher education
- By completing an acceptable history or government course in high school that satisfies the subject requirement for admission to the university, described in [Subject Requirements](#).

*Note: Alternatives for satisfying this requirement vary among the campuses of the University of California. If you plan to transfer to another UC campus, consult its general catalog for information on this point.

Entry Level Writing Requirement

Every candidate for a bachelor's degree must demonstrate an acceptable level of ability in English composition. Before your fourth quarter of enrollment, you must fulfill this requirement in one of the following ways:

1. Score 680 or higher on the Writing section of the SAT Reasoning test.
2. Score 30 or higher on the ACT Combined English/Writing test .

3. Score 3 or higher on the College Board Advanced Placement Examination in English (Language or Literature).
4. Score 5 or higher on the International Baccalaureate Higher Level Examination in English: Literature (formerly IB HL English A1).
5. Score 6 or higher on the International Baccalaureate Standard Level Examination in English (Language A).
6. Complete with a grade of C or better an acceptable college course in English composition worth 4 quarter or 3 semester units.
7. Achieve a passing score on the UC [Analytical Writing Placement Examination](#), given in the spring every year (freshmen who are admitted to UC will receive detailed information in April about the exam; nonresidents may take the exam in the fall after enrolling).
8. Complete an appropriate English course at UC with a grade of C or better.

California high school seniors who have been admitted to UCSC must take the systemwide UC Analytical Writing Placement Examination, given in May, unless they have already satisfied the requirement.

Residence

Every candidate for a bachelor's degree must be registered at UCSC for a minimum of three terms. In addition, of the final 45 quarter credits, 35 must be in regular courses of instruction that you have taken as a registered student at UCSC (including during the summer session). Courses taken through University Extension or the Intercampus Visitor Program do not constitute regular courses and therefore do not satisfy residence requirements.

The credit requirement for residence is applied differently to students participating in the Education Abroad Program (EAP) and the University of California in Washington, D.C. (UCDC), program. Students may satisfy the requirement in either of two ways. The first way is for students to complete 35 of their final 45 credits before leaving the Santa Cruz campus to participate in EAP or UCDC. In this scenario, students do not have to return to Santa Cruz for any additional course work after they have finished EAP or UCDC. The second way to fulfill the residence requirement is for students to complete 35 of their last 90 credits at the Santa Cruz campus, with a minimum of 12 credits completed at UCSC

after their return from EAP or UCDC.

General Education Requirements

The general education requirements are designed to introduce you to various kinds of information, reasons for learning, and approaches to acquiring knowledge, as well as to promote responsible use of what is learned. Obviously, general education requirements alone cannot achieve these ends. You are urged to look for as many opportunities as possible to gain a richer understanding of your own cultural heritage and social situation; insight into countries, societies, and eras besides your own; proficiency in another language; understanding of the nature of ethical and moral choice; and expanded knowledge of science and technology. The formal requirements described here should be considered foundations for exploration.

New General Education Requirements for Students Entering Beginning Fall 2010

Complete list of Courses That Fulfill General Education Requirements

Beginning in fall 2010, all new students are required to fulfill a new set of guidelines for general education requirements that were approved by the UCSC Academic Senate in 2009. Students who began prior to fall 2010 and transfer students who entered another collegiate institution prior to that time may opt to change to the new requirements or fulfill the previous general education requirements, if catalog rights allow. See [Catalog Rights](#) for more information. Contact your college adviser if you have questions.

The general education requirements are meant to accomplish several goals:

- Provide students with a base of knowledge and skills that future learning can build on.
- Expose students to a broad range of disciplines and methodologies, to better prepare them for a world of complex problems and rapid changes.
- Enhance the abilities of students to approach problems in appropriately analytical ways.

Prepare students to function as responsible and informed participants in civic life, considering pressing societal issues (such as the environment, the economy) productively and from a variety of perspectives.

Each area has a general education code associated with it, and only those courses carrying that code satisfy the requirement. The codes appear in the course descriptions in this catalog and in the “General Education” field on the MyUCSC Class Search page. See a list of courses that fulfill [General Education requirements](#). The list is subject to change. Students should check the [Schedule of Classes](#) each quarter for the most up-to-date information. Students following the new general education requirements should review the requirements for their proposed or declared major(s) to ascertain whether some of their general education requirements will be fulfilled by completing their major. As a general rule, each course satisfies only one of the new general education requirements.

General Education Requirements Beginning in Fall 2010

Category	General Education Code	Number of Required Credits
Cross-Cultural Analysis	CC	5
Ethnicity and Race	ER	5
Interpreting Arts and Media	IM	5
Mathematical and Formal Reasoning	MF	5
Scientific Inquiry	SI	5
Statistical Reasoning	SR	5

Textual Analysis	TA	5
Perspectives (choose one from the following three categories)	PE-E	
Environmental Awareness	PE-H	5
Human Behavior	PE-T	
Technology and Society		
Practice (choose one from the following three categories)		
Collaborative Endeavor	PR-E	2
Creative Process	PR-C	
Service Learning	PR-S	
Composition	C1 & C2	10
Disciplinary Communication	DC	5*

*Students satisfy the Disciplinary Communication (DC) requirement by completing one to three upper-division courses required for their major, totaling a minimum of five credits and must be taken at UCSC. The DC requirement must be completed at UCSC—transfer courses do not apply to this requirement.

Cross-Cultural Analysis (CC code: one 5-credit course or equivalent). Courses in cross-cultural analysis prepare students for a world with increased interaction and integration among peoples, companies, and governments. These courses encourage a broader and deeper understanding of cultures and societies outside the United States. Such courses might focus on an in-depth examination of one culture, or one aspect of such culture (for example, art, music, history, language). Alternatively, these courses help students develop skills of cross-cultural comparison and analysis. A third option comprises courses that explore topics that are inherently cross-cultural such as international relations or the processes of economic globalization. Whatever the approach, these courses all aim to help students develop the openness and sensitivity

necessary for cross-cultural understanding.

Ethnicity and Race (ER code: one 5-credit course or equivalent).

Courses in Ethnicity and race prepare students for a state and a world that are increasingly multiethnic and multiracial. Beyond familiarizing students with the culture and/or history of one or more ethnic or racial groups, these courses also aim to develop theoretical and practical understanding of questions such as (but not limited to): how categories of ethnicity and race are constructed; the role they can play in identity formation; how ethnicity and race have historically been used to justify forms of enforced inequality; and the contributions of people of various ethnicities to society and to political change. These courses are particularly concerned with how ethnicity and race may intersect with other categories, such as gender, class, or sexual orientation, to shape self-understanding and patterns of human interaction.

Interpreting Arts and Media (IM code: one 5-credit course or equivalent).

Interpreting Arts and Media courses explore the complex ways in which information of all kinds is represented by visual, auditory, or kinesthetic means, or through performance. These courses build in-depth understanding of one or more forms of artistic media: that is, media in which nontextual materials play primary roles. They offer skills in the practice, analysis, interpretation and/or history of one or more of these media, as well as the ability to analyze the means by which they encode and convey information.

Mathematical and Formal Reasoning (MF code: one 5-credit course or equivalent).

In a world in which much thinking and discourse is directed by emotion and association, formal or mathematical models teach the value of dispassionate analysis. Mathematical and formal-reasoning courses emphasize the development of mathematical, logical, and/or formal reasoning skills. Mathematics-based courses that satisfy this requirement are focused on teaching significant problem-solving skills, and are often oriented toward particular application areas. Other courses that satisfy this requirement train students in formal reasoning skills and/or in the construction and use of formal models. Formal reasoning domains include mathematical proof, logic, and applied logic. Some examples of formal models are: computer programming languages, generative grammars (from linguistics), supply and demand models, and formal music theory.

Scientific Inquiry (SI code: one 5-credit course or equivalent).

Courses in Scientific Inquiry teach students about the essential role of observation, hypothesis, experimentation and measurement in the physical, social, life, or technological sciences. In these courses, students acquire key concepts, facts, and theories relevant to the scientific method. By the end of the course students should be able to articulate an understanding of the value of scientific thinking in relation to issues of societal importance.

Statistical Reasoning (SR code: one 5-credit course or equivalent). In today's globalized, media-saturated information society, we are continually presented with—or asked to present—numerical data. Statistical-reasoning courses prepare students to interpret quantitative claims and make judgments in situations of statistical uncertainty. The goal of statistical-reasoning courses is to teach skills for effective reasoning about probability and the use of quantitative information. Students acquire an understanding of making informed decisions in the presence of uncertainty. Topics addressed in statistical-reasoning courses include ways of (mis)representing data; correlation vs. causation; statistical inferences; experimental design and data analysis; understanding orders of magnitude.

Textual Analysis and Interpretation (TA code: one 5-credit course or equivalent). Even in our current multimedia world, the written word remains a major vehicle of communication. Many fields, from literature and history to law, government, science and religion, depend heavily on the understanding and interpretation of written documents. Textual analysis and interpretation courses have as their primary methodology the interpretation or analysis of texts. The aim of these courses is to develop higher-order reading skills and to train students how to read attentively, to think critically and analytically, to produce and evaluate interpretations, to assess evidence, and to deploy it effectively in their own work. These abilities are not only necessary for academic success, but also for full participation in civic life at every level.

Perspectives (one 5-credit course or equivalent from any of the three following categories):

Perspectives: Environmental Awareness (PE-E code). The interactions between people and the earth's environments are subtle, complex, and influenced by a variety of natural, scientific, economic, cultural, and political factors. Courses satisfying the environmental-awareness

requirement teach students about the complexity of particular ecosystems and/or people's interactions with nature so that they will better understand the environmental issues and trade-offs that are likely to arise in their lifetimes.

Perspectives: Human Behavior (PE-H code). Courses in human behavior help students to prepare for a world in which many of the most pressing challenges (such as genocide, environmental degradation, poverty) are impacted by human thoughts, decisions, or practices. As well, they provide a kind of "owner's manual" for students to assist them in understanding themselves, their roles (for example, parent, partner, leader), and their social groups (family, workplace, neighborhood, nation).

Perspectives: Technology and Society (PE-T code). The study of technology helps satisfy the need of society for knowledgeable people able to understand, participate, and guide the rapid technological advances that play such a vital role in our world. Technology and society courses focus on understanding technological advances, how they are developed, and their impacts on society.

Practice (one minimum 2-credit course from any of the three following categories):

Practice: Collaborative Endeavor (PR-E code). Students learn and practice strategies and techniques for working effectively in pairs or larger groups to produce a finished product. For example, students might learn specialized practical information such as how to use change-management software to monitor and manage changes initiated by multiple group members. Alternatively, they might learn basic information about leadership, teamwork, and group functioning, which they can incorporate into their own group process. What is common to all courses is that some instruction regarding the process of collaboration is provided, in addition to instruction specific to the academic discipline and the products being produced.

Practice: Creative Process (PR-C code). Creative-process courses teach creative process and techniques in a context of individual or collaborative participation in the arts, including creative writing. Courses may combine theory and experiment in the creation of a new artwork, or new interpretation(s) of an existing artwork. Creative-process courses include studies in individual or group creativity or improvisation, and/or ensemble rehearsal and performance.

Practice: Service Learning (PR-S code). Service-learning courses provide students with an opportunity to integrate their academic course work with community involvement. Such courses provide supervised learning experiences in which students reflect on, communicate, and integrate principles and theories from the classroom in real-world settings. Students gain valuable practical skills, while giving back to the community.

Composition (C1 and C2 codes) (Two 5-credit courses or equivalent): C1 and C2 typically are fulfilled by your college core course and Writing 2, Rhetoric and Inquiry. Students must complete the Entry Level Writing Requirement to satisfy the composition requirements.

Disciplinary Communication (DC) requirement. The goal of this requirement is to ensure that students acquire the skills in writing and other forms of communication appropriate for their discipline. Students satisfy the DC requirement by completing 1 to 3 upper-division courses required for their major, totaling a minimum of 5 credits. The DC requirement must be taken at UCSC and is automatically fulfilled by the completion of major requirements.

Pre 2010 General Education Requirements

Category	General Education Code	Number of Required Credits
Introductions to disciplines- humanities and arts area* (from two different disciplines)	IH	10
Introductions to disciplines- natural sciences and engineering area* (from two different disciplines)	IN	10
Introductions to disciplines- social sciences area (from two different disciplines)	IS	10
Topical courses (one course from each of the three academic areas; appropriately designated college courses)	T	15

fulfill this requirement)

Quantitative course	Q	5
Composition course	C or C1/C2	5–10
Writing-intensive course**	W	5
Arts course	A	5
U.S. Ethnic minorities/non-Western society course	E	5

*For purposes of the general education requirements, humanities and arts are combined in one academic area, as are natural sciences and engineering.

**The W requirement must be completed at UCSC—transfer courses do not apply to this requirement.

General Education Requirements for Students Entering Prior to Fall 2010

Designed to expose students to diverse subject areas, the general education requirements also stress a variety of approaches to acquiring knowledge. A description of the general education requirements and a complete list of current courses that satisfy general education requirements under the pre-2010 general education reform are included.

There are nine categories of general education requirements (see table above, Types of General Education Requirements). Each category has a general education code associated with it, and only those courses carrying that code satisfy the requirement. The codes appear in the course descriptions in this catalog and in the [Schedule of Classes](#). A list of [Courses That Fulfill General Education Requirements](#) is included in the catalog. The list is subject to change and is updated quarterly. Students should check the [Schedule of Classes](#) each quarter for the most up-to-date listing of courses that fulfill general education requirements.

Some courses satisfy more than one general education requirement, so

the total number of required courses may be 10 to 15.

Introductions to disciplines (IH, IN, and IS codes). These courses introduce a discipline's content, scope, and methodology. Introductory courses from two different departments are required in each of three academic areas: humanities and arts (IH code), natural sciences and engineering (IN code), and social sciences (IS code). Only one language course may be used to satisfy an IH requirement, as all languages are considered to be part of the same discipline. Similarly, only one literature course may be used, and English (transfer) courses are considered to be literature. Only one of the two IH courses may be from the arts (art, film and digital media, history of art and visual culture, music, and theater arts). Transfer courses designated IN from Anatomy, Botany, Physiology, and Zoology Departments are considered to be "biology" courses for general education purposes.

Topical courses (T code). These courses expose students to introductory-level themes of broad social or intellectual relevance. Three courses are required, no more than one from each academic area. For information on which disciplines are in each area, see [Arts](#); [Engineering](#); [Humanities](#); [Physical and Biological Sciences](#); and [Social Sciences](#). College core courses are labeled topical and carry the designation of the appropriate academic area.

Quantitative course (Q code). These courses provide methods for acquiring quantitative reasoning that involve use of advanced algebra, statistics, or calculus. One course is required.

Writing courses (C1, C2, and W codes). These courses stress explicit attention to the craft of writing. Having satisfied the [Entry Level Writing Requirement](#) by the end of your first year of enrollment at UCSC, you must complete two to three courses in writing. One of these must be a writing-intensive course (W code) that provides instruction and extensive practice in writing applied to a particular subject. For some courses, only certain sections are writing intensive (look for the "W" in the Schedule of Classes when enrolling). You must take this course at UCSC.

Students satisfy the other part of the writing requirement by passing two composition courses (C1 and C2 codes). You must fulfill the composition requirement prior to the seventh quarter of enrollment and before you can enroll in a writing-intensive course.

Arts course (A code). These courses provide the exposure to creative or

artistic expression necessary for a liberal arts education. One designated arts course is required; most are offered through art, film and digital media, history of art and visual culture, music, and theater arts.

Ethnic minorities/non-Western society course (E code). These courses are intended to increase knowledge of ethnic minorities in the United States and non-Western cultures, improve cross-cultural awareness, and explore relationships between ethnicity and other aspects of a liberal arts curriculum. One course is required.

Courses of fewer than 5 credits. Students usually meet the general education requirements with 5-credit courses. Several related arts courses of fewer than 5 credits with the same code may be used to satisfy the arts (A) general education requirement if they total at least 5 credits.

Advanced Placement and International Baccalaureate Examinations

[Advanced Placement Exams \(AP\) and International Baccalaureate Higher Level Exams \(IBH\) Table](#)

The university grants credit for College Board Advanced Placement (AP) Examinations on which a student scores 3, 4, or 5 and for International Baccalaureate Higher Level (IBH) Examinations on which a student scores 5, 6, or 7. The university does not grant credit for IB standard or subsidiary level exams. Students completing the International Baccalaureate Diploma with a score of 30 or higher receive 30 quarter credits. The credit is applied toward the total credits required for graduation and toward the UCSC campuswide general education requirements, as indicated in the table on pages 29–30, Advanced Placement (AP)/International Baccalaureate Higher Level (IBH) Examinations. Students should be aware that AP, IB, and college-level courses will not be granted duplicate credit. In these cases, the university will award credit for only one.

AP and IBH Examination Credit Toward Degree Requirements

Certain departments also allow prospective majors to obtain waivers for prerequisite courses. In all cases, a student should contact the particular department to discuss his or her plans with an adviser. Please note that approval is not automatic; a petition must be filed with most departments.

Credit for Transfer Students

General Education Requirements

Transfer students may apply courses taken at other institutions toward the lower-division general education requirements. The disciplinary communication course(s) (DC code) must be taken at UCSC.

If you are currently attending one of the California community colleges, see the ASSIST web site at www.assist.org, or consult with the UCSC Office of Admissions or your current counselor to determine which college courses satisfy UCSC general education requirements.

Transfer students who have satisfied the general education or breadth requirements of another UC campus prior to transfer will be considered to have completed the UCSC general education requirements, with the exception of the DC requirement. Completion of the Intersegmental General Education Transfer Curriculum (IGETC) prior to enrollment at UCSC will also be accepted in lieu of the campus general education requirements, with the exception of the DC requirement.

Intersegmental General Education Transfer Curriculum (IGETC)

The Intersegmental General Education Transfer Curriculum (IGETC) is a series of courses that prospective California community college transfer students may complete to satisfy the lower-division breadth/general education requirements at any University of California or California State University (CSU) campus (see the IGETC table below). This curriculum is the result of an agreement by the University of California, the California State University, and the California community colleges, aimed at simplifying the transfer process for community college students. The IGETC is intended exclusively for California community college transfers and is not an option for continuing UCSC students or for students transferring from four-year colleges or universities.

Students who complete the IGETC prior to transfer are not required to satisfy the UCSC lower-division general education requirements. For students who are partially certified, please consult the Office of Admissions. Courses used to satisfy IGETC must be completed with a grade of C (2.0) or better. A grade of Credit or Pass may be used if the community college's policy states that it is equivalent to a grade of C (2.0) or better.

IGETC is not recommended for majors that require extensive course

preparation, such as any major in the Jack Baskin School of Engineering or the Division of Physical and Biological Sciences.

IGETC Subject and Unit/Credit Requirements

Subject Area	Courses Required	Units/Credits Required
---------------------	-----------------------------	-----------------------------------

1. English

Communication

One course in English composition and one course in critical thinking/English composition. (Students transferring to CSU must take an additional course in oral communication.)

2 courses

6 semester units or 8-10 quarter credits

2. Mathematical Concepts and Quantitative Reasoning

1 course

3 semester units or 4-5 quarter credits

3. Arts and Humanities

Three courses with at least one

3 courses

9 semester units or 12-15 quarter

from the arts and
one from the
humanities. credits

**4. Social and
Behavioral
Sciences**

Three courses
from at least two
disciplines or an
interdisciplinary
sequence.

3 courses

9 semester
units or 12-
15 quarter
credits

**5. Physical and
Biological
Sciences**

One physical
science course
and one
biological science
course, at least
one of which
includes a
laboratory.

2 courses

7-9
semester
units or 9-
12 quarter
credits

**6. Language
Other Than
English**

Proficiency
equivalent to two
years of high
school in the

Proficiency

Proficiency

same language.
(Not required of
students
transferring to
CSU.)

Total	11 courses	34 semester units or 45- 57 quarter credits
-------	------------	------------------------------------------------------

Major Requirements and Course Prerequisites

Students who believe they have taken courses at other institutions that satisfy major requirements or UCSC course prerequisites should contact their major adviser for review.

College Requirements

You must fulfill the requirements of your college in addition to those of your major and of the university. Each college has established a core course, which all first-year students are required to complete. Students admitted as transfer students are exempt from the core course requirement but may take the course at their option on a space-available basis. College requirements are outlined below. The core courses are described more fully in the individual [college descriptions](#).

College Eight

- College Eight 80A, Introduction to University Discourse: Environment and Society, fall quarter, or College Eight 80B, Rhetoric and Inquiry: Environment and Society, fall quarter or College Eight 80C and 80D, Introduction to University Discourse: Writing for Environment and Society, fall and winter quarters; and College Eight 81A, The Environment and Us, fall quarter.

- College Eight 81A, The Environment and Us, fall quarter.
- College Eight 81B, Fundamentals of Environmental Science, winter quarter.
- College Eight 81C, Designing a Sustainable Future, spring quarter

Note: College Eight 81A, and 80A, or 80B, or 80C and 80D are mandatory for all incoming freshmen. College Eight 81B and 81C also satisfy many of UCSC's general education requirements.

College Nine

- College Nine 80A, Introduction to University Discourse: International and Global Issues, fall quarter, or College Nine 80B, Rhetoric and Inquiry: International and Global Issues, fall quarter; or College Nine 80C and 80D, Introduction to University Discourse: International and Global Issues Writing Intensive, fall and winter quarters

College Ten

- College Ten 80A, Introduction to University Discourse: Social Justice and Community, fall quarter, or College Ten 80B, Rhetoric and Inquiry: Social Justice and Community, fall quarter, or College Ten 80C and 80D, Introduction to University Discourse: Social Justice and Community, Writing Intensive

Cowell

- Cowell 80A, Introduction to University Discourse: Imagining Justice Past and Present, fall quarter, or Cowell 80B, Rhetoric and Inquiry: Imagining Justice Past and Present, fall quarter

Crown

- Crown 79, Introduction to Ethical Foundations
- Crown 80A, Introduction to University Discourse: Ethical Issues in Emerging Technologies, or Crown 80B, Rhetoric and Inquiry: Ethical Issues in Emerging Technologies

Kresge

- Kresge 80A, Introduction to University Discourse: Power and Representation, fall quarter, or Kresge 80B, Rhetoric and Inquiry: Power and Representation, fall quarter, or Kresge 80C and 80D, Introduction to University Discourse: Power and Representation

Writing Intensive, fall and winter quarters

Merrill

- Merrill 80A, Introduction to University Discourse: Cultural Identities and Global Consciousness, fall quarter, or Merrill 80B, Rhetoric and Inquiry: Cultural Identities and Global Consciousness, fall quarter

Oakes

- Oakes 80A, Introduction to University Discourse: Communicating Diversity for a Just Society, fall quarter, or Oakes 80B, Communicating Diversity for a Just Society, fall quarter, or Oakes 80C and 80D, Introduction to University Discourse: Communicating Diversity for a Just Society Writing Intensive, fall and winter quarters

Porter

- Porter 80A, Introduction to University Discourse: Writing Across the Arts, fall quarter, or Porter 80B, Rhetoric and Inquiry: Writing Across the Arts, fall quarter

Stevenson

- Stevenson 80A, Introduction to University Discourse: Self and Society, fall quarter, or Stevenson 80B, Rhetoric and Inquiry: Self and Society, fall quarter
- Stevenson 81A, Self and Society 2, winter quarter, or Stevenson 81B, Rhetoric and Inquiry: Self and Society 2, winter quarter

Major and Minor Requirements

To qualify for a bachelor's degree at UCSC, you must complete the minimum requirements for a major program, as well as satisfy university, campus, and college requirements.

At UCSC, you have the option of pursuing a single major, a double major, or a combined major. The minimum requirements for an established major program are set by the sponsoring department. (If you are a transfer student, the department will determine which of your transferable courses may be used to satisfy major requirements.) The major involves substantial work in the discipline and requires no fewer than 40 upper-division or graduate credits. Only courses in which you earn a grade of Pass, C, or better satisfy major or minor requirements.

Declaring a Major

The field of interest you indicate on your application to UCSC does not automatically place you in a major. You are advised to declare your major as soon as possible. You are required to declare a major before enrolling in the equivalent of your third year.* You will not be allowed to enroll in classes for the equivalent of your third year until you have declared a major. Certain majors have a limit on the number of students they can serve. Be sure you are aware of all the necessary criteria for qualifying for the major. It is wise to apply for major status as soon as you feel sure of the field you wish to enter and have met qualification requirements (if any) for the major you wish to pursue. Junior transfer students must declare a major during their second quarter at UCSC by the deadline printed in the [Academic and Administrative Calendar](#) in the [Schedule of Classes](#).

You should determine the requirements for possible major choices as soon as possible because certain majors require substantial preparation, with many interlocking course sequences and qualifying GPAs in certain major foundation courses. If you intend to pursue such a major, you should start work toward it early in your undergraduate career, and review your progress toward qualification regularly. (Review majors that interest you in the [Programs and Courses](#) section.) Academic advisers can offer assistance in selecting courses appropriate to your individual needs.

***Note:** This is the year you would become a junior given normal progress to degree. For example, if you transfer to UCSC as a beginning sophomore, it is your second year here.

Comprehensive Requirement

Every major at UCSC includes a senior exit requirement designed to integrate the knowledge and skills learned throughout the curriculum. This capstone requirement may be a senior thesis, senior seminar, comprehensive examination, or some other integrative experience designed for the major. Choices for satisfying this requirement are specified with the requirements for each major.

Minor Programs

See [Fields of Study](#) for undergraduate minors currently offered at UC Santa Cruz. Completion of a minor is optional. If you wish, you may complete more than one minor.

The sponsoring department establishes the course requirements for a

minor. The minor involves substantial work in the discipline and requires no fewer than 25 upper-division or graduate credits. The minor appears on your official transcript but not on your diploma.

Additional Majors or Minors

To complete multiple majors and minors, you must fulfill all of the requirements for all majors and minors declared, including the comprehensive requirement for each major. In general, a single thesis may not be used for more than one major. You may count courses for more than one major or minor, as long as each major includes 40 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor, and each minor includes at least 25 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor.

The diploma of a student who has completed a double major in history and music, for example, would read “Bachelor of Arts with Majors in History and Music.”

Combined Major

A combined major allows you to complete a course of study involving two disciplines offered as regular programs at UC Santa Cruz.

Examples of combined majors include environmental studies/economics and Latin American and Latino studies/politics. A combined major is designed by faculty representatives from both disciplines. In general, fewer courses are required than for a double major, and students complete the comprehensive requirements as specified for each combined major. Combined majors currently available are listed in the footnotes in the [Fields of Study](#).

The diploma of a student who has completed a combined major in environmental studies and economics, for example, would read “Bachelor of Arts with a Major in Environmental Studies/Economics.”

Individual Major

Students may also work with three faculty members to define an individual major specific to his or her academic goals. Proposals for individual majors require considerable effort to develop, and students are advised to consider double major, combined major, and major/minor alternatives. College advising offices can provide information on the individual major proposal and approval process.

Catalog Rights

Effective for all undergraduates who entered in fall quarter 1993 or after, students may follow the degree requirements from either the UCSC General Catalog published at the time of entering UCSC or subsequent catalog(s). Students need not follow a catalog in its entirety but may elect to follow different catalog years for their college requirements, university and general education requirements, requirements of their major(s), and requirements of any minor(s).

Catalog year will initially be set for the first year of enrollment at UCSC. Students may elect to follow requirements from other catalog year(s) when filing the Petition for Major/Minor Declaration. All requirements for graduation outlined in the catalog(s) selected must be met before graduation. Changing catalog year(s) for majors/minors is done by contacting your major adviser (for major requirements) or your college adviser (for college, university, and general education requirements).

Students transferring from other collegiate institutions may elect to meet as graduation requirements one of the following:

- those in effect at the time of transfer to UCSC;
- those subsequently established; or
- those in effect when the student entered a previous collegiate institution, provided that entry was not more than three years prior to the time of transfer to UCSC.

Students who seek readmission to UCSC after a break in attendance greater than two years (six regular quarters) must adhere to the graduation requirements in effect at the time of readmission or those subsequently established.

Students who entered prior to 1993 should see an adviser. Their catalog year(s) for graduation, whether the year they entered UCSC or subsequent year(s), will be decided at the discretion of their major department and/or their college.

Institutional Responsibility

Undergraduate students who have made significant progress toward a degree in a specific major can assume that a degree will be granted if they meet all catalog degree requirements and maintain continuous enrollment and progress.

Should UCSC find it necessary to discontinue a specific major, every effort will be made to allow currently enrolled majors to complete their degrees within a reasonable period of time. This may include (1) movement to a similar or related degree track; (2) substitution of requirements; (3) development of an individual major proposal; or (4) completion of courses at another University of California campus through the Intercampus Visitor Program. Students with questions concerning this policy should contact their major and college advising offices.

In all cases, any financial obligations are the responsibility of the individual student involved.

Evaluating Academic Performance

UC Santa Cruz has one of the more comprehensive systems for evaluating students' academic performance of any research university in the United States. The evaluation system consists of two major components: the assignment of a final grade in the course and an accompanying evaluation of your performance.

Evaluations

Beginning fall 2010, undergraduate evaluations are at the option of the faculty. In each course for which you receive a grade of D or better (or P) an evaluation of your academic performance may be submitted. An evaluation may:

- Describe the strengths and weaknesses of your performance in the various areas of class activity (discussion, laboratory work, term papers, examinations)
- Assess your general understanding of the course content
- Recognize additional or particularly outstanding work

Evaluations are used at UCSC in academic advising, reviewing scholarship applications, and awarding College Honors and Honors in the major. Evaluations are a permanent part of your academic record. All students may request transcripts either with or without evaluations.

Grades

At the end of each course, you will receive one of the following grade notations:

A excellent

B good

C fair

D poor

F fail

P passing

NP not passing

I incomplete

IP in progress

W withdrawal

The grades of A and B may be modified by a plus (+) or a minus (-). The grade of C may be modified by a plus only. You will not receive credit for graduation in any course in which you receive a final grade of F or NP. The grades I and IP are temporary grades used in special circumstances. The final notation W indicates that you officially withdrew from the course before completing it.

Grade Points

Grade points are assigned to a letter grade as follows:

4.0 = A+

4.0 = A

3.7 = A-

3.3 = B+

3.0 = B

2.7 = B-

2.3 = C+

2.0 = C

1.0 = D

0.0 = F

The grades P and NP are not included in calculating your GPA and so are not assigned grade points. Courses in which the interim grades I and IP are assigned earn no grade points or credit until the interim grade is replaced by a final letter grade.

Grade-Point Average (GPA)

Undergraduates entering UCSC in fall 2001 and thereafter have a UCSC cumulative grade-point average calculated from UCSC courses, courses taken through the Education Abroad Program, and courses taken at another UC campus as part of the Intercampus Visitor Program.

A grade-point average is determined by dividing the number of grade points earned by the number of units attempted for a letter grade. In calculating your UCSC GPA, the interim grades IP and I are not included in the computation because you do not earn those credits until they are replaced with a final grade. (However, when checking for whether you have satisfied the 2.0 UC GPA requirement for graduation, these interim grades are included and counted as courses with grade F [or NP]).

If you repeat a course in which you have received a D or F, only the last grade recorded shall be computed in your GPA for the first 15 credits of repeated work. After the 15 credit maximum is reached, the GPA will be based on all grades assigned and total credits attempted.

Undergraduates who entered UCSC for the first time in or after fall 1997 and before fall 2001 have a UCSC cumulative grade-point average only if they have elected letter grades in at least two-thirds of the cumulative credits attempted. Undergraduates who entered UCSC prior to fall 1997 cannot have an official UCSC grade-point average calculated.

Pass/No Pass Option

Students in good academic standing may request to take specific courses on a Pass/No Pass basis. Students receive a P (Pass) for work that is performed at C level or better. Work performed at below a C level receives a notation of NP on the student's transcript, and no academic credit is awarded for the course. Requests for Pass/No Pass grading must be submitted and confirmed by the Grade Option deadline printed in the [Academic and Administrative Calendar](#). If you request P/NP grading in a course and you are later placed on academic probation, your P/NP grading request will be canceled.

No more than 25 percent of the UCSC credits applied toward graduation may be graded on a Pass/No Pass basis. This includes any credits completed in the Education Abroad Program or on another UC campus in an intercampus exchange program. Students must be careful about the use of the Pass/No Pass option. Some courses may only be taken Pass/No Pass, and therefore count against the 25 percent Pass/No Pass limit. Several majors require all or most major requirements to be taken for a letter grade; read the major requirements section carefully before using the Pass/No Pass option for any course in a major you are considering.

Incomplete

The notation I may be assigned when your work for a course is of passing quality but for which some specific required work has not been completed. You must make arrangements with the instructor before the end of the course in order to receive an Incomplete. To remove the Incomplete, you must submit the remaining course work and file a petition by the deadline printed in the Academic and Administrative Calendar (generally the end of the following quarter). If you do not meet the deadline, the Incomplete lapses to a No Pass or an F, depending on the grading option selected at the beginning of the quarter.

The notation IP (In Progress) is reserved for a single course extending over two or three terms of an academic year. The grade for such a course may be awarded at the end of the course and shall then be recorded as applying to each of the terms of the course. A student satisfactorily completing only one or two terms of a course extending over two or three terms of an academic year will be given grades for those terms. The grade option selected in the first quarter of the multiple-term sequence applies to all quarters of the sequence.

Grade changes (except for I and IP, as above) are allowed only to correct clerical or calculation errors by the instructor and must be submitted to the Office of the Registrar by the instructor in charge of the course within one year of the close of the quarter for which the original grade was submitted.

Student Responsibility

Students are responsible for using the Academic Information Systems (AIS) to set and confirm choices for grading options and for ensuring timely completion of all requirements. Students view their schedule at [MyUCSC](#).

Course Loads

The usual course load for UCSC undergraduates is 15 to 19 credits, most often as three 5-credit courses and associated laboratories and sections. After instruction begins, students with a UCSC GPA of 3.0 may enroll in up to 22 credits without special approval and may seek approval for higher loads from their college advising office. Students in their first quarter or with a lower GPA must seek approval from their college advising office for enrollment in more than 19 credits.

College approval is required to carry fewer than 15 credits.

Academic Progress

Academic progress is a measure of the completion of courses with a D or better, or Pass. Colleges monitor academic progress to ensure you are progressing toward your degree, which must be earned within five years.

Minimum progress is based on length of time at UCSC. The minimum acceptable progress is completion of 36 credits for each academic year, 12 credits for each additional full-time term, and four-fifths of credits attempted for each part-time term. Progress is measured cumulatively, not term by term. For example, a full-time student must complete 48 credits by the end of the first quarter of the second year.

If you do not maintain minimum progress, your college may require you to take higher course loads, complete Summer Session courses, or make other adjustments to your study plan.

A separate financial aid satisfactory academic progress policy (FASAP) defines the GPA and progress requirements for remaining eligible to receive financial aid. Information can be found [here](#).

Academic Standing

Academic standing is a measure of performance in completed courses. You must maintain a 2.0 UCSC GPA in order to remain in good academic standing.

If your UCSC term or cumulative GPA falls below 2.0 at the end of any term, you will be placed on academic probation for the next term. You will need to work with your college and major advisers to determine the best way to return to good academic standing. Be sure to take full advantage of the many learning support services available at UCSC.

If your UCSC GPA for any term falls below 1.5, or if you are on academic probation and your cumulative GPA at the end of a term is below 2.0, you are also subject to disqualification. This means that your enrollment at UCSC may be barred for a specific period of time, or you may be disqualified indefinitely from attending the University of California. In many cases, a specific study plan can be developed with your college that will enable you to remain enrolled at UCSC.

For students who entered UCSC prior to fall 2001, academic standing and progress are calculated differently. Contact your college office or see [The Navigator](#) for more information.

A separate financial aid satisfactory academic progress policy (FASAP) defines the GPA and progress requirements for remaining eligible to receive financial aid. Information can be found [here](#).

Maximum Credits and Years

Students are expected to complete their degree objective(s) within four years, with maximum enrollment limits of at most 225 credits and five academic years (Advanced Placement and International Baccalaureate units are not counted). Upper-division transfer students are expected to complete their degree objective(s) within at most 135 UCSC credits and three academic years.

Colleges may make exceptions to the credit maximum for students in certain cases. Such exceptions are conditional on maintaining academic standing, minimal progress, and progress toward the degree objective(s).

Students in danger of exceeding the credit limit or the five-year or three-year limit may be required to modify their degree objective, such as by completing a major without a minor or double major, or completing a related major with fewer course requirements.

Repeating Courses

Undergraduates may repeat courses in which they earn a D, F, No Pass, or W. For an undergraduate to repeat a course more than once requires approval of the student's college. A grade of W counts as an attempt. Courses in which a D or F is earned may not be repeated on a Pass/No Pass basis. Courses in which a grade of No Pass is earned may be repeated on the same basis or for a letter grade. For the first 15 credits of repeated courses, the original grade is excluded from the GPA, and only

the grade from the repetition is used. After the 15-credit maximum is reached, all grades are included in the GPA. However, credit is not awarded more than once for the same course. The grade assigned each time the course is taken will be permanently recorded on the official transcript.

Academic Integrity

The university is dedicated to the unhindered pursuit of knowledge and its free expression. It is essential that faculty and students pursue their academic work with the utmost integrity. This means that all academic work produced by an individual is the result of the sole effort of that individual and acknowledges the contributions of others explicitly. It is the responsibility of students and faculty to be absolutely clear about what constitutes plagiarism, cheating, or other violations of academic integrity. Violations of academic integrity by students result in both academic sanctions (e.g., failing the course) and disciplinary sanctions (e.g., suspension or dismissal). Consult Appendix G of the campus's [Student Policies and Regulations Handbook](#) for more discussion and information.

Undergraduate Honors Program

UC Santa Cruz awards several honors for outstanding academic achievement.

Dean's List Honors

Students will be eligible for quarterly Dean's Honors if they have earned a minimum of 15 units that quarter, of which at least 10 are graded, with a term grade point average (GPA) equal or higher than that required for University Honors at graduation in their group* for the current academic year. The notation "Dean's Honors" will appear on the transcript.

***Note:** GPA thresholds for Baskin School of Engineering majors are calculated separately from those of majors in all other divisions.

Honors at Graduation

Honors at graduation are awarded by the university and by the separate majors and colleges based on a review of their graduates' academic records. In general, honors are limited to 15 percent of the graduating class. University Honors are based solely on the cumulative UC GPA. Faculty review for major and college honors may involve additional criteria.

University Honors

To be considered for University Honors at graduation, students must have completed 70 or more units at the University of California and have attained in their group* a UC GPA that places them in the rankings as follows: Summa Cum Laude, top 2 percent; Magna Cum Laude, next 3 percent; Cum Laude, next 10 percent. Each year and for each group, the registrar will calculate the GPA thresholds required for these levels of University Honors, based on the GPAs of recent graduates. The notation "University Honors" will appear on the diploma and transcript.

* **Note:** GPA thresholds for Baskin School of Engineering majors are calculated separately from those of majors in all other divisions.

Honors in the Major

At graduation, the department sponsoring a student's major program may confer Honors or Highest Honors in the major. This notation appears on the transcript as well as on the diploma. In general, no more than 15 percent of the graduation class in a major will be awarded Honors at graduation.

College Honors

Some colleges review their graduating students for academic achievement and according to criteria set by the college faculty reviewers. In general, no more than 15 percent of the graduating class of a college will be awarded Honors at graduation.

Deadlines

To be considered for honors in the major or college honors, students must apply to graduate by the Registrar's deadline.

Any student who has a reportable disciplinary sanction for a violation of academic integrity policies may be ineligible for any honors designation, at the discretion of the agency that awards the designation.

Undergraduate Honors Opportunities

First-Year Honors Program

The UCSC First-Year Honors Program offers a congenial and challenging academic home for a select group of well-prepared students at UC Santa

Cruz. This enriched program of study includes special courses, seminars, colloquia, and other events during each quarter of the academic year. Qualified UCSC applicants who are offered admission to the university will be invited to apply to participate in the program.

Honor Societies

Many UC Santa Cruz students are members of departmental, professional, local, and national honor societies whose goals are to recognize and improve scholastic standing in an area of interest. Among these are Phi Beta Kappa, the oldest national society that advances scholarship and recognizes excellence in the liberal arts and sciences; Tau Beta Pi, the engineering honor society that recognizes students of distinguished scholarship, exemplary character, and dedication to service; the Golden Key International Honour Society, which provides recognition and leadership opportunities to top-performing students; and Psi Chi, which encourages, stimulates, and maintains excellence in scholarship, and advances the science of psychology.

Awards and Scholarships

UC Santa Cruz has a variety of scholarship and award opportunities that are designed to reward, encourage, and assist students in pursuing academic excellence and leadership roles. Students can find such opportunities through their colleges, departments, divisions, and various external agencies.

The Office of Undergraduate Education provides administrative support to a variety of prestigious scholarships and awards such as the Karl S. Pister Leadership Opportunity Award, Deans' and Chancellor's Awards, Steck Foundation Award, Boren Scholarship, Donald A. Strauss Scholarship, Fulbright U.S. Student Program, Scholarship, Marshall Scholarship, and Rhodes Scholarship.

Transcripts

Academic records are maintained by the Office of the Registrar, which will issue an official transcript only on your authorized request.

For information on ordering transcripts, please refer to the following URL: registrar.ucsc.edu/records/transcripts/index.html.

If you have outstanding financial obligations to the university, a hold may be placed on your transcript. Students may access their unofficial

transcript on MyUCSC.

Transcripts for UCSC Extension courses should be requested from UCSC Extension Records, 2505 Augustine Drive, Suite 100, Santa Clara, CA 95054-3003, (408) 861-3700.

Privacy of Records

UCSC students are informed annually of the federal Family Educational Rights and Privacy Act (FERPA) and its provisions. This act, which the institution follows, was designed to protect the privacy of education records and to provide guidelines for the correction of inaccurate or misleading data through informal and formal hearings. Students also have the right to file complaints with the Family Educational Rights and Privacy Act Office concerning alleged failures by the institution to comply with the act.

UCSC policy explains in detail the procedures to be used by the institution for compliance with the provisions of the act. FERPA guidelines are available in [The Navigator](#), the student handbook. The full text of the University of California policies applying to the Disclosure of Information from Student Records is online:
registrar.ucsc.edu/records/disclosure/index.html.

Questions concerning the Family Educational Rights and Privacy Act may be referred to the Office of the Registrar, 190 Hahn Student Services Building.

Advising: From Course Selection to Careers

Academic Advising

Academic advising at UC Santa Cruz aims to assist students in clarifying their educational goals and in developing academic plans to achieve them. The core of UCSC's advising system is housed in the colleges and academic programs and is supplemented by advising and support services throughout the campus.

College academic advisers (some of whom are called "academic preceptors") are generalist advisers who focus on orientation to the university, pre-major advising, academic success, and campuswide requirements such as general education and university requirements. Each college has an advising team that can provide you with individual

and group advising and can refer you to resources and educational opportunities. You remain affiliated with your college advisers throughout your undergraduate career.

Staff advisers in UCSC's academic programs (sometimes called "major advisers") focus on areas related to a student's major or minor. Major advisers can help you understand declaration and major requirements, and can assist you in planning a program of study. They can help you identify enrichment opportunities within the major and refer you to appropriate faculty advisers. Faculty advisers may serve as mentors in your field, recommending courses and helping you refine your educational goals. For transfer students and for students in many majors (such as those in the physical and biological sciences, engineering, and the arts), it is important to review information provided by major advisers prior to your first quarter on campus.

For help in assessing career interests and exploring and choosing career options, contact the [Career Center](#). The staff also can assist you with choosing a major, résumé preparation, interviewing skills, applying for an internship, and job-search strategies.

If you plan to go on to graduate school, consult with faculty in your major. Faculty advisers are the best people to ask about the quality of graduate programs in your field of interest. In addition, the Career Center offers advising and workshops on applying to graduate school.

If you intend to pursue graduate study in a field not offered as a major at UCSC, you can often prepare for your intended program through one of the campus's regular majors. You must plan your studies carefully, however, and advising will be especially important. The Career Center has information that will help prepare you for graduate and professional programs. The following are some fields in which UCSC alumni have pursued graduate study and successful careers:

- Business
- Conservation
- Film
- Finance
- Guidance and counseling
- Health fields

- High-tech industry
- Human resources
- Industrial and labor relations
- International relations
- Law
- Marketing
- Museum administration
- Public administration
- Urban planning

The Career Center includes advisers with specialized expertise in preparing for careers in medicine or another health-related field (including dentistry, nursing, nutrition, occupational therapy, optometry, osteopathic medicine, pharmacology, physical therapy, public health, and veterinary medicine), and in preparing for careers in law.

A number of programs provide additional academic and comprehensive support services to students with specific needs. Educational Opportunity Programs (EOP), Services for Transfer and Re-Entry Students (STARS), and the Disability Resource Center are described below. Counseling on personal and family issues is available through [Counseling and Psychological Services](#). If you need assistance that is not listed in this section, consult [The Navigator](#) or check with your college advisers.

Your first step in accessing advising at UCSC is to attend Orientation.

Orientation

Orientation is an indispensable resource for all students. Students who attend Orientation feel better prepared, encounter fewer problems, and receive priority registration. Attending Orientation is one of the most important steps a new student takes in preparing for the transition to university life, providing the academic advising needed to make informed decisions about classes and majors, and the opportunity to get questions answered, and learn more about the university.

Orientation begins the process of academic advising and provides a comprehensive introduction to all aspects of UCSC. While at Orientation, students enroll in classes, learn to access campus resources, meet with

college and department advisers, meet new and continuing students, learn about the many student organizations on campus, attend a resource fair, take pictures for their student ID card, attend breakout sessions, and gain valuable student life information. We urge students to attend Orientation to help facilitate their academic and personal success at the university.

Summer Orientation is held several times over the course of the summer and includes separate programs for first-year and transfer students, as well as a concurrent program for family members.

Fall Welcome Week, scheduled approximately five days prior to the beginning of fall quarter, is the next step in the orientation and advising process for new students entering fall quarter. It provides students with an opportunity to settle into life at UCSC, take advantage of important services, and continue their academic advising.

Students make their reservations for Summer Orientation online through the UC Santa Cruz portal at [MyUCSC](#).

Questions can be directed to the Office of Campus Orientation Programs at (831) 459-5468, or via e-mail to orientation@ucsc.edu. Web: orientation.ucsc.edu.

Career Center

UC Santa Cruz graduates find success in many different career fields, and their superior education is the foundation for this success. The staff at the Career Center will help you link your educational experience to the world of work. The center provides a variety of employment and career-development services to help students obtain rewarding and successful careers.

Students are encouraged to visit the Career Center early during their first year on campus. The first step is to meet with a career adviser to begin developing a focused career plan. Simply sign up online for an advising appointment. Your career adviser will show you how to research and discover the many opportunities that are available to UC Santa Cruz students and graduates. Workshops offered by the Career Center include: Finding and Applying to Internships; Résumé and Cover Letter Writing; Applying to Graduate and Professional School; and special workshops on specific majors or career fields.

Your college experience is likely to include a part-time job or internship in

your area of interest. The Career Center has hundreds of opportunities available. Off-campus and on-campus employment opportunities (both work-study and non-work-study) are posted on the [Career Center's web site](#). For your convenience, you may apply for on-campus jobs online.

An internship is one of the best ways to gain practical work experience in your area of interest. The Career Center has a database with hundreds of opportunities in a wide variety of career fields. While visiting the center, be sure to check out the **Chancellor's Undergraduate Internship Program (CUIP)**. This unique internship program is designed to give participants a professionally enriching work experience on campus in one of the university's colleges, administrative units, or academic departments.

Another interesting and challenging position is the UC Student Regent, with an annual recruitment process. For information, e-mail larojas@ucsc.edu.

The Career Center's resource library contains a wealth of material on career exploration, graduate and professional schools, job search, career fields, internships, and employer information. However, the most exciting online resource is the Career Advice Network (CAN). Consisting of UCSC alumni and other professionals from various fields, the members of the network help UCSC students and alumni by sharing career insights and information.

UCSC students and alumni looking for full-time career opportunities need look no further than SlugQuest—an online site that lists job openings targeted to UCSC graduates. You may connect to SlugQuest on the [Career Center web site](#). Another way to obtain a career position is to participate in the On-Campus Interview Program. Corporate recruiters visit campus every fall, winter, and spring to interview and hire students. The Career Center web site has a list of participating companies.

The Career Center sponsors several major events every academic year. The Graduate and Professional School Fair brings representatives from the nation's top universities to campus to share information about their advanced-degree programs. Job fairs, which bring hiring companies to campus, take place several times a year. Students looking for a job or internship will want to come prepared with a great résumé. Other events include the Multicultural Career Conference, which brings students and alumni together to develop mentor relationships and explore careers.

The Career Center—located at the Bay Tree Building, Room 305, in Quarry

Plaza—can be reached at (831) 459-4420. Office hours are 8 a.m. to 5 p.m. Web: careers.ucsc.edu

Educational Opportunity Programs (EOP)

The Educational Opportunity Programs (EOP) provide a variety of academic and personal support programs designed to improve the retention and academic success of first-generation college students from low-income and educationally disadvantaged backgrounds. EOP helps to ensure these students successfully complete their undergraduate education and acquire the skills to prepare for graduate and professional school, as well as for future leadership roles. Below are the programs and services offered through EOP.

Advising Programs and Services

EOP Advising programs and services are designed to facilitate personal growth and development for the purpose of achieving academic and social integration, academic achievement, and exposure to opportunities beyond the baccalaureate degree. These programs and services include:

- Academic advising and personal counseling
- Time-management and study-skills development
- Referrals to resources, programs, and opportunities
- Peer advising
- Community events

Bridge Program

The main goal of the Bridge program is to deepen and personalize the UCSC experience. The program offers a select group of EOP students special academic and personal support to facilitate a smooth transition from high school to the university. This support fosters academic achievement and social integration into campus life, helping to ensure a successful first-year experience.

Support Services for AB540 Students

AB540 Student Services provides a broad range of support services designed to address the needs of AB540 students. These services are designed to address the gaps that AB540 students face within the university and enhance student achievement. Services provided to

students include mentoring, community-building events and programs, personal advising, and student-based support.

Textbook Lending Program

This program is designed to assist students in obtaining required textbooks that they would not be able to purchase on their own due to cost. To receive textbook assistance, students must demonstrate financial hardship and must have exhausted all other forms of financial aid available to them. This includes all forms of loans (subsidized and unsubsidized).

Pre-Graduate Programs

EOP also sponsors two pre-graduate programs designed to increase the placement of EOP students in professional and doctoral programs and to encourage the pursuit of academic careers.

The Graduate Information Program (GIP) supports students seeking to pursue graduate and professional school education. Services include:

- Graduate and professional school advising
- Graduate school application and internship-related workshops
- Graduate school resource library and web site
- Trips to conferences and forums

The Faculty Mentor Program (FMP) is a two-quarter undergraduate research program designed to encourage and prepare students for future graduate study within the arts, humanities, and social sciences. FMP includes:

- Hands-on research apprenticeship with UCSC faculty
- Participation in a two-quarter undergraduate research seminar
- Library research skills development
- Graduate school application workshops and support

For information about any of these programs, please call the EOP office at (831) 459-2296 or visit eop.ucsc.edu.

MARC and IMSD Programs

The Division of Physical and Biological Sciences sponsors two National Institutes of Health grant programs: the Minority Access to Research

Careers (MARC) Program and the Initiative for Maximizing Student Diversity (IMSD) Program. Though separately funded, the projects share a similar mandate: to increase the number of well-prepared ethnic-minority students who are admitted to graduate or professional schools in biomedical sciences. The program seeks students from groups that have traditionally been denied equal access to educational opportunities in the science professions.

Continuing students who have successfully completed specific introductory courses in biology, chemistry, and mathematics are invited to apply for the MARC and IMSD programs, which begin in the summer and introduce students to program faculty, their research, and research techniques. After students successfully complete the summer program, they have the opportunity to work in a faculty lab for the following academic year. Financial compensation is available for laboratory research and participation in the summer program.

MARC and IMSD are run in conjunction with UC LEADS and CAMP, and we also work with other offices to help make the most of campus resources and provide practical assistance with the graduate school admission process. In addition, the staff maintains an information file on summer enrichment programs (which can provide you with vital research experience), conferences, professional development workshops, journal clubs, and seminar courses.

The program's well-equipped student office provides additional academic support and a convenient place for students to meet. The staff encourages students to make use of this study space and assists them in learning to use the office's personal computers.

For further information, contact the MARC, IMSD, CAMP and UC LEADS Office, 369–381 Thimann Laboratories, (831) 459-4770, or e-mail malika@ucsc.edu. Web: stemdiv.ucsc.edu.

Academic Excellence Program (ACE)

ACE is a nationally recognized academic support program that is designed to increase the diversity of students who earn bachelor's degrees in science, technology, engineering, and mathematics (STEM). ACE offers active-learning discussion sections for selected mathematics and science courses.

The sections provide a structured setting where students teach and learn

from each other. An ACE instructor, who has an academic background in the subject, facilitates the discussion sections. Undergraduate co-leaders/peer mentors assist the instructor, bringing the student-to-teacher ratio to approximately 12:1. In addition to attending their ACE discussion section, students meet weekly with their peer mentor, who shares study strategies as well as opportunities for undergraduate teaching and research internships. ACE instructors offer weekly office hours, as well as examination review sessions and academic and career planning. ACE students join a community of STEM scholars who are dedicated to academic excellence and success.

Applications are accepted quarterly for the upcoming term. Enrollment in ACE is limited and priority is given to students who are studying STEM disciplines and who are first-generation college students. For more information, visit the web site: ace.ucsc.edu.

Multicultural Engineering Program (MEP)

Also known as the MESA Engineering Program, MEP is the university-level component of [Mathematics, Engineering, Science Achievement \(MESA\)](#), a statewide program of the University of California Office of the President. At UC Santa Cruz, MEP is supported by the Baskin School of Engineering. Its goal is to promote the retention and graduation of a diverse population of students, especially those from groups that remain the most underrepresented in engineering studies.

MEP provides academic and personal support for engineering students who are first-generation college students, are the first in the family to pursue engineering or computer science studies, or are from a low-income (limited financial resources) or educationally disadvantaged background. MEP's academic learning community supplements students' undergraduate experience and encourages them to continue their education into graduate school. MEP has a strong support system and engages students' full participation in a variety of services and activities. These include academic advising, personal counseling, tutorial services, drop-in assistance, individual and small-group study, study-skills workshops, peer-support networks, community-building activities, scholarships, and an engineering Summer Bridge program for a select group of entering first-year students.

MEP's well-equipped study center and computer lab provides 24-hour access to computer workstations and printer, textbooks, individual

lockers, and a place for students to gather and study. Students who have participated in pre-university service programs (e.g., Early Academic Outreach, Upward Bound, MESA, Talent Search, Puente, DEEP, Smith Scholastic Society) are encouraged to apply to MEP.

For further information, call (831) 459-2868, visit the web site mep.soe.ucsc.edu, or drop by the School of Engineering Undergraduate Affairs Office, 231 Baskin Engineering Building.

Services for Transfer and Re-entry Students (STARS)

Services for Transfer and Re-entry Students (STARS) offers a broad range of personal and academic support services for all transfer and re-entry students (undergraduates 25 years and older, graduate students 29 years and older), students who are parents regardless of age, and military veterans. These services include admissions information; orientations for new students; academic seminar courses; study skills workshops; tutorial services; informal academic advising; drop-in assistance; social, recreational, and cultural programs; scholarships; newsletters; and study centers with computer workstations. STARS also acts as a clearinghouse for information about campus and community resources for UCSC's large transfer and re-entry student populations.

STARS is located at Kresge College, on the floor above the College Office. All current and prospective transfer and re-entry students are invited to visit. Hours are 9:00 a.m.-7:00 p.m., Monday through Thursday, and to 5:00 p.m. on Friday.

Veterans Education Team Support (VETS) is a STARS program for veterans returning to school. In this peer mentor program, veterans meet each other and receive assistance as they navigate admission and transition into university life. Ongoing personal and academic support and outreach to prospective students are also offered.

The Smith Renaissance Scholars Program, which helps foster and former foster youths pursue their educational goals, is affiliated with STARS.

The Osher Lifelong Learning Institute at UCSC, a UC/community organization dedicated to continuing education, is also under the STARS umbrella. The organization hosts monthly meetings with university faculty, offers courses taught primarily by emeriti faculty, and coordinates a wide variety of peer-led interest groups.

For further information regarding all the STARS programs, call (831) 459-2552. For current programs and activities, visit the [STARS web site](#).

Disability Resource Center (DRC)

The campus accommodates students with disabilities and welcomes their attendance at UCSC. The Disability Resource Center (DRC) provides services such as disability-related advising, authorization for testing accommodations, conversion of print materials into alternative formats (audio, electronic, Braille), adaptive equipment loans, notetakers, sign language interpreters, real-time captioning services and referrals to appropriate campus or community resources.

The Disability Resource Center is located at 146 Hahn Student Services Building and can be reached by phone at (831) 459-2089, or via e-mail at drc@ucsc.edu. Web: drc.ucsc.edu/

Campus access for people with mobility impairments. Visit the [campus Americans with Disabilities Act web site](#) for more information about accessibility maps, vehicles equipped with wheelchair lifts that can transport students throughout campus, and permits for accessible or medical parking spaces that are adjacent to all campus buildings. Most buildings on campus have wheelchair-accessible ramps, modified rest rooms, and other facilities. If necessary, classes are rescheduled to meet accessibility needs.

Questions and concerns can be directed as follows:

- Education/program accessibility should be addressed to the director of the Disability Resource Center, at (831) 459-2089 (voice).
- Facility or transportation access should be directed to Facilities Access Coordinator (831) 459-3759 (voice).
- Computing access to the campus should be directed to IT Accessibility Coordinator (831) 459-2410.
- Accommodating job applicants or current employees with disabilities should be directed to (Disability Management Coordinator, Benefits Office (831) 459-4602 or Assistant Director for EEO, Office for Diversity, Equity, and Inclusion (831) 459-3676.

ROTC and Military Affairs

UC Santa Cruz Air Force ROTC

Students interested in participating in Air Force Reserve Officer Training Corps (AFROTC) have the option of attending AFROTC classes at San José State University while taking other academic classes at UC Santa Cruz.

San José State University supports a wing of AFROTC with cadets from San José State University, Santa Clara University, Stanford University, UC Santa Cruz, and many local community colleges. The Air Force ROTC program is designed to provide instruction in leadership, management, and national security studies along with military education and training. This prepares the cadet for assignment to positions of responsibility and importance in the modern Air Force. Instruction is conducted on and off campus. This program offers all eligible students the opportunity to obtain an officer's commission in the United States Air Force while earning their college degrees.

Program Overview

Our faculty brings a wealth of experience and diversity to the program. Instructors are Active Duty Air Force officers from various career areas and provide students with a first-rate academic education and military training experience. Each faculty member also acts as a student advisor to guide students through the program and help them reach the goal of an officer's commission in the United States Air Force.

College students wishing to commission as an Air Force officer through ROTC may enroll in a three-, three-and-a-half-, or four-year program. Students attend Air Force ROTC classes along with other college courses and receive elective academic credit. AFROTC courses are sequenced by subject area for specific and logical reasons. Please see www.sjsu.edu/depts/AFROTC/homepage.html for course information. After successfully completing all requirements, the cadets are commissioned as Air Force officers with a four-year active duty service commitment.

For information on the Air Force ROTC program, contact the Department of Aerospace Studies, AFROTC Det 045, One Washington Square, Industrial Studies Building, Room 214, San José State University, San José, CA, 95192-0051. Phone: (408) 924-2960. E-mail Det045@maxwell.af.mil or visit the web site: www.sjsu.edu/depts/AFROTC/homepage.html. Students may call or inquire about program prerequisites, scholarship availability, and class

schedules at the Department of Aerospace Studies.

(Editor's note: The following section on the UC Santa Cruz Army ROTC program was added to the catalog post-publication on March 10, 2015.)

UC Santa Cruz Army ROTC

The Army ROTC (Reserve Officers' Training Corps) is one of the best leadership courses in the country and can be part of your college curriculum. UC Santa Cruz students have the opportunity to take ROTC courses with cadets from other local campuses including Santa Clara University, Stanford, and San Jose State University. Cadets from UC Santa Cruz have flexible options to meet ROTC class requirements such as local classes on campus, shuttles to Santa Clara University, or by virtual attendance of classes at Santa Clara University through the Army's online meeting application. During classes, leadership labs, physical training, and field training exercises, Army ROTC students will learn firsthand what it takes to lead others, motivate groups and conduct missions as an officer in the Army. Upon graduation from Army ROTC, students will earn the bar of a second lieutenant and be commissioned into the Active Army, Army Reserve or Army National Guard.

Army ROTC at Santa Clara University is a program that fosters the development of cadets' academic, athletic, professional, and mental strengths. Students attend class and physical training for three hours each week, along with a Wednesday lab session that features hands-on instruction regarding Army operations and leadership situations. This program is ideally designed as a four-year process. Cadets spend their first two years familiarizing themselves with the Army, and in their third year be expected to perform and improve as leaders in preparation for a summer leadership development camp at Ft. Knox, Kentucky. The fourth and final year of Army ROTC introduces cadets to the responsibilities of military staff, teaching them to plan, train, lead, and develop their junior cadets in preparation for their commission. A typical four-year education with Santa Clara University ROTC comes with a service obligation of four years in the Army.

Army ROTC also gives cadets the opportunity to gain further Army experience by earning appointments to Army training schools where they will parachute from airplanes or rappel from helicopters. In addition, cadets are allowed a single quarter of study abroad, as well as the opportunity to participate in Army-funded immersion trips to dozens of countries across the globe in the summer months.

ROTC offers the opportunity to compete for scholarships that can pay for your education. These scholarships consist of tuition, money for books, and a monthly stipend. Cadets who graduate from the program will compete for active duty and reserve positions across the Army. Active officers have a full-time position and serve for a minimum of four years. Reserve officers serve for eight years part-time in either the National Guard or Army Reserve.

For more information about ROTC opportunities and scholarships contact Mario Morales by e-mail at mcmorales@scu.edu or by phone at 408-554-6840, or visit the Army ROTC web site at <http://www.scu.edu/rotc/>.

For more information regarding Army ROTC please visit the Army ROTC web site at <http://www.goarmy.com/rotc.html>.

Undergraduate Research

At the best research universities, professors bring knowledge and creativity from their cutting-edge research into the classroom, integrating the canon of the discipline with its future directions. UC Santa Cruz takes this further with a special tradition of undergraduate research outside the classroom. UC Santa Cruz, its departments, and faculty offer undergraduates many ways to get involved in research and creative activities. These opportunities develop advanced skills and insights and an early introduction to the nature of graduate studies. Research projects can help students launch careers, secure admissions to top graduate schools, and truly impact society.

Many majors incorporate research in their senior comprehensive requirement, with options or requirements of a senior thesis, capstone project, or other creative endeavor based on students' individual research. Other opportunities for undergraduates exist through structured internships or research programs, by joining ongoing faculty research or creative projects, or by developing their own projects under faculty supervision. The next sections discuss a sampling of UCSC's international education, field-study, and exchange programs, which enable students to deeply enrich their undergraduate experience and education as they learn by doing. For additional information, see [Undergraduate Research Opportunities](#).

UC LEADS

After being selected as UC LEADS scholars, students begin a two-year program of scientific research and graduate school preparation guided by individual faculty mentors and program staff. Scholars are provided with an excellent opportunity to explore their discipline, experience a research environment, and improve their opportunities for future study in their chosen field. Each scholar is mentored by a member of the UC faculty who assists the student in designing a plan of research and enrichment activities tailored to his or her individual interests and academic goals. Scholars attend the annual statewide symposium and receive funding to participate in another STEM conference of their choice each year.

The UC LEADS program is headquartered in the STEM Diversity office, along with MARC, IMSD and CAMP. To learn more about eligibility requirements and the UC LEADS program, visit the [STEM Diversity Programs web site](#) or e-mail STEM Diversity Director Malika Bell at malika@ucsc.edu.

California Alliance for Minority Participation (CAMP)

CAMP is a statewide initiative that aims to support and retain underrepresented undergraduates to achieve their degrees in the biological sciences, physical sciences, mathematics, and engineering.

By integrating research and undergraduate education, CAMP creates a cohesive set of experiences that fully prepares undergraduates for graduate education and influences career choices. CAMP programs motivate participants through cooperative learning, internships, faculty mentored research, and travel to professional conferences.

The CAMP program is headquartered in the STEM Diversity office along with MARC, IMSD and UC LEADS. To learn more about eligibility requirements and the CAMP program, visit graddiv.ucsc.edu/prospective/ugradopps.php or email STEM Diversity Director, Malika Bell: malika@ucsc.edu.

National Science Foundation Research Experience

The National Science Foundation (NSF) funds a large number of summer research opportunities through the Research Experience for Undergraduates (REU) Site Program. Each site, typically at a university, has a group of six to 10 undergraduates who work on specific research projects under the mentorship of faculty and other researchers. Students are granted stipends and, in many cases, assistance with housing and

travel. Additional activities, including professional development workshops, tours, and social activities, provide students with opportunities to network and to learn about the culture of science. An REU Site may be at either a U.S. or foreign location.

UCSC hosts the following three REU programs:

- Undergraduate Research in the Biological Effects of Climate Change (Ecology and Evolution)
- Summer Undergraduate Research Fellowship in Information Technology (SURF-IT) (Engineering)
- Lamat Summer Research Program (Computational Astrophysics)

UCSC students are not given preference for these programs, so there is no disadvantage to applying to an REU site at another location. For more information, see UCSC's REU web site.

International Education

The International Education Office (IEO) actively supports UCSC's teaching research, and service missions. IEO encompasses two functional UCSC Programs Abroad and International Scholar and Student Services (ISSS).

For further information, contact the International Education Office, 101 Classroom Unit Building, (831) 459-2858, e-mail: oiie@ucsc.edu, Web: oiie.ucsc.edu.

Programs Abroad

UCSC Programs Abroad offers undergraduate and graduate students the opportunity to study through the University of California, Education Abroad Program (UCEAP) at 115 host universities and colleges in 34 countries as part of their regular UCSC academic program. The program serves students at all UC campuses and is administered by the University Office of the Education Abroad Program in Santa Barbara: eap.ucop.edu.

Additionally, UCSC Programs Abroad assists students participating in study-abroad opportunities through UCSC directly, through other UC campuses, and through privately sponsored organizations. UCSC Programs Abroad seeks to bring these programs within reach of all students.

International Scholars and Students

The International Scholar and Student Services (ISSS) office provides immigration advising and advocacy as well as cultural and academic programming for UCSC's growing global community. ISSS assists students, scholars, researchers, and faculty members in maintaining their legal status while in the United States, serving as UCSC's official liaison to U.S. government agencies related to immigration matters. ISSS serves more than 1,000 international clients and their accompanying family members who come to the campus each year.

Fulbright Grants for Graduate Study and Research Abroad

The Division of Undergraduate Education facilitates the Fulbright annual awards competition for the Graduate Study and Research Abroad Program for currently enrolled UCSC students. Web: <http://honors.ucsc.edu>.

Field and Exchange Programs

UCDC Program at the UC Washington Center

The UCDC Program at the UC Washington Center in Washington, D.C., supervises and supports students who pursue internships and academic study in the nation's capital. The program is open through a competitive application process to students in all majors who will have upper-division status by the quarter in which they participate. (Physical and biological sciences and engineering majors are eligible to participate in their sophomore year with department approval.) Students enroll for fall, winter, or spring quarter, earn 12 to 17 course credits, and continue to be registered as full-time students. (In addition, see [Residency](#).) Applicant selection is based on academic record, a written statement, letters of recommendation, and in some cases a personal interview. Financial-aid eligibility is maintained.

Students live in the UC Washington Center with students from all the participating UC campuses. This provides a social and intellectual community throughout the quarter.

Interested students with strong academic records are encouraged to apply. For further information, visit the [program's web site](#) or e-mail the UCDC Coordinator at ucdc@ucsc.edu.

Intercampus Visitor Program

UCSC students may take advantage of educational opportunities at other campuses of the University of California through the Intercampus Visitor Program. This program enables you to take courses not available at Santa Cruz, to participate in special programs, or to study with distinguished faculty at other campuses.

To qualify for participation in this program, you must be in good standing after completing at least three quarters in residence at Santa Cruz. Each host campus establishes its own criteria for accepting students from other campuses as visitors. You must also have the approval of your college. Consult with your department about how courses taken at the host campus may apply to your major requirements.

Applications are available online [here](#). Additional information is available from the special programs coordinator in the Office of the Registrar, (831) 459-4412. The application form contains a great deal of useful information about the program and how and when to file; please read it carefully. A nonrefundable application fee of \$70 is due when the application is filed.

Cross-Campus or Simultaneous Enrollment with Other University of California Campuses

Undergraduate students enrolled at UCSC may enroll, without formal admission and without payment of additional university fees, in courses at another UC campus on a space-available basis at the discretion of the appropriate campus authorities on both campuses. Simultaneous enrollment refers to UC courses not offered through UC Online. Additional information about online UC courses is available through [UC Online](#).

Currently registered students must meet all of the following requirements to be eligible to enroll in one class through the Cross-Campus and Simultaneous Enrollment Programs: completion of a minimum of 12 credits at UCSC as a matriculated student, be in good academic standing, and demonstrate appropriate academic preparation as determined by the host campus. Full-time students must be enrolled in at least ten credits at UCSC. University Part-Time students must be enrolled in at least five credits at UCSC and may enroll in up to ten credits total.

Information about Cross-Campus Enrollment is available through [UC Online](#). Applications for Simultaneous Enrollment are available at the

Office of the Registrar, 190 Hahn Student Services Building or online. For more information, call (831) 459-4412 or e-mail registrar@ucsc.edu, or visit the Web at [Simultaneous Enrollment](#).

Part-Time Program

If you are unable to attend the university full-time because of family obligations, employment responsibilities, or a medical condition, or you are in your final quarter before graduation, you may qualify for the Part-Time Program. This program enables students to pursue a bachelor's degree part-time in any major offered at UC Santa Cruz. To participate, undergraduate students must file a Part-Time Program application by the appropriate deadline. Full-time students normally take three 5-credit courses per quarter; part-time students may enroll in a maximum of 10 credits.

Students approved for enrollment on a part-time basis pay the same fee as full-time students but pay only one-half of the tuition. Part-time nonresidents pay one-half of nonresident tuition. Financial aid awards may be affected by enrolling part-time. Students who use the part-time fee reduction may not also use the UC employee reduction. Applications for undergraduates are available from the Office of the Registrar, 190 Hahn Student Services Building. For more information, call (831) 459-4412, or e-mail registrar@ucsc.edu. More information is available on the Web: registrar.ucsc.edu/enrollment/part-time-program/index.html.

Domestic Exchange Programs

UCSC has exchange programs with the University of New Hampshire (UNH) and the University of New Mexico (UNM). UNH is located near the New Hampshire seacoast in the picturesque colonial town of Durham, a little more than an hour from Boston, Massachusetts. UNM is located in Albuquerque, a city of approximately half a million population, situated on the banks of the Rio Grande. Both schools give students the opportunity for an educational experience in an entirely different environment.

While enrolled in the exchange program, students maintain their status at UCSC, and they are expected to return to complete their studies following enrollment at UNH or UNM. Both universities are on the semester system and students may participate in one semester or the entire academic year.

Participants are selected from among students who are in good academic

standing. Selection for 2015–16 will take place during winter quarter 2015. Each department of study determines the applicability of UNH and UNM courses toward requirements for the major. Letter grades earned while at UNH and UNM will not be calculated into the UCSC GPA or the UC GPA. Further information is available from the exchange program coordinator in the Office of the Registrar, by phone at (831) 459-4412, and [on the Web](#).

Intersegmental Cross-Enrollment

This program permits a student who is currently enrolled in a California community college or a California State University campus and who meets certain eligibility criteria to enroll in one undergraduate course at UCSC each term, on a space-available basis. A student is qualified to participate in this program if he or she meets the following requirements:

- has completed at least one term at the home campus as a matriculated student and is enrolled in at least 6 credits at the home campus during the term in which he or she seeks to cross-enroll;
- has a grade-point average of 2.0 for work completed;
- has paid tuition or fees required by the home campus for the academic term in which he or she seeks to cross-enroll;
- has appropriate academic preparation as determined by the host campus, consistent with the standard applied to currently enrolled students;
- is a California resident for tuition purposes at the home campus; and
- has not previously been admitted to and registered at UCSC.

Applications are available online at registrar.ucsc.edu/forms/students/crossenrollment.pdf. The application form contains a great deal of useful information about the program and how and when to file. Please read it carefully.

Field Programs

Many UCSC students complement their major programs with field experience or off-campus internships, which also provide opportunities for students to become involved in public service activities in the local community and throughout the world. Most of the field programs described below are open to students in a range of majors, although some are restricted to students pursuing a designated area of study.

Students in all majors may apply for internships sponsored by the [Career Center](#).

In addition to the off-campus placements provided by the programs described below, independent field study opportunities are available through some UCSC colleges and departments.

Community Studies Field-Study Program

Community Studies is the oldest interdisciplinary undergraduate program at UCSC. Its hallmarks are a focus on social justice and a distinctive pedagogy that integrates classroom learning with an extended six-month field study. Not only is the full-time field study a requirement of the major, it is the centerpiece of a core curriculum through which students prepare for, then immerse themselves in a setting where they participate in and analyze the social justice work of an organization. Upon return from field study, students integrate topical and experiential learning in a capstone project (usually a senior essay) that uses their field notes as a key source for analysis.

With the guidance of faculty and program staff advisers, Community Studies students choose field placements related to the program's areas of focus in economic justice and health justice. Most placements are in California, although students have completed field studies throughout the U.S. and around the world. Field placements have included community health clinics, women's and feminist organizations, immigrant-rights centers, media and policy advocacy organizations, homeless resource and support groups, sustainable development projects, queer and transgender organizations, neighborhood or workers' collectives, civil rights groups, community food security programs, legal clinics, community-based cultural organizations, programs for seniors, tenant or labor unions, HIV/AIDS advocacy groups, harm reduction programs, government agencies and the offices of elected officials, and still other organizations with a social justice mission. As political, economic, cultural and technological landscapes shift, so do the needs and venues for social justice organizing. Throughout its history Community Studies has been noteworthy for being attuned and responsive to the dynamics of social justice work and related innovations in field-study opportunities.

The practical experience gained from the six-month field study, combined with their topical learning, provides graduates with many choices. About half go on to graduate or professional study in education, urban studies, public health, public administration, social work, planning, law, policy studies, medicine, nursing, or academic disciplines like sociology,

anthropology, and politics. Others enter the work world directly, in many cases continuing with non-profit agencies like those in which they did their field study. Community Studies graduates are social entrepreneurs, community organizers, program directors, public officials, teachers, therapists, librarians, social workers, news directors, union officials, labor organizers, forest management consultants, reporters, youth workers, and artists. According to a recent alumni survey, almost 100 alumni have founded nonprofit social justice organizations, and many more have served on nonprofit boards and/or in executive director positions.

The field study program is open to Community Studies majors only. The entire major usually takes two years to complete. More information about Community Studies can be found at communitystudies.ucsc.edu.

Economics Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional in the workplace. Students can select from a wide variety of field placements such as accounting firms, community nonprofits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply and prepare for field study a quarter in advance. Acceptance into the field-study program is determined by academic standing, class level, and successful completion of Economics 100A, 100B, and 113 (see [Economics courses](#)). Students may earn a maximum of 10 credits and complete up to two quarters in a field placement.

Along with the training and supervision by a professional in the workplace, students receive guidance from a faculty sponsor who directs their academic project. Completion of this project and the job supervisor's evaluation of performance earn the student credit. Economics Field Study (Economics 193 or 198, see [Economics courses](#)) does not satisfy an upper-division requirement for the major and is available on a passing/not passing (P/NP) basis only.

Interested students should make an appointment or stop by the Economics Field-Study Office: 401 Engineering2 Bldg.; call (831) 459-5028; or e-mail econintern@ucsc.edu. Web: economics.ucsc.edu

Environmental Studies Field and Internship Program

Open to all UCSC students, the Environmental Studies Field and

Internship Program is an integral academic component of the environmental studies major, and it augments the research and professional development of undergraduate students (see [Environmental Studies](#)). Interns are placed, individually and in groups, in both on-campus and off-campus agencies, where their work often results in publications and resource documents, and in many cases serves as the primary basis for policy formation within a particular agency or organization. Placements have included research for small businesses; learning all aspects of running an organic farm; writing policy documents for state agencies, nongovernmental organizations, and planning departments; assignments as natural history interpretive guides for state and national parks; and apprentice positions with consultants, architects, solar-energy designers, agroecologists, and teachers. Student intern placements are also obtainable working with coffee growers, teachers, and agricultural specialists in Costa Rica, Nicaragua, El Salvador, and Mexico.

Part- and full-time placements are available, and students may receive two to 15 course credits for their work. Each student's placement is supervised by a team of supporters: a faculty adviser, field sponsor, and the internship coordinator. Students spend 12 to 15 hours each week on their assignments for every 5 credits they receive.

Internships and fieldwork are designed to complement a student's course work and are available for both lower- and upper-division credit. Often, the internship leads to a summer job or employment after graduation. Qualified environmental studies majors may undertake a senior internship to fulfill the department's comprehensive requirement. In addition, internships provide a fieldwork component for some environmental studies courses. Undergraduates are also afforded ample opportunities to intern on faculty and graduate-student research projects.

Further information is available from the Environmental Studies Field and Internship Program Office, 491 Interdisciplinary Sciences Building, (831) 459-2104, e-mail: ckrohn@ucsc.edu. Web: envs.ucsc.edu/internships

The Everett Internship Program (formerly the Global Information Internship Program)

The [Everett Program](#) is a highly innovative, student-managed program that deploys the tools of information-communication technology (ICT) and social entrepreneurship to advance social justice, sustainable practices, and progressive institutional change at the global and local levels. Everett is sponsored by the Center for Global, International, and Regional Studies

(CGIRS) and the Division of Social Sciences. Since 1998, the Everett Fellows have mentored and funded hundreds of info-savvy social entrepreneurs from UC Santa Cruz to design, implement, and manage collaborative projects with civil society, community, and non-profit groups. The Everett Program empowers students to focus their passion for social change by teaching them how to research, plan, design, fund, and implement ICT-driven projects in partnership with excluded communities. Everett-sponsored students have worked with Muslim feminists in Malaysia, coffee farmer co-ops in Central America, democracy-advocating NGOs in Ghana, and aspiring high school students in Watsonville. Everett Fellows teach sections and mentor students enrolled in the intensive major and minor in Global Information and Social Enterprise Studies (GISES), which is sponsored by the Department of Sociology. For more information on the GISES major and minor, please consult the [Sociology](#) page.

For more information, visit: sociology.ucsc.edu/undergraduate/programs-internships/ or call (831) 459-1572.

Health Sciences Internship Program

A requirement of the Human Biology major, the Health Sciences Internship Program offers students a unique opportunity for personal growth and professional development. Paired with a professional mentor, students spend one quarter interning in a health-related setting. Placement opportunities cover a broad range, from individual physicians to community clinics and hospitals, hospices, non-profits, and public health agencies. The Health Sciences Internship Coordinator works with students to prepare them for their internship and maintains a list of appropriate placements. Junior and senior Human Biology majors only are eligible to apply. Applications are due two quarters in advance. For further information, contact the Health Sciences Internship Coordinator, Caroline Berger, at (831) 459-5647 or cmberger@ucsc.edu.

Latin American and Latino Studies Field-Study and Internship Opportunities

All Latin American and Latino Studies majors are strongly encouraged to undertake either (1) a field study in Latin America, the Caribbean, or a Latino/a community in the U.S.; or (2) formal academic study abroad through the Education Abroad Program (EAP). These paths are the best ways to improve language skills, explore the nature and direction of specific academic and career interests in relation to Latin American and

Latino studies, and deepen cross-cultural understanding and relationships based on personal experience.

Field studies comprise independent, community-based study projects for academic credit, done under faculty sponsorship and arranged on an individual basis. Students can do full-time field study for one quarter for full academic credit, part-time field study scheduled in conjunction with formal course work at UCSC, or field study as an extension of the Education Abroad Program (EAP). Projects vary widely, but students who want to develop a field-study proposal are expected to prepare for it by acquiring fluency in the appropriate language, prior cross-cultural experience, and upper-division course work on the region and/or topic that is to be the focus of the study.

Students who wish to pursue a full-time field study are advised to speak with their faculty advisor to assess their eligibility and preparation, as well as to receive needed guidance, ideally a quarter or two in advance.

Many of the students who have done full-time field study have developed a senior thesis based on that work. Students who pursue a part-time field study are highly encouraged to discuss their plan with their faculty advisor as well.

Local opportunities for internships and field study in Latino/a communities on California's Central Coast are numerous. Credit for up to three upper-division courses may be applied toward the major from field study; however, course credit from field study and study abroad combined may not exceed three upper-division courses. Students should check the Latin American and Latino Studies Department web site for further information regarding the field-study process and course credit. A listing of local field-study programs and petition forms are available at the LALS Department office, 32 Merrill Academic Building.

For more information, contact the LALS office at (831) 459-2119 (aalvares@ucsc.edu). Web: lals.ucsc.edu.

Psychology Field-Study Program

The Psychology Field-Study Program provides qualified students an opportunity to integrate what they have learned in the classroom with direct service to a community agency. Each year, more than 200 students develop new skills and clarify personal and professional goals by working as interns in schools, criminal justice programs, and mental health and other social service agencies, where they are supervised by a

professional within that organization. Psychology faculty members sponsor field-study students, helping them to synthesize their intern experience with psychology course work and guiding them through an academic project.

Junior and senior psychology majors in good academic standing are eligible to apply for this competitive program. **There is a minimum commitment of two quarters. Information can be viewed on the web at psychology.ucsc.edu/undergraduate/field-study/index.html.** Interested students should attend an information meeting, held every quarter, for a general overview and application. The schedule for each quarter is posted at the start of instruction. For more information, visit the [Psychology Field Study Program](#).

Education Field Programs

The M.A. in Education/California SB 2042 Preliminary Teacher Credential program provides students with necessary credential preparation for K–12 teaching in the California public schools. Preparation is offered for the Multiple Subject Preliminary credential (grades K–6), and the Single Subject Preliminary credential (grades 7–12), in the following subject areas: English, math, social science, and science. Students may also pursue a Bilingual Authorization in Spanish.

Students pursuing the Education M.A./California Preliminary Credential must complete an extensive student teaching course sequence. Student teaching placements are restricted to enrolled students.

The student-teaching sequence consists of five courses: Education 200, 201, 201A (single subject only), 202A, B, and C. The first and second quarters of the sequence involve part-time placements in public schools in Santa Cruz County, as well as a few schools in North Monterey County. The third quarter of student teaching is a full-time experience in which students gradually take over full responsibility for the daily instructional program of the classroom in which they are placed. Substantial fieldwork is also incorporated in other courses required for the teaching credential.

The minor in education is an undergraduate program in which students explore the history of educational thought and philosophy, the politics and economics of education, learning theory and pedagogy, and issues of cultural and linguistic diversity. As a part of the six-course minor sequence, students engage in field study in schools through Education 180, Introduction to Teaching.

For more information, see [Education](#), or contact the Education Department, 2140B McHenry Library Building, (831) 459-3249. E-mail address: education@ucsc.edu; Web: education.ucsc.edu.

Summer Session Courses and Programs

UCSC Summer Session offers UCSC students an opportunity to accelerate progress on their degrees and welcomes visitors from other colleges and universities as well as members of the community (including high school juniors and seniors). A broadly ranging 250 courses are taught by UCSC faculty, lecturers, and graduate students. Often smaller in size than during the academic year, summer session classes include major requirements and qualifying courses, lower- and upper-division courses, general education courses, and online courses. Most courses are five weeks long and offered over two sessions. Students may enroll in multiple classes in either or both sessions, with a maximum of 15 credits per session.

Tutoring and other academic support is available for summer session courses, as are on-campus housing and dining, OPERS fitness center and outdoor recreation, campus employment, and more. Special summer-only programs include Summer Start for International Freshmen, Shakespeare this Summer, and the one-week Dickens Universe. Please visit summer.ucsc.edu for courses and details or e-mail summers@ucsc.edu with any questions.

UCSC Silicon Valley Extension

Undergraduates and graduate students can find credit fulfillment options and career-oriented courses at UCSC Silicon Valley Extension, the continuing education arm of the university.

UCSC Extension is located in Santa Clara at UCSC Silicon Valley Extension, a facility that is also home to UC Scout and programs of UCSC's Baskin School of Engineering. Classroom courses are held at the Santa Clara location, and UCSC Extension serves adults who live and work in the South Bay, Peninsula, and East Bay communities, as well as on the Central Coast. A large number of popular courses are also available online.

Programs are open enrollment and courses range in length from a single day to multiple weeks. Most class meetings are scheduled on weekday evenings and weekends. Certificate programs focus on advanced

professional education and are oriented toward immediate application in the workplace. While most certificates can be completed within one year, coursework is graded and substantial, typically involving lectures, readings, presentations, and final projects or examinations. The key program areas at UCSC Extension are:

- Business and Management
- Engineering and Technology
- Applied and Natural Sciences
- Education

Extension programs are open to any adult but cater to those who hold undergraduate or graduate degrees and who would benefit from university-level professional study. The instructors are degreed working professionals with practical expertise in the subject areas they teach. In some cases, they are faculty from UC and other educational institutions.

Regularly enrolled UCSC students may obtain degree credit for Extension courses numbered 1–199. Upon submission of the Extension transcript to the Office of Admissions, the course credit may be applied toward a bachelor's degree at UCSC. Extension courses numbered other than 1–199 are not applicable to a UCSC degree. However, many Extension courses are recognized for graduate degree credit by other universities. Check the Extension catalog for details.

UCSC Extension also provides professional education on a contract basis to local corporations and agencies through its academic departments. Upon request, the departments offer management, engineering, bioscience, and education courses and certificates on site at the companies' locations.

Comprehensive program descriptions and course offerings are available online at ucsc-extension.edu. To be placed on the mailing list for a print catalog, call (408) 861-3700. The mailing address for UCSC Silicon Valley Extension is 2505 Augustine Drive, Santa Clara, California 95054-3303.

Open Campus/Concurrent Enrollment

Concurrent Enrollment through Extension is a cooperative arrangement between UC Santa Cruz and UCSC Extension Silicon Valley that enables members of the public to enroll in one or two regular UCSC undergraduate or graduate courses per quarter for credit. The program is

administered by UCSC Extension Silicon Valley, and course credit granted appears on a UCSC Extension Silicon Valley transcript. Participants must meet certain criteria outlined in the Concurrent Enrollment application. An application fee is charged for each quarter of enrollment in addition to course fees. A first-time application filed at least one week prior to the first day of instruction for the quarter has a \$65 fee; subsequent applications filed at least one week prior to the first day of instruction for the quarter have a \$20 fee. Applications filed later than one week prior to the first day of instruction for the quarter have a \$110 fee.

Concurrent Enrollment through Extension may be used as a path toward a part-time or full-time degree program or as a way of studying subjects of personal or occupational interest. Credit earned through this program may be used toward degree requirements, when applicable, if participants subsequently seek admission to the university and are accepted.

Financial aid is not available to participants in the Concurrent Enrollment program.

For further information and to obtain the application packet, contact UCSC Extension Silicon Valley, 2505 Augustine Drive, Suite 100, Santa Clara, CA 95054-3003, (831) 861-3700. Web: www.ucsc-extension.edu.

Practice (minimum 2 credits)

Choose one minimum two-credit course from any of the three following categories: PR–E, PR–C, PR–S

Collaborative Endeavor (PR–E code)

Courses provide significant experience with collaboration on a project.

Biology: Molecular, Cell, and Developmental 140
Biomolecular Engineering 88A, 123A, 123T
College Nine 120
College Ten 120
Computer Engineering 123A, 129B
Computer Science 20, 116, 183
Earth and Planetary Sciences 109L, 110L, 188A
Electrical Engineering 123A, 129B
Environmental Studies 100L
Film and Digital Media 151, 185X
Kresge College 72, 172
Mathematics 101
Music 1C, 2
Physics 180
Porter College 22A
Psychology 182
Technology and Information Management 20
Theater Arts 139

Creative Process (PR–C code)

Courses teach creative process and techniques in the arts (including creative writing), at an individual or a collaborative level.

Anthropology 81A, 81B, 81C, 154
Art 20G, 20H, 20I, 20J, 121
Computer Science 25, 26, 80V, 178, 179

Disciplinary Communication (DC code)

Students satisfy the DC Requirement by completing 1–3 upper-division courses required for their major totaling a minimum of five credits.

Courses that Fulfill General Education Requirements for Students Entering Prior to Fall 2010

Refer to the course listings in the Class Search in MyUCSC to identify general education courses offered.

Introductions to Disciplines, Humanities, and Arts (IH code)—Two courses from different departments required (10 credits)

Only one IH requirement may be satisfied with a course (equivalent to 5 credits) from the Arts Division (art, film and digital media, history of art and visual culture, music, theater arts); only one language course may be used to satisfy an IH requirement; and only one literature course may be used to satisfy an IH requirement. Note: Transfer courses designated IH from English departments are considered to be literature courses for general education purposes.

Topical Courses (T code)—Three courses required (15 credits)

Students entering UCSC with fewer than 45 transferable credits must take three topical courses in residence at UCSC. UCSC Summer Session courses can be used to satisfy topical requirements.

Choose one course from each academic area: natural sciences (2), social sciences (3), and humanities and arts (4). Courses labeled 5, 6, and 7 satisfy topical requirements in two different academic areas; students can apply this kind of topical course to either academic area indicated. The three topical course requirements must be satisfied with three different courses. In the Schedule of Classes, courses that carry a T general education code are listed as follows:

2-Natural Sciences Area

3-Social Sciences Area

4-Humanities and Arts Area

5-Humanities and Arts or Social Sciences Area

6-Natural Sciences or Humanities and Arts Area

7-Natural Sciences or Social Sciences Area

T2-Natural Sciences

Graduate Studies

2014–15 General Catalog

UC Santa Cruz offers graduate study in more than 30 academic fields. About 1,500 graduate students are enrolled at the certificate, master's, and doctoral levels. The small size of the UCSC graduate programs encourages close working relations between students and faculty in an informal atmosphere conducive to rapid learning and professional growth. Many graduate programs have interdisciplinary components, and students are encouraged to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization.

Research facilities at UCSC are excellent, and there are extensive opportunities for graduate students to engage in significant independent study and research (see [Resources for Learning and Research](#)). Graduate students are also encouraged to obtain teaching experience, primarily as supervised teaching assistants. They are highly valued members of the UCSC community, contributing substantially to the research and teaching conducted on the campus.

Degrees and Programs

The University of California, Santa Cruz, offers graduate programs leading to advanced degrees or certificates in the following areas:

Department	Degree or Certificate
Anthropology	Ph.D.
Applied Economics and Finance	M.S.
Astronomy and Astrophysics	Ph.D.
Biomolecular Engineering and Bioinformatics	M.S./Ph.D.
Chemistry and Biochemistry	M.S./Ph.D.
Computer Engineering	M.S./Ph.D.
Computer Science	M.S./Ph.D.
Digital Arts and New Media	M.F.A.
Earth Sciences	M.S./Ph.D.
Ecology and Evolutionary Biology	M.A./Ph.D.
Economics	Ph.D.
Education	Ph.D.

Education: Teaching (credential program)	M.A.
Electrical Engineering	M.S./Ph.D.
Environmental Studies	Ph.D.
Feminist Studies	Ph.D.
Film and Digital Media	Ph.D.
Games and Playable Media	M.S.
History	M.A./Ph.D.
History of Consciousness	Ph.D.
Latin American and Latino Studies	Ph.D.
Linguistics	M.A./Ph.D.
Literature	M.A./Ph.D.
Mathematics	Ph.D.
Microbiology and Environmental Toxicology	M.S./Ph.D.
Molecular, Cell, and Developmental Biology	M.A.
Music	M.A./D.M.A./Ph.D.
Ocean Sciences	M.S./Ph.D.
Philosophy	M.A./Ph.D.
Physics	M.S./Ph.D.
Politics	Ph.D.
Program in Biomedical Sciences and Engineering	Ph.D.
*Bioinformatics and Computational Biology	
*Mechanistic, Structural, and Chemical Biology	
*Molecular, Cell, and Developmental Biology	
*Microbial Biology and Pathogenesis	
Psychology (social, developmental, or cognitive)	Ph.D.
Science Communication: Science Writing	Certificate
Social Documentation	M.A.
Sociology	Ph.D.
Statistics and Applied Mathematics	M.S./Ph.D.
Technology and Information Management	M.S./Ph.D.
Theater Arts	M.A.
Visual Studies	Ph.D.

Program Descriptions

Descriptions of individual programs appear under the specific disciplines in the [Programs and Courses](#) section. Application materials for all programs are available online at graddiv.ucsc.edu.

All of our graduate programs have information on the web at www.ucsc.edu/academics. Inquiries about part-time study should be directed to the individual departments. If there are any problems with the online application process, please e-mail gradadm@ucsc.edu.

Administration

At UCSC, the individual graduate programs are directed by departments. Overall policy is determined by the Graduate Council, and coordination and record keeping for matters common to all graduate students—such as admission applications, fellowships, and advancement to candidacy—are the responsibility of the Division of Graduate Studies. The dean of graduate studies is the chief administrative officer. Graduate policies and other information can be found online in the [Graduate Student Handbook](#).

Catalog Rights

Students matriculating in a given graduate program will select the *UCSC General Catalog* they will follow to meet their requirements. This can be either the one published the year they enter the program, or any subsequent catalog published prior to the year they are awarded the degree sought. Students who seek readmission after a break in attendance of more than two years (six regular quarters) must adhere to the graduation requirements in effect at the time of readmission or to those subsequently established for all portions of the degree requirements not already fulfilled. The readmitting program will determine which degree requirements remain to be fulfilled, and will communicate this information in the letter offering readmission. This determination constitutes a formal requirement for readmission to the program, and the student's acceptance of readmission implies acceptance of the program's written stipulation of remaining degree requirements. Should any student choose to follow catalog requirements for a year in which the catalog is not printed in hard copy, the requirements will include any online catalog update for that year. A student must follow the chosen catalog in its entirety, including both the individual degree program and general university requirements. General university requirements may be found in the [Graduate Student Handbook](#).

Evaluation of Performance

Graduate students are graded Satisfactory/Unsatisfactory (S/U) or, at student option, A, B, C, D, F. The grade A, B, or S is awarded for satisfactory work. A graduate student receiving a grade of C, D, or U will not be able to use the credit for that course to satisfy any course requirement for a graduate degree. Courses in which a graduate student receives a grade of C, D, F, or U may be repeated. Credits will be counted once, and the most recently earned grade will determine whether a degree requirement has been met. Repeating a course more than once requires the prior written approval of the dean of graduate studies.

Graduate student performance in all courses taken for credit at UC Santa Cruz may also be evaluated according to the Narrative Evaluation System. A narrative evaluation typically describes the nature and requirements of the course, the student's strengths and weaknesses in the various aspects of the course (e.g., discussion, laboratory work, term papers, and examinations), and the student's general understanding of the course content. Evaluations may be used by academic advisers and become part of the student's official academic record.

Please also refer to the statement on Academic Integrity; Appendix F, Graduate Student-Faculty Adviser Relationship Guidelines; and Appendix O, Official University Policy on Academic Integrity for Graduate Students, published in the [Student Policies and Regulations Handbook](#).

Diversity-Enhancement Programs

The Eugene Cota-Robles Fellowship and the Dissertation-Year Fellowship are part of the University of California's Academic Career Development Program.

The Eugene Cota-Robles Fellowship is a merit-based diversity-enhancement program that

provides financial support for students from diverse backgrounds to pursue and successfully complete a graduate degree. This fellowship is awarded to entering doctoral students who have overcome significant obstacles to achieve a baccalaureate-level degree, and whose economic, educational, or social background contributes to intellectual diversity of the graduate student population. Departments identify applicants from among their pool of admissions applications. Applicants should refer to the information under Financial Support in the application to gain a better understanding of this fellowship. Fellowship recipients must be U.S. citizens or permanent residents.

The Dissertation-Year Fellowship is available to continuing students who are advanced to candidacy. Enrolled students are assisted through formal and informal group orientations, individual advice about academic matters, financial aid, postdoctoral opportunities, and the provision of information about career planning, health care, and housing.

Departments nominate applicants for this fellowship from among their qualified students. If you have questions, call the Division of Graduate Studies, (831) 459-5905.

Intercampus Exchange Program

A graduate student in good standing at UC Santa Cruz who wishes to take advantage of educational opportunities available only at another campus of the University of California may become an intercampus exchange graduate student for a quarter or more. This program also permits students to take courses at more than one UC campus during the same quarter.

To participate in the program, a student must have the approval of his or her faculty adviser, the dean of the Division of Graduate Studies at UC Santa Cruz, and the graduate dean on the campus to be visited. Application forms may be obtained from the Division of Graduate Studies and should be submitted three weeks before the quarter in which the exchange begins.

Student Life

The campus offers a variety of programs to enhance the quality of student life, all of which are available to graduate students. These include childcare, sports and recreation, health services, cultural events, transportation services, and the UCSC Women's Center. See [Campus Life](#) for information on these services and a description of the local community. See [Disability Resource Center](#) for services available to students with disabilities.

College Affiliation

Graduate students at Santa Cruz have the opportunity to affiliate with one of the 10 colleges on campus ([college descriptions](#)). Participation in the activities of a college may include taking an occasional meal there, living at the college, or participating in the college's educational and preceptorial programs or in its extracurricular activities.

Graduate Student Association

The Graduate Student Association (GSA) is an organization of all graduate students at UCSC. It seeks to advance the general welfare of the graduate student body and is responsible for promoting extracurricular activities on campus.

Graduate students elect a GSA steering committee, which coordinates activities and their funding. In past years, the steering committee has sponsored student social gatherings, musical events, poetry readings, lectures by visiting scholars, and other activities of special interest to graduate students. A portion of the college student government fee, paid by all students, is available to the association for this purpose. The steering committee also recommends graduate students for appointment to university committees.

Graduate Student Commons (Grad Commons)

Located right above Joe's Pizza and Subs in the Quarry Plaza, the Graduate Student Commons (Grad Commons) exists solely to serve the needs and interests of graduate students at UCSC. The Grad Commons is the only building on campus that is owned and operated entirely by graduate students. It provides a comfortable and welcoming space, fostering graduate student interaction and a sense of community. The Grad Commons is open 24 hours a day for all graduate students and graduate student groups to use the

various study and meeting rooms. In addition, the Grad Commons holds numerous events each quarter to enrich graduate student life and cultivate professional development.

Social events such as monthly 1st Friday Socials, quarterly parties, and art shows are sponsored by the Grad Commons to promote a sense of community and cohesion among graduate students across the various departments. Health and wellness activities are available to help graduate students relax from the stresses of TAing and research. The Grad Commons also offers a wide range of professional development workshops each quarter to support graduate student success in academia and beyond. Past professional development workshop topics include: grant writing, conflict management, résumé and CV writing, website design, time management, teaching and diversity statements, communication skills, preparing for your Qualifying Exam, and more. Visit our [Graduate Student Commons web site](#) to learn about upcoming programming and ways to get involved with the Grad Commons.

Housing

As at all UC campuses, finding housing may be a challenge. Students who wish to reside on campus should submit their application as soon as possible. Likewise, students who wish to live off campus will want to start looking at available rentals and costs as soon as possible.

On-campus Graduate Student Housing for 82 individual students is located adjacent to "Science Hill," home to many of UCSC's academic facilities. Four students share a furnished apartment with four single bedrooms, living room, kitchen, dining room, and bathroom. Visit the [Grad Housing web site](#), or email gradhsg@ucsc.edu.

Students with families may apply to live in Family Student Housing, a complex of two-bedroom unfurnished apartments. Located on the west side of campus, the 22-acre site is adjacent to a nature reserve and overlooks the Monterey Bay. Refer to the [Family Student Housing web site](#), or email fsh@ucsc.edu.

To assist students in locating living accommodations in the surrounding communities, the Community Rentals Office maintains [a list of available rentals](#).

Application and Admission

Application Deadlines

Students may apply for only one UCSC graduate program at a time. A list on the [Graduate Studies web site](#) shows the date set by each program as the final deadline for submission of all documents. Please visit the Graduate Studies web site for the most current information on applying to UCSC graduate programs. Application deadlines may be updated on or before applications open. The dates listed are the official deadlines, but students are strongly advised to submit applications well in advance of the deadline. If an application deadline falls on a weekend or holiday, there will not be staff available for assistance.

To be considered for fellowship support for fall quarter, the application for admission and all supporting materials must arrive at the Division of Graduate Studies by the program's deadline or by Feb. 1, 2015, whichever is earlier.

Admission Requirements

To be admitted with graduate status at UCSC, a student must have completed a bachelor's degree or its equivalent from an accredited undergraduate institution of acceptable standing and demonstrate ability to pursue a program of study leading toward an advanced degree. Preparation must provide an adequate foundation for advanced study, as determined by the department for the program in which the student intends to enroll. If the bachelor's degree is not in the same discipline as the graduate program, the student must have sufficient preparation in the intended area of study to undertake graduate-level work.

To apply for admission, application materials (including test scores, written materials, and any required supplemental materials) must be submitted before the deadline date to the Division of Graduate Studies. UC Santa Cruz requires that applicants complete an online application to be considered for admission to a graduate program. The application and the accompanying materials should be complete and accurate.

Admission application. Applications for all programs are available online at the [Graduate](#)

[Studies web site](#). The completed application is paid for online with either a credit card or e-check. This application fee is not refundable. [Application fee waivers](#) are available for cases of hardship. International applicants are not eligible for fee waivers.

Graduate Record Examination (GRE) scores. If the applicant is applying for admission to a program that requires the GRE, the scores must be received by UC Santa Cruz Graduate Application Processing before the application deadline. It is strongly recommended that all applicants complete testing by November, since December test scores will not reach the division prior to most application deadlines.

The Educational Testing Service should be asked to forward the test scores directly to the division. UC Santa Cruz's school code is 4860. Test results are electronically submitted to UC Santa Cruz Division of Graduate Studies four to six weeks after the exam has been taken. Please consult the [Graduate Studies web site](#) to see what exams are required for each program.

Supplemental material. Many of the graduate programs have special application requirements, such as writing samples, portfolios, auditions, or personal interviews. The [Graduate Studies or program web site](#) to which the student is applying should be consulted and all of the requirements specified should be fulfilled.

Duplication of Higher Degrees

It is the policy of the Santa Cruz campus to prohibit the pursuit of duplicate advanced degrees. However, applicants may petition the graduate dean for an exception to this policy if the degree sought is in a field of study distinctly different from the field in which the original advanced degree was attained.

In order for a student who already holds the doctorate to be admitted or readmitted to work toward a second Ph.D.—or toward an academic master's degree—all of the following conditions must be met:

- The applicant must petition the graduate dean in writing prior to the application deadline for the program in question.
- The department sponsoring the program to which admission is sought must support the applicant's petition.
- The department must present the graduate dean with a clear and complete outline of the program required for the degree sought, and must explain the intellectual separateness of the proposed program from that completed by the applicant in attaining the earlier degree.
- The graduate dean will review all materials submitted and decide whether or not to admit the applicant, consulting with the Graduate Council when appropriate.

Admission to a professional master's program after a Ph.D.—or to an academic master's program after a professional doctorate—is not subject to these restrictions.

Transfer of Credit

UC Santa Cruz does not automatically grant credit for graduate-level work undertaken at other universities. Each department determines credit transferability on an individual basis.

International Applicants

Applicants from other countries must meet standard admission requirements and, upon admission, provide satisfactory evidence of financial support before they may obtain the necessary visa documents. Because it normally takes much longer to process international applications, such students are urged to apply as early as possible. Once the student has been formally admitted, a Certificate of Eligibility (I-20) will only be issued by the UC Santa Cruz Office of International Education when all requirements are satisfied. Please note that international students are eligible for neither need-based financial aid nor application fee waivers.

For those choosing to take the TOEFL, a minimum score on the paper-based TOEFL of 550, or 220 on the computer-based test, or 83 on the Internet-based test is required for admission. Chemistry and Biochemistry, Computer Engineering, Computer Science, and Electrical Engineering require 570 on the paper-based test, 230 on the computer-based test, and 89 on the Internet-based test. Any international students who wish to be

considered for Teaching Assistant opportunities must score a 26 or higher on the Spoken Word portion of the Internet-based test.

For those choosing to take the IELTS, our institution requires an overall band score of 7 or higher on the IELTS. An overall score of 8 from the IELTS test is required for all new international students who may serve as a Teaching Assistant at any time during their graduate career. UC Santa Cruz only accepts scores submitted electronically by the IELTS test center. No paper Test Report Forms will be accepted. An institutional code is NOT required. Please contact the test center where you took the test directly and request that your test scores be sent electronically using the IELTS system. All IELTS test centers worldwide are able to send scores electronically to our institution. For inquiries on test dates, fees, and preparation, please contact your nearest test center (see the [IELTS web site](#)).

All official academic records must be issued in the original language and accompanied by English translations prepared by the issuing institution. If translations are not available from the institution itself, translations may be prepared by government or official translators. In order for translations to be acceptable, they must bear the stamp or seal of the issuing institution or government agency and the original signature of the translator. They must be complete and exact word-for-word translations of the original documents, not interpretations. Grades must not be converted to the American scale. Specially prepared English versions are not acceptable in place of documents issued in the original language. Once submitted, documents may not be borrowed, returned to you or sent elsewhere.

International applicants are not required to submit evidence of financial support until they have received formal admission to a graduate program. A Certificate of Eligibility (I-20) will not be issued by the UC Santa Cruz International Programs office until all standard admissions requirements have been met and the UCSC Financial Certificate and supporting financial documents have been received and approved.

Application Processing

The Division of Graduate Studies receives most application materials and creates a file for each applicant. Once the application is submitted online, it will be available to the appropriate department for review and recommendation. Applicants are admitted by the graduate dean following recommendations by the departments. Applicants will be notified by e-mail whether or not they have been admitted for graduate study at UCSC after all reviews are complete. Under no circumstances will UCSC give out this information over the phone, in person, or by proxy. E-mail notifications are sent throughout the month of March. By a general agreement to which UC Santa Cruz and most graduate schools in the U.S. are signatories, applicants admitted to graduate schools have until April 15 to reply with their acceptance of fellowship offers. Any information about the completeness of the file can be found on the [MyUCSC](#) student portal once an application has been submitted. Specific questions about the evaluation of the application should be directed to the department.

NOTE: Expense figures below to be verified in July

Fees and Expenses

Fees and expenses for graduate students are shown below. Tuition, fees, and other charges are subject to change without notice by the Regents of the University of California. For current fee information, check [registration fees](#).

Graduate Student Fees, 2014–15

	One Quarter	F–W–S Quarters
Student Services Fee (formerly University Registration Fee)	\$324.00	\$972.00
Tuition (formerly Educational Fee)	\$3,740.00	\$11,220.00
Campus-Based Fees	\$355.86	\$1,067.58

GSHIP Health Insurance (waivable)	\$1,233.00	\$3,699.00
Total for California Residents	\$5,652.86	\$16,958.58
Nonresident Tuition (a)	\$5,034.00	\$15,102.00
Total for Nonresidents of California	10,686.86	32,060.58

(a) A limited number of Nonresident Tuition Fellowships are available. Please refer to the [Financial Support](#) section.

For information on fee refunds, see [Finances](#).

Minimum annual expenses, including registration fees, for a single graduate student living on campus are estimated to be \$38,672.58 per academic year. Students should not plan to undertake graduate study without assured funding, since outside employment in the Santa Cruz community can be difficult to obtain. An estimated sample student budget for the 2014–15 academic year is provided below. Non-California residents should add \$15,102 in nonresident tuition and fees to the total.

Graduate Student Budget, 2014–15

Fees	\$16,958.58
Books and supplies	\$1,515.00
Room and board (on or off campus) (a)	\$16,530.00
Transportation (b)	\$1,653.00
Personal	\$2,847.00
Total	\$39,503.58

a) Estimated room and board for graduate students living with family is \$4,491.

b) Expenses of owning a car and parking on campus are not included here. For parking fees, see [Transportation and Parking Services](#).

Required Fees

Required fees are due and payable before the start of each quarter. These typically include tuition and fees, on-campus housing and meals if applicable, and campus health insurance if you do not secure a waiver. You will need sufficient funds to cover required fees and other personal expenses at the start of each term. For many financial aid recipients who are enrolled at least half time, tuition and fees on the student account are paid automatically with approved student aid funds. Financial aid recipients should note that fellowship, grant, and loan checks or bank deposits in excess of university charges are refunded to students via direct deposit or check, but are not available to you until the first week of instruction each quarter.

The Student Services Fee supports student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well-being of students, social and cultural activities and programs, services related to campus life, and educational and career support.

Tuition helps support student financial aid and related programs; administration; libraries; operation and maintenance of plant; the university's operating budget; and all costs related to instruction, including faculty salaries.

Campus-Based Fees help support a wide range of student services, including

extracurricular programs, campus childcare, community and public service projects, and free-fare use of the local transit systems.

In addition, all students are assessed a mandatory Health Insurance Premium. The Cowell Student Health Center provides primary care services for the plan, while a contracted insurance company provides major medical and hospitalization insurance. Dependent coverage is also available. Detailed information is on the [UCSC Student Health Insurance web site](#), or contact (831) 459-2389.

Waivers from the mandatory insurance fee are available for students who can show that their outside plan provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the [Schedule of Classes](#) and the [Graduate Student Handbook](#).

Nonresident Tuition

A resident of a state other than California or of another country must also pay nonresident tuition. General criteria for residency are in [Appendix A](#).

Non-U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

Late Fees

Late fees may be assessed if a student fails to make university payments or enroll by the specified deadlines. Late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account. Late fee amounts of \$50 for each late registration payment and/or late enrollment and \$25 for a late housing payment. Deadlines are published online in the [Graduate Student Handbook](#) and the [Schedule of Classes](#), and they appear on the Statement of Account.

Deferred Payment Plan

See the information under [undergraduate expenses](#).

Financial Support

The University of California, Santa Cruz, makes a strong effort to provide financial support to all graduate students who make normal progress in their program of studies. Certain kinds of support are awarded on the basis of academic merit, and others are granted on the basis of need. Students are encouraged to apply for both kinds of assistance by submitting the Free Application for Federal Student Aid (FAFSA). This form must be submitted after January 1 prior to the academic year for which you are requesting aid. The FAFSA may be filled out online and filed electronically at www.fafsa.gov. To receive need-based support for the fall quarter, the FAFSA should be submitted no later than three weeks prior to the end of spring quarter of the year you are enrolled. Applications for student loans for each academic year will be accepted until April of that academic year. More detailed information about the application process and loans can be found at financialaid.ucsc.edu. Students may also visit the Financial Aid and Scholarships Office, 205 Hahn Student Services Building, or call (831) 459-2963.

Fellowships, Assistantships, Grants

Students who received Cal Grant A or B as undergraduates within the last 15 months may request a one-year extension from the California Student Aid Commission to attend a teacher credential program. The Cal Grant A and Cal Grant B programs paid a maximum of \$12,192 for 2013-14 for study at the University of California. Renewal of these awards requires the student to submit the FAFSA by March 2nd. In addition, the student must submit a Request for Teaching Program Benefits Form ([Form G-44](#)) to the California Student Aid Commission.

The federal Teacher Education Assistance for College and Higher Education (TEACH) Grant Program provides grants to students who intend to teach in a high-need field in a public/private elementary or secondary school that serves students from low-income families. The program at UCSC is for M.A. Education students. In exchange for receiving this grant, you must sign an Agreement to Serve and complete online counseling. This grant converts to a loan with retroactive interest if the Service Agreement is not fulfilled.

More information and a Fact Sheet can be found at the [Federal Student Aid TEACH Grants web site](#).

Teaching Assistantships. For the 2012–13 academic year, half-time teaching assistantships provided a salary of \$5, 885 per quarter; this is expected to be higher in 2014–15.

Graduate Student Researcher Internships. For the 2014–15 academic year, salaries for half-time researcher internships are estimated between \$1,391 to \$2, 526 per month or \$4,175 to \$7,578 per quarter (depending on your department) with state and federal taxes withheld from these amounts. A 3% raise is expected in July 2014. The division and the [UCSC Career Center](#) can provide information about external graduate fellowships and grants.

Student Loans

Graduate students can qualify for federal student loans by completing the FAFSA. Graduate students are eligible for Unsubsidized and Graduate PLUS loan programs. For additional information , see the UCSC [Financial Aid and Scholarships web site](#).

Loan Forgiveness Programs

The federal government will forgive all or part of a student loan under certain circumstances. This can include performing volunteer work or military service, or practicing medicine in certain communities. For a summary of such exemptions, visit the [Federal Student Aid web site](#).

2014–15 General Catalog

[University Library](#) | [Computing Facilities and Technology Services](#) | [Natural Reserve System](#) | [Arts Division Research Centers and Institutes](#) | [Arts Division Teaching, Research and Performance Facilities](#) | [Baskin School of Engineering Facilities](#) | [Humanities Division Research Programs--The Institute for Humanities Research \(IHR\)](#) | [Physical and Biological Sciences Research Programs and Centers](#) | [Physical and Biological Sciences Research Facilities and Laboratories](#) | [Social Science Division Research Centers and Institutes](#) | [Social Sciences Division Research Facilities](#) | [Interdisciplinary and Systemwide Research Programs and Resources](#)

University Library

The handsome Science and Engineering and recently renovated McHenry libraries house the impressive holdings of UCSC's University Library—the largest library collection between Santa Barbara and San José. In nearly five decades, the collection has grown from a few shelves of books and a substantial dependence on the libraries of UC Berkeley to more than 2.2 million volumes, over 56,000 periodical titles (including online journals), in excess of 39,000 microforms, and more than 406,000 non-print items including films, slides, and audio and video recordings.

As part of the statewide University of California library system, the University Library also serves as a gateway to millions of other books and periodicals. The library's efficient Interlibrary Loan service is heavily used, facilitated by the online request service of the systemwide Melvyl® Catalog.

The University Library collection is divided into two parts. Resources in the humanities, arts, and social sciences are contained in McHenry Library at the heart of the campus, while the engineering, mathematics, and natural sciences collections are housed in the award-winning Science and Engineering Library, conveniently located on "Science Hill."

Collections librarians manage the growth and development of UCSC's collection and provide in-depth research assistance.

Most of the holdings of the University Library are shelved in open stacks. Students and faculty are encouraged to help themselves, using information found via the local Cruzcat online library catalog, the Melvyl Catalog, and the library web site. The library home page provides a convenient gateway to the Cruzcat and Melvyl catalogs, the California Digital Library, and a host of other electronic information resources, such as article databases and online journals. The library staff is also eager to offer its assistance at any of several service points.

At the McHenry Library reference desk as well as by e-mail and appointment, librarians and reference specialists give individual guidance: general orientation for the newcomer and specialized help for the researcher. They assist in the use of a wide range of resources—in

print and online—including more than 200 online article databases to which the library subscribes. Librarians also offer specialized group instruction, upon request, to classes in all disciplines.

The Reserve service, located at the respective circulation desks, lends copies of assigned class readings on a short-term basis and provides protection for vulnerable circulating materials and heavily used periodicals.

Special Collections at McHenry Library contains rare, valuable, and often fragile materials that do not circulate. Holdings focus on local and campus history, and 20th-century literature and book arts. Special Collections also houses the official campus archive, as well as the archives of George Barati, Gregory Bateson, Thomas Carlyle, the Grateful Dead, Lou Harrison, Robert Heinlein, Kenneth Patchen, Brett Weston, and the Shameless Hussy, Trianon, and Turtle Island presses.

Other important collections and services include:

- [The Digital Collections web site](#), containing a growing treasury of digitized photographs, maps, artwork, oral history transcripts, and sound recordings, as well as “born digital” materials, focusing on the most rare and unique.
- Government Publications, a selective depository for documents published by U.S., California, and Santa Cruz government agencies
- The Media Center, which provides access to audio and video in all formats; CD-ROMs; support for music study, including music scores and music course reserves via iTunes; and language-related audio and video recordings
- The Map Collection, with maps and aerial photographs of Santa Cruz and adjoining counties, and topographic, nautical, and aeronautical maps from all over the world
- The Mary Lea Shane Archives of the Lick Observatory, a national resource for the history of astronomy
- The Regional History Project’s documentation of Central California history

For more information, see the [library’s home page](#).

Computing Facilities and Technology Services

Information Technology Services (ITS)

[Information Technology Services \(ITS\)](#) at UCSC provides a broad spectrum of IT-related resources, services, and support to students, faculty, and staff in the areas of computing, network, telephones, media services, information systems security, web, e-mail, and instructional technology.

ITS operates [the campus network](#), which interconnects computers, workstations, instructional computing labs, and computer-equipped classrooms with each other and the Internet. In addition, wireless access is available across campus.

ITS also provides the campus with technical services and computer support through [the ITS Support Center](#).

Purchasing a Computer?

If you are planning on buying a new computer, UCSC recommends purchasing a laptop with both wired and wireless network capability. The campus supports both PC and Mac computers. An excellent source for purchasing computers and computer products is the campus [Bay Tree Bookstore](#), (831) 459-2082. Through university-negotiated contracts, the bookstore offers a full line of Apple and Dell computers, as well as software and peripheral equipment. Pricing is almost always below outside market prices. The bookstore works closely with ITS to be certain the equipment you buy will meet campus specifications, both wired and wireless.

Computer Standards

The campus supports both PC and Mac computers. For general campus support standards, see [Standard Desktop Support](#) at ITS.

UCSC Account (CruzID) and E-mail

All students, faculty, and staff have a UCSC account called CruzID and a UCSC e-mail account, for example cruzid@ucsc.edu.

In addition to e-mail, CruzID gives individuals access to many campus systems and applications. Every UCSC student is preassigned a CruzID account upon enrollment. Students can activate and change their initial password through [MyUCSC](#).

All official UC and UCSC communication is e-mailed to the @ucsc.edu address. More information is available at [UCSC Email Services](#).

Computing Policies

Policies define how ITS will approach security, how faculty, staff, and students are to approach security, and how certain situations will be handled. Individuals using UCSC computing services must comply with the [University of California state and federal policies and laws](#).

Security Awareness

There are many cyber security threats out there, but it is important to remember that most of them are avoidable. To help protect against common cyber security threats, information is available at [the IT Security page](#).

Residential Network

ITS provides in-room Internet access (called ResNet) to students living on campus. Network services are available to undergraduate and graduate students living in university housing (except for the Camper Park). For assistance with network connections, contact ResNet at resnet@ucsc.edu or call (831) 459-HELP (4357).

Computing Labs for Drop-in Use and Academic Classes

ITS manages 12 computer labs throughout the campus. These labs have more than 300 computers available for students to use that include PC, Mac, and Sun workstations. Wireless access is available in all labs.

The computing labs are used like classrooms; they can be reserved by faculty or teaching assistants for instruction. When not reserved for instruction, the labs are available to students on a walk-in basis. Even if faculty are not teaching in the labs, they may request specific academic software to be installed in the labs so that students may complete homework assignments. More extensive lab information, including hardware and software specifications and hours of operation, is available at [the Computer Labs page](#).

Equipment Checkout

With faculty authorization, students may reserve and check out media equipment for instructional purposes from the ITS checkout pool located in Kerr Hall 149. UCSC Identification with a current quarter sticker is required to check out any equipment. Reservations for equipment are strongly encouraged. All equipment is available on a first come, first served basis and can be borrowed for up to three working days. Equipment may be reserved by calling 459-2117. Detailed information can be found at [the Audio-Visual Checkout page](#).

Academic Course Materials on the Web

[eCommons](#) is the campus online course-management system used to create sophisticated web-based course materials to supplement, but not replace, classroom instruction. eCommons uses a web browser as the interface for the course.

Faculty using eCommons can incorporate a wide variety of tools in their course site, such as a course calendar, student conferencing system, electronic mail, group projects with student-created web pages, and quizzes. Faculty can use eCommons to see what materials students have viewed before they arrive in class. When faculty administer pre-class quizzes on eCommons, they can see what concepts students understand before class and then tailor the lecture accordingly.

Outside of class time, students can use eCommons to view course materials, participate in web-based class discussions, collaborate on student group projects, and take quizzes.

Disability Accommodations for Instruction

If you have a disability and require adaptive or assistive technology to use lab computers, library facilities, or other campus services, please contact the Disability Resource Center (DRC) right away so that they can coordinate services for you.

Computing labs have common adaptive technologies—such as enlarged type for students with low vision and Dvorak keyboards for students with repetitive strain injuries. If you need accommodations, please call the DRC at (831) 459-2089 (voice), or (831) 459-4806 (TTY).

ITS Support Center for Technical and Computer Help

The ITS Support Center is open to all students, staff, and faculty and provides general computer help, assistance with CruzID accounts and e-mail, and other technical-support needs. The Support Center is located at 54 Kerr Hall and is open Monday through Friday from 8 a.m. to 5 p.m.

Get help:

- Online: <http://itrequest.ucsc.edu>
- Phone: 459-4357 (459-HELP)
- E-mail: help@ucsc.edu
- Walk-in: Kerr Hall, Rm. 54

Natural Reserve System (NRS)

The purpose of the NRS is to establish and maintain, for teaching and research, a system of natural areas that encompass diverse and undisturbed examples of California's terrain, both aquatic and terrestrial. The reserves are open to all qualified individuals and institutions for scholarly work concerned with the natural environment. Such work usually deals with ecological topics or experimental studies in a natural setting. At UCSC, the reserves play an important role in supporting experiential learning (course support, internships, and research support) for undergraduate students interested in ecology and environmental sciences in general.

The University of California administers 38 natural reserves throughout the state. Santa Cruz has responsibility for four—the Landels-Hill Big Creek Reserve, Fort Ord Natural Reserve, Año Nuevo Island, and Younger Lagoon Natural Reserve—in addition to the campus's own Natural Reserve. Information about the system's holdings and management is available from the director, [NRS, University of California](#), 1111 Franklin Street, Oakland, CA 94607-5200, (510) 987-0150. You may also contact [the UCSC natural reserve](#) director, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, ghdayton@ucsc.edu.

Campus Natural Reserve

Approximately 400 acres of campus wildlands were designated by the Regents in the 1988 Long-Range Development Plan as a [Campus Natural Reserve](#). This reserve contains redwood forest, springs, a stream, vernal pools, secondary madrone/Douglas fir forest, chaparral, and many soil types and geological formations and structures. The reserve is used for research and teaching and is overseen by the UCSC natural reserve director, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, asjones@ucsc.edu. Students interested in internships and volunteer opportunities should contact Alex Jones asjones@ucsc.edu.

Año Nuevo Island Reserve

This 25-acre island, part of the 4,000-acre [Año Nuevo State Reserve](#) 20 miles north of Santa Cruz, is a university research reserve of the NRS. Northern elephant seals, California sea lions, northern sea lions, and harbor seals breed and haul out in different seasons. The reserve's breeding colony of elephant seals has been the subject of a remarkable 40-year study by UCSC scientists. More than 300 species of land, shore, and sea birds reside in or

migrate through the area, which also has a diversity of fish and intertidal organisms. Access to the island is restricted, and UCSC's research use is managed by the UCSC Natural Reserves. An annual use agreement with California State Parks allows research and field work throughout Año Nuevo State Reserve. A small research facility is located on the island, and a day-use facility is available in the state reserve. For further information, or to use the reserve, contact Patrick Robinson,, e-mail patrick.robinson@ucsc.edu.

Fort Ord Natural Reserve

The [Fort Ort Natural Reserve](#) is a 600-acre reserve was added to the system in 1996. It contains Monterey Bay maritime chaparral, an endemic plant community, and coast live oak woodland, grassland, and coastal scrub, including nine species of plants and animals that are listed as endangered, threatened, or of special status. The reserve was part of the former Fort Ord army base and its habitats are relatively intact. The reserve specializes in studies of plant ecology and rare species conservation. It is a 45-minute drive from campus. For information, contact the UCSC natural reserve director, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, ghdayton@ucsc.edu. Students interested in internships and volunteer opportunities should contact Gage Dayton ghdayton@ucsc.edu.

Landels-Hill Big Creek Reserve

The [Landels-Hill Big Creek Reserve](#) is a 4,000-acre reserve is located in the Santa Lucia Mountains on the Big Sur coast, about two hours by car from the campus. The reserve includes the lower portions of an undisturbed and protected watershed containing numerous terrestrial and aquatic habitats and several geological formations and associated fault systems. The upper watershed is protected by the Ventana Wilderness of the Los Padres National Forest. The reserve's four miles of rocky coastline, located within the California Sea Otter Refuge area and the Monterey Bay National Marine Sanctuary, is now a California Department of Fish and Game Marine Protected Area and provides opportunities for marine research. There are campsites for researchers, a modest field-laboratory facility, a cabin for long-term researchers, and a small storage facility. The Big Creek Reserve is managed by the onsite reserve director. Access is controlled, and applications for use should be made to the resident reserve manager, Big Creek Reserve, Big Sur, CA 93920, (831) 667-2543, readdie@biology.ucsc.edu.

Younger Lagoon Reserve

The [Younger Lagoon Reserve](#) is a 26-acre coastal lagoon and beach next to UCSC's Long Marine Laboratory is part of the NRS. Its waters are a haven for many species of migratory birds, and many small mammals, birds, reptiles, and invertebrates live in its marsh and bank vegetation. A 20-year restoration effort has been initiated. The site provides opportunities for student projects and hands-on involvement in restoration and monitoring. Younger Lagoon is managed by the UCSC natural reserve director and field manager, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, eahoward@ucsc.edu. Students interested in internships and volunteer opportunities should contact Beth Howard eahoward@ucsc.edu.

Research Programs and Facilities

Research at UC Santa Cruz is thriving, facilities are excellent, and the amount of external funding received for research continues to grow. In addition to their individual research projects, faculty are involved in organized research on various scales, from small focused activities within academic divisions, to large research units, some with campuswide scope and others with wider connections to the whole 10-campus University of California system.

Research programs and facilities are described below by academic division: [Arts Division](#); [Baskin School of Engineering](#); [Humanities Division](#); [Physical and Biological Sciences Division](#); and [Social Sciences Division](#).

Specialized research facilities in addition to those listed below are described in the [Programs and Courses](#) section.

Arts Division Research Centers and Institutes

Arts Research Institute (ARI)

[The Arts Research Institute \(ARI\)](#) funds and facilitates the research and creative work of individual Arts Division faculty, as well as collaborative research, symposia and other creative activities and events. Grants and awards from the ARI have helped to support performances, exhibitions, software design, manuscript preparation, digital recordings, international field research, collaborative colloquia, on-site installations, operas, and electronic productions. These and other innovative projects in arts practice and theory are among the research areas and interests supported by the institute.

Center for Documentary Arts and Research

[The Center for Documentary Arts and Research \(CDAR\)](#) supports interdisciplinary explorations of the documentary and nonfiction arts, broadly conceived. CDAR serves as a locus for experimentation and investigation of the social, aesthetic, historical, political, and pedagogical capacities of documentary and nonfiction film and media forms and practices. In addition to staging screenings, talks, and symposia, CDAR fosters exhibition, discussion, investigation, and collaboration in areas of documentary and nonfiction media history, theory, and practice that bridge the gap between academic settings of documentary research and the broader public sphere.

Center for Force Majeure Studies

The mission of the interdisciplinary [Center for Force Majeure Studies](#) is to generate long-term research projects that address the emerging stresses on the Earth's largest ecosystems. The center connects the processes of art-making and the sciences within the unique perspective pioneered by Helen Mayer Harrison and Newton Harrison. The center is reaching out to cultural and educational institutions to execute on-the-ground projects that engage scientists, artists, lawmakers, and the public; enrich public discourse concerning ecology; and inform policy development.

Innovation and Design Lab (IDL)

[The Innovation and Design Lab \(IDL\)](#) is devoted to creating and publishing new knowledge in the health and wellness industries. The IDL takes a holistic approach to innovation and design research that generates products, tools, services, and solutions to improve health outcomes. The IDL is currently focused on a large collaborative program "The Hospital of the Future: The Living Laboratory" at the Johns Hopkins Medical Institutions (JHMI) Children's Center in Baltimore, Maryland. This work is in collaboration with the Department of Pediatrics at JHMI and with corporate research and corporate sponsor partners.

OpenLab Network

[The OpenLab Network](#) is an interdisciplinary initiative that promotes collaborations among art and science researchers. The goal of the OpenLab Network is to help change the current status quo by providing shared research facilities and creating a network for discourse fueled by academic communities, arts and science communities, and industry. The OpenLab Network is pursuing the physical development of new collaborative laboratories on the UCSC campus to foster this research and is establishing an online social networking system for faculty and students to create projects.

Social Practice Arts Research Center (SPARC)

[The Social Practice Arts Research Center \(SPARC\)](#) fosters knowledge exchange and project building between artists, scientists, the public, and others to promote active social and environmental change. The mission of SPARC is to increase the flow of ideas and art actions in real social contexts; position art-making and the creative process as research; and foster creative exchange, critical dialog, and social consciousness in art, education, and life. Working across disciplines, SPARC aims to engender and support collaborations and projects that have a local, national, or international impact.

Arts Division Teaching, Research, and Performance Facilities

Arts Information Technology Services (ITS) Labs

ITS has [two labs](#) that primarily serve the Arts Division: the [Porter Arts Mac Lab](#) (Porter D 240) and the [Music Lab](#) (Music 249). The Porter Arts Mac Lab is equipped with arts-specific software, including high-end video-editing, graphics, web-development, and sound-

editing software. The Music Lab includes hardware and software for music editing, notation and working with MIDI. These ITS labs are open to all UCSC students. In addition, several of the departments in the Arts Division manage computer labs with specialized equipment and software for the exclusive use of students taking classes in Art, Film and Digital Media, Theater Arts, Social Documentation, Music, and Digital Arts and New Media (DANM).

Baskin Visual Arts Center

The [Baskin Visual Arts Center](#) provides excellent [studio facilities](#) for drawing, painting, installation, photography, sculptural construction, printmaking, and digital and traditional printmaking and photography. The nearby bronze foundry is the only such facility within the UC system.

Digital Arts Research Center

Opened in 2010, the 25,000-square-foot [Digital Arts Research Center \(DARC\)](#) houses UCSC's MFA Program in Digital Arts and New Media (DANM) and parts of the departments of Art and Music. This state-of-the-art, three-story facility includes several DANM labs for graduate student use, an outstanding undergraduate photo lab and classroom, as well as an expansive drawing studio and faculty research studios.

Music Center

[UCSC's Music Center](#) offers several performance venues as well as classrooms and teaching studios outfitted with advanced audiovisual technology and with state-of-the-art digital audio, video, and recording systems. Facilities include the 386-seat Recital Hall; studios for Indonesian gamelan, percussion, and electronic music; a 60-seat performance studio; 20 practice rooms; and a music library.

Theater Arts Center

[The Theater Arts Center](#) contains a 500-seat thrust stage, a state-of-the-art experimental theater, and a 200-seat proscenium theater. It also offers acting, directing, and dance studios; costume, scene, and properties shops; a sound recording room; and a computer lab. Elsewhere on campus are additional dance studios, the open-air Quarry Amphitheater seating 3,000, the Sinsheimer-Stanley Festival Glen, and the 150-seat Barn Theater.

Baskin School of Engineering (BSOE) Research Centers and Institutes

Center for Games and Playable Media

[The Center for Games and Playable Media](#) focuses on research in computer games, interactive fiction, and playable media, broadly construed. The center houses the school's five games-related research labs: Expressive Intelligence Studio, Computational Cinematics Studio, Natural Language and Dialog Systems, Augmented Design Laboratory, and Software Introspection Laboratory. There is a great diversity in the faculty's topics of research. Projects range from work on artificial intelligence and interactive storytelling, to natural language dialogue systems, cinematic communication, procedural content generation, human computer interaction, rehabilitation games, computational photography, and level design. Members of the group have published in some of the most respected journals in the fields of game studies, game AI, and game culture.

Center for Maximizing Abilities Through Technology, Education and Research (MATTER)

[The MATTER Center](#) (Maximizing Abilities Through Technology, Education and Research) is formed by an eclectic combination of faculty members in engineering, psychology, nursing, and rehabilitation from UC Santa Cruz, UC San Francisco, and UC Davis. The center covers a broad spectrum of research areas, under the common denominator of technologies to help persons with special needs in their activities of daily living.

Center for Research in Intelligent Storage (CRIS)

The Center for Research in Intelligent Storage (CRIS) is a partnership between universities and industry, featuring high quality, industrially relevant fundamental research, strong industrial support of collaboration in research and education, and direct transfer of university developed ideas, research results, and technology to U.S. industry to improve its

competitive posture in world markets. Through innovative education of talented graduate and undergraduate students, CRIS is providing the next generation of scientists and engineers with a broad, industrially oriented perspective on engineering research and practice. Web: <http://cris.cs.umn.edu/>

Center for Stock Assessment Research (CSTAR)

[The Center for Stock Assessment Research \(CSTAR\)](#) is a collaboration between the Fisheries Ecology Division, NOAA Fisheries (FED), Santa Cruz, and UCSC to provide training in for undergraduate and graduate students and postdoctoral colleagues in the quantitative population biology needed to improve the sustainability of fisheries. CSTAR members work closely with FED staff, and participate in stock assessments, cruises, data workshops, and other management-oriented activities. Members of CSTAR have gone on to positions at NOAA Fisheries across the country, to academia, and to other kinds of non-academic positions including the Malaria Atlas and high-tech companies. A CSTAR alumna founded FishWise, which trains point-of-sale individuals about the sustainability of fisheries and includes Safeway and Target as customers.

Center for Sustainable Energy and Power Systems (CenSEPS)

[The Center for Sustainable Energy and Power Systems \(CenSEPS\)](#) is poised to become a major hub for innovation in emerging clean energy technologies and for tackling the challenges of energy sustainability. The center explores the societal implications of new renewable energy technologies and prepares a new generation of 21st century engineers and scientists to address the problem of more efficient energy use with a minimal carbon footprint. We promote and integrate the use of renewable energy technology to create sustainable communities and renewable energy districts. The center partners with other energy research institutes, both within the United States and abroad, to develop an international approach to solving the critical problems that delay deployment of renewable energy resources.

Information Technologies Institute (ITI)

[The Information Technologies Institute \(ITI\)](#) is a focused research activity (FRA) founded in 2001 and housed at the Baskin School of Engineering. ITI's objective is to provide an environment in which its members can attract large-scale projects that bridge technology research from concept to prototype and solve problems in social and commercial sectors nationally.

In ITI, advanced Internet applications provide the impetus and focus that bring together the components of research related to the rapidly expanding world of networks, distributed computing, "smart" sensors, and Internet appliances. As electronics and packaging developments lead to powerful low-cost sensors, resulting in a broad array of instruments, these become Internet devices, bringing a significant increase in the data captured, transmitted, stored, managed, and displayed.

Through its research centers, ITI focuses on interrelated areas in computer science, computer engineering, and electrical engineering as well as physics, chemistry, and applied mathematics. Areas of emphasis include:

- Design and development of complex networked systems and software technologies
- Storage systems and databases
- Assistive technologies
- Sensors, sensor systems and Internet appliances
- Multimedia systems and applications in education and business management
- Communications
- VLSI design, packaging, and testing
- Visualization and computer graphics
- Knowledge management/data mining
- Decision support tools

Directed by Professor of Computer Engineering Patrick Mantey, ITI has faculty throughout the School of Engineering and manages the participation of other research partnerships—including the activities in the Center for Information Technology Research in the Interest of Society (CITRIS)—with UC Berkeley, UC Davis, and UC Merced. ITI also has participation from the Division of Physical and Biological Sciences, the Division of Social Sciences, and the Arts.

Institute for Scalable Scientific Data Management (ISSDM)

The [Institute for Scalable Scientific Data Management \(ISSDM\)](#) is a collaboration between Los Alamos National Laboratory (LANL) and UC Santa Cruz. The ISSDM promotes and sponsors LANL/UCSC research collaborations and fosters long-term relationships with collaborators at LANL and UCSC. The current focus of these collaborations is on research in storage systems, data and knowledge management, human computation, and visual exploration and analysis of cosmology.

Storage Systems Research Center (SSRC)

The [Storage Systems Research Center \(SSRC\)](#) is composed of faculty from the Computer Science, Computer Engineering, and Electrical Engineering departments and the Technology and Information Management Program. It is funded by the NSF, the Department of Energy, and companies such as NetApp, Symantec, HP, LSI, Data Domain, and Agami. Current research topics include long-term archival storage, scalable indexing and metadata, petabyte-scale storage systems, and file systems for next-generation storage technologies such as non-volatile memories and probe-based storage. Issues of particular concern include performance and scalability, reliability, and security. The SSRC's resources include several computing clusters, the largest with more than 80 processor-disk nodes, as well as over 10 terabytes of dedicated storage. In addition, there are several hardware-software testbeds for projects such as self-managing archival storage and large-scale distributed file systems. The SSRC also maintains a PlanetLab site at UC Santa Cruz, allowing researchers to run experiments on the PlanetLab global-scale distributed testbed.

W. M. Keck Center for Adaptive Optical Microscopy

The [W. M. Keck Center for Adaptive Optical Microscopy](#) is an interdisciplinary center's objectives are to develop enabling adaptive optical technologies and critical procedures to overcome longstanding barriers and vastly improve in vivo deep tissue biological imaging. The approach is inspired by the highly successful use of adaptive optics in the W. M. Keck Telescopes, which allows astronomers to see much more clearly and deeply into space. This center was made possible through the generous support of the W.M. Keck Foundation.

W. M. Keck Center for Nanoscale Optofluidics

The mission of the multidisciplinary [W. M. Keck Center for Nanoscale Optofluidics](#) is the development of optofluidic devices and their application to single-particle studies in molecular biology and biomedical diagnostics. Facilities include a dedicated nanofabrication facility housing a FEI Quanta 3D FEG dual beam SEM/FIB nanofabrication instrument for fabrication, imaging, and characterization of nanoscale devices.

UCSC Genome Technology Center

The [UCSC Genome Technology Center](#) features state-of-the-art equipment including the GS FLX Titanium Series sequencing platform from 454 Life Sciences and the SOLiD sequencing platform from Applied Biosystems. Applications include whole-genome and targeted sequencing; resequencing; RNA sequencing; micro-RNA and small-RNA sequencing; chromatin immunoprecipitation (ChIP) sequencing (to identify binding sites of DNA-associated proteins); and metagenomics (also called environmental genomics, involving the analysis of genetic material recovered directly from environmental samples)

Baskin School of Engineering (BSOE) Facilities

The [Baskin School of Engineering \(BSOE\)](#) occupies principally the Jack Baskin Engineering and Engineering 2 buildings. Some laboratories and offices are also in the new Biomedical Sciences and Engineering Building (completed in 2012), the Physical and Biological Sciences Building, and the Sinsheimer Laboratory Building. On the west side of Santa Cruz, outside the main campus, BSOE has a set of advanced material sciences laboratories at 2300 Delaware Ave. (formally a Texas Instruments semiconductor fabrication plant). Several BSOE

faculty also work closely with colleagues at the adjacent UCSC Long Marine Laboratory and Marine Sciences Campus.

“Over the hill,” BSOE has created a strong presence at the UCSC Silicon Valley Campus (SVC) located at 2505 Augustine Drive in Santa Clara across the 101 Freeway from Intel, and has joint laboratory facilities at NASA Ames Research Center in Mountain View, California. Many BSOE faculty members maintain offices and teach classes at the SVC and have joint research agreements with NASA through its [University Affiliated Research Center \(UARC\)](#) and with a large number of companies. Many BSOE faculty are also members of the joint [NASA/UCSC Advanced Studies Laboratories \(ASL\)](#), which is located at NASA Ames Research Center.

BSOE is working to develop additional locations off the main campus often in interdisciplinary partnerships.

BSOE Computing Infrastructure

For the most current details regarding BSOE computing infrastructure, see the BSOE page [How To Get Computer Support](#).

BSOE operates a computing network of several hundred Unix, Windows, and Macintosh computers and several computer laboratories. These labs support research and graduate instruction in applied mathematics and statistics, biomolecular engineering, computer engineering, computer science, electrical engineering and technology and information management. Undergraduate computing is supported by a combination of BSOE Undergraduate Laboratories (also known as the BELS Labs) and the campus’s Instructional Computing Laboratories (IC Labs).

For graduate and research computing, the ITS/BSOE computing support team operates a high-speed 100/1000 megabit-per-second network with 1/10 gigabit-per-second fiber optic backbones and redundant core routers and paths. Most areas of BSOE buildings are covered by wireless networking of various types (802.11g/n). The BSOE computing network has redundant connections to the main campus network.

UCSC and BSOE have connections to the [Corporation for Education Network Initiatives in California \(CENIC\)](#) via CENIC-managed “dark-fiber,” which provides direct connections to the CENIC High Performance Research Network, to activities at NASA Ames, and to the BSOE research labs located at 2300 Delaware Ave.

BSOE Computing also operates four separate Tier 1+ data centers, all with UPS and air-conditioning support. Two of the data centers have backup power generation and the other two use a campus cogeneration facility for backup power. In addition, BSOE uses the main UCSC data center (Tier 2) for some redundancy and for web sites and copies and/or mirrors data to distant Universities (such as the San Diego Supercomputer Center). For graduate and research computing, BSOE supports the following:

- Central file servers for core services such as mail, name service, file sharing, and backup
- Several general-access Unix systems
- Multiple compute servers
- Research computing clusters
- Several general-use research computing clusters, in addition to the clusters used by individual research groups. These clusters are available to all faculty and graduate students for general-purpose computations:
- Several graduate student computer labs with a mix of Windows, Linux, and Apple workstations and network printers
- A variety of software purchased in cooperation with UCSC central computing, BSOE computing, and individual faculty members
- A variety of computer-aided-design software, including Altera, Agilent Advanced Design System, AutoCAD, Cadence, Maple, Matlab, Mentor Graphics, National Instruments Labview, Qualnet, Synopsys, and Xilinx.

Baskin Engineering Wireless Networking. BSOE has an installed wireless computer (Wi-Fi)

network that covers nearly all interior building spaces of the Baskin Engineering, Engineering 2, Physical Sciences Building, and Biomedical Sciences Building. The Wi-Fi network uses "eduroam," a wireless authentication system that allows members of other confederated universities to use the UCSC wireless network; BSOE personnel are also able to use Wi-Fi networks at other universities that participate in eduroam.

Undergraduate Engineering Laboratories (Baskin Engineering Lab Support-BELS). BSOE operates the following special instructional laboratories for the exclusive use of engineering students. These laboratories are typically open 24 hours a day, seven days a week, during instructional quarters. The instructional labs available in 2012 are listed below. Please check the web site for updates as new instructional laboratories are being added:

- Digital Logic Design Laboratory
- Controls, Signals, and Instrumentation Laboratory
- Analog Circuits Laboratory
- Electrical Engineering Senior Projects Laboratory
- Optics and Laser Laboratory
- Computer Engineering Projects Laboratory
- Electromagnetic and Radio Frequency Laboratory
- Physical Electronics Laboratory
- Computer Networking Laboratory
- Computer Game Design Laboratory
- Tau Beta Pi, Engineering Honor Society Hardware Laboratory
- Biomolecular Engineering Instructional Laboratory
- Fabrication Laboratory
- Flexible Instructional Laboratory

A number of [additional laboratory spaces](#) are set up for three-quarter-sequence senior projects in electrical engineering, computer engineering, and computer science. These labs are often used by project groups sponsored by various industry partners, many of which have headquarters or operations in Silicon Valley and the Monterey Bay Area.

UCSC Instructional Computing Laboratories. In addition to the facilities provided by the Jack Baskin School of Engineering, students have access to the computing facilities of the UCSC Instructional Computing (IC) Labs. These include several labs located around the campus consisting of Unix, Mac, and Windows workstations. There are two large IC Labs located in the Baskin Engineering Building. Check the [UCSC Instructional Computing web site](#) for details on these labs and hours of operation.

Research Laboratories

BSOE operates and supports the following [research laboratories](#). Current information about BSOE research labs. see the [BSOE laboratories web site](#).

Applied and Nano-Optics. [The Applied and Nano-optics group](#) covers a wide range of optical research with an emphasis on experimental nanoscale optics. New methods and devices are developed for optical studies of single particles such as molecules, photons, or nanomagnets. A variety of optical and nanoscale characterization techniques such as time-correlated single-photon counting, ultrafast laser spectroscopy, or scanning-probe microscopy are used and investigated. Applications include integrated biomedical sensors, high-density magnetic memory, single-photon light sources and detectors.

Biomolecular Engineering Research Facilities. BSOE supports a broad range of biomolecular-engineering (BME) research activities through the use of more than seven state-of-the-art research labs in the department. Areas of research include systems biology, comparative genomics, HIV vaccine development, stem-cell research, nano-device fabrication and DNA-

sequencing–device development. BME departmental laboratory facilities include a variety of equipment used for molecular biology, cell biology, protein chemistry, immunology, virology and computational biology. Specific equipment includes high– and low–speed centrifuges, PCR machines, CO2 incubators, bacterial shakers, microtiter plate readers, microtiter plate washers, microscopes (inverted, upright, fluorescence), spectrophotometers, protein–chromatography equipment, a variety of gel electrophoresis equipment including power supplies, gel dryers, gel–imaging equipment, vacuum concentrators, and cryopreservation equipment. Recently acquired and planned equipment purchases to be shared with other investigators include a Fluorescence Activated Cell Sorter (FACS), and next–generation DNA sequencing devices. Shared equipment rooms contain a variety of common equipment including freezers, glass–washing equipment, autoclaves, and refrigerators. Most labs are supplied with basic utilities such as air, gas, vacuum and reverse–osmosis de–ionized (RODI) water. The BME research groups have several computer clusters, one with more than 1,000 CPUs. There is additional access to BSOE laboratories and facilities within other departments. Many of the BME research groups cooperate closely with the Electrical Engineering Department, which operates a clean room, a scanning electron microscope and semiconductor fabrication facilities. Collaborative research with faculty from the Physical and Biological Sciences Division is frequent with routine access to a wide range of biology and chemistry laboratory facilities. Web: www.soe.ucsc.edu/research/labs/

Clean Room. The Electrical Engineering Department operates a shared [Class 1,000 clean room](#) for use by researchers in Electrical Engineering. The Biomolecular Engineering Department also uses this facility.

Computer Communication Research Group (CCRG). [The Computer Communication Research Group \(CCRG\)](#) is dedicated to basic and applied research in computer communication. CCRG research focuses on new algorithms, protocols, and architectures for wireless networks based on packet switching (packet–radio networks), Internetworking, multipoint communication, and the control of resources by multiple administrative authorities.

Design and Verification Laboratory. [The Design and Verification Laboratory](#) facilitates research in software and system design methods, embedded software design, software and system verification, game theory, formal methods.

Geospatial Visualization Laboratory. [The Geospatial Visualization Laboratory](#) creates a consistent four–dimensional space–time visualization of geospatial data and intelligence associated with the environment. This task requires intelligent collection of data using various sensors, including a variety of cameras, LIDAR data, and multispectral imagery in all kinds of frequency bands. The spatiotemporal GIS (geographic information systems) visualization will bring together several layers of information including terrain data, street maps, buildings, environment data, aerial images, and mobile–objects data.

High–Speed Network Laboratory. Members of this lab explore and expand the field of high–speed computer networking and communication. Current areas of research include high–speed switching, traffic–scheduling algorithms for providing quality–of–service (QoS) guarantees in packet networks, ATM congestion control, and optical networks. Projects are funded by NSF, ARPA, and private industry.

Image Processing and Multimedia Laboratory (IPMML). This lab is the central venue for ongoing research into topics in image processing and multimedia. Areas of interest include wireless digital video; virtual scene and panorama generation; natural and machine–generated image compression; video capture, processing, and editing techniques; color printing technology; image libraries; and combinations of the above.

Information Retrieval and Knowledge Management Lab (IRKM). This lab conducts basic and applied research in information retrieval and data mining. Projects include developing a proactive personalized information–retrieval system (funded by NSF), adaptive information filtering (funded by AFOSR), and collaborative personalized search, recommendation and advertising (with industry funding from Yahoo, Microsoft, Google, NEC, Nokia, Bosch).

Internetworking Research Group (i–NRG). [The Internetworking Research Group \(i–NRG\)](#) conducts research in the design, experimental evaluation, and implementation of network protocols for both wired and wireless internetworks. Research activities include a number of areas in computer networks and distributed systems.

Materials Synthesis and Characterization Research Lab. This laboratory has recently been commissioned at our 2300 Delaware Ave. location. Formally a Texas Instruments semiconductor fabrication plant, the building has infrastructure to support very large clean rooms. At present, synthesis capability exists in metal-organic chemical vapor deposition (MOCVD) and rf-magnetron sputtering. The Materials Synthesis and Characterization Research Lab capability includes semiconductor test equipment, bulk magneto-thermal properties, and atomic force microscopy. Much of the work involves properties of materials at very low temperatures, nearly 0 degrees Kelvin. At these temperatures, materials behave very differently than at room temperature, a notable example being superconductors. Web: www.soe.ucsc.edu/research/labs

Micro-Architecture at Santa Cruz (MASC). MASC's focus is on computer-architecture research, with emphasis on energy/performance trade-offs, thread-level speculation, simulation tools, FPGAs, and design complexity. Web: masc.soe.ucsc.edu

Multidimensional Signal Processing Research Group (MDSP). This group's interests are in the area of inverse problems in imaging, statistical detection and estimation, and associated numerical methods. Current projects include image-resolution enhancement and superresolution, computationally efficient image-motion estimation, shape reconstruction from local and global geometric data, multiscale modeling and analysis of signals and images, radon transform-based algorithms for deformation analysis and dynamic imaging, image processing and inverse problems in remote sensing, and automatic target detection and recognition. The group is also associated with the Image Processing and Multimedia Lab. Web: www.users.soe.ucsc.edu/%7emilanfar/

Network Management and Operations Lab. BSOE, in partnership with Cisco Systems, has established this lab to serve as a "network-systems teaching hospital" where real-world problems and projects are addressed by students and faculty. Projects range from the routine (e.g., quality-assurance and release testing of new products) to the advanced (e.g., research into new architectures for network systems). Students employed as interns work with faculty researchers on these projects in BSOE facilities equipped for the specific needs of the projects. Web: nmo.soe.ucsc.edu

Santa Cruz Laboratory for Visualization and Graphics. Recent research at this lab includes animal modeling and animation, environmental visualization, isosurfaces, d.v.r., hierarchies, irregular grids, massively parallel volume rendering through the net, uncertainty visualization, virtual reality in scientific visualization, nomadic collaborative visualization, tensor visualization, and flow visualization. Web: <http://www.soe.ucsc.edu/research>

Thin Films Research Lab. This laboratory is located at our 2300 Delaware Ave. location. Formally a Texas Instruments semiconductor fabrication plant, the building has infrastructure to support very large clean rooms. The Thin Films laboratory operates several advanced metal organic chemical vapor deposition (MOCVD) systems to fabricate and study thin film semiconductors. Applications include advanced solar cells, memory systems, and biosensors. The Thin Films laboratory in April 2010 received an in-kind donation from Phillips LumiLEDs of Santa Clara of an AIXTRON Nitride MOCVD Reactor (AIX 200RF).

UCSC Broadband Communications Research Group. The members of this group investigate the fundamental limits and performance analysis of protocols in wireless ad hoc networks, space-time signal processing, and development of signal processing and coding techniques for wireless communication systems. Web: <http://users.soe.ucsc.edu/~hamid/ucbc/index2.html>.

UCSC Scientific Visualization Laboratory. This lab provides the means for creating visualizations from scientific data. Projects include a simulation of an "extensive air shower" striking the Milagro detector at Los Alamos National Lab, representing a subsonic flow over a delta-wing aircraft, a demonstration of direct volume rendering on a multiple-gridded space-shuttle launch vehicle, an N-body simulation of large-scale structure in the universe, and a representation of a diving whale based on location data from a Monterey Bay tagging experiment. Web: www.soe.ucsc.edu/research/labs/

UCSC Visual Computing Laboratory. This lab explores visual tracking, stereo and sparse IBR, facial modeling and analysis, and image and video processing. Web: soe.ucsc.edu/research/labs

For additional information regarding BSOE, please check the web site: www.soe.ucsc.edu.

Humanities Division Research Programs—The Institute for Humanities Research (IHR)

The Institute for Humanities Research (IHR) at UC Santa Cruz is a laboratory for theorizing and implementing new visions of the humanities via faculty research projects, graduate and undergraduate education, and public programs. Established in 1999, the IHR has grown dramatically since its inception and now serves as an umbrella for a multitude of research centers, research clusters, and multi-campus research projects.

With these and other initiatives, the IHR serves as an incubator for new ideas and provides crucial support to faculty, graduate students, and undergraduate students at every stage of the research process. One of our key functions is to identify promising students and help them become productive researchers through mentorship programs, fellowships, and internship opportunities.

As the designated humanities center of UC Santa Cruz, the IHR is part of the University of California system-wide Humanities Network and is able to leverage the human and intellectual resources of the finest public university system in the world.

In addition, the IHR administers a variety of research centers, including the Center for Cultural Studies, Center for Jewish Studies, Center for Labor Studies, Center for Mediterranean Studies, Center for the Study of Pacific War Memories, and Center for World History. It also houses new research initiatives in ancient studies, Sikh and Punjabi studies, and critical race and ethnic studies. Supported activities include research clusters, conferences, seminars, visiting scholars, publications, film series, and NEH summer seminars for university and high school teachers.

For more information, please visit us at ihr.ucsc.edu or e-mail us at ihr@ucsc.edu.

Center for Cultural Studies

The Center for Cultural Studies at UC Santa Cruz was founded in the spring of 1988 as a part of the University of California's President's Humanities Initiative. The Center encourages a broad range of research in the rapidly evolving field of cultural studies and hosts a hugely popular weekly colloquium series

The international field of cultural studies emerged from the challenges posed to traditional humanistic and social scientific agendas by new research strategies in visual studies; anthropology, ethnography and folklore; feminist studies; comparative sociology and politics; semiotics; social, cultural, literary, and political theory; science studies; colonial discourse analysis; ethnic studies; and the histories of sexualities. These challenges, and the areas of scholarly activity they stimulate, compose the heart of cultural studies at UC Santa Cruz. Thus, the Center for Cultural Studies' concern is to foster research across divisional and disciplinary boundaries.

While based in the humanities, the Center engages with the "interpretive" or "historical" social sciences, science studies, and theoretically informed work in the arts. The membership of the Center's Advisory Board and faculty/graduate student participation in its events clearly reflect this cross-divisional agenda. Visit us at culturalstudies.ucsc.edu.

Center for Jewish Studies

Jewish Studies is one of the most intellectually compelling and broadly relevant fields in the university. We design research projects and host public events that conceptually redraw the boundaries of Jewish studies, while encouraging people who may have previously been uninvolved in Jewish studies to engage with it.

Our primary constituents are the thousands of students at UC Santa Cruz, including the 1,200 who take Jewish Studies courses every year, making it one of the most popular programs in the entire university. We are also committed to creating programs that attract faculty and staff members as well as people from the broader Santa Cruz community. The content of our programming organically integrates the contemporary issues that are most important to our constituents, with a range of perspectives and methods unique to Jewish Studies. In so doing, we place Jewish Studies squarely at the center of the intellectual and

cultural life of the campus and illuminate the central role that Jewish creativity has played in helping to shape human civilization for over three thousand years. Visit us at cjs.ucsc.edu.

Center for Labor Studies

The Center for Labor Studies, founded in 2007, is dedicated to the study of working people, the labor movement, and the challenge of the broader global economy as it impacts the working people of California and beyond. Through conferences, workshops, public lectures, and a range of guest speakers, we focus, in particular, on the relationship between the labor movement (broadly defined), social movements, and democratic practices; on gender, race, and ethnic dynamics; and on labor activism in international context. We also address a wide spectrum of questions related to the nature of work, employment, and working people's lives in the U.S. and beyond. Our goal is to serve UCSC students, staff, and faculty while reaching out to the broader community of the Central Coast of California and beyond. Visit us at ihr.ucsc.edu.

Center for Mediterranean Studies

The Center for Mediterranean Studies is dedicated to the study of the nature of premodern Mediterranean societies and cultures and their role in world history and the history of "the West." Located at the intersection of three continents, the premodern Mediterranean was a shared environment characterized by tremendous ethnic and religious diversity and by the particular intensity of its cultural, economic, and political exchange. Among Africans, Asians and Europeans, Christians, Muslims, and Jews, and others, both conflict and peaceful communication encouraged acculturation and spurred innovations that transformed the societies of the Mediterranean and their continental neighbors. It is affiliated with the independent scholarly forum the Mediterranean Seminar.

Because of the dominance of modern national paradigms, the weight of teleological historical traditions, and assumptions about the rigidity of ecumenical divisions, the premodern Mediterranean is frequently regarded as an anomaly. Sponsoring a diverse range of scholarly activities, including a reading group, colloquia, seminars, and publications, the Mediterranean Seminar provides a forum for scholarly exchange and dialogue across the humanities and social sciences. Our aim is to facilitate investigation into the premodern Mediterranean and to promote the incorporation of Mediterranean studies into university curricula. Visit us at mediterraneanseminar.org.

Center for the Study of Pacific War Memories

The Center for the Study of Pacific War Memories was established in the fall of 2006 to promote transnational, collaborative teaching and research projects across the Asia-Pacific region related to memories of the Pacific theater of World War II (1937-1945). Memories of the war are articulated and sustained in a wide range of media and practices at individual and collective levels. At the same time, memory changes over time, with changing contexts and changing agents of memory. Finally, while memory is at the core of identity-formation, memory-making in the modern world always operates at a global level. Thus, memories of the past in one place do not exist in isolation within single national or ethnic boundaries, but are always in formation through engagement with other memories from other places and other groups.

The foundational project of the center is the construction of a web site for a multilingual and multinational research community built around a user-generated digital archive called *Eternal Flames: Living Memories of the Asia Pacific War*. The site will enable the formation of collaborative research projects among both students and researchers from countries throughout the Pacific region, particularly promoting translingual work. Other center projects include a documentary film about a former Japanese soldier now living in California, an exhibit of photographs of Okinawa taken by an American serviceman in the early 1950s, and a data-rich virtual re-creation of a massive memorial complex in Okinawa. Visit us at cspwm.ucsc.edu.

Center for World History (CWH)

As a part of a collective effort at imagining the development of world history as a research field, the CWH sponsors occasional lectures and conferences, including periodic conferences of the all-UC Multi-Campus Research Group, the World History Workshop.

CWH is also active in encouraging the development of world history as a teaching field. To this end, it develops world history teaching materials available online. The Center has hosted multiple NEH Summer Seminars for classroom teachers on the theme "Production and Consumption in World History." Visit us at cwh.ucsc.edu.

Dickens Project

Through a regular program of conferences, courses, and scholarly gatherings, the Dickens Project coordinates research and instruction in the work, times, influence, and achievement of Charles Dickens. Twice a year, faculty members and graduate students from the 10 campuses of the University of California, joined by colleagues from other universities, present their research findings to conference participants, interested undergraduate and graduate students, and members of the general public. They meet on the Santa Cruz campus each summer and at another university each winter. Each year, the conference is available as a regular Summer Session undergraduate course. The project also publishes its own newsletter and curricular materials and cosponsors international conferences. Visit us at dickens.ucsc.edu.

Linguistics Research Center (LRC)

LRC at UC Santa Cruz facilitates research and education in the areas of theoretical linguistics—syntax, phonetics, phonology, morphology, and semantics. The members of the linguistics community at UCSC (faculty, students, and visiting scholars) work together under the auspices of the LRC to conduct and disseminate the results of their research to the larger linguistics community. An increasingly important aspect of LRC's mission is to coordinate and administer the LRC Labs (SynLab, PhonLab and SemLab).

In addition, LRC serves as a liaison between researchers at other institutions and researchers at UC Santa Cruz. Among other efforts, the LRC hosts visiting scholars from other institutions interested in conducting research in the UCSC linguistics community, organizes workshops featuring participants from other U.S. and international institutions, engages in online publication of research conducted at UCSC, coordinates the logistics of externally funded research projects, and in general works to enhance the environment for linguistic research at UCSC.

A collection of books and journals in linguistics, including working papers from many other linguistics departments, is maintained in the LRC Library, which is available for use by any LRC affiliate. The LRC sponsors visiting scholars for an entire academic year (or for shorter periods) through the Research Associate Program. Visit us at lrc.ucsc.edu.

Ray Film and Study Center

The Satyajit Ray Film and Study Center (Ray FASC) is a research activity concentrating on the films and other artistic works of Satyajit Ray, one of the world's greatest filmmakers. Ray FASC maintains, in addition to 35-mm films and videocassettes of Satyajit Ray's films, a collection of the Ray papers: books, articles, letters, screenplays, sketchbooks, costume designs, music tapes/recordings, posters, stills, illustrations, and other examples of Ray's multifaceted genius. Ray FASC has received the Lethbridge Collection of some 1,500 volumes/items of works on Ray and by Ray in some 10 world languages. The gift has come from Mr. and Mrs. Cuthbert Lethbridge of Melbourne, Australia.

With major grants Ray FASC has prepared an inventory, catalog, and database of the materials in the archive. Ray FASC hosts lectures, film screenings, seminars, and exhibitions. It helped organize several Ray retrospectives nationally and internationally. Student internships and research projects in the archives are welcome. Please visit <http://satyajitray.ucsc.edu>.

Physical and Biological Sciences Division Research Programs and Centers

Center for Adaptive Optics (CfAO)

CfAO is a cross-disciplinary center funded by the University of California. It is headquartered at UC Santa Cruz, with members from other UC campuses and with many academic and industrial affiliates. Adaptive optics (AO) is an enabling technology that sharpens images by removing optical aberrations. This technology is transformative for

ground-based astronomical telescopes because it removes blurring due to turbulence in the Earth's atmosphere. An exciting application closer to home is the use of AO for imaging the living human retina. The mission of the CfAO is to develop, apply, and disseminate adaptive optics science and technology in service to scientific research, healthcare, industry, and education. To accomplish these goals, the CfAO connects the UC campus communities, fosters research collaborations across campuses and disciplines, and works to develop the next generation of graduate students and young leaders in this burgeoning field. Web: cfao.ucolick.org and lao.ucolick.org

Center for Molecular Biology of RNA

The Center brings together an interdisciplinary group of researchers from the Departments of Molecular, Cell and Developmental Biology; Chemistry and Biochemistry; and Biomolecular Engineering, whose common interest is to understand the structure, function, and biological roles of DNA's more versatile cousin, RNA. The Center promotes interaction between structural biologists, molecular geneticists, biochemists, and computational biologists. Unlike DNA, RNA has the ability to fold into complex and unusual three-dimensional structures that confer its biological functions. RNA, like protein, can possess enzymatic activity to catalyze biochemical reactions. It is believed that RNA preceded both protein and DNA in the early molecular evolution of living systems. Today, its importance is underscored by the finding that, while only a small fraction of the human genome codes for protein, the majority of human DNA is transcribed into RNA. Many new classes of functional RNAs continue to be discovered, including those that regulate development of higher organisms; however, the roles of most non-coding RNAs remain to be discovered.

New insights into the fundamental properties of RNA benefit medical research in such areas as the study of RNA viruses (which include HIV, influenza, polio and the common cold) and in development of new antibiotics based on the molecular structure of the bacterial ribosome. Among the areas currently under investigation in the Center are RNA genomics, RNA splicing, protein synthesis, ribonucleoprotein assembly, RNA-protein recognition, molecular structures of RNA and RNA-protein complexes, mechanisms of action of catalytic RNAs and micro-RNAs, and in vitro evolution of novel catalytic and other functional RNAs. Researchers in the Center employ diverse experimental methods, including cryo-EM reconstruction, x-ray crystallography, DNA microarrays, high-throughput DNA and RNA sequencing, single-molecule FRET and optical tweezer techniques and state-of-the-art computational approaches. The Center provides research training for postdoctoral scientists and doctoral students in graduate programs offered by the Department of Molecular, Cell, and Developmental Biology, the Department of Chemistry and Biochemistry, and the Department of Biomolecular Engineering. Web: rna.ucsc.edu/rnacenter

Center for Origin, Dynamics, and Evolution of Planets (CODEP)

CODEP brings together faculty from the Departments of Astronomy and Astrophysics, Applied Mathematics and Statistics, Earth and Planetary Sciences, and Physics. The interests of CODEP researchers include Earth's internal dynamics, the formation of planets, how planetary systems evolve, and the discovery of new planets outside the solar system. This is a joint effort to understand as much as possible about planets in general, both in our own solar system and around other stars. The center encourages Earth scientists and astronomers to bring their different perspectives to bear on planetary issues. Web: <http://codep.ucsc.edu/>

Center for the Study of Imaging and Dynamics of the Earth (CSIDE)

This center coordinates research in seismology, geodynamics, geomagnetism, hydrology, geomorphology, active tectonics, and mineral physics addressing structure and dynamics of the Earth's interior. Thermal, chemical, and dynamic processes are studied in six affiliated research laboratories. CSIDE hosts a major industrial consortium focused on development of new seismic-imaging technologies. Web: <http://cside.ucsc.edu/>

Center for Remote Sensing (CRS)

CRS coordinates research efforts of faculty in the Departments of Earth and Planetary Sciences, Ocean Sciences, Ecology and Evolutionary Biology, Electrical Engineering, and Computer Engineering for the use of satellite and airborne remote sensing in studying processes occurring on the surfaces of Earth and other planets. Specific interests include

astrogeology; plant ecology; coral reef health; volcanic, geothermal, and earthquake processes; climate change; submarine and coastal geology; ocean surface processes and marine habitats; and engineering development. Web: <http://crs.ucsc.edu/>

Institute of Marine Sciences (IMS)

With the dynamic combination of university marine scientists, state-of-the-art facilities and analytical equipment, collaborative research, and an overriding commitment to quality, UC Santa Cruz is at the forefront of marine sciences research, education, and outreach. Set in the biologically rich environment of Monterey Bay and the nation's largest national marine sanctuary, the campus provides students and scientists who seek to study the ocean and its life a unique opportunity to pursue their dreams.

Established in 1972, IMS is composed of 39 affiliated faculty; 175 professional researchers, project scientists, specialists, postdoctoral researchers, and research associates; and 25 support staff. Marine scientists from the departments of Ocean Sciences, Ecology and Evolutionary Biology, Earth and Planetary Sciences, Microbiology and Environmental Toxicology, Chemistry and Biochemistry, Environmental Studies, and Applied Mathematics and Statistics conduct their research within the shared focus of the institute. The institute provides facilities and administrative and technical support for faculty, researchers, visiting scientists, graduate students, and undergraduates. Faculty and researchers work independently and collaboratively within eight clusters:

- Coastal biology
- Environmental toxicology
- Fisheries and fishery management
- Marine and coastal geology
- Marine and coastal policy
- Marine vertebrate biology
- Oceanography and ocean processes
- Paleooceanography, paleoclimatology, and global change

An undergraduate major leading to a B.S. in marine biology is described [here](#); a two-year graduate program leading to an M.S. in ocean sciences is described [here](#). Doctoral students pursue marine research through the Ph.D. programs in the Departments of Ecology and Evolutionary Biology, Earth and Planetary Sciences, Microbiology and Environmental Toxicology, or Ocean Sciences.

Facilities. The institute's on-campus complex includes the IMS administrative office; research laboratories; offices for researchers, postdocs, and visiting scientists; state-of-the-art analytical labs for marine chemistry, biology, and geology; a computer laboratory; culture rooms for invertebrates and algae; portable seagoing analytical labs; and support facilities for cruise staging.

The Joseph M. Long Marine Laboratory is the core of UCSC's Coastal Sciences Campus, an onshore site three miles from main campus on the coastline of the nation's largest national marine sanctuary. The laboratory's running seawater capabilities increase opportunities for research and instruction. Facilities include research laboratory buildings; outdoor tanks for research involving marine mammals (dolphins, seals, sea lions, and sea otters), seabirds, and fish; and teaching laboratories. Specialized laboratories and facilities for marine physiology, ecology, and marine mammal bioacoustics studies are available. Adjacent to the lab are 55 acres of land for which plans have been developed and approved for an expanded marine lab campus with space for future research and educational facilities. The Coastal Sciences Campus also has a protected lagoon, a sandy beach, and rocky intertidal platforms for field research. Because Long Marine Lab is close to the campus, work there is easily incorporated into daily campus activities.

Each year, over 65000 people—including 10,000 schoolchildren—tour the Seymour Marine Discovery Center at Long Marine Lab. Trained volunteer docents welcome visitors, guide groups through the Center and around the site, and provide information on research in progress. The Seymour Center houses an aquarium, exhibits that interpret the research

underway within the institute, two classrooms for school groups, and an auditorium. All are open to the public—including K-12 classes—for a modest fee.

In addition, the Center for Ocean Health at Long Marine Lab houses offices and labs for marine sciences faculty and their research programs, as well as three nonprofits: the Nature Conservancy's Coastal Waters Program, Island Conservation, and the Natural Capital Project.

IMS maintains a number of small vessels equipped for nearshore coastal research, several small craft for inshore work, and a scientific diving program. In addition, IMS-associated faculty, researchers, and students work around the world aboard larger oceanographic vessels.

IMS has scientific control over use of [Año Nuevo Island](#), the largest elephant seal rookery on the Pacific coast.

IMS maintains active cooperative research agreements with both the Biological Resources Division and the Coastal and Marine Group of the U.S. Geological Survey that have 100 agency scientists and staff now housed adjacent to the Coastal Sciences Campus.

The institute also maintains a cooperative agreement with the National Marine Fisheries Service (NMFS). In 2000, this agency completed a fisheries laboratory at Long Marine Lab, which houses 105 scientists and staff working on salmon, bottom fish, and fishery-management issues. NMFS scientists study causes of variability in abundance and health of fish populations and the economics of exploiting and protecting natural resources. The California Department of Fish and Wildlife operates a Marine Wildlife Research Center at Long Marine Lab, which provides interior lab space and outdoor pool space for research on sea otters and the effects of oil and other contaminants on marine mammals and seabirds.

Additional collaboration also takes place with scientists at the Monterey Bay Aquarium Research Institute, Moss Landing Marine Laboratories, Hopkins Marine Station, the Monterey Bay Aquarium, the Naval Postgraduate School, and the Monterey Bay National Marine Sanctuary.

IMS web sites: ims.ucsc.edu and <http://www2.ucsc.edu/seymourcenter/>

Microbiology and Biomedical Research. The Division of Physical and Biological Sciences supports a broad range of biomedical research in the Departments of Chemistry and Biochemistry; Microbiology and Environmental Toxicology; and Molecular, Cell, and Developmental Biology. Structural biology, the molecular biology of RNA, genetics, bioinformatics, chromatin biology, and developmental biology are areas of particular strength. Researchers work in state-of-the-art laboratories, with additional access to shared facilities, equipment, and computational tools. Collaborative research is frequent, both among investigators within the division as well as with faculty in the Baskin School of Engineering, which is internationally recognized for its expertise in computational biology. These collaborative efforts are facilitated by the university's Center for Biomolecular Science and Engineering. There are excellent training opportunities for postdoctoral fellows, and graduate and undergraduate students in areas of biomedical research and the health sciences. Web: biomedical.ucsc.edu

Institute for the Biology of Stem Cells (IBSC)

The IBSC encompasses research, training, and facilities. Stem cell research at UCSC focuses on the basic biological systems operating in the processes of self-renewal and differentiation of stem cells. The institute was made possible by the high quality of biological and engineering research on the UCSC campus and by the California Institute for Regenerative Medicine (CIRM), which in September 2005 approved funding for UCSC to establish a training program in stem cell research. The UCSC Training Program in Systems Biology of Stem Cells provides predoctoral and postdoctoral students with a solid understanding of the biology of stem cells, the skills to use stem cells in their own research, and the ability to devise and use computational approaches in their stem cell research. Funding from CIRM also made possible the UCSC Shared Stem Cell Facility and other major projects that have supported stem cell research on this campus, such as a major facility award that funded the IBSC space in the Biomedical Sciences Building. Web: stemcell.ucsc.edu

Santa Cruz Predatory Bird Research Group

The Santa Cruz Predatory Bird Research Group (SCPBRG) was formed in 1975 to restore an endangered peregrine falcon population in California. Since then, more than 1,000 peregrine falcons have been released to the wild and the Pacific Coast population has recovered and been removed from State and Federal Endangered Species Lists.

SCPBRG advises students on their senior theses, directs interns in individual studies, and teaches a College 8 class, Peregrine Falcon Recovery—A Case Study in Conservation Success. In addition, we lead a large conservation education and outreach program that includes falcon nest cameras posted on our web site, training for volunteers who monitor peregrine falcons, and conservation education lectures for schools and community. SCPBRG is located at the Long Marine Laboratory and is affiliated with the Seymour Discovery Center. Web: www.scnbrg.org.

University of California High-Performance AstroComputing Center (UC-HiPACC)

Based at UCSC, this is a consortium of nine University of California campuses and three Department of Energy laboratories (Lawrence Berkeley National Laboratory, Lawrence Livermore Laboratory, and Los Alamos National Laboratory). The mission of UC-HiPACC is to foster collaborations among astronomers, computational astrophysicists, computer scientists, computer hardware engineers, and the builders and users of UC telescopes. The center supports activities that facilitate research collaborations and working groups of scientists from multiple UC campuses and labs pursuing joint projects in computational astrophysics and sponsors workshops and conferences on topics in computational astrophysics. The center also sponsors an annual summer school open to UC graduate students and postdocs as well as participants from around the world. Web: hipacc.ucsc.edu

Physical and Biological Sciences Division Research Facilities and Laboratories

Chemical Screening Center (CSC)

UCSC's CSC offers access to high-throughput screening technologies to speed the identification of small molecules that modulate biochemical or cellular processes and have the potential to alter disease states. The CSC maintains a suite of modern robotic instrumentation that permits high-throughput biochemical and cell-based screening of up to 50,000 compounds a day. In addition to targeted and known drug libraries purchased from commercial vendors, the CSC curates a growing collection of natural products. All libraries housed at UCSC are submitted to a panel of screens in diverse organisms, pairing each compound with a broad bioactivity profile. Active compounds are prioritized based on potency and phenotype, and target ID may be immediately pursued using affinity approaches. Through collaboration with UC investigators, the CSC aims to accelerate the path from new discoveries in biology to validated biological targets to provide novel small-molecule therapies for fighting diseases such as cancer, malaria, Parkinson's disease, and cholera. Web: <https://cscenter.pbsci.ucsc.edu/>

Climate Change and Impacts Laboratory (CCIL)

The CCIL is a computational facility sponsored by the National Science Foundation, the California Energy Commission, and UCSC. The facilities include a 32-processor (quad core) Dell PowerEdge M1000e supercomputer, numerous high-performance workstations, and multiterabyte data storage and backup facilities. The goals of CCIL are to calculate scenarios of likely future climate change and to investigate the possible impacts of climate change on the various dimensions of a given region, providing a multidisciplinary and multidimensional view of the possible effects of future climate change at regional scales. The current focus is concentrated on a region centered in California because of its complex topography, diverse microclimates and ecosystems, large and growing population, and vulnerability to water. CCIL members are scientists from the departments of Earth and Planetary Sciences, Ecology and Evolutionary Biology, Environmental Studies, Microbiology and Environmental Toxicology, and Ocean Sciences, and represent a wide range of expertise on aspects of California's human and natural systems. Web: ccil.ucsc.edu

Crustal Imaging Laboratory (CIL)

The CIL provides researchers with the sophisticated hardware and software resources necessary to perform high-resolution studies of the Earth's surface and outer layers. CIL facilities consist of a network of Linux and PC workstations, a variety of input/output and mass-storage devices, multichannel seismic interpretation packages, and remote sensing software. Research is focused on surface bathymetric and roughness mapping, 2D and 3D seismic-reflection imaging, hyperspectral and InSAR remote sensing, and quantitative geomorphology. Web: <http://eps.ucsc.edu/research/facilities/geophysical.html>

Earth System Modeling Laboratory

The laboratory is home to the Paleoclimate and Climate Change Research Group, which is presently focused on past and future climatic and environmental change, and hosts several national and international visitors each year. This research takes many forms and involves the use of various kinds of models and observations, as well as a wealth of paleoclimate proxy data from many marine and terrestrial locations. Computing facilities include a Dell PowerEdge M1000e Blade server with 16 PowerEdge M600 blades (2 quad core Xeon processors per blade), numerous high-performance workstations and servers, and multi-terabyte data storage and backup facilities. The computing resources are used for global and regional climate-modeling efforts and data analysis. Web: <http://eps.ucsc.edu/>

Electron Paramagnetic Resonance Facility

The facility is used to examine the structure and properties of metal-containing inorganic complexes, peptides, proteins, enzymes, nanoparticles, and biological membranes. The facility's Bruker ELEXSYS 580 X-band spectrometer operates in either continuous-wave or pulsed mode, with variable temperature control. A high-sensitivity Bruker EMX is especially useful for the limited sample sizes often encountered in biological studies. Web: biomedical.ucsc.edu/ESR.html

Hydrogeology Facilities

These facilities include hardware, software, and technical expertise applied to field sampling and measurements, lab analyses, and computer modeling. Hydrologic equipment and supplies include: a state-of-the-art particle size analyzer; autonomous field scale infiltration testing system; pressure and temperature data loggers; total station and other surveying equipment; dedicated hydrogeology field truck; flow meters and rain gauges, autonomous and networked conductivity, temperature, pressure, and water-content sensors; hydraulic and hand augers and other soil-sampling equipment; infiltrometers, lysimeters, piezometers, and tensiometers; and a borehole geophysical logging system. Lab space is dedicated to water and sediment analysis, including geotechnical and hydrologic testing of core samples. Outstanding analytical facilities are available throughout the Earth and Planetary Sciences and Ocean Sciences departments, and the Institute of Marine Sciences, including IC, ICP-OES, Latchet, and stable isotope mass spectrometers. These and additional capabilities at regional collaborator institutions allow for specialized analyses of water, sediment, and rock samples. A dedicated computing lab is equipped with fast workstations (Linux, PC, and Mac), portable (field) computers, printers (black and white, and color), a large-format plotter, scanners, and other devices and associated software for interfacing with field and lab instruments. Software includes public domain, commercial, and custom programs for coupled and multi-phase transport through soils and aquifers. Web: <http://es.ucsc.edu/%7eafisher/>

Life Sciences Microscopy Center

A core facility supported by California Institute for Regenerative Medicine (CIRM) and California Institute for Quantitative Biosciences (QB3), personalized assistance is provided on various aspects of imaging, from sample preparation to training on the shared microscopes and image analysis. The light microscopy facility is housed within the CIRM Shared Stem Cell Facility and supports the stem cell research community as well as other biomedical research. Light microscopy instrumentation includes widefield, single and multi-photon laser-scanning confocal, and spinning disk confocal microscopes as well as a live cell imaging scope. Electron microscopy instrumentation includes a Transmission Electron Microscope (TEM) which is a user-sponsored resource supervised by Professor Melissa Jurica. Web: <http://stemcell.soe.ucsc.edu/facilities/microscopy>

Macromolecular X-ray Crystallography Facility

The facility houses a state-of-the-art rotating-anode/imaging-plate X-ray crystallography

data collection suite, a cryosystem, and a collection of Apple, SGI and Linux computer workstations and software for crystallography data collection and computation, molecular visualization, and model building. UCSC scientists have used the facility to investigate the structure of the ribosome, catalytic RNA ("ribozymes"), the spliceosome, and protein structures relevant to cell-cycle regulation. Users of the facility also collaborate with the Lawrence Berkeley National Laboratory's Advanced Light Source synchrotron radiation facility and the Stanford Synchrotron Light Source. Web: biomedical.ucsc.edu/Xray.html

Marine Analytical Laboratories

The Marine Analytical labs are a part of the Institute of Marine Sciences at UC Santa Cruz (see [above](#)). They consist of a general access analytical facility for the support of research in the marine sciences. Scientific instruments and other equipment to aid research in marine chemistry, biology, geology, and environmental toxicology are housed in a central lab complex within the Earth and Marine Sciences Building. Analytical instrumentation; instruction in use of the equipment; consultation in experimental design, sampling, analysis, and data interpretation; and general assistance in all aspects of analytical science are available. Web: ims.ucsc.edu/mal

Mass Spectrometry Facility

Mass spectrometry is an analytical technique used to measure the mass-to-charge ratio of chemical ions. The facility currently houses two mass spectrometers: a Thermo Finnigan LC/MS/MS (LTQ) and an Ettan MALDI-TOF. This equipment is capable of determining the molecular weight of both small molecules and peptides, identifying proteins, and characterizing protein modifications. Web:

<http://www.chemistry.ucsc.edu/research/facilities/mass-spec.html>

Microarray Facility

Used for genome-wide splicing and expression analyses of diverse organisms, from microbes to humans, the facility supports both spotted microscope slide and Affymetrix microarray research. Equipment includes an Affymetrix GeneChip system, a robotic microscope slide arrayer, an Axon slide scanner, and a 96-channel automated liquid handler. The staff offers wet-lab expertise to investigators. Web:

biomedical.ucsc.edu/Microarray.html

Mineral Physics Laboratory

The properties of the materials that make up the Earth and other planets are probed in the Mineral Physics Laboratory. Specifically, we determine the phase equilibria and thermochemical and elastic properties of planetary materials at ultrahigh pressure (up to 150 GPa) and temperature (up to 6,000 K) of planetary interiors. High P-T conditions are generated using the diamond anvil cell coupled with laser heating. Presently, both Raman and infrared spectroscopic facilities are available for characterization of the structural and bonding properties of minerals and fluids in situ at pressures and temperatures characteristic of planetary interiors. In addition, we utilize state-of-the-art synchrotron x-ray sources at particle accelerators (primarily the Advanced Light Source at Lawrence Berkeley Labs) to determine the equations of state and phase equilibria of mineral assemblages relevant to the Earth's mantle and core. Our analytic and experimental capabilities are also deployed on projects that range from mineralogy and petrology to characterizations of archaeological materials. Web:

<http://eps.ucsc.edu/research/facilities/geophysical.html>

Molecular Ecology and Evolutionary Genetics Facility

The MEEG facility provides molecular technologies for analyses of the structure and dynamics of genetic diversity found in animal, plant, and microbial populations. The facility includes all equipment necessary for PCR and preparation of samples for cloning, microsatellite analysis and Sanger sequencing; a Qubit fluorometer, electrophoresis and imaging equipment, micropipettes, PCR machines, a fume hood, water baths, stir plates, a pH meter, a shaking incubator, a biosafety cabinet, microcentrifuges, vortexes, and a refrigerated microcentrifuge. The facility also maintains data analysis resources such as several computers and software licenses. Web:

http://bio.research.ucsc.edu/meeg/Welcome_to_the_MEEG_Facility/Welcome_to_the_MEEG.html

Nanosecond Time-resolved Laser Spectroscopy

The Department of Chemistry and Biochemistry maintains several laser spectroscopy systems capable of measuring time-resolved spectra from the far UV to the near IR regions. Various systems are optimized to measure nanosecond-resolution time-resolved absorption spectra, linear dichroism spectra, circular dichroism spectra, magnetic circular dichroism spectra, optical rotatory dispersion, or magnetic optical rotatory dispersion. Software is available to collect and analyze data to obtain kinetics and spectra of reaction intermediates from nanosecond to second time scales. These facilities are used in a wide variety of research, including photochemical and photobiological studies, examination of materials properties, examination of functional and folding mechanisms of peptides and proteins, and investigation of fast electron and proton transfer in proteins involved in mitochondrial and bacterial respiration. Web: biomedical.ucsc.edu/Laser.html

Nuclear Magnetic Resonance Facility

The NMR facility brings together an interdisciplinary group of researchers from the departments of Chemistry and Biochemistry, Microbiology and Environmental Toxicology, Molecular, Cell, and Developmental Biology, and Biomolecular Engineering. Ongoing research includes structural elucidation of anticancer and antiviral natural products isolated from marine organisms, organic intermediates for drug synthesis, specially designed peptide intermediates, and tumor suppress proteins. At present, the facility manages three high-resolution NMR spectrometers: two 3-channel Varian Unity+ 500s with direct and inverse detection probes and a Varian INOVA 600 system with a triple resonance cold-probe system. Initial funding came from the Lucille P. Markey Charitable Trust and the W. M. Keck Foundation, as well as individual research grants from the National Institutes of Health, the National Science Foundation, and other sources available to UCSC. Web: <http://nmr.ucsc.edu>

Paleomagnetism Laboratory

This lab is located in a remote building specially constructed with nonmagnetic materials and isolated from major sources of man-made magnetic noise. Inside this building, a magnetically shielded room houses a state-of-the-art superconducting magnetometer, a sensitive spinner magnetometer, thermal and alternating field demagnetizers, and paleointensity equipment. A second lab, devoted to the study of rock and mineral magnetic properties and housed in the Earth and Marine Sciences Building, contains another spinner magnetometer, devices for measuring Curie temperatures, magnetic susceptibility and its anisotropy, hysteresis loops, and computer facilities for data analysis and graphics. Web: <http://eps.ucsc.edu/research/facilities/geophysical.html>

Rock Preparation Facility

The facility is fully equipped to aid researchers in petrographic section making, rock crushing, sample sieving, and mineral separation. Web: <http://eps.ucsc.edu/research/facilities/geochem-rock.html#rock>

Scientific Diving and Boating Safety

The university's Diving Safety Program (DSP) is housed within the Institute of Marine Sciences, with offices at Long Marine Lab. Scuba diving and small boats are tools used in science classes and by UCSC faculty, staff, and student researchers in Monterey Bay and at study sites worldwide. In order to ensure safe scuba diving and scientific boating practices, DSP provides training and oversight for all scuba diving (scientific and recreational) and scientific boating activities conducted under UCSC auspices. The diving safety officer teaches Biology 75, Scientific Diving Certification, which is a prerequisite for all UCSC courses and research using scuba diving as a tool. DSP maintains a fleet of boats and diving equipment for researchers to use. DSP assists faculty, staff, and student researchers in complying with federal OSHA standards for scientific scuba diving. Anyone who needs to use scuba diving or small boats for scientific purposes should contact the DSP Office at srclabue@ucsc.edu. Web: www2.ucsc.edu/sci-diving

Recreational diving opportunities offered by the Office of Physical Education, Recreation, and Sports (OPERS) include numerous scuba courses and the Scuba Club. Web: <http://www.ucsc.edu/opers/scuba>

Stable Isotope Laboratory

program in environmental studies includes a focus on agroecology and sustainable food systems (see [Environmental Studies](#)); graduate students have access to CASFS facilities for field-based work. Students have also pursued undergraduate and graduate studies with CASFS by working through the Departments of Biology, Education, Anthropology, and Sociology. UCSC faculty and other researchers have access to CASFS facilities for field-based research (see [Research Opportunities](#)).

In conjunction with student and faculty representatives, CASFS also coordinates activities funded by UCSC's Measure 43, the Sustainable Food, Health and Wellness Initiative. Measure 43 supports research and education grants to UCSC undergraduate students, on-campus events and speakers, and a variety of educational programming for UCSC undergraduates, such as the Food Systems Learning Journeys offered through the OPERS Recreation program. To read more about Measure 43 opportunities, please see <http://casfs.ucsc.edu/farm-to-college/measure-43-initiative/index.html>.

In addition, approximately 40 people complete a six-month apprenticeship organized and taught by CASFS staff each year, earning a Certificate in Ecological Horticulture through UCSC Extension. Through workshops, lectures, and hands-on instruction, apprentices master basic organic farming, gardening and direct marketing techniques, and learn about food systems issues.

CASFS gives high priority to forging links with, and serving as a resource for, researchers on and off campus, government agencies at many levels, nongovernmental organizations, producers, consumers, students, gardeners, and other individuals interested in multiple aspects of sustainable agriculture and food systems. Staff coordinate conferences, teach short courses, and make presentations at agricultural and food systems events.

CASFS manages two facilities: the 30-acre Farm on a lower meadow of campus and the three-acre Alan Chadwick Garden on the upper part of campus. As the primary on-campus research facility, the CASFS Farm includes research plots, raised-bed gardens, row crops, and orchards, as well as staff offices, a laboratory, greenhouses, and a visitor center. The Chadwick Garden showcases small-scale intensive horticulture and supports a diverse collection of ornamentals, vegetable crops, fruit trees, and native California plants.

The CASFS Farm and Alan Chadwick Garden are open to the public daily from 8 a.m. to 6 p.m. In conjunction with the Friends of the UCSC Farm and Garden, CASFS sponsors a variety of public education events for the community, including an active docent program offering tours of the facilities. For further information, contact CASFS at (831) 459-3240 or casfs@ucsc.edu; for directions to the Farm and Garden, call (831) 459-4140. Web: casfs.ucsc.edu.

Center for Educational Research in the Interest of Underserved Students (CERIUS)

CERIUS develops, conducts, and disseminates educational research to improve the teaching and learning of the nation's increasingly diverse student population and the teachers who serve them. The center is transdisciplinary, drawing on studies of education from multiple theoretical perspectives. CERIUS serves as a hub to integrate the work of scholars who are organized in research groups focusing on three research domains:

- Teachers and Teacher Development
- Literacy Education
- Science, Technology, Engineering, and Mathematics (STEM) Education

Taken together, the research conducted by faculty, graduate students, and academic researchers under the auspices of CERIUS aims to reinvent the institutional and organizational settings for education in order to meet the educational needs of students from underserved communities. CERIUS pursues extramural sources of funding to support its research and other scholarly activities. For information, e-mail rtogawa@ucsc.edu.

Center for Global, International and Regional Studies (CGIRS)

[The Center for Global, International and Regional Studies \(CGIRS\)](#), established in 1996 through a merger of the Global Transformations ORU and the IGCC-funded Stevenson College Program on Global Security, is the primary center for the study of international

affairs at UCSC. CGIRS is also the institutional home for the Everett Program, the administrative office for the systemwide UC Pacific Rim Research Program, and the campus affiliate for the Institute on Global Conflict and Cooperation.

CGIRS and its affiliates work to seek better understanding of the complex issues surrounding the environmental, economic, social and political structures of the 21st century, through innovative, thoughtful, and critical faculty research, undergraduate curricula, public outreach, and policy analysis and action. Its programs and activities recognize that contemporary societies are anchored in specific regions and locales even as they are also linked to other places and levels by complex political, economic, social, and cultural networks of communication and action. For further information, contact CGIRS at (831) 459-2833 or e-mail global@ucsc.edu or elnish@ucsc.edu. Web: cgirs.ucsc.edu

Center for Integrated Water Research (CIWR)

The [Center for Integrated Water Research](#) at UC Santa Cruz undertakes research on policy, economics, and communications issues related to fresh water supply. Fresh water is critical to our health and quality of life, to providing ample food supplies, to maintaining a vibrant economy, and to supporting the environmental systems we depend on and enjoy. Billions of dollars and millions of skilled workers are employed in the water sector. Policies on fresh-water management have profound impacts that can last for decades.

Water supply challenges in the early 21st century include meeting growing demand from all categories of water users, replacing and upgrading aging infrastructure, reversing declines in water quality, and adapting to climate and groundcover that affect water availability and quality.

To meet these challenges, society has developed an array of new water treatment and supply technologies, as well as new approaches to managing when and how water is gathered and used. Some water treatment technologies are so innovative they do not fit in well with our existing laws and regulations, so regulatory adaptation is necessary.

The center serves the UCSC campus by providing internship opportunities and supporting conference attendance by students. It develops and maintains relations with individuals in the business, finance, and regulatory sectors who often lecture at UCSC, thereby helping students learn about cutting-edge issues. The center also collaborates with local water agencies to provide innovative teaching and training programs, including WaterLab, the Water Teaching and Research Laboratory, a collaboration with the Watsonville Water Resources Center, which trains students to operate advanced water treatment systems.

Further information is available on the web at <http://ciwr.ucsc.edu>, by e-mail at bhaddad@ucsc.edu, or by phone at (831) 459-4149.

Chicano/Latino Research Center (CLRC)

Since 1992, the [Chicano Latino Research Center \(CLRC\)](#) has helped make UC Santa Cruz a vibrant hub for Chicano, Latino, Latin American, and migration studies. Drawing from and bringing together the social sciences, humanities, and arts, the center's work explores the diversity of the Americas, with a focus on the mobility of people, ideas, and commodities. The CLRC addresses questions related to class, economics, education, embodiment, everyday cultures, gender, identities, indigeneity, labor, language, nation, place, politics, policy, race, representation, sexuality, social movements, the state, and statelessness.

A forum for investigation and exchange, the CLRC hosts conferences, symposia, workshops, public lectures, and film screenings by UCSC faculty and students, community members, and visitors to UC Santa Cruz. We sponsor [Research Clusters](#) on topics proposed by UCSC faculty and students, distribute [Individual Faculty Research Awards](#) and [Graduate Student Mini-grants](#), and co-administer the [Lionel Cantú Memorial Award](#) with the Latin American and Latino Studies and Sociology departments. With the center's support, CLRC affiliates have produced numerous publications, including single-authored books, edited volumes, [research reports, and working papers](#). In addition, the CLRC helps prepare UCSC students for an increasingly diverse, complex, and changing world by providing them with mentorship and hands-on research experience via our [Undergraduate Research Apprenticeship Program](#).

Center for Learning Architecture-Silicon Valley

The Center for Learning Architecture–Silicon Valley (CLA–SV) was established in 2013 as a partnership between the University of California, Santa Cruz (UCSC) and the National Laboratory for Education

Transformation (NLET). CLA–SV joins cross–disciplinary teams of researchers with community agencies and industry in the region to employ information technology to transform education.

CLA–SV designs systems that foster deep, personalized learning for all students—with an emphasis on students from underserved communities—by integrating cutting–edge technologies with contemporary forms of social organization. Combined with advanced data analytics, these responsive, instructional platforms support learning activities that enhance student engagement and academic outcomes.

Multidisciplinary teams from UCSC, which involve social sciences and engineering, conduct research to:

- Understand human and social factors that influence learning;
- Advance technologies that facilitate learning; and
- Develop data–analytic techniques applicable to solving educational problems.

For information about CLA–SV, please contact its Director, Rodney Ogawa at rrogawa@ucsc.edu

Institute for Scientist and Engineer Educators (ISEE)

The [Institute for Scientist and Engineer Educators \(ISEE\)](#), an innovative initiative at UC Santa Cruz, will prepare science and engineering (S&E) graduate students for their educational role as future faculty members, and a wide range of other science and engineering careers requiring teaching skills.

Web: isee.ucsc.edu

Santa Cruz Institute for International Economics (SCIIE)

Home to the largest number of international economists at any American public university, the [Santa Cruz Institute for International Economics \(SCIIE\)](#) facilitates scholarly collaboration to further knowledge and debate on global economics and policies. An annual conference draws participation from leading academicians, researchers, and financial professionals.

Web: sciie.ucsc.edu

Social Sciences Division Research Facilities

CineMedia Project (CMP)

This is a noncirculating research archive dedicated to the study of Latin American and Latino film and video. The CMP film, video, and DVD holdings are located in Crown 206. The CMP books, journals, and files are located in Crown 123, and are available by contacting the LALS Department. Visit us at <http://lals.ucsc.edu/research/research-groups.html>.

Center for Integrated Spatial Research (CISR)

One of the most exciting developments in research over the past decade has been the increasing sophistication of spatial technology, along with a dramatic increase in the availability of spatially referenced data. Spatial technology is an information technology field that acquires, manages, interprets, integrates, displays, analyzes, or otherwise uses data focusing on the geographic, temporal, and spatial context. Today, spatial technology is recognized as the primary means of dealing with information referenced to a specific location and is being integrated across a broad range of disciplines.

CISR (pronounced “scissor”) is located in the Department of Environmental Studies, Division of Social Sciences, and serves as a central facility for spatially focused research and training at UCSC. CISR is focused on integrating advanced spatial technology, methods, and data (geographic information systems—GIS, global positioning systems—GPS, remote sensing, spatial modeling and statistics) with interdisciplinary research challenges in terrestrial, marine, and urban environments. The central goal of the center is to foster cross–domain

cooperation in the application of these tools and to promote a diversity of research by increasing campus and community literacy in spatial methods.

CISR manages both a research and teaching facility specializing in state-of-the-art spatial technology, software applications, and data, as well as, an expanded training program. Training options include three academic courses focused on spatial theory and methods (see Environmental Studies course listing); short courses through a professional development certificate program in GIS; and regular workshops and symposia. Access to CISR facilities is limited to current UCSC students, faculty, researchers or staff involved in spatial research and/or courses through the CISR. Web: spatial.cisr.ucsc.edu

Life Lab Science Program

Life Lab helps bring learning to life in a garden through curriculum, professional development, and innovative programs at our Garden Classroom site, located on the UCSC Farm. Web: <http://www.lifelab.org>

Museum of Natural History Collections (MNHC)

MNHC is dedicated to cultivating an increased understanding and appreciation of the natural world by promoting the use of its natural science collections for teaching, research, and aesthetics. The museum, part of the Environmental Studies Department, is the main repository for natural science collections at UC Santa Cruz. Collections include specimens of plants, fungi, insects, fishes, amphibians, reptiles, birds, and mammals. Web: mnhc.ucsc.edu

Physical Anthropology and Archaeology Laboratories

These laboratories are dedicated to teaching and research in both anthropological archaeology and physical (biological) anthropology. Within the labs are spaces for the study of ceramics, lithics, household archaeology, spatial archaeology (including GIS), zooarchaeology, comparative anatomy and osteology, and forensic anthropology. The laboratories maintain collections related to local Monterey Bay archaeology, as well as comparative vertebrate osteology and taphonomic specimens. Web: anthro.ucsc.edu/labs/

UCSC Farm and Alan Chadwick Garden

The Center for Agroecology and Sustainable Food Systems (CASFS) manages the 30-acre UCSC Farm and 3-acre Alan Chadwick Garden for research, education and public service activities. These unique campus and community resources use organic practices and are certified by the California Certified Organic Farmers (CCOF).

The Center's Farm and Garden facilities are available to faculty, staff, and students interested in pursuing field or laboratory research, and for use by classes. Researchers from other institutions, such as Cooperative Extension, may also collaborate on Center research projects or propose new projects. For more information, contact CASFS at 831.459-3604 or by email. Web: casfs.ucsc.edu/about/facilities

For more information on the UCSC Farm and the Alan Chadwick Garden, please see:

<http://casfs.ucsc.edu/about/facilities.html>

UCSC Greenhouses

UCSC Greenhouses is a core support facility used primarily for instructional and research programs for the departments of [Ecology and Evolutionary Biology](#) (EEB) and [Environmental Studies](#) (ENVS). UCSC Greenhouses is comprised of three separate growing areas all located on the roofs of buildings on Science Hill in the center of the UC Santa Cruz campus. More information on UCSC Greenhouses can be found at: greenhouse.ucsc.edu.

Social Sciences Division Research Activities

Bruce Initiative on Rethinking Capitalism

The [Bruce Initiative on Rethinking Capitalism](#) aims to connect those who are technically adept at the new financial technologies with scholars of culture, institutions, ethics and theology. Original research in political economy and the social study of finance is supported. Founded in the wake of the recent economic turmoil, the goal of Rethinking Capitalism is to reconsider the liquidity crisis and imagine what comes after. What distinguishes this project is the foundational premise that exploring the full range of

“capitalist futures” requires a critical, multidisciplinary understanding of derivatives, speculation and financial markets. The Project aspires to create conceptual and empirical tools of economic practice and regulation, both locally and globally, that give capitalism a future that may diverge from its past. This triple commitment: to advance interdisciplinary research on political economy and finance; to foster a community of academics, regulators, and practitioners; and to promulgate the best ideas in this emerging field to broader audiences entails an ambitious program to disseminate intellectual content through various media. Web: rethinkingcapitalism.ucsc.edu

Center for Collaborative Research for an Equitable California (CCREC)

The [Center for Collaborative Research for an Equitable California](http://ccrec.ucsc.edu) (CCREC) was established in 2009 by the UC Office of the President as part of a program designed to support multi-campus research initiatives that focus on topics critical to the state of California. CCREC brings together university researchers, community leaders, and policymakers to seek community-driven solutions to the state's interconnected crises in the economy, education, employment, health, nutrition, housing, and the environment. Based at UC Santa Cruz with affiliated research centers and faculty fellows at the other nine UC campuses, CCREC repositions the University of California to confront complex interrelated problems from an interdisciplinary perspective. CCREC provides seed and development funding for innovative projects, incubates regional-scale projects demonstrating best practices in equity-oriented, collaborative, community-based research, and supports UC graduate students and early career scholars to disseminate their work. CCREC is helping to establish national standards for the distinctive ethical quandaries of collaborative research, and it also fosters data- and research-based public deliberations on matters of significance for a democratic society. Web: ccrec.ucsc.edu/

Center for Informal Learning and Schools (CILS)

The [Center for Informal Learning and Schools](http://cils.exploratorium.edu) (CILS) is focused on the strengthening of K-12 science education through broadening the understanding of learning in both formal and informal environments. Funded by the National Science Foundation, CILS is a collaboration between the University of California Santa Cruz, the Exploratorium, and Kings College London. Web: cils.exploratorium.edu

Center for Labor Studies (CLS)

The UCSC [Center for Labor Studies](http://labor.ihr.ucsc.edu), founded in 2007, is dedicated to the study of working people, the labor movement, and the challenge of the broader global economy as it impacts the working people of California and beyond. Through conferences, workshops, public lectures, and a range of guest speakers, in particular, on the relationship between the labor movement, social movements, and democratic practices; on gender, race, and ethnic dynamics; and on labor activism in international context. Web: labor.ihr.ucsc.edu

Center for Statistical Analysis in Social Sciences (CSASS)

Founded in 2012, CSASS, is administered by the Division of Social Sciences. Its mission is to facilitate the use and training of statistical, psychometric, and computational methods in social science research within the context of research designs represented by the division's academic departments of Anthropology, Economics, Education, Environmental Studies, Latin America and Latino Studies, Politics, Psychology, and Sociology. CSASS provides statistical and methodological support to the research missions of all departments within the Division of Social Sciences by providing free statistical consulting and quantitative training workshops. Web: csass.ucsc.edu

Center for Tropical Research in Ecology, Agriculture, and Development (CenTREAD)

The goal of the [Center for Tropical Research in Ecology, Agriculture, and Development](http://centread.ucsc.edu) (CenTREAD) is to foster interdisciplinary research and training to understand tropical environmental issues and develop ecologically-based, economically viable, culturally respectful, nonexploitative solutions that serve as a foundation for future generations. For more information, see: <http://centread.ucsc.edu/>

Learning and Experimental Economics Projects of Santa Cruz (LEEPS)

[Learning and Experimental Economics Projects of Santa Cruz \(LEEPS\)](http://leeps.ucsc.edu) began operation in

1986 with the Double Auction Asset Market, the world's second fully computerized market system. The lab is run by economists at UCSC and elsewhere who conduct research on individual decision-making as well as strategic interaction and market design. Funding is mainly from the National Science Foundation, with occasional support from industry and nonprofits. Web: <http://leeps.ucsc.edu/home/>

Science and Justice Research Center

The [Science and Justice Research Center](#) brings together faculty and graduate students from all five academic divisions on the UC Santa Cruz campus to collaboratively address common problems. As science and technology increasingly shape our lives, the Science and Justice community generates modes of inquiry and empirically rigorous research that can enable a diversity of livable techno-scientific worlds. UCSC's innovative initiative in Science and Justice is funded by the university and the U.S. National Science Foundation and is increasingly recognized nationally and internationally for its leading role in developing new forms of inquiry and action at the intersection of science and society. The initiative builds on the UCSC campus' historic commitments to social justice and strengths in science studies and interdisciplinary research. Web: <http://scijust.ucsc.edu/>

South Asia Studies Initiative

UC Santa Cruz is the University of California campus that meets the needs of Silicon Valley, including the vibrant South Asian diaspora that has contributed to the region's innovations and economic growth. An important aspect of the campus's educational mission is creating a major new South Asia Studies Center with global visibility, contributing to understanding not only South Asia's priceless heritage, but also its future trajectory. The center will focus particularly on India's new role as a leading participant in the world economy, including its emergence as a source of management expertise, entrepreneurship, capital, and innovation. The initiative is a campuswide collaboration that builds on existing initiatives and research from multiple disciplines and in strong partnership with the region's South Asian community. The initiative hosts an India public lecture series, featuring speakers from around the world focusing on issues of science, technology, economics, and politics in India and the region. For additional information, please contact the Assistant to the Dean of Social Sciences at (831) 459-2919. Web: <http://southasia.ucsc.edu/>

Sury Initiative on Global Finance and International Risk Management (SIGFIRM)

The [Sury Initiative on Global Finance and International Risk Management \(SIGFIRM\)](#) seeks to become a world class research center for the design, development, and dissemination of new investment and risk management strategies, techniques, and policies. Web: <http://sigfirm.ucsc.edu/>

Interdisciplinary and Systemwide Research Programs and Resources

Arboretum

The [Arboretum](#) at UCSC is a research and teaching facility committed to plant conservation that serves both the campus and the public. Its rich and diverse collection, containing representatives of more than 300 plant families, provides beginning students with a broad survey of the plant kingdom. Facilities for growing plants offer students and research faculty opportunities to experiment with living plants. The Arboretum maintains collections of rare and threatened plants of unusual scientific interest. Particular specialties include world conifers, primitive angiosperms, and native succulents. Large assemblages of plants from Australia, New Zealand, and South Africa, and California are displayed on the grounds. Many of the species in these collections are not otherwise available for study in American botanical gardens and arboreta.

Arboretum events educate and engage the public about plant diversity and conservation. The Arboretum's activities in importing, selecting, and breeding choice ornamental plants, especially those that are drought tolerant and pest resistant, are of service to the public and nursery industry. To date, the Arboretum has selected from the wild in California or imported more than 1,500 different selections of choice ornamentals. Many of these have been and will continue to be the plants of future California gardens. The Arboretum is open 9 a.m. to 5 p.m. daily. Admission is free to UCSC students.

Norrie's, the Arboretum's volunteer-run gift shop, supports the Arboretum and is open every day, 10 a.m. to 4 p.m.

Arboretum: (831) 427-2998; Norrie's gift shop: (831) 423-4977; e-mail: arboretum@ucsc.edu; Web: arboretum.ucsc.edu. Facebook: UC Santa Cruz Arboretum and Norrie's.

California Carlyle Edition

UCSC's Humanities Division is the focus of an exciting and innovative effort by an international group of scholars to publish an eight-volume critical edition of Thomas Carlyle's major works. Headquartered at UCSC, it is the first "scientific" edition of Carlyle, using computer technology to compare all the lifetime editions of each work in order to establish an accurate text, as well as providing explanatory notes for the modern reader.

The edition promises to set the agenda for work on Carlyle and the Victorian era for the next generation. In addition to producing a much needed critical edition of the works of Carlyle, the project is using the campus's computer facilities to develop and demonstrate many state-of-the-art applications of data-processing technology in the humanities, from optical scanning of some editions and machine-assisted collation and proofreading, to desktop typesetting and the creation of an online Carlyle textual archive. The first volume, *On Heroes, Hero Worship, and the Heroic in History*, was published in 1993 by the University of California Press. The second volume, *Sartor Resartus*, was published in 2000, followed by *Historical Essays*, in 2003, and *Past and Present*, in 2006. *The French Revolution* is forthcoming. Web: <http://www3.nd.edu/~carlyle/strouse.html>

California Institute for Quantitative Biosciences (QB3)

One of four California Institutes for Science and Innovation, QB3 is a multi-disciplinary research institute at the University of California created to drive the state's economy and improve the quality of life for its residents. QB3's domain is the quantitative biosciences, in which scientists take on challenges in molecular biology using the techniques of physics, chemistry, and computer sciences. The QB3 faculty members—professors at UC Berkeley, UC San Francisco, and UC Santa Cruz—publish regularly in top academic journals, patent their discoveries, and launch spinoff companies. QB3 brings scientists together across disciplines, connects industry and academia in mutually beneficial partnerships, and helps entrepreneurs start successful companies. At UC Santa Cruz, QB3 is run by the Center for Biomolecular Science and Engineering. Web: <https://qb3.soe.ucsc.edu/>

Center for Biomolecular Science and Engineering (CBSE)

CBSE promotes and supports genomic and stem cell research, technology innovation, and education. An umbrella organization of UCSC's Jack Baskin School of Engineering and the Division of Physical and Biological Sciences, the center supports a vast array of biological and engineering research that is fueling biomedical advances and the biotechnology explosion. CBSE started in 2000, when UCSC scientists helped the Human Genome Project reach a stunning milestone by providing the computational solution that produced the first assembly of the human genome, the map of our genetic make-up. This early accomplishment evolved the widely used UCSC Genome Browser, followed by the UCSC Cancer Genomics Browser. Much of the research combines cutting-edge computational approaches with laboratory experimentation. In addition, through collaboration with affiliates in sociology, the center supports the exploration of the ethical, legal, and social implications of genome research.

Web: <http://cbse.soe.ucsc.edu/>

Center for Information Technology Research in the Interest of Society (CITRIS)

CITRIS was created to "shorten the pipeline" between world-class laboratory research and the creation of start-ups, larger companies, and whole industries. CITRIS facilitates partnerships and collaborations among more than 300 faculty members and thousands of students from numerous departments at four University of California campuses (Berkeley, Davis, Merced, and Santa Cruz) with industrial researchers from over 60 corporations. Together, the groups are thinking about information technology in ways it's never been thought of before.

CITRIS works to find solutions to many of the concerns that face all of us today, from monitoring the environment and finding viable, sustainable energy alternatives, to simplifying health care delivery and developing secure systems for electronic medical records and remote diagnosis, all of which will ultimately boost economic productivity. CITRIS represents a bold and exciting vision that leverages one of the top university systems in the world with highly successful corporate partners and government resources. Web: www.citris-uc.org

Educational Partnership Center (EPC)

Established in 1999, the EPC coordinates UCSC's new and long-standing student academic preparation efforts with the goal of increasing access and opportunity to postsecondary education for students in the Monterey Bay and Silicon Valley/San Jose regions. EPC is an umbrella organization for a variety of complementary, integrated academic preparation and educational partnership programs serving students, teachers, and families from middle through high school. To build a college-going culture, EPC partners with K-12 districts in Santa Clara, Santa Cruz, and Monterey Counties to help students and families navigate the college-going pathway and achieve their higher-education goals.

EPC's mission is to equip students with the knowledge, tools, and support network to navigate the academic pipeline and advance toward higher education. EPC offers college and academic prep services and materials that motivate and empower students of diverse backgrounds to seek and achieve a college education. EPC provides an array of direct services and programs to support students on the college-going pathway through tutoring, mentoring, academic planning and counseling, leadership training, test preparation, college awareness and enrichment, family involvement initiatives, and teacher professional development.

EPC's key to success is providing an integrated services model that brings all of the student academic preparation programs together and creates synergy across programs that are each grounded in measurable goals and research-based best practices. Coordinating services across middle and high school programs has been essential to providing students and families with vital information on the various pathways to college. EPC programs include:

California Reading and Literature Project (CRLP) is one of nine California subject-matter projects. It supports professional development opportunities for teachers in pre-K-12 classrooms. Governed by the UC Office of the President, CRLP supports pre-K-12 students in the Monterey Bay region in achieving the highest standards of academic performance by developing teachers' content knowledge and expanding their teaching strategies, focusing on academic English language development to prepare all students to meet or exceed academic content standards. CRLP creates a statewide pool of expert teacher-leaders to train other teachers on sound classroom practices, and also links universities, schools, and districts together in collaborative partnerships to improve teaching and learning through teacher professional development.

California State Summer School for Mathematics and Science (COSMOS) is a four-week summer residential program at four UC campuses that provides students with an unparalleled opportunity to work side-by-side with outstanding researchers and university faculty, covering topics that extend beyond the typical high school curriculum. The academic experience includes nine clusters taught by UCSC faculty, special discovery lectures, academic field trips, and enrichment sessions. Students' residential life includes weekend events and fun-filled peer activities, and COSMOS alumni have opportunities to attend the California Nobel Laureate event, receive research awards and college scholarships, and participate in an industry internship program.

California Student Opportunity and Access Program (Cal-SOAP) is a vital component in California's effort to build an educated workforce for the 21st century by providing college, career, and financial aid assistance to traditionally non-college-going students. The program was established by the California Legislature in 1978 and is administered by the California Student Aid Commission. Statewide projects support the Commission's objective "to make education beyond high school financially accessible to all Californians." The project sustains and enhances the work of K-12, college, and university partners and increases the value and reach of other important federal and state college preparation

programs. Cal-SOAP communicates important information about financial aid, postsecondary opportunities, and career technical education. San José Cal-SOAP provides academic tutoring, peer mentoring, college and career advisement, college access and admissions counseling, SAT/ACT test preparation, college tours and financial aid workshops and grants. In addition, the San José Cal-SOAP Consortium convenes key stakeholders from higher education institutions, K-12 districts, county offices of education, the City of San Jose, and community agencies and businesses to collaboratively develop and implement academic preparation activities to maximize resources and avoid duplication of efforts.

Early Academic Outreach Program (EAOP) is the University of California's largest academic preparation program. EAOP works with students at underserved schools to prepare for postsecondary educational opportunities, complete all UC/CSU eligibility requirements, and apply for college and financial aid. EAOP partners with families, schools, and communities to make college dreams a reality and provides a variety of year-round services designed to increase the academic preparation, awareness, and motivation of high school students toward higher education and to inform parents about available education opportunities.

Gaining Early Awareness and Readiness for Undergraduate Programs (GEAR UP) is a federally funded discretionary grant program designed to increase the number of low-income students who are prepared to enter and succeed in postsecondary education. Through the collaborative efforts of school and district partners, along with additional business and community partners, GEAR UP provides critical academic preparation and support for students and families to help them navigate the college-going pathway. GEAR UP partnerships supplement existing school reform efforts and use research-proven practices to promote academic rigor and student achievement. The program brings much-needed resources to increase student academic performance and preparation for college, increase student and family college awareness, increase teachers' capacity to prepare students for college, and create a college-going culture within the broader community. EPC provides a variety of school-based academic services in its two GEAR UP partnerships in Watsonville/Pájaro Valley and south Monterey County.

The Mathematics, Engineering, Science Achievement (MESA) Schools Program provides academic development for middle and high school students to prepare them for success in baccalaureate degree programs in STEM (Science, Technology, Engineering, Mathematics) majors. The MESA Schools Program works in partnership with the MESA Community College and MESA Engineering Programs, which support students after high school along college and career pathways. The primary goal of the MESA Schools Program is to support educationally disadvantaged students through fun-filled, hands-on projects and other college awareness activities to promote STEM college and career opportunities. The UCSC MESA program provides STEM academic support and enrichment, college knowledge, parent leadership, and teacher professional development to students, families, teachers, and partner schools in Santa Cruz and Monterey counties. The annual MESA Day Preliminary Competition brings hundreds of students to campus to compete against their peers in a variety of science, math, and engineering events.

EPC is located at the UCSC campus at the Oakes College Administrative Offices. For more information, call (831) 459-3500 or visit online at <http://epc.ucsc.edu>.

Monterey Bay Education, Science, and Technology (MBEST) Center

UCSC has played a leading role in the development of a multi-institutional center for science, technology, education, and policy—the MBEST Center—as a cornerstone of the Fort Ord defense conversion redevelopment plan.

The mission of the MBEST Center is to promote collaborative interaction among private businesses, government research agencies, public and private education and research institutions, and policy makers in strategic alliances to address the environmental opportunities and challenges of the new millennium.

In 1994, about 1,100 acres at the former Fort Ord Military Reservation were conveyed to the University of California. Of that land, 479 acres are available for development, and 605 acres of adjacent natural habitat are now part of the UC Natural Reserve System. Investments in roadway and utilities infrastructure have been completed, making 55 acres of real estate ready for development. In addition, the UC MBEST Center headquarters was

constructed and a high-technology business incubator was established in 2001.

Information about the center is available from the UC MBEST Center Office, 3180 Imjin Road, Suite 104, Marina, CA 93933, (831) 402-2165; via e-mail: info@ucmbest.org; Web: www.ucmbest.org

Santa Cruz Institute for Particle Physics (SCIPP)

Research in high-energy particle physics and astrophysics is done in the setting of an Organized Research Unit, the Santa Cruz Institute for Particle Physics (SCIPP). With approximately two dozen faculty from the Department of Physics, the Department of Astronomy and Astrophysics, and SCIPP appointments, plus post-docs, research staff, students, visitors, and administrative staff, SCIPP is home to vibrant and evolving research in experimental and theoretical particle physics and particle astrophysics. An especially exciting aspect of work in SCIPP is the productive interaction among the different research groups, including the close connections between theoretical and experimental work on topics such as measurements of the Higgs boson, searches for supersymmetry, the nature of dark matter, tests of fundamental physics, and a wide variety of high-energy phenomena on the ground, in the atmosphere, and in space.

SCIPP faculty, research staff, students, engineers, and technicians play major roles in experiments at the frontier accelerator laboratories in the world, including CERN (the European Organization for Nuclear Research), as well as in a variety of experiments that do not involve terrestrial accelerators, to answer the most important questions in particle physics and high energy astrophysics. These efforts usually include groundbreaking work on the technologies needed to advance this research. SCIPP is recognized as a world leader in the development of custom readout electronics and silicon micro-strip sensors for state-of-the-art particle detection systems. Always creating new opportunities, SCIPP personnel are also pursuing the application of these technologies to other scientific fields such as neurophysiology and biomedicine.

The research interests of the SCIPP Theory Group fall into two broad topical categories: (1) Theory and phenomenology of high-energy particles, with an emphasis on physics beyond the Standard Model of particle physics, and (2) Theoretical astrophysics and cosmology. High-energy particle physics is an excellent example of the close connections between the Theory Group and SCIPP experimental or observational efforts, especially with the Large Hadron Collider at CERN, planning for future international colliders, and the Fermi Gamma-ray Space Telescope, to which faculty and students have contributed many of the key early studies and publications. Theoretical cosmology studies on dark energy, dark matter, and structure formation and evolution are key to the SCIPP involvement in the Dark Energy Survey and future large surveys.

Graduate and undergraduate students take part in essentially all SCIPP projects, finding many opportunities for thesis work, independent study, and part-time employment. Students also gain experience in electronics, computer-aided design (CAD), large-scale scientific computing, instrumentation, and data analysis. The work by students in both theory and experiment often results in highly cited scientific journal publications. Web: scipp.ucsc.edu

University Affiliated Research Center (UARC)

Under an extended 10-year, \$330 million research contract between NASA and the University of California, which began in September 2003, UC Santa Cruz is leading the UC-wide UARC at NASA Ames. The UARC was established to increase the safety, effectiveness, and scientific impact of NASA's missions through the infusion of new technologies and research knowledge. The UARC's primary mission is to perform mission-driven multi-disciplinary, integrative research and technology development that supports NASA's long-term program requirements.

UARC research, which takes place at the NASA Ames's Moffett Field facility as well as at several UC campuses, focuses on multidisciplinary research in the following areas:

- Aerospace Systems
- Earth Science
- Information Technology and Computer Sciences

- Quantum Computing
- Space Sciences
- Biological Sciences and Synthetic Biology
- Nano Sciences

In addition to task-based support provided by a team of scientists, engineers and support staff, the UARC engages in two education programs. Our Aligned Research Program (ARP) funds research by University of California faculty and students working in collaboration with NASA Ames scientists on projects directly aligned with NASA's priorities. The Systems Teaching Institute (STI) provides opportunities for students to work alongside university and Ames researchers, enhancing their educational experiences while training them to become world-class 21st-century scientists, engineers, and educators. By efficiently collaborating with organizations that are the best in their fields, the UARC is able to deliver excellence-driven research, while training the scientists of tomorrow. Web: uarc.ucsc.edu

University of California Observatories (UCO)

UCO astronomers became partners with California Institute of Technology astronomers to operate and provide instruments for the W. M. Keck Observatory, located at the summit of Mauna Kea in Hawaii. The two Keck 10-meter telescopes began operating in 1993 and 1996. These are the largest and most capable optical/IR telescopes in the world.

UCO astronomers became partners with California Institute of Technology astronomers to operate and provide instruments for the W. M. Keck Observatory, located at the summit of Mauna Kea in Hawaii. The two Keck 10-meter telescopes began operating in 1993 and 1996. These are the largest and most capable optical/IR telescopes in the world.

In 1988 the Regents established an organization to manage the university's ground-based optical and infrared observatories as a single unit. Known as the University of California Observatories (UCO), the organization includes Lick Observatory and UC's component of the Keck Observatory and is headquartered at UCSC. UCO plays a large role in the Keck enterprise: both of the Keck telescopes' secondary mirrors were polished in the optical laboratory at Santa Cruz, and the high-resolution echelle spectrograph (HIRES), designed and constructed in the instrument-development laboratories here, was the first Keck instrument to become fully operational. The laboratories have also designed and constructed instruments for the second Keck telescope, including a powerful optical imager and multi-object spectrograph (DEIMOS) and a higher-resolution echelle optical spectrograph and imager (ESI). Web: www.ucolick.org

As resident members of the Santa Cruz faculty, the UCO staff are members of UCSC's Department of Astronomy and Astrophysics, which offers the graduate program in astronomy and astrophysics and an undergraduate minor (see [Astronomy and Astrophysics](#)). B.S. degrees in astrophysics are offered through the Physics Department (see [Physics](#)). The UCO laboratories are located on campus, as are optical, electronics, engineering, programming, and detector/instrument-development groups. There are resources for measurement, analysis, and computation of data on campus as well.

The telescopes and accompanying facilities on the 3,762-acre reservation on Mt. Hamilton east of San Jose are operated as an observatory, with observers either commuting to use the facility in person or using remote control rooms available at UCSC and at UCLA. Telescopes include the Lick 36-inch refractor, the CAT 24-inch and Nickel 40-inch reflectors, and the Katzman 30-inch robotic reflector, dedicated to searching for supernovas. The newest and now-operational telescope is the 94-inch Automated Planet Finder (APF), which is one of the world's most sensitive for discovering Earth-like planets among the stars. The largest and most powerful of the Lick telescopes is the Shane 120-inch reflector, which was completed in 1959 and remains one of the world's most productive telescopes. The observatory's equipment also includes a variety of auxiliary instruments used in connection with observations at the 120-inch telescope. Among them is the Hamilton echelle spectrograph, judged to be one of the world's most efficient instruments for high-resolution analysis of the light of stars and galaxies and the instrument by which astronomers have discovered new planets outside our solar system. Another instrument is the Kast double spectrograph, a pioneering example of UCO's

innovative instrumentation capabilities. One of the most exciting technological innovations developed at Lick Observatory, originally in conjunction with Lawrence Livermore National Laboratory, is the use of an adaptive-optics system with an artificial, laser-produced guide star to sharpen images normally blurred by the atmosphere. Advanced and improved adaptive-optics designs are continuing to be designed, built, and tested on the Shane Telescope by a team from UCSC and then used for science by UC astronomers. The observatory is a system-wide facility used extensively by faculty, researchers, and students from eight of the ten UC campuses and two national laboratories.

UCSC's courses in astronomy and astrophysics are taught on campus. Advanced students gain observing experience with the Mt. Hamilton telescopes and conduct research directed by the staff.

UCO astronomers work on a wide variety of astrophysical topics, including solar system and star formation, exoplanets, stellar evolution, the origin and evolution of the Galaxy and external galaxies, abundances of the chemical elements, the interstellar/circum-galactic/inter-galactic gas, dark matter and dark energy, and the size, structure, and evolution of the universe.

Since 2000, UCO has been a partner in an international project called the Thirty-Meter Telescope (TMT). This giant telescope with a 30-meter diameter primary mirror will be nearly 10 times more powerful than a 10-meter Keck telescope and is being built near the two Keck Telescopes in Hawaii. Its advanced adaptive optics systems and innovative instruments will make the TMT one of the most powerful astronomical facilities in the world for decades to come.

Student Life

[2014–15 General Catalog](#)

Student Life

Campus life is all about learning, discussion, and debate; meeting people from diverse backgrounds; making new and lasting friendships; attending cultural celebrations and artistic and musical performances; and getting involved with student organizations and clubs. UCSC provides a wealth of opportunity for personal growth within the context of a rich and meaningful academic experience. You will live, study, and socialize with students from your college as well as with students from the other colleges. UCSC's colleges (see [The Colleges](#)) and various campus units provide a wide range of student services to respond to individual needs, interests, and levels of personal development. In addition, students can take advantage of the campus's stunning natural setting, the friendly and engaging local community, and easy access to the Monterey and San Francisco Bay areas.

Santa Cruz Community

Located on the northern tip of Monterey Bay, Santa Cruz is famous for its Mediterranean climate, forested state parks, and miles of scenic beaches. Recreational opportunities abound—hiking through redwood forests, bicycling along mountain roads, and surfing, sailing, and scuba diving. The Santa Cruz Mountains are minutes away; the majestic Sierra Nevada is a four-hour drive to the east.

The metropolitan centers of the San Francisco Bay Area are easily accessible. By car, Berkeley and San Francisco are less than two hours from campus. San José, Monterey, and Carmel are one hour away.

The city of Santa Cruz, with a population of about 60,000, was originally founded as a Spanish mission. Santa Cruz is a small community with cosmopolitan appeal and a strong awareness of environmental and political issues. Art exhibits, local theater companies, a symphony orchestra, fine restaurants, and a lively contemporary music scene combine to make Santa Cruz an interesting place to live.

Housing

College Residences

UC Santa Cruz combines the resources of a world-class public research university with a distinctive undergraduate experience characterized by our college system. Each college is a vibrant living/learning community supported by faculty and staff who provide academic support, organize student activities, and sponsor events that enhance the intellectual and social life of the campus. After accepting the UC Santa Cruz offer of admission, all undergraduate students become affiliated with one of our 10 colleges.

The colleges differ in academic focus, environment, location, architecture, and programs offered. However, all 10 colleges are dynamic, engaging learning communities that offer

opportunities for students to help build and shape their experiences. About 45 percent of single undergraduate students live in university housing.

Freshmen and new transfer students entering in fall quarter are guaranteed university housing for their first two years at UCSC. All deadlines must be met to qualify for guarantees.

Students accepting the offer of admission to UC Santa Cruz must complete the online acceptance process at [MyUCSC](#). During the acceptance process you will be asked to indicate several college preferences. You may also choose to indicate “no preference,” as many students do, meaning that you will be fine with any of our 10 colleges. After you have completed the acceptance process, and after the acceptance deadline (May 1 for freshmen; June 1 for transfers), the Office of Admissions will affiliate you with a college. The college assignment takes into account available space at each college and the preferences you have indicated. Once you have been affiliated with a college, you will be sent information about the housing options available to you and instructions for completing the online housing application/contract process. Housing application periods open in mid-May for new freshmen and mid-June for new transfers entering in the fall.

The housing options available to you will differ depending on whether you are a new freshman or a new transfer student—though all students have access to campus dining facilities. Freshmen are generally assigned to live in residence halls at their college, except at Kresge College, which has all apartments. Residence hall floors are typically shared by 15 to 50 students and have common bathrooms and lounge areas. Students can request to live in a coed or single-gender area. Gender-neutral rooms are also available. Apartments, typically shared by four to seven students, have common living/dining rooms, kitchens, and bathrooms, and a combination of shared and private bedrooms. Each community provides accessible housing for students with disabilities. Incoming transfer students reside at the Transfer Community, The Village, or the University Town Center, regardless of college affiliation.

A variety of theme-housing options are available for those who are interested. Based on academic pursuits, hobbies, individual backgrounds, and lifestyle preferences, these living/learning options serve to complement a student’s experience in residence.

Each college’s residential program is a team effort. Professional staff (coordinators of residential education) work with students trained as resident assistants. They help organize activities and events, provide referral information about academic or personal concerns, and assist with roommate problems.

All housing contracts for residence halls and apartments at the colleges, and at the Transfer Community, include meal plans. Students with meal plans may use their student ID cards to access any of the five dining halls on campus. Meal plans include Flexi Dollars (a dollar-for-dollar exchange for “food dollars” that can be used at college coffee shops, campus restaurants, and all dining halls). Additional Flexi Dollars may be added to any meal plan.

For more information on the colleges, refer to the brochure titled [UC Santa Cruz, The Colleges: Communities of Learning](#), or contact the campus [Housing Office](#).

Redwood Grove Apartments

Located on the west side of campus between Kresge College and Graduate Student Housing, Redwood Grove is an apartment community primarily for continuing seniors and juniors. Each apartment has private and shared bedrooms and a living room, kitchen, dining room, and bathroom. Call (831) 459-2977 or e-mail redwoodgrove@ucsc.edu for more information.

The Village

Located in the Lower Quarry, The Village houses a mix of continuing, transfer, re-entry, and graduate students. Each of the 17 houses features nine single bedrooms, three bathrooms, and a kitchenette. A meal plan is optional. A manager’s apartment, office, laundry facility, community kitchen, and community lounge are located on site. Call (831) 459-4388 or e-mail village@ucsc.edu for more information.

University Town Center

The University Town Center (UTC), located at the corner of Pacific and Cathcart in downtown Santa Cruz, provides housing for continuing and transfer students in two- and three-person studio apartments. A meal plan is optional. Call (831) 459-4388 or e-mail utc@ucsc.edu for more information.

Family Student Housing

Family Student Housing, located on the west side of campus, has apartments for students and their families. Students must reside with at least one eligible family member on a permanent, full-time basis. Eligible family members include children, a spouse or adult partner, a parent, or a sibling. The apartments are unfurnished, and each has two bedrooms, a bathroom, a small study, a combined living/dining area, and a kitchen. Several apartments are accessible to people with mobility impairments. Call (831) 459-4080 or e-mail fsh@ucsc.edu for more information, or download an application at housing.ucsc.edu/fsh. Also, see information on childcare and youth programs, [below](#).

Camper Park

The 42-space Camper Park on the north side of campus is available to students who own recreational vehicles. All have water and electrical hookups; eight also have sewer hookups. The community includes a small central facility with rest rooms, showers, a meeting room, and a laundry room. For more information about the park and the vehicle requirements, or to request an application, call (831) 459-4388 or e-mail rvpark@ucsc.edu.

Graduate Student Housing

Four-bedroom apartments for single graduate students are located on the west side of campus, between Kresge College and the Baskin Engineering Building. Call (831) 459-5712 or e-mail gradhsg@ucsc.edu for more information.

Campus Housing Office

This office is responsible for the application and contract records for all single students living in campus residence halls and apartments, The Village, University Town Center, and Graduate Student Housing. Staff are available to advise students about room and board billing, payment plans, and contractual responsibilities. Students can purchase meal plans or Flexi Dollars online at [Student Housing Online](#).

Centrally located at 104 Hahn Student Services Building, the Campus Housing Office is open 8 a.m. to 5 p.m. Monday through Friday, (831) 459-2394; e-mail housing@ucsc.edu; Web: housing.ucsc.edu.

Community Rentals Office

Students interested in finding their own accommodations in the off-campus community are encouraged to use the resources available through the UCSC Community Rentals Office. Community Rentals maintains online rental listings to assist students in locating rental housing and serves as an information and advising resource.

Locating suitable housing in the Santa Cruz area can take from one to four weeks, depending on specific requirements and restrictions. Average rental rates are available at housing.ucsc.edu/cro/costs.html.

The Community Rentals Office, located at 104 Hahn Student Services (North Entrance), is open 8 a.m. to 5 p.m., Monday through Friday. For information, call (831) 459-4435; e-mail communityrentals@ucsc.edu; web: communityrentals.ucsc.edu

The Sustainable Living Center (SLC) at UCSC

The Sustainable Living Center's mission is to develop a model Action Education Center at UC Santa Cruz where a diversity of students engage meaningfully with food systems sustainability and justice through experiential learning. We believe that through community-based learning students will become leaders, educators, and engaged agents of change and embody the values of environmental consciousness and social justice to create a more sustainable world.

The SLC is located in The Village of the Lower Quarry on campus. It is home to the Program in Community and Agroecology (PICA) and Friends of the Community Agroecology Network

(FoCAN). At the SLC, students from diverse majors are engaged in projects that include food production, ecological landscaping, green building, alternative trade systems, and much more.

At the SLC, young people learn the necessary skills and tools to become leaders in educating and engaging communities in sustainable and equitable food systems. We follow an educational model in which students engage in project-based learning, gain experience through community internships, and use the knowledge they gain from their internships to educate others in the student community.

Sustainable Living Center Programs

Program in Community and Agroecology (PICA), an academic program of the Environmental Studies Department, is an experiential living/learning program at UCSC where students use agroecology principles in the maintenance of a half-acre organic garden, work together to develop community projects, and share in the many aspects of sustainable living—by harvesting, cooking, and eating healthy food grown organically right next to their rooms. Through a unique collaboration that integrates classroom instruction and community-based experience, PICA has become a model for an experiential learning program that allows students to practice sustainability at a hands-on level.

On-campus living at PICA. The PICA residential program offers students an alternative to traditional on-campus living. At the Village in the Lower Quarry, students from across academic disciplines come together to create a sustainable living environment on campus. PICA residents grow organic food at the nearby Foundational Roots Garden, come together to share in weekly community meals, and manage a Village-wide composting program. This living/learning experience allows students a way to link healthy communities with healthy food systems.

Friends of CAN (FoCAN) is a UCSC student organization affiliated with the Community Agroecology Network (CAN), a nonprofit organization that works with partner communities in rural Mexico and Central America to develop self-sufficiency and sustainable farming practices. CAN promotes integrated approaches to sustainable community development as a means to sustain rural livelihoods and environments through three programs: Action Education, Trade Innovations, and Action Research Initiatives. CAN's Field Study opportunities, intercultural exchanges, research, and the annual Agroecology Shortcourse inspire action for environmental sustainability and social justice.

Field Studies. The CAN Field Study program provides college students and recent graduates the opportunity to live and learn in rural Mexico and Central America. It offers students a realistic first step in doing international work that focuses on environmental sustainability and social justice. In developing close relationships with a rural community and working with them on a project, students come to understand the complexity and satisfaction of engaging meaningfully in international community development. CAN also offers local internship and volunteer opportunities to students interested in engaging with community projects connected to CAN's international partners in Mexico and Central America.

Together PICA and FoCAN facilitate hands-on learning activities that engage students with all aspects of a sustainable food system—from growing organic food that supports local communities to conscious consumerism on a global level.

For further information, contact Mira Michelle at mmichel1@ucsc.edu. web: <http://ucscpica.org>

Student-Run Cooperatives

Kresge Food Co-op

Mission statement: "We are a group of students whose goal is to run a natural food store through consensus decision-making and group responsibility. We embrace cooperation as our tool for social change. We are not for profit; we are for collective power. As a cooperative business we seek to educate all members of the community, including ourselves. We use our buying power to reflect our ideals regarding ecological, social, and political issues. For this reason we carry healthful, locally based, cruelty-free, organic products. We focus on products that are good for the earth, the people who produce them, and the people who consume them. Open to all, we provide a space where good food and

revolutionary action meet at the checkout line.” Call (831) 426-1506 for more information.

Bike Co-op

The Bike Co-op is student owned and operated, run cooperatively, and nonprofit. Whether you need to purchase a bike, repair a bike, or want to learn, the co-op can accommodate your needs. People are encouraged to attend meetings, learn more about cooperatives, and get involved. The Bike Co-op is located at the Student Union. For information, come by or call (831) 457-8281.

Transportation and Parking Services (TAPS)

The UC Santa Cruz campus is designed to preserve the natural beauty of our magnificent setting and strives to minimize automobile traffic and congestion. Because parking is such a limited resource, the majority of campus parking spaces are available only to commuting students, faculty, staff, and visitors. UCSC has a parking prohibition for first and second year residential students; students with fewer than 90 units who live in university housing facilities are not eligible to purchase a campus parking permit. Parking regulations are strictly enforced; all students who bring a car to campus must purchase a permit in advance. UCSC requests that students not bring vehicles to campus if they are not eligible to purchase an on-campus parking permit. For additional information, visit <http://taps.ucsc.edu/>.

Transportation Options

Airports and Long-Distance Bus Service: The nearest commercial airport is in San José, approximately 35 miles from Santa Cruz. The San Francisco Airport is about 70 miles from campus. Both airports are accessible by commercial van and limousine services. Santa Cruz is also served by commercial bus lines on a regularly scheduled basis.

Campus Transit: On-campus buses and paratransit services are provided on a no-fare basis; these services are supported by the mandatory Student Transit Fee. TAPS buses operate on campus from approx. 7:30 a.m. to 11:30 p.m. Monday through Friday, and from 6:00 p.m. to 11:30 p.m. on weekends. TAPS also operates a Night Owl service to transport UCSC affiliates between the campus and downtown Santa Cruz. The Night Owl operates until 1:15 a.m. Sunday through Thursday, and until 2:50 a.m. on Friday and Saturday.

Metro Buses: Santa Cruz Metro Transit District is the bus service provider for Santa Cruz County. Metro operates over 35 bus routes throughout the county, including six routes to and from UC Santa Cruz. UCSC students can ride Metro buses throughout the county by showing a student ID card with a current quarter validation sticker; no additional fare is required to ride.

Bike Program: TAPS offers a variety of programs to support those who choose bicycles as their main mode of travel, including over 3,500 bike-rack spaces, bike "fix-it" stations, free weekly bike repair and maintenance clinics, free (required) bike licensing, and free morning bike shuttles that run from two off-campus locations up to campus. Popular student-run bike services include the Bike Library (where you can borrow a bike on a quarterly basis for free) and the Bike Co-op (a not-for-profit, full-service bike shop located near the Bay Tree Bookstore).

Car Sharing: Zipcar is a membership-based car share program that allows students 18 and over to rent cars on campus on an hourly or daily basis. Use fees start at \$8 per hour and include all vehicle fees, gas, insurance, mileage, and reserved parking on campus. Members have access 24 hours per day to 18 vehicles—ten on campus and eight at other nearby Santa Cruz locations. For detailed information, visit <http://www.zipcar.com/ucsc>.

Ridematching: Zimride is a social networking ridematching program exclusive to the UCSC community. You can find someone to share your regular commute or one-time trip through Zimride, even if you don't have a car—just post the ride you need. If you have a car, you can share your Zipcar trip with others and save on costs. For more information, go to <http://zimride.ucsc.edu>.

Walking: UC Santa Cruz is one of the most beautiful campuses in the world, and the best way to experience it is on foot! Walking is the single most sustainable means of getting around (and often the most direct way, as well) so be sure to bring a pair of sturdy walking

shoes. A walking map of the campus is provided to all new students.

Student Health Services

Located on McLaughlin Drive across from Colleges Nine and Ten, the Student Health Center provides quality health care focused on the particular needs of students. All registered students have access to the Student Health Center regardless of their insurance plan, as services are partially supported by their Student Services fee. Care is provided by board-certified physicians, nurse practitioners, and physician assistants. Students can be seen by appointment or, in cases of acute illness or injury, on the same day at the Same Day Clinic. In case of emergencies, either during the day or after normal operating hours, please call 911.

In addition, the Student Health Center offers counseling and psychiatry services, nutritional counseling, health promotion, x-ray, laboratory, optometry and pharmacy services on site. The center is open weekdays during the regular academic year. For summer services and hours, visit the Student Health Center's web site. For more information about the Student Health Center, e-mail healthcenter@ucsc.edu; Web: healthcenter.ucsc.edu.

Student Health Insurance

To ensure that emergencies and other health care costs do not interfere with a student's education, all University of California students are required to carry medical insurance. A comprehensive and affordable program specifically designed for students is available through the university via the University of California Student Health Insurance Plan (UC SHIP). All students are automatically enrolled in UC SHIP and billed quarterly through their student account, unless they choose to waive this coverage by providing proof of comparable insurance by the specified deadline. For detailed information regarding insurance coverage and the waiver process, visit <http://healthcenter.ucsc.edu/billing-insurance/index.html>. You may also contact the insurance office at insure@ucsc.edu or (831) 459-2389.

Fees will be assessed for most visits for students without UC SHIP.

Mandatory Hepatitis B Immunization

California state law mandates that all entering students under 19 years old must be immunized against Hepatitis B. These students are required to provide the Student Health Center with documentation proving their compliance with this law. Those not in compliance at the beginning of the quarter may be dropped from their classes. For more information, visit healthcenter.ucsc.edu or call (831) 459-2211.

Student Health Outreach and Promotion (SHOP)

SHOP is UCSC's destination for health-related information, conversation, and self-exploration. It's the place for students to learn about health and wellness in a safe, non-judgmental environment. SHOP does not tell people what we think they should or shouldn't do. We help students do what they choose to do in the safest way that they can.

SHOP offers information, education, resources, and support on issues related to alcohol and other drug use; sexuality and sexual health (including HIV and other sexually transmitted infections); safer sex; unplanned pregnancy and contraception; and sexual assault and violence prevention. Students can get involved with SHOP by becoming peer educators, HIV test counselors, volunteers for the Condom Co-op, and/or CUIP interns.

Alcohol and Other Drug (AOD) Education

SHOP empowers students to reduce risks related to substance use/abuse. Students can meet with staff confidentially to discuss their personal AOD involvement, discuss concerns about friends or family members, obtain educational materials, participate in workshops, and access resources for students in recovery. Educators provide formal and informal sessions and workshops for students, college residential staff, and other campus groups. Staff also serve on the campuswide AOD Advisory Committee, which develops, implements, and assesses policies. For information call (831) 459-1417 or visit the [SHOP web site](#).

NOTE: In January 2014, UC Santa Cruz implemented a campuswide smoke and tobacco-free

policy.

HIV and Other Sexually Transmitted Infection (STI) Prevention

SHOP offers many resources for promoting sexual health, including:

- Free, anonymous HIV testing with Orasure (no needles) provided by student peer test counselors. Results in 20 minutes.
- The Condom Co-op, selling safer sex supplies at reduced cost.
- Workshops, activities, and events.
- Sexual health questions? SHOP has many resources.

Sexual-Assault Facts and Education (S.A.F.E.)

The Sexual Assault Facts and Education program at SHOP provides confidential support, information, and resource referrals to survivors of sexual violence, dating violence, and stalking. An experienced sexual violence prevention educator is available for individual appointments and provides nonjudgmental support for those who have experienced sexual assault, dating violence, or stalking. These resources are also available for their friends and loved ones. The sexual violence prevention educator is certified as a crisis counselor by the state of California and can be reached at (831) 459-2721. Police officers are available 24 hours a day, as are emergency phones, guards at campus entrances from 8 p.m. until 3 a.m., and frequent shuttles and buses.

Since 1979, UCSC has actively addressed issues related to sexual violence on campus. Students are required to take an online education course and to attend educational presentations that encourage respect, responsibility, and bystander intervention among students. Workshops are organized in the residence halls, and a variety of educational resources are available for all students.

SHOP is located at the Student Health Center. For more information on SHOP programs, call

(831) 459-3772 or e-mail at shop@ucsc.edu. Web: <http://healthcenter.ucsc.edu/shop/>

Counseling and Psychological Services

Counseling and Psychological Services (CAPS) offers a range of professional services to undergraduate and graduate students seeking help with personal concerns. We provide assistance for students with academic and personal stress, relationship and family issues, drug and alcohol problems, psychological problems, and crisis situations. Psychiatry services include diagnostic evaluations or prescribing of medication in certain situations. Depending on a student's needs, a student may be provided with brief individual or couples counseling, group counseling, psychiatric services, crisis intervention, or a referral for open-ended or long-term therapy off campus. Information provided to any CAPS professional staff member is confidential within the student health center and cannot be released without a student's permission except in specific circumstances involving risk and safety. All services are aimed at helping a student gain greater personal effectiveness and academic success. Professional staff members are available at various locations on campus, including the Student Health Services building, the colleges, the Academic Resource Center, and Family Student Housing. Emergency on-site crisis services and after hours crisis services are also available.

Staff members are available to provide consultation to staff, faculty, individuals, or family members for assistance in helping students in distress. Counseling psychologists can also provide trainings and programs on a variety of mental health topics, stress and coping skills, multicultural issues, and organizational development.

For more information about Counseling and Psychological Services, please call (831) 459-2628 or visit our web site at <http://caps.ucsc.edu/>

Resource Centers

African American Resource and Cultural Center (AARCC)

The African American Resource and Cultural Center (AARCC) develops and fosters co-curricular initiatives that promote academic success, leadership training, and student

development. Since the center's inception in 1991, the program's primary mission has been to serve as a key resource to acclimate students to general campus life and academic culture. In addition, the program provides advocacy and support in helping to monitor students' academic progress and subsequent achievement of their educational goals. AARCC works closely with overall campus outreach to enhance the recruitment and retention of students of African descent.

AARCC hosts a couple of community groups to allow for engagement and interaction, such as Sisters' Corner and Black Men's Initiative. Other organizations AARCC co-sponsors and/or supports are National Society of Black Engineers (NESBE), the African American Mentoring Program (AMP), African/Black Student Alliance, African American Theater Arts Troupe, African Student Union, Black Sistas United, Black Men's Alliance, Destination Higher Education, Rainbow Theatre, Rosa Parks African American Theme House (R.PAATH), and Delta Sigma Theta Sorority.

AARCC works collaboratively with others campus units/departments and in the surrounding community to enhance cultural and ethnic diversity initiatives on the UCSC campus. The center is located on the third floor of the Bay Tree Building in Quarry Plaza, and is open Monday through Friday from 8 a.m. to 5 p.m. For more information, call (831) 459-2427, fax (831) 459-2469, e-mail aarcc@ucsc.edu or visit aarcc.ucsc.edu.

American Indian Resource Center (AIRC)

The American Indian Resource Center (AIRC) works in collaboration with the Student Alliance of North American Indians (SANAI), the University of California American Indian Counselors/Recruiters Association, the Amah Mutsun Band of Ohlone Indians, and native faculty and staff, as well as the indigenous tribal community leaders of the region to develop co-curricular programming, cultural activities, and events that assist public understanding of native peoples. Invested in creating a campus climate that supports all students, the center provides leadership development, internship opportunities, mentoring, and personal and academic advising. The AIRC is located on the third floor of the Bay Tree Building in Quarry Plaza. For more information, call (831) 459-2881, e-mail airc@ucsc.edu, or visit <http://airc.ucsc.edu/>

Asian American/Pacific Islander Resource Center (AA/PIRC)

The Asian American/Pacific Islander Resource Center (AA/PIRC) provides and enhances opportunities for education and dialogue on issues affecting Asian Americans and Pacific Islanders, as well as opportunities for leadership development and community building. AA/PIRC aims to address students' multiple and diverse academic, social, cultural, and other co-curricular needs through programs and services. Programs include Asian American/Pacific Islander Heritage Month, Year-End Ceremony for graduating seniors, leadership skills workshops, graduate school panels, and community receptions.

AA/PIRC events also highlight writers, performance artists, scholars, and community leaders. AA/PIRC sponsors academic and paid internships for students interested in gaining professional experience. Through AA/PIRC, students benefit from networking with individuals and resources such as alumni, faculty, and staff, off-campus community-based organizations, and on-campus student organizations.

AA/PIRC is located on the third floor of the Bay Tree Building with the African American, American Indian, and Chicano Latino Resource Centers. Add your e-mail address to AA/PIRC's listserv to receive announcements on leadership, scholarship, internship opportunities, events, and community news. For more information, call (831) 459-5349; e-mail aapirc@ucsc.edu; or visit them on [Facebook](#).

Chicano Latino Resource Center (El Centro)

The Chicano Latino Resource Center (El Centro) is a hub of organized activities and resources that support Chicano and Latino student transition, retention, and academic advancement at the university. Through collaborative efforts with campus partners, students can participate in a host of activities that encourage intellectual growth, leadership development, preparation for graduate or professional school, and career options. El Centro encourages and supports student and community development through cultural and educational programming. Annual programs include the following: New

Student Welcome Program; Día De Los Muertos; Pachanga; César Chavez Convocation; dialogue on academic, social, cultural, and personal issues that affect the Chicano and Latino community; and a weekly online newsletter, CHISME E-news. El Centro offers student internships that support leadership-skills development while students help to organize events and activities. For more information or to schedule an appointment, call (831) 459-5806 or e-mail elcentro@ucsc.edu. Web: elcentro.ucsc.edu

Gay, Lesbian, Bisexual, Trans*, Intersex (GLBTI) Resource Center

The Lionel Cantú Gay, Lesbian, Bi, Trans*, Intersex (GLBTI) Resource Center (aka the Cantú Queer Center), housed in a beautiful cabin in a redwood glen near Crown and Merrill Colleges, is a friendly, welcoming space for the entire community. The center's mission is to provide educational, psychosocial, advocacy, and supportive services to students, staff, faculty, and alumni on GLBTI issues. The Cantú Queer Center is home to several student organizations that meet weekly; a host of exciting programs; the GALA art gallery; and a library offering 3,000 books, magazines, and films. Information and referral to campus and community resources is available by phone or in person. Throughout the year, the Cantú Queer Center coordinates student programming with a queer focus—beginning with National Coming Out Day in the fall and culminating in the Rainbow Graduation Ceremony in the spring. Education of the entire campus population is another function of the resource center; the Cantú Queer Center's professional staff members offer workshops/trainings for groups, classes, and dorms on a range of GLBTI topics. Everyone is welcome to use the center's cozy lounge, full kitchen, and computer corner to study, relax, socialize, and become involved in the campus's queer community. The center is open Monday through Friday; usual hours are 9 a.m. to 5 p.m. Stop by and meet the center's friendly, knowledgeable staff. Come discover why UCSC has been consistently rated one of the best-of-the-best universities for queer students! You can reach the center at (831) 459-2468 or via e-mail at queer@ucsc.edu. The center's web site, queer.ucsc.edu, provides an overview. Self-subscribe to QConnect, the center's e-newsletter and calendar, on the site's home page.

Women's Center

Located in Cardiff House, a historic farmhouse near the main entrance to campus, the Women's Center is devoted to helping students maximize their success at UCSC. Resource referrals and informal advising are always available, and weekly events include films, readings, and talks. At least one staff member is a state-certified domestic violence and sexual assault advocate. We create or sponsor student-oriented workshops on topics ranging from money management to positive body image and stress reduction.

The Women's Center is home base for a variety of student groups and student-run community-service efforts. Other opportunities for involvement include internships, independent study, and work-study jobs. Students can become involved in such Women's Center projects as the 51% Pipeline Project (leadership), Take Back The Night (anti-violence), Inside Out Writing Project (women in jail)—or create projects with the support and mentorship of staff.

The Center, a haven located in a picturesque meadow, is also close to the campus police station. The center's meeting rooms, kitchen, and garden are ideal places to study, relax, or connect with students, staff, faculty, and community members. Rotating art exhibits bring the center's walls to life, and students are encouraged to inquire about showing their work.

For more information call (831) 459-2072, e-mail women@ucsc.edu, or visit womenscenter.ucsc.edu

The Office of Physical Education, Recreation and Sports (OPERS)

Physical education classes, recreation, sports, and fitness programs at OPERS provide a variety of interesting and challenging activities intended to attract you to becoming an active participant. The emphasis is on giving you an opportunity to develop knowledge, skills, and habits related to wellness that last through a lifetime of enjoyable physical and recreational activity.

Obtain further information about the programs described below from the Office of Physical Education, Recreation, and Sports, located at the East Field House, (831) 459-2531. Web: <http://opers.ucsc.edu>

Physical Education Courses

Regularly scheduled courses, which carry no academic credit but are recorded on your transcript, are available in a broad range of physical activities (see [Physical Education](#)). Many classes are small, and all offer expert instruction and carefully designed practice periods so that you can accomplish much in sessions of two to three hours per week. Most activities have intermediate and advanced sections as well as courses for beginners. Subjects offered include swimming, scuba, sailing, rowing, kayak, basketball, racquetball, tennis, volleyball, ballet, folk dance, jazz dance, modern dance, fencing, soccer, tai chi chuan, strength training, fitness and conditioning, yoga, aikido, and tae kwon do. Web: <http://opers.ucsc.edu/>

Intramural Sports

The intramural sports program includes competitive leagues, tournaments, and special one-day events. Many of the activities are coeducational. The leagues feature basketball, flag football, dodgeball, indoor and outdoor soccer, softball, indoor and outdoor volleyball, ultimate Frisbee and innertube water polo. Some of the leagues are divided into different skill levels. Special events include a 5-mile run. Prospective participants are encouraged to form their own teams. Individuals looking to be placed on a team are also welcome (but there is no guarantee of team placement). Web: <http://opers.ucsc.edu/intramurals/index.html>

Sports Clubs

The sports club program offers a variety of activities depending on student interest. Currently, active clubs include men's and women's rugby, men's and women's water polo, men's and women's ultimate frisbee; men's soccer, baseball and lacrosse; coed cross-country and track and field; coed Special Olympics; and coed cheerleading, dance, equestrian, triathlon, disc golf, cycling, sailing, badminton, and fencing. Web: <http://www.ucscsportsclubs.com/>

Intercollegiate Athletics

UC Santa Cruz offers the only National Collegiate Athletic Association (NCAA) Division III program in the UC system. As a Division III member, the program offers no scholarships or grants in aid that are based on athletic ability. UCSC sponsors the following intercollegiate sports: men's and women's basketball, soccer, swimming and diving, tennis, volleyball, and cross country, and women's track and golf. For information on teams, rosters, schedules, and the Slug Booster Club, go to www.goslugs.com.

Recreation Program

The Recreation Program is designed to fulfill the diverse needs and interests of all members of the UCSC community. More than 100 activities, workshops, classes, off-campus outings, and special events are scheduled quarterly. In addition, the program offers a 10-day Wilderness Orientation (WO) prior to the start of school. WO is an invaluable experience for incoming college students, serving as an introduction to mountain travel and the "journey" of college education. The beautiful settings of the Sierra Nevada provide students an opportunity to form new friendships and discuss their hopes and fears about entering college while learning outdoor skills. No previous backpacking experience is necessary.

The Outdoor Equipment Rental Center offers recreational equipment including surfboards, wetsuits, and high-quality backpacking and camping gear. If you are interested in planning your own outing, contact the Recreation Program Office for assistance. The office has extensive files, and staff members act as consultants, planning with people as well as for them. The office also provides bicycle licensing and offers a free weekly drop-in bicycle maintenance program. Open recreation hours are scheduled quarterly; you are strongly encouraged to use the facilities. Sports equipment may be borrowed without charge. There are also recreation clubs if you are primarily interested in organized recreation and individual performance. Clubs are coed and feature some combination of recreational participation, advanced instruction, and individual competition. Web: ucscrecreation.com.

Banana Slug Mascot

The Banana Slug, a bright yellow indigenous gastropod found in the campus's redwood forest, was the unofficial mascot for UCSC's coed teams beginning in the university's early years. In 1981, when some campus teams wanted more organized participation in extramural competition, UCSC joined Division III of the NCAA. Since the application required an official team name, UCSC's then-chancellor polled the student players, and out of this small group emerged a consensus for a new moniker—the sea lions. It was a choice that the chancellor considered more dignified and suitable to serious play than the Banana Slugs. But the new name did not find favor with the majority of students, who continued to root for the Slugs even after a sea lion was painted in the middle of the basketball floor. After five years of dealing with the two-mascot problem, an overwhelming pro-Slug straw vote by students in 1986 convinced the chancellor to make the lowly but beloved Banana Slug UCSC's official mascot.

Facilities

To make it convenient for you to utilize campus physical education, recreation, and sports facilities, field houses are located on the east and west sides of the campus. At both the East Field House and the West Field House, you will find the following: gymnasium, tennis courts, outdoor basketball and volleyball courts, and locker rooms. The East Field House also has the Wellness Center, which offers two floors of state-of-the-art cardiovascular and strength-training equipment, a dance studio, the martial arts room, handball/racquetball courts, equipment center, 50-meter swimming pool, half-mile jogging track, and sports fields. An outdoor strength-training and cardiovascular-fitness court is located near the east jogging track. In addition, personal training and drop-in fitness classes are offered. More information is available on the website at opers.ucsc.edu.

The UCSC Boating Center is located on FF Dock at the Santa Cruz Small Craft Harbor. The boating program offers PE instruction as well as a boating club with boat usage for students and community members alike. Boating courses are offered for dinghies, 24'-32' keel boats, sea kayaks, and rowing shells. Web: <http://opers1.ucsc.edu/boating/>

The Student Union

The Student Union is a student-governed facility where students can take a break and lounge, play pool or ping-pong, use computers, meet, or watch television. Located in the Quarry Plaza across from the Bay Tree Bookstore, the Student Union complements college facilities by providing a centrally located place for social, recreational, and educational gatherings for all students and members of the campus community.

The Student Union is also home to the campuswide student government (Student Union Assembly) and student organizations, the Bike Co-op, Engaging Education, and Student Organization Advising and Resources (SOAR).

The Union is open Monday through Thursday 9 a.m. to 9 p.m., Friday 9 a.m. to 6 p.m. The Union is closed holidays and quarter breaks. For more information, call (831) 459-3167.

Graduate Student Commons (see [Grad Commons](#))

Student Activities

Campuswide Student Activities: SOMeCA

SOMeCA brings together three dynamic areas of campuswide student engagement: Student Organization Advising and Resources (SOAR), Student Media, and Cultural Arts and Diversity. The organizations and programs of SOMeCA offer students a place of self-discovery. SOMeCa's professional and experienced staff offers instruction, mentorship, leadership training, organizational development advising, and project management to all students. Visit: <http://someca.ucsc.edu>.

Student Organization Advising and Resources (SOAR)

UCSC offers the student body over 150 student-initiated organizations, including cultural, social, political, religious, academic, ethnic, and environmental organizations, as well as fraternities and sororities. Participating in a UCSC student organization provides valuable experience in leadership and teamwork and develops a network of rewarding and lifelong

friendships.

UCSC student organizations govern large-scale and established programs. For example, student leaders host high school students to encourage and support their entrance into college. Others produce major campuswide events to raise funds for cancer research and local community nonprofits. Performing arts organizations perform at conferences and competitions across the country. These are just a few examples of organization experiences that contribute to UCSC students becoming more self-directed, connected, and successful in pursuing their studies and careers.

Student organization membership is open to all UCSC students. Learn more at the Student Organization Advising and Resources (SOAR) office. Contact SOAR at (831) 459-2934, e-mail soar@ucsc.edu, or visit www.soar.ucsc.edu. SOAR is located on the second floor of the Student Union.

Student Media

Student Media at UCSC include 20 print publications and campus Student Cable Television (SCTV). Every year, hundreds of students enrich their educational experience through internships, academic credit, fellowships, and employment opportunities with media organizations.

The award-winning student newspaper of record, *City on a Hill Press*, covers campus and local news, sports, music, and offers art reviews and commentary. *Fish Rap Live!* provides an alternative forum for free expression of ideas, humorous coverage of local and campus events, and personal journalism. TWANAS, the Third World and Native American Students Press Collective, publishes a newsmagazine that seeks to broaden awareness of perspectives of color in the campus community. Other campus magazines include the critical film journal, *EyeCandy*; *Leviathan Jewish Journal*; *Gaia*, which focuses on environmental issues; and the *Disorientation Guide*. Annual literary journals include Chinquapin, Red Wheelbarrow, ALAY, and Matchbox.

Artistic, narrative, experimental, documentary, news, and public-service film and video are produced by broadcast organizations, including Banana Slug News, Rainbow TV, Film Production Coalition, On the Spot, and others. Many of the participating students are affiliated with UCSC's Film and Digital Media major; however, students from all disciplines are encouraged to participate.

To contact student media organizations, call the Student Media Center at (831) 459-2840 or SCTV at (831) 459-5360. Visit the [Student Media web site](#) for links to print, radio and broadcast organizations.

Cultural Arts and Diversity (CAD)

Cultural Arts and Diversity (CAD) strives to enhance the cultural climate of UCSC and its surrounding community by celebrating diversity. CAD fosters the spirit of unity between cultures by providing students with outlets for the creative talents of various cultures through theater, lectures, presentations, and productions. By promoting access to resources and services that support these endeavors, CAD strives to provide cultural awareness and diversity, build collaborative partnerships and community outreach, enhance retention and recruitment efforts, and provide opportunities for leadership and educational development. The Cultural Arts and Diversity Center promotes the following programs:

- African American Theater Arts Troupe
- Rainbow Theater
- Rainbow/African American Theater Arts Troupe Outreach
- Classes offered through Theater Arts and Stevenson College

Contact the CAD Office at (831) 459-1861 or visit the web site at: <http://www.cadrc.org/>.

UCSC and Systemwide Student Governance

UCSC offers a wide variety of opportunities to participate in university governance at the college, campus, systemwide, and national levels. Regardless of what level you choose,

participating in student government provides a wonderful opportunity to practice leadership skills, meet others who share your interests, and learn a great deal about yourself and the university.

Student Union Assembly

The Student Union Assembly (SUA) is the undergraduate advocacy organization and the official student voice of UCSC. It comprises three representatives from each college government; six elected officers (chair, internal vice chair, external vice chair, organizing director, commissioner of academic affairs, and commissioner of diversity); and one appointed representative from each of the following student organizations that represent historically underrepresented people within the UC system: African/Black Student Alliance; Asian Pacific Islander Student Alliance; The Network (Gay, Lesbian, Bisexual, Trans*, and Intersex Students); Movimiento Estudiantil Chicano de Aztlan; Student Alliance of North American Indians; and Ethnic Student Organization Council. The SUA also provides paid part-time internship opportunities for students each year. These internships include, but are not limited to, field organizers, treasurers, outreach and publicity, and strategy and planning.

The SUA conducts open meetings every Tuesday at 6 p.m. throughout the academic year. Students interested in advocacy, activism, and politics, as well as those concerned with their own and their friends' lives, are invited to get involved. The assembly operates via issue-specific campaigns and around general campus concerns. In the past, the SUA has formed campaigns around fighting fee-hikes, defending affirmative action, saving financial aid on a national and state level, striving for reasonable campus growth, and reforming UC Regents' procedures. Current issues have been fighting to make a UC education affordable, fighting to stop balancing budgets on the backs of students, fighting for the rights of UC workers, and working with community groups because UCSC students are also Santa Cruz residents. The SUA also works with the UC Student Association and the United States Student Association on system, state, and national issues. For more information, contact the SUA at (831) 459-4838. Visit the SUA office on the second floor of the Student Union or visit the [SUA web site](#).

Systemwide Student Government: UCSA

The UC Student Association (UCSA) is the statewide association of graduate and undergraduate student governments from the 10 UC campuses. UCSA is the officially recognized voice of the students to the UC Board of Regents, various UC administrative offices, and the UC Office of the President. Issues covered by UCSA include UC fees and financial aid, comprehensive admissions policies, and academic policies, as well as broader issues of social responsibility such as environmental concerns and civil rights. UCSA coordinates the yearly selection of the UC Student Regent.

The SUA external office provides grassroots membership and support for the two main UCSA offices in Oakland and Sacramento. The campus office organizes students to run the grassroots campaigns that are adopted each summer during the UCSA Congress. At this session, delegates from the 10 UC campuses come together and choose the critical issues to be worked on for the next year. Issues in the past have included voter registration drives, letter-writing campaigns on particular UC issues, and increases in financial aid. UCSA provides a thorough introduction to UC politics and student representation. Students may also serve on systemwide committees through UCSA and gain a wide knowledge of the entire UC system through their service.

Two officers help to coordinate UCSA activities on our campus. The external vice-chair (EVC) is the official representative to the UCSA Board of Directors. This position has voting rights for UCSC, is the primary contact regarding all UCSA issues, and coordinates all lobbying of UCSA and local, state, and Federal governments on behalf of UCSC students. The organizing director (OD) coordinates with the EVC to effectively run the grassroots campaigns that are sponsored by UCSA every year. These positions are elected for one-year terms during spring quarter every year.

The Student Union Assembly officers in charge of UCSA activities can be reached at (831) 459-4838.

College Student Governments

Each college has its own form of student government, enabling students to gain experience in planning, budgeting, implementing, and evaluating a wide range of college programs and policies. Like the colleges themselves, each college governing body has its own character, structure, and meeting times and dates. For information, inquire in your college office or talk to our college programs coordinator.

The Graduate Student Association (GSA)

The Graduate Student Association (GSA) provides governance and representation for graduate student interests with regard to tuition and fees, health insurance, parking, on-campus housing, and other important issues. The GSA makes available quarterly travel grants for graduate students attending conferences or traveling on thesis-related research. The GSA also organizes and co-sponsors events campuswide, in addition to offering annual graduate student and solidarity orientations. The GSA is strongly committed to working toward intellectual and social diversity, including advocating for and working with underrepresented groups at the university. For more information, contact the GSA (gsa.ucsc.edu), or visit our office at the Graduate Student Commons.

Student Representation on Campuswide Committees

Serving on a campus advisory committee is a recognized channel for student involvement in the university's decision-making processes. Advisory committees, composed of faculty, staff, and student representatives, are established to develop and recommend policies on a wide range of topics. Each year the Student Committee on Committees (composed of one student appointed by each college and chaired by the Internal Vice-Chair of the Student Union Assembly) nominates more than 100 students to serve on over 50 administrative and Academic Senate committees. For information about the selection process, contact Student Committee on Committees, (831) 459-5533, or the Student Union Assembly, (831) 459-4838.

Community Service Opportunities

Community service is a vital part of the university's mission. It is possible for individual students, as well as campus-wide student organizations, to develop service projects that link the university with the broader Santa Cruz community. With the financial support of the campus' Community Service Project funding, students have aided local groups such as Students Toward Achievement in Writing Success, the Strange Queer Youth Conference, and the Walnut Avenue Women's Center.

The Student Volunteer Center, located in the Dean of Students Office at Hahn Student Services, connects students with local volunteer opportunities based on skills and interest. Volunteer opportunities range from aiding youth and elderly to addressing homelessness and environmental issues. The Student Volunteer Center also sponsors events for the campus community where students can volunteer their time.

For more information about service opportunities, see the web site volunteer.ucsc.edu or contact the Student Volunteer Center at (831) 459-3364 or e-mail volunteer@ucsc.edu.

Campus Cultural Programs

Throughout the year, UCSC offers frequent and varied cultural opportunities. Students, faculty, and staff may participate as audience members, performers, or behind-the-scenes support crew. The considerable range of offerings includes art exhibits, lectures, films, concerts, recitals, and dance and drama presentations; programs vary from single performances to weeklong cultural celebrations. The colleges host a number of events, and the departments frequently engage speakers of particular academic interest to address the campus community or present lecture-demonstrations.

The Arts Division serves as a gateway to the entire university, presenting high-quality research and work by faculty, students, and guest artists. Art exhibitions, film screenings, digital arts presentations, music recitals, as well as several theater, dance, and music presentations, are offered in conjunction with the academic programs. In addition, the Arts Division offers regular public lectures and colloquia to introduce audiences to professional practitioners and scholars in the traditional and digital arts.

In addition to attending Arts Division activities, UCSC students are invited to participate in a

wide variety of activities open to all UCSC students. Join an Indonesian gamelan ensemble, sing in the UCSC Concert Choir, play in the UCSC Orchestra, or audition for a theater or dance production.

For up-to-date information about cultural offerings from the Arts Division, contact the Arts Division Events Office at (831) 459-2787 and visit us online at arts.ucsc.edu and on Facebook.

Bay Tree Bookstore

UCSC's Bay Tree Bookstore is located in the Quarry Plaza complex in the center of campus, at the intersection of Hagar Drive and Steinhart Way. The bookstore serves as the campus resource for UCSC course materials, including new and used course books and customized faculty publications; general reading and reference books; a wide variety of school and personal supplies (including computers and computer supplies); and many other items such as residence hall living needs, small appliances, backpacks, emblematic apparel, art supplies, posters, gifts, greeting cards, testing supplies, and academic regalia. Services include online reservations for course materials, textbook rentals, student debit accounts, special ordering of books, book buyback services, passport photos and passport application processing, fax services, and limited check cashing. The bookstore also houses the campus's convenience store (the Express Store) and Student ID Card Services. For more information, call (831) 459-4544. Web: slugstore.ucsc.edu/

Child Care and Early Education Services

Child Care and Early Education Services offers programs for children of students currently enrolled in classes at UCSC. All of our centers are conveniently located on campus near the West Entrance. Free or low-cost tuition rates are available for students who meet the eligibility requirements for subsidized care (please see Eligibility for State Funding Chart at childcare.ucsc.edu). All meals are included in the program (breakfast, lunch, and afternoon snack).

Our programs are dedicated to providing the highest-quality developmental care possible in a secure, homelike environment characterized by warmth, affection, and support. The classrooms stress the importance of meeting children's needs in all areas of development: social, emotional, physical, cognitive and creative. The curriculum emphasizes play as a learning process and provides environments that are rich and challenging.

Programs are open to all children without regard to religion, color, ethnicity, gender, and physical or mental ability. All of our centers are located in the Family Student Housing Complex. Each of our centers is operated during the academic year from September through June, and closed during the summer months, administrative and university holidays, and staff development days. All of the child care spaces are provided for children of student families only. The majority of the spaces are reserved for students who meet the qualifications for subsidized care. Fee-for-service spaces at a below market rate may be available for student families whose income exceeds state-subsidy requirements.

Information about programs, fees, and applications is available at childcare.ucsc.edu and at the Early Education Services Office in the Community Building at Family Student Housing; at (831) 459-2967, or by e-mail at earlyeducation@ucsc.edu.

Infant Center

The Infant Center serves 12 children ages 11 to 24 months. Small groups, low child-to-adult ratios, and primary caregivers ensure consistent and nurturing care. The hours of operation are 7:30 a.m. to 6:15 p.m.

Preschool Center

There are three preschool classrooms that serve a total of 36 children from 24 months until they enter kindergarten. Each classroom provides small groups with low child-to-adult ratios, and an environment that provides a stimulating and rich curriculum, which helps prepare children for kindergarten. The hours of operation are 7:30 a.m. to 6:15 p.m.

School Age Center

The School Age Program serves 16 children. It operates as an after-school recreation

program during the academic year. The program provides developmentally appropriate arts and crafts, life-skills and sports activities, occasional community outings and quiet time for homework. The hours of operation are 12 noon to 6:15 p.m. for kindergarteners; and 2:30 p.m. to 6:15 p.m. on Mondays, Tuesdays, Thursdays, and Fridays for 2nd through 4th graders. On Wednesdays (public school minimum days), care is available from 12 noon to 6:15 p.m. for all school-age children. Extended care is available on a sign-up basis on some Santa Cruz City Schools closure days (university closure days excluded).

UCSC Alumni Association

UCSC's graduates—more than 90,000 of them—can maintain a lifelong connection to the campus through the UCSC Alumni Association. Through the dues they pay, Association members contribute to the living-learning environments at each college and the enrichment of the entire campus. Membership dues directly support student programs, special activities, and other projects at the colleges and campuswide.

The association promotes excellence at UCSC by making annual awards. It supports students by offering two types of scholarships (college service and financial need), and enriches campus and college intellectual life through its Distinguished Visiting Professor program and endowment.

The association sponsors programs that engage and reconnect alumni with each other and the campus. Hundreds of alumni return to campus during the annual Alumni Weekend to enjoy receptions, tours, panel discussions, and other programs through which they reconnect with old friends, faculty, and students. Thousands more reconnect through the Online Community (www.alumni.ucsc.edu/), which offers an online alumni directory, association event information and RSVP services, and much more. Many alumni also reconnect at regional events across the country and through Association-sponsored affinity groups.

The association connects alumni and students through career programs. Alumni act as career mentors online through the Career Services' Career Advice Network, and in person at the annual Multicultural Career Conference and similar events. The Alumni Association, in partnership with other UC Alumni Associations, brings politically minded graduates to Sacramento for an annual legislative conference aimed at increasing support for UC.

Members of the Alumni Association enjoy a range of benefits. These include use of the campus pool and recreation facilities, Kaplan and Princeton Review course discounts, library privileges across the entire UC system, access to the online Digital Library, and more.

Information about the Alumni Association is available by contacting us at 1156 High Street, Santa Cruz, CA 95064, locally at (831) 459-2530, toll-free at (800) 933-SLUG, via e-mail at alumni@ucsc.edu, and on the web: alumni.ucsc.edu.

University Interfaith Council

The University Interfaith Council (UIC) seeks to integrate spirituality with academic life and to promote tolerance, peace, and understanding of all faiths and spiritual traditions. The UIC is open to all religious groups. Programs include celebrations and interfaith gatherings; educational events, including religious study courses; community service; worship/meditation; and spiritual care and counseling for students, faculty, and staff. The UIC strengthens a campuswide sense of spirituality and increases awareness of options for spiritual life on campus. For more information on University Interfaith Council events and discussion boards, visit the [UIC web site](#).

The Colleges

[2014–15 General Catalog](#)[Cowell College](#) | [Stevenson College](#) | [Crown College](#) | [Merrill College](#) | [Porter College](#) | [Kresge College](#) | [Oakes College](#) | [College Eight](#) | [College Nine](#) | [College Ten](#)

The Colleges

UC Santa Cruz combines the resources of a world-class public research university with a distinctive undergraduate experience characterized by our college system. All undergraduate students and most faculty are affiliated with one of our 10 colleges, their home within the larger university. The colleges are committed to fostering a nurturing and academically thriving environment for students of all backgrounds. Each college strives to promote the attributes of a diverse and multicultural community in its own unique way. In order of founding, the colleges are [Cowell](#), [Stevenson](#), [Crown](#), [Merrill](#), [Porter](#), [Kresge](#), [Oakes](#), [College Eight](#), [College Nine](#), and [College Ten](#).

Self-contained and architecturally distinct, each college is a relatively small community of 30 to 110 faculty members and between 1,400 and 1,700 students, about half of whom live on campus. Each college has its own housing, as well as academic and recreational programming, and each is an integral part of the larger campus. The colleges have their own academic emphases and cultural traditions, although each seeks faculty and students from a variety of disciplines to foster broad intellectual interests. The colleges play a primary role in academic advising and are the center of student life. Students graduate from their college. At the same time, all university academic programs, resources, and student services are open to students of every college.

During the process of accepting the offer of admission, entering students are asked to list several colleges in order of preference; whenever possible, students are assigned to one of their preferred colleges. The information students need to rank their college preferences can come from a variety of sources—personal acquaintance, a campus visit, literature available from the colleges, campus web sites, and the descriptions in this section of the catalog. Students also have the option to indicate “no preference,” meaning they will be fine with any of our 10 colleges, and the Admissions Office will assign those students to one of the colleges.

Similarities and Differences

The colleges are small-scale residential communities, each providing an academically and socially supportive environment and offering special programs designed to help students transition to campus life, build a strong connection with the campus, and get the most out of their UCSC experience.

Most frosh choose to live on campus, as do a number of sophomores, juniors, and seniors. The particular style of housing varies among the colleges, ranging from residence halls, with a mix of single, double, and triple rooms, to apartment-style housing, where students live together in small groups and may do some of their own cooking. Each college's

residential program is a team effort. Professional staff (coordinators of residential education) work with students trained as resident assistants. They help organize activities and events, provide referral information about academic or personal concerns, and assist with roommate problems.

The faculty, or fellows, of each college come from a variety of academic disciplines; many faculty have their offices in the colleges.

Each college offers a distinctive academic program for entering frosh. The required course provides a significant bridge between academic and residential life, since all frosh, regardless of major, will be in the course, and most will be in residence as well. The colleges also offer selected courses in their area of interdisciplinary emphasis and host events and speakers that enhance this focus.

Each college provides academic advising as well as academic and general campus orientations to help you plan your academic program. College academic preceptors and advisers provide advice on general academic matters outside a student's major, including general education, choosing a major, and strategies for academic success. Psychological and personal counseling is also available in each college.

The colleges differ in architecture; each was planned by a different architect, who was encouraged to convey the distinct personality of that college through the design of its buildings and their placement in the natural environment. Above all, the colleges differ in subtle ways having to do with their intellectual and social traditions, the different designs of their student governments, and the predominant interests of their students and faculty.

Changing Colleges

Most students, having affiliated with a particular college, develop friendships and intellectual attachments there, and they remain members of that college throughout their undergraduate years. Some students find that changing academic interests draw them to a different college. During specified filing periods, students may request a change of college with the approval of both college administrations.

Cowell College

Cowell College inaugurated the Santa Cruz campus when it opened with a pioneer class of 600 students in 1965. The founding faculty shaped an educational program that challenged and enriched students through wide-ranging inquiry and disciplined study. Today, Cowell has more than 1,500 affiliated students and over 90 faculty fellows. Its motto—The Pursuit of Truth in the Company of Friends—expresses a continuing commitment to create a serious academic environment within a humane and broadly inclusive community. The college is named for the S. H. Cowell Foundation, which endowed the college at its founding.

Academic Emphases

The academic theme of the college encourages students to pursue their general and disciplinary study with attention to the values of liberal arts education: understanding one's individual perspectives by exploration of its historical background and world context. Students affiliated with the college pursue majors from all departments on campus.

In satisfying their general education requirements, first-year Cowell students are required to take the Cowell Core Course in the fall term. The core course, Cowell 80, taught in small seminar sections, seeks to develop critical reading, analytical writing, and seminar discussion skills by reading a selection of classic and contemporary texts focused on the theme of justice.

Enrichment courses are offered every term at the college, and priority is given to Cowell students. Some courses emphasize the development of skills such as public speaking or researching in library collections. Some courses take a broader perspective, examining the role of education in democracy or the epistemological bases of our judicial system.

The college also enriches the intellectual and cultural life of the campus by sponsoring events of various kinds: lectures and presentations by local faculty and visiting scholars, theatrical and musical performances, and forums and debates on topics of current interest.

Students who develop ideas for research, creative projects, community service, or internship experiences may apply to the college provost for financial support. The college also awards several annual scholarships and sponsors prizes for outstanding academic work.

The faculty fellows affiliated with the college represent all academic divisions (arts, engineering, humanities, physical and biological sciences, and social sciences). The faculty fellows guide the college academic programs and often contribute to the college-based advising system.

The college academic buildings house humanities faculty, with notable concentrations in philosophy, classics (study of ancient Greek and Latin language and civilization), and modern foreign languages, especially Chinese, French, Italian, Russian, German, and Japanese. Interdisciplinary faculty groups in visual and performance studies and in pre- and early-modern studies are centered at Cowell College.

Honors Program

Cowell participates in the UCSC First-Year Honors Program. Each year a small set of students who demonstrated high academic achievement in high school is invited to join the university-wide program. Cowell hosts one cohort group, with members housed together in one of the residence halls. In the fall of their first year, the students take a special advanced section of the core course. During the winter, they chose one of the honors program seminars, which are offered by the colleges participating in the program. During the spring, all students in the program take a special two-unit class together, which includes special lectures and dinners.

College Community and Facilities

Cowell's seven residence halls and three apartment buildings are arranged in three quadrangles on a hillside overlooking the city of Santa Cruz and Monterey Bay. About 700 students are housed in the college. Most floors are coed, with men and women sharing common lounges and other facilities, but single-gender floors are provided for those who prefer this arrangement. Apartments house continuing students, mostly juniors and seniors. The residential staff members facilitate diverse educational, social, and recreational programming to enhance the living and learning environment.

Arranged around the college's central courtyard are the dining hall, the Page Smith Study Library, the fireside lounge, the coffee shop, and conference rooms and classrooms. The Cowell Press, where students can learn the fine technique of hand-operated letterpress printing, is a stone's throw away from the plaza. Also nearby are the Cowell Galleries, including the Eloise Pickard Smith Gallery and the Annex Gallery.

Since the college's founding, regularly scheduled College Nights in the dining hall have offered students, staff, and faculty a special meal and a rich mix of programs. Community life is enlivened by many other scheduled and impromptu intellectual, cultural, and social events.

The Student Senate meets weekly to discuss campus issues and student government. The Senate advises the college on the allocation of funds for student activities and programs. Members of the Senate are selected each year by lot, but any student may become a voting member by steady attendance at meetings. The college's student groups, staff, and faculty work together to create a supportive community for students from all ethnic groups, all religious traditions, and all sexual orientations and to increase awareness of the many dimensions of diversity in the community.

For more information on the college, see cowell.ucsc.edu or call (831) 459-2253.

Stevenson College

“We are Stevensonians; we are free agents of history and masters of our own destinies. Every one of us is important, and we cherish our differences as much as we cherish our shared values of love, chivalry, honesty, hard work, and responsibility.”

—Seung Kyun Joseph Mok, Stevenson Alumnus/Regents Scholar

Stevenson College is named after former statesman and U.S. Ambassador to the United Nations Adlai E. Stevenson. Our faculty, students, and staff take pride in intellectual critical inquiry, academic and civic leadership, and respect for students’ concerns about shared student governance, human rights, and social justice.

Stevenson College has a long-standing reputation for excellence in liberal education. The college strives to provide an academically, culturally, and socially supportive environment for all its members, fostering social responsibility and academic achievement. Stevenson

has brought to the campus distinguished individuals such as Senator George McGovern, Congresswoman Bella Abzug, Nobel Laureate Elie Wiesel, Chief of the Miwok Tribe Greg Sarris, Producer Lourdes Portillo, and Associate Director–Counsel Theodore M. Shaw of the NAACP Legal Defense and Educational Fund.

The college's faculty and staff offer professional and personal service for the diverse needs of students. Faculty and staff assist students in all areas of their academic and social experience at Stevenson College, and are committed to instilling respect for the diverse backgrounds of Stevenson students.

Academic Emphases

- Faculty drawn from social sciences, humanities, natural sciences
- Two-quarter frosh core course
- Writing Assistants
- Junior Fellows Program

The faculty at Stevenson, drawn from a variety of disciplines in the social sciences, humanities, and physical and biological sciences, share a common concern for the study of social processes that shape modern society and determine the quality of our individual lives throughout various global regions and periods of world history. Linguistics, history, sociology, politics, psychology, biology, chemistry, and computer science are strongly represented in the college.

Stevenson distinguishes itself as the only college with a two-quarter core course intended to provide all first-year students with a common academic experience. The core course allows for more rigorous development of students' critical, writing, and analytical skills. It provides a unique learning environment and a supportive intellectual community for all Stevenson first-year students. Those admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) are able to take the core course to satisfy the C1 requirement. Stevenson alumni can be found in legal, political, educational, engineering, medical, computer and information sciences, business, and public administration careers, among others.

The Stevenson core course, *Self and Society*, enables students to examine the nature of the self and the relationship of the individual to society. In addition, the course fosters an intellectual commitment to the general philosophy that has helped to define Stevenson College since its inception: preservation of human dignity, the social cultivation of individual creativity and citizenship, and a belief in ethical responsibility. The core course reflects the college's long-standing commitment to interdisciplinary and culturally diverse readings, while at the same time it affords students an opportunity to develop research interests, to acquire greater understanding of the role of research universities in contemporary societies, and to acquire the requisite skills to engage in increasingly more sophisticated intellectual work while at UCSC.

Students have the opportunity to apply for funding for special research projects each quarter. Stevenson also provides several annual scholarships and service awards, including the Michele Guard Memorial Scholarship, the Matthew Graviano Memorial Scholarship, the John Halverson Scholarship, the Sandor Callahan Scholarship Award, and the Robert Dodge Service Award.

The Stevenson College Junior Fellows Program offers juniors and seniors an opportunity to serve as instructors in *Self and Society*. Junior fellows, who must have completed outstanding work in *Self and Society* during their first year, undergo a rigorous application and selection process. Junior fellows (enrolled in Stevenson 120, Teaching Practicum) earn five course credits.

Stevenson provides writing assistance for all of its students. Stevenson Writing Assistantships are paid student positions open to juniors and seniors with excellent academic records.

College Community Programs

- College Nights
- Stevenson Student Council
- Stevenson Ethics Bowl Team
- Multicultural Advisory Committee (MAC)
- Path to a Greener Stevenson (PTAGS)
- Social and Multicultural Programs/Activities
- Stevenson Housing Association (SHA)
- Rainbow Theater

Stevenson holds regular College Nights, where joining together for a special dinner presents an opportunity for Stevenson faculty, staff, and students to get together in a social context. College Nights—such as Cinco de Mayo, Chinese New Year, and Vietnamese College Night—provide the opportunity to celebrate many different cultures. Dinner is followed by entertainment.

The Stevenson Student Council meets on Thursday evenings. This group is responsible for allocating college membership fees to student activities. The council also serves as a forum for the discussion of college and campuswide issues and appoints student representatives to college and campuswide committees.

Facilities

- Eight small residence halls
- Three apartment buildings
- Theme floors in residence halls:
 - —Multicultural and Social Justice House
 - —Outdoor Adventure House
 - —Continuing Student House
- Coffee house
- Wagstaff Fireside Lounge
- Writers' Center
- Stevenson Library
- Stevenson Event Center
- Silverman Conference Room
- Recreation room

Stevenson has a wide variety of facilities and activities to appeal to many tastes. The college, designed by San Francisco architect Joseph Esherick, has won many architectural awards. The buildings are situated amid redwood trees and sprawling lawns, and the main quad overlooks Monterey Bay. Stevenson is situated close to the campus bookstore, restaurants, McHenry Library, gym, and pool. There are eight small residence houses at the college providing a choice of single-gender or coed floors; each house accommodates about 65 undergraduates. The apartments provide space for 156 continuing students. Nearby are a picnic area, playing fields, and a garden.

The Stevenson Coffee House, which has become *the* gathering place in the college, is a friendly and inviting spot to enjoy lunch or an espresso and pastry— indoors or out on the patio. It is the scene of lively conversation, occasional musical entertainment, and chess matches. Adjoining the coffee house is the recreation room, with Ping-Pong, foosball, pool tables, and television. This area is also the site of much socializing and spontaneous group activity.

In contrast, the Stevenson Library is a striking building designed for quiet reading and

study. The Wagstaff Fireside Lounge, a retreat for relaxed discussion, is also used for recitals, special lectures, meetings, and residence house activities. Art exhibits (both student and professional) are on display throughout the year in the lounge, library, and coffee house.

For more information, call (831) 459-4930 or visit the web site: stevenson.ucsc.edu.

Crown College

Crown College faculty and students represent a wide variety of academic disciplines. The majority of the faculty teaches in the physical, biological and social sciences. Although Crown has more science and engineering students than any of the other colleges, most of Crown's students major in the social sciences, humanities, and arts. This diversity of interests and academic training enriches our intellectual environment. An important goal of the college is to foster an appreciation for the contributions of diverse cultural groups and to provide an atmosphere in which issues of both diversity and common social purpose are integrated into a wide range of programs and discussions.

Crown is located on a hilltop surrounded by a redwood forest. The core buildings consist of an administration office, dining commons, lounge spaces, study spaces, faculty offices, and classrooms built around a large patio and central fountain. The award-winning architecture with its white walls and high-pitched tiled roofs suggests a hillside Mediterranean village. The college's residential facilities house approximately 800 students. The facilities at Crown College were built through a partnership of public funds and a gift from the Crown Zellerbach Foundation.

Academic Emphases

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. We approach these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on the scientific enterprise, as well as the ways in which science and technology influence our society.

Beginning with the 2014–15 academic year, the Crown College core course becomes a two-quarter sequence. Our students take the two-unit Crown 79, *Introduction to Ethical Foundations*, in the fall. This course introduces the foundations of ethical decision-making and is designed to develop students' skills in understanding and making ethical arguments. Crown 79 prepares students to take winter quarter sections of Crown 80A/B. Crown 80A/B, *Ethical Issues in Emerging Technologies*, is an interdisciplinary seminar concerning the effects of these world-changing technologies and encourages students to develop decision-making strategies to steer them. The course examines these technologies' impacts on society using a variety of disciplinary approaches that engage the perspectives of both humanists and scientists. Both the fall and winter core courses are required of all non-transfer students during their first quarters at UCSC. As with the core courses from

our sister colleges, the development of critical reading and writing skills is a major thrust of Crown 79, 80A, and 80B.

Crown College is one of two colleges at UCSC participating in the First-Year Honors Program. This innovative new program offers a congenial and challenging academic home for a select group of well-prepared students at UC Santa Cruz. The enriched program of study includes special courses, seminars, colloquia, and other events during each quarter of the academic year. Admission to the First-Year Honors Program is by invitation during the admissions process.

The Crown Science Learning Community (SLC) is an innovative program to support first-year students who are interested in pursuing a major in engineering and the sciences. Students enrolled in this program live together, forming a supportive community promoting collaborative learning and group problem solving. To facilitate this process, SLC students are placed in a special section of Chemistry 1A or Math 3 and participate in a residentially based study group. The program is designed especially for students who have a strong interest in the sciences but feel slightly underprepared for university-level course work. It often acts as a bridge to the ACE Program in the physical and biological sciences and engineering. Participation—limited to first-year students at Crown College—requires a commitment to succeed, a willingness to work hard, and a positive attitude.

Similar to the Science Learning Community, Crown's Engineering Learning Community focuses on underrepresented student success in engineering. Participants receive support from the Baskin School of Engineering, including tutoring, mentoring, and specialized programs. All Crown juniors and seniors can participate in the college's Undergraduate Research Fellowship Program, which awards \$900 fellowships to student-faculty teams and encourages their interaction through undergraduate research.

College Community and Facilities

Crown sponsors a wide variety of co-curricular events spanning cultural, educational, and social areas of interest. One popular series is the Science/Public Affairs Tables, informal dinners at the Provost House offering students an opportunity to socialize with a faculty member outside the classroom and learn about his or her research.

Students become involved in Crown life by both initiating and participating in a wide range of activities. Social activities vary each year according to the interests of students. At the monthly College Night in the dining commons, a special dinner is followed by entertainment, both often sharing a common cultural theme. Some major events have become a tradition: for example, Epic Game Tournaments, the Crown Semi-Formal, and quarterly Regression Nights. Crown activities and dances draw students from all over campus. Outdoor activities organized by the student government, the College Programs Office, or residential staff range from whale watching on the Monterey Bay to ultimate Frisbee, and from backpacking to stargazing.

The Social Fiction Conference each spring brings students, staff, faculty, and community members together to focus on the intersection of social justice issues with the genres of science fiction, fantasy, anime, and gaming.

The Crown Student Senate (CSS), the elected student government at Crown, holds open weekly meetings to recommend fund allocations for student activities and to discuss issues of concern to students and the college. CSS also sponsors events to enhance the college experience, including the very popular Casino Night.

Crown offers two types of residential facilities: residence halls and apartments. Eight traditional residence halls each house approximately 60 students in single, double, and triple rooms in a coed environment (single-gender bedrooms with unisex bathrooms) or on a few all-female floors. For students particularly interested in living with and learning about a special-interest environment, Crown provides the Gaming House, Outdoor Pursuits and Academic Success Houses, Arts & Humanities House, the Science and Engineering Learning Communities, and continuing student houses.

The college also has apartments for approximately 230 third- and fourth-year students. Like the residence halls, the apartments are built on a small scale. Each three-story building has two or three apartments per floor that house four to six students in a combination of single, double, and triple rooms and include a kitchen, living room, dining

room, bathroom, and outside deck.

Other facilities in the college include the Crown Library study space; a modern computer laboratory housing Mac workstations, which provides students with access to several kinds of systems and an array of applications and instructional software selected to support academic course work; the Fireside Lounge with a piano and a flatscreen television; the Music Practice Room; and the Crown–Merrill Community Room, with a television, pool table, foosball, and ping-pong table, and provides an informal place to study, hold meetings, or just visit with friends. Dining facilities boast continuous dining and Banana Joe's take-out and quick mart.

For general information, call the College Office at (831) 459-2665 or visit crown.ucsc.edu.

For residential or college programs information, call the Student Life Office at (831) 459-5689.

Merrill College

Merrill College seeks to expand its students' awareness of their own heritage and of the

diversity of cultures around the world, past and present. Merrill faculty specialize in a number of different areas of study, concentrating especially on social theory, international affairs, and social change, and from a variety of disciplinary perspectives including history, the social sciences, literature, and foreign language study. The college makes a special effort to be a home for students from different cultural backgrounds and for international students; it presents unique opportunities to those who value multicultural perspectives.

Merrill houses the Departments of Politics and Legal Studies, and Latin American and Latino Studies. Merrill also hosts a Peace Corps satellite officer who helps UCSC students interested in working overseas to apply to the Peace Corps after graduation; and KZSC, the campus radio station. It also hosts the Chicano/Latino Research Center; UCSC's Cantú Queer Center; the student-run Pottery Co-op, the only one of its kind at UCSC; and the Ming Ong Computer Center, a modern computer facility with more than 40 state-of-the-art personal computers.

College Theme and Core Course

Cultural Identities and Global Consciousness is the ethos of Merrill College and is reflected in the theme of the college core course. Readings include diverse first-person narratives or works of fiction that focus on historical or political flashpoints, particularly those illuminating relationships between the developed and the developing world. Recent readings have included texts examining Chicano/Latino, Asian, African, Indian, and Islamic experiences. These works bear witness not only to conflicts and crises, but also to individual strengths and communal hopes. Students also read secondary sources related to the texts. Linked lectures, events, and films illuminate the case studies. The works studied expand international awareness by showing individuals and groups dealing with critical issues of nationalism, globalization, war, economic underdevelopment, and social and gender differentials. They frequently identify forms of social activism that respond to and seek to overcome violence and other problems. Students formulate their own analyses in relation to these examples and share their ideas in writing and seminar discussions. The course emphasizes skills central to intellectual life at the university: critical reading, analytical writing, and formulation of ideas for presentation and debate in seminars with peers and teachers are emphasized as students expand their global horizons.

Those admitted as transfer students are exempt from the core course requirement but may take it at their discretion.

Other Courses and Academic Initiatives

Merrill sponsors a variety of two- and five-credit courses on topics that change from year to year. Recently these have included a series of small classes drawing on ideas introduced in the Merrill Core, including seminars on *Americans and Human Rights* and *Topics in Foreign Policy* and experiential learning classes on sustainable building practices and field study. Merrill also offers an upper division class in personal empowerment, and another on the research university for recent transfer students. Additionally, students can enroll in *Classroom Connection*, a service-learning course in which students volunteer in local and regional K-12 schools while also engaging in classroom discussions of readings on current issues in educational theory. Participants make final presentations.

Recognizing the increasingly rigorous requirements for science majors, Merrill—in collaboration with the Academic Excellence Program—coordinates the Science Learning Community to support students majoring in the sciences. Students participating in the program enroll in small discussion sections that encourage a collaborative learning approach.

The Merrill Research Mentorship Program aims to prepare undergraduate students to pursue graduate studies and provides research experience and personal and professional development for Merrill students. Merrill faculty nominate a Merrill student whose interests dovetail with their own areas of research and expertise. Students who participate in the program (juniors and seniors) are employed as research assistants by their faculty mentors and receive up to \$800 for the school year.

The Merrill Peer Mentoring Program (MP²) matches newer Merrill students with more established students to help them acclimate to a new setting and the new demands of University life. MP² also provides a modest employment opportunity to peer mentors.

The Merrill College Distinguished Visiting Scholars Program hosts public and class presentations by national and international academics, artists, writers, and activists representing a wide variety of perspectives.

College Community and Facilities

Located on a hilltop, Merrill's newly renovated, award-winning buildings thread upward through the edge of a redwood forest. Glass curtain walls provide views from the A & B Buildings of the reconstructed college center and new restaurant building. The brick patios, gardens, outdoor café, and mission bell tower suggest California's Latino heritage. Merrill offers residence-hall and apartment-style options for students. Four residence halls house approximately 550 students in two high-rise structures and two smaller buildings.

The apartments, which are located a short distance from the central area of the college, house 180 continuing Merrill students. Grouped amid winding pathways and redwood trees, these three-story buildings have two or three apartments per floor. Each apartment houses four to six students in a combination of single, double, and triple rooms, and comes fully equipped with kitchen and bath, large living area, and outside deck. Facilities at the apartment complex include a large community room, plenty of outdoor space, and two laundry rooms.

With the help of the Merrill's Student Life Staff, staff and students work together to plan a diverse array of educational, social, recreational, and cultural events that include film series, art exhibits, intramural sports competitions, dances, musical events, and a yearly outdoor Moat mural painting party. Many of these social and educational activities focus on building a multicultural community. Other facilities at Merrill include the Cultural Center, where large events (including Merrill the Musical and the Glitterball) take place; the Baobab Lounge, which provides study space, a piano, and a television; and Merrill Academic Success (MAS), which provides Merrill students with a quiet place to study as well as close evening access to computers and a printer. Finally, Merrill is the only college that has a student-run pottery co-op. Students can throw, fire, and glaze their pieces in the workshop space, which is open to Merrill students on a first-come, first-served basis. Merrill's two-year renewal project to renovate the residence halls, update community space, and improve pathways and way-finding at the college will conclude in fall 2014.

The physical facilities of Merrill College were provided through a partnership of public funds and gifts from the Charles E. Merrill Trust and the family of Ming Ong, a student in the 1980s. For more information, call (831) 459-2144 or visit the web site: merrill.ucsc.edu.

Porter College

Porter College was founded in 1969 as the fifth of UC Santa Cruz's residential colleges and was later renamed in honor of a generous grant from the Porter–Sesnon family. Its mission is to foster achievement in all areas of study. Porter is especially dedicated to achievement in the arts, believing that creative inquiry is an essential part of a rigorous and broad-minded education, a flourishing society, and a happy life.

Academic Emphases

The Porter campus is the administrative home of the Arts Division and the History of Art and Visual Culture Department, but Porter College faculty fellows hail from every academic division on campus and from many non-academic professions. All of them share the philosophy of education that the college's curriculum embodies: first, discover how to learn; then, learn by doing; and finally, let your learning make a difference in the world.

The Porter College curriculum encourages students to explore unusual topics and provocative ideas, to test and revise hypotheses about the meaning of their experiences, to learn from the failures that are an inevitable part of new learning and discovery, and to assume responsibility for the decisions they make in their studies.

Porter 80A and 80B, known as "Porter Core," provide rigorous training in critical reading and writing and study skills. Students meet with instructors in seminars and in small writing groups. Those who are admitted as transfer students are exempt from the Core course requirement but may opt to enroll in Core if resources permit it. Lower-division transfer students who have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better, prior to enrollment, are permitted to take the Core course to satisfy the C1 requirement.

In addition to Core, Porter offers a variety of smaller interdisciplinary seminars that combine historical and theoretical approaches to the arts, humanities, and sciences with practical experience conducting scholarly research and making creative work.

The College provides fellowship funds each year to talented students pursuing original research and creative projects.

College Community and Facilities

The traditional residence halls and apartments play an important role in bringing the college community together. Students are encouraged to spend their beginning years in residence in the college, where housing is available for 1,300 students. The residence halls are divided into smaller units, with from 30 to 35 students sharing common lounges and other facilities. Theme halls include Film and Digital Media, Math, Engineering, and Sciences. Students also have a choice of quiet/intensive study, same gender, or substance-free halls. The six-person apartments are reserved for upper-division students.

Porter College is also home to the Transfer Community at Porter, a transfer student living/learning community. All on-campus incoming transfer students reside at Porter regardless of their college affiliation. Special programs are designed to help new transfer students adapt to life at UCSC.

In addition to traditional classrooms, Porter has many specialized facilities, such as student art galleries, a study center, and a dining hall that converts to a theater space. The Arts Instructional Computing Laboratories, located at Porter College, consist of two high-end labs oriented toward the arts.

Porter provides constructive opportunities for relaxation and recreation to balance the intellectual demands of a university education. The Porter Activities Office organizes formal and informal events, including open-mic nights, dances, recreational activities, and the mural painting program.

Many students and faculty perform or exhibit their work at Porter. The Sesnon Gallery, the dining commons, the amphitheater, and the faculty gallery host a wide range of artistic, cultural, and academic events each year.

Porter College facilities were constructed through a partnership of public funds and a gift from the Porter-Sesnon family of Santa Cruz. Part of the gift was used to establish an endowment for the college. For more information, call (831) 459-2273 or visit the web site: porter.ucsc.edu.

Kresge College

Kresge has a strong academic community that emphasizes creativity, leadership, sustainability, and community. Our motto is Independence, Creativity, Community.

Academic Emphases

Kresge's core course 80, Power and Representation, is a writing class that explores the relationships between individuals and their communities. Our goal is to empower individuals to think beyond easy answers, to express themselves clearly, to feel at home in writing, and to feel powerful in representing themselves on the page. In Power and Representation, we examine the many ways we constitute ourselves (and are constituted) as individuals in relation to communities. First, we study ideas about representation as a theoretical grounding, and then focus on representations of nationality, ethnicity, sexual orientation, gender, and race in critical theory, film, fiction, theater, and nonfiction. Our purpose is to create a dialogue about ourselves and our relationship to our communities as it is, as it might be, and as we might help make it.

In addition to section meetings, on Tuesday nights all students come together to watch core-related films or performers or listen to lectures. All students complete a final creative project that engages with the theme of the course.

Lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 (composition) requirement. Students who, in the Analytical Writing Placement Exam (AWPE), received a score of five or lower take a two-quarter version of the core class, designed to increase competency in college-level writing

In addition to the core course, Kresge offers a series of courses taught by guest faculty, alumni, and faculty affiliated with the college. These courses offer students the opportunity to study in small groups, focusing on topics related to faculty or alumni research interests, while at the same time enriching the standard curriculum. A new array of classes is offered each year. For example, Kresge has offered journalism, comic writing, documentary film, gardening, and service learning.

Kresge is home to the Writing Center, including the Creative Writing archives, and Writer's House, a living/learning community for students interested in creative writing and journalism, regardless of major.

A new living/learning community was created in Fall 2013. The Ecovillage is for students who want to actively create a new world based on cooperation and sustainable living. Kresge also offers the following opportunities:

- The new Common Ground Center promotes social and environmental change through undergraduate-focused action-education, research, advocacy, and civic engagement.
- Transformative Action and Service Learning classes prepare students to become innovators in real-life community projects.
- The Kresge Garden is the site of our organic gardening and food systems classes, where

students empower themselves by learning how to grow their own food and work together cooperatively.

Residential Life

Kresge was the sixth college to be built on the UCSC campus. The college was founded on the principle of participatory democracy as a means of encouraging a strong sense of community. Architecturally renowned, Kresge offers apartments rather than residence halls.

The Kresge apartments attract students with a sense of independence and community participation. Distinctively designed, the apartments at Kresge proper are configured for five to nine people. Kitchen and living areas look out onto the street, with other rooms facing the surrounding redwood forest. J and K Building's three-person apartments are reserved for continuing upper-division students. These two-bedroom apartments have an efficiency-style kitchen and living area.

The Residential Life and College Programs staff at Kresge work to bring students of similar interests together academically and socially by designing fun and unique programs based on student interest. Programs that focus on celebrating the diversity of the residential community, on multicultural community building, and on enhancing academic success through music events, mural painting, and food-centered events are highlighted.

Community Life

A wide variety of events and activities shape community life at Kresge: lectures, workshops, dances, and concerts are a regular part of student life at the college. The nature and tenor of these events are a reflection of the diverse interests of students and staff, who are committed to providing voice and opportunity for all community members.

Students actively shape the college community through participation in Kresge Parliament, an openly structured student organization responsible for voting the allocation of all college membership fees in support of activities and events. Parliament and Town Meetings also serve as a forum for the discussion of college and campus-wide issues with college staff and faculty. Additionally, students can get involved in the Kresge Multicultural Education Committee (KMEC), Music Co-op, Food Co-op, Photo Co-op, or the Kresge Garden.

Transfer Students

In recognition of the wealth of diversity that transfer students bring to the community—in terms of culture and experience—Kresge is the home of the STARS program (Services for Transfer and Re-entry Students). This is a staffed facility where students can gather to relax, socialize, hold meetings, and obtain campus information and resource support in a central location regardless of college affiliation. The resource center offers workshops, social evenings, and special events tailored to meet the needs of transfer students.

STARS also offers special advising workshops and two- and three-credit courses designed to help transfers in the process of entering the university and moving forward in their careers.

Facilities

At the entrance to the college is the restful Piazzetta, with a beautiful, architecturally designed fountain, and the Kresge Garden, the biggest student-run garden on campus. Leading off from the Piazzetta are STARS, the Commuter Lounge, and a student lounge equipped with television and DVD player. In addition to STARS, as a unique facility on the campus, the Commuter Lounge is a place for off-campus students who want to use a kitchen, shower, or lockers while on campus. Kresge's Photo Lab Co-op is above the Piazzetta and offers 24-hour accessibility to darkroom equipment. Adjacent to the nearby meadow are a racquetball court and an outdoor basketball court. The college includes a study center with soaring ceilings and walls of glass overlooking the forest, which also houses a writing center, a computer lab equipped with PCs for student use, and a student-run food co-op, where organic produce is sold and working memberships are available. At the top of the college are the Town Hall, the Music Co-op, and the Owl's Nest cafe.

Oakes College

Oakes was founded in 1972 to provide high-quality education to students from diverse cultural and social backgrounds. Students, staff, and faculty associated with the college believe that learning takes place not only in the classroom, but also in residential settings. For that reason, they work hard to create a multicultural community whose members strive to achieve ambitious goals—including equal access to educational opportunity and freedom from oppression—while simultaneously affirming and celebrating their distinctive cultural backgrounds.

Academic Emphases

The Oakes College faculty represents a wealth of expertise from the natural sciences to the humanities, and we are proud to have some of the top scholars in the world among our faculty fellows. Our students major in nearly every discipline at UCSC—from economics and computer science, to theater arts and Latin American and Latino studies—and they are well supported by the depth and breadth of the Oakes College faculty and the extensive knowledge of our advising team. Oakes graduates have gone on to successful careers in fields such as medicine, law, education, medical research, and community service.

The Oakes core course, Communicating Diversity for a Just Society, is required of all first-year students. The course is writing intensive and examines individual and collective responses to issues of culture, gender, sexuality, race, and class. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

At Oakes College, we are committed to fostering student engagement and leadership within and beyond the classroom. To this end, we encourage students to develop the knowledge, skills, and cross-cultural understanding necessary to become active citizens and future leaders in their own communities, workplaces, and academic disciplines as well as in the larger U.S. society and the world as a whole. We also provide a range of resources and programs that will enable all students to succeed in their academic endeavors. Such

resources include:

- The Learning Center and the Westside Writing Center at Oakes College provide space for study groups as well as tutoring and advising programs. Special assistance in writing and tutoring in a variety of subjects is offered to Oakes students and EOP students.
- The Oakes Computer Lab provides access to 20 PCs for Oakes students.
- Co-curricular programs like Oakes 4.0, Oakes Core Café, and the residential Science Community at Oakes College all offer living-learning opportunities to enhance student success and to provide students with unique opportunities for interacting with faculty in small group contexts.
- Oakes 77, Exploring Opportunities for Social Justice Field Work, provides students with the opportunity to work with a variety of community service organizations. All Oakes students are encouraged to contribute service to public agencies, schools, and community organizations in the city of Santa Cruz and in economically deprived areas of Santa Cruz and Monterey Counties. Oakes students serve as tutors, teachers, mentors, and community builders. Academic credit is available through the Oakes 77 course.
- Student services at Oakes include academic advising and psychological counseling.

College Community and Facilities

Oakes College, located on the west side of the UCSC campus, commands a sweeping view of Monterey Bay. Students may choose between apartment and residence hall living. The residence halls have a lounge, attractive courtyards, and views of the ocean and the city of Santa Cruz. Students can also share an apartment-style living space, which includes a common living area and small kitchen. All students participate in a University Meal Plan. Full-time coordinators for residential education and neighborhood assistants help residents develop cooperative ways of living together. As one student put it, "Oakes is a community where people of many different backgrounds, interests, and goals form a friendly neighborhood. We share our cultures and adapt to the different lifestyles of our neighbors." The residential program is designed to assist all students in integrating their academic and social needs. The residential staff host activities sponsored through its wellness, academic success, leadership, and social justice and diversity committees.

The college staff seeks to nurture and sustain a community in which mutual respect, understanding, and concern for others are the norm. Within that atmosphere of community expectations, students are also supported and encouraged to find room for their own creative personal expression.

The other facilities at Oakes further support the special programs of the college and provide recreational opportunities for the students. College facilities include the Learning Center, a multipurpose room for lectures, movies, and small theater productions; a college library; a quiet space for individual study, a dining facility shared with College Eight; TV lounges in the residences. Adjacent to the Oakes Café is the Guzman Room, a social and group study space. Oakes is also home to the Underdome, a small outdoor basketball court great for friendly three-on-three competition. Additional recreational facilities located close to the college include tennis courts, a large recreational field, and an indoor basketball court.

Oakes is named after Roscoe and Margaret Oakes in recognition of their generous philanthropy through the San Francisco Foundation.

For further information, call (831) 459-2558 or visit the web site: oakes.ucsc.edu.

College Eight

College Eight is dedicated to Environment and Society, and the college has a vigorous intellectual life around this theme. The college examines environmental issues from multiple perspectives, through the social and natural sciences, engineering, public policy, and science and technology studies. College Eight offers students a sense of community and opportunities to augment academic work with a wide range of extracurricular activities. These include events such as Earth Week, sustainability internships, and even a minor in Sustainability Studies.

College Eight students major in nearly every discipline offered at UCSC, while sharing a strong commitment to environmental stewardship. We teach our students and graduates to become environmentally aware green citizens, with the capacity to evaluate sustainability policies and strategies and the skills needed for hands-on engagement in the many projects and activities that will be required to ensure the future of the planet and human civilization.

Academic Emphases

College Eight sponsors a number of educational initiatives aimed at furthering its theme and mission. A three-quarter core course, *Nurturing Environmental Citizenship*, is taught by senior faculty from the departments of Politics, Ecology and Evolutionary Biology, Earth and Planetary Sciences, and Electrical Engineering. The fall-quarter course is mandatory for all incoming freshmen, and its goal is to introduce students to environmental issues, past, present, and future, with a special focus on California. The winter-quarter course addresses the principles of environmental science, while the spring quarter course examines how technological innovation and engineering can address environmental challenges. In addition, practicum internships, a three-quarter course on the tools of sustainability work, and the Sustainability Studies minor all enable students to acquire skills necessary for success in the coming green economy and to take on service-learning work with campus and community-based agencies and organizations. Additional college courses include garden internships, filmmaking for Santa Cruz TV (SCTV) and the student journal *Gaia*, student-led classes in sustainability, and a seminar on environment in film.

College Community and Facilities

College Eight is located on a sunny, terraced hillside on the west side of the UCSC campus, offering a spectacular view of Monterey Bay and the coastline as well as the redwood-covered hills. The college is designed to encourage interaction among resident and commuter students, with outdoor spaces for relaxing and informal opportunities to socialize. These include small residence hall patios, grass quadrangles, and a large plaza—the heart of the college—where pedestrian traffic converges. Adjacent to the college are recreational facilities that include the West Field House, tennis courts, basketball and sand volleyball courts, and playing fields. The Theater Arts and Music Centers, McHenry Library, and Porter and Oakes Colleges are a short walk from the college. Other parts of the university are easily accessible on foot or by frequent shuttle buses.

College Eight's facilities include an academic building that accommodates the college and faculty offices, the Sociology Department, associated research centers, classrooms and a computer lab with printers. Approximately 500 students live in the college's community of two- and three-story residence halls, which provide single, double, and triple rooms as well as suites. The residence halls include designated study lounges, laundry facilities, and lobbies that serve as living rooms—favorite places where residents gather to relax, watch television, and catch up on the news of the day. A number of these are themed residences, and the occupants are invited to small focused dinners with faculty and staff. Another 300 students are housed in College Eight's two-, three-, and four-bedroom apartments.

The college's residential staff includes both coordinators for residential education, who are full-time live-in professionals, and undergraduate resident assistants. The residential staff

plans a variety of educational and recreational events, including community barbecues, outdoor movies, and student-initiated events celebrating the diversity of our community. More intimate gatherings include study breaks, coffee talks, and potlucks. The residential staff is available to ease the transition to college life, making the college a comfortable new home for our residents.

The Student Commons building contains the office of College Eight's college programs coordinator, the office of the Student Environmental Center, and a large meeting room for student use. A study center/art gallery is located across the plaza. The College Eight Café offers a quiet, comfortable space and is a favorite haven and gathering place for students, faculty, staff, and other members of the campus community.

In conjunction with the student government and student organizations, the College Eight Student Programs Office plans social, multicultural, and educational events for the college community. Weekly Café Nights—featuring open mics, music, art shows, and guest speakers—accommodate the diverse spectra of cultural and artistic interests of the students. College Night, a quarterly cultural event, provides an opportunity for students to learn about a variety of cultures through entertainment, education, and delicious cuisine. In addition, the Student Programs Office works closely with the Student Environmental Center to bring programs that educate and build long-lasting networks, which aim to address the environmental issues affecting our world today.

Above all, College Eight seeks to create a community of inclusion, in which each person is encouraged to share and explore beliefs, worldviews, values, and ideas in an atmosphere of mutual support and trust.

For more information, contact the college at (831) 459-2361, e-mail 8housing@ucsc.edu or rrrhodes@ucsc.edu, or visit the web site: eight.ucsc.edu.

College Nine

“At College Nine, we introduce students to our increasingly interconnected world. Students can learn about the impact of economic globalization. We also expect them to come to appreciate the diversity of cultural traditions.”

—Campbell Leaper, College Nine Founding Provost

Academic Emphases

College Nine’s theme of International and Global Perspectives emphasizes the impact of our increasingly interconnected world. We consider how people around the world affect one another through global economies, politics, and culture. Some specific issues that our academic and co-curricular programs consider are economic and cultural globalization, immigration, ethnic conflicts, genocide, and human rights. Our programs seek to respect both diversity and unity in understanding individuals and societies. Students interested in these issues either as their major focus or as part of their general education are invited to join the College Nine community.

Writing Seminar

In the first-quarter frosh course, Introduction to University Discourse: International and Global Issues, students examine current issues pertinent to the college’s intellectual theme. Topics address issues such as globalization, inequities in wealth and poverty across the world, human rights, and regional conflicts.

The seminar emphasizes the development of students’ writing skills. Being able to write well is a valuable asset for success in college and in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

Special Academic and Co-curricular Programs

Optional programs are available to involve College Nine students in academic and co-curricular activities beyond the first-quarter course. They are designed to promote students’ academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Global Action

In this workshop facilitated by peer instructors, students will learn about current

international and global issues through interactive exercises, small group discussions, and faculty presentations. Students will develop an “action plan” to raise awareness about one or more of these concerns and take practical steps to create positive change in the world.

Service Learning: Esprit de Corps (110 and 110B), Praxis, and Alternative Spring Break

Students can extend their learning beyond the classroom by gaining practical experience volunteering for a school or a nonprofit organization in the Santa Cruz community. Examples include assisting in a classroom or at a homeless shelter. College Nine has its own service-learning class, Esprit de Corps (110 and 110B), taught by our service-learning coordinator. Students meet weekly to reflect on their experiences, discuss readings, and listen to speakers from the community. To complete the service experience, students develop a final paper or project related to civic engagement. The class is available all three quarters and is facilitated by students during the winter and spring. Praxis, College Nine’s community-service organization, provides another way to serve the Santa Cruz community. Praxis students meet weekly and volunteer on the weekends at a variety of locations. Over the spring break students can participate in an Alternative Spring Break Project and earn credit at the same time. Students join forces with Live Oak community activists by immersing themselves in the issues and solutions of this multifaceted region of Santa Cruz County.

Students as Teachers and Mentors

College Nine students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Nine course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Nine academic advisers can also direct students to other opportunities for student teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop one’s own skills as a teacher and a leader.

Global Information Internship Program

The Global Information Internship Program (GIIP) places highly motivated students in internships with nongovernmental organizations and community groups. Students in GIIP help these organizations and groups in the use of Internet-based information and communications technologies. Interns acquire leadership and organizational skills through the “learning-by-doing” method. For more information, visit the web site at giip.org/.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a daylong, student-led event featuring keynote speakers, ten workshops, various on- and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit activism.ucsc.edu for more information.

Education Abroad

The UC Education Abroad Program places students at a university in another country for one or more quarters. Studying abroad can be a valuable way to expand ones understanding of the world. Given the international focus at College Nine, students are encouraged (but not required) to develop a second language or to study abroad.

Research Opportunities

The faculty at UC Santa Cruz are highly ranked for the quality of their research. College Nine students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Nine academic advisers will help link students with these programs.

College Nine Pathways to Distinction

Another feature of College Nine is that qualified students may graduate with College Nine

Distinction. This recognition is intended to serve as an incentive for students to pursue activities that are especially apt to help them succeed in college and beyond. Two pathways are possible:

- Research and scholarship. In this pathway, students pursue research with faculty by completing three quarters (15 credits) of work on a senior thesis or a research internship. Students may be recognized with College Nine Distinction if they do a thesis or a research internship in their major on a topic related to international or global issues.
- Language and culture. Students who enroll in at least three quarters (15 credits) in either Education Abroad or a foreign language (or a combination) may qualify for College Nine Distinction.

College Community

Founded in Fall 2000, College Nine is one of the newest colleges at UCSC. Consistent with UCSC's founding vision, College Nine creates an integrated living and learning environment through engaging academic and extracurricular programs focusing on the theme of International and Global Perspectives. Students and staff collaborate to develop an array of programs exploring the many aspects of the college's theme. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

Several times a quarter, the college community comes together to plan College Night, which is a large-scale community celebration held in the dining commons and open to all College Nine students whether or not they live on campus. These events are planned by students and focus on some element of international and global issues. College Nights include food, entertainment, and educational materials related to the theme. Past College Nights have featured international dance and music, Earth Day, and other topics relevant to the college theme.

Student Government

The College Nine Student Senate serves as the student government for College Nine and represents its students to the college and campus administrations and to the Student Union Assembly (SUA), the campuswide student governance board. The Senate appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

International Living Center

The International Living Center (ILC) at College Nine offers a unique living environment fostering understanding, cooperation, and friendship among upper-division students from different nations, cultures, and backgrounds. Half of the residents are students from the United States, and the other half are students from various countries around the world. Students reside in the Colleges Nine and Ten Apartments. Based out of the International Living Center, the International Affairs Group (IAG) offers all Colleges Nine and Ten community members the opportunity to engage in lively discussions about important current international issues with one another through guest speakers, film, literature, media and personal experience.

iFloor

The iFloor is a residence hall floor made up of a mix of international first-year students and U.S. first-year students who apply to live in this intentional intercultural community housed within the College Nine. This unique community offers residents opportunities to make meaningful, lifelong friendships and connections that extend beyond borders.

Think Global; Act Local

Think Global; Act Local is College Nine's living-learning community for students who wish to practice the components of service learning. Students living on this floor will have the opportunity to gain knowledge and understanding of important social justice issues

occurring in Santa Cruz and in the world at large. Students participate in local service projects several times per quarter and take the time to reflect individually and as a group upon their actions.

Co-curricular Programs and Opportunities

Getting involved in co-curricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Nine for student involvement. These include the following groups as well as many other programs, activities, and clubs.

Global Leadership Development (GLAD)

GLAD meets weekly throughout the fall quarter and provides a wide range of exercises, guest speakers, and programs designed to foster and develop participants' efficacy as world citizens and leaders of College Nine.

CREATE

CREATE (Cultural Resources to Educate and to Empower) offers a community at College Nine for students of color to find support and empowerment through mentorship and friendship.

Praxis (Student Volunteer Community)

Praxis is an organization geared toward community building and social justice. By participating in Praxis, students gain exposure to a variety of Santa Cruz community agencies and explore what it means to be agents of social change.

Intercultural Community Weekend

This two-day retreat provides international and U.S. students from diverse backgrounds the opportunity to explore various components of intercultural communication. Through a series of structured exercises and small-group discussions, students share perspectives on issues such as multiculturalism, values orientation, and cross-cultural communication. The goal of the workshop is to build community and friendship between international and U.S. students as well as to increase students' understanding of the complexity of communicating across cultures.

Physical Surroundings

College Nine is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in the Social Sciences 1 Building. A nature preserve serves as College Nine's "backyard." College Nine students have immediate access to hiking, running, and mountain bike trails in the adjacent forest.

Residence halls offer approximately 500 single, double, and triple bedrooms. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, there is a state-of-the-art dining hall with an adjoining multipurpose room and recreation lounge for both College Nine and College Ten.

College Nine and College Ten also house approximately 300 upper-division students in apartments, with 190 students in single bedrooms and the balance in double and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

For more information about academic or general college programs, call (831) 459-5034, e-mail jhartman@ucsc.edu or visit the College Nine web site: collegenine.ucsc.edu.

College Ten

"Our goal at College Ten is to foster students' concerns for social justice and their respect for diversity. This appreciation develops through both understanding and practice. Students can study the roots of social problems such as prejudice, ethnic hatreds, poverty, and political oppression. Another form of learning can occur through involvement in community organizations and other agencies. In these ways, we hope our students can contribute to the makings of a better world."

—Campbell Leaper, College Ten Founding Provost

Academic Emphases

College Ten's theme of Social Justice and Community addresses a range of social problems and their impact on all members of society. In particular, the academic and co-curricular programs consider the injustices that many people confront in their lives. Possible community and governmental policies for addressing social, political, and economic inequalities are also examined. In addition, the college provides students with opportunities to make their own positive contributions to social change through community involvement or scholarly research.

The college curriculum explores the causes and consequences of social injustice in several ways. Students examine the roots of prejudice, discrimination, and violence directed toward groups based on their ethnicity, skin color, gender, sexual orientation, religious beliefs, or political views. They also consider the causes and consequences of poverty both within the United States and around the world.

Writing Seminar

In the first-quarter frosh course, Introduction to University Discourse: Social Justice and Community, students examine current issues pertinent to the college's intellectual theme. Students explore issues such as poverty, discrimination, and economic injustice and address ways that communities, governments, and businesses can address inequities in society.

The seminar emphasizes the development of students' writing, reading, and speaking skills. Being able to write well is a valuable asset for success in college and later in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least

one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

Special Academic and Co-curricular Programs

Optional programs are available to involve College Ten students in academic and co-curricular activities beyond the first-quarter core course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Social Justice Issues Workshop

College Ten students have the option of enrolling in the Social Justice Issues Workshop in winter quarter. This two-credit course meets once per week and can be taken in addition to a regular 15-credit academic load. The workshop offers a small, dynamic learning community in which members explore important issues of personal and cultural identity; social, political, and environmental concerns; and community-mindedness. The class emphasizes small-group experiential learning through structured exercises and group activities, and also includes discussions, film presentations, and guest speakers.

Service Learning: Esprit de Corps (110 and 110B), Praxis, and Alternative Spring Break

Students can extend their learning beyond the classroom by gaining practical experience volunteering for a school or nonprofit in the Santa Cruz community for credit. Examples include assisting in a classroom or at a homeless shelter. College Ten has its own service-learning class, Esprit de Corps (110 and 110B), taught by our service-learning coordinator. Students meet weekly to reflect on their experiences, discuss readings, and listen to speakers from the community. To complete the service experience, students develop a final project related to civic engagement. The class is available all three quarters and is facilitated by students during the winter and spring. Praxis, College Ten's community-service organization, provides another way to serve the Santa Cruz community. Praxis students meet weekly and volunteer on the weekends at a variety of locations. Over the spring break students can participate in an Alternative Spring Break Project and earn credit at the same time. Students join forces with Live Oak community activists by immersing themselves in the issues and solutions of this multifaceted region of Santa Cruz County.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a daylong, student-led event featuring keynote speakers, 10 workshops, various on-and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit activism.ucsc.edu for more information.

Students as Teachers and Mentors

College Ten students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Ten course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Ten academic advisers can also direct students to other opportunities for student teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop one's own skills as a teacher and a leader.

Research Opportunities

The faculty at UC Santa Cruz are highly ranked for the quality of their research. College Ten students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Ten academic advisers will help link students with these programs.

College Ten Pathways to Distinction

We understand that learning styles and educational commitments are unique and personal.

Therefore, students are recognized with College Ten Distinction upon successful completion of three quarters (15 credits) of experiential course work in Service and Leadership and/or Research and Scholarship focused on social justice and diversity issues. Applicable courses in service-learning and research opportunities with faculty can fulfill the criteria for distinction. This recognition is intended to serve as an incentive for students to pursue activities that are apt to help them succeed in college and beyond.

College Community

Founded in Fall 2002, College Ten is the newest college at UCSC. Consistent with UCSC's founding vision, College Ten creates an integrated living-and-learning environment through engaging academic and extracurricular programs focusing on the theme of Social Justice and Community. Students and staff collaborate to develop an array of programs exploring the many aspects of social justice. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

Several times a quarter, students and staff work together to plan College Nights, which are large-scale community celebrations held in the dining commons and open to all College Ten students whether or not they live on campus. College Nights include food, entertainment, and educational materials related to a theme. Past College Night themes have included International Dance and Music, Earth Day, and other topics relevant to the college theme.

Student Government

The College Ten Student Senate serves as the student government for College Ten and represents its students to the college and campus administrations and to the Student Union Assembly (SUA), the campuswide governance board. The Senate appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

Rumi's Field

Named after a renowned peace-seeking Sufi poet, Rumi's Field offers a space for student who wish to learn, live and interact, using the skills of Nonviolent Communication. Taught and practiced around the globe, Nonviolent Communication (NVC) strengthens one's ability to inspire compassion from others and respond compassionately even under difficult circumstances. This mixed community of College Ten first-year and continuing students will offer the opportunity to engage in dialog and resolve conflict using NVC consciousness as a tool for personal and societal transformation.

Co-curricular Programs and Opportunities

Getting involved in co-curricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Ten for student involvement. These include the following groups as well as many other programs, activities, and clubs.

CREATE

The purpose of CREATE (Cultural Resources to Educate and to Empower) is to facilitate the ongoing discussion of diversity issues at College Ten and in our living communities, learn about and promote multiculturalism, plan activities, and help students and staff have a resource for inclusiveness and training.

ENGAGE

ENGAGE (Explore New Growth and Gain Experience) offers students the opportunity to explore and develop their own beliefs, values, and feelings about current issues and social concerns. Students gain leadership skills through collaborating on a community action project, and develop relationships and experience to become leaders in the College Ten community. ENGAGE meets weekly throughout fall quarter.

Multicultural Community Weekend

This two-day retreat provides students from diverse backgrounds the opportunity to explore aspects of social justice, diversity, and community through a series of exercises and discussions (both structured and informal). Participants explore issues impacting our individual identities (e.g., race, class, gender, sexual orientation, ability, religion), increase their understanding of the complexities of communicating across diverse experiences and backgrounds, build communication skills, and share in celebrating and deconstructing the diversity of our community. The Multicultural Community Weekend is optional; students apply for this opportunity in the fall.

Terry Freitas Café

Located at College Ten, Terry Freitas Café is a favorite gathering place. It is open nightly for social justice performances, music, and social interaction.

Physical Surroundings

College Ten is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in Social Sciences 1. A nature preserve serves as College Ten's "backyard." College Ten students have immediate access to hiking, running, and mountain bike trails in the adjacent forest. Residence halls offer approximately 500 single, double, and triple bedrooms. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, there is a state-of-the-art dining hall with an adjoining game room and student lounge for both Colleges Nine and Ten. Colleges Ten and Nine also house approximately 300 upper-division students in apartments, with 190 students in single bedrooms and the balance in double and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

For more information about academic or general college programs, call (831) 459-5034, e-mail jhartman@ucsc.edu or visit the College Ten web site: collegeten.ucsc.edu.

Programs and Courses | [Links to Program Statements by Department](#)

Courses

The academic programs offered at UC Santa Cruz are described in detail in this section. Curricula, courses, and degrees listed in this catalog are subject to change through normal academic channels. New proposals and changes are initiated by the relevant departments, divisions, or colleges and approved by the appropriate academic dean and by the Committee on Educational Policy or the Graduate Council. The designations F (fall), W (winter), S (spring), or Summer that appear at the end of each course indicate the intentions of the academic units; however, on occasion, the actual scheduling of classes may change.

For changes and additions to courses listed in this catalog, consult the [Schedule of Classes](#) and [the Class Search](#) published each quarter and available on the web. The Office of the Registrar also provides detailed information on its web site at registrar.ucsc.edu.

Course Credit

Unless otherwise specified in the course description, each course earns 5 quarter credits. Therefore, regardless of course format or scheduling, each course makes approximately equal demands on enrolled students.

All physical education courses are noncredit. Other noncredit courses include certain graduate seminars. Laboratory courses, music courses involving individual lessons or ensemble participation, as well as some special-interest seminars and individual studies courses carry less than 5 credits and are designated accordingly.

The normal UCSC undergraduate program of study is three 5-credit courses per quarter or equivalent. In 12 quarters at UCSC, most students complete 180 credits. With a college's approval, a student may be allowed to vary the course load. See also [Part-Time Program](#).

Course Numbering

Undergraduate courses are classified as lower division or upper division. Lower-division courses (numbered 1-99) are designed for first-year and sophomore students but may be taken by more advanced students. Upper-division courses (numbered 100-199) are designed for junior and senior students but are open to first-year and sophomore students

who have sufficient background and the consent of the instructor in charge.

Graduate courses (numbered 200–299) are either restricted to graduate students or open only to students who can show the instructor that they have completed sufficient upper-division course work basic to the subject matter of the course.

Footnotes

Courses marked with an asterisk (*) will not be offered in the 2014–15 academic year.

Courses marked with a dagger (†) will be offered, with the quarter as yet to be determined.

General Education Codes

The general education codes that appear in some course descriptions are explained in the section on [general education requirements](#).

Course Format

Most courses at UCSC are taught as lectures or, when the class is small enough for considerable discussion, as seminars. A large number of courses require enrollment in a secondary discussion section scheduled at a different time from the primary course. Sometimes there is laboratory or fieldwork associated with a course.

Occasionally, a student may wish to do an individual project as part of the work for a course. UCSC instructors are usually quite willing to consider and evaluate such work, time permitting.

Prerequisite Policy

When applicable, prerequisites are listed in this catalog within the course description for each course. There are many courses that meet general education requirements and do not require a prerequisite.

Prerequisites come in many forms—for example, specific courses, placement examinations, or “satisfaction of the Entry Level Writing and Composition requirement” for writing courses. Some course descriptions also specify that students must be declared majors or seniors in order to enroll. Other course descriptions recommend the appropriate background for a course—for example, “ability to use algebra and solve problems.”

Questions concerning prerequisites should be directed to the instructor of the course or the respective department office. Students who have not met all prerequisites may be excluded from a course. Alternatively, the instructor or a department adviser may waive the prerequisite based on demonstrated competence or equivalent academic experience.

Class Size

A student’s class level plays a large part in how many small classes are available. Introductory classes tend to be large, although they are usually accompanied by required small sections or laboratories. Many small classes have prerequisite courses that enroll large numbers of students. Also, certain large classes fulfill campuswide general education requirements. First-year students experience at least one small seminar in conjunction with the college core course, and they are likely to experience an increasing proportion of small classes as they progress to senior status.

Individual Study

Especially in the upper division, students are encouraged to devise special courses to pursue independently, under the guidance of faculty members. A study plan should be discussed with a faculty member in the general subject area of interest. This faculty member will ultimately be responsible for evaluating the work done. The study plan must also be approved by the course sponsoring agency; it should be noted that not all proposed plans are accepted.

Field Study

Independent, off-campus field study is available through many departments. It is handled in

much the same way as individual study. In addition, there are several established field programs that offer a variety of full- or part-time, off-campus, field placements as part of the regular program of academic study. For more information on these programs, see [Field and Exchange Programs](#) in the Undergraduate Academics section.

Apprentice Teaching

An upper-division or graduate student may apply for approval to teach an undergraduate seminar of his or her own design. The seminar is supervised by a faculty member and carries normal academic credit for the students and the apprentice teacher. Interested students should initiate a proposal with a faculty member in the appropriate subject area.

Credit by Petition

Regularly enrolled students may obtain full academic credit for a course by challenging the course. Challenging the course entails passing an examination or completing an appropriate body of work supervised by a regular instructor for the course. The petition for such credit must be approved by the instructor of the course, the chair of the department offering the course (or provost, if it is a course offered by a college), and the provost of the student's college. Some courses are not considered appropriate for credit by petition.

For foreign language students, credit by petition may not be used by students whose language ability greatly exceeds the course level proposed for challenge. Petitions for credit for levels 4 and 5 cannot be filed in the same quarter. Contact the Language Program, 239 Cowell, 459-2054, for more information.

Auditing of Classes

Instructors may permit nonenrolled students to attend their classes when space is available after all students who wish to enroll officially have done so. An instructor is not obligated to devote time to the work of students who are not officially enrolled in the class.

Anthropology

2014–15 General Catalog

361 Social Sciences 1 Building

(831) 459– 3320

<http://anthro.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

Anthropology studies people throughout the world and through time. Because it covers a wide range of topics— physical evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline. The anthropology program at UCSC offers courses that reflect the diversity of the field.

- Cultural anthropology explores the movements of people, objects, and ideas in diverse societies, including our own. Cultural anthropology courses examine such topics as race and ethnicity, medicine, science, gender, sexuality, the environment, religion, law, popular culture, and politics.
- Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people's interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of East Africa and the American Southwest.
- Physical/biological anthropology traces the human journey from its beginnings in Africa over five million years ago. Physical anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and physical anthropology. Laboratory courses in archaeology and physical anthropology offer practical experience in the analysis of biological and cultural materials. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, and the interpretation of archives.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1

also houses the Visual Culture Research Laboratory and laboratories for archaeology and physical anthropology where space is provided for laboratory and individual studies courses and for collections of mammalian skeletal material, casts of fossil hominids, ceramics, stone tools, and other archaeological artifacts.

The Anthropology Society, a campus club, is open to all students interested in anthropology. The Anthropology Colloquium showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/Physical Anthropology Lunch forum to share information on fieldwork and employment opportunities.

Undergraduate Handbook

All undergraduate majors should obtain a copy of the Anthropology Department undergraduate handbook from the department web site. It outlines information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

Admission into the Major

In order to qualify for the major, students must have received a "C" or better in at least one lower-division anthropology course (ANTH 1, 2, or 3) and have either received a "C" or better in a second lower-division anthropology course or be enrolled in a second lower-division anthropology course at the time of declaration.

Requirements of the Major

The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program or coursework. Peer advisers are also available.

To graduate with an anthropology major, students must take courses 1, 2, and 3 as background for upper-division courses. They must take a minimum of 10 upper-division courses, including at least one course selected from each of these four categories listed below. Note: Not all of these courses are offered each year. Students must also complete the Disciplinary Communication (DC) Requirement.

Anthropological Theory Courses

- 100 History and Theory of Physical Anthropology
- 150 Communicating Anthropology
- 152 Survey of Cultural Anthropological Theory
- 170/270 History of Archaeological Theory

Sociocultural Anthropology Courses

- 119 Indigenous Visual Culture
- 120 Culture in Film
- 121 Socialism
- 122 Postsocialism
- 123 Psychological Anthropology
- 124 Anthropology of Religion
- 126 Sexuality and Society in Cross-Cultural Perspective
- 127 Ethnographies of Capitalism
- 128 Contemporary American Evangelical Culture

Anthropology At-Large Courses

Anthropology At-Large courses may be used as electives for completing upper-division course requirements. These courses do not count as anthropological theory, sociocultural anthropology, ethnographic area studies, or physical/biological anthropology and archaeology courses.

110A Contemporary Issues

110B Archaeology in the Public Eye

110G Barrio Popular Culture

110H Acoustic Culture

110K Culture though Food

110L Anthropology of Love and Intimacy

110O Postcolonial Britain and France

110P India and Indian Diaspora Through Film

110R Discourses in American Religions and Their Role in Public Life

110T Motherhood in American Culture

110V Anthropology of Violence and Conflict

Exit Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing an advanced senior seminar (194-series course, 190ABC, or 196AB), by writing an acceptable independent senior thesis, or by passing an approved graduate-level topical seminar in anthropology.

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to senior anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25-30 pages) to a professional journal article in its subfield.

Students who intend to satisfy the exit requirement by taking a graduate seminar must first get permission from the department. Not all graduate seminars are appropriate for fulfilling this requirement. Students who take a graduate-level course to fulfill the theory requirement may not use this course to satisfy the exit requirement.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. A combined major in anthropology and Earth and planetary sciences, leading to a bachelor of arts (B.A.) degree, is also offered; for that program description, see Earth and Planetary Sciences. Students going on to graduate school should plan course schedules in close consultation with faculty advisers.

Many anthropology majors whose studies emphasize archaeology have benefited from concurrent study in the Cabrillo College Archaeological Technology Certificate Program. This vocational certification program is sponsored entirely by Cabrillo College, but credit for its summer field survey and excavation component may be transferred for credit at UCSC. Although courses in the Archaeological Technology Certificate Program do not count toward the UCSC anthropology major, students who have obtained the certificate in tandem with their bachelor's degree in anthropology have expanded their employment and advanced degree program opportunities. Students interested in exploring this possibility are encouraged to consult with UCSC archaeology faculty and to visit the program's web site at <http://www.cabrillo.edu/academics/anthropology/>.

- 194A Anthropology of Dead Persons
- 194B Chimpanzees: Biology, Behavior and Evolution

- 196G Advanced Topics in Folkloristics
- 196H Global History and the Longue Durée
- 196I Hard Problems
- 196J Imagining America
- 196K Settler Colonialism
- 196L Archaeology of the American Southwest
- 196M Modernity and Its Others

Two-credit courses do not count toward the 10 upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the 10 required upper-division courses. Course 107L does not count toward the 10

upper-division courses required for the major. Theory courses can only be counted toward the theory requirement or an upper-division elective.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Anthropology's DC requirement aims especially at cultivating high-level skills in critical and ethnographic writing. To satisfy the DC requirement students must: a) complete an Anthropological Theory Course (chosen from ANTH 100, 150, 152, 170, 270) and; b) complete a Senior Seminar or complete an Independent Senior Thesis, following the guidelines of the senior exit requirement. Students who take 270 to fulfill the theory/DC requirement may not use the course to satisfy the senior exit requirement. Please refer to the [Undergraduate Handbook](#) for details.

Transfer Students

If possible, transfer students should complete lower-division requirements for the major before coming to UCSC by taking classes equivalent to courses 1, 2, and 3. Department policy also allows students to petition up to 10 quarter credits (equivalent to two UCSC courses) of upper-division transfer credit toward the major requirements. Any courses completed at the community college level are not considered to be upper-division courses. Transfer students should bring an unofficial copy of all pertinent transcripts to the undergraduate adviser in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

Peer Advisers

The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office.

Honors

The Anthropology Department awards honors in the major and highest honors in the major based on a ranked departmental grade-point average (GPA) that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative (GPA) through the quarter before graduation. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative. When applicable, narrative evaluations can be taken into consideration for highest honors.

Minor Requirements

Students earn a minor in anthropology by completing all of the requirements for the major with the following differences:

The number of upper-division courses is reduced from ten to seven. Of these, at least one must be from each of the following categories: 1) sociocultural anthropology, 2) ethnographic area studies, and 3) physical anthropology or archaeology.

Independent study courses cannot be used toward completion of the minor.

No senior seminar or thesis is required.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available on the anthropology web site <http://anthro.ucsc.edu/>.

Anthropology/Earth Sciences Combined Major Requirements

The Anthropology Department also collaborates with the Earth and Planetary Sciences Department to offer a combined major, which leads to a B.A. in anthropology/Earth sciences.

The anthropology/Earth sciences combined major is designed for students with strong interests in Earth sciences and in the laboratory-based subfields of anthropology. This includes anthropology students who are interested in archaeology or paleoanthropology and desire more intensive training in the natural sciences, and Earth sciences students who are interested in paleobiology or archaeology. The combined major allows students to receive a strong grounding in both disciplines without pursuing a double major or major/minor in the two departments. This program will permit anthropology/Earth sciences majors to enter graduate programs in Earth sciences, archaeology or paleoanthropology with extraordinarily well-developed geological knowledge and skills. Anthropology-based students in the combined major are encouraged to augment the science-rich required curriculum with upper-division courses in cultural anthropology.

Eleven Lower-Division Courses

Anthropology 1 – Introduction to Biological Anthropology

Anthropology 2 – Introduction to Cultural Anthropology

Anthropology 3 – Introduction to Archaeology

Earth Sciences 5/5L or Earth Sciences 10/10L or Earth Sciences 20/20L

Mathematics 11A or 19A

Mathematics 11B or 19B

Five lower-division cognate science courses from the following: Chemistry 1A, Chemistry 1B/M, Chemistry 1C/N, Physics 6A/L, Physics 6B/M, Biology 20A, Biology 20B, Biology 20C

Eight Upper-Division Courses

Earth Sciences 110A/L – Evolution of the Earth

Any three Earth Sciences upper-division electives (must be 5-credit courses)

Any four Anthropology upper-division electives from the physical anthropology or archaeology concentrations (must be 5-credit courses)

One Senior Comprehensive Requirement (choose one of the following)

Anthropology 194 – Any Senior Seminar in Physical Anthropology or Archaeology (by petition)

Earth Sciences 188A-B – Summer Field Internship

Senior Thesis (by petition only)

Any approved Earth science field program (by petition only)

Students must coordinate with both the Earth and Planetary Sciences Department and the Anthropology Department to complete the combined major.

Faculty Adviser in Anthropology: Diane Gifford-Gonzalez, dianegg@ucsc.edu

Faculty Adviser in Earth Sciences: Paul Koch, plkoch@ucsc.edu

Anthropology Undergraduate Adviser: Christina Domitrovic, cdomitro@ucsc.edu

Earth Sciences Undergraduate Advising: epsadvising@ucsc.edu

Graduate Program

The anthropology doctoral program at UCSC consists of two tracks: cultural anthropology and anthropological archaeology. The majority of students are admitted to the cultural anthropology program. Smaller numbers of students are admitted to the anthropological archaeology program. Admission of students who are interested in the physical

anthropology program described below have been suspended indefinitely.

Although applicants are accepted only for the doctor of philosophy (Ph.D.) program, students may obtain a master of arts (M.A.) degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress unites the research interests of many faculty in the cultural anthropology graduate program at UCSC. In recent years, anthropology's central concept of culture has been subjected to extraordinary ethnographic and theoretical pressures. Across the social sciences, scholars are responding to emergent scientific and social dilemmas by turning to the concept of culture and the ethnographic method. Such disciplinary turns grow from a challenging new set of social configurations, which affect both scholarly and lay understandings of the present, past, and future: the demise of certainties about progress and modernization and the need to understand newly emergent worlds. Nineteenth- and 20th-century ideas of progress and programs of modernization both created the concept of culture and relegated it to a nostalgic role as backward-looking sentiment. Anthropologists studied "vanishing worlds." In the last 30 years, however, such certainties have been challenged. Grand theories of human behavior that depended on the idea of a universal man have begun to fray around the edges. Heterogeneity and disjuncture have caught the attention of a wide range of social scientists, calling out for ethnographic investigation. In this context, scholarly discussions have turned toward culture, the world-making networks, geographies, innovations, meanings, and assemblages that are carrying us into the future.

Our concentration on "emerging worlds" and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombination of these approaches can elucidate specific anthropological problems.

Working with their faculty advisory committee, students in cultural anthropology have considerable freedom to design their own programs of study after completing the two-quarter core course and the ethnographic practice course during the first year. To achieve Ph.D. candidacy, students are expected to pass a first-year and second-year review of their written work, take three additional 5-credit courses in anthropology (excluding independent study courses), maintain satisfactory academic progress, satisfy the ethnographic writing requirement and the foreign language requirement, pass a qualifying exam at the end of the third year, and meet the specific requirements of the Division of Graduate Studies. After advancing to Ph.D. candidacy, students carry out a sustained ethnographic fieldwork project and are expected to complete their dissertation within two years after returning from the field.

Graduate students in cultural anthropology may obtain a designated emphasis on the anthropology Ph.D. diploma indicating that they have specialized in feminist studies or Latin American and Latino studies (LALS) if they meet requirements spelled out by the individual committee composed of anthropology faculty and faculty from the program awarding the notation.

The Ph.D. program in archaeological archaeology is highly selective, focusing on the archaeology of late pre-colonial societies in East and West Africa and North America, especially the Southwest and California. The program also features an emerging concentration on the archaeology of colonial encounters among peoples of Europe, Africa, and the Americas. It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

In the first year, students take two foundational theory courses and pass a review of their work. Within the first two years of study, students complete at least two foundational materials/methods courses or laboratory courses in other departments; two advanced laboratory apprenticeship courses or similar courses in other departments; two foundational courses in geographic/temporal areas or, in physical anthropology, topical areas; two graduate seminars with other anthropology or campus faculty; one quantitative methods course; and two terms of supervised teaching experience.

The third-year requirements are three laboratory apprenticeship courses, the grant writing

seminar, and tutorials to prepare the student for the qualifying exams. All courses outside the department must be approved by the student's adviser. After advancing to Ph.D. candidacy, the student carries out a sustained laboratory or fieldwork project and is expected to complete the dissertation within a year after finishing research.

(831) 459-2272

visart@ucsc.edu<http://art.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

The Art Department offers an integrated program of study in theory and practice exploring the power of visual communication for personal expression and public interaction. The department provides students with the means to pursue this exploration through courses that provide the practical skills for art production in a variety of media within the contexts of critical thinking and broad-based social perspectives.

The art program at UCSC is composed of courses in drawing, painting, photography, sculpture, print media, intermedia, critical theory, electronic art, public art, and interactive technologies. Baskin visual arts studios provide world-class facilities for art production in these areas. The Art Department is committed to pursuing a continuing dialogue about what constitutes basic preparation in the arts while offering students experience in established practices, new genres, and new technologies.

Students graduating with a major in art may become professional artists or pursue careers in such diverse areas as arts management, museum and gallery practices, communication technologies, public school teaching, media arts, and publishing. Many students who want to teach at the college level continue their education in graduate school.

Declaration of the Art Major—Frosh

Students may apply for admission to the art major after completing two of the following: Art 10D, Art 10E, or Art 10F. While completing this lower-division coursework, it is critical that each student meet with a faculty adviser regarding the student's potential to proceed to the major level.

Declaration of the Art Major—Junior Transfer Students

Junior transfer students are accepted into the art major for fall quarter after passing a portfolio review in early April. Their acceptance is contingent upon their acceptance to UCSC. Acceptance to UCSC does not guarantee admittance to the art program, nor does passing the portfolio review guarantee that UCSC will accept the student to the university. Transfer students must identify themselves as potential art majors when applying to the university in order to receive information on the portfolio review deadlines and the materials required for the review. All junior transfers will be required to take Art 194,

Forms and Ideas in their junior year at UCSC in lieu of the first-year foundation program requirements. Junior transfer students must pass the portfolio review and be admitted to UCSC to become art majors. If a student is admitted to UCSC and does not pass the Art Department portfolio review, it is imperative that this student pursue another major upon admittance. Students will be notified of the results of the review before they need to submit their Statement of Intent to Register for UCSC.

Requirements of the Art Major

The minimum requirements for art majors who were admitted to UCSC in their frosh year are completion of eight lower-division and eight upper-division courses and satisfaction of the senior comprehensive requirement. Junior transfer students complete five lower-division and eight upper-division courses and their senior comprehensive requirement. A maximum of three courses total from outside the Art Department (including UC Education Abroad Program (EAP) courses) may be substituted for regular art courses with the approval of a major adviser. In courses taken outside the UCSC Art Department, students must have received a grade of B or higher. Students should plan carefully when using this option.

Students plan their course of study in consultation with a faculty adviser.

Lower-Division Requirements

Students complete eight courses as follows:

The Foundation (15 credits required, 10 credits must be from the 10 series)

- 10D, 2D Foundation
- 10E, 3D Foundation
- 10F, 4D Foundation
- and one course from the Art 80 series.

Introduction to Contemporary Art Practice (15 credits required)

Student complete three courses from the following:

- 20G, Introduction to Print Media and Drawing
- 20H, Introduction to Sculpture and Public Art
- 20I, Introduction to Photography and Digital Media
- 20J, Introduction to Drawing and Painting

Critical Theory and Historical Context (10 credits required)

Students complete two courses from History of Art and Visual Culture (HAVC): one in Western art and culture and one in non-Western art and culture.

Note: Students may use Advanced Placement (AP) in Art History in lieu of the Western-emphasis history of art and visual culture requirement.

Upper-Division Requirements

Students complete eight courses as follows:

Studio Work (30 credits required)

- Six upper-division (100+ numbered) studio courses;

Senior Capstone/Comprehensive Requirement (10 credits required)

- 190A, Writing for Artists (meets the Disciplinary Communication requirement for the Art B.A.); and
- Students may satisfy the comprehensive requirement with one of the following options:
 1. Completing Art 190B: Senior Project; or
 2. Completing 5 credits of upper-division studio courses work in the area of focus; and
 - a. Presenting an exhibition and, by appointment, meeting with a faculty member for

review and critique of the exhibition; or

- b. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Senior majors should meet with their faculty adviser about this requirement.

A total of 80 credits are required for the Art B.A.; students are advised to plan in advance if they are interested in the program. Some requisite courses may be offered during Summer Session.

The last three quarters of coursework for the major must be completed in residence at UCSC.

Art Major Planner (Incoming Frosh)

The following is a recommended academic plan for students to complete during their first two years as preparation for the art major.

Year	Fall	Winter	Spring
1st (frsh)	ART 80 Series†	ART 10 series**	ART 10 series**
	ART 10 series**		
2nd (soph)	ART 20 Series	ART 20 Series	ART 20 Series
	HAVC*	HAVC*	

†ART 80 courses may be taken in Fall, Winter, or Spring (one required)

*Courses from history of art and visual culture (one with a Western emphasis, one with a non-Western emphasis)

**Art 10 courses may be taken in fall, winter, and/or spring (two required)

Lower-Division Requirements (Junior Transfers)

- Three lower-division studios (equivalent to those found in the above list) should be taken at the community college, college, or university in preparation for the mandatory portfolio review prior to acceptance to the art major. Please remember that three studios is a minimum requirement and may not be enough studio work undertaken to pass the highly competitive nature of the portfolio review.
- Two courses from history of art and visual culture may be taken at the community college, college, or university, if available, or at UCSC (one with a Western emphasis, one with a non-Western emphasis).

Upper-Division Requirements (Junior Transfers)

Students complete eight courses as follows (40 credits required):

- Art 194, Forms and Ideas;
- Five upper-division (100+ numbered) studio courses
- 10 credits of senior capstone/comprehensive requirement;

Art 190A, Writing for Artists

Art 190B, Senior Project or upper-division (100+) level art studio course

The last three quarters of coursework for the major must be completed in residence at UCSC.

Disciplinary Communication (DC) Requirement

- Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in art is satisfied by completing Art 190A, Writing for Artists

Comprehensive Requirement

- All art majors satisfy the capstone/comprehensive requirement with Art 190A, Writing for Artists and Art 190B, Senior Project; or
- Students may satisfy the comprehensive requirement with one of the following options:
 1. Completing Art 190B: Senior Project; or
 2. Completing 5 credits of upper-division studio courses work in the area of focus; and
 - a. Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or
 - b. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Senior majors should meet with their faculty adviser about this requirement.

Study Abroad

The UC Education Abroad Program (EAP) offers students the opportunity for study abroad. Art majors may participate in EAP in their junior year. Art students may not go abroad in their senior year because the last three quarters of coursework must be in residence at UCSC. When considering attending EAP, the student should be mindful that only three courses may be substituted in the art major and each must receive a grade of B or better.

Materials Fee

Art students should be aware of the materials fee required for some studio courses. The fee is billed to the student's account for specific course materials purchased by the Art Department through the university. Fees generally range from \$5 to \$150 per course. Students may incur additional expense purchasing individual supplies.

Arts Division

2014–15 General Catalog

Porter College, D Building,
(831) 459-4940
<http://arts.ucsc.edu>

Program Description

The Arts Division offers both creative and critical studies of art and culture at the undergraduate and graduate level. The division is committed to building a sustainable model for excellence in the arts. Instruction in the arts inspires and develops the capacity for individual and collaborative creative thought, analysis, and action within and beyond the university. Our faculty consists of artists, historians, critics, and theorists working across the arts in a global context.

Undergraduate education in the arts includes bachelor of arts (B.A.) programs in art, film and digital media, history of art and visual culture, music, and theater arts, and a bachelor of music (B.M.) in music. There are also several minors offered in film and digital media, history of art and visual culture, electronic music, jazz, theater arts, and dance.

Established graduate programs include the interdisciplinary digital arts and new media master of fine arts (M.F.A.) program, the social documentation master of arts (M.A.), the music master of arts (M.A.), and the theater arts master of arts (M.A.). Doctoral programs include the music composition doctor of musical arts (D.M.A.), and Ph.D programs in music, visual studies, and film and digital media. A master of fine arts (M.F.A.) program in art (environmental art and social practice) is currently in review.

The Arts Division provides students with access to quality work spaces, including a new digital-arts research facility with two experimental media labs, along with a state-of-the-art music recital hall, practice rooms, electronic music studios, and recording facilities, four theaters for dramatic productions, filmmaking studios and editing suites, surround-sound screening theaters, drama and dance studios, painting and printmaking studios, a foundry, photography and computer laboratories, and specialized lecture and seminar classrooms. McHenry Library houses an extensive collection of books and periodicals on the arts, as well as an analog and digital slide collection, music scores and recordings, and one of the largest collections of films and DVDs in the University of California system. Exhibition space in the arts includes galleries for students and faculty shows. Celebrating its 40th anniversary in 2011–12, the Sesnon Gallery presents curated exhibitions to the university community and the general public. The Institute for the Arts and Sciences, a focus for interdisciplinary exhibitions, conferences, symposia, and seminars, is currently in development.

The Theater Arts Department offers a wide variety of performances in four venues, ranging from faculty-directed productions of classics and musicals on our Mainstage to intimate student created productions in our century-old converted barn. An annual Dean's Lecture Series invites innovative leaders to present on selected topics of interest to the campus

community. Student work is regularly broadcast on SCTV, and *Eyecandy*, a student-run magazine and blog, publishes student writing on film, television, and digital media. The Music Department hosts an annual festival of contemporary music, April in Santa Cruz, and an opera in the spring quarter of each year, and presents a variety of solo and ensemble concert programs throughout the year. The History of Art and Visual Culture Department hosts a series of speakers and seminars each year on rotating topics that are supported by the Patricia and Rowland Rebele Endowed Chair. The Art Department sponsors regularly scheduled public presentations as well as quarterly open studios and a print and photo sale in the spring. The Digital Arts and New Media M.F.A. program regularly sponsors digital arts events, such as festivals, symposia, visiting speakers, and exhibitions of student work, both on- and off-campus, culminating in an annual exhibition of graduate thesis research.

For more information about specific programs in the arts, please visit catalog listings and web sites for Art, Digital Arts and New Media, Film and Digital Media, History of Art and Visual Culture, Music, and Theater Arts.

Astronomy and Astrophysics

2014–15 General Catalog

Astronomy Department Office

211 Interdisciplinary Sciences Building
(831) 459–2844<http://www.astro.ucsc.edu>Faculty | [Course Descriptions](#)

Program Description

The science of astronomy has the universe as its domain. Galaxies, stars, planets, and an ever-increasing variety of phenomena observed from ground- and space-based observatories are among the objects of study. Areas of special interest at UCSC include cosmology, the formation and evolution of planets, stars, and galaxies, high-energy astrophysics, active galaxies, supernovae and nucleosynthesis, extra-solar planets, interstellar medium, intergalactic medium, solar system dynamics, and all aspects of observational optical and infrared astronomy. Astronomers use concepts from and contribute to the development of many other scientific disciplines, including optics, mechanics, relativity, atomic and nuclear physics, applied mathematics, chemistry, geology, and meteorology. The interdisciplinary nature of astronomy, including its historical and philosophical elements, makes its study valuable to those planning careers in a variety of fields.

The Astronomy and Astrophysics Department offers a broad undergraduate curriculum that fulfills the needs of students seeking a general education but also enables students wishing to obtain a minor or major in astrophysics to study the subject in greater depth.

The graduate program is intended for those with a professional interest in the subject. The interests of the faculty embrace a wide range of both theoretical and observational aspects of astronomy. Current research and course offerings include our solar system and other solar systems, stellar structure and evolution, stellar spectroscopy, the interstellar medium, galactic structure, active galaxies and quasars, cosmology, general relativity and gravitational radiation, the origin of the elements, infrared and radio astronomy, advanced astronomical instrumentation, astrobiology, high-energy astrophysics, and X-ray and gamma-ray astronomy.

Graduate students have access to state-of-the-art instrument development and data reduction technology, the UCO/Lick Observatory computer network, and an unusually extensive astronomical library at the Lick Observatory headquarters on campus. Graduate students may conduct supervised research using selected telescopic facilities of the Lick Observatory on Mount Hamilton, 55 miles from Santa Cruz. The 10-meter Keck Telescope in Hawaii, the world's largest, is administered from the UCSC campus and is used for frontier research by UC astronomers.

The Center for Adaptive Optics (CfAO) is also headquartered at UCSC. Education is central to the CfAO's mission, and a key element of this is the support provided by the center to

graduate students. In addition to research, the center provides interdisciplinary access to a nationwide network of scientists in astronomy and vision science.

Undergraduate Courses

Instruction in astronomy for undergraduates at UCSC is designed to meet the needs of several groups of students.

Courses 1, 2, 3, 4, 5, and 6, providing a general survey of the universe as now understood from historical and modern observations, are offered for those not specializing in a scientific discipline.

Courses 12, 13, 15, 16, and 18, emphasizing basic physical laws and theories as applied to astronomy, taken together provide a survey of modern astronomy for students with some facility in mathematics. Taken separately, these courses provide an in-depth introduction to gravitational interaction, stellar evolution, and extragalactic astrophysics. These courses are designed for students intending to major in a scientific subject, although qualified nonscience majors may enroll. A good high school background in mathematics and physics is required.

Prior or concurrent enrollment in a basic calculus course (Mathematics 11A or 19A) and a basic physics course (Physics 5A/L or 6A/L) is helpful but not required.

Finally, a more thorough quantitative treatment of selected topics in astronomy and astrophysics at the upper-division level is provided by courses 111, 112, 113, 117, and 118. Completion of course work in calculus of several variables (Mathematics 22 or 23A–B) and Physics 5B/M or 6B/M and 101A is required for these advanced courses.

Astrophysics Minor

For undergraduate students having a particular interest in the subject, a minor in astronomy and astrophysics is offered. Most students who minor in astronomy and astrophysics are majors in another science, though majors in other fields are also possible. The minor in astronomy and astrophysics requires that students take the Physics 5 or 6 series (with associated laboratories), Physics 101A or Physics 102, a minimum of two courses from the Astronomy 12–18 series, and a minimum of three courses from the following, Astronomy 111–118, PHYS 129, PHYS 171, ASTR 257. A senior thesis on an astronomy-related topic is also encouraged. Interested students should contact the Physical & Biological Sciences Undergraduate Affairs office for further information.

Astrophysics Major

The UCSC major in astrophysics is administered by the Physics Department and combines a core physics major with advanced electives in astrophysics, an astrophysics laboratory course, and senior thesis work on a topic in astrophysics. It is a rigorous program designed to prepare students for a broad range of technical careers or for entry into graduate or professional programs. A full description of the major can be found in the physics section of this catalog.

Preparation for Graduate Work in Astrophysics

The UCSC graduate program in astronomy and astrophysics is designed for Ph.D. students seeking a professional career in teaching and research. In view of the thorough preparation in mathematics and physics required for graduate study, most entering astronomy graduate students major in physics or astrophysics as undergraduates.

The suggested minimum requirements for admission to graduate standing at UCSC include the following undergraduate courses:

Basic physics. Mechanics, wave motion, sound, light, electricity and magnetism, thermodynamics, atomic physics, and quantum mechanics (Physics 5A, 5B, and 5C).

Basic mathematics. Calculus (Mathematics 19A–B and 23A–B or equivalent) and statistics (Applied Mathematics and Statistics 5).

Intermediate-level physics. Mechanics (Physics 105); electricity, magnetism, and optics (Physics 110A–B); mathematical methods in physics (Physics 116A–B–C); nuclear and

particle physics (Physics 129); and quantum mechanics (Physics 139A–B).

Intermediate-level mathematics. Linear algebra (Mathematics 21), complex analysis (Mathematics 103), and ordinary and partial differential equations (Mathematics 106 and 107).

Graduate Program

Graduate instruction is built upon a two-year cycle of 11 one-quarter courses in astronomy and physics that are required of all students.

Seven courses are specifically required:

Astronomy 202, Radiative Processes

Astronomy 204, Astrophysical Flows

Astronomy 205, Introduction to Astronomical Research and Teaching

Astronomy 212, Dynamical Astronomy

Astronomy 220A, Stellar Structure and Evolution

Astronomy 230, Diffuse Matter in Space

Astronomy 233, Physical Cosmology

and four additional courses are chosen from the list of electives given below. In addition, students must fulfill the following requirements:

Students must meet at least quarterly with an assigned adviser.

Each student must also be a teaching assistant for at least one quarter.

By the time of the annual Board Review, which occurs in July at the end of their second academic year, students must:

- Complete one quarter of independent study with a faculty member and give a department talk on that work.
- Pass a preliminary examination based on course material, relevant physics, and general astronomical knowledge.
- Submit one lead-author paper to a refereed journal that is based on research conducted at UCSC. By the time of the Board Review, second-year students are expected to either (1) have submitted a paper for publication to a refereed journal; or (2) submit to the Board Review a complete first draft of such a paper and a detailed plan for completion. If the student pursues option (2), he or she is expected to submit the paper for publication by the first day of the fall quarter, and provide the electronic submission acknowledgement for the paper to the chair of the graduate advising committee. If the student does not complete this requirement, he or she will meet with his or her adviser, the graduate advising committee chair, and the department chair before the first faculty meeting of the fall quarter, in order to discuss the status of the paper. The faculty at that meeting will then make a recommendation whether the student should be granted an extension to the next Board Review, and the full faculty will then vote on whether to grant an extension.

By the end of the third year, students must complete a qualifying examination that presents and defends a proposed thesis topic.

After passing the board review based on the above-mentioned requirements and the qualifying examination, students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense. A completed draft of the thesis must be submitted to the dissertation committee at least two weeks before the date of the defense, and the defense itself must occur at least two weeks before the campus deadline for thesis submissions in that quarter. Exceptions to this policy will be granted only under exceptional circumstances and must be approved by the department chair, associate chair, and the department graduate advising committee.

The department has established five years as the normative time to degree. Normative times is the elapsed calendar time, in years, that, under normal circumstances, will be needed to complete all requirements for the Ph.D. A one-year extension may be granted if funding is available. Funding support will not, in general, be provided beyond six years. Exceptions for extension beyond six years will be granted only for exceptional extenuating circumstances, and will be decided upon by the department chair, associate chair, and the department graduate advising committee.

Electives (four required) may be drawn from this list:

Astronomy 207, Future Directions/Future Missions

Astronomy 214, Special Topics in Cosmology

Astronomy 220B, Star Formation

Astronomy 220C, Advanced Stages of Stellar Evolution and Nucleosynthesis

Astronomy 222, Planetary Formation and Evolution

Astronomy 223, Planetary Physics

Astronomy 225, High-Energy Astrophysics

Astronomy 231, Diffuse Gas In and Between Galaxies

Astronomy 235, Numerical Techniques

Astronomy 237, Accretion Processes

Astronomy 240A, Galactic and Extragalactic Stellar Systems

Astronomy 240B, High Redshift Galaxies

Astronomy 257, Modern Astronomical Techniques

Astronomy 260, Instrumentation for Astronomy

Astronomy 289, Adaptive Optics and Its Applications

Physics/Astronomy 224, Particle Astrophysics and Cosmology

Physics/Astronomy 226, General Relativity

Earth Sciences 265, Order of Magnitude Estimation

Earth Sciences 275, Magnetohydrodynamics

Applied Mathematics and Statistics 206, Bayesian Statistics

Applied Mathematics and Statistics 212A, Applied Mathematical Methods I

Applied Mathematics and Statistics 214, Applied Dynamical Systems

Applied Mathematics and Statistics 217, Introduction to Fluid Dynamics

Physics 210, Classical Mechanics

Physics 215, Introduction to Non-Relativistic Quantum Mechanics

Physics 216, Advanced Topics in Non-Relativistic Quantum Mechanics

Physics 217, Quantum Field Theory I

Physics 218, Quantum Field Theory II

Physics 227, Advanced Fluid Dynamics

Faculty | Course Descriptions

Program Description

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking coursework in biology, chemistry, physics, mathematics, and computer science. The undergraduate major in Biochemistry and Molecular Biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science (B.S.) degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research at UCSC. The Department of Chemistry and the Department of Biochemistry and Molecular, Cell, and Developmental Biology each host a very active seminar series in which internationally recognized scientists present their current research findings. Advanced BMB undergraduates are encouraged to attend.

The BMB program features close faculty–student interaction, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should see the BMB academic adviser in the Undergraduate Affairs Office as early as possible. Junior transfer students or others with questions should consult the Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>. A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

Declaration of the Biochemistry and Molecular Biology Major

Biochemistry and Molecular Biology Qualification Policy

To qualify to declare the Biochemistry and Molecular Biology major, students must achieve a

cumulative GPA of 2.50 or greater in the following courses, or their equivalents:

Chemistry 1B, General Chemistry
 Chemistry 1C, General Chemistry
 Chemistry 108A, Organic Chemistry
 Biology (BIOL) 20A, Cell and Molecular Biology

and in one of the following calculus courses:

Applied Mathematics and Statistics 15A, Case-study Calculus I
 Mathematics 11A, Calculus with Applications
 Mathematics 19A, Calculus for Science, Engineering, and Mathematics

Students with two or more grades of NP, D, or F in the policy courses are not qualified to declare.

When calculating GPA to determine qualification:

- All courses must be taken for a letter grade, see [Letter Grade Policy](#).
- Students with non-grades (I, IP, DG, Z, AC, NC, etc.) in any of the policy courses will not be eligible to declare until a grade has been assigned.

Students who are informed that they are not eligible to declare the major may appeal by submitting a letter to the Biochemistry and Molecular Biology program chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the Biochemistry and Molecular Biology program chair will notify the student, the Office of the Registrar and the student's affiliated college of the decision. For more information about the appeal process, see the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the major requirements must be taken for a letter grade.

Program Planning Notes

Students who do not begin the lower-division requirements during their first year and who do not complete the organic chemistry requirements by the end of their second year will have difficulty completing the program within four years. Students who transfer to UCSC prior to completing their introductory requirements will have difficulty completing the program within the allotted time. The BMB academic adviser works closely with students interested in pursuing the major to ensure that they begin the program immediately and follow the appropriate steps toward completion.

It is strongly recommended that students avail themselves of the opportunities to obtain firsthand research experience through either independent study or senior thesis research. A tutorial course or a senior thesis research course may not be substituted for the required laboratory elective.

A number of graduate courses in Biochemistry and Molecular Biology are offered by the molecular, cell, and developmental biology (MCDB), and chemistry and biochemistry departments. Advanced undergraduates possessing the necessary prerequisites may take one or more of these courses with the consent of the instructor; however, graduate courses may not be substituted for any of the elective courses required for the degree.

Requirements for the B.S. Degree

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A-B and 22; or Mathematics 19A-B and 22; or Applied Mathematics and Statistics 15A-B, and Mathematics 22

Statistics: Applied Mathematics and Statistics 5 or 7/L

- [Queer and Sexuality Studies](#)

- [Spanish Studies](#)
- [Stevenson College](#)
- [Sustainability Studies](#)
- [Technology and Information Management](#)
- [Theater Arts](#)
- [UCDC Program](#)
- [Writing Program](#)
- [Yiddish](#)

[Faculty](#)

[Course Descriptions](#)

[Teaching and Administrative Staff](#)

[Appendixes](#)

[Archive of General Catalogs](#)

[Nondiscrimination Statement](#)

[Search the Catalog](#)

Introductory Biology: Biology (BIOL) 20A and Biology (BIOE) 20B

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L, 108B/M

Biochemistry: Biochemistry and Molecular Biology (BIOC) 100A, 100B, and 100C and BIOL 101L (formerly 100K)

Genetics: Biology (BIOL) 105

Cell Biology: Biology (BIOL) 110

Molecular Biology: Biology (BIOL) 115

Physical Chemistry: Chemistry 163A and 163B

One of the following laboratory courses:

Biochemistry and Molecular Biology (BIOC) 110L, Advanced Biochemistry Laboratory

Biology (BIOL) 100L, Advanced Biochemistry Laboratory

Biology (BIOL) 105L, Eukaryotic Genetics Laboratory

Biology (BIOL) 105M, Microbial Genetics Laboratory

Biology (BIOL) 109L, Yeast Molecular Genetics Laboratory

Biology (BIOL) 110L, Cell Biology Laboratory

Biology (BIOL) 115L, Eukaryotic Molecular Biology Laboratory

Biology (BIOL) 121L, Environmental Phage Biology Laboratory

Biology (BIOL) 186L, Undergraduate Research in MCD Biology

Biology (BIOL) 187L, Molecular Biotechnology Laboratory

Biomolecular Engineering (BME) 122, Environmental Virus Bioinformatics Laboratory

Microbiology and Environmental Toxicology (METX) 119L, Microbiology Laboratory

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Biochemistry and Molecular Biology is satisfied by completing one of the following courses: BIOC 110L, BIOL 100L, 105L, 105M, 109L, 110L, 115L, 121L, 186L, 187L, or BME 122, or METX 119L. The DC requirement must be satisfied at UCSC and may not be transferred from another institution.

Biochemistry and Molecular Biology Planner

<http://undergrad.pbsci.ucsc.edu/programs/bioc/biocbs.html>

Comprehensive Requirement

Students must satisfy the comprehensive requirement by receiving a passing letter grade in any of the independent research laboratory listed in the previous section. In addition, students are encouraged to complete a senior thesis or a senior essay (see Chemistry and Biochemistry for more information).

Materials Fee

Biochemistry and Molecular Biology students should be aware of the materials fee required for some laboratory courses. The fee is billed to the student's account for specific laboratory materials purchased through the university. Fees generally range from \$15 to \$75 per course. Students may incur additional expenses purchasing individual supplies.

Biology (Bachelor of Science)

2013–14 General Catalog

Physical and Biological Sciences Undergraduate Affairs Office

142 Jack Baskin Engineering Building

(831) 459-4143

undergrad.pbsci.ucsc.edu

Program Description

Biology has entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no surprise that biology is at the heart of many of today's most pressing intellectual and social concerns.

The Departments of Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB) offer a broad spectrum of courses that reflect the exciting new developments and directions in the field of biology. An outstanding group of faculty, each with a vigorous, internationally recognized research program, is available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the departments include RNA molecular biology, molecular and cellular aspects of genetics and development, neurobiology, microbial biochemistry, plant biology, animal behavior, physiology, evolution, ecology, and marine biology. Many students take advantage of the numerous opportunities for undergraduate research, allowing students to interact one on one with faculty and other researchers in a laboratory or field setting.

Students may plan a program that leads to a bachelor of arts (B.A.), including a bioeducation concentration, or bachelor of science (B.S.) degree. Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratory facilities for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Hospitals, convalescent and physical therapy centers, veterinary clinics, and other enterprises in the vicinity of the campus provide the opportunity to pursue field projects and internships comparable to on-the-job training. This array of opportunities for directed independent study enables biology majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Prerequisites

The introductory biology sequence is prerequisite to virtually all upper-division biology courses. BIOL 20A has a prerequisite of Chemistry 1A and 1B. Therefore, it is essential for

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College

students considering a major in biology to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but are prepared to begin biology may begin the introductory sequence with BIOE 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence.

An online Mathematics Placement Examination is offered at various periods prior to enrollment for each quarter. Biological science majors are expected to take this examination. For more information see the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu>.

Transfer Students

Applications from transfer students in the biological sciences are encouraged. Students who transfer without having completed the required and recommended coursework may have difficulty enrolling in courses and may require more than two years to complete a degree. Prior to transfer, students should satisfy major qualification requirements or their UCSC equivalents: Chem 1B, General Chemistry; Chem 1C, General Chemistry; BioL 20A, Cell & Molecular Biology; BioE20B, Development and Physiology. Junior-level transfer students are also strongly encouraged to complete courses equivalent to MATH 11A, MATH 11B and AMS 5 or AMS 7/L prior to transfer. Intended human biology majors are strongly encouraged to complete the Spanish language requirement prior to transfer. Prospective transfer students should review the transfer information at <http://assist.org> or contact the [Undergraduate Affairs office](#) for further information.

Academic Advising

Academic advising is available at the Physical and Biological Sciences Undergraduate Affairs office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The undergraduate web site (<http://undergrad.pbsci.ucsc.edu>) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact an academic adviser.

Biology B.S. Qualification Policy

To qualify for the Biology B.S. majors, students must pass and achieve a cumulative GPA of 2.30 or greater in each of the following courses or their equivalents.

Chemistry and Biochemistry 1B, General Chemistry
 Chemistry and Biochemistry 1C, General Chemistry
 Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A, Cell and Molecular Biology
 Biology: Ecology and Evolutionary Biology (BIOE) 20B, Development and Physiology

Students with two or more grades of NP, D, or F in the policy courses are not qualified to declare.

When calculating grades to determine cumulative GPA in policy courses:

- All courses must be taken for a letter grade, see [Letter Grade Policy](#).
- Students with AP credit for Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A and Biology: Ecology and Evolutionary Biology (BIOE) 20B, may base their cumulative GPA on three grades: a single A for AP Biology and their grades in Chemistry and Biochemistry 1B and 1C.
- Students with non-grades (I, IP, DG, etc.) in any of the policy courses will not be eligible to declare until a grade has been assigned.
- Every student who satisfies the major admission requirements and who petitions to declare the major by the campus major declaration deadline (i.e., before enrolling in their third year or the equivalent) will be admitted to the major. Students enrolled in their final qualification policy course at the major declaration deadline may submit the petition, but will not be declared until satisfactory grades and qualifying GPA have been posted.

- [Queer and Sexuality Studies](#)
- [Religious Studies](#)

Appendixes

Archive of General Catalogs

Nondiscrimination Statement

Search the Catalog

Students who satisfy the major admission requirements but who petition to declare the major after the campus major declaration deadline will be considered on a case-by-case basis for admission to the major; admission is not guaranteed.

- Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the MCD Biology Faculty Advisor within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.”

For more information about the appeal process see the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/mcdb/qualifying/appeal-process.html>.

Declaring a Biology B.S. Major

Students may submit a petition to declare after completing the qualification policy courses noted above. Students enrolled in their final policy course may submit the petition to declare, but will not be declared until grades have been posted. For instructions on petitioning to declare go the Physical and Biological Sciences Undergraduate Affairs web site: undergrad.pbsci.ucsc.edu/.

Students may not pursue multiple majors combining a Biology major (B.A., B.S., bioeducation concentration, or minor) with any other biological sciences major (Ecology and Evolution; Marine Biology; Plant Sciences; Environmental Studies/Biology combined major; Molecular, Cell and Developmental Biology; Neuroscience; Human Biology; and Biochemistry and Molecular Biology).

Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A–B or 19A–B or Applied Math and Statistics 15A–B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

Students must complete one upper-division biology course that includes regular laboratory or fieldwork. (In addition to BIOL 101L, a lab or field course must be completed).

Six core courses and one lab course:

Biochemistry: BIOL 100/K

Molecular Biology BIOL 101*

Molecular Biology Laboratory: BIOL 101L

Genetics: BIOL 105

Cell Biology: BIOL 110

Ecology: BIOE 107

Evolution: BIOE 109

*Instead of Biochemistry (BIOL 100) and Molecular Biology (BIOL 101), students may complete the series in Biochemistry and Molecular Biology 100A, 100B, 100C. (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one lecture elective.)

Students must complete three additional upper-division biology electives chosen from Biological Sciences–EEB courses (BIOE) or Biological Sciences–MCDB courses (BIOL).

BIOL 111A, Immunology

BIOL 113, Mammalian Endocrinology

BIOL 115, Eukaryotic Molecular Biology

BIOL 125, Introduction to Neuroscience

BIOL 130/L, Human Physiology and Laboratory (laboratory optional)

BIOE 108, Marine Ecology

BIOE 131/L, Animal Physiology and Laboratory (laboratory optional)

BIOE 133/L, Exercise Physiology and Laboratory

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for the biology bachelor of science degree is satisfied by completing courses BIOE 107, Ecology, or BIOE 108, Marine Ecology, and BIOE 109, Evolution, or BIOE 159A, Marine Ecology Field Quarter.

Biology B.S. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/mcdb/mcddbbs/mcddbbs-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/mcdb/mcddbbs/mcddbbs-transfer-plans.html>

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

- by passing course 190, Senior Seminar;
- by receiving a passing grade in an internship, independent research laboratory, or field course:

BIOE 114L, Field Methods in Herpetological Research

BIOE 141L, Behavioral Ecology Field Course

BIOE 145L, Field Methods in Plant Ecology

BIOE 150L, Ecological Field Methods

BIOE 151, Ecology and Conservation in Practice

BIOE 158L, Marine Ecology Laboratory

BIOE 159, Marine Ecology Field Quarter

BIOE 161L, Kelp Forest Ecology Laboratory

BIOE 183, Undergraduate Research in EEB

BIOL 100L, Advanced Biochemistry Laboratory

BIOL 105L, Eukaryotic Genetics Laboratory

BIOL 105M, Microbial Genetics Laboratory

BIOL 109L, Yeast Molecular Genetics Laboratory

BIOL 110L, Cell Biology Laboratory

BIOL 111L, Immunology Laboratory

BIOL 115L, Eukaryotic Molecular Biology Laboratory

BIOL 120L, Developmental Biology Laboratory

BIOL 121L, Environmental Phage Biology Laboratory

BIOL 178L, Protocols in Stem Cell Biology

BIOL 186L, Undergraduate Research in MCD Biology

BIOL 186R, Undergraduate Research in MCD Biology

BIOL 187L, Molecular Biotechnology Laboratory

BIOL 189, Health Sciences Internship

Biochemistry and Molecular Biology 110L, Advanced Biochemistry Laboratory

Biomolecular Engineering 122, Environmental Virus Bioinformatics Laboratory

Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

- by completing a senior thesis;
- by achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the biological sciences advising office before the last day of the graduating quarter;
- by obtaining a medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences advising office before the last day of the graduating quarter.

Honors

Honors in biology majors are awarded to graduating students whose academic performance demonstrates excellence at a grade point average (GPA) of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (numbered 100-190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Physical and Biological Sciences Undergraduate Affairs office before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the undergraduate web site at <http://undergrad.pbsci.ucsc.edu>.

A maximum of one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Education Abroad Opportunities

The UC Education Abroad Program (EAP) offers qualified students unique opportunities to broaden their educational horizons. Both the Ecology and Evolutionary Biology and the Molecular, Cell and Developmental Biology departments encourage interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning; you must seek advice about your EAP plan for major courses at UCSC from the biological sciences undergraduate adviser and/or faculty adviser and receive their approval for your plans.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Undergraduate Program Description

The Department of Ecology and Evolutionary Biology (EEB) is devoted to the study of ecological and evolutionary processes in marine, terrestrial, and freshwater environments. The past 30 years have seen several revolutions in our understanding of how the biological world works. Advances in both analytical and genetic methods have given us a far more sophisticated understanding of the complexities of ecological and evolutionary processes in the natural world. Biologists at UCSC have played and will continue to play an important part in these advances, and the campus programs offer unique educational opportunities in biology that feature small class sizes, field studies, and extensive faculty–student interactions.

Class offerings, as well as research opportunities, focus on the varied natural environments in the Monterey Bay region, throughout the western US, and in more distant locations such as Africa, Europe, Mexico, Tahiti, Australia, and the Far East. This emphasis on field studies is a unique focus of our variety of undergraduate majors. Within this context they address not only basic ecological and evolutionary processes, but also the application of this knowledge to improve conservation strategies and environmental quality and sustainability.

An outstanding group of faculty, each with a vigorous, internationally recognized research program, is available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the department include plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting.

Students may plan a program that leads to one of several bachelor of arts (B.A.) and bachelor of science (B.S.) degrees. Students may choose from the following major options:

Biology B.A.

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology >

Biology B.A. (Bioeducation concentration)

Ecology and Evolution B.S.

Marine Biology B.S.

Plant Sciences B.S.

Environmental Studies/Biology combined major B.A. (administered by the Environmental Studies Department).

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratories, including state-of-the-art genetics and physiology facilities, for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Terrestrial studies are supported by the UCSC reserve on campus, an arboretum, greenhouse facility, and vehicles to transport students to field sites off campus. Freshwater studies have access to a number of coastal tributaries and laboratory facilities at Long Marine Laboratory. Marine studies are supported by the Long Marine Laboratory with running seawater facilities, a boating program, and an AAUS accredited SCUBA diving program for underwater classes and research. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. In addition to coursework, there is an array of opportunities for directed independent study that enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Prerequisites

The introductory biology sequence is prerequisite to virtually all upper-division biology courses. BIOL 20A has a prerequisite of Chemistry 1A and 1B. Therefore, it is essential for students considering a major in the biological sciences to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but are prepared to begin biology may begin the introductory sequence with BIOE 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence.

An online Mathematics Placement Examination is offered at various periods prior to enrollment for each quarter. Biological science majors are expected to take this examination. For more information see the Mathematics Placement Exam web site at <http://undergrad.pbsci.ucsc.edu/enrollment/math-placement/index.html>.

Transfer Students

EEB encourages applications from transfer students in the biological sciences. In fall 2012 the department established a [Qualification Policy](#) that limits access to the program to those students who have completed a subset of foundational coursework. Transfer students are held to similar criteria for accessing the major.

To be considered for admission to UCSC as one of the EEB majors, transfer students must pass equivalents of the following courses with a C (2.0) or better in these preparatory courses:

- BIOL 20A, Cell and Molecular Biology (offered by the Molecular, Cell, and Developmental Biology Department)
- One of the following courses offered by the Ecology and Evolutionary Biology Department:
 - BIOE 20C, Ecology and Evolution
 - BIOE 20B, Development and Physiology
- CHEM 1A, General Chemistry (offered by the Chemistry Department)
- CHEM 1B, General Chemistry (offered by the Chemistry Department)
- One of the following calculus courses (except biology B.A. majors) offered by the Mathematics Department
 - MATH 11A, Calculus with Applications
 - MATH 19A, Calculus for Science, Engineering, and Mathematics

For more information on qualifying for the major as a transfer applicant, visit:

- [Queer and Sexuality Studies](#)
- [Religious Studies](#)

Archive of General Catalogs

Nondiscrimination Statement

Search the Catalog

<http://undergrad.pbsci.ucsc.edu/eeb/transfer-students/transfer-admissions.html>.

In addition to the required coursework, students should complete a full year of calculus, general chemistry, and introductory biology. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and may require more than two years to complete their EEB-sponsored degree.

Prospective transfer students should review the transfer preparation guidelines at:

<http://undergrad.pbsci.ucsc.edu/eeb/transfer-students/transfer-prep.html>.

Academic Advising

Academic advising is available at the Physical and Biological Sciences Undergraduate Affairs office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The undergraduate web site (<http://undergrad.pbsci.ucsc.edu/eeb/index.html>) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact an academic advisor.

Ecology and Evolutionary Biology Qualification Policy

To qualify for any of the majors sponsored by the department of Ecology and Evolutionary Biology, except the combined major with Environmental Studies, students must complete the following courses, or their equivalents, with a grade of C or better:

CHEM 1A, General Chemistry (offered by the Chemistry Department)

CHEM 1B, General Chemistry (offered by the Chemistry Department)

BIOL 20A, Cell and Molecular Biology (offered by the Molecular, Cell, and Developmental Biology Department)

One of the following courses offered by the Ecology and Evolutionary Biology Department:

- BIOE 20C, Ecology and Evolution,
- BIOE 20B, Development and Physiology

One of the following calculus courses (except biology B.A. majors) offered by the Mathematics Department

MATH 11A, Calculus with Applications

MATH 19A, Calculus for Science, Engineering, and Mathematics

Determining qualification:

Students who complete all the qualification courses with a grade of C or better are allowed to declare a major.

Students who have received one grade of NP, D, or F in one of the qualification courses will only be allowed to declare after successfully completing the same or an equivalent course with a grade of C or better.

Students with two or more grades of NP, D, or F in the qualification courses are not allowed to declare.

Students with AP credit for any of the qualification course(s) are allowed to declare after successfully completing the remaining qualification courses.

Students with non-grades in any of the qualification courses will not be allowed to declare until a grade of C or better has been assigned.

Students who are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision. For more information about the appeal process see the Physical and Biological Sciences Undergraduate Affairs website at:

<http://undergrad.pbsci.ucsc.edu/eeb/qualifying/appeal-process.html>.

Declaring a Major

Students may submit a petition to declare after completing the qualification policy courses. Students who are enrolled in their final qualification policy course may submit the petition, but will not be declared until grades have been posted. For instructions on petitioning to declare go the Physical and Biological Sciences Undergraduate Affairs web site at: <http://undergrad.pbsci.ucsc.edu/eeb/qualifying/petition-to-declare.html>.

Double Major in the Biological Sciences

Students interested in pursuing multiple majors within the biological sciences may not declare any combination of Biology (B.A., B.S., bioeducation concentration, or minor), Ecology and Evolution, Marine Biology, Plant Sciences, or Environmental Studies/Biology combined major.

General Biology Bachelor of Arts Major

The general biology Bachelor of Arts major permits flexibility, but demands careful attention to a student's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

General Biology B.A. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B and 20C
General Chemistry: Chemistry 1A and 1B
Calculus: Mathematics 11A
Statistics: Applied Mathematics and Statistics 5 or 7/L
Physics: Physics 6A/L

Advanced Requirements

A total of eight upper-division biology courses, as follows:

Three core courses:

Genetics: BIOL 105
Evolution: BIOE 109
Ecology: BIOE 107

One of the following anatomy or physiology courses:

BIOE 131/L, Animal Physiology/Laboratory
BIOE 133/L, Exercise Physiology/Laboratory
BIOE 134/L, Comparative Vertebrate Physiology/Laboratory
BIOE 135/L, Plant Physiology/Laboratory
BIOL 130/L, Human Physiology/Laboratory
BIOL 135/L, Human Anatomy/Laboratory

Electives

Four additional electives chosen from the following:

BIOE 108, Marine Ecology
BIOE 112/L, Ornithology/Laboratory
BIOE 114/L, Herpetology/Laboratory
BIOE 117/L, Systematic Botany/Laboratory
BIOE 118, Ethnobotany
BIOE 120/L, Marine Botany/Laboratory
BIOE 122/L, Invertebrate Zoology/Laboratory
BIOE 124/L, Mammology/Laboratory
BIOE 127/L, Ichthyology/Laboratory
BIOE 128L, Large Marine Vertebrates Field Course
BIOE 129/L, Biology of Marine Mammals/Laboratory

BIOE 131 /L, Animal Physiology/Laboratory
BIOE 133/L, Exercise Physiology/Laboratory
BIOE 134/L, Comparative Vertebrate Physiology/Laboratory
BIOE 135/L, Plant Physiology/Laboratory
BIOE 137/L, Molecular Ecology/Laboratory
BIOE 140, Behavioral Ecology
BIOE 141L, Behavioral Ecology Field Course
BIOE 145, Plant Ecology
BIOE 145L, Field Methods in Plant Ecology
BIOE 147, Community Ecology
BIOE 148, Quantitative Ecology
BIOE 149, Disease Ecology
BIOE 150, Ecological Field Methods
BIOE 150L, Ecological Field Methods Laboratory
BIOE 151ABCD, Ecology and Conservation in Practice
BIOE 155, Freshwater Ecology
BIOE 155L, Freshwater Ecology Laboratory
BIOE 158L, Marine Ecology Laboratory
BIOE 159ABCD, Marine Ecology Field Quarter
BIOE 161, Kelp Forest Ecology
BIOE 161L, Kelp Forest Ecology Laboratory
BIOE 163/L, Ecology of Reefs, Mangroves, and Seagrasses/Laboratory
BIOE 165, Marine Conservation Biology
BIOE 172/L, Population Genetics/Laboratory
BIOL 100, Biochemistry
BIOL 101 /L, Molecular Biology/Laboratory
BIOL 110, Cell Biology
BIOL 111A, Immunology
BIOL 113, Endocrinology
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development
BIOL 125, Introduction to Neuroscience
Chemistry 108A, Organic Chemistry
Chemistry 108B, Organic Chemistry
Microbiology and Environmental Toxicology 119, Microbiology
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the biology bachelor of arts degree is satisfied by completing courses BIOE 107, Ecology, and BIOE 109, Evolution.

General Biology B.A. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/biology/biolba/biolba-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/biology/biolba/biolba-transfer-plans.html>

General Biology, Bioeducation Concentration, B.A.

The General Biology, Bioeducation Concentration, B.A. major is designed to meet the needs of students who plan careers as K-12 science teachers. It provides students with a rigorous education in biology through science breadth courses to prepare them for the state credentialing examinations (CSET) in biology/life sciences, and courses covering education theory and practical teaching experience through internships in local schools.

General Biology, Bioeducation Concentration, B.A. Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A–B or 19A–B
Statistics: Applied Mathematics and Statistics 5 or 7/L
Physics: Physics 6A/L, and 6B or 6C
Education: Education 50C
Earth Sciences: Earth Sciences 20/L (optional*)
Astronomy: Astronomy 2 (optional*)

*These courses are recommended for students interested in pursuing a credential to teach general science.

Advanced Requirements

A total of 10 upper-division biology and education courses, and associated laboratories, as follows:

BIOL 100, Biochemistry
BIOL 105, Genetics
BIOE 107, Ecology
BIOE 109, Evolution
Education 185C, Introduction to Teaching Science
Education 185L, Introduction to Teaching: CalTeach 3

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

CELL/DEVELOPMENTAL BIOLOGY:

BIOL 110, Cell Biology
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Developmental Biology
Microbiology and Environmental Toxicology 119, Microbiology

PHYSIOLOGY:

BIOE 131, Animal Physiology
BIOE 135, Plant Physiology
BIOL 113, Endocrinology
BIOL 130, Human Physiology

BIOLOGY LABORATORY:

One 5-credit, upper-division biology laboratory course, or

BIOE 131L, Animal Physiology Laboratory
BIOE 135L, Plant Physiology Laboratory
BIOL 130L, Human Physiology Laboratory

(BIOL 135L cannot be used to satisfy the laboratory requirement in the bioeducation concentration.)

Ecology and Evolution Major

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution, behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic and ecological aspects of conservation biology and biodiversity.

Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the intensive Education Abroad Programs (EAP) in Costa Rica (tropical biology) and Australia (marine sciences).

Ecology and Evolution B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Calculus: Mathematics 11A–B or 19A–B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

Three upper-division core courses:

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One of the following physiology courses:

BIOE 131/L, Animal Physiology/Laboratory

BIOE 135/L, Plant Physiology/Laboratory

One of the following organism courses:

BIOE 112/L, Ornithology/Ornithology Field Studies

BIOE 114/L, Herpetology/Field Methods in Herpetological Research

BIOE 117/L, Systematic Botany of Flowering Plants/Laboratory

BIOE 120/L, Marine Botany/Laboratory

BIOE 122/L, Invertebrate Zoology/Laboratory

BIOE 124/L, Mammology/Laboratory

BIOE 127/L, Ichthyology/Laboratory

BIOE 129/L, Biology of Marine Mammals/Laboratory

Microbiology and Environmental Toxicology 119/L, Microbiology/Laboratory

Elective list for Ecology and Evolution Major

Three topical electives chosen from the following:

BIOE 108, Marine Ecology

BIOE 112/L, Ornithology/Laboratory

BIOE 114/L, Herpetology/Laboratory

BIOE 117/L, Systematic Botany/Laboratory

BIOE 118, Ethnobotany

BIOE 120/L, Marine Botany/Laboratory

BIOE 122/L, Invertebrate Zoology/Laboratory

BIOE 124/L, Mammology/Laboratory

BIOE 127/L, Ichthyology/Laboratory

BIOE 128L, Large Marine Vertebrates Field Course

BIOE 129/L, Biology of Marine Mammals/Laboratory

BIOE 131/L, Animal Physiology/Laboratory

BIOE 133/L, Exercise Physiology/Laboratory

BIOE 134/L, Comparative Vertebrate Physiology/Laboratory

BIOE 135/L, Plant Physiology/Laboratory

BIOE 137/L, Molecular Ecology/Laboratory

BIOE 140, Behavioral Ecology

BIOE 141L, Behavioral Ecology Field Course

BIOE 145, Plant Ecology

BIOE 145L, Field Methods in Plant Ecology

BIOE 147, Community Ecology

BIOE 148, Quantitative Ecology

BIOE 149, Disease Ecology

BIOE 150, Ecological Field Methods

BIOE 150L, Ecological Field Methods Laboratory

BIOE 151ABCD, Ecology and Conservation in Practice

BIOE 155, Freshwater Ecology

BIOE 155L, Freshwater Ecology Laboratory

BIOE 158L, Marine Ecology Laboratory
BIOE 159ABCD, Marine Ecology Field Quarter
BIOE 161, Kelp Forest Ecology
BIOE 161L, Kelp Forest Ecology Laboratory
BIOE 163/L, Ecology of Reefs, Mangroves, and Seagrasses/Laboratory
BIOE 165, Marine Conservation Biology
BIOE 172/L, Population Genetics/Laboratory
BIOE 188, Introduction to Science Writing
BIOL 100, Biochemistry
BIOL 101/L, Molecular Biology/Laboratory
BIOL 110, Cell Biology
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development
Microbiology and Environmental Toxicology 119, Microbiology
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory
Ocean Sciences 118, Marine Microbial Ecology

Three general electives chosen from the following:

BIOLOGICAL SCIENCES–EEB

any upper-division BIOE course

BIOLOGICAL SCIENCES–MCDB

BIOL 100, Biochemistry
BIOL 101/L, Molecular Biology/Laboratory
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development

CHEMISTRY

Chemistry 108A, Organic Chemistry
Chemistry 108B, Organic Chemistry

EARTH SCIENCES

Earth Sciences 100/L, Vertebrate Paleontology
Earth Sciences 101/L, Invertebrate Paleobiology/Laboratory
Earth Sciences 102, Marine Geology
Earth Sciences 105, Coastal Geology

ECONOMICS

Economics 166A, Game Theory and Applications I
Economics 166B, Game Theory and Applications II

ENVIRONMENTAL STUDIES (ENROLLMENT BY PERMISSION OF INSTRUCTOR)

Environmental Studies 104A, Introduction to Environmental Field Methods
Environmental Studies 108/L, General Entomology/Laboratory
Environmental Studies 115A/L, GIS and Environmental Applications/Exercises in GIS
Environmental Studies 120, Conservation Biology
Environmental Studies 122, Tropical Ecology and Conservation
Environmental Studies 123, Animal Ecology and Conservation
Environmental Studies 129, Integrated Pest Management
Environmental Studies 130A/L, Agroecology and Sustainable Agriculture/Laboratory
Environmental Studies 130B, Principles of Sustainable Agriculture
Environmental Studies 131/L, Insect Ecology/Laboratory
Environmental Studies 160, Restoration Ecology
Environmental Studies 161A/L, Soils and Plant Nutrition/Laboratory
Environmental Studies 162, Plant Physiological Ecology
Environmental Studies 163/L, Plant Disease Ecology/Laboratory
Environmental Studies 167, Freshwater and Wetland Ecology
Environmental Studies 168, Biochemistry and the Global Environment

MICROBIOLOGY AND ENVIRONMENTAL TOXICOLOGY

Microbiology and Environmental Toxicology 119, Microbiology
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

OCEAN SCIENCES

Ocean Sciences 118, Marine Microbial Ecology
Ocean Sciences 130, Biological Oceanography

PSYCHOLOGY

Psychology 123, Behavioral Neuroscience

One of the following may also be used as an upper-division general elective:

BIOLOGICAL SCIENCES–EEB

Any 5 credits of undergraduate research (BIOE 183W, 183L, 193, 193F, or 195, or 198)

ENVIRONMENTAL STUDIES

Environmental Studies 183, Environmental Studies Internship

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in ecology and evolution is satisfied by completing courses BIOE 107, Ecology, and BIOE 109, Evolution.

Ecology and Evolution B.S. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/eeb/ecevbbs/ecev-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/eeb/ecevbbs/ecev-transfer-plans.html>

Marine Biology Major

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; and state, federal, and private marine research institutions and resource management agencies. These resources, combined with on-campus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the Ecology and Evolutionary Biology Department web site at <http://www.eeb.ucsc.edu/>.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help in understanding the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

Marine Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Calculus: Mathematics 11A–B or 19A–B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of 11 upper-division courses; two must include laboratory or fieldwork.

Two core courses:

Genetics: BIOL 105

Evolution: BIOE 109

One ecology course:

BIOE 107, Ecology

BIOE 108, Marine Ecology

One marine-environment course:

Ocean Sciences 101, Marine Environment
Ocean Sciences 130, Biological Oceanography

One marine course:

BIOE 120/L, Marine Botany/Laboratory
BIOE 122/L, Invertebrate Zoology/Laboratory
BIOE 127/L, Ichthyology/Laboratory
BIOE 129/L, Biology of Marine Mammals/Laboratory

Elective list for Marine Biology Major

Three topical electives chosen from the following:

BIOE 108, Marine Ecology
BIOE 120/L, Marine Botany/Laboratory
BIOE 122/L, Invertebrate Zoology/Laboratory
BIOE 127/L, Ichthyology/Laboratory
BIOE 128L, Large Marine Vertebrates Field Course
BIOE 129/L, Biology of Marine Mammals/Laboratory
BIOE 155, Freshwater Ecology
BIOE 155L, Freshwater Ecology Laboratory
BIOE 158L, Marine Ecology Laboratory
BIOE 159ABCD, Marine Ecology Field Quarter
BIOE 161, Kelp Forest Ecology
BIOE 161L, Kelp Forest Ecology Laboratory
BIOE 163/L, Ecology of Reefs, Mangroves, and Seagrasses/Laboratory
BIOE 165, Marine Conservation Biology
BIOE 188, Introduction to Science Writing
EART 102, Marine Geology
EART 105, Coastal Geology
EART 122, Paleoceanography
Ocean Sciences 118, Marine Microbial Ecology
Ocean Sciences 130, Biological Oceanography

Three general electives chosen from the following:

BIOLOGICAL SCIENCES–EEB

Any upper-division BIOE course

BIOLOGICAL SCIENCES–MCDB

BIOL 100, Biochemistry
BIOL 101/L, Molecular Biology/Laboratory
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development

CHEMISTRY

Chemistry 108A, Organic Chemistry
Chemistry 108B, Organic Chemistry

EARTH SCIENCES

Earth Sciences 100/L, Vertebrate Paleontology
Earth Sciences 101/L, Invertebrate Paleobiology/Laboratory
Earth Sciences 102, Marine Geology
Earth Sciences 105, Coastal Geology

ECONOMICS

Economics 166A, Game Theory and Applications I
Economics 166B, Game Theory and Applications II

ENVIRONMENTAL STUDIES (ENROLLMENT BY PERMISSION OF INSTRUCTOR)

Environmental Studies 104A, Introduction to Environmental Field Methods
Environmental Studies 108/L, General Entomology/Laboratory
Environmental Studies 115A/L, GIS and Environmental Applications/Exercises in GIS
Environmental Studies 120, Conservation Biology

Environmental Studies 122, Tropical Ecology and Conservation
Environmental Studies 123, Animal Ecology and Conservation
Environmental Studies 129, Integrated Pest Management
Environmental Studies 130A/L, Agroecology and Sustainable Agriculture/Laboratory
Environmental Studies 130B, Principles of Sustainable Agriculture
Environmental Studies 131/L, Insect Ecology/Laboratory
Environmental Studies 160, Restoration Ecology
Environmental Studies 161A/L, Soils and Plant Nutrition/Laboratory
Environmental Studies 162, Plant Physiological Ecology
Environmental Studies 163/L, Plant Disease Ecology/Laboratory
Environmental Studies 167, Freshwater and Wetland Ecology
Environmental Studies 168, Biochemistry and the Global Environment

MICROBIOLOGY AND ENVIRONMENTAL TOXICOLOGY

Microbiology and Environmental Toxicology 119, Microbiology
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

OCEAN SCIENCES

Ocean Sciences 118, Marine Microbial Ecology
Ocean Sciences 130, Biological Oceanography

PSYCHOLOGY

Psychology 123, Behavioral Neuroscience

One of the following may also be used as an upper-division general elective:

BIOLOGICAL SCIENCES-EEB

Any 5 credits of undergraduate research (BIOE 183W, 183L, 193, 193F, or 195, or 198)

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in marine biology is satisfied by completing courses BIOE 107 Ecology, or BIOE 108 Marine Ecology, or BIOE 159A Marine Ecology Field Quarter: Marine Ecology with Laboratory, and BIOE 109 Evolution.

Marine Biology B.S. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/eeb/mabibs/mabibs-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/eeb/mabibs/mabibs-transfer-plans.html>

Plant Sciences Major

UCSC has a strong program in the plant sciences (sometimes called botany). A fine natural environment, the campus Arboretum, the facilities under the Center for Agroecology and Sustainable Food Systems (especially the Farm and Garden), and an excellent greenhouse collection all enhance the resources that support UCSC's botanical programs.

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant molecular biology, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interest. For example, a more in-depth study of physiology and molecular biology courses can serve as preparation for work in the biotechnology field or for graduate school; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers such as resource ecologist or naturalist or to the pursuit of related fields in graduate school; upper-division training in agroecology can lead to careers in agriculture or food systems. There are many opportunities for internships both on the UCSC campus and in the community at large.

Plant Sciences B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B and 20C
General Chemistry: Chemistry 1A, 1B and 1C/N
Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of 11 upper-division courses; two of which must include laboratory or fieldwork.

Three core courses:

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One plant physiology course from the following:

BIOE 135/L, Plant Physiology/Laboratory

Environmental Studies 162, Plant Physiological Ecology

One botany course from the following:

BIOE 117/L, Systematic Botany/Laboratory

BIOE 120/L, Marine Botany/Laboratory

Elective list for Plant Sciences Major

Three topical electives chosen from the following:

BIOLOGICAL SCIENCES-EEB

BIOE 117/L, Systematic Botany/Laboratory

BIOE 118, Ethnobotany/BIOE 120/L, Marine Botany/Laboratory

BIOE 135/L, Plant Physiology/Laboratory

BIOE 137/L, Molecular Ecology/Laboratory

BIOE 145, Plant Ecology

BIOE 145L, Field Methods in Plant Ecology

BIOE 148, Quantitative Ecology

BIOE 149, Disease Ecology

BIOE 151ABCD, Ecology and Conservation in Practice

BIOE 188, Introduction to Science Writing

BIOLOGICAL SCIENCES-MCDB

BIOL 100, Biochemistry

BIOL 101/L, Molecular Biology/Laboratory

BIOL 110, Cell Biology

BIOL 115, Eukaryotic Molecular Biology

ENVIRONMENTAL STUDIES (ENROLLMENT BY PERMISSION OF INSTRUCTOR)

Environmental Studies 104A, Introduction to Environmental Field Methods

Environmental Studies 129, Integrated Pest Management

Environmental Studies 130A/L, Agroecology and Sustainable Agriculture/Laboratory

Environmental Studies 130B, Principles of Sustainable Agriculture

Environmental Studies 131/L, Insect Ecology/Laboratory

Environmental Studies 160, Restoration Ecology

Environmental Studies 161A/L, Soils and Plant Nutrition/Laboratory

Environmental Studies 162, Plant Physiological Ecology

Environmental Studies 163/L, Plant Disease Ecology/Laboratory

Three general electives chosen from the following:

BIOLOGICAL SCIENCES-EEB

Any upper-division BIOE course

BIOLOGICAL SCIENCES-MCDB

BIOL 100, Biochemistry

BIOL 101/L, Molecular Biology/Laboratory

BIOL 110, Cell Biology

BIOL 115, Eukaryotic Molecular Biology

BIOL 120, Development

CHEMISTRY

Chemistry 108A, Organic Chemistry

Chemistry 108B, Organic Chemistry

EARTH SCIENCES

Earth Sciences 100/L, Vertebrate Paleontology

Earth Sciences 101/L, Invertebrate Paleobiology/Laboratory

Earth Sciences 102, Marine Geology

Earth Sciences 105, Coastal Geology

ECONOMICS

Economics 166A, Game Theory and Applications I

Economics 166B, Game Theory and Applications II

ENVIRONMENTAL STUDIES (ENROLLMENT BY PERMISSION OF INSTRUCTOR)

Environmental Studies 104A, Introduction to Environmental Field Methods

Environmental Studies 108/L, General Entomology/Laboratory

Environmental Studies 115A/L, GIS and Environmental Applications/Exercises in GIS

Environmental Studies 120, Conservation Biology

Environmental Studies 122, Tropical Ecology and Conservation

Environmental Studies 123, Animal Ecology and Conservation

Environmental Studies 129, Integrated Pest Management

Environmental Studies 130A/L, Agroecology and Sustainable Agriculture/Laboratory

Environmental Studies 130B, Principles of Sustainable Agriculture

Environmental Studies 131/L, Insect Ecology/Laboratory

Environmental Studies 160, Restoration Ecology

Environmental Studies 161A/L, Soils and Plant Nutrition/Laboratory

Environmental Studies 162, Plant Physiological Ecology

Environmental Studies 163/L, Plant Disease Ecology/Laboratory

Environmental Studies 167, Freshwater and Wetland Ecology

Environmental Studies 168, Biochemistry and the Global Environment

MICROBIOLOGY AND ENVIRONMENTAL TOXICOLOGY

Microbiology and Environmental Toxicology 119, Microbiology

Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

OCEAN SCIENCES

Ocean Sciences 118, Marine Microbial Ecology

Ocean Sciences 130, Biological Oceanography

PSYCHOLOGY

Psychology 123, Behavioral Neuroscience

One of the following may also be used as an upper-division general elective:

BIOLOGICAL SCIENCES-EEB

Any 5 credits of undergraduate research (BIOE 183W, 183L, 193, 193F, or 195, or 198)

ENVIRONMENTAL STUDIES

Environmental Studies 183, Environmental Studies Internship

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary

Communication (DC) Requirement. The DC Requirement in plant sciences is satisfied by completing courses BIOE 107, Ecology, and BIOE 109, Evolution.

Plant Sciences B.S. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/eeb/plntbs/plntbs-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/eeb/plntbs/plntbs-transfer-plans.html>

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

by passing course 190, Senior Seminar;

by receiving a passing grade in an internship, independent research laboratory, or field course:

BIOE 114L, Field Methods in Herpetological Research
BIOE 128L, Large Marine Vertebrates Field Course
BIOE 141L, Behavioral Ecology Field Course
BIOE 145L, Field Methods in Plant Ecology
BIOE 150L, Ecological Field Methods
BIOE 151, Ecology and Conservation in Practice
BIOE 155L, Freshwater Ecology Laboratory
BIOE 158L, Marine Ecology Laboratory
BIOE 159, Marine Ecology Field Quarter
BIOE 161L, Kelp Forest Ecology Laboratory
BIOE 183, Undergraduate Research in EEB
BIOE 188, Introduction to Science Writing

BIOL 100L, Advanced Biochemistry Laboratory
BIOL 105L, Eukaryotic Genetics Laboratory
BIOL 105M, Microbial Genetics Laboratory
BIOL 109L, Yeast Molecular Genetics Laboratory
BIOL 110L, Cell Biology Laboratory
BIOL 111L, Immunology Laboratory
BIOL 115L, Eukaryotic Molecular Biology Laboratory
BIOL 120L, Developmental Biology Laboratory
BIOL 121L, Environmental Phage Biology Laboratory
BIOL 178L, Protocols in Stem Cell Biology
BIOL 186L, Undergraduate Research in MCD Biology
BIOL 186R, Undergraduate Research in MCD Biology
BIOL 187L, Molecular Biotechnology Laboratory
BIOL 189, Health Sciences Internship
Biochemistry and Molecular Biology 110L, Advanced Biochemistry Laboratory
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

by completing a senior thesis;

by achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the biological sciences advising office before the last day of the graduating quarter;

by obtaining an medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences advising office before the last day of the graduating quarter.

Honors

Honors in the biological sciences majors are awarded to graduating students whose academic performance demonstrates excellence at a grade point average (GPA) of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the majors must be taken for a letter grade.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (numbered 100-190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Physical and Biological Sciences Undergraduate Affairs office before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses

to UCSC, please consult the undergraduate web site at:
<http://undergrad.pbsci.ucsc.edu/biology/transfer-students/index.html>.

A maximum of one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Education Abroad Opportunities

The UC Education Abroad Program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The EEB department encourages interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde research station, this program gives students experience with hands-on field research, offers a homestay program, and carries credit for two upper-division biology courses. The University of Queensland (Australia) offers an intensive, full-semester marine science program, which includes stays at research stations on the Great Barrier Reef and in sheltered mangrove and seagrass habitats near Brisbane.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning; you must seek advice about your EAP plan for major courses at UCSC from the biological sciences undergraduate adviser and/or faculty advisor and receive their approval for your plans.

Graduate Program Description

The Ecology and Evolutionary Biology (EEB, courses BIOE) Graduate Program at UCSC reflects the remarkable local and global diversity of species and environments studied by the EEB faculty and students. The vision of the EEB graduate program is to provide a nurturing, creative, and intellectual environment conducive to the development of world-class scientists. The small size of the EEB graduate program encourages close working relations between students and faculty in an informal atmosphere advantageous to rapid learning and professional growth. Interdisciplinary collaborations with oceanographers, geologists, mathematicians, environmental and conservation biologists, toxicologists, and others enable students to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization.

The graduate program in Ecology and Evolutionary Biology (EEB) at UC Santa Cruz is one of the premier EEB programs in the country. EEB-UCSC graduate students regularly win prestigious awards for their presentations at international meetings and publish their work in the best journals of their fields. In addition to taking advantage of local field sites and state-of-the-art departmental laboratories, more than two-thirds of the EEB faculty also participate in field studies throughout the world, especially in Africa, Latin America, Antarctica, and around the Pacific Rim.

A special strength of the EEB program is the integration of terrestrial and aquatic perspectives across all research tracks. The course requirements and examinations emphasize both breadth and depth.

Research in EEB comprises four core tracks

Ecology

Evolutionary biology

Physiology

Behavior

Degree Requirements

Ph.D. Requirements

COURSES:

BIOE 200A, Scientific Skills
BIOE 200B, Advanced Organismal Biology
BIOE 279, Evolutionary Ecology
BIOE 293, Readings in Ecology and Evolution (orequivalent)
BIOE 294, Ecology, Evolutionary Biology Seminar (taken each quarter when in residence)
BIOE 295, Advanced Ecology and Evolutionary Biology Seminar (may substitute for BIOE 293)

Each Ph.D. student should expect to complete at least two quarters as a teaching assistant during their graduate career.

During fall of the second year, students take a comprehensive examination. This is a two-part examination, written and oral, the goal of which is to examine the student's breadth and depth of knowledge of evolution, ecology, physiology, behavior, organismal, and general biology.

Later in the second or third year, the student submits a dissertation research proposal to the proposal committee and must defend it in an oral examination, followed by a seminar on his/her proposed research. The student advances to candidacy only after having completed all coursework, the comprehensive examination, the proposal defense, and the proposal seminar.

No sooner than 30 days after submitting the dissertation to a dissertation reading committee, the student defends the dissertation to the committee, followed by a public seminar. At least one chapter of the dissertation must be submitted to a refereed journal for publication before receipt of the Ph.D.

Master of Arts (M.A.) Requirements

COURSES:

BIOE 200A, Scientific Skills
BIOE 200B, Advanced Organismal Biology
BIOE 279, Evolutionary Ecology
BIOE 293, Readings in Ecology and Evolution (or equivalent): two quarters
BIOE 294, Ecology and Evolutionary Biology Seminar (taken every quarter)

Thirty days after submitting the master's thesis to a thesis reading committee, the student defends the thesis to the committee, followed by a public seminar.

Requirements for the Ecology and Evolutionary Biology Designated Emphasis

To receive a parenthetical notation in Ecology and Evolutionary Biology (hereafter EEB), graduate students must complete the following requirements, in addition to the degree requirements for the doctorate in their home department:

1. Take the following EEB core courses (required for all EEB graduate students):

BIOE 279 Evolutionary Ecology (5 credits), BIOE 200A Scientific Skills (5 credits), BIOE 200B Advanced Organismal Biology (5 credits)

2. Attend EEB department seminars (enroll in BIOE 294, 2 credits) for one quarter

3. Attend a lab group seminar course (enroll in BIOE 281, 2/5 credits) for one quarter

4. Take at least two courses from any other graduate or appropriate upper-division courses in biology, for example:

BIOE 293 Readings in Ecology and Evolution (2 credits) BIOE 295 Special Advanced Topics in Ecology and Evolution (2 credits) BIOE 272 Exercise Physiology (5 credits) BIOE 233 Exercise Physiology (5 credits) BIOE 148 Quantitative Ecology for Conservation (5 credits) BIOE 252 Community Ecology (5 credits) BIOE 208 Marine Ecology (5 credits) BIOE 245 Plant Ecology (5 credits) BIOE 274 Evolutionary Game Theory (5 credits) BIOE 286 Experimental Design

and Data Analysis (5 credits)

5. In all, students will be expected to complete at least 20 credits of EEB coursework. Courses taken to fulfill graduate requirements within the home department will not count toward the Designated Emphasis requirements.
6. Have a designated graduate adviser from among the faculty of the EEB department, who commits to serve on the qualifying exam committee and on the Ph.D. dissertation reading committee.

Undergraduate Program Description

This is an extraordinary time to be involved in biomedical research. New technologies are rapidly changing our understanding of the molecular and cellular basis of life, with dramatic implications for how we treat human disease. Members of the Department of Molecular, Cell and Developmental Biology, along with affiliated faculty in the departments of Biomolecular Engineering, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, and Physics, are participating in an extraordinary revolution in biomedical science. A broad spectrum of cutting-edge research tools are being employed to tackle problems in key areas that include: the structural and functional role of RNA in regulation of gene expression; chromatin biology and epigenetic control of genes; the cell biology of the cytoskeleton and the cell cycle; decisions controlling embryogenesis and organ development; and developmental neurobiology. The insights generated by this basic research enable new strategies for treatments of aging disorders, birth defects, neurological diseases, cancer and other human ailments. The department offers a spectrum of courses that reflect the exciting new developments and directions in these fields, and trains students to participate in these exciting fields.

Students may plan a program that leads to one of several bachelor of science (B.S.) degrees. Students may choose from the following major options:

Human biology B.S.

Molecular, cell, and developmental biology B.S.

Neuroscience B.S.

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratory facilities for independent research. Many students take advantage of the numerous opportunities with local physicians, health care providers and biotech companies to gain experience in a real world setting. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals.

Prerequisites

Due to the demanding nature of the majors, students must begin their science coursework as early as possible. CHEM 1A, 1B and 1C, and BIOL 20A and BIOE 20B must be taken during the first and second years in order for students to qualify for admission to MCD biology-sponsored majors (see below). Students are strongly encouraged to take AMS 5 or AMS 7/L and at least one quarter of calculus during their first two years.

An online Mathematics Placement Examination is offered at various periods prior to enrollment for each quarter. Biological science majors are expected to take this examination. For more information see the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu>.

Students intending to major in human biology should take the Spanish placement examination, offered by the language program, to determine with which course they should begin the Spanish sequence. They should also complete the laboratory course 20L.

Transfer Students

Applications from transfer students in the biological sciences are encouraged. Students who transfer without having completed the required and recommended coursework may have difficulty enrolling in courses and may require more than two years to complete a degree. Prior to transfer, students should satisfy major qualification requirements or their UCSC equivalents: CHEM 1B, General Chemistry; CHEM 1C, General Chemistry; BIOL 20A, Cell and Molecular Biology; BIOE 20B, Development and Physiology. Junior-level transfer students are also strongly encouraged to complete courses equivalent to MATH 11A, MATH 11B and AMS 5 or AMS 7/L prior to transfer. Intended human biology majors are strongly encouraged to complete the Spanish language requirement prior to transfer. Prospective transfer students should review the transfer information at <http://assist.org> or contact the [Undergraduate Affairs office](#) for further information.

Academic Advising

Academic advising is available at the Physical and Biological Sciences Undergraduate Affairs office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study. For additional advice and information please see the [undergraduate web site](#).

Major Requirements Qualifications Policy

The Department of Molecular Cell and Developmental Biology has a qualification policy that applies to the molecular, cell and developmental biology B.S.; human biology B.S. and neuroscience B.S. majors.

To qualify for any of the majors, students must pass and achieve a cumulative GPA of 2.30 or greater in the following courses or their equivalents:

Chemistry and Biochemistry 1B, General Chemistry
 Chemistry and Biochemistry 1C, General Chemistry
 Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A, Cell and Molecular Biology
 Biology: Ecology and Evolutionary Biology (BIOE) 20B, Development and Physiology

Students who want to declare the Human Biology B.S. are strongly encouraged to complete BIOL 20L prior to declaring.

Students with two or more grades of NP, D, or F in the policy courses are not qualified to declare.

When calculating grades to determine cumulative GPA in policy courses:

- All courses must be taken for a letter grade, see [Letter Grade Policy](#).
- Students with AP credit for Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A and Biology: Ecology and Evolutionary Biology (BIOE) 20B, may base their cumulative GPA on three grades: a single A for AP Biology and their grades in Chemistry and

Biochemistry 1B and 1C.

- Students with non-grades (I, IP, DG, etc.) in any of the policy courses will not be eligible to declare until a grade has been assigned.
- Every student who satisfies the major admission requirements and who petitions to declare the major by the campus major declaration deadline (i.e. before enrolling in their 3rd year or the equivalent) will be admitted to the major. Students enrolled in their final qualification policy course at the major declaration deadline may submit the petition, but will not be declared until satisfactory grades and qualifying GPA have been posted. Students who satisfy the major admission requirements, but who petition to declare the major after the campus major declaration deadline will be considered on a case-by-case basis for admission to the major; admission is not guaranteed.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the Molecular Cell and Developmental Biology Faculty Adviser within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision. For more information about the appeal process see the Physical and Biological Sciences Undergraduate Affairs web site at

<http://undergrad.pbsci.ucsc.edu/mcdb/qualifying/appeal-process.html>.

Double Major in the Biological Sciences

Students interested in pursuing multiple majors within the biological sciences may not declare any combination of biology (B.A., B.S., bioeducation concentration, or minor), molecular, cell and developmental biology, neuroscience, and biochemistry and molecular biology.

[\[Return to top\]](#)

Human Biology Major

The B.S. major in human biology is designed for students interested in careers in medicine or biomedical research. Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply. Students are required to take introductory biology and lab (BIOL 20L), genetics, biochemistry, cell biology, human physiology with lab and one additional course directly relevant to human health. Students in this program must also fulfill Spanish language and health care internship requirements.

Human Biology B.S. Major Requirements*

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and BIOL 20L

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M (Note: 109 is also recommended for pre-med students)

Calculus: Mathematics 11A–B or 19A–B or Applied Math and Statistics 15A–B;

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6C/N (Note: some medical schools require one full year of Physics/Lab)

Advanced Requirements

Five core courses:

Biochemistry with laboratory: BIOL 100 or BIOC 100A, 100B, 100C

Molecular Biology: BIOL 101

Genetics: BIOL 105

Cell Biology: BIOL 110

Human Physiology with Laboratory: BIOL 130/L

One of the following electives:

BIOL 111A, Immunology I

BIOL 111B, Immunology II
BIOL 113, Mammalian Endocrinology
BIOL 114, Cancer Cell Biology
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development
BIOL 125, Neuroscience
BIOL 126, Advanced Neural Development
BIOL 127, Neurodegenerative Disease
BIOL 135/L, Anatomy of the Human Body/Laboratory
BIOL 140, Biophysics
BIOL 178, Stem Cell Biology
BIOL 179, Biotechnology and Drug Development
BIOL 182, Genomics
Microbiology and Environmental Toxicology 119, Microbiology

Internship Requirement: BIOL 189 and 189W, Health Sciences Internship. The student must participate in a community health care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.

Language Requirement: Spanish 1–4 or the equivalent and one quarter of Spanish for health-care workers (Spanish 5M).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in human biology is satisfied by completing courses BIOL 130L, Human Physiology Laboratory, and BIOL 189, Health Sciences Internship and BIOL 189W, Disciplinary Communication: Human Biology.

Human Biology B.S. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/mcdb/hbiobs/hbiobs-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/mcdb/hbiobs/hbiobs-transfer-plans.html>

[\[Return to top\]](#)

Molecular, Cell, and Developmental Biology Major

The molecular, cell, and developmental (MCD) biology major is designed for students interested in medical or other professional graduate programs and those preparing for careers in biotechnology industries. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

Molecular, Cell, and Developmental Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C
General Chemistry: Chemistry 1A, 1B and 1C/N
Organic Chemistry: Chemistry 108A/L and 108B
Calculus: Mathematics 11A–B or 19A–B or Applied Math and Statistics 15A–B
Biostatistics: Applied Mathematics and Statistics 5 or 7/L
Physics: Physics 6A/L and 6B or 6C

Advanced Requirements

Five core courses:

Biochemistry*: BIOL 100; or the series Biochemistry and Molecular Biology 100A, 100B, 100C. (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one lecture elective.)
Molecular Biology*: BIOL 101

*Instead of Biochemistry (BIOL 100) and Molecular Biology (BIOL 101), students may complete the series in Biochemistry and Molecular Biology 100A, 100B, 100C. (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one lecture elective.)

Molecular Biology Laboratory: BIOL 101L

Genetics: BIOL 105

Cell Biology: BIOL 110

Three of the following electives:

(Only one of which may be a 3-credit course: BIOL 116 or BIOL 117)

Biochemistry and Molecular Biology 100C, Biochemistry

BIOL 111A, Immunology

BIOL 111B, Immunology II

BIOL 113, Mammalian Endocrinology

BIOL 114, Cancer Cell Biology

BIOL 115, Eukaryotic Molecular Biology

BIOL 116, Advanced Topics in Cell Biology

BIOL 117, Neglected Tropical Diseases

BIOL 118, Biology of Disease

BIOL 120, Development

BIOL 125, Neuroscience

BIOL 126, Advanced Neural Development

BIOL 127, Neurodegenerative Disease

BIOL 130/L, Human Physiology/Laboratory

BIOL 140, Biophysics

BIOL 178, Stem Cell Biology

BIOL 178L, Protocols in Stem Cell Biology

BIOL 179, Biotechnology and Drug Development

BIOL 180/L, Research Programming for Biologists and Biochemists/Laboratory

BIOL 181, Computational Biology Tools

BIOL 182, Genomics

BIOE 109, Evolution

BIOE 135/L, Plant Physiology/Laboratory

Microbiology and Environmental Toxicology 119, Microbiology

One of the following laboratory courses:

BIOL 100L, Advanced Biochemistry Laboratory

BIOL 105L, Eukaryotic Genetics Laboratory

BIOL 105M, Microbial Genetics Laboratory

BIOL 109L Yeast Genetics Laboratory

BIOL 110L, Cell Biology Laboratory

BIOL 115L, Eukaryotic Molecular Biology Laboratory

BIOL 120L, Development Laboratory

BIOL 121L, Environmental Phage Biology Laboratory

BIOL 186L, Undergraduate Research in MCD

Biochemistry and Molecular Biology 110L, Advanced Biochemistry Laboratory

Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in molecular, cell, and developmental biology is satisfied by completing one of the following courses:

Biochemistry and Molecular Biology 110L; BIOL 100L, 105L, 105M, 109L, 110L, 115L, 120L, 121L, 186L, 187L; Biomolecular Engineering 122; or Microbiology and Environmental Toxicology 119L.

Molecular, Cell, and Developmental Biology B.S. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/mcdb/mcdbbs/mcdbbs-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/mcdb/mcdbbs/mcdbbs-transfer-plans.html>

[\[Return to top\]](#)

Neuroscience Major

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other. The neuroscience major provides students with rigorous preparation for graduate studies and research in the field of neuroscience. Rigorous course work is supplemented by opportunities for hands-on research.

Neuroscience B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A–B or 19A–B or Applied Math and Statistics 15A–B

Biostatistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L and 6C

Advanced Requirements

Seven core courses:

Biochemistry: BIOL 100

Molecular Biology: BIOL 101

Molecular Biology Laboratory: BIOL 101L

Genetics: BIOL 105

Cell Biology: BIOL 110

Neuroscience: BIOL 125

Advanced Neuroscience: BIOL 126

Two of the following electives:

BIOE 131/L, Animal Physiology/Laboratory

BIOE 140, Behavioral Ecology

BIOL 111A, Immunology I

BIOL 111B, Immunology II

BIOL 113, Mammalian Endocrinology

BIOL 115, Eukaryotic Molecular Biology

BIOL 118, Biology of Disease

BIOL 120, Development

BIOL 127, Neurodegenerative Disease

BIOL 130/L, Human Physiology/Laboratory

BIOL 140, Biophysics

BIOL 178L, Protocols in Stem Cell Laboratory

BIOL 179, Biotechnology and Drug Development

BIOL 180/L, Research Programming for Biologists and Biochemists/Laboratory

BIOL 181, Computational Biology Tools

BIOL 182, Genomics

Psychology 121, Perception

Psychology 123, Behavioral Neuroscience

One of the following laboratory electives:

BIOE 141L, Behavioral Ecology Field Course

BIOE 183L/W, Undergraduate Research in EEB and Writing

BIOL 100L, Advanced Biochemistry Laboratory

BIOL 105L, Eukaryotic Genetics Laboratory

BIOL 109L Yeast Genetics Laboratory

BIOL 110L, Cell Biology Laboratory

BIOL 115L, Eukaryotic Molecular Genetics Laboratory

BIOL 120L, Development Laboratory
BIOL 121L, Environmental Phage Biology Laboratory
BIOL 186L, Undergraduate Research in MCD
BIOL 187L, Molecular Biotechnology Laboratory
Biomolecular Engineering 122, Environmental Virus Bioinformatics Laboratory

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in neuroscience is satisfied by completing one of the following: BIOE 141L, 183L; BIOL 100L, 105L, 109L, 110L, 115L, 120L, 121L, 186L, 187L; or BIOE 183L and 183W; or Biomolecular Engineering 122.

Neuroscience B.S. Sample Planners

For freshmen: <http://undergrad.pbsci.ucsc.edu/mcdb/nbiobs/nbiobs-frosh-plans.html>

For transfer students: <http://undergrad.pbsci.ucsc.edu/mcdb/nbiobs/nbiobs-transfer-plans.html>

[\[Return to top\]](#)

Comprehensive Requirement

All majors require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

- by passing course 190, Senior Seminar;
- by receiving a passing grade in an internship, independent research laboratory, or field course:

BIOE 114L, Field Methods in Herpetological Research
BIOE 141L, Behavioral Ecology Field Course
BIOE 145L, Field Methods in Plant Ecology
BIOE 150L, Ecological Field Methods
BIOE 151, Ecology and Conservation in Practice
BIOE 155L, Freshwater Ecology Laboratory
BIOE 158L, Marine Ecology Laboratory
BIOE 159, Marine Ecology Field Quarter
BIOE 161L, Kelp Forest Ecology Laboratory
BIOE 183, Undergraduate Research in EEB
BIOL 100L, Advanced Biochemistry Laboratory
BIOL 105L, Eukaryotic Genetics Laboratory
BIOL 105M, Microbial Genetics Laboratory
BIOL 109L Yeast Genetics Laboratory
BIOL 110L, Cell Biology Laboratory
BIOL 111L, Immunology Laboratory
BIOL 115L, Eukaryotic Molecular Biology Laboratory
BIOL 120L, Developmental Biology Laboratory
BIOL 121L, Environmental Phage Biology Laboratory
BIOL 178L, Protocols in Stem Cell Biology
BIOL 186L, Undergraduate Research in MCD Biology
BIOL 186R, Undergraduate Research in MCD Biology
BIOL 187L, Molecular Biotechnology Laboratory
BIOL 189, Health Sciences Internship
Biochemistry and Molecular Biology 110L, Advanced Biochemistry Laboratory
Biomolecular Engineering 122, Environmental Virus Bioinformatics Laboratory
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

- by completing a senior thesis;
- by achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the biological sciences adviser before the last day of the graduating quarter;

- by obtaining an medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences adviser before the last day of the graduating quarter.

Honors

Honors in the majors are awarded to graduating students whose academic performance demonstrates excellence at a grade point average (GPA) of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the majors must be taken for a letter grade.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (numbered 100-190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Physical and Biological Sciences Undergraduate Affairs office before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the [undergraduate web site](#).

Students who wish to receive credit toward the major for different courses taken either at UCSC or at another institution should contact the Physical and Biological Sciences Undergraduate Affairs office.

Education Abroad Opportunities

The UC Education Abroad Program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The MCDB Department encourages interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning; you must seek advice about your EAP plan for major courses at UCSC from the biological sciences undergraduate adviser and/or faculty adviser and receive their approval for your plans.

Graduate Program Description

The program in molecular, cell, and developmental (MCD) biology (courses BIOL) leads to either the doctor of philosophy (Ph.D.) or the master of arts (M.A.) and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, chromatin structure, epigenetics, signaling, cell division, development, nerve cell function, and stem cell biology. A unique focus of the department is the Center for the Molecular Biology of RNA.

Degree Requirements

Ph.D. and master's students complete the graduate core courses, BIOL 200A, 200B, and 200C, and 200D in the first year. Additional undergraduate courses required to strengthen the student's background may be assigned by the advisory committee during the initial

advising meeting. Typically, these courses are Biochemistry 100A and BIOL 115. Students are required to participate in laboratory research meetings and departmental seminar series every quarter.

First-year Ph.D. students complete three 6-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The laboratory rotations give students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each rotation, students present a short talk to the department on their rotation project. At the end of winter quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit two proposals—one on their proposed thesis work and a second on an unrelated MCDB research topic. The Ph.D. qualifying examination, taken in spring quarter of the second year, is an oral examination before a committee comprised of three internal reviewers and one external reviewer.

Once the qualifying examination is passed, a student, with her/his faculty adviser, selects a thesis committee to consult with in the development of the student's thesis. This committee monitors the student's progress and ultimately approves the final draft of the student's dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying examination.

A student is advanced to candidacy following presentation of their research to the department in a seminar. This presentation takes place no later than spring of the third year.

Graduate students must take two approved advanced graduate electives. Students who enter the Ph.D. program with a master's degree but without doing rotations must complete an additional two approved graduate elective courses.

Ph.D. Requirements

- Complete the graduate core course
- Complete the Practice of Science course
- Complete an oral qualifying examination
- Complete an advancement to candidacy seminar
- Complete two advanced, graduate elective courses
- Meet yearly with a thesis committee after the qualifying examination
- Complete two quarters of service as a teaching assistant
- Complete thesis research resulting in a dissertation of individual work
- Present the thesis defense in a departmental seminar

M.A. Requirements

Students apply to the master's degree program through the same portal as for the Ph.D. degree program. However, since master's students do not do research rotations, they must identify a research adviser at the outset of the training period.

- Completion of the graduate core courses
- Completion of the Practice of Science course
- Write a master's thesis based on original research
- Presentation of thesis defense in a departmental seminar

Program Description

Chemistry is central to modern science and, ultimately, most phenomena in biology, medicine, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers many lower-division courses, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to end their formal education with a bachelor of arts (B.A.) or bachelor of science (B.S.) degree, as well as those who wish to go on for an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or an allied field.

Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry research program is active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research is done for academic credit in Chemistry 195A–B–C, Senior Research; or in Chemistry 199, Tutorial. There are also opportunities for interdisciplinary research combining chemistry with a wide range of sciences, for example, physics, geology, oceanography, biology, computer science, microbiology and environmental toxicology. At UCSC, it is not uncommon for students to see their own original work published in research journals.

Chemistry and biochemistry faculty and approximately 90 graduate students and 30 postdoctoral fellows are housed in the Physical Sciences Building near the Science Library. Standard and specialized spectrophotometric equipment, a number of instruments devoted to structural studies, instrumentation for specialized analytical purposes, and computer facilities used in studies of structure and reactivity are all available. The Science Library has an excellent collection of current journals, in print and electronic form, and reference works, as well as earlier volumes of all the major journals. be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as researchers in industry in areas such as electronic materials, biotechnology, medicinal chemistry, or laser technology. Others have entered government service as research chemists in the Food and Drug Administration, the Environmental Protection Agency, or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in research, teaching, or a combination of the two. The degree in chemistry also provides a strong disciplinary background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences.

The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. The B.S. degree should be the choice if a student is interested in getting a job in industry immediately after receiving his or her college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, and health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. However, for either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research.

A minor in chemistry is also offered for those who wish to have a strong complementary program in chemistry while majoring in another course of study.

Declaration of the Major

Chemistry Qualification Policy

The Department of Chemistry & Biochemistry has a qualification policy that applies to the following majors:

Chemistry BS

Chemistry BS with Biochemistry concentration

Chemistry BS with Environmental Chemistry concentration

Chemistry BA

To qualify to declare any of the above majors, students must achieve a cumulative grade point average (GPA) of 2.50 or greater in the following courses, or their equivalents:

CHEM 1A, General Chemistry

CHEM 1B, General Chemistry

CHEM 1C, General Chemistry

MATH 22, Introduction to Calculus of Several Variables

And one of the following calculus sequences:

MATH 11A and 11B, Calculus with Applications

MATH 19A and 19B, Calculus for Science, Engineering, and Mathematics

AMS 15A and 15B, Case-study Calculus I and II

When determining qualification to declare the major:

- All courses must be taken for a letter grade.
- For policy courses that have been satisfied with AP credit based on an AP examination score of 5 (for Chemistry 1A), and an AP Calculus BC examination score of 4 or 5 (for Mathematics 11A or 19A), students may substitute a grade of A for each course when calculating their cumulative GPA.

[Search the Catalog](#)

- Students with non-grades (I, IP, DG, Z, AC, NC, etc.) in any of the policy courses will not be eligible to declare until a grade has been assigned.
- Students with two or more grades of NP, D, or F in the policy courses are not eligible to declare.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the students, the college, and the Office of the Registrar of the decision. For more information about the appeal process see the Physical & Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Requirements for the Chemistry B.A. Degree

The requirements for the bachelor of arts in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to study areas of the humanities or social sciences, to complete major requirements late in their college career, or to concentrate on a study in a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student's total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate faculty adviser.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A, 11B, and 22; or Mathematics 19A, 19B, and 22; or Applied Mathematics and Statistics 15A, 15B, and Mathematics 22

Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L, 108B/M

Inorganic Chemistry: Chemistry 151A/L

Physical Chemistry: Chemistry 163A, 163B, and 164

One of the following laboratory courses:

Chemistry 110L (must be taken with Chemistry 110)

Chemistry 146A, Advanced Laboratory in Organic Chemistry

Chemistry 146B, Advanced Laboratory in Inorganic Chemistry

Chemistry 146C, Advanced Laboratory in Physical Chemistry

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Elective(s)

At least two from the following :

Chemistry 103, Biochemistry

Chemistry 109, Organic Intermediate Chemistry

Chemistry 110/L, Intermediate Organic Chemistry with Emphasis on Synthesis and Analytical Methods/Intermediate Organic Chemistry Laboratory

Chemistry 143, Organic Chemical Structure and Reactions

Chemistry 151B, Chemistry of Main Element Groups

Chemistry 156C, Advanced Topics in Inorganic Chemistry

Chemistry 163C, Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications

Chemistry 169, Chemistry and Biology of Drug Design and Discovery

Biochemistry and Molecular Biology 100A, Biochemistry

Biochemistry and Molecular Biology 100B, Biochemistry

Biochemistry and Molecular Biology 100C, Biochemistry

Microbiology and Environmental Toxicology 101, Sources and Fates of Pollutants

Microbiology and Environmental Toxicology 102, Cellular and Organismal Toxicology

Ocean Sciences 120, Aquatic Chemistry: Principles and Applications

Ocean Sciences 220, Chemical Oceanography

Physics 116A, Mathematical Methods in Physics

Physics 116B, Mathematical Methods in Physics

Physics 180, Biophysics

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the bachelor of arts degree in chemistry is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.A. Planner

<http://undergrad.pbsci.ucsc.edu/chemistry/chemba/index.html>

Requirements for the Chemistry B.S. Degree

The bachelor of science major program is designed for students who intend to pursue a professional career in chemistry. It is rigorous and broadly based, appropriate for that purpose. The course requirements for the B.S. major are as follows; please refer to each course description for a detailed listing of prerequisites.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A, 11B, and 22; or Mathematics 19A, 19B, and 22; or Applied Mathematics and Statistics 15A, 15B, and Mathematics 22

Advanced Mathematics: Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24

Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L, 108B/M, and 110/L

Inorganic Chemistry: Chemistry 151A/L

Biochemistry: Chemistry 103

Physical Chemistry: Chemistry 163A, 163B, 163C, and 164

One of the following laboratory courses:

Chemistry 146A, Advanced Laboratory in Organic Chemistry

Chemistry 146B, Advanced Laboratory in Inorganic Chemistry

Chemistry 146C, Advanced Laboratory in Physical Chemistry

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Elective(s)

At least two from the following list:

Chemistry 122, Principles of Instrument Analysis*

Chemistry 143, Organic Chemical Structure and Reactions

Chemistry 151B, Chemistry of the Main Element Groups

Chemistry 156C, Advanced Topics in Inorganic Chemistry

Chemistry 169, Chemistry and Biology of Drug Design and Discovery

Biochemistry and Molecular Biology 100A, Biochemistry

Biochemistry and Molecular Biology 100B, Biochemistry

Biochemistry and Molecular Biology 100C, Biochemistry

Microbiology and Environmental Toxicology 101, Sources and Fates of Pollutants

Microbiology and Environmental Toxicology 102, Cellular and Organismal Toxicology

Ocean Sciences 120, Aquatic Chemistry: Principles and Applications

Ocean Sciences 220, Chemical Oceanography

Physics 116A, Mathematical Methods in Physics

Physics 116B, Mathematical Methods in Physics

Physics 180, Biophysics

*To receive certification from the American Chemical Society, you must complete Chemistry 122; see additional information below.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the bachelor of science degree in chemistry is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.S. Planner

<http://undergrad.pbsci.ucsc.edu/chemistry/chembs/chembs-frosh-plans.html>

Chemistry B.S. Degree with Biochemistry Concentration

The biochemistry concentration is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis..

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, 1C/N

Calculus: Mathematics 11A, 11B, and 22; or Mathematics 19A, 19B, and 22; or Applied Mathematics and Statistics 15A, 15B and Mathematics 22

Advanced Mathematics: Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24

Introductory Biology: Molecular, Cellular and Developmental Biology (BIOL) 20A, and Ecology and Evolutionary Biology (BIOE) 20B

Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L, 108B/M, and 110/L

Inorganic Chemistry: Chemistry 151A/L

Biochemistry: Biochemistry and Molecular Biology 100A-B-C and 110L

Physical Chemistry: Chemistry 163A, 163B, and 163C

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with a biochemistry concentration is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and Biochemistry and Molecular Biology 110L, Advanced Biochemistry Laboratory.

Chemistry Major B.S. with Biochemistry Concentration Planner

<http://undergrad.pbsci.ucsc.edu/chemistry/chem-concentrations/chembs-bioc/index.html>

Biochemistry and Molecular Biology B.S.

See the biochemistry and molecular biology program description and major requirements.

Chemistry B.S. Degree with Environmental Chemistry Concentration

A concentration within the biology, chemistry and biochemistry, and Earth sciences disciplines, collectively identified as the environmental sciences program, is offered. Students will develop a core competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Introductory Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A, and Ecology and Evolutionary Biology (BIOE) 20B

Geology: Earth Sciences 20/L, 10/L, or 5/L

Environmental Policy and Economics: Environmental Studies 25

Calculus: Mathematics 11A, 11B and 22; or 19A, 19B and 22; or Applied Mathematics and Statistics 15A, 15B and Mathematics 22

Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Environmental Toxicology: Microbiology and Environmental Toxicology 101 or 102

Biochemistry: Chemistry 103

Organic Chemistry: Chemistry 108A/L, 108B/M and 110

Instrumental Analysis: Chemistry 122

Inorganic Chemistry: Chemistry 151A/L

Physical Chemistry: Chemistry 163A, 163B, and 164

Earth Sciences: Earth Sciences 110B/M

Ocean Sciences: Ocean Sciences 120 or 220 (Ocean Sciences 220 must be taken for a letter grade)

One of the following laboratory courses:

Chemistry 146A, Advanced Laboratory in Organic Chemistry

Chemistry 146B, Advanced Laboratory in Inorganic Chemistry

Chemistry 146C, Advanced Laboratory in Physical Chemistry

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with an environmental chemistry concentration is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.S. with Environmental Chemistry Planner

<http://undergrad.pbsci.ucsc.edu/chemistry/chem-concentrations/chembs-envr/index.html>

Requirements for the Minor

The course requirements for the minor, including electives, are the same as for the B.A. degree, with the exclusion of Chemistry 146A, 146B, 146C, 151A/151L, and 164. The minor has no senior comprehensive requirement.

Chemistry Minor Planner

<http://undergrad.pbsci.ucsc.edu/chemistry/chem-minor.html>

Comprehensive Requirement

The comprehensive requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

Senior thesis: A senior research project based on original experimental or theoretical research (Chemistry 195A-B-C). At the conclusion of the project, the student submits a satisfactory formal research paper to the faculty sponsor. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry or the biochemistry and molecular biology major programs. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the Chemistry and Biochemistry Department undergraduate faculty adviser. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take Chemistry 195 courses. Students who achieve excellence in both research and thesis may be awarded honors in the thesis upon graduation.

Senior essay: An essay based on literature research (Chemistry 199). After agreeing in advance on an appropriate topic of interest and a format, the student submits a satisfactory essay on the topic. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry and biochemistry major program should have the title and description of the proposed essay reviewed by the Chemistry and Biochemistry Department undergraduate faculty adviser. Students acquire experience and skills in scientific literature research as well as in the writing of a research paper.

Advising

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to declare their major at an early date so that advising and planning can commence. For assistance with advising, please refer to the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Prerequisites

Prior to enrollment in the general chemistry sequence, CHEM 1ABC, students are encouraged to take the Chemistry Assessment Exam. For information about the assessment, visit the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Materials Fee

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Chemistry and Biochemistry Department through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expense purchasing individual supplies.

High School Preparation

Prospective chemistry majors are encouraged to get a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly recommended. Students who take chemistry at UCSC begin with Chemistry 1A or 1B, both of which require a strong background in high school chemistry. Students without a high school chemistry background may begin with Chemistry 1P, Essentials of Chemistry. Starting with Chemistry 1P does not impede progress in the major. To assess your level of preparation in chemistry, please see the Chemistry Self-Assessment examination on the Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Transfer Students

The Chemistry and Biochemistry Department welcomes applications from community college students who are prepared to enter as junior-level chemistry majors. Students intending to transfer must complete one full year of general chemistry and calculus prior to transfer; and would be well served by also completing a year of calculus-based physics. Students preparing to transfer from a California Community College should reference <http://assist.org> before enrolling in courses at a community college. Prospective transfer students should consult the Physical and Biological Sciences Undergraduate Affairs web site for more information on preparing to transfer into the chemistry major at <http://undergrad.pbsci.ucsc.edu/chemistry/transfer-students/index.html>.

Program for Students of the Health Sciences

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further courses, especially in biology, as specified by the admissions requirements of the school where they intend to apply. Students are urged to contact the Career Center for assistance with the application process.

American Chemical Society Certification

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing a B.S. major in chemistry (not including the biochemistry concentration) at UCSC, including Chemistry 122 as an elective. A year of study in a major modern foreign language (preferably German) is recommended. More information is available from the Chemistry and Biochemistry undergraduate adviser.

Honors in the Major

Honors in the Chemistry major requires a 3.5 or higher GPA in all chemistry courses;

highest honors requires a 3.8 or higher GPA in all chemistry courses for the major. Students may also receive honors for a senior research thesis.

Letter Grade Policy

For all students entering UCSC in fall 2014 and later, all courses used to satisfy any of the majors must be taken for a letter grade

Graduate Programs

The Chemistry and Biochemistry Department offers three graduate degrees: the doctor of philosophy (Ph.D.), a thesis master of science (M.S.), and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to teachers and others wishing to update or broaden their chemical expertise. Approximately 90 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, materials, organic chemistry, and bio-organic chemistry. Collaborative research efforts are encouraged, both intra- and inter-departmentally. The interdisciplinary Center for Biomolecular Science and Engineering emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the Center for the Molecular Biology of RNA. Productive interactions have developed between the Chemistry and Biochemistry Department, the Department of Microbiology and Environmental Toxicology, the Department of Molecular, Cell and Developmental Biology, and the School of Engineering. Several Chemistry and Biochemistry faculty members also participate in the new graduate Program in Biomedical Sciences and Engineering.

Before beginning coursework, Ph.D. students take attainment examinations to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take Chemistry 292 and 296, and select a research adviser and research committee by the end of winter quarter. In the first two years, students enroll in core courses and electives related to their specialization. Core courses are Chemistry 200A, B, and C for biochemistry and biophysical chemistry; Chemistry 151B, 234 and 256A, B, or C for inorganic and bioinorganic chemistry; Chemistry 242A, 242B, 242C for organic chemistry; and Chemistry 261, 262, and 263 for physical chemistry. Organic studies students must pass four cumulative examinations based on assigned reading in current research journals. The Ph.D. candidate's research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in five to six years.

M.S. students and Ph.D. students who have not advanced to candidacy enroll in a weekly seminar (Chemistry 291A, B, C, or D). Speakers from UCSC, other universities, and research labs expose students to advances at the frontiers of chemical research, offering the opportunity for personal contact with leading scientists.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in Chemistry 296 (presentation techniques, discussion strategies, laboratory teaching skills, laboratory safety procedures, and time management). Doctoral students are also supported as graduate-student researchers.

Ph.D. Requirements

- Pass three out of four attainment examinations and meet any deficiencies as directed by spring of the first year.
- Take Chemistry 292 and 296 in fall of the first year.

- Take Chemistry 291, Research Seminar, every quarter until advanced to candidacy.
- Organic studies students must pass four out of 12 "cumulative examinations" based on reading lists of current published organic research.
- Select an adviser and nominate members of the research committee by the end of the winter quarter of the first year.
- Present a second-year seminar on a topic of current interest in published research outside the candidate's own research area.
- Serve as a teaching assistant (TA) during at least three quarters in the first two years, before attempting the Ph.D. oral qualifying examination.
- Pass five lecture courses (25 credits): at least four at the graduate (200) level, and at least four in chemistry and biochemistry (with departmental approval, up to two courses may be at upper-division undergraduate level).
- In fall of the third year, pass the Ph.D. oral qualifying examination before an examining committee consisting of three research committee members plus one outside member approved by the graduate dean. The Ph.D. candidate presents (a) a summary of current research results and possible future direction, and (b) an original research proposal on a chemistry or biochemistry topic either related or unrelated to the candidate's current thesis research.
- Nominate members of the Dissertation Reading Committee (DRC).
- After advancing to candidacy, submit a research prospectus (outline of dissertation chapters) and meet with the DRC to review research progress annually.
- Submit an updated research prospectus (outline of dissertation chapters) to the DRC in the winter of the fifth year.
- Submit written dissertation based on original research.
- Present dissertation seminar.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying examination. Financial support is not available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 credits per quarter.

M.S. Requirements: Research Thesis Path

- Pass three out of four attainment examinations in the first year.
- Take Chemistry 292.
- Take Chemistry 296 if working as teaching assistant (TA) at any time.
- Take Chemistry 291 each quarter.
- Select an adviser and nominate members of the research committee in the first year.
- Pass at least five Chemistry and Biochemistry lecture courses, of which at least three must be graduate (200) level.
- Conduct original laboratory research.
- Capstone requirement: write a thesis based on original research.

M.S. Requirements: Coursework Path

- Pass three out of four attainment examinations in the first year.
- Take Chemistry 296 if enrolled as teaching assistant (TA) at any time.
- Take Chemistry 291 each quarter.

▪

Pass seven chemistry lecture courses (at least four at the graduate (200) level) from three of the four sub-disciplines: organic, inorganic, physical chemistry, and biochemistry.

- Capstone requirement: present a seminar on a topic of current interest in published research.

Department of Languages and Applied Linguistics
218 Cowell College
(831) 459-2054
<http://language.ucsc.edu>

[Faculty](#) | [Course Descriptions](#)

Program Description

Students interested in learning Chinese may enroll in language courses from beginning to advanced levels and should do so early in their careers at UCSC. Only those with no prior experience with the language may enroll in Chinese 1, which is only offered fall quarter. Heritage learners and those with prior instruction are required to take a placement exam. The Chinese 4H–5H sequence is designed to accommodate most heritage learners of Chinese. Students interested in combining their language study with their major focus may choose from a major or minor in language studies or linguistics, a minor in East Asian studies through the History Department, an individual major in East Asian studies through their college, or a global economics major.

The sequence of lower-division courses 1–6 is aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing skills. Instruction takes place mostly in Chinese from the second half of the first quarter. Upper-level courses include Chinese 103, Language and Society in Taiwan and the PRC; Chinese 104, Readings in Chinese Literature; Chinese 105, Readings in Chinese History; Chinese 107, Introduction to Classical Chinese Prose; and Chinese 108, Introduction to Classical Poetry.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Department of Languages and Applied Linguistics](#).

Study Abroad

Students may apply to study intensive Chinese language at universities—in Taipei, Hong Kong, or Beijing—for periods ranging from a summer up to a full year through the Office of International Education (OIE). Courses taken abroad can, with approval of an adviser, be applied to major requirements. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>. For information on credit applied to a major, please contact the appropriate department.

Classical Studies

2014–15 General Catalog

Department of History

201 Humanities

(831) 459–2982

<http://classicalstudies.ucsc.edu/>

Faculty

Program Description

“Classics” is a traditional designation for the study of the literature, history, and culture of ancient Greece and Rome. Classical studies at UCSC combines features of traditional programs, such as solid grounding in ancient Greek and/or Latin, with innovative, interdisciplinary approaches (literary theory, gender studies, performance, and film).

Classical studies is an interdisciplinary field. While the core of the program is focused on courses in the ancient Greek and Latin languages it also includes courses in history, history of art and visual culture, linguistics, literature, philosophy, politics, religious studies, and theater arts. Students are encouraged to study the literary and material artifacts of Greece and Rome within the larger context of ancient Mediterranean and Near Eastern cultures.

The classical studies program offers an opportunity to work in small classes with a dedicated teaching faculty and excellent fellow students. Classical studies is an excellent preparation for further study in a wide variety of graduate and professional programs including comparative literature, English, philosophy, law, and publishing.

The basic requirements for the classical studies major allow a variety of emphases and concentrations. For example, students with an interest in contemporary philosophy and political theory might want to concentrate in Greek, taking upper-division courses in Greek, history, philosophy, and politics. Students with an interest in European literature might want to concentrate in Latin, taking upper-division courses in Latin, history, and literature in translation. Students planning on pursuing a classics degree at the Ph.D. level should concentrate most of their coursework in the Greek and Latin languages themselves.

Classical studies is administered by the Department of History. For additional information on curriculum and advising, go to <http://classicalstudies.ucsc.edu>.

Requirements for the Major

A prerequisite for the classical studies major is the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2). A minimum of 40 upper-division units must be completed within the classical studies major course requirements. The major requires a total of 10 courses plus a senior comprehensive examination and must include the following:

- one lower-division survey of ancient history or literature in translation;

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Electrical Engineering
- School of Engineering
- Environmental Studies
- Feminist Studies
- Film and Digital Media
- French
- German
- German Studies
- Greek
- Hebrew
- History
- History of Art and Visual Culture
- History of Consciousness
- Humanities
- Italian
- Italian Studies
- Japanese
- Jewish Studies
- Kresge College
- Language Studies
- Latin
- Latin American and Latino Studies
- Legal Studies
- Linguistics
- Literature
- Mathematics
- Molecular, Cell, and
Developmental Biology
- Merrill College
- Microbiology and Environmental
Toxicology
- Music
- Oakes College
- Ocean Sciences
- Philosophy
- Physical and Biological Sciences
Division
- Physical Education
- Physics
- Politics
- Portuguese
- Porter College
- Psychology

- three upper-division courses in Greek or Latin literature;
- six additional approved upper-division courses (which may include additional courses in Greek or Latin literature);
- enrollment in a 2-credit comprehensive examination preparatory course, History 199F, is required in the same quarter that the senior comprehensive examination will be given. The preparatory course will be taken with the chair of the student's examination committee.

Comprehensive Requirement. Classical studies majors are required to pass a senior comprehensive examination. Each student shall identify a minimum of two classical studies faculty members to serve on the examination committee, one of which shall be designated as the committee chair. Please consult the classical website for a more detailed description of this requirement at <http://classicalstudies.ucsc.edu>

Disciplinary Communication (DC) Requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in classical studies is satisfied by completing two upper-division courses in Greek literature or Latin literature from the following list: Greek Literature 102, 103, 104, and 105; or Latin Literature 102, 103, and 104.

Honors in the Classical Studies Major. All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The classical studies faculty advisers determine honors based upon courses applied toward the classical studies major. Performance in courses taken elsewhere and being transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most courses for honors, and excellence in all courses for highest honors. Summer, fall, and winter graduates will be reviewed at the end of each of their respective quarters. Spring graduates will be reviewed as of the spring announcement of candidacy deadline.

Requirements for the Minor

A minor in classical studies requires the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2) and Greek or Latin Literature 100 plus any four of the upper-division courses listed as satisfying the classical studies major requirements.

Cognitive Science

2014–15 General Catalog

273 Social Sciences 2

(831) 459–2002

<http://psychology.ucsc.edu>

Program Description

Cognitive science has emerged in the last few decades as a major discipline that promises to be increasingly important in the 21st century. Focused on achieving a scientific understanding of how human cognition works and how cognition is possible, its subject matter encompasses cognitive functions (such as memory and perception), the structure and use of human language, the evolution of the mind, animal cognition, artificial intelligence, and more.

The cognitive science degree provides a strong grounding in the principles of cognition through courses in cognitive psychology, and, in addition, provides breadth in the interdisciplinary aspects of cognitive science such as anthropology, linguistics, biology, philosophy, and computer science. Graduates will be well prepared for advanced training in research fields of cognitive psychology and cognitive neuroscience, technology industries such as human–computer interface, and health fields in the treatment of brain disorders.

The cognitive science major is intended for students wishing to enter doctor of philosophy (Ph.D.) programs in cognitive psychology, cognitive science, or cognitive neuroscience to pursue careers in research; enter the field of public health to work with individuals with neurological disorders and learning disabilities; or to enter the field of human–computer interface design; or pursue other related careers.

The Department of Psychology administers the program and student major advising.

Preparation for the Major

Students who are not prepared to begin the calculus requirement should take preparatory courses offered by the mathematics and applied mathematics departments, including pre-calculus.

Requirements for the Cognitive Science Major

The undergraduate degree program in cognitive science is a program offering a course of study leading to the bachelor of science (B.S.) degree. Fifteen courses (75 credits) are required. Because some courses have additional prerequisites, students should read the descriptions of courses carefully, noting the prerequisites for courses of interest to them.

Lower-Division Requirements:

Introduction to Cognition (one of PSYC 20A or 20B)

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Electrical Engineering
- School of Engineering
- Environmental Studies
- Feminist Studies
- Film and Digital Media
- French
- German
- German Studies
- Greek
- Hebrew
- History
- History of Art and Visual Culture
- History of Consciousness
- Humanities
- Italian
- Italian Studies
- Japanese
- Jewish Studies
- Kresge College
- Language Studies
- Latin
- Latin American and Latino Studies
- Legal Studies
- Linguistics
- Literature
- Mathematics
- Molecular, Cell, and Developmental Biology
- Merrill College
- Microbiology and Environmental Toxicology
- Music
- Oakes College
- Ocean Sciences
- Philosophy
- Physical and Biological Sciences Division
- Physical Education
- Physics
- Politics
- Portuguese
- Porter College
- Psychology

Statistics (one of PSYC 2, AMS 5 or AMS 7/L)

Calculus (one of AMS 11A, MATH 11A, 19A or 20A)

Computer Programming (one of CMPE 13/L, CMPS 5C, 5J, 5P, 12A)

Upper-Division Requirements:

Students must complete 10 courses toward the major after completing the lower-division requirements. At least eight of these must be upper-division courses (a minimum of 40 credits). These must include Psychology 100, three upper-division core courses and three upper-division cognitive psychology electives, as described below. Students must also complete four interdisciplinary electives in other departments, which may or may not be upper-division. Students must ensure that one of the interdisciplinary electives is an upper-division course.

Psychology 100, Research Methods in Psychology (7 credits)

Core Courses

Students must complete a course from three of the following areas:

Perception (Psychology 120 or 121)

Neuroscience (Psychology 123)

Language (Psychology 125)

Memory (Psychology 129)

Cognitive Psychology Electives

Students must complete three additional upper-division Psychology courses from the following list. One of the core courses that is not used to satisfy the core courses requirement may be used to satisfy this requirement. One of these cognitive electives must be a Cognitive Senior Seminar as designated by the asterisks below.

Any of Psychology 120–138 (i.e., the Cognitive Series)

Psychology 104, Development in Infancy

Psychology 105, Children's Thinking

Psychology 119E, The World of Babies *

Psychology 119F, Language Development *

Psychology 119P, Children and Technology *

Psychology 139B, Consciousness *

Psychology 139C, The Psychology of Lying and Deception *

Psychology 139D, Modeling Human Performance *

Psychology 139F, Psychology and Evolutionary Theory *

Psychology 139G, Conversations *

Psychology 139H, Weird Science *

Psychology 139J, Forgetting*

Psychology 139K, Face Recognition*

Psychology 181, Psychological Data Analysis

Psychology 194B, Advanced Cognitive Research

Psychology 195A, Senior Thesis

Psychology 204–252, graduate cognitive courses, by petition

*denotes Senior Seminar

Interdisciplinary Electives

Students must complete four interdisciplinary electives from lists of courses pre-approved by the Psychology Department, one of which must be upper-division. The electives fall into four groups: Evolution; Artificial Intelligence and Human-Computer Interaction; Linguistics; Philosophy. Three of the four electives must be selected from the same group. Students are responsible for planning their course of study to complete any necessary prerequisites for electives they wish to take. Possible sequences of interdisciplinary courses, including prerequisites, are given below.

Group 1: Evolution

Anthropology 1, 100, 101, 104, 105, 106, 109, 112, 139 (also listed in Group 3), 173, 174, 175A, 184/L, 194B, 194H, Biology: Ecology and Evolutionary Biology 20C, 109, 124/L, 129/L, 140, 141L, 147, 172/L, Biology: Molecular, Cell, and Developmental Biology 80E, 105, 120, 125, Philosophy 127 (also listed in Group 4), 190F (also listed in Group 4)

Group 2: Artificial Intelligence and Human-Computer Interaction

Computer Engineering 8, 9, 80A, 80U, 131, 161, 167/L, Computer Science 17, 20, 80B, 80J, 80K, 80V, 132, 140, 146, 148, Music 80L

Group 3: Linguistics

Anthropology 139 (also listed in Group 1), Linguistics 50, 53, 80C, 80D, 101, 102, 105, 111 (formerly Linguistics 55), 112 (formerly Linguistics 52), 113, 116, 117, 124, 125, 140, 151, 152, 155, 157, 158

Group 4: Philosophy

Philosophy 9, 11, 80S, 100B (formerly Philosophy 93), 100C (formerly Philosophy 94), 121, 123, 125, 127, (also listed in Group 1), 133, 135, 137, 138, 141, 190F (also listed in Group 1), 190G, 190O, 190S

Major Qualification Requirements

Students may petition to declare the cognitive science major once they have completed the lower-division requirements. For students to be admitted to the major, they must have a 2.80 or higher cumulative grade-point average (GPA) in the lower-division requirements and receive a C or better in each of the courses. Transfer students may substitute equivalent courses from other institutions. Students not meeting the grade requirements in the lower-division courses may take any of the listed alternatives as substitutions; the department will use the highest grade to compute GPA.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Comprehensive Requirement

UCSC requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Cognitive Science students will satisfy this requirement by receiving a passing grade in either a senior seminar (PSYC 139A-K, or 119E, or 119F, or 119P), or research experience (PSYC 194B, Advanced Cognitive Research, or PSYC 195, Senior Thesis).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that majors upper-division Disciplinary Communication (DC) requirement. The DC requirement in cognitive science is satisfied by completing Psychology 100, Research Methods in Psychology, and the Senior Seminar requirement.

Honors

Honors in the cognitive science major are awarded to graduating seniors whose academic

performance is judged to be consistently excellent by a committee of psychology faculty. Highest honors in the major are reserved for students with consistently excellent academic performance and an honors-level senior thesis.

Cognitive Science Course Planners

Following are two recommended academic plans for students to complete the Cognitive Science major. Plan 1 assumes typical curriculum selections. Plan 2 assumes the maximum number of prerequisites.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	MATH 2	MATH 3	Calculus
	PSYC 20 college core	Programming	
2nd (soph)	Interdisciplinary prerequisite	PSYC 2 Interdisciplinary prerequisite	PSYC 100

Community Studies

[2014–15 General Catalog](#)213 Oakes Academic Building
(831) 459–2371<http://communitystudies.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

Founded in 1969, community studies is the oldest interdisciplinary program at UCSC. The longstanding hallmarks of community studies are its focus on social justice and its distinctive pedagogy integrating classroom learning and extended field study. Community studies was a national pioneer in the field of experiential education and its civic engagement model has been emulated widely. Community studies was also a pioneer in addressing principles of social justice, specifically inequities arising from race, class and gender dynamics in society at large, and in critically assessing strategies for achieving social change.

The undergraduate major offers highly motivated and focused students the opportunity to pursue a rigorous course of study combining on- and off-campus learning. On campus, students complete a core curriculum enabling them to identify, analyze, and help construct strategies for social justice movements, nonprofit sector advocacy, public policy making, and social enterprise. The core curriculum works in tandem with topical course work that develops expertise in specific domains of social science scholarship related to their field study. Off campus, students commit to spending six months immersed in a setting where they participate in and analyze the social justice work of an organization, with a goal of making a meaningful contribution to the organization's mission. Students work independently but with active guidance from both campus faculty and an on-site supervisor from the field study organization.

The undergraduate core curriculum begins with the development of skills in social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives essential to the study of communities and social transformation. Next, through the six-month full-time field study, students engage with specific communities through residence and participation in an organization with a social justice mission. This intensive and extended immersion is a distinguishing feature of the community studies major. Finally, students return to campus to analyze their field study experience and its relation to their ongoing classroom-based learning. The major culminates with a senior capstone integrating academic coursework, field study analysis, and original writing.

With the guidance of faculty and staff advisers, community studies students choose field placements related to one of the program's areas of focus in health justice and economic justice. In the past, placements have been arranged with community health clinics,

women's and feminist organizations, immigrant-rights centers, media advocacy organizations, homeless resource and support groups, sustainable development projects, queer and transgender organizations, neighborhood or workers' collectives, civil rights groups, community food security programs, legal clinics, community-based cultural organizations, programs for seniors, tenant or labor unions, HIV/AIDS advocacy groups, harm reduction programs, government agencies and the offices of elected officials, and still other organizations committed to and working for social justice. As political, economic, cultural and technological landscapes shift, so do the needs and opportunities for social justice organizing. It is a dynamic world and throughout its history Community Studies has been noteworthy for being attuned and responsive to innovative field study opportunities.

Community studies alumni have pursued a wide variety of professional careers in health care, K-12 education, public policy, social work, urban planning, higher education, and law. According to a 2005 alumni survey, almost 100 alumni have founded non-profit social justice organizations and many more have served on non-profit boards and/or in executive director positions.

Program Overview

Community studies is a major with a sequential core curriculum. This means that core curriculum courses must be completed in a specific order:

Fall Quarter	CMMU 10, Introduction to Community Activism
Winter (pre-field study)	CMMU 101, Communities, Social Movements, and the Third Sector
Spring	CMMU 102, Preparation for Field Study
Summer/Fall	CMMU 198. Independent Field Study (15 units per quarter)
Winter (post-field study)	CMMU 194, Analysis of Field Study

In addition to the core curriculum, students must successfully complete at least three topical courses to develop expertise in their designated emphasis (health justice and/or economic justice). Students are encouraged to take as many topical courses as possible prior to their field study. Two directed electives complete the requirements for the major, one each in the areas of race/class/privilege and regional/historical contexts. These electives are designed to ensure that all students develop knowledge of the history, culture, and political economy of the place where they will be carrying out their field study—whether that place is a neighborhood in Santa Cruz, New York City, or a small village in Guatemala—and develop a critical consciousness about their own social locations. Students must complete both directed electives before beginning field study.

A list of approved topical and elective courses will be posted in the program office and updated regularly on the program web site.

In sum, the program includes courses that develop a substantive focus for field study immersion, courses that contextualize the field study in wider social and geographical processes, and courses offering instruction about methods relevant to conducting and analyzing the field study experience.

Transfer Students

The Community Studies program can easily accommodate students who transfer to UCSC for the fall quarter. To ensure a smooth transition, all transfer students should contact the Community Studies undergraduate adviser as early as possible to discuss course enrollment and declaring the major.

Declaring the Major

In order to declare the community studies major, a student must satisfactorily complete CMMU 10, Introduction to Community Activism, and at least one upper division topical course from the approved list of courses. Students may then declare the community studies major at any time, but must declare prior to enrolling in CMMU 102, Preparation for Field

Study. As part of the declaration process, students meet with the program director to review their academic plan for the major, including discussion of field study possibilities, directed electives, and appropriate courses to meet the topical requirements. Students must submit their approved academic plan and declaration petition to the Community Studies staff adviser. Any change to the student's academic plan must be approved by the program director.

Major Course Requirements

10, Introduction to Community Activism

This course introduces students to different approaches to community activism including charity, volunteering, labor and community organizing, non-violent resistance, non-profit sector involvement, and media advocacy.

101, Communities, Social Movements, and the Third Sector

This course critically engages with concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. It is designed to deepen students' understanding of the opportunities and obstacles embedded in various avenues of social action.

102, Preparation for Field Study

This course examines participatory and other social-research methods including participant observation, conducting interviews, writing ethnographic field notes, and collecting descriptive data. Students receive practical experience with developing research questions, methods, and writing field notes. The course also addresses ethical and logistical issues of community-based research. The final project is a literature review completed in partial satisfaction of the disciplinary communication (DC) general education requirement.

Topical Requirements

Students must complete three upper-division courses in the topical area of health justice and/or economic justice from available approved courses listed below. The program director also may approve other courses, as appropriate. These courses are an essential component of the community studies major because they define the focus of students' overall academic plan and their work on full-time study. The topical requirements also permit students to work across academic disciplines by enrolling in the many fascinating topical courses offered by community studies affiliate faculty. Note that not all topical courses are offered every academic year. Check the program website for current year offerings.

Race, Class, and Privilege Electives

These upper-division courses should examine race, class, and other hierarchies of difference as they intersect with structural inequality, self-identification, and identity politics. Students complete this requirement through a course selected from an approved list of directed electives posted on the [Community Studies program web site](#) and at the program office.

Regional/Historical Electives

Students have a choice of upper-division courses that provide historical/geographic knowledge of particular peoples, places, or regions relevant to their full-time field study. Students complete this requirement through a course selected from an approved list of directed electives posted on the [Community Studies program web site](#) and at the program office.

Topical Courses

Community Studies

CMMU 132, American Cities and Social Change

CMMU 141, Economic Justice

CMMU 143, Walmart Nation

198, Full-Time Independent Field Study

During the full-time, six-month field study, students are enrolled at UCSC and receive full-time university credit. Students are required to submit field notes and several analytical essays during the field study. Students are guided by a campus faculty adviser and on-site organization supervisor.

194, Analysis of Field Materials

This course is designed for students returning from their full-time field study and has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to facilitate completion of the senior capstone requirement. Students work with their field material to develop findings and arguments and connect those to relevant theoretical literature(s). The written work of 194 completes the DC requirement.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division DC requirement. The community studies program's model of experiential pedagogy relies heavily on writing instruction to develop students' analytical, reflexive, and communication skills. As stated, although students in the major develop disciplinary writing skills throughout the core curriculum, they fulfill the DC requirement with course 102 and course 194.

Senior Capstone Requirement

In addition to the full-time field study, another distinctive feature of the major is the emphasis placed on the capstone. Each student must fulfill this requirement, either through a senior essay, a senior thesis or a student-directed seminar. For a thesis or student-directed seminar, the student must work directly with a faculty adviser, usually for two quarters.

Senior Essay: Students complete a senior essay that incorporates field study observations and contextualizes their findings historically and theoretically. Most students pursue this capstone option. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 194, Analysis of Field Materials.

Senior Thesis: Outstanding students may choose to complete a senior thesis, which is comprised of field-study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social justice issues at the heart of the field study. The thesis also involves post-field-study research; typical length is 40-50 pages, including bibliography. Students begin the senior thesis during course 194 and complete it in the following quarter(s) by enrolling in course 195, Senior Thesis.

Student-Directed Seminar (SDS): The SDS capstone option is reserved for exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course related to the student's field study and academic course work and submits a seminar completion report. Student-directed seminars need advance planning; a proposal for the SDS must be completed before beginning the field study.

Honors in the Major

Honors in the community studies major are awarded to graduating seniors whose academic performance, including coursework, field study, and the senior capstone, is judged by a faculty committee to have achieved excellence. Highest honors in the major are reserved for students with consistently outstanding academic performance.

Critical Race and Ethnic Studies

[2014–15 General Catalog](#)

416 Humanities I

(831) 459–3981

<http://cres.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

Critical Race and Ethnic Studies (CRES) majors develop a deep understanding of how race and other modalities of power have structured human life in the past and the present. Students acquire an understanding of the historical production of race and ethnicity in the United States and across the globe. They learn how the contours of race and racism have changed over time and, concomitantly, how individuals and groups have experienced these phenomena in constantly morphing ways. Students examine present-day racial/ethnic ideologies such as multiculturalism, colorblindness, and postracialism as well as contemporary social phenomena such as changing working conditions, new migration patterns, and emergent cultural expressions. Students also explore the ways that race and ethnicity have developed in concert with gender, sexuality, class, indigeneity, citizenship, and other modalities of power and lived identity.

CRES majors make critical use of methods and concepts from different academic disciplines as a means of better understanding historical and contemporary social phenomena and problems. In the process, they learn to recognize both the limits and the value of established knowledge production practices. The configuration of the major allows students flexibility at the upper division to design a course of study that enables a general understanding of a range of issues of intellectual and professional interest and/or a deeper understanding of a key area of focus.

Through their immersion in a program of study that is multidisciplinary, comparative, and transnational in scope, CRES majors develop a critical, situated perspective on the rights, responsibilities, and privileges of being a citizen of the United States or residing in its borders in the 21st century. CRES also helps students develop skills in critical thinking, comparative analysis, the application of social theory, research, communication, and writing so that they can act effectively in an ever-changing, complicated, and culturally diverse world.

Requirements for the Major

To apply for the major, students must have taken or currently be enrolled in CRES 10. Students must submit a proposed study plan to the program adviser that meets the major requirements in a coherent manner. Students are urged to submit their study plan no later than the third quarter of their sophomore year or, in the case of transfer students, no later than the first quarter of their junior year. The study plan should reflect a commitment to

take CRES 100 and 101 at the next possible opportunity.

Disciplinary Communications (DC) Requirement

Students of every major must satisfy that major's upper division Disciplinary Communication (DC) requirement. The DC requirement in CRES is satisfied by completing CRES 190.

Course Requirements

To graduate with a major in CRES, a student is required to complete 10 courses with the approval of the program.

One lower-division foundation course: CRES 10

Two upper-division foundation courses: CRES 100 and CRES 101

Students may petition to substitute a department-based community engagement course for CRES 101.

At least six upper-division electives offered by other departments, from the list of CRES-approved courses.

At least two electives must be from the list of designated courses focusing on phenomena outside of the US or on transnational or hemispheric subjects.

At least two academic divisions must be represented in the elective coursework.

Students are encouraged to take more than the minimum number of elective courses.

They may elect to craft an elective distribution from several areas of specific research and career interests. Or, they may wish to take a number of elective courses in a particular area to develop expertise in it. For example, they may wish to focus on a social group (e.g., members of the African Diaspora), on a discipline (e.g., history), on a social phenomenon (e.g., social movements), or on a methodological or theoretical orientation (e.g., theories of race, gender and sexuality.)

Capstone research seminar: CRES 190

Students are encouraged to supplement their upper-division coursework with language study, internships, and individual or group independent studies. Students may petition to have up to 10 credits of such activities substituted for upper-division elective requirements, so long as these activities serve, or do not interfere with, the breadth requirements.

Graduate Program

Designated Emphasis

Requirements for the Designated Emphasis

Graduate students from other departments may obtain a designated emphasis in CRES by completing the following requirements in addition to the requirements for the doctorate in their home department:

- The student must have a designated graduate adviser from the CRES program principal or affiliated faculty. The student must meet with this CRES adviser to develop a coherent plan for meeting the requirements for the designated emphasis, preferably before the end of the student's first year. This plan must be approved by the CRES graduate director.
- A member of the CRES principal or affiliate faculty (usually the CRES graduate adviser) must serve on the student's qualifying examination committee and/or on the student's dissertation committee.
- The student must prepare a significant piece of scholarly writing in the area of CRES. This writing may take the form of a substantial seminar paper, a master's essay, or a portion of the doctoral dissertation. The student's CRES adviser will determine whether a particular piece of writing meets this requirement.
- The student must take four relevant graduate seminars taught by CRES program faculty. One relevant graduate seminar taught by non-program faculty may be counted with the approval of the CRES adviser. The adviser may also approve the substitution of an

- [Yiddish](#)

individual or group independent study addressing a set of readings or focused on research and writing for one of the four required graduate courses. The specific courses used must reflect a coherent plan of study that embodies both breadth and focus.

Students pursuing the designated emphasis are encouraged to serve as a teaching assistant for at least one CRES core or elective course. CRES faculty are encouraged to appoint CRES designated emphasis students as teaching assistants when possible and appropriate.

Proposing and Obtaining the Designated Emphasis

Once a plan for meeting the requirements is agreed upon, the student should complete the application, obtain the CRES adviser's and graduate director's signatures, and submit the application to the CRES program office. The request for the designated emphasis must originate in the degree-granting department.

Once the requirements have been met, the student submits relevant documentation to the CRES Program office for final approval by the CRES graduate director. At a minimum, the student should submit copies of the qualifying examination and/or Dissertation Committee Nomination forms and a note from the adviser confirming that the writing sample and proposed courses have been completed. If the proposed courses have changed, an explanation of the changes should be included.

The CRES program will notify the student and the home department of approval for the designated emphasis.

Digital Arts and New Media

2014–15 General Catalog

DARC 204

(831) 459–1919

[http:// danm.ucsc.edu](http://danm.ucsc.edu)[Faculty](#) | [Course Descriptions](#)

Program Description

New technologies have profoundly changed contemporary culture and inevitably altered the role of the arts in society. The Digital Arts and New Media (DANM) Master of Fine Arts (M.F.A.) Program serves as a center for the development and study of digital media and the cultures that they have helped create. Faculty and students are drawn from a variety of backgrounds, such as the arts, computer engineering, humanities, the sciences, and social sciences, to pursue interdisciplinary artistic and scholarly research and production in the context of a broad examination of digital arts and cultures.

Program Learning Objectives

- 1) Develop necessary digital art and new media knowledge to understand the state of the field. Examples: Technical, aesthetic, historical, and theoretical knowledge.
- 2) Demonstrate ability to define, plan, and execute individual and collaborative digital art and new media research projects. Examples: Developing project concepts, prototyping, timeline development, creative problem solving.
- 3) Understand multiple forms of digital art and new media critique, be able to respond to and give critiques productively. Examples: Forms such as studio critique, performance critique, system design critique, and writing critique. Ability to understand critique, evaluate feedback, produce iteration of work.
- 4) Demonstrate ability to participate in planning, coordinating, and executing collaborative digital art and new media research projects. Examples: Brainstorming, collaborative idea formalization and project planning, iterative development and refinement, team coordination and communication.
- 5) Employ professional communication practices in digital art and new media to make public contributions to the field. Examples: Research papers, artist talks and statements, exhibitions, performances.

The Digital Arts and New Media M.F.A. Program is a two-year program organized into four interdependent and equally important pursuits:

New Praxis—The term "praxis" has many meanings, which include "translating ideas into action" and "action and reflection upon the world in order to change it." New Praxis in DANM is comprised of "critique" and "practicum" which provide students with both the practical training and critical dialogue necessary to pursue their own individual goals as artists and cultural practitioners.

Studies—DANM “studies” include required core seminars that allow students first to explore an array of recent methods and approaches in digital arts and culture, and then to pursue the construction of specific genealogies and theories with a sustained focus on a particular topic, by engaging in various dialogues at the intersection of theory and practice while developing their thesis project and paper.

Collaborative Research—Students and faculty engage in research collaborations resulting in publications and exhibitions in one of four possible focused research areas: mechatronics, participatory culture, performative technologies, and playable media described below.

Mechatronics

Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media including video, performance, and sculpture for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, and perception.

Participatory Culture

Participatory culture studies and research efforts explore the role of information and communication technologies in the current shift from “top-down” culture to a culture of participation and social engagement. Within the social register, the human/computer interface acts as both a boundary and a bridge. Participatory culture research in DANM encompasses a range of projects in social computing and community-media activism which involve the design of new technologies to address social problems and facilitate broader participation in culture and politics.

Performative Technologies

Research in performative technologies explores new methods for combining media and technology to create the visual, aural, and connective material of performance. DANM performance research generates new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, and stage and sound design to create real-time shared multimedia experiences for audiences and performers at both local and remote locations. Ongoing projects in this area may include work in telematics; performance-driven, real-time graphics; algorithmic composition of sound and image; computer vision and motion capture; and studies of ritual, performativity, embodiment, interactivity, and subjectivity.

Playable Media

Playable media research explores the potential of computational systems for the creation of new media forms that invite and structure play. This group works to understand and create new ways for computer games and related forms to engage audiences, make arguments, tell stories, and shape social space. Ongoing playable-media work combines game-design and artificial-intelligence research with writing, art, and media authoring.

Prospective students are asked to identify their choice of research group in their application and statement of purpose. Admissions are tied to DANM project group foci. New students are admitted into a specific project group based on the quality and relevance of the student’s prior work and expertise to the group project in their chosen area of focus. Students collaborate on faculty-initiated and -directed research projects. This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project. The collaborative-project group experience is intended to inform, but not necessarily contribute to, the student’s thesis project.

Pedagogy—DANM trains future arts academics through practical experience. Students are awarded teaching assistantships as part of their overall support package as well as opportunities to assist faculty in workshops.

Nondiscrimination Statement

Search the Catalog

The DANM M.F.A. Program requires 72 credits of academic course work. In the first year, students generally take three courses each term—one course in each of the program areas, New Praxis, Studies, and Collaborative Research. In the second year, students primarily take elective courses, work with their thesis committees, and pursue independent and directed research leading to the completion of the thesis project and paper.

New Praxis

New Praxis in DANM is comprised of “critique” and “practicum.” Students are required to take seven new praxis courses over two years and have the option to take two new praxis electives.

New Praxis–Year One

Practicum—This area of praxis is designed to allow students to develop the conceptual, technical, and practical skills they need to successfully complete projects that realize their own individual goals as digital media artists.

DANM 210—First-year students are required to take a Project Design Studio in the first quarter. This course guides the development of students’ individual studio practice, particularly in relation to the transition to digital media.

Electronic and programming requirements—First-year students also take basic courses in electronics and programming. Students with prior experience in programming and/or electronics should discuss their background with the instructor and their adviser to determine if the course is needed or if an alternative course should be taken to fulfill this credit requirement. Students seeking an alternative means to fulfill this requirement may choose to:

- serve as assistants in workshops for beginning students;
- take electronics or programming electives offered in computer engineering; or
- enroll in independent studies, as approved by their adviser.

Critique—This area of praxis is designed to allow students to present their own work and review the work of their fellow students as a means of engaging in the critical dialogue necessary to pursue their own individual goals as digital media artists. First-year students are required to present work-in-progress based on the projects developed in the project-design course in both individual studio and group critiques, and participate in group critique discussion.

During the spring quarter, first-year students identify and engage a thesis committee under the supervision of the program director.

New Praxis–Year Two

Practicum—During the fall quarter, second-year students work on the development of their thesis project proposal and abstract under the supervision of their thesis committee. Second-year students are encouraged to take practice-based electives and independent studies that facilitate the development of their thesis projects.

DANM 299—In the winter and spring quarters, second-year students enroll in a minimum of 10 credits of independent thesis research which is supervised by one or more members of their thesis committee.

DANM 215—Students work with faculty curator/coordinator on development of thesis projects specifically for the group exhibition context. Students contribute to development of exhibition design and collateral materials, while studying the unique presentation and curatorial challenges of new media.

Studies

Students are required to take three core seminars over two years and have the option to take two studies electives.

Studies–Year One

DANM 201 Recent Methods and Approaches to Digital Arts and Culture—In this seminar

students examine an array of methods and approaches to research and writing in digital media art and culture and explore key theories concerning digital media and cultures.

DANM 202 Dialogues and Questions in Digital Arts and Culture—A pre-thesis course in which students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and preparatory essay. Readings and seminar discussions will inform the development of pre-thesis project proposals and essays.

Studies—Year Two

DANM 203 Frameworks and Arguments in Digital Arts and Culture—This course is intended to help students develop and write the M.F.A. thesis. Students conduct research on the thesis topic, design outlines, construct strong theoretical arguments, and draft the final document. The course is intended to help students structure and develop their thesis papers which are intended to theoretically contextualize their thesis projects.

Elective—Students may choose to take an elective offered by the program or choose an elective from a broad array of graduate courses offered on campus with the approval of their adviser.

Collaborative Research

Students participate in a three-quarter-long, collaborative-research project group in one of four possible DANM research focus areas, which takes place in the winter and spring quarters of the first year. In the second year, students continue with the final quarter of their project group (fall). This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project.

Thesis Requirement

Students are required to complete a thesis project and written paper under the supervision of their thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper. Thesis projects may be individual or collaborative and are expected to grow out of the research pursued in the project groups during the three quarters prior as well as work developed in new praxis courses. Each student will be expected to complete a 20- to 30-page paper discussing the student's preparatory research as well as the theoretical significance of the project. In the case of collaborative projects, each student will be required to submit his or her own paper. During the thesis year, students will make at least two progress presentations to their thesis committee. The chair of the three-person committee will be a full associate professor and DANM faculty member. A completed thesis project and paper must be submitted to and approved by the thesis committee before the degree can be awarded.

Applications

Prospective students in the Digital Arts and New Media program will have a foundation in the arts with some demonstrated interest in technology or a foundation in technology with demonstrated background in the arts. Many, but not all, entering students will have completed a Bachelor of Arts (B.A.) program in one or more of the arts disciplines (art or art history, film, multimedia, music, theater, video, etc.) or a Bachelor of Science (B.S.) program in computer science or computer or electrical engineering. Other successful applicants will have a B.A. or B.S. in another field but will be able to show substantial achievement in the arts, in technology, or in digital arts.

In certain cases, students who demonstrate excellent potential for the program but lack proficiency in a "cross discipline" will be admitted to the program with the understanding that they will take courses during their first two quarters of study to make up that deficiency. An arts student lacking sufficient programming experience, for example, will be expected to take one or two programming courses in their first two quarters in addition to the DANM program requirements.

Students will apply online through the Division of Graduate Studies web site between October and January for the following fall quarter. In addition to submitting an online application, students will be expected to submit an online portfolio. Further information can be found at: <http://graddiv.ucsc.edu>.

Earth and Planetary Sciences

[2014–15 Catalog](#)

A232 Earth and Marine Sciences Building

(831) 459–4089

<http://eps.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

The Earth and Planetary Sciences Department teaches and conducts research in a wide array of topics. We seek to answer questions such as:

How did the Earth form? How has it evolved since then? What makes up the interior of the Earth?

What is the history of life on Earth? What are the causes and effects of past mass extinctions?

How do mountain ranges form? What causes earthquakes? What causes island chains to form? What controls the evolution of glaciers? How do we prevent coastal erosion? How well can we predict tsunamis?

What has Earth's climate been like in the past? How will climate change in the future?

What controls the supply and quality of our freshwater resources?

How are other planets in our solar system different from Earth? How did they evolve to their present state? How have the impacts of asteroids on Earth and other planets affected their evolution?

A variety of methods and tools are used to help us address these questions. Geologists examine rocks and geologic formations in order to understand the processes that control their formation and evolution. Geochemists and mineralogists examine the chemical and mineral composition of rocks, sediments, and fossils using a variety of sophisticated analytical instruments. Geophysicists use seismometers to not only record earthquakes, but also to learn about the deeper parts of the Earth. Environmental scientists collect samples of the atmosphere, rivers, lakes, and the oceans, sometimes requiring the use of aircraft and ships. Spacecraft have visited and explored all of the planets in our solar system. Space-based satellites have provided a massive amount of data about Earth over the past few decades. Scientists from all disciplines use computer models to help them understand these complex systems.

The Department of Earth and Planetary Sciences offers a number of degrees that teach undergraduate and graduate students the knowledge and skills necessary to address these and many other questions. Along with the standard Earth sciences major, we offer degrees with concentrations in environmental geology, ocean sciences, planetary sciences, and

science education. We also offer combined majors with environmental studies and anthropology. A minor in Earth sciences is also available. We offer courses across a wide range of topics, allowing students to tailor the curriculum to their interests. Courses are comprised of not only classroom lectures, but frequently field trips, laboratories, and computer exercises are involved. Many related courses are offered by other departments such as Ocean Sciences, Microbiology and Environmental Toxicology, Environmental Studies, Biological Sciences, Chemistry and Biochemistry, and Astronomy and Astrophysics. The university capstone requirement is often fulfilled by attending the departmental field camp, or by completing a senior research thesis, but other choices are also possible.

Graduates of our department continue on to a variety of careers, such as:

- Business and industry
- Geological and environmental consulting
- Governmental agencies at the federal, state, and local level
- Non-profit organizations
- Research at universities, governmental research institutions, or other scientific agencies
- Graduate/professional school in areas such as science, engineering, teaching, law, public health, business

For more information about the people in the department, their areas of interest, departmental facilities, contact e-mails and phone numbers, and how to apply to join our department as an undergraduate or graduate student, please see our web site:

<http://eps.ucsc.edu/>.

Academic Advising

A student who wants to become an Earth sciences major should contact the [Earth and Planetary Sciences Department undergraduate staff adviser](#) as soon as possible. After developing a formal study plan and submitting a declaration of major petition, students are required to meet with staff and faculty advisers who can help the student plan his or her program in detail and provide information about independent study, thesis research, advanced study, career options, and other educational opportunities. Relevant courses taken at UCSC or other institutions may be substituted for degree requirements by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

Bachelor of Science Degree

The bachelor of science (B.S.) program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the basic physical sciences, and particular breadth and depth in Earth and planetary sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth and planetary sciences courses. For the standard B.S., students then select at least six additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related departments, provide the student with expertise in one or more subdisciplines within Earth sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. Four formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: environmental geology, ocean sciences, science education, and planetary sciences. A senior comprehensive experience (senior thesis, or geologic field camp, intensive internship experience, or exemplary performance in a graduate course) is required of all majors.

Qualifications to the Major

We recommend that you consult with the department's undergraduate staff adviser to discuss options for degree concentrations and coursework priorities before you start the process of officially declaring your major. To declare the Earth sciences majors (including all concentrations within the major), a student must complete (with a minimum grade of C) one of the following introductory courses in physical geology:

Earth Sciences 5, California Geology

Earth Sciences 10, Geologic Principles

Earth Sciences 20, Environmental Geology

Transfer students may take an approved substitution for one of the above courses.

The process for declaring the major starts by obtaining a Declaration of Major petition (available online at <http://advising.ucsc.edu/student/declaration/Declaration.pdf>) and having it approved and processed by the department staff adviser.

Transfer Students

Transfer students planning to major in Earth sciences are strongly recommended (but not required) to complete all lower-division mathematics and science pre-requisites appropriate to their concentration of interest. For example, students planning to major in Earth sciences with a Planetary Science concentration should complete the equivalents to the following courses (including the associated laboratory components): Mathematics 11A and 11B; Chemistry 1A/L, 1B/M and 1C/N; Physics 6A/L and 6B/M; and Earth Sciences 5/L, 10/L or 20/L. One of the latter Earth sciences courses is required for declaring the major (see above).

Having this coursework completed elsewhere allows students greater flexibility in scheduling and completing their UCSC Earth and planetary sciences courses. Transfer students intending to become Earth sciences majors should meet with department advisers during summer orientation or shortly after their arrival on campus to plan their next year's schedule of courses.

Preparation for the Standard Earth Sciences Major (B.S.)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A–B or 19A–B, or Applied Mathematics and Statistics 15A–B, Mathematics 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Requirements for the Standard Earth Sciences Major (B.S.)

Earth Sciences 5/L, or 10/L, or 20/L; 110A/L, 110B/M, and 110C/N, 190 (optional, 1-credit mentorship class)

At least six elective courses (5+ credits each) from upper-division Earth Sciences or Ocean Sciences offerings must be completed. Two of the six upper-division electives must be selected from this subset of Earth Sciences courses, which involve significant laboratory or field data acquisition/analysis: 107, 109/L, 116, 117/L, 119, 120/L, 130/L, 140/L, 142, 146, 148, 150/L, 168. Two must also be completed from Earth Sciences courses that are part of our Disciplinary Communications (DC) requirement: 100, 101, 102, 104, 109, 116, 120, 125, 140, 146, 148, 150, 152, 160, 188A, 191, 195. Courses may simultaneously satisfy both the laboratory or field data acquisition/analysis and DC requirements.

Five (5) credits of internship (Earth Sciences 198) or independent study (Earth Sciences 199) may be substituted for one upper-division elective.

Students also complete the comprehensive requirement described below.

Students are encouraged to take more than the minimum number of elective courses and

may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (an asterisk (*) indicates that the course satisfies the laboratory or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering, erosion, and hydrology: 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 125, 128, 148*, 191, 208, Ocean Sciences 102, 120

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: 109/L*, 117/L*, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: 104, 105, 107, 109/L*, 116*, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: 109/L*, 117/L*, 120/L*, 130/L*, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth's deep interior, and gravitational and magnetic fields: 117/L*, 119*, 150/L*, 160, 162, 168*, 172

Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: 107, 117/L*, 146*, 150/L*, 152, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth's surface and the relations to climatic and tectonic forcing processes: 107, 109/L*, 116*, 119*, 120/L*, 140/L*, 128, 142*, 146*, 148*, 163, Microbiology and Environmental Toxicology 144

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: 105, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, Microbiology and Environmental Toxicology 144, Ocean Sciences 120

Comprehensive Requirement (B.S.)

Students complete one of the following five options:

Satisfactory completion of Earth Sciences 188A–B, Summer Field Internship and GIS with Applications in the Earth Sciences. Various external field experiences may also satisfy this requirement. See adviser for more details.

Satisfactory completion of a senior thesis (Earth Sciences 195), which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (at least three quarters in advance of completion)

Exemplary performance (grade of B or better), including a major written report, in a 5-credit graduate course or seminar (which requires permission from the instructor in order to enroll)

Satisfactory completion of Earth Sciences 191, Climate Change and Policy

Satisfactory completion of a 5-credit internship (Earth Sciences 198) under the guidance of an on-site supervisor, with coordination and prior approval of the department's internship director. The project must include a comprehensive final written report.

PLEASE NOTE: None of the above may count toward fulfilling an upper-division elective if used as a capstone.

Standard Earth Sciences B.S. Major Planner

Students planning a professional career in the Earth and planetary sciences should take

more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

Note: Chemistry 1A, 1B/M and 1C/N and Mathematics 11A–B and 19A–B and 22 and 23A are offered every quarter. Physics 6A/L is offered every quarter but Physics 6B/M is not offered in fall.

Year	Fall	Winter	Spring

†Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department at least three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

Earth Sciences Major with Concentration in Environmental Geology (B.S.)

The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 20/L (recommended) or 10/L or 5/L

Environmental Studies 25

Biology: Ecology and Evolutionary Biology (EEB) BIOE 20C

Chemistry 1A, 1B/M, and 1C/N

Mathematics 11A–B or 19A–B, or Applied Mathematics and Statistics 15A–B

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L and 110B/M, 190 (optional, 1-credit mentorship class)

At least four elective courses (5+ credits each) from upper division Earth sciences or ocean sciences courses must be completed. Choosing from the following list is recommended but not mandatory: 100/L, 101/L, 102, 104, 105, 107, 109/L, 110C/N, 111, 116, 119, 120/L, 121, 125, 128, 140/L, 142, 146, 148, 150/L. Two must be completed from Earth Sciences courses that are part of our DC requirement: 100, 101, 102, 104, 109, 116, 120, 125, 140, 146, 148, 150, 152, 160, 188A, 191, 195.

Two additional upper-division electives, preferably with environmental topics from biology, chemistry, Earth and planetary sciences, environmental studies, environmental toxicology, or ocean sciences. Courses may simultaneously satisfy both the upper-division elective and DC requirements.

Students also complete a comprehensive requirement from the list described above.

Earth Sciences Major with Concentration in Ocean Sciences (B.S.)

The ocean sciences concentration is intended to provide quantitative preparation for career pathways that include oceanography and biogeochemistry. Additional biology and chemistry courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 5/L or 10/L, or 20/L

BIOE 20C

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A–B or 19A–B, or Applied Mathematics and Statistics 15A–B

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N, 190 (optional, 1-credit mentorship class); Ocean Sciences 101 or 102

At least four elective courses (5+ credits each) chosen from upper-division Earth Sciences or Ocean Sciences courses must be completed. Choosing from the following list is recommended, but not mandatory: Earth Sciences 101/L, 102, 105, 107, 109/L, 111, 116, 119, 120/L, 121, 128, 130/L, 148, 172; Chemistry 122; Ocean Sciences 101, 102, 118, 120, 130, 200, 220, 260. Two Earth Sciences courses must be completed that are part of our DC requirement: 100, 101, 102, 104, 109, 116, 120, 125, 140, 146, 148, 150, 152, 160, 188A, 191, 195. Courses may simultaneously satisfy both the upper-division elective and DC requirements.

Students also complete a comprehensive requirement from the list described above. For those choosing a thesis, a topic emphasizing ocean sciences is recommended.

Earth Sciences Major with Concentration in Planetary Sciences (B.S.)

The planetary sciences concentration is designed to provide students with a quantitative

background appropriate for career pathways in the interdisciplinary study of planets and their satellites. The upper-division elective courses can be tailored for students interested in planetary interiors, atmospheres, and/or surfaces.

Required Lower-Division Courses

Earth Sciences 10/L (preferred); or 5/L; or 20/L

Astronomy 12 or 16 or 18

Chemistry 1A, 1B/M, and 1C/N

Mathematics 19A–B (preferred) or 11A–B, or AMS 15A–B

Mathematics 22; or 23A; or Earth Sciences 111

Physics 5A/L, 5B/M (preferred); or 6A/L, 6B/M

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N, 119, 160, 190 (optional, 1-credit mentorship class)

One elective from the following Earth Sciences courses: 162, 163, 164

At least three electives (5+ credits each) from upper division Earth Sciences, Astronomy 112 or 118, or Mathematics 130 must be completed. Choosing from the following list is recommended but not mandatory: Earth Sciences 107, 109/L, 116, 117/L, 121, 128, 130/L, 140/L, 148, 150/L, 152, 162, 163, 164, 172, 209, 210; Astronomy 112, 118; Mathematics 130. Two Earth Sciences courses must be completed that are part of our DC requirement: 100, 101, 102, 104, 109, 116, 120, 125, 140, 146, 148, 150, 152, 160, 188A, 191, 195. Courses may simultaneously satisfy both the upper-division elective and DC requirements.

Students also complete the comprehensive requirement from the list described above. For those choosing a thesis, a topic emphasizing planetary sciences is recommended.

Earth Sciences Major with Concentration in Science Education (B.S.)

The science education concentration provides future K–12 science teachers with coursework aligned with the California K–12 Earth and planetary science standards; a broad background across the sciences; and a thorough introduction to educational theory and practice including a sequence of three classroom–based internships. Additional biology, astronomy, and ocean science courses required for this concentration ensure that students are very well prepared to enter a rigorous teaching–credential program and, ultimately, a career in education. The senior comprehensive requirement involves a curriculum–development project jointly overseen by faculty in Earth and planetary sciences and UCSC’s California Teach (Cal Teach) program.

Students may start with either the Cal Teach or Earth and Planetary Sciences Department for degree and course information, but must stay in contact with both for dual advising and development of study plans as well as approval for formally declaring the major.

Required Lower–Division Courses

Earth Sciences 5/L (strongly recommended) or 10/L or 20/L

Astronomy 2 (recommended) or another lower–division course in astronomy

Molecular, Cell, and Developmental Biology (BIOL) 20A

Ecology and Evolutionary Biology (BIOE) 20B and 20C

Education 50C

Mathematics 11A–B, or 19A–B, or Applied Mathematics and Statistics 15A–B

Chemistry 1A, 1B/M, and 1C/N

Physics 6A/L and 6B/M

Required Upper–Division Courses

Ocean Sciences 102

Earth Sciences 110A/L and 110B/M

Earth Sciences 109/L, or both 120/L and 150/L

Earth Sciences 111, or Mathematics 21 or 22, or Applied Mathematics and Statistics 5

At least two elective courses (5+ credits each) from upper–division Earth Sciences or Ocean Sciences offerings must be completed, one of which must involve significant laboratory or field data acquisition/analysis

Education 100C, 185C, 185L

One upper–division Education course from the following list: Education 128, 141, 164, or 181

Students complete a comprehensive requirement by doing an independent project through the Earth and Planetary Sciences Department, which applies knowledge of Earth and planetary sciences to K–12 curriculum development (Earth Sciences 194F).

Combined Major in Environmental Studies/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. Students are advised to plan carefully and to contact academic advisers in both the Environmental Studies and Earth and Planetary Sciences Departments early if they have questions. For the requirements of the combined environmental studies/Earth sciences bachelor of arts (B.A.) degree, see the environmental studies program description. [will link to environmental studies]

Combined Major in Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

Required Lower-Division Courses

Anthropology 1, 2, and 3

Earth Sciences 5/L, or 10/L, or 20/L

Mathematics 11A-B, 19A-B, or Applied Mathematics and Statistics 15A-B

Five lower-division science cognate courses (plus laboratories) chosen from the following:

BIOL 20A, BIOE 20B, BIOE 20C

Chemistry 1A, 1B/M, 1C/N

Physics 6A/L, 6B/M

Required Upper-Division Courses

Earth Sciences 110A/L

At least three elective courses (5+ credits) from upper-division Earth Sciences offerings must be completed.

Any four five- to seven-credit upper-division electives listed under the Anthropology Department's Physical Anthropology and Archaeology Courses subdivision.

At least two courses that are part of the DC requirement must be completed as part of the required upper-division courses. Earth Sciences courses that are part of the DC curriculum are: 100, 101, 102, 104, 109, 116, 120, 125, 140, 146, 148, 150, 152, 160, 188A, 191, 195; Anthropology courses are: 100, 170, 194B, 194L, and 194Y). Courses may simultaneously satisfy both the DC requirement and the upper-division Earth Sciences or Anthropology elective requirement.

Comprehensive Requirement

One of the following:

Satisfactory completion of Anthropology 194-series (any senior seminar in physical anthropology or archaeology)

Satisfactory completion of Earth Sciences 188A-B*, Summer Field Internship and Geographic Information Systems with Applications to the Earth Sciences

Satisfactory completion of a senior thesis (Earth Sciences 195) with faculty readers from both departments, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from faculty members to supervise it (at least three quarters in advance of completion)

Satisfactory completion of a 5-credit internship (Earth Sciences 198) under the guidance of an on-site supervisor, with coordination and prior approval of the Earth and Planetary Science department's internship director. The project must include a comprehensive final written report.

* Earth Sciences 188A-B has as prerequisites courses 109/L, 110A/L, and 110B/M.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. All degree options for the Earth sciences major except science education require students to pass at least two of the following courses (totaling 10 credits), all of which entail writing assignments:

Earth Sciences 100, Vertebrate Paleontology

Earth Sciences 101, The Fossil Record

Earth Sciences 102, Marine Geology

Earth Sciences 104, Geologic Hazards

Earth Sciences 109, Field Geology

Earth Sciences 120, Sedimentology and Stratigraphy

Earth Sciences 125, Analytical Paleobiology

Earth Sciences 140, Geomorphology

Earth Sciences 146, Ground Water

Earth Sciences 148, Glaciology

Earth Sciences 150, Structural Geology

Earth Sciences 152, Tectonics

Earth Sciences 160, Planetary Science

Earth Sciences 188A, Summer Field Internship

Earth Sciences 191, Climate Change Science and Policy

Earth Sciences 195, Senior Thesis

Students in the science education concentration are required to take Education 185L and either Earth Sciences 109 or both Earth Sciences 120 and 150.

Students in the combined major in Earth sciences/anthropology are required to pass two courses in any combination from the above list of Earth Sciences courses or the following Anthropology courses: 100, 170, 194B, 194L, and 194Y.

Honors

Honors in the major are determined by a review of grades (typically 3.50 or above) and narrative evaluations at the time a student applies for graduation. A faculty committee makes the decision based on the quality of all coursework, but especially in the courses required for the major. Extra coursework or independent study as well as more intensive or rigorous coursework and the quality of a capstone project may also be taken into consideration. Honors in the combined majors with environmental studies and anthropology will be granted only when the committees in both departments are in agreement. Highest honors may also be awarded in exceptional cases when a student's overall grade point average (GPA) is above 3.75 and performance in the senior capstone requirement is equally outstanding. The department reserves the right to withhold honors and highest honors based on other criteria, such as an incident of academic dishonesty.

Honors on the senior thesis are determined independently of major honors, and must be approved by two faculty readers.

Keys to Success in the Major

Achieving success in the Earth Sciences major is strongly correlated with successfully taking the required Foundation Classes and their associated 2-credit laboratories,

Earth Science 110A/L, Evolution of the Earth;

Earth Science 110B/M, Earth as a Chemical System.

If you are unsuccessful in passing your first attempt at these classes, past experience suggests that you might have difficulty successfully completing this major. We strongly recommend that you seek advising from the department or your college advisor. Two failures of one of these required gateway classes (or associated lab) is likely to preclude completion of the major.

Minor Requirements

Students can earn a minor in Earth sciences by taking courses 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Courses offering less than 5 credits (such as Earth Sciences 190 or 2-credit laboratories and independent studies) may not be counted toward the minor requirements, although additional coursework is always encouraged.

Graduate Program

The graduate program in Earth and planetary sciences is designed to prepare students for research, industry, consulting, teaching, and numerous other career paths, including business and law. The aim is to develop habits of critical analysis and thorough documentation; skills in quantitative field, computational, and/or laboratory research; and proficiency in one or more fields of research. The fundamental requirement for admission to the program is substantial evidence of superior scholarship, dedication and determination to do quality work, and aptitude for original research. Preparation in the basic sciences equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected and, for non-undergraduate Earth sciences majors, achieving breadth of knowledge across the Earth and planetary sciences is expected. Excellent scholars from other disciplines, including chemistry, physics, engineering, or biology, are both eligible and encouraged to apply. Gaps in knowledge can be made up through coursework. Prospective students should take the Graduate Record Examination (GRE) General Test and have the scores sent electronically to the UCSC Division of Graduate Studies.

UCSC awards both the master of science (M.S.) and the doctor of philosophy (Ph.D.) degrees. The M.S. degree may be the terminal degree for some seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project.

Thesis Track (Ph.D., M.S.). In their first year, all thesis-track graduate students register for courses 203, Introductory Teaching Seminar; 204, Fundamentals of Earth and Planetary Sciences; 205, Introductory Graduate Seminar; 206, Great Papers in the Earth Sciences; and, in consultation with the graduate advising committee, choose at least one subject course focusing on specific Earth and planetary sciences content and one course focusing on quantitative analysis (from a list available at the department office). In subsequent years, all students participate in course 293, Graduate Research Seminar. Other course requirements are tailored to the individual student's academic background, professional experience, and plans for research. Master's degree students must take a minimum of 35 quarter credits of graduate and upper-division undergraduate courses (at least 20 of which are graduate-level and not including Earth Science 297, Independent Research) including the courses mentioned above. No specific number of course credits is required for the Ph.D., but ordinarily students put more of their effort into coursework during the first year of graduate study. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Before the start of fall quarter, each first-year thesis track student must meet with his/her faculty adviser to determine a customized course list designed to improve breadth and enable research goals. Immediately afterwards, a meeting is scheduled with the graduate program director to finalize and approve this initial discussion with a written study plan. Yearly academic review meetings will then reassess the student's progress in completing these courses and independent research, initially with the primary adviser but eventually with a reading committee composed of at least three members of the faculty and research staff (at least 50 percent of which must be members of the Academic Senate).

To qualify for candidacy in the Ph.D. program, each student must pass an oral examination in his or her area of specialization by the end of their third year of graduate study, although students are strongly encouraged to take the examination earlier. The examination is based on a research proposal presenting one or more specific questions to be researched by the student in the course of completing their Ph.D. thesis. Students are expected to have in-depth knowledge of fields relevant to the proposal, including familiarity with the professional literature.

The Ph.D. dissertation is a scholarly contribution to knowledge that embodies the results of original and creative effort by the student. Students are urged to prepare their dissertations for publication in peer-reviewed professional journals. A public oral defense of the thesis is required prior to completion of the Ph.D.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be completed by the end

of the third year after entering the program, and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

Coursework M.S. Track. The coursework M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K-14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study, students have a meeting with their faculty adviser in which they develop a study plan of at least nine courses, no more than one of which may be 297 or 298, and a statement of objectives. The plan must be approved by the graduate representative. Students are also limited to one Earth Sciences 290 pro-seminar course. It is expected that the course plan will comprise mainly graduate-level and quantitative, upper-level, undergraduate elective courses.

Coursework master's students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their coursework.

There is no foreign-language requirement for either the M.S. or Ph.D. degree. However, many students in the Earth and planetary sciences find knowledge of one or more foreign languages necessary in their particular research and therefore study the appropriate language.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies. For more information, see Graduate Studies at <http://eps.ucsc.edu/academics/grad-studies/index.html>.

East Asian Studies

[2014–15 General Catalog](#)

Department of History

201 Humanities

(831) 459–2982

<http://eastasianstudies.ucsc.edu>[Faculty](#)

Program Description

East Asian studies addresses the three societies of China, Japan, and Korea in northeast Asia. We recognize that they compose a meaningful regional designation that contains a diverse range of peoples, languages, and cultures. Linked by centuries of common use of the Chinese writing system, a shared textual canon, general principles of statecraft, and the continual circulation of people and goods, the three societies nevertheless also possess distinctive languages, histories, and social identities, making it necessary to explore each society in its own right.

In recognition of this diversity within the common bonds, East Asian studies at UCSC encourages students to explore East Asia in both depth and breadth. Building first upon developing language skills in Chinese or Japanese, students also begin their studies in one of two historical surveys—History 40A, Early Modern East Asia, or History 40B, The Making of Modern East Asia—which explore the broad regional forces that contextualize each society's particular trajectory. From these foundations, students are encouraged to investigate a broad range of questions pertinent to each society in classes across the university, including anthropology, economics, education, feminist studies, film and digital media, history, history of art and visual culture, languages, linguistics, literature, music, politics, sociology, and theater arts.

The East Asian studies minor is administered by the Department of History. For additional information on curriculum and advising, go to <http://eastasianstudies.ucsc.edu>.

Requirements for the Minor

Language. All East Asian studies minors are expected to gain proficiency in Chinese or Japanese language. Students with prior knowledge of Chinese or Japanese are required to complete a language placement exam. Instructions for the placement exam can be found on the Languages and Applied Linguistics web site: <http://language.ucsc.edu>. Students without prior knowledge of Chinese or Japanese should enroll in beginning Chinese (CHIN 1) or Japanese (JAPN 1) no later than fall quarter of the sophomore year. Students may also pursue study abroad opportunities as a way of acquiring Chinese or Japanese language instruction (see below).

All East Asian studies minors are required to complete at least two upper-division courses in Chinese or Japanese language instruction. Additional upper-division

offerings in Chinese or Japanese language instruction may be applied to the upper-division elective requirements (see below).

Core Courses. One required core course: History 40A, Early Modern East Asia, or History 40B, The Making of Modern East Asia.

Upper-Division Electives. Three additional upper-division courses from the East Asian studies curriculum, one of which may be an individual study (course 199).

A minimum of 25 upper-division units must be completed within the East Asian studies minor course requirements.

Study Abroad

Because the minor is designed to support the integration of language training with exploration of East Asian societies, we strongly endorse participation in one of the many education abroad programs available for UC students in East Asia where language skills acquired at the university are put to practical use in daily life and research. At present, there are UC education abroad programs in China, Japan, Hong Kong, Korea, and Taiwan. All students interested in studying abroad should meet with the East Asian Studies director prior to their departure. Students who participate in study abroad are required to complete a language placement exam upon their return. Instructions for the placement exam can be found on the Languages and Applied Linguistics web site: <http://language.ucsc.edu>. For more information on the program, see the UC Education Abroad program (EAP) web sites: UCSC—<http://oie.ucsc.edu/sa/apply.html>, and UC system-wide—<http://eap.ucop.edu/>.

Program Description

An understanding of economics is a vital component of a liberal arts education and a necessity for anyone interested in such areas as business, environmental policy, welfare reform, unemployment, international competitiveness and trade, or transformations in the global economy.

The programs offered by the UCSC Economics Department are designed to acquaint students with a broad range of economic issues and with the tools economists use. The department offers the following majors:

- Economics B.A.
- Business management economics B.A.
- Global economics B.A.
- The department also offers the following combined majors:
 - Economics/Mathematics B.A.
 - Environmental studies/Economics B.A.
 - Latin American and Latino studies/Global economics B.A.
 - A minor in economics is also available.

The economics curriculum begins at the introductory level; no specific high school preparation is required. All economics majors study a substantial core of economic theory and mathematical and statistical methods, and then choose among a wide variety of upper-division electives.

Economics majors may combine their upper-division elective choices in a variety of ways to achieve specialization in a number of possible areas, including environmental economics, public policy, political economy, international economics, economic development, and quantitative methods.

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics. The qualification requirements for major declaration are the same for all four.

Students must take three courses prior to petitioning for entry to an economics major: Economics 1 (Introductory Microeconomics) and Economics 2 (Introductory Macroeconomics) and one of the following calculus courses: Economics/Applied Mathematics and Statistics 11A, Mathematical Methods for Economists; or Mathematics 11A, Calculus with Applications; or Mathematics 19A, Calculus for Science, Engineering, and Mathematics. Students who have a combined grade–point average (GPA) of 2.8 or better in Economics 1, 2, and the first calculus course qualify for the economics major upon applying. Students receiving a grade of NP, D, or F in one of the courses required for admission to the major may only declare once they have passed the same or equivalent course with a grade of C or better. Students who receive two grades of NP, D, or F in the required courses are not eligible to declare the major. Students are encouraged to apply to the major as soon as they have satisfactorily completed these three courses. Equivalent courses may be taken at other universities or community colleges. Students should check on assist.org to determine whether a transfer course is designated as equivalent to Economics 1, 2 or the first required calculus course. Transfer students are strongly encouraged to ask the department to review such courses prior to matriculation at UCSC, since an offer of admission to UCSC does not automatically imply admission to the economics major.

Students may petition for admission to the major by filling the Petition for Major/Minor Declaration and the UCSC Academic Planning form and by supplying evidence of their grades in the three pre–major courses.

Students who have a GPA lower than 2.8 in Economics 1, 2, and the calculus course are not eligible to declare an economics major. Students who are not eligible to declare the major may appeal this decision by submitting a letter of appeal to the department within 15 days of the denial of the declaration. Within 15 days of the receipt of the appeal, the department will notify the student, college and Office of the Registrar of the decision. Please check the department web site (<http://economics.ucsc.edu>) for further information on declaring a major or appealing ineligibility.

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

Core Requirements for All Economics Majors

Economics 1 and 2, 11A, 11B, 100A (or 100M), 100B (or 100N), 113, and Applied Mathematics and Statistics 5 or equivalent courses are required for all economics majors and are prerequisites for most upper–division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least Economics 1, 2, 11A, 11B, and preferably 100A, 100B, and 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Mathematics and Statistics Content Requirement

Mathematics: Successful completion of Economics 11A and 11B, also offered as Applied Mathematics and Statistics 11A and 11B, (or equivalent) is required of all economics majors and is prerequisite to Economics 100A (or 100M), 100B (or 100N), and 113. Therefore, students are advised to take Economics 11A and 11B or their equivalent as early as possible in their undergraduate career. Mathematics 11A–B and 22 or 23A, or 19A–B and 22 or 23A, are acceptable equivalents to Economics 11A and 11B. Students may also complete the mathematics requirement by taking Mathematics 11A or Mathematics 19A, and then Economics 11B or Applied Mathematics and Statistics 11B. Students planning to pursue graduate work in economics or business should seriously consider more intensive mathematical training; consult an adviser.

Transfer students interested in the combined Economics/Mathematics major are encouraged to complete as many lower–division (mathematics and statistics) courses as

- [Queer and Sexuality Studies](#)
- [Religious Studies](#)
- [Russian](#)
- [Science Communication](#)
- [Social Documentation](#)
- [Social Sciences](#)
- [Sociology](#)
- [Spanish and Spanish for Heritage Speakers](#)
- [Spanish Studies](#)

[Archive of General Catalogs](#)

[Nondiscrimination Statement](#)

[Search the Catalog](#)

they can prior to transferring. The courses need to be equivalent to Math 19A, 19B, 23A and 23B.

Statistics: Applied Mathematics and Statistics 5, Statistics or

Applied Mathematics and Statistics 7, Statistical Methods for Biological, Environmental and Health Sciences, or

Computer Engineering 7, Statistical Reasoning in the Age of the Internet

Comprehensive Requirement

The comprehensive requirement for the economics major and the combined economics/mathematics major is satisfied by passing the following intermediate core courses with grades of C or better here at UCSC: Economics 100A or 100M, and 100B or 100N, and 113. Students may elect to complete a senior thesis with consent of an instructor in addition to completing the intermediate core courses.

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' Disciplinary Communication (DC) requirement. The DC requirement in economics is satisfied by completing Economics 104, Is There Truth in Numbers: The Role of Statistics in Economics; or Economics 197, Economic Rhetoric. Students in the combined economics/mathematics major may also satisfy the requirement by completing Mathematics 100, Mathematical Proof, and either Mathematics 194, Senior Seminar, or Mathematics 195, Senior Thesis.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. Economics 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses 100A (or 100M), 100B (or 100N), and 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A field study requires 12 hours per week spent working on internship duties and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12 hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses (193 and 198) do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Department at 401 Engineering 2; or e-mail econintern@ucsc.edu. Web address: <http://economics.ucsc.edu>

Transfer Students

A student transferring to UCSC may fulfill some of the requirements for the major by completing equivalent courses, with a grade of C or better, at another recognized institution. Please refer to the section on Admission to the Major and Minor for specific admission requirements for the Economics majors.

Students should check on assist.org for already established equivalency agreements between UC and the California community colleges. For courses not already articulated through assist.org, transfer students must present their Transfer Credit Summary (available on the student portal) and course syllabi or descriptions to an Economics Department adviser. The department approves courses applicable for economics prerequisites and major requirements.

All transfer students must complete the three-course senior comprehensive requirement (and the DC requirement as stated previously) at UCSC. Economics and global economics majors must take at least two of their upper-division economics electives at UCSC. Business management economics majors must take at least three of their upper-division economics electives at UCSC, one of which must be 101, 133, or 135. Courses taken for credit elsewhere may not be repeated for credit here.

Combined Majors

The Economics Department offers the following combined majors: [economics/mathematics](#), [environmental studies/economics](#), and [Latin American and Latino studies/global economics](#). Requirements for these majors may be reviewed under their separate entries in this catalog.

Economics Program Description

Economics studies how individuals, firms, governments, and other organizations within our society make choices, and how these choices affect the society's use of its available resources. Economists study a wide range of questions such as: How do individuals make decisions in the face of uncertainty? Why were fewer Americans working in 2011 than in 2005? Why do Europeans work fewer hours than Americans? Why have health care and education costs risen so much? What are the consequences of government deficits? Why has the gap between rich and poor in many countries risen? Why have some poor countries grown faster than many rich countries in recent years?

Economics majors study a substantive core of theory and mathematical and statistical methods that aid in addressing these questions. This required core can be combined with electives that emphasize specialized areas such as international economics, finance, public policy, applied microeconomics, law and economics, economic development, quantitative methods, macroeconomics, game theory and behavioral economics. A focus on core theory as well as mathematical and quantitative tools provides a foundation for graduate studies in economics. Selecting a range of electives to sample the broad domain of economics offers an excellent background for students who plan to enter careers in the private sector, in public service, the non-profit sector or to attend law school or other professional schools.

Economics Major Requirements

Students who major in economics are required to take the following courses:

1 Introductory Microeconomics: Resource Allocation and Market Structure

2 Introductory Macroeconomics: Aggregate Economic Activity

11A Mathematical Methods for Economists I (or equivalent)

11B Mathematical Methods for Economists II (or equivalent)

100A or 100M Intermediate Microeconomics

100B or 100N Intermediate Macroeconomics

113 Introduction to Econometrics

197 Economic Rhetoric or Economics 104, Is There Truth in Numbers: The Role of Statistics in Economics

Applied Mathematics and Statistics 5 Statistics or

Applied Mathematics and Statistics 7/L Statistical Methods for the Biological, Environmental, and Health Sciences;

and four additional upper-division economics courses, at least three of which must be selected from the following:

- 105 Macroeconomic Theory
- 114 Advanced Quantitative Methods
- 120 Economic Development
- 125 Economic History of the U.S.
- 126 Why Economies Succeed or Fail
- 128 Poverty and Public Policy
- 130 Money and Banking
- 137 Performing Arts in the Public and Private Economy
- 140 International Trade
- 141 International Finance
- 142 Advanced Topics in International Finance
- 143 Policy Issues in the International Economy
- 148 Latin American Economies
- 149 The Economies of East and Southeast Asia
- 150 Public Finance
- 156 Health Care and Medical Economics
- 159 The Economics of Organizations
- 160A Industrial Organization
- 160B Government and Industry
- 165 Economics as an Experimental Science
- 166A Game Theory and Applications I
- 166B Game Theory and Applications II
- 169 Economic Analysis of the Law
- 170 Environmental Economics
- 171 Natural Resource Economics
- 175 Energy Economics
- 180 Labor Economics
- 183 Women in the Economy
- 184 Labor Wars in Theory and Film
- 185 The Value and Support of the Arts: Challenges and Opportunities in American Society
- 189 Political Economy of Capitalism
- 190 Senior Proseminar

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the four upper-division elective major requirements. Other electives are listed under the Business Management Economics program description.

Minor Requirements

Students earn a minor in economics by completing the following requirements:

ECON 1, Introductory Microeconomics: Resource Allocation and Market Structure

ECON 2 Introductory Macroeconomics: Aggregate Economic Activity

ECON/AMS 11A, Mathematical Methods for Economists I

ECON/AMS 11B, Mathematical Methods for Economists II

Applied Mathematics and Statistics 5, Statistics; or Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological, Environmental, and Health Sciences; or Computer Engineering 7, Statistical Reasoning in the Age of the Internet

ECON 100A/ 100M Intermediate Microeconomics

ECON 100B/100N Intermediate Macroeconomics

ECON 113 Introduction to Econometrics

Three additional upper-division economics electives.

Economics 191, 192, 193, 193F, 198, and 198F may not be used to meet minor requirements.

Business Management Economics Program Description

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of applied fields related to business management. Particular areas of strength of the program are accounting, finance, and technology management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master's program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the technology and information management major.

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics advisers) which provide an excellent way to apply students' academic knowledge of economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts.

In cooperation with the UC Education Abroad Program (EAP), opportunities are available for students to take some business courses (taught in English) in Europe, Mexico, and Hong Kong. Students should ask the Economics Department for additional information about these programs.

Students who are committed to the major early in their academic career should plan to complete Economics 1, 2, 10A, 10B, 11A, 11B and preferably 100A, 100B, and 113 no later than the end of their sophomore year.

Business Management Economics Major Requirements

Introductory and core requirements. Students who major in business management economics are required to take the following courses:

1, Introductory Microeconomics: Resource Allocation and Market Structure

2, Introductory Macroeconomics: Aggregate Economic Activity

10A, Economics of Accounting (or equivalent, see under General Requirements)

10B, Economics of Accounting (or equivalent, see under General Requirements)

11A, Mathematical Methods for Economists I (or equivalent)

11B, Mathematical Methods for Economists II (or equivalent)

100A or 100M, Intermediate Microeconomics

100B or 100N, Intermediate Macroeconomics

113, Introduction to Econometrics

197, Economic Rhetoric; or ECON 104, Is There Truth in Numbers: The Role of Statistics in Economics

Applied Mathematics and Statistics 5, Statistics; or Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological, Environmental, and Health Sciences; or Computer Engineering 7, Statistical Reasoning in the Age of the Internet

Computer literacy requirement. Students must complete a minimum of two courses from the following list (with department approval, a student may substitute other computing courses):

Computer Engineering

12/L, Computer Systems and Assembly Language

80N, Introduction to Networking and the Internet

Computer Science

10, Introduction to Computer Science

12A/L, Introduction to Programming

5C, Introduction to Programming in C++ (formerly CMPS 60 N)

5J, Introduction to Programming in Java (formerly CMPS 60 G)

5P, Introduction to Programming in Python

80B, Systems and Simulation

Technology and Information Management

50, Business Information Systems

58, Systems Analysis and Design

Economics

216, Applied Econometric Analysis I (with permission of instructor)

Note: Students with no prior programming experience are encouraged to take Computer Science 5J and Computer Science 10 rather than Computer Science 12A/L.

Upper-division electives. Students are required to take five additional courses: four in business management and one other economics elective. Students must choose four courses from the following list; at least one of the four must be a course designated with an asterisk (*).

*101, Managerial Economics

110, Managerial Cost Accounting and Control

111A, Intermediate Accounting I

111B, Intermediate Accounting II

112, Auditing and Attestation

115, Introduction to Management Sciences

117A, Tax Factors for Individuals

117B, Tax Factors for Business and Investment

119, Advanced Accounting

131, International Financial Markets

*133, Security Markets and Financial Institutions

*135, Corporate Finance

136, Business Strategy

138, The Economics and Management of Technology and Innovation

139A, Economics of Electronic Commerce

139B, E-Commerce Strategy

161A, Marketing

161B, Marketing Research

164, Economics and the Telecommunications Industry

188, Management in the Global Economy

194, Advanced Topics in Management

Students must choose the remaining two courses from the upper-division economics electives listed for the economics major (see preceding page).

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five elective upper-division major requirements.

Field study. One quarter of field study is strongly recommended. Placements and credit for course 193 or 198 are arranged through the economics field-study coordinator. See above under Field-Study Program description.

Global Economics Program Description

Global economics is an interdisciplinary major designed to prepare students to participate in the global economy; the program aims to deepen the student's knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements.

Global Economics Major Requirements

Introductory and core requirements. Students who major in global economics are required to take the following courses:

1, Introductory Microeconomics: Resource Allocation and Market Structure

2, Introductory Macroeconomics: Aggregate Economic Activity

11A, Mathematical Methods for Economists (or equivalent)

11B, Mathematical Methods for Economists (or equivalent)

100A or 100M, Intermediate Microeconomics

100B or 100N, Intermediate Macroeconomics

113, Introduction to Econometrics

197, Economic Rhetoric or Economics 104, Is There Truth in Numbers: The Role of Statistics in Economics

Applied Mathematics and Statistics 5, Statistics; or Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological, Environmental, and Health Sciences; or Computer Engineering 7, Statistical Reasoning in the Age of the Internet

Students are strongly recommended to complete courses 100A (or 100M), 100B (or 100N), and 113 prior to study abroad. In addition, majors must have language study, area study,

and overseas study, as described below.

Courses 191, 192, 193, 193F, 198 and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the four elective upper-division major requirements.

Upper-division requirements. Four additional upper-division courses are required. Please see the entire economics course list. These may include approved courses offered by other departments.

At least one of the four courses must be selected from the following three:

120, Economic Development

140, International Trade

141, International Finance

In addition, at least one course must be chosen from the following departmental listings:

Economics

120, Economic Development

126, Why Economies Succeed or Fail: Lessons from Western and Japanese History

131, International Financial Markets

140, International Trade

141, International Finance

142, Advanced Topics in International Economics

148, Latin American Economies

149, The Economies of East and Southeast Asia

188, Management in the Global Economy

Latin American and Latino Studies

140, Rural Mexico in Crisis

168, Economic History of Latin America

169, Latin American Industrialization in a Global Perspective: Past, Present, Future

Politics

140B, Comparative Post-Communist Politics

160D, International Political Economy (formerly POLI 176)

178, U.S. Foreign Economic Policy

Sociology

163, Global Corporations and National States

167, Development and Underdevelopment

The other two required upper-division electives are determined by the student's interests. See advisers for details.

The global economics major has three additional elements:

1. Foreign Language Study: The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement by completing two years of university-level language courses or by demonstrating an equivalent level of competence through a recognized language test.

2. **Area Study:** The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses should focus on the area of the student's language study and overseas study. The Economics Department provides a list of approved courses; substitute courses are welcomed when they are part of the student's overseas program or from other UCSC departments, but must be approved by the adviser for the global economics major.
3. **Study Abroad:** All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (EAP). Numerous overseas study sites are available through EAP. Students desiring to fulfill their required study abroad through EAP must apply directly to the EAP office for the selected program and are subject to the admission requirements determined by UC EAP. In countries and at universities where EAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

Combined Economics/Mathematics Program Description

The major in Economics and Mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both Economics and Mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for an economics doctoral (Ph.D.) program, or for a group of technically demanding professional careers.

Economics/Mathematics Major Requirements

Economics Required Courses

1, Introductory Microeconomics: Resource Allocation and Market Structure

2, Introductory Macroeconomics: Aggregate Economic Activity

100A or 100M, Intermediate Microeconomics

100B or 100N, Intermediate Macroeconomics

113, Introduction to Econometrics

DC requirement (see statement under [General Requirements](#))

Applied Mathematics and Statistics 5, Statistics; or Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological, Environmental, and Health Sciences; or Computer Engineering 7, Statistical Reasoning in the Age of the Internet

Economics elective courses

(choose three from the following list)

101, Managerial Economics

114, Advanced Quantitative Methods

115, Introduction to Management Sciences

120, Economic Development

125, Economic History of the U.S.

126, Why Economies Succeed or Fail

128, Poverty and Public Policy

130, Money and Banking

131, International Financial Markets

133, Security Markets and Financial Institutions

135, Corporate Finance

136, Business Strategy

137, Performing Arts in the Public and Private Economy

138, Economics and Management of Technology and Innovation

139A, Economics of Electronic Commerce

139B, E-Commerce Strategy

140, International Trade

141, International Finance

142, Advanced Topics in International Finance

148, Latin American Economies

149, The Economies of East and Southeast Asia

150, Public Finance

160A, Industrial Organization

161A, Marketing

164, Economics and the Telecommunications Industry

165, Economics as an Experimental Science

166A, Game Theory and Applications I

166B, Game Theory and Applications II

169, Economic Analysis of the Law

170, Environmental Economics

171, Natural Resource Economics

175, Energy Economics

180, Labor Economics

183, Women in the Economy

184, Labor Wars in Theory and Film

188, Management in the Global Economy

189, Political Economy of Capitalism

Mathematics Required Courses

Mathematics 19A, Calculus for Science, Engineering, and Mathematics

Mathematics 19B, Calculus for Science, Engineering, and Mathematics

Mathematics 21, Linear Algebra

Mathematics 22, Calculus of Several Variables or 23A and 23B, Multivariable Calculus

Mathematics 100, Mathematical Proof

Mathematics 105A, Real Analysis

Mathematics electives

(choose two from the following list)

Mathematics 106, Systems of Ordinary Differential Equations

Mathematics 107, Partial Differential Equations

Mathematics 114, Introduction to Financial Mathematics

Mathematics 117, Advanced Linear Algebra

Mathematics 145/L, Chaos Theory

Mathematics 194, Senior Seminar

Mathematics 195, Senior Thesis

Applied Mathematics and Statistics 114, Introduction to Dynamical Systems

Applied Mathematics and Statistics 131, Introduction to Probability Theory

Applied Mathematics and Statistics 132, Statistical Inference

Applied Mathematics and Statistics 147, Computational Methods and Applications

*Students in the combined economics/mathematics major may also satisfy the DC requirement by completing Mathematics 100, Mathematical Proof, and either Mathematics 194, Senior Seminar; or Mathematics 195, Senior Thesis

Additional Preparation for the Major

Students interested in the combined major must meet a minimum GPA requirement in Economics 1 and 2 (and the first calculus course). Transfer students should check assist.org for agreements with California community colleges about economics and mathematics courses. Students who have met all articulations before transferring will need at least six economics and four to five mathematics classes at UCSC to complete the major.

Honors in the Major

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department's Honors and Scholarship Committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department's honor committee. The faculty committee looks for a record of excellence in courses offered towards the major, with a strong performance in the upper-division core (theory and econometrics—courses 100A/M, 100B/N, and 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an "A" throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an "A-." Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.

Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted.

In general, honors have been awarded to between 10 and 15 percent of each year's graduating class.

Graduate Programs

Master's Program in Applied Economics and Finance

The master of science (M.S.) program in applied economics and finance is designed for

students who want analytical graduate training that prepares them for careers in business, government, international and domestic banking, consulting firms, and nonprofit organizations. The program is unique in its focus on graduate-level economics training for practical applications and its emphasis on communication skills. The curriculum stresses the application of microeconomic and macroeconomic concepts, statistical techniques, finding and using data sources, working out substantial practical applications, developing writing and reporting skills, and presenting material orally before an audience. The program differs from typical master of business administration (M.B.A.) programs by preparing students to meet the increasing technical demands of private- and public-sector employers through comprehensive coursework in economic analysis.

Past graduates of this program have gone on to successful careers in the private and public sectors with placements at a diverse range of companies and institutions, including Cisco Systems, Seagate Technology, Google, Sony Computer Entertainment, Plantronics, Wells Fargo, all of the big four accounting firms, McKesson Corp., Pepsi Corp., Visa, Square Trade, the California Franchise Tax Board, Guardian News (U.K.), Blue Cross, the World Bank, Stanford University, and the Bank of Japan. Other graduates have gone on to earn Ph.D.s in economics.

Please contact Sandra Reebe (econ_grad_coor@ucsc.edu) if you have questions regarding either the program or the application process.

Courses and Program Requirements

M.S. students are required to take the following classes starting in the fall quarter of the academic year they enroll in the program. Students may also take additional classes if they desire.

Courses and Program Requirements		
Fall	Winter	Spring
200 Microeconomic Analysis	217 Applied Econometric Analysis II	201 Applications Microeconomics
202 Macroeconomic Analysis	233 Finance	236 Financial Engineering
216 Applied Econometric Analysis	Master's elective	Master's elective
294A Applied Economics		
*186 Math Methods for Economic Analysis		

*Note: M.S. students are strongly encouraged to enroll in Econ 186, a pre-fall math course, which is highly beneficial to students' success in the program. Econ 186 is offered as an accelerated short course before the start of fall quarter.

Upon successful completion of these classes, master's students must either pass a comprehensive examination or complete a final paper. The final paper alternative is only available via petition.

Ph.D. Program in Economics

The Ph.D. program in economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance, international trade, economic development, monetary economics, applied microeconomics, experimental economics, and other areas. Graduates of the program have conducted research on a wide variety of topics; examples include international economics, monetary economics, experimental economics, environmental economics, and economic growth and development.

Courses and Program Requirements

First-year Ph.D. students are required to take the three sequences: Economics 204A-B-C, Advanced Micro Theory, Economics 205A-B-C, Advanced Macro Theory, and Economics 211A-B-C, Advanced Econometrics. In late June each year, first-year students take two written preliminary exams; one each in Micro and Macro. First-year students must also

write an econometrics paper and submit it to the department by September 30 (beginning) of the second year.

Ph.D. students are required to complete two field sequences, and take 40 units of coursework in the second year. Only two courses per topic are needed to satisfy one sequence. Students may choose one of the following sequences: Economics 240A–B–C, Adv. International Trade, Economics 241A–B–C, Adv. International Finance, Economics 220A–B, Development Economics, Economics 221A–B, Monetary Economics, and Economics 270 or 273, Applied Microeconomics. At the end of their second year, students are required to submit a field paper.

Third-year Ph.D. students must take Economics 295A–B–C, Directed Reading and the third-year Ph.D. seminar, Economics 296A–B–C. Additionally, the students will take sequences that interest them as well as workshops that are focused on advanced topics such as: Economics 274, Workshop in Macroeconomics; Economics 275, Workshop in Microeconomics; Economics 276, Workshop in Experimental Economics.

In their fourth and fifth years, students are focused on their dissertation research and enroll in either or both Economics 297A–B–C, Independent Study, or Economics 298 or 299A–B–C, Thesis Research.

Courses and Program Requirements

Year	Fall	Winter	Spring
1st	204A Advanced Micro Theory	204B Advanced Micro Theory	204C Advanced Micro Theory
	205A Advanced Macro Theory	205B Advanced Macro Theory	205C Advanced Macro Theory
	210B Math Methods Econ Analysis	211B Advanced Econometrics	211C Advanced Econometrics
	211A Advanced Econometrics		Micro and Macro Prelim Exams
2nd**	220A Development Economics: Theory and Cases	220B Development Economics: Theory and Cases	221B Advanced Monetary Economics II
	240A Advanced International Trade	221A Advanced Monetary Economics I	240C Advanced International Trade
	241A Advanced International Finance	240B Advanced International Trade	241C Empirical Applications
	212 Empirical Project	241B Advanced International Finance	Trade and Finance Field Paper
		243* History of International Economy	
3rd	274 Workshop in Macro+	274 Workshop in Macro+	274 Workshop in Macro+
	275 Workshop in Micro+	275 Workshop in Micro+	275 Workshop in Micro+
	276 Workshop in Experimental Economics+	276 Workshop in Experimental Economics+	276 Workshop in Experimental Economics+
	295A Directed Reading	295B Directed Reading	295C Directed Reading

	296A Third-Year Seminar		
	Qualifying Exam (QE)		
	298 Dissertation Research	298 Dissertation Research	298 Dissertation Research
4th	297A Independent Study	297B Independent Study	297C Independent Study
			Last quarter to challenge QE without academic probation

*ECON 243 is not required, but Ph.D. students are encouraged to enroll in the course when it is offered.

**Not all field sequences are necessarily offered every year.

+Enrollment in Economics 274, 275, 276 is based on student interest.

Based on university policy, course requirements are satisfied by a letter grade of B or better or a grade of S (satisfactory). A letter grade of C in a course is not satisfactory for meeting a course requirement for the Ph.D. program.

Preliminary Requirements

Preliminary examinations are given in two parts: one test in micro theory and one test in macro theory. Students are expected to pass both examinations before the beginning of their second year. Preliminary examinations are currently offered in June and September, although scheduling is subject to change.

In the fall quarter of the second year, each student must enroll in Economics 212. An econometrics paper is due September 30 (beginning) of the second year. A field paper is due August 31 (beginning) of the third year of the program. The graduate handbook of the department details the evaluation procedure for the econometrics and the field papers.

Students who do not pass both preliminary examinations, the econometrics paper, and the field paper requirements will not be allowed to continue in the Ph.D. program.

Qualifying Examination

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, the econometrics paper, the field paper, and the oral examination. The oral examination is taken after all other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record. Students are expected to complete the oral qualifying examination (QE) during the fall quarter of their third year.

Dissertation

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee, headed by the student's research adviser, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the Economics Ph.D. Committee and the Graduate Council. The committee may require a formal public defense of the dissertation.

Program Description

The purpose of the Education Department's instructional programs is to prepare all students, undergraduates and graduates, to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. The department's primary intellectual and practical focus is on fostering equitable and effective schooling for all students. In working toward this goal, the department seeks to understand the profound issues involved in transforming public education so that it better meets the needs of students from diverse language, ethnic, racial, and class backgrounds. We are a small department with the large agenda of developing educational leaders and pursuing educational research that will affect the future of teaching and learning both inside and outside of schools. Our commitment lies in three essential and interrelated domains: 1) school, families, and communities; 2) teacher education and development; and 3) mathematics and science education. Undergirding them all is a focus on the socio-cultural context in which learning and teaching takes place and an understanding of the power of language and literacy in both formal and informal educational settings.

The Education Department has an active doctor of philosophy (Ph.D.) program and doctor of education (Ed.D.) programs (currently not accepting new students) that attract students who have exemplary preparation as well as experience working in educational settings; a model teacher-education program; and two vibrant minor tracks that serve more than 300 undergraduates each year.

Minors in Education

The UCSC undergraduate courses in education engage students in the study of the history of educational thought and philosophy, the politics and economics of education, learning theory and pedagogy, and issues of cultural and linguistic diversity in education.

Because an academic major in education is not permitted in the state of California, UCSC offers two minors in education for those students who are considering a career in teaching and also for those who hold a general interest in educational studies. Please note that the minors in education do not provide a California Teaching Credential. Additionally, the UCSC teaching credential program is a graduate program and coursework taken in the minor cannot be substituted for credential requirements.

General Minor in Education

The general minor in education consists of six courses totaling 30 credits:

- Education 60, Introduction to Education
- Education 180, Introduction to Teaching
- Four upper-division education courses (courses number EDUC 102–189) (Please refer to the [Education Department's web site](#) for a list of approved upper-division courses being offered during the current academic year.

To be eligible to declare the general minor in education, students must have:

- Completed or be enrolled in EDUC 60, Introduction to Education
- Successfully declared a major.

To officially declare a general minor in education, students must bring from their major department a completed Petition for Major/Minor Declaration and UCSC Academic Planning Forms to the Education Department's Undergraduate Adviser. Students pursuing a minor in education should meet with the Education Department's Undergraduate Adviser as early as possible. The adviser will assist students in completing the Petition for a Major/Minor Declaration and the UCSC Academic Planning Forms.

For Further Information

For specific instructions about how to declare a minor in education and for the current Drop-in Advising Schedule, please refer to the Education Department's web site <http://education.ucsc.edu>. For other inquiries, please contact the Undergraduate Adviser by sending an e-mail to education@ucsc.edu.

Science, Technology, Engineering, and Mathematics (STEM) Education Minor

The STEM minor specifically serves students in STEM majors who are considering careers in secondary mathematics or science teaching. The STEM minor in education consists of eight courses, totaling 32 credits and including 80–90 hours of classroom field placements:

EDUC 50, Introduction to Teaching, CalTeach 1

EDUC 60, Introduction to Education

EDUC 100, Science and Mathematics, Cal Teach 2

EDUC 185B, Introduction to Mathematics Education, or 185C, Introduction to Teaching Science

EDUC 185L, Introduction to Teaching: Cal Teach 3

One upper-division education course addressing cultural and linguistic diversity (e.g., EDUC 128, 135, 141, 164, 170, 177, or 181),

- Two upper-division education courses (courses number EDUC 102–189). Please refer to the Education Department's web site for a list of approved upper-division courses being offered during the current academic year, <http://education.ucsc.edu>.

Students pursuing the STEM education minor should meet with the Cal Teach staff as early as possible. Entry into EDUC 50 is by interview only, and interested students must submit an application to the Cal Teach program (see <http://calteach.ucsc.edu> or e-mail calteach@ucsc.edu).

Graduate Programs

Master of Arts in Education and California Teacher Credential Program

Please note that students are not admitted into the program for a stand-alone master of arts (M.A.) in education or a stand-alone credential.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission on Teacher Credentialing, program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred to are subject to change to comply with regulatory mandates.

The master of arts in education and California teacher credential program prepare prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K-12 public schools. The program also offers the Bilingual Authorization (in Spanish) for primary language instruction or dual language immersion instruction in a K-12 setting.

Students who complete the program are eligible to apply for a California Preliminary Multiple Subjects Teaching Credential or a California Preliminary Single Subject Teaching Credential. The Multiple Subjects Teaching Credential authorizes the holder to teach in a K-12, self-contained public school classroom, where all subjects are taught by the same teacher. The Single Subject Teaching Credential authorizes the holder to teach in his/her credential subject area in a K-12 departmentalized classroom setting within a public school system.

The UCSC, single-subject, teacher-credential program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change.

Master of Arts in Education and Preliminary Credential in Secondary Science in Silicon Valley

The Silicon Valley masters of arts in education and preliminary secondary science credential has the same degree requirements as the campus-based program. The program's course work is offered at UCSC and UCSC Extension in Santa Clara with student teaching placements in middle and high schools in the greater San Jose area. Program details are available at web site <http://education.ucsc.edu/macsv/>.

Prerequisite Admission Requirements

All candidates must have preparation in the following areas:

A course, or equivalent experience, that addresses cultural and linguistic diversity. The following UCSC undergraduate education courses are examples of courses that meet this requirement: 128, Immigrants and Education; 141, Bilingualism and Schooling; 164, Urban Education; 181, Race, Class, and Culture in Education; and 92C Introduction to Issues in Diversity and Education. Other courses offered outside the Education Department may be acceptable. However, outside coursework cannot be preapproved by the department.

A documented field experience with children or youth in an educational setting. Experiences such as directed observation, substitute teaching, school tutoring, work in after-school programs, camp counseling, instructional aide, or the equivalent are acceptable experiences. When applying to the program, please describe your field experience in the designated area of the application titled, PERSONAL STATEMENT.

Application Selection Criteria

Admission to the program is competitive. Candidates for admission are selected, in part, on the following criteria:

Academic Record

College coursework is evaluated with attention to content and grades or narrative evaluations. The appropriateness of courses taken for the credential sought is also taken into consideration. For the multiple subjects credential, students should have an extensive breadth of courses in the core subject areas taught in elementary school—math, science, social science, and English. For the single subject credential, students should have an extensive body of coursework in the content area.

Statement of Purpose, Writing Sample, Letters of Recommendation, Personal Statement, and Résumé

Information provided in these documents is used in the selection of candidates. All

documents must be submitted by the application deadline.

The statement of purpose should discuss the following:

- an explanation of why you want to become a teacher;
- how your experience has contributed to your motivation and potential to be an educational leader;
- a description of your experiences related to youth, cultural and linguistic diversity, and community involvement.
- Writing sample: a sample of your writing (no more than 10 pages). A research-based paper is preferred, for example, a paper written on an educational topic or a paper written in your content area. Alternatively, applicants may choose to write a brief piece specifically for this application.
- Letters of recommendation: three letters of recommendation are required. At least one letter should be written by university faculty who can address the applicant's academic merit, and at least one letter written from someone in the field who has observed the applicant's work with children or youth. It is recommended that these letters address your qualifications in the following areas:
 - a) academic performance
 - b) field work with youth
 - c) experience in culturally and linguistically diverse settings and with student populations who have traditionally been underserved in schools and classrooms.
- Personal history: write a statement (approximately two to five pages) explaining how your personal history has influenced your decision to apply to this graduate program.
- Résumé: a résumé that includes an employment history; any relevant volunteer or community work, especially in schools and/or with children; and experiences in multicultural and multilingual settings. Include information on languages (other than English) in which you have competence.
- Bilingual Authorization Essay (Bilingual Authorization applicants only): candidates must submit an essay in Spanish as described in the online application.

Admission Requirements

Testing

All required examinations must be met by the stated deadlines.

All admitted applicants must verify completion of the California Basic Educational Skills Test (CBEST) requirement and submit a passing-status verification by June 1 in order to enroll in the program.

Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/> (state requirement and subject to change). It is recommended that passing verification be submitted with the application.

Subject-Matter Competence

California state law mandates that all teachers provide evidence of their subject-matter knowledge (state requirement and subject to change).

Admitted Multiple Subject applicants must submit verification of having passed the California Subject Examinations for Teachers (CSET): Multiple Subjects Subtests by June 1 prior to enrollment in the program. However, it is highly recommended that documentation of passing CSET scores be submitted with the application. Multiple Subject applicants must pass each section of the CSET; no coursework or "waiver" program can substitute for passing CSET scores.

Deadline to complete this requirement: June 1 of each year prior to enrollment into the program. However, applicants are encouraged to complete this requirement prior to applying to the program.

Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/>.

Single Subject

The California Subject Examinations for Teachers (CSET), or verification of an approved subject matter program from the applicant's undergraduate institution is required. Admitted applicants must submit verification of having passed the CSET examination for their subject (e.g., mathematics), or confirmation of 100 percent completion of an approved subject matter program.

Deadline to complete this requirement: June 1 of each year prior to enrollment into the program. However, it is highly recommended that documentation of subject matter competence be submitted with the application. Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/>.

Certificate of Clearance

In accordance with Education Code Section 44320(b), each credential candidate for an initial credential, prior to admission to any credential program, must obtain a Certificate of Clearance.

A Certificate of Clearance is a document that indicates that the individual has completed the fingerprint and character and identification process and has been cleared by the California Commission on Teacher Credentialing to begin student teaching.

To comply with this regulation the UCSC Education Department must have on file a copy of the Certificate of Clearance before allowing a person to begin public school fieldwork or student teaching.

If you hold or have applied for a credential from the California Commission on Teacher Credentialing (such as an emergency substitute teaching permit) you are not required to apply for another Certificate of Clearance. Please submit a photo copy of your prior credential for your application to the program by mail to: Education Dept., UC Santa Cruz, 1156 High St., Santa Cruz, CA, 95064.

Applicants who do not hold a valid California credential or have not previously applied for a Certificate of Clearance through the Commission on Teacher Credentialing must apply for the Certificate of Clearance.

Further information regarding this requirement, including Live Scan form LS-41, is available within the UCSC Graduate School Online Application October 1 of each year at <http://graddiv.ucsc.edu/prospective/>, or you may send an e-mail to the Education Department, edma@ucsc.edu, for further instructions regarding your Certificate of Clearance Application.

Deadline for completing this requirement: January 15 of each year.

Program and State of California Requirements (Not Required for Initial Admission in the Program)

These requirements may be met prior to or while enrolled in the program, but they must be met to be eligible for a California teaching credential.

U.S. Constitution Requirement

A course on the U.S. Constitution (or completion of an examination offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are Politics 20, American Politics; Politics 111, Constitutional Law; Politics 120A, Congress, President, and the Court in American Politics; and History 25A, United States History to 1877.

Reading Instruction Competence Assessment (RICA)

Multiple Subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA examination. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction

to K-12 students. Candidates should not take this examination prior to completing course 220.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed and valid upon application for the credential

Bilingual Authorization Candidates

1. CSET – Spanish Language and Culture of Emphasis Requirements

The CSET LOTE (Spanish) Subtest III (CSET test code 147) and CSET LOTE (Spanish) Subtest V (CSET test code 258) (Culture of Emphasis) are required. Admitted applicants must submit verification of having passed the exam prior to completing the final quarter of the MA/Credential program.

Additional testing information can be found at the CSET Registration web site at <http://www.cset.nesinc.com>.

2. Three–page essay in Spanish

Bilingual Program applicants will be required to submit a three–page essay in Spanish with their application to the MA/Credential Program. The essay should address topical questions listed on the Education M.A. Supplemental Application contained within the online [UCSC Graduate School Application](#).

BCLAD Candidates

The CSET Languages Other Than English (LOTE) (Spanish) Subtest III (CSET test code 147). It is recommended that passing test scores be submitted with the application. Individuals may still apply to the program without having passed the CSET LOTE. However, all admitted BCLAD applicants must submit passing verification for the examination prior to being issued a credential. (CSET Registration: <http://www.cset.nesinc.com>).

Student Teaching

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).
- Plan ahead to anticipate needs and potential student teaching problems.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning student teaching, which begins during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program. Student teachers are in their classroom placements from 10–14 hours a week depending on the school site schedule. To enroll in this course, students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing.

Intermediate and advanced student teaching is a two-quarter experience (winter/spring) in which student teachers are placed with cooperating teachers in local schools. Students are in the classroom placements 14 or more hours a week in winter quarter leading toward full time in the classroom by spring quarter. They gradually assume responsibility for preparation, instruction, and evaluation of the class during this two-quarter period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subjects candidates obtain classroom experience in both primary and intermediate grades. Single Subjects candidates obtain classroom experience in middle school/junior high and high school.

Admission to course 201 and 201A, Intermediate Student Teaching, and courses 202A–B–C, Advanced Student Teaching, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program.

Capstone Requirements

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year to year as they reflect the most current California state credentialing requirements.

Multiple Subject Course Requirements

200 Applied Classroom Analysis and Methods: Beginning Student Teaching

201 Intermediate Student Teaching

202ABC Advanced Student Teaching

203 Methods of English Language Development

205 Teaching, Learning, and Schooling

207 Social Foundations of Education

208 Portfolio Development

210 Creating Supportive, Healthy Environments for Student Learning

211 Teaching Special Populations

212ABC (Bilingual Authorization students only) Bilingualism and Biliteracy

217 Topics in Elementary Education: Physical Education

218 Topics in Elementary Education: Visual Arts

219 Topics in Elementary Education: Performing Arts

220 Reading and Language Arts for Elementary Classrooms

221 Science Learning and Teaching in Elementary Classrooms

222 Mathematics Learning and Teaching in Elementary Classrooms

MA/C students must fulfill the requirements for Level 1 technology skills. Students meet this requirement in one of two ways: (a) passing the CSET examination, or (b) passing an approved course offered via UCSC Extension.

Single Subject Course Requirements

200 Applied Classroom Analysis and Methods: Beginning Student Teaching

201 Intermediate Student Teaching

201A Intermediate Student Teaching: Single Subject

202ABC Advanced Student Teaching

204 Methods of English Language Development

206 Teaching, Learning, and Schooling

207 Social Foundations of Education

208 Portfolio Development

210 Creating Supportive, Healthy Environments for Student Learning

211 Teaching Special Populations

212ABC (Bilingual Authorization students only) Bilingualism and Biliteracy

225 Reading Across the Curriculum in Middle School and Secondary

Single Subject Credential students enroll in the two methods courses related to their subject area:

226 English Teaching: Theory and Curriculum

227 English Teaching for Secondary Classrooms

228 Math Education: Research and Practice

229 Teaching Mathematics in the Secondary Classroom

230 Science Education: Research and Practice

231 Teaching Science in the Secondary Classroom

232 Social Science: Theory and Curriculum

233 Social Science Teaching for Secondary Classrooms

MA/C students must fulfill the requirements for Level 1 technology skills. Students meet this requirement in one of two ways: (a) passing the CSET examination, or (b) passing an approved course offered via UCSC Extension.

For Further Information

Please contact the credential analyst by sending an e-mail to edma@lists.ucsc.edu, or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the programs.

Ed.D in Collaborative Leadership

(Currently not admitting new students)

Overview

The goal of the Ed.D. program is to prepare educational professionals to enact research-based leadership in the transformation of schools and other educational institutions serving racially, culturally, and linguistically diverse communities in California's Central Coast and Bay Area region. Ed.D. students' dissertations apply cutting-edge theory and research in action-research reform efforts. Research projects will often be situated within the student's professional work site. Graduates of the Ed.D. program will be qualified for leadership positions in schools and school districts, as well as for the instruction of professional courses in universities and colleges. Graduates may also choose to work for independent or governmental policy centers.

Admission Requirements

- M.A. or equivalent with a background in research methodology
- 3.0 grade point average (GPA) or above
- Official Graduate Record Examination (GRE) scores <http://www.gre.org/~> taken within the last five years
- Documentation of second language and/or multicultural focus
- Statement of purpose

- Personal history
- A research project proposal
- Official transcripts from all undergraduate and graduate work
- Application essay, which includes:
 - Three current recommendation letters specifying potential for collaborative leadership and scholarly productivity.
- Application fee

Prior to completing your application, we highly recommend a personal interview with at least one of our faculty members. Please contact an Education Department faculty member whose research interest is similar to your own (please visit the Education Department web site at <http://education.ucsc.edu/>)

Course Requirements and Sequencing

Courses required in year one:

- EDUC 235, Introduction to Educational Inquiry
- EDUC 236, Quantitative Methods in Educational Research
- EDUC 237, Qualitative Research Methods
- EDUC 262, Social and Cultural Context of Education Core Seminar
- EDUC 263, Foundations of Educational Reform
- EDUC 268, Schools, Communities, and Families
- EDUC 269ABC, First-Year Doctoral Pro-seminar
- Summer research and coursework optional, though encouraged

Courses required in year two

- EDUC 266, Program Evaluation and Action Research in Educational Reform
- EDUC 271, Theoretical Perspectives on Learning and Using Literacy, or EDUC 273, Language Acquisition, Bilingualism, and Education
- EDUC 277ABC, Second/Third-Year Professional Development Seminar Families
- Summer research and coursework optional, though encouraged

Courses required in year three

- EDUC 277ABC, Second/Third-Year Professional Development Seminar
- EDUC 279ABC, Dissertation Supervision
- EDUC 299, Directed Research (each quarter)
- Qualifying examination (conclusion of spring quarter)

Courses required in year four

- Graduation

For Further Information

Contact the doctoral adviser, by sending an e-mail to edphd@lists.ucsc.edu or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the program.

Ph.D. in Education

Overview

The goal of the Ph.D. in education is to support graduate students in becoming creative

scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K–12 classrooms. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

Together with his or her faculty academic adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and electives. Students learn through an apprenticeship model in which they develop expertise through active participation in research. Courses may be taken in other departments, when appropriate.

Ph.D. Admissions Guidelines

The minimum grade-point average (GPA) established by the University of California for admission to graduate school is 3.0. In general, the Ph.D. in education program looks for potential excellence in graduate students, whether this manifests itself in a high grade-point average, strong letters of recommendation, or a high Graduate Record Examination (GRE) score, or a strong statement of purpose. Applicants will be evaluated on their individual merits and also with regard to how well their proposed doctoral research can be supported by the existing resources of the program.

Admission Requirements

- Bachelor's degree, or its equivalent, from an accepted university prior to the quarter for which admission is sought
- 3.0 GPA or above
- Official GRE scores <http://www.gre.org/~> taken within the last five years
- Experience working with culturally and linguistically diverse communities
- Statement of purpose
- Personal history
- A writing sample, preferably in education or a related field. The sample can be a term paper, a field report, a research proposal, or an essay written especially for the application
- Official transcripts from all colleges/universities attended after high school
- Three current recommendation letters specifying potential for scholarly productivity
- Current resume
- Application fee
- International applicants must take the Test of English as a Foreign Language (TOEFL). A minimum score of 550 on the TOEFL (paper) or 220 on the TOEFL (computer) is required for admission. The TOEFL examination may be waived for international students who have taken and successfully passed a freshman composition course at an accredited university in the United States.

Prior to completing your application, we highly recommend a personal interview with at least one of our faculty members. Please contact an education faculty member whose research interest is similar to your own (please visit the Education Department web site at <http://education.ucsc.edu/>)

Program Requirements

During the first two years of study, all students are expected to enroll in a set of required courses, including foundational courses, methodology courses, and elective courses. The student and his/her adviser will determine the overall individualized program of study, depending on the student's preparation, interests, and plans, which are determined in consultation with relevant faculty and the department chair. The program encourages interdisciplinary study.

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAship or teaching internship, pass a qualifying examination (QE), and meet the specific requirements of the Division of Graduate Studies.

The QE is intended to assess a student's depth and breadth of knowledge in his or her areas of concentrations and his/her competence to do extended dissertation-level research and analysis. Normally taken near the end of the third year of enrollment, the QE consists of both written and oral components. For the written portion, the student prepares three papers, two of which advance a position based on a review of related research, theoretical framework, or research design/methods; the third is a dissertation prospectus. The student presents and defends his/her work to at the oral examination.

A dissertation based on original research is required. After the dissertation has been completed and submitted, students must defend the dissertation in an oral examination.

Course Requirements and Sequencing

The following courses constitute the minimum requirements: four foundational courses, four research methods courses, and four elective courses. Incoming students should consult with their faculty advisors and the current course offerings to determine the order in which they will complete required courses. Students are encouraged to take courses beyond the minimum required; in consultation with their advisors, students will determine the full set of research methods and elective courses they will complete based on their intellectual interests and professional goals. All required courses must be completed prior to advancement to candidacy.

Foundational Courses (20 credits)

Course Number and Title	Type	When Taken
EDUC 261, Thinking and Learning	Foundational	Before Advancement
EDUC 262, Social Foundations of Education	Foundational	Before Advancement
EDUC 272, Language in Education and Society	Foundational	Before Advancement
EDUC 2XX, Teaching and Teachers	Foundational	Before Advancement

Research Methods (20 credits)

Course Number and Title	Type	When Taken
EDUC 235, Introduction to Educational Inquiry and Research Study Design	Research Methods	Before Advancement
EDUC 236, Quantitative Research 1	Research Methods	Before Advancement
EDUC 235, Qualitative Research	Research Methods	Before Advancement
EDUC 255, Quantitative Research 2 or EDUC 256, Qualitative Research 2	Research Methods	Before Advancement

Elective Courses (20 credits)

Students in consultation with their advisors will pursue appropriate depth and breadth of study according to each student's intellectual interests and professional goals. Students must complete 4 elective courses (20 credits). Electives can include the following:

Department elective courses (at least two of the four required elective courses must be from this category):

Educational Reform (EDUC 263)

Research on Teacher Development and Teacher Education (EDUC 264)

Communities, Families, and Education (EDUC 268)

Language and Literacy Across Disciplines (EDUC 280)

Research in STEM Education (EDUC 286)

Critical Perspectives on Education (EDUC 295)

MA Course in Education with additional readings and assignments (pne maximum)

Graduate courses in other departments

Independent Study, Reading Group, Research Apprenticeship (EDUC 293), or undergraduate course with additional readings and assignments taken as IS (one maximum UG course to count toward the four electives)

Requirements for the M.A. Degree

Although applications for a master's degree independent of the Ph.D. program are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of six quarters residency, 60 course credits including 4 foundational courses, 4 research methods courses, 4 elective courses, and a second-year research project. Students seeking an M.A. degree must adhere to the guidelines set forth by the Graduate Division.

Other Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

The education Ph.D. program emphasizes teaching experience, and all students are required to complete one TAship or teaching internship in education prior to advancement to candidacy.

Students are required to complete a second-year project paper by the first day of fall quarter in year three.

Financial Support

It is each student's responsibility to secure funding for graduate studies. Over the course of students' enrollment in the graduate program, students typically fund their education with some combination of the following: TAships, GSRships, UCSC graduate fellowships, scholarships or fellowships from outside sources, loans, personal savings, family income, and support from other individuals (e.g., extended family members). When possible first-year students are supported with UCSC graduate fellowships, which typically cover part of a student's expenses for the first year only. Beginning in the student's first year, he or she is strongly encouraged to apply for TAships in college core courses and in other departments on campus. Students are also encouraged to seek and apply for outside funding from government agencies, private foundations, and industry, and to plan alternative financing should none of these opportunities become available.

Financial support for students includes a variety of fellowships, research assistantships, and

teaching assistantships in the Education Department. Students may participate in research projects under the auspices of several interdisciplinary research centers, including the Chicano/Latino Research Center (CLRC), the Vocabulary Innovations in Education (VINE) project, The Teachers With Computers: Ward Annotations for Vocabulary Education (tecWAVE) project, Effective Science Teaching for English Language Learners (ESTELL) project, The Center for Collaborative Research for an Equitable California (CREC), and the Center for Educational Research in the Interest of Underserved Students (ERIUS).

Designated Emphasis in Education

The Designated Emphasis in Education enables doctoral students in other departments to pursue interests in education and obtain formal certification of a “minor” level of competence in the field of education. The requirements for obtaining a Designated Emphasis in Education are the following:

Obtain a designated graduate adviser from the faculty in education. This adviser will be in addition to the graduate adviser from the student’s home department. The education adviser must serve on the student’s qualifying examination committee and, as appropriate, may also serve on the student’s dissertation committee.

Complete at least two of the following three core courses in education:

EDUC 261, Thinking and Learning

EDUC 262, Social Foundations of Education

EDUC 263, Foundations of Educational Reform

Complete additional courses as needed to total five graduate courses in education, no more than one of which may be a directed readings course (Independent Studies). Courses must be approved by the student’s graduate adviser in education. Courses in other departments focused on education may be approved by petition to the Education Department’s Doctoral Programs Committee.

Prepare a significant piece of writing in some area of education. This writing may take the form of a substantial position paper (seminar paper, QE paper, dissertation chapter, master’s thesis) grounded in the literature of educational research, as determined by the graduate adviser in education.

Education is an institutional field in which scholars from a wide variety of disciplines—including sociology, psychology, politics, economics, mathematics and science—have scholarly interests. A Designated Emphasis in Education enables graduate students from other departments to ground their work in theory and research on important issues in education.

The Education Department’s foundational courses, EDUC 261 and 262, are offered every other year; and EDUC 263, an elective course, is offered every other year. The department typically offers five doctoral courses during each year. The Education Department annually admits 7–10 Ph.D. students, leaving adequate room for doctoral students from other departments to take courses in education.

For Further Information

Contact the doctoral adviser, by sending an e-mail to edphd@ucsc.edu or view the department’s home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the programs.

Baskin School of Engineering

The Baskin School of Engineering has a high–technology focus incorporating programs and curricula that educate students to meet the changing demands of society and a high–technology global marketplace. The school offers a stimulating academic environment that provides a foundation for professional growth as well as a lifetime of learning. The Baskin School's programs and courses prepare students for the human aspects, as well as the technical challenges, of careers in engineering, computer science, and bioinformatics. The Baskin School of Engineering includes the Department of Applied Mathematics and Statistics, the Department of Biomolecular Engineering, the Department of Computer Engineering, the Department of Computer Science, the Department of Electrical Engineering, and the Department of Technology Management.

Graduate Study

The Baskin School of Engineering offers 13 graduate programs designed to prepare students for advanced study and research in major areas of biomolecular, computer, and electrical engineering, as well as computer science and statistics and applied mathematics:

- Biomolecular engineering and bioinformatics master of science (M.S.) and doctor of philosophy (Ph.D.)
- Computer engineering M.S. and Ph.D.
- Computer science M.S. and Ph.D.
- Games and playable media M.S.
- Electrical engineering M.S. and Ph.D.
- Statistics and applied mathematics M.S. and Ph.D.
- Technology and information management M.S. and Ph.D.

These programs are described in subsequent sections. The aim of these programs is to develop professionals who can address the complex scientific and technological problems of today and tomorrow.

Undergraduate Study

The School of Engineering offers 12 undergraduate degree programs in the following majors:

- Bioengineering bachelor of science (B.S.)
- Bioinformatics B.S. or combined B.S./Graduate
- Computer engineering B.S. or combined B.S./M.S.
- Computer science bachelor of arts (B.A.) and B.S.
- Computer science: computer game design B.S.
- Electrical engineering B.S.
- Network and digital technology B.A.
- Robotics engineering B.S.
- Technology and information management B.S.

Bioengineering. The bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine and biology. UCSC bioengineering graduates will have a thorough grounding in the principles and practices of bioengineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. The program includes a broad range of courses in the sciences, engineering, ethics, and other topics, and is co-sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Bioinformatics. The bioinformatics curriculum combines mathematics, the physical sciences, computer science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing and gene expression chips. The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of mathematics, science, and engineering. The undergraduate bioinformatics degree program prepares students for graduate school or a career in the fast-paced pharmaceutical or biotechnology industries.

Computer Engineering. The computer engineering curriculum focuses on making digital systems that work. It overlaps with computer science on one end (software systems) and with electrical engineering on the other (digital hardware). The emphasis of our program is

on design rather than analysis—on making things work, rather than on explaining the abstract theory of computation or electronics. The program’s emphasis on problem solving provides both excellent training for future engineers and a strong foundation for graduate study. The computer engineering B.S. program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The combined B.S./M.S. program provides an opportunity for outstanding undergraduates to begin advanced study and earn both degrees in five years.

Computer Science. The computer science curriculum has options that include topics in hardware and software, giving students a solid grounding in both theoretical and practical aspects of computer technology and computer usage. The bachelor of arts focus is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering. The bachelor of science curriculum has a stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry. Students become proficient in many areas, with a good academic foundation for various careers in the software industry, as well as preparation for graduate school.

Computer Science: Computer Game Design. The computer game design curriculum is a four-year interdisciplinary program that focuses on the technical, dramatic, and artistic elements of computer games. The program provides a rigorous education in computer science, in concert with a broad introduction to those aspects of art, music, narrative, digital media, and computer engineering most relevant to games. An intensive year-long game design studio sequence permits students to create substantial video games as part of a multi-student team. Students receive proficiency in many aspects of computer science, a good academic foundation for careers in the computer game industry or information technology industry, or for the pursuit of graduate studies in computer science, or computer game design.

Electrical Engineering. The electrical engineering curriculum provides a balance of engineering science and design and allows students to specialize in both the traditional topics and the latest subjects in electrical engineering. Students may concentrate their electives in the areas of electronics and optics, communications, or signals and systems. The major is designed to attract motivated students who, upon graduation, will be sought by employers in the high-tech industry. The electrical engineering program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Network and Digital Technology. The network and digital technology B.A. program provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes which make these technologies function. The program, through its flexible requirements, is especially tailored to students who wish to combine technology with other fields, such as through a double major or a minor, or who, through the choice of electives, wish to concentrate on the digital design or computer networks aspects of computer engineering in preparation for future employment. The network and digital technology B.A. program is offered by the Computer Engineering Department.

Robotics Engineering. The robotics engineering program prepares graduates for rewarding careers at the interfaces between electrical, computer, and mechanical engineering. UCSC robotics engineering graduates will have a thorough grounding in the principles and practices of robotics and control, and the scientific and mathematical principles upon which they are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

Technology and Information Management. The technology and information management (TIM) curriculum is multidisciplinary and focuses on the fusion of information systems, technology, and business management for two purposes: the use of information systems to solve business problems and the management of technology, which includes new product development and enterprise management. Students must learn the mathematics, science, and technical fundamentals of computer science and engineering as well as understand the environment in which information technology (IT) solutions will be applied—through economics, business, and management of technology courses. It is a rigorous, challenging

major for those students wanting to pursue careers in information systems management and the management of technology.

Undergraduate Minors

Undergraduate students may choose from the following seven minor options:

Applied Mathematics. The applied mathematics minor is available to students who wish to develop 1) proficiency in modeling real-life problems using mathematics and 2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Bioinformatics. The bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

Computer Engineering. The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline.

Computer Science. The computer science minor is available for students whose primary interest is in another area, and are interested in the applications of computer science in other areas of study, from art and music to business and science.

Electrical Engineering. The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper-division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in applied physics or any School of Engineering major.

Technology and Information Management. The technology and information management minor provides undergraduates in the School of Engineering as well in other programs and divisions in the university, such as economics and business management economics, the physical and biological sciences, and arts, the opportunity to expand the breadth of their knowledge and training to include the management of information systems and the management of technology.

Statistics. The statistics minor is available for students who wish to gain a quantitative understanding of how to a) measure uncertainty and b) make good decisions on the basis of incomplete or imperfect information and apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Undergraduate Advising Office

The Baskin School of Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in School of Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Students may obtain additional information and assistance on the School of Engineering web site: <http://ua.soe.ucsc.edu/>.

Admission to School of Engineering Majors

High School Preparation for Engineering Students

It is recommended that high school students intending to apply to a School of Engineering major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare students

for these majors.

College Board Advanced Placement Credit

Prospective students are encouraged to take the College Board Advanced Placement (AP) and International Baccalaureate (IBH) Examinations as acceptable scores on these examinations may satisfy both university or major degree requirements. Prospective engineering students should consider taking examinations in computer science, mathematics, economics, chemistry, or biology. Students must provide official examination scores to the UCSC Office of Admissions to be granted credit toward course prerequisites or degree requirements. The following AP and IBH scores are accepted for course credit requirements as follows:

Common Entrance Examination for Admission to Polytechnics

CEEP AP Exam Score UCSC Course Credit

Biology	3,4,5	Biology 20A: Cell and Molecular Biology
	5	Biology 20B: Development and Physiology
Chemistry	5	Allows enrollment in Chemistry 1B and 1M
Computer Science:		
Exam A	3	Computer Science 5J: Introduction to Programming in Java
	4,5	Computer Science 12A/L: Introduction to Programming
Computer Science:		
Exam AB	3	Computer Science 12A/L: Introduction to Programming and Lab
	4,5	Computer Science 12 A/L: Introduction to Programming and Lab and Computer Science 12B/M: Introduction to Data Structures Lab
Economics:		
Microeconomics	4 or 5	Economics 1: Introductory Microeconomics
Economics:		
Macroeconomics	4 or 5	Economics 2: Introductory Macroeconomics
Mathematics:		
Calculus AB	3	Mathematics 3 or AMS 3: Precalculus
Mathematics:		
Calculus AB	4 or 5	Mathematics 19A: Calculus for Science, Engineering and Math
Mathematics:		
Calculus BC	3	Mathematics 19A: Calculus for Science, Engineering and Math
Mathematics:		
Calculus BC	4 or 5	Mathematics 19A: Calculus for Science, Engineering and Math and Mathematics 19B: Calculus for Science, Engineering and

International Baccalaureate Credit

IBH Exam Score UCSC Course Credit

Computer Science	5	Computer Science 12A/L: Introduction to Programming and Lab
Computer Science	6 or 7	Computer Science 12A/L: Introduction to Programming and Lab and Computer Science 12B/M: Introduction to Data Structures and Lab

Students may check with the Office of Admissions for details about other AP and IBH examinations that also satisfy university requirements.

Admission as First-Year Students

Students interested in pursuing a school of engineering major should indicate the major as their first or second choice on the UC application for admissions. Some school of engineering programs offer direct acceptance to qualified first-year applicants. For those engineering majors offering direct acceptance, admission is based upon high school grade point average, courses completed in mathematics and sciences, scores on standardized tests, and/or their personal statement. Some majors may specify criteria for directly accepted students to remain declared in the major. Please consult the department program statements for more information about which majors offer direct admission for first-year students and additional criteria, where applicable.

Post First-Year Current Students Acceptance to Majors

Students interested in declaring a School of Engineering major can do so by following the major declaration policy for that major as specified in the corresponding program statement. Major declaration must be completed by the sixth quarter of study at UCSC, but can be done earlier. Students are encouraged to declare as early as possible, to ensure placement into courses required for the major. Specific information about requirements and the School of Engineering major declaration process can be found at <http://ua.soe.ucsc.edu/>.

Junior Transfer Acceptance to Majors

The School of Engineering strongly encourages applications from transfer students. Due to the prerequisite structure for upper-division courses, prospective transfer students should have completed as many of the lower-division requirements for the respective majors as possible to complete the degree within a reasonable time. Students must plan carefully because many courses must be taken sequentially.

Transfer students should not follow the Intersegmental General Education Transfer Curriculum (IGETC) because it will not provide transfer students with enough mathematics and engineering courses to allow them to complete School of Engineering programs at UCSC in two years.

Students who apply as transfer students with junior status (90 quarter credits or more of transfer credit) who wish to earn a degree from the School of Engineering must indicate a School of Engineering major as their first choice on their UC application. (Students may also indicate an alternative School of Engineering major as their second choice.)

Junior transfers who do not list a School of Engineering major on their application to UCSC will not be considered for admission to such majors after the first day of their first quarter on campus. Junior transfers who are qualified by the applicable declaration of major deadline will be considered by exception.

Acceptance into the major is based on the student's academic college record and preparation for the major. Applicants are encouraged to take and excel in as many courses that are equivalent to the department's foundation courses as possible. For many School of Engineering majors, this includes completion of a year of calculus (accepted as equivalent

to Mathematics 19A–B), linear algebra, differential equations, a year of calculus–based physics courses (accepted as equivalent to Physics 5A, 5B, 5C), and two programming courses (accepted as equivalent to Computer Science 12A/L or Computer Engineering 13/L, Computer Science 12B/M, and Computer Engineering 12/L) are strongly recommended. An applicant will be approved, conditionally approved, or declined. Only students who have completed most or all of the foundation courses will be approved or conditionally approved for acceptance into the major.

Students who are approved for acceptance and who have course credit for all the foundation courses for their major must declare the major in their first term of enrollment at UCSC. The status of students who are approved for acceptance but who, upon review of their transcripts, are found not to have course credit for all the foundation courses for their major will be changed to proposed.

Students who are proposed majors must complete the remaining required foundation courses for their major during their first term at UCSC in order to declare the major at the beginning of the following term at UCSC. Students who are unsuccessful in their attempt to complete their remaining foundation courses should be prepared to declare an alternative major outside of the School of Engineering.

Course Substitutions

Undergraduate engineering students who wish to complete a course at another institution or study abroad must first consult the School of Engineering Undergraduate Advising Office. The advising office may require that a Petition for Course Substitution be approved before credit for a course completed at another institution can be applied to any School of Engineering major requirement. This petition is in addition to and separate from the transfer credit awarded by the university. Petition forms are available at the undergraduate advising office and online at <http://ua.soe.ucsc.edu/policies-forms>. Each petition must be accompanied by a course description, syllabus, and verification of the number of credits earned with a grade of C or better. To guarantee equivalency, departments may sometimes require a grade of B or better. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations.

Appeal Process

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, the college, and the Office of the Registrar of the decision.

If you have further questions concerning the appeal process, please contact the Undergraduate Student Affairs Office at (831) 459–5840 or e-mail soeadmissions@soe.ucsc.edu.

Letter Grade Policy

Starting fall 2014, all students admitted to a School of Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade.

Ethics Requirement

Graduates of the Baskin School of Engineering are expected to become professionals with the highest ethical standards. Knowledge and practice of professional ethics is a requirement for the degree. Examples of professional society codes of ethics are available at <http://www.ieee.org/about/corporate/governance/p7-8.html> and <http://www.acm.org/about/se-code/>. Students of the Baskin School of Engineering are also expected to adhere to high ethical standards while pursuing their undergraduate studies.

Courses Taken Elsewhere After Enrollment

Once enrolled in the School of Engineering continuing students must have permission to subsequently take courses elsewhere. Course substitutions, such as taking a course at

another UC campus, in the Education Abroad Program (EAP), or at a community college, require approval prior to taking the class.

Continuing students must get pre-approval before taking a class at a California community college. Applications and procedures for pre-approval can be obtained from and submitted to the Undergraduate Advising Office.

When a student declares their major, minor, or proposed major in a School of Engineering program, the decision as to whether a course taken elsewhere is accepted for this School of Engineering major or minor is made by the major department at that point. (Note: There is no guarantee that a course will be applicable toward a School of Engineering major, minor, or proposed major even if the student has completed more advanced courses in that department.)

School-Wide Information and Policies

Computing Facilities

The Baskin School of Engineering houses research facilities and teaching laboratories in the Baskin Engineering Building for courses in programming, software design, circuits, electronics, graphics, digital design, and computer and system architecture. Emphasis in these laboratories is on state-of-the-art equipment, including personal computers, engineering workstations, a 1000-processor Linux cluster, logic analyzers, microprocessor development systems, a wireless network for mobile computers, and network support at 100MB/sec.

All Unix computers and workstations and most personal computers on campus are networked together, allowing students to access the School of Engineering and the Information Technology Services (ITS) facilities from any computer account on campus. For a more complete description of the computing facilities on campus, see <http://its.ucsc.edu/>.

Prerequisites

Because of the sequential nature of the School of Engineering curricula, most courses have prerequisites, which are listed in the course descriptions. Students should carefully review these descriptions in the catalog and the quarterly *Schedule of Classes*. Students must have passed all prerequisites of a course for which they are enrolling. Pre-enrolled students who then fail a prerequisite are no longer eligible to be enrolled in the course and will be dropped.

For example, to enroll in Computer Science 101, a prerequisite to many upper-division courses, the prerequisite courses that must be completed or in progress are Computer Science 12B, Computer Engineering 16, Mathematics 19B, and one of the following: Mathematics 21, 22, 23A, 24, or Applied Mathematics and Statistics 10.

Students who have transferable course work from another institution that appears to satisfy a UCSC course prerequisite, but is not listed in current articulation agreements, should promptly consult with the School of Engineering's staff advisers for guidance. Students will be asked to present records from the other institution to document the course equivalency. Until such evidence has been verified by the department, students attempting to enroll in a course using a prerequisite course that was not completed at UCSC will be informed that they have not satisfied the course prerequisite. (See the Course Substitutions section under Admission to School of Engineering Majors.)

Permission Numbers

Students not meeting the regular prerequisite requirements for courses sponsored by the Baskin School of Engineering may petition the course instructor to receive a permission number to enroll. The instructor may ask a student to demonstrate the ability and/or potential to succeed in the course or may request additional information to formulate a decision. If no instructor has been assigned to the course, please contact the Undergraduate Advising Office for direction.

Materials Fee

Students should be aware that some laboratory courses require each student to purchase miscellaneous parts or a material kit for completion of the laboratory work. Some

laboratory courses may include consumable (one-time use) parts and materials that are distributed to the entire class. Some laboratory kits include parts that the student will assemble into a project and keep. Please refer to the Baskin Engineering Laboratory Support web page for specific course material fee amounts:

<https://intranet.soe.ucsc.edu/lab-support/fees>.

Miscellaneous Fees

Miscellaneous breakage or loss of equipment fees are assessed to address the cost of damaged laboratory equipment and loss of laboratory materials due to abuse or negligence. This fee is only charged if a student breaks or loses laboratory equipment or materials and is not a mandatory fee charged to all students taking the course. Please refer to the Baskin Engineering Laboratory Support web page for more information:

<https://intranet.soe.ucsc.edu/lab-support/fees>.

Applied Mathematics and Statistics

2014–15 General Catalog

Baskin School of Engineering

(831) 459–2158

<http://www.soe.ucsc.edu>Faculty | [Course Descriptions](#)

Program Description

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers master's and doctoral programs in Statistics and Applied Mathematics, or Applied Mathematics and Statistics, depending on chosen emphasis. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a designated emphasis in statistics, a minor in statistics, and a minor in applied mathematics.

Additional information on these programs can be found on the department's web pages at www.soe.ucsc.edu.

Undergraduate Programs

Requirements of the Minor in Statistics

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Students are required to take a two-quarter basic calculus sequence:

- Applied Mathematics and Statistics 11A–B or Economics 11A–B or Applied Mathematics and Statistics 15A–B or Mathematics 11A–B or Mathematics 19A–B or Mathematics 20A–B
- Plus one course from each of the following seven categories:
 - Statistical Concepts: Applied Mathematics and Statistics 5 or 7/L

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology
- Economics

- Physical and Biological Sciences Division
- Physical Education
- Physics
- Politics
- Portuguese
- Porter College
- Psychology

- Computer Programming: Biomolecular Engineering 160/L, Computer Science 12A/L or 5C or 5J or 5P or Computer Engineering 13/L
- Linear Algebra: Applied Mathematics and Statistics 10 or Mathematics 21 (also recommended that students take Applied Mathematics and Statistics 20 or Mathematics 24)
- Multivariate Calculus: Mathematics 22 or both Mathematics 23A and Mathematics 23B
- Probability: Applied Mathematics and Statistics 131 Applied Mathematics and Statistics 203 or Computer Engineering 107
- Statistical Inference: Applied Mathematics and Statistics 132
- Computational Methods: Applied Mathematics and Statistics 147
- Plus two electives from the following category:
 - Statistical Elective: Applied Mathematics and Statistics 118; 156; 198; 202; 205B; 206B; 207; 256;
 - Biomolecular Engineering 205; Computer Engineering 108; Computer Science 142; Economics 104; 113; 114; 120; 161B; and 190; Electrical Engineering 151; Mathematics 114; Psychology 181; Sociology 103A; Technology and Information Management 230.

Note: Students planning graduate work in statistics are recommended to choose Mathematics 23A–B, Applied Mathematics and Statistics 205B, and Mathematics 105A–B.

Requirements of the Minor in Applied Mathematics

The applied mathematics minor is available for students who wish to develop (1) proficiency in modeling real-life problems using mathematics and (2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Students are required to take the four-quarter calculus sequence:

- Calculus Sequence: Mathematics 19A–B or Mathematics 20A–B, and Mathematics 23A–B
- Plus one of the following sequences:
 - Applied Mathematics and Statistics 10 and 20
 - Mathematics 21 and 24
 - Physics 116A and 116B

Note: Students who complete Mathematics 21 and 24 or Physics 116A and 116B, are strongly recommended to complete the MATLAB self-paced tutorial at: <http://matlab-training.soe.ucsc.edu/>

- Plus one course from each of the following categories:
 - Probability Theory: Applied Mathematics and Statistics 131 or Computer Engineering 107
 - Dynamical Systems: Applied Mathematics and Statistics 114 or Applied Mathematics and Statistics 214
 - Introduction to Numerical Methods: Applied Mathematics and Statistics 147, Physics 115, or Earth Sciences 119
 - Partial Differential Equations: Applied Mathematics and Statistics 212A, Physics 116C, or Mathematics 107
- Plus one applied-mathematics elective from the following list:
 - Applied Mathematics elective: Applied Mathematics and Statistics 107/217, 115/215,

- Electrical Engineering 103, 154; Computer Engineering 115; Mathematics 103A, 117, 121A; Physics 105, 139A, 139B, 171.

Students may also propose other electives which use applied mathematical methods, subject to approval by the department.

Graduate Programs (M.S., Ph.D.)

Requirements for a Graduate Degree in Statistics and Applied Mathematics

This track is for students emphasizing statistics. All students must complete the core courses described below.

Required core Applied Mathematics and Statistics courses:

- 200 Research and Teaching in Applied Mathematics and Statistics
- 203 Introduction to Probability Theory
- 205B Intermediate Classical Inference
- 206B Intermediate Bayesian Inference
- 207 Intermediate Bayesian Statistical Modeling
- 211 Foundations of Applied Mathematics
- 256 Linear Statistical Models
- 280B Seminar in Statistics and Applied Mathematical Modeling

In addition to these 35 credits, master of science (M.S.) students must complete two additional 5-credit courses from the approved list, for a total requirement of 45 credits; doctor of philosophy (Ph.D.) students must complete four additional 5-credit courses from the approved list, for a total requirement of 55 credits.

Requirements for a Graduate Degree in Applied Mathematics and Statistics

This track is for students emphasizing Applied Mathematics. All students must complete the core courses described below.

Required core Applied Mathematics and Statistics courses:

- 200 Research and Teaching in Applied Mathematics and Statistics
- 203 Introduction to Probability Theory
- 211 Foundations of Applied Mathematics
- 212A Applied Mathematical Methods I
- 212B Applied Mathematical Methods II
- 213 Numerical Solutions of Differential Equations
- 214 Applied Dynamical Systems
- 280B Seminar in Statistical and Applied Mathematical Modeling

In addition to these 35 credits, master of science (M.S.) students must complete two additional 5-credit courses from the approved list, for a total requirement of 45 credits; doctor of philosophy (Ph.D.) students must complete four additional 5-credit courses from the approved list, for a total requirement of 55 credits.

For both emphasis tracks, M.S. students will be allowed to substitute up to two courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document.

Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the graduate director.

Qualifying Examinations

At the end of the first year, all students will take a pre-qualifying examination covering the six (non-seminar) core courses. This examination will have two parts: an in-class written examination, followed by a take-home project involving data analysis. Students who do not pass this examination will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will be dismissed from the program.

Ph.D. students must complete the oral proposal defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee.

Thesis and/or Dissertation Requirements

A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree.

For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within the Applied Mathematics and Statistics Department or outside of it. Either the adviser or the additional reader must be from within the Applied Mathematics and Statistics Department.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination.

Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in the Applied Mathematics and Statistics Department. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in statistics or applied mathematics. The completed dissertation will be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Relationship of Masters and Doctoral Programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program, and students in the Ph.D. program can receive a M.S. degree upon completion of M.S. requirements, including the capstone research project. Each Ph.D. student will be required to have knowledge of statistics and applied mathematics equivalent to that

required for the M.S. degree. In addition, Ph.D. candidates will be required to complete coursework beyond the M.S. level.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements are subject to dismissal from the program (see the Graduate Handbook for the policy on satisfactory academic progress). For specific guidelines on the annual student reviews, please refer to <http://www.soe.ucsc.edu/programs/ssm/graduate/index.html>.

Requirements for a designated emphasis to an external degree program

Students from another degree program who meet the following requirements can have the designated emphasis of "statistics" annotated to their degree title. For example, a Ph.D. student in electrical engineering who meets the requirements would get a certification that read "Ph.D. Electrical Engineering (Statistics)." The course requirements are:

Required Core Applied Mathematics and Statistics courses:

- 203 Introduction to Probability Theory
- 206 Classical and Bayesian Inference (or 206B Intermediate Bayesian Inference)
- 207 Intermediate Bayesian Statistical Modeling
- 256 Linear Statistical Models

and one other statistics course from a list of approved courses in AMS (currently 202, 205B, 221, 223, 225, 241, 245, 261, 263, 274, and 291).

Faculty

Program Description

The four concentrations of the UCSC bachelor of science (B.S.) degree in bioengineering prepare graduates for productive employment in industry or further education in graduate school. Each concentration is based on different essential underlying science, but all share an emphasis on teaching engineering design using that basis in science.

The biomolecular engineering concentration is designed for students interested in protein engineering, stem cell engineering, and synthetic biology. The emphasis is on designing biomolecules (DNA, RNA, proteins) and cells for particular functions, and the underlying sciences are biochemistry and cell biology.

The bioelectronics concentration is designed for students interested in the interface between organisms and electronic instrumentation or implants. The emphasis is on the interfacing of biological sensors to computer systems, and the underlying sciences are physics and chemistry.

The assistive technology: motor concentration is designed for students interested in helping people with movement disabilities. The emphasis is on designing exoskeletons and robots, and the underlying sciences are physics and anatomy.

The assistive technology: cognitive/perceptual concentration is designed for students interested in helping people with cognitive or perceptual disabilities. The emphasis is on designing computer systems that help people compensate for disabilities, and the underlying sciences are psychology and computer science.

In all four concentrations, students participate in a capstone design experience: either a two–quarter, group project intended to prepare students for work in industry or a three–quarter senior thesis intended to prepare students for Ph.D. research. Both options involve working closely with faculty and other researchers at UCSC, analyzing ideas, developing technologies, and discovering new approaches. Application areas include biomolecular sensors and systems, nano–electronic implants, assistive technologies for the elderly and disabled, bioinformatics, microfluidics, nanoscale biotechnology, environmental monitoring, and other areas at the junction between engineering and the life sciences.

More information about bioengineering research and undergraduate research opportunities can be found on the web at ugr.ucsc.edu, beng.soe.ucsc.edu, cbse.ucsc.edu, biomedical.ucsc.edu, marcmbrs.ucsc.edu, surf-it.soe.ucsc.edu, and

stemdiv.ucsc.edu/ucleads/.

The program is sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental Biology, with additional participating faculty in the Departments of Applied Mathematics and Statistics, Chemistry and Biochemistry, and Psychology.

The program has course requirements in mathematics, science, and engineering. Students interested in bioengineering as a major should contact the School of Engineering advising office (advising@soe.ucsc.edu) before enrolling in any courses at UCSC. Early advising is particularly important before choosing calculus and physics courses.

Bioengineering students may continue their research and studies at UCSC in any of several graduate programs. Information may be found at <http://www.graddiv.ucsc.edu>.

Courses for Nonmajors

The following courses are recommended for nonmajors interested in bioengineering.

Computer Engineering 80A, Universal Access: Disability, Technology, and Society; Biomolecular Engineering 80G, Bioethics in the 21st Century: Science, Business, and Society; and Biomolecular Engineering 5, Introduction to Biotechnology. Students are also advised to consult the program discussions of the collaborating departments for additional possibilities related to bioengineering.

Declaration of the Major

To be admitted by the end of the 5th quarter, students need to have taken 50 credits from the following list of courses with a GPA of 2.8 or better:

Applied Mathematics and Statistics (AMS) 7/L, AMS 10, AMS 20, Molecular, Cell, and Developmental Biology (BIOL) 20A, Ecology and Evolutionary Biology (BIOE) 20B, Biomolecular Engineering (BME) 5, BME 80G, Chemistry and Biochemistry (CHEM) 1A, CHEM 1B/M, CHEM 1C/N, CHEM 108A/L, CHEM 108B/M, Computer Engineering (CMPE) 9, CMPE 12/L, CMPE 13/L, CMPE 80A, CMPE 100/L, Computer Science (CMPS) 12A/L, CMPS 12B/M, Mathematics (MATH) 19A, MATH 19B, MATH 22 or MATH 23A, Physics (PHYS) 5A/L (or 6A/L), PHYS 5B/M (or 6B/M), PHYS 5C/N (or 6C/N), and Psychology (PSYC) 20A.

Students changing majors after the 6th quarter will need to have completed 10 more credits of required courses in the major for each additional quarter past the 6th quarter.

Appeals for major declaration may be filed with the Baskin School of Engineering Office of Undergraduate Affairs by the end of the fifth week of each regular quarter for faculty review. Determinations will be made by the end of the seventh week of the quarter. After the campus major declaration deadline, students submitting an appeal must have a declared alternate major.

Transfer Students

Transfer students need to have completed eight transferable courses from the list used for admission for on-campus students, with a GPA in those courses of 2.8 or better. However, students are recommended to complete at least ten transferable courses prior to transfer, as they may otherwise have difficulty finishing in a timely fashion.

Students may satisfy the bioethics requirement if they have completed a suitable ethics course at their community college.

Honors in the Major

Bioengineering majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on their GPA and on the results of undergraduate research. Students with a GPA of 3.7 receive "Highest Honors in the Major." Students with a GPA of 3.3 receive "Honors in the Major." Students with particularly significant accomplishments in undergraduate research may receive honors or highest honors with a lower GPA. Students who have been found guilty of academic misconduct are not eligible for either honors or highest honors.

Major Requirements

Advising and Elective Approval

Every major must have a bioengineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office. With assistance from the adviser, students must formulate a program of proposed course work that meets the major requirements. All electives must be pre-approved by the bioengineering undergraduate director.

Optional Courses for Majors

Biomolecular Engineering 88A, BMES Freshman Design Seminar, is recommended for first-year students interested in learning to think like engineers. Students considering the assistive technology: motor concentration or desiring an early introduction to the use of mathematics in engineering may wish to take Computer Engineering 8, Robot Automation, in their first quarter.

Courses required for all concentrations (lower-division, 7):

Mathematics 19-B, Calculus for Science, Engineering, and Mathematics

Biomolecular Engineering 80G, Bioethics in the 21st Century: Science, Business, and Society

Chemistry and Biochemistry 1A, 1B/M General Chemistry

Biology (BIOL) 20A, Cell and Molecular Biology

Biology (BIOE) 20B, Development and Physiology

All concentrations also require physics and computer programming, but the details of the requirements differ, due to the different needs of the concentrations (see below).

Courses required for all concentrations (upper-division, 4):

Biomolecular Engineering 101/L, Applied Circuits for Bioengineers

Computer Engineering 185, Technical Writing (satisfies the Disciplinary Communication requirement)

Applied Mathematics and Statistics 131, Introduction to Probability Theory

Applied Mathematics and Statistics 132, Classical and Bayesian Inference

Capstone requirement, all concentrations, 2–3 courses

All bioengineering students complete a senior capstone project in bioengineering, either as a group project or as an individual senior thesis doing research in a faculty laboratory. (Satisfies the campus comprehensive requirement.)

Biomolecular Engineering 123A–B, Bioengineering Project; or

Computer Engineering, or Electrical Engineering 129A–C, Capstone Project; or

Fifteen credits of independent study or senior thesis research, such as by completing three offerings of Biomolecular Engineering, Computer Engineering, or Electrical Engineering 193 or 195; and Biomolecular Engineering 123T, Senior Thesis Presentation (2 credits).

Students pursuing the senior thesis option must seek approval of their project one year before graduation, typically spring quarter of the third year. Students spend three or more

quarters working on their thesis projects. Thesis students must enroll in 123T, Senior Thesis Presentation, before completing their thesis.

Additional required courses for Biomolecular concentration (16 courses)

Biomolecular Engineering 5, Introduction to Biotechnology

Physics 5A/L or 6A/L, Introduction to Physics I or Introductory Physics I

Physics 5C/N or 6C/N, Introduction to Physics III or Introductory Physics III

Chemistry 1C/N, General Chemistry

Chemistry 108A/L, Organic Chemistry

One of two three-course sequences in biochemistry or molecular biology. The first sequence is intended for students primarily interested in the design of proteins, while the second is intended for students interested in cellular engineering.

Chemistry 108B/M, Organic Chemistry, and Biochemistry and Molecular Biology 100A–B; or

Biology (BIOL) 100, Biology (BIOL) 101/L, and one of Biology 110L, Cell Biology Laboratory, 115L, Eukaryotic Molecular Biology Laboratory, or 120L, Development Laboratory

Biomolecular Engineering 160/L, Research Programming in the Life Sciences

One of three introductions to programming:

Computer Science 12A/L, Introduction to Programming/Laboratory; or Computer Science 5J, Introduction to Programming in Java and 11, Intermediate Programming; or Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory and Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Biomolecular Engineering 110, Bioinformatics Tools

Biology (BIOL) 105, genetics

Biomolecular Engineering 150/L, Molecular Biomechanics/Laboratory

One of Biology 110, Cell Biology; Biology 115, Eukaryotic Molecular Biology; or Microbiology and Environmental Toxicology 119, Microbiology.

Design elective from Baskin School of Engineering.

Upper-division elective from Baskin School of Engineering or Division of Physical and Biological Sciences.

Additional required courses for Bioelectronics concentration (16 courses)

Chemistry 1C/N, General Chemistry

Physics 5A/L, 5B/M, and 5C/N, Introduction to Physics I, II, and III

Mathematics 23A–B, Vector Calculus; or Mathematics 22, Introduction to Calculus of Several Variables

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Computer Engineering 100/L, Logic Design/Laboratory

Electrical Engineering 101/L, Introduction to Electronic Circuits/Laboratory

Electrical Engineering 103/L, Signals and Systems/Laboratory

Computer Engineering 167/L, Sensing and Sensor Technologies/Laboratory

Electrical Engineering 171/L, Analog Electronics/Laboratory

Biomolecular Engineering 140, Bioinstrumentation

One of Electrical Engineering 153, Digital Signal Processing, 130/L, Introduction to Optoelectronics and Photonics/Laboratory, or 172, Advanced Analog Circuits; or Computer Engineering 141, Feedback Control Systems

Additional required courses for Assistive Technology: Motor concentration (16 courses)

Computer Engineering 80A, Universal Access: Disability, Technology, and Society

Physics 5A/L and 5C/N, Introduction to Physics I/Laboratory and Physics III/Laboratory

Computer Engineering 9, Introduction to Statics Dynamics & Biomechanics

Mathematics 23A–B, Vector Calculus; or Math 22, Introduction to Calculus of Several Variables

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Computer Engineering 100/L, Logic Design/Laboratory

Biology (BIOL) 135/L, Functional Anatomy/Laboratory

Computer Engineering 118/L, Introduction to Mechatronics/Laboratory

Electrical Engineering 101/L, Introduction to Electronic Circuits/Laboratory

Electrical Engineering 103/L, Signals and Systems/Laboratory

Computer Engineering 167/L, Sensing and Sensor Technologies/Laboratory

Upper-division elective from Baskin School of Engineering or Division of Physical and Biological Sciences.

Additional required courses for Assistive Technology: Cognitive/Perceptual concentration (16 courses)

Computer Engineering 80A, Universal Access: Disability, Technology, and Society

Physics 5A/L or 6A/L, Introduction to Physics I/Laboratory or Introductory Physics I/Laboratory

Physics 5B/M or 6B/M, Introduction to Physics I/Laboratory or Introductory Physics II/Laboratory

Physics 5C/N or 6C/N, Introduction to Physics III/Laboratory or Introductory Physics III/Laboratory

Mathematics 23A–B, Vector Calculus; or Mathematics 22, Introduction to Calculus of Several Variables

Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological, Environmental, and Health Sciences/Laboratory

One of three introductions to programming:

Computer Science 12A/L, Introduction to Programming/Laboratory; or

Computer Science 5J, Introduction to Programming in Java and 11, Intermediate Programming; or

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory and Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Science 109, Advanced Programming

Psychology 20A, Cognition: Fundamental Theories

Psychology 100, Research Methods in Psychology

Two upper-division Psychology courses selected from the following:

Psychology 120, Visual and Spatial Cognition

Psychology 121, Perception

Psychology 123, Cognitive Neuroscience

Psychology 128, Human Factors

Psychology 129, Human Learning and Memory

Computer Engineering 131, Human Computer Interaction

Computer Engineering 161, Mobile Sensing and Interaction

Upper-division elective from Baskin School of Engineering, Division of Physical and Biological Sciences, or Psychology.

Exit Requirement

Students are required to submit a portfolio, exit survey, and exit interview.

The portfolios must be turned in electronically as PDF files by the last day of the quarter of graduation, and will be reviewed quarterly by the undergraduate director.

Portfolios must contain the following:

- 1) A substantial written report on a design project. This is typically satisfied by a senior thesis, a written capstone project report, or a report from the Applied Circuits for Bioengineers course.
- 2) Slides from a substantial verbal presentation. This is typically satisfied by a capstone design presentation, Molecular Biomechanics, Stem Cell Engineering, or other design courses.
- 3) A research poster. This is typically satisfied by a senior thesis poster or a capstone design project poster, presented at the undergraduate poster symposium.

The three parts of the portfolio should represent at least two different design projects. If a senior thesis is completed, it must be provided as the written report. If a capstone project is completed, it must be provided as one (or more) of the three submissions.

Exit interviews are scheduled during the last week of the quarter by the Baskin School of Engineering (BSOE) advising office, generally as small group interviews.

Bioengineering Major Planners

The following sample academic plans show possible courses of study for a bioengineering major. The first plan follows the biomolecular engineering concentration, the second the bioelectronics concentration, the third the assistive technology: motor concentration, and the fourth the assistive technology: cognitive/perceptual concentration.

All plans assume that students are ready for calculus and advanced computer programming courses when they start. Those who need to take precalculus or the CMPS 5J+11 programming series may not be able to complete the entire program within four years.

Students should consider taking courses during the summer to ensure timely completion of the degree. Courses planned to be taken at institutions other than UCSC require pre-approval by the undergraduate director.

All students should meet quarterly with an adviser from the School of Engineering Undergraduate Advising Office to review their finished and planned courses, as schedules and prerequisites change frequently. Any electives should be chosen well ahead of time, to ensure that prerequisites can be scheduled.

[Faculty](#) | [Course Descriptions](#)

Program Description

The Department of Biomolecular Engineering is an interdisciplinary department that combines expertise from biology, mathematics, chemistry, computer science, and engineering to train students and develop technologies to address major problems at the forefront of biomedical and bio-industrial research. Students trained in the Department of Biomolecular Engineering can look forward to careers in academia, the information and biotechnology industries, public health, or medical sciences.

The department offers an undergraduate minor and a bachelor of science (B.S.) degree in bioinformatics, and graduate master of science (M.S.) and doctor of philosophy (Ph.D.) degrees in biomolecular engineering and bioinformatics. The department co-sponsors the B.S. in bioengineering program, described elsewhere in this catalog, with the departments of Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental (MCD) Biology. The department co-sponsors the Program in Biomedical Science and Engineering (PBSE), a doctoral training program, with the departments of MCD Biology, Chemistry and Biochemistry, and Microbiology and Environmental Toxicology.

Departmental faculty advise undergraduate and graduate researchers enrolled in the bioinformatics, bioengineering, and related degree programs. Members of the Department of Biomolecular Engineering actively collaborate with faculty from other Baskin School of Engineering departments, such as Applied Mathematics and Statistics, Computer Engineering, Computer Science, and Electrical Engineering; and with the Physical and Biological Sciences departments of MCD Biology, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, Ecology and Evolutionary Biology, and Ocean Sciences.

Bioinformatics Major

Bioinformatics combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene-expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Center for Biomolecular Science and Engineering, <http://cbse.ucsc.edu>.

The Human Genome Project, the international collaboration to determine the sequence of human DNA and understand its function, had its origin in a conference that took place at UCSC in 1985. One notable output from our research is that UCSC is the primary release site for the public version of the human genome (<http://genome.ucsc.edu>), as well as the

repository for the ENCODE (Encyclopedia Of DNA Elements) project, a national effort to annotate the entire human genome with multiple functional assays. We also have a strong research group in systems biology, functional genomic characterization of stem cells, and play a lead role in national efforts to discover molecular underpinnings of various cancers, including participating as a Dream Team for the Stand Up To Cancer project and a data-analysis center for The Cancer Genome Atlas project.

The undergraduate bioinformatics degree program prepares students for graduate school or a career in the pharmaceutical or biotechnology industries.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering. A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar with the chemistry and biology required in the field. Thus, this program strives for a balance of the two: an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

The undergraduate degree program in bioinformatics builds a solid foundation in the constituent areas of the field. Students complete core sequences in mathematics (including calculus, statistics, and discrete mathematics), science (including biology, chemistry, and biochemistry), and engineering (including programming, algorithms, and databases). The core topics are brought together in two bioinformatics courses: Biomolecular Engineering 110, Computational Biology Tools, and Biomolecular Engineering 205, Bioinformatics Models and Algorithms. Students have two electives for specialization within the fields of bioinformatics and are required to take Biomolecular Engineering 80G, Bioethics in the Twenty-First Century: Science, Business, and Society to study the ethical, legal, and social implications of this new technology.

Courses for Nonmajors

Biomolecular Engineering 5, Introduction to Biotechnology, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

Biomolecular Engineering 160, Programming for Biologists and Biochemists, provides an introductory programming class using Python and BioPython to analyze, transform, and publish biological data.

Biomolecular Engineering 80G, Bioethics in the Twenty-First Century: Science, Business, and Society, is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 110, Computational Biology Tools, provides an introduction to the tools and techniques of bioinformatics from a users view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 130, Genomes Genome-scale analysis to answer biological questions.

Biomolecular Engineering 155, Biotechnology and Drug Development, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Bioinformatics Policies

Declaration of the Major

Admission to the bioinformatics major is based on the required lower-division courses: BIOL 20A, BIOE 20B, BME 80G, CHEM 1A, CHEM 1B/M, CHEM 1C/N, CMPE 16, CMPS 12A/L (or CMPS 5J and 11 OR CMPE 12/L and CMPE 13/L), CMPS 12B/M, MATH 19A, MATH 19B, MATH 23A, and fundamental upper-division courses: AMS 131, CHEM 108A/L, CHEM 108B/M, and CMPS 101. Students must have completed 50 credits from this list by the end of the fifth quarter. Students must also have a GPA of 2.8 or better in all attempts in these courses. Students changing major after the sixth quarter will need 10 additional credits for

- [Queer and Sexuality Studies](#)
- [Religious Studies](#)
- [Russian](#)
- [Science Communication](#)
- [Social Documentation](#)
- [Social Sciences](#)
- [Sociology](#)
- [Spanish and Spanish for Heritage Speakers](#)
- [Spanish Studies](#)

[Teaching and Administrative Staff](#)

[Appendixes](#)

[Archive of General Catalogs](#)

[Nondiscrimination Statement](#)

[Search the Catalog](#)

each additional quarter.

Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Office, describing why the grade point average obtained is not an accurate reflection of the student's potential, or requesting that other completed upper-division courses be considered in admissions process.

Courses Taken Elsewhere

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

Honors in the Major

Bioinformatics majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on their GPA and on results of undergraduate research. Students with a GPA of 3.7 receive "Highest Honors in the Major." Students with a GPA of 3.3 receive "Honors in the Major." Students with particularly significant accomplishments in undergraduate research may receive honors or highest honors with a lower GPA. Students who have been found guilty of academic misconduct are not eligible for either honors or highest honors.

Transfer Students

Transfer students need eight transferable courses from the list of courses used for admission to the major for on-campus students, with a GPA in those courses of 2.8 or better. Students with fewer than 10 transferable courses may find it difficult to complete the major in only two more years.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Preparation for the Major

Students applying for admission to the bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

Requirements of the Bioinformatics Major

Every bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed course work that meets the major requirements. Because of the enormous breadth of requirements, bioinformatics majors are urged to take honors courses or sections whenever possible to get as much as possible out of the courses they take in each field.

Lower-Division Requirements

Majors must complete the following lower-division courses:

Biology

Biology (BIOL) 20A, Cell and Molecular Biology

Biology (BIOE) 20B, Development and Physiology

Biomolecular Engineering

Biomolecular Engineering 80G, Bioethics in the Twenty-First Century: Science, Business, and Society

Chemistry

Chemistry 1A, 1B/M, and 1C/N, General Chemistry/Laboratory

Computer Engineering

Computer Engineering 16, Applied Discrete Mathematics

Programming 1

Computer Science 12A/L, Introduction to Programming/Laboratory (accelerated); or

Computer Science 5J, Introduction to Programming in Java, and 11, Intermediate Programming; or

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory, and 13/L, Computer Systems and C Programming/Laboratory

Programming 2

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Mathematics

Mathematics 20A–B, Honors Calculus; or

Mathematics 19A–B, Calculus for Science, Engineering, and Mathematics (Credit for one or both can be granted with adequate performance on the College Entrance Examination Board (CEEB) calculus AB or BC Advanced Placement examination.)

Mathematics 23A, Multivariable Calculus

Upper-Division Requirements

Majors must complete the following upper-division courses:

Applied Mathematics and Statistics

Applied Mathematics and Statistics 131, Introduction to Probability Theory

Applied Mathematics and Statistics 132, Statistical Inference

Biochemistry and Molecular Biology

Biochemistry 100A, Biochemistry (first in three-part sequence)

Bioinformatics

Biomolecular Engineering 110, Computational Biology Tools

Biomolecular Engineering 130, Genomes

Biomolecular Engineering 205, Bioinformatics Models and Algorithms

One of the following:

Biomolecular Engineering 211, Computational Systems Biology; or

Biomolecular Engineering 230/L, Computational Genomics/Laboratory; or

Biomolecular Engineering 195, Senior Thesis Research

Biology (BIOL)

Biology 105, Genetics

Chemistry

Chemistry 108A/L and 108B/M, Organic Chemistry/Laboratory; or

Computer Engineering

Computer Engineering 185, Technical Writing for Computer Engineers

Computer Science

Computer Science 101, Algorithms and Abstract Data Types

One of the following:

Computer Science 182, Introduction to Database Management Systems, or
Computer Science 180, Database Systems.

Advanced Programming

Computer Science 109, Advanced Programming

Required Electives

Students must select one additional course as an elective, justify their choice in writing, and get the choice approved by their faculty adviser. The following courses are typical of the ones chosen, but do not constitute a pre-approved list:

Applied Mathematics and Statistics 162

Biochemistry 100B, 100C, 110

Biology 105L, 105M, 109L, 110, 115, 115L, 117A, 117B, 140, 187L, 200A, 200B

Biomolecular Engineering 101/L, 102, 109, 128, 140, 150/L, 155, 177, 178, 211, 230

Computer Engineering 108, 177

Computer Science 104A, 105, 115, 116, 130, 140, 142, 160/L

Microbiology and Environmental Toxicology 119, 119L

Technology and Information Management 105, 206

Note: many of these courses are offered only once a year and have long prerequisite chains, so advance planning is necessary to make sure elective courses can be fit into the student's schedule.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. Bioinformatics majors satisfy the DC requirement by completing Computer Engineering 185, Technical Writing for Engineers.

Comprehensive Requirement

The bioinformatics comprehensive requirement can be met by taking Biomolecular Engineering 211, Computational Systems Biology; or Biomolecular Engineering 230/L, Computational Genomics, which include substantial projects; or Biomolecular Engineering 195, Senior Thesis Research. Students electing the senior thesis must submit a written thesis proposal to the undergraduate director of bioinformatics for approval one quarter prior to submitting the final thesis.

Requirements of the Bioinformatics Minor

Where the bioinformatics major is intended for people who wish to become bioinformaticians and create the tools needed to solve new problems in computational biology, the bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

A bioinformatics minor consists of the following 16 courses:

Lower-division (10 courses)

Biology (2)

Biology 20A, Cell and Molecular Biology; and

Biology 20B, Development and Physiology

General chemistry (3)

Chemistry 1A, 1B/M, and 1C/N

Single-Variable Calculus (2)

Mathematics 19A and 19B (preferred); or

Mathematics 11A and 11B; or

Mathematics 20A and 20B

Programming 1 (1)

Computer Science 12A/L; or

Computer Science 5J and 11; or

Computer Engineering 12/L and 13/L

Programming 2 (1)

Biomolecular Engineering 160/L; or

Computer Science 12B/M

Bioethics (1)

Biomolecular Engineering 80G

Upper-division (6 courses)

Organic chemistry (1)

Chemistry 108A

Biochemistry (1)

Biochemistry 100A; or

Chemistry 103; or

Biology 100

Statistics (2)

Computer Engineering 107; or

Applied Mathematics and Statistics 131

Applied Mathematics and Statistics 132

Bioinformatics (1)

Biomolecular Engineering 110

Elective(1)

Biochemistry 100B; or

any other upper-division or graduate biomolecular engineering course

The bioinformatics minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed in Major and Minor Requirements. Majors with substantial overlap include biochemistry, bioengineering, all biology majors, chemistry, computer science, and computer engineering. Students pursuing one of these majors are particularly encouraged to consider the bioinformatics minor.

The Bioinformatics Combined B.S./Graduate Degree Program

Because our bioinformatics B.S. program provides excellent preparation for a graduate program in bioinformatics, we offer a combined B.S./graduate degree program that allows our B.S. students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less tailored preparation.

The current B.S. and graduate requirements have four courses in common:

Biomolecular Engineering 80G, Bioethics in the 21st Century

Biomolecular Engineering 205, Bioinformatics Models and Algorithms

Biomolecular Engineering 230, Computational Genomics

Applied Mathematics and Statistics 206, Bayesian Statistics

The combined B.S./graduate degree program does not make any changes to the undergraduate program, except that students must pass the four overlapping courses listed above for a grade of B- or better.

The requirements at the graduate level are changed to remove the four courses that overlap with the B.S. and to add two graduate electives to be chosen by the students with the approval of their advisers. Thus, the total number of full courses required is reduced from nine to seven.

To apply for the combined program, students apply to the M.S. or Ph.D. program through the normal graduate admission process in the fall of their senior year. If admitted into the graduate program, they are automatically included in the combined B.S./M.S. or B.S./Ph.D. program.

Bioinformatics Major Planners

As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters. Students considering pursuing a bioengineering or bioinformatics degree should follow the biomolecular engineering concentration of the bioengineering B.S. program and complete the programming sequence (Computer Science 12A and 12B) by the end of their second year.

Four-year plans require individual design to fit in the desired electives, so only the first two years of the academic plan are presented here. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated laboratories in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Biomolecular Engineering 205, Bioinformatics Models and Algorithms, should be taken after Biomolecular Engineering 110, Computational Biology Tools.

Sample Plan

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19B	MATH 23A
	CHEM 1A	CHEM 1B/M	CHEM 1C/N
	college core	gen ed	gen ed
2nd (soph)	BIOL 20A	CMPS 12A/L	CMPS 12B/M
	CHEM 108A/L	BIOE 20B	CMPE 16
	BME 80G	gen ed	gen ed

Biomolecular Engineering and Bioinformatics Graduate Program

The Department of Biomolecular Engineering offers interdisciplinary M.S. and Ph.D. degrees in biomolecular engineering and bioinformatics.

Course Requirements

Both masters and doctoral students must complete eight, 5-credit courses and one 3-credit

research and teaching course. In addition, M.S. students must complete three seminar courses, while Ph.D. students must complete five seminar courses. M.S. students must also complete one lab rotation, and Ph.D. students must complete three research laboratory rotations (course 296) with different supervisors.

Core courses (5–credit) six are required

Bioinformatics Emphasis

- BME 205, Bioinformatics Models and Algorithms
- Two Biomolecular Engineering graduate courses from the bioinformatics list
- One Biomolecular Engineering graduate course from the biomolecular engineering list
- One graduate statistics course (Applied Mathematics and Statistics 206B recommended)
- One graduate course from MCD Biology, Chemistry and Biochemistry, or Microbiology and Environmental Toxicology

Biomolecular Engineering Emphasis

- BME 250, Molecular Biomechanics
- Two Biomolecular Engineering graduate course from the biomolecular engineering list
- One Biomolecular Engineering graduate courses from the bioinformatics list
- Two graduate courses from Applied Mathematics and Statistics, MCD Biology, Chemistry and Biochemistry, or Microbiology and Environmental Toxicology

Ethics Course (5–credit) one is required

- BME 80G, Bioethics in the Twenty–First Century: Science, Business, and Society
- Sociology 268A, Science and Justice: Experiments in Collaboration.

Electives (5–credit) one is required

One graduate course consistent with the students degree objectives. With preapproval by the graduate director, this elective may be an upper–division undergraduate course selected to improve background in areas not studied as an undergraduate.

Independent or thesis research courses cannot be counted as electives.

Students must choose courses with faculty guidance and approval to balance their preparation and make up for deficiencies in background areas. With consent of the graduate director, variations in the composition of the required courses may be approved.

Other Curriculum Requirements

BME 200, Research and Teaching in Bioinformatics, 3 credits

Seminars

M.S. students: a minimum of three seminar courses, including at least one quarter of the 2–credit Biomolecular Engineering seminar, 280B

Ph.D. students: a minimum of six seminar courses, including at least two quarters of the 2–credit Biomolecular Engineering seminar, 280B

Before and after advancement, full–time Ph.D. students are required to enroll in at least one seminar course each quarter (e.g., 280 or 281), and must present the results of their ongoing research at least once each year. Because the intent of the seminar requirement is to ensure breadth of knowledge, lab group meetings (BME 281 courses) do not count for the seminar requirement.

Research Experience

M.S. students: one laboratory rotation (BME 296), and one quarter of independent study (BME 297).

Ph.D. Students: three laboratory rotations (course 296), generally within the first 12 months.

One of the laboratory rotations must be with a faculty supervisor who does wet-lab research, though the students rotation project may be purely computational.

Course Lists

The following are the bioinformatics and biomolecular engineering course lists. The lists are subject to change as courses and course content changes. The graduate office maintains the current list.

Bioinformatics list: 205, 211, 230, 235

Biomolecular Engineering list: 215, 250, 255

Qualifying Examinations

Ph.D. students are required to pass the qualifying examination and advance to candidacy by the end of their second year.

Adequate Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

Masters Capstone Requirement

M.S. students must complete a one-quarter research project with written report to fulfill the capstone requirement. In consultation with the faculty adviser, the student forms a Master's Capstone Reading Committee of at least two faculty members (including the adviser), each of whom is provided a copy of the project report. The final project report must be signed by the reading committee before the award of the Master of Science Degree.

Doctoral Dissertation Requirements

Ph.D. students must select a faculty research adviser by the end of the first year. A qualifying examination committee is then formed in the second year, which consists of the adviser and three additional members, and which is approved by the graduate director and the campus graduate dean. At least two of the four must be members of the Department of Biomolecular Engineering. The student must submit a written dissertation proposal to all members of the committee and the graduate program adviser one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee.

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the graduate director upon the recommendation of the dissertation supervisor. At least one of the three must be a member of the Department of Biomolecular Engineering. The candidate will present his or her research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

Transfer Limitations

Up to two courses may be transferred from other graduate institutions with the approval of the faculty adviser and the graduate director.

Computer Engineering

2014–15 General Catalog

Baskin School of Engineering

(831) 459–2158

<http://www.soe.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The UCSC Department of Computer Engineering sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering. The department offers the bachelor of science (B.S.) in computer engineering, the bachelor of science in robotics engineering, the bachelor of arts (B.A.) in digital and network technology, the master of science (M.S.) and the doctor of philosophy (Ph.D.) in computer engineering degrees as well as an undergraduate minor. A combined B.S./M.S. program allows students to complete both the B.S. and M.S. in computer engineering degrees in five years. The department administers the interdisciplinary graduate designated emphasis in robotics and control that may be pursued along with a graduate degree in computer engineering or another field such as applied mathematics and statistics or electrical engineering.

Undergraduate Program Description

The department offers two bachelor of science majors, one in computer engineering and the other in robotics engineering. The department also offers a bachelor of arts in network and digital technology. The programs are closely related with many common requirements, so that students do not need to immediately decide among the three.

The two undergraduate engineering degrees have the same program objectives for their graduates. The program objectives of the UCSC B.S. in computer engineering and B.S. in robotics engineering are:

1. Graduates who choose to pursue a career in industry, government, or academia will become successful engineers, scientists, or educators who demonstrate strong leadership, technical, and team skills; and a commitment to continuing professional development.
2. Graduates who choose to pursue advanced degrees will gain admission to graduate programs and will be successful graduate students.

The UCSC B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical

principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. Because computer engineering is so broad, the B.S. in computer engineering offers five specialized concentrations for completing the program: systems programming, computer systems, robotics and control, networks, and digital hardware.

Descriptions of these concentrations follow in the section on major requirements.

The UCSC B.S. in robotics engineering prepares graduates for a rewarding career at the interfaces between electrical, computer, and mechanical engineering. UCSC robotics engineering graduates will have a thorough grounding in the principles and practices of robotics and control, and the scientific and mathematical principles upon which they are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

The UCSC B.A. in network and digital technology provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes that make those technologies function. The program is tailored to students who wish to combine technology with other fields or have a general focus on digital design or computer networks. The B.A. in network and digital technology is not an engineering degree, but B.A. graduates will be prepared to work with technology development in other capacities, or join the computer network workforce. Students interested in graduate study should pursue either B.S. program.

The Department of Computer Engineering offers an undergraduate minor, described after the B.A. program below. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded systems, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty-led research projects to take part in cutting-edge research. The department sponsors the summer undergraduate research fellowship in information technology (SURF-IT), as well as many other research opportunities. The department holds regular faculty-undergraduate lunches to discuss research and other issues of interest.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers a combined B.S./M.S. program in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering and robotics engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the Ph.D. degrees.

The computer engineering B.S. program is accredited by the ABET Engineering Accreditation Commission.

Courses for Nonmajors

The Department of Computer Engineering offers course Computer Engineering 1, Hands-on Computer Engineering, a two-credit laboratory course designed to introduce students to computer engineering via many short fun projects; course Computer Engineering 3, Personal Computer Concepts: Software and Hardware, providing students an introductory course on the design and use of computers from an engineering viewpoint; and Computer Engineering 8, Robot Automation: Intelligence through Feedback Control. Other computer engineering courses of interest to nonmajors include Computer Engineering 12, Computing Systems and Assembly Language, an introductory course on computer systems, system software, and machine-level programming; Computer Engineering 80N, Introduction to Networking and the Internet, an introduction to technological services of the Internet; Computer Engineering 80E, Engineering Ethics; and Computer Engineering 80A, Universal Access: Disability, Technology, and Society.

Computer Engineering Policies

Advising for Proposed Majors

Students interested in pursuing any of the department's three majors but not yet ready to declare should have their status updated to reflect the associated proposed major. They should also visit the Baskin School of Engineering undergraduate advising office to plan a course of study that will allow them to complete any of the department's three majors as well as preserve their options for other majors that might be of interest. Computer engineering proposed majors will be assigned a faculty adviser on request and invited to School of Engineering and Computer Engineering advising events. Please note that students who are proposed majors still need to follow the procedure for declaring one of the three majors as describe below; a student may not graduate as a proposed major.

Declaration of the Computer Engineering Majors

Declaration of the computer engineering major in the first six quarters of enrollment at UCSC is based on performance in the CE Major Qualification Courses: Mathematics 19A, Mathematics 19B, Mathematics 23A, Applied Mathematics and Statistics 10 or Mathematics 21 (whichever is completed first), Applied Mathematics and Statistics 20, Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L and Physics 5C/N. Students in their first six quarters who have completed at least 36 credits in these courses will be admitted to the computer engineering major if:

1. their cumulative grade point average is at least 2.8 in all of the CE Major Qualification Courses attempted; and
2. they have no more than 7 credits resulting in grades of D, F or NP among all of the CE Major Qualification Courses attempted.

All other applications for admission to the major in the first six quarters of enrollment will be reviewed individually to ensure the major can be completed within the campus limits. After the first six quarters petitions to declare the major are reviewed individually to ensure the major can be completed within the campus limits. Students seeking to change their current major to computer engineering in their seventh through ninth quarters who have completed the four upper-division classes and associated labs, Computer Engineering 100/L, Computer Engineering 107, Computer Science 101 and Electrical Engineering 101/L with a cumulative grade point average of at least 2.50 or greater and have completed all of the lower-division courses listed above by their ninth quarter will also be admitted.

Declaration of the robotics engineering major in the first six quarters of enrollment at UCSC is based on performance in the following lower-division courses and associated labs required for the major: Mathematics 19A, Mathematics 19B, Mathematics 23A, Applied Mathematics and Statistics 10 or Mathematics 21 (whichever is completed first), Applied Mathematics and Statistics 20, Computer Engineering 9, Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L and Physics 5C/N. Students in their first six quarters who have completed at least 41 credits in these courses will be admitted to the computer engineering major if

1. their cumulative grade point average is at least 2.8 among the courses listed above; and
2. they have attempted no more than 7 credits resulting in grades of D, F or NP in all of the courses listed above.

All other applications for admission to the major in the first six quarters of enrollment will be reviewed individually to ensure the major can be completed within the campus limits. After the first six quarters petitions to declare the major are reviewed individually to ensure the major can be completed within the campus limits. Students seeking to change their current major to robotics engineering in their seventh through ninth quarters who have completed the five upper-division classes and associated labs, Computer Engineering 100/L, Computer Engineering 107, Computer Science 101, Electrical Engineering 101/L and Electrical Engineering 103/L with a cumulative grade point average of at least 2.50 or greater and have completed all of the lower-division courses listed above will also be admitted.

Declaration of the network and digital technology major is based on performance in the following lower-division courses and associated labs required for the major: Math 19A, Math 19B, Math 23A, Applied Mathematics and Statistics 10 or Mathematics 21 (whichever is completed first), Applied Mathematics and Statistics 20 or Mathematics 24 (whichever is completed first), Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L or Physics 6A/L and Physics 5C/N or Physics 6C/N. Students in their first six quarters who have completed at least 36 credits in these courses with a cumulative grade point average of at least 2.30 or greater will be admitted to the network and digital technology major. After the first six quarters petitions to change a student's major to network and digital technology are reviewed individually to ensure the major can be completed within the campus limits. Students seeking to change their current major to network and digital technology after their sixth quarter must have completed the courses listed above with a cumulative grade point average of at least 2.30.

Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Office, addressed to the Computer Engineering Undergraduate Director, describing why the grade point average obtained is not an accurate reflection of the student's potential.

Transfer Students

Admission to the Computer Engineering Major and Robotics Engineering Major for transfer students is based on performance in all attempts at courses transferable to UCSC as Mathematics 19A, Mathematics 19B, Mathematics 23A, Applied Mathematics and Statistics 10 or Mathematics 21, Applied Mathematics and Statistics 20, Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L and Physics 5C/N. Before they transfer, students must complete Physics 5A/L, Physics 5C/M, Mathematics 19A, Mathematics 19B and at least one of the following three: Mathematics 23A, Applied Mathematics and Statistics 10 or Mathematics 21, Applied Mathematics and Statistics 20. In addition, completion of at least one programming course (even if not articulated) is required.

Admission to the Network and Digital Technology Major for transfer students is based on performance in all attempts at courses transferable to UCSC as Mathematics 19A, Mathematics 19B, Mathematics 23A, Applied Mathematics and Statistics 10 or Mathematics 21, Applied Mathematics and Statistics 20 or Mathematics 24, Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L or Physics 6A/L and Physics 5C/N or Physics 6C/N. Before transferring students must have completed at least 5 of these courses and their associated labs including at least one programming course (even if the programming course is not articulated).

Students should consult assist.org to determine which courses at other institutions in California are transferable to UCSC.

Advising

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed coursework that meets the major or minor requirements. Additional information can be found on the [SOE web pages](#).

Restrictions on Double Majors and Minors

Students completing any of the department's three majors cannot also receive the computer engineering minor.

Students completing the Robotics Engineering B.S. or the Computer Engineering BS cannot receive the Network and Digital Technology B.A. degree.

Students completing the Robotics Engineering B.S. can receive the Computer Engineering B.S. as well only by completing a concentration other than Robotics and Control.

Honors in the Major

Majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on their GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with a GPA of 3.70, in most cases, receive highest

honors. Students with a GPA of 3.30, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower GPA. Computer engineering and robotics engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Letter Grade Policy

The Computer Engineering Department requires letter grading for all courses applied towards any of its three undergraduate degrees: the B.S. in computer engineering, the B.S. in robotics engineering and the B.A. in network and digital technology. This policy includes courses required for these degrees that are sponsored by other departments.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees under the School of Engineering.

Requirements of the Computer Engineering Major

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence. The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the exit requirement.

Lower-Division Core Requirements

Students who may have originally pursued another major should discuss with the Baskin School of Engineering undergraduate advising office whether or not already completed coursework may be substituted for one or more lower-division requirements.

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or Mathematics 21, Linear Algebra

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II;

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A, Multivariable Calculus

Physics 5A/L, Introduction to Physics I /Laboratory;

Physics 5B/M, Introduction to Physics II/Laboratory; or Computer Engineering 9, Statics, Dynamics, and Biomechanics (recommended for robotics and control concentration).

Physics 5C/N, Introduction to Physics III/Laboratory;

Computer Engineering 80E, Engineering Ethics; or another approved ethics course. This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L, Logic Design/Laboratory

Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic

Computer Engineering 110, Computer Architecture

Computer Engineering 121 /L, Microprocessor System Design/Laboratory

Computer Engineering 185, Technical Writing for Computer Engineers

Computer Science 101, Abstract Data Types

Electrical Engineering 101 /L, Introduction to Electronics/Laboratory

Electrical Engineering 103/L, Signals and Systems/Laboratory

Concentrations

The following concentrations are specializations for the computer engineering student. Students must complete all of the courses listed within their selected concentration.

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems of all types. This concentration is the closest one to a computer science major—the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

Computer Science 111, Introduction to Operating Systems

Computer Science 115, Software Methodology

Computer Engineering 150/L, Introduction to Computer Networks/Laboratory

Elective: Upper-division or graduate elective from the approved list

Any one of the following courses:

Computer Engineering 113, Parallel and Concurrent Programming

Computer Engineering 156/L, Network Programming/Laboratory

Computer Science 104A, Fundamentals of Compiler Design I

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

Computer Engineering 125/L, Logic Design with Verilog/Laboratory

Computer Science 109, Advanced Programming; or Computer Science 115, Software Methodology

Computer Science 111, Introduction to Operating Systems

Elective: Upper-division or graduate elective from the approved list

Robotics and Control Concentration

This concentration covers the hardware, software, sensing, and control aspects of autonomous and embedded systems. Students receive training in the theory, design, and realization of complex systems such as mobile robots. The concentration emphasizes integration of embedded software with hardware systems that interact with the environment.

Any two of the following:

Computer Engineering 118/L, Introduction to Mechatronics/Laboratory

Computer Engineering 167/L, Sensing and Sensor Technologies/Laboratory

Computer Engineering 141, Feedback Control Systems

Elective: Upper-division or graduate elective from the approved list

Third course from above (Computer Engineering 118/L, Computer Engineering 167/L, Computer Engineering 141); or any one of the following courses:

Computer Engineering 115, Solid Mechanics (requires prerequisite)

Computer Engineering 153, Digital Signal Processing

Applied Mathematics and Statistics 114, Introduction to Dynamical Systems

Computer Engineering 215, Models of Robotic Manipulation

Computer Engineering 216, Bio-Inspired Locomotion

Computer Engineering 240, Introduction to Linear Dynamical Systems

Computer Engineering 242, Applied Feedback Control

Computer Engineering 244, Digital Control

Computer Engineering 264, Image Analysis and Computer Vision

Networks Concentration

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

Computer Engineering 150/L, Introduction to Computer Networks/Laboratory

Computer Engineering 156/L, Network Programming/Laboratory

Computer Science 111, Introduction to Operating Systems

Elective: Computer Engineering 151/L, Advanced Computer Networks/Laboratory; or an upper-division or graduate elective from approved list.

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

Computer Engineering 125/L, Logic Design with Verilog/Laboratory

Electrical Engineering 171/L, Analog Electronics/Laboratory

Elective: Upper-division or graduate elective from approved list

Any one of the following courses:

Computer Engineering 122, Introduction to VLSI Digital System Design

Electrical Engineering 173/L, High-Speed Digital Design/Laboratory (requires prerequisite)

Computer Engineering 202, Computer Architecture

Computer Engineering 222, Advanced VLSI Digital System Design

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in computer engineering is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

Capstone Requirement

All computer engineering students complete either the two-quarter capstone project sequence Computer Engineering 123A/B, or the three-quarter capstone project sequence Computer Engineering 129A/B/C or a senior thesis along with the first capstone course.

One of the following sequences:

Computer Engineering 123A, Computer Engineering Design Project I and Computer Engineering 123B, Computer Engineering Design Project II;

Computer Engineering 123A, Computer Engineering Design Project I and Computer Engineering 195, Senior Thesis Research

Computer Engineering 129A, Capstone Project I; and Computer Engineering 129B, Capstone Project II; and Computer Engineering 129C, Capstone Project III

Computer Engineering 129A, Capstone Project I and Computer Engineering 195, Senior Thesis Research

Exit Requirement

Students are required to submit a portfolio, complete the exit survey, and attend an exit interview. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically by the last day of the quarter of graduation. The online form can be found on the [computer engineering web pages](#).

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the following:

- A hardware-oriented project report;
- A software-oriented project report;
- A third project report of the student's selection;

and any additional information related to these projects requested.

If a project report is associated with a course, it must be an upper-division (other than CMPE100/L) or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Exit interviews are scheduled during the last week of the quarter.

Computer Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the computer engineering major. Plan One is suggested guidelines for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major. Students who take pre-calculus at UCSC, or who have little programming experience, are strongly advised to take course 8, Robot Automation in the fall quarter.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19B	CMPE 80E
	CMPE 12/L	CMPE 13/L	CMPS 12B/M
	core course	gen ed	MATH 23A
2nd (soph)	PHYS 5A/L	AMS 20	PHYS 5C/N
	AMS 10	CMPE 107	CMPE 100/L
	CMPE 16	PHYS 5B/M	CMPS 101

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	MATH 3 (pre-calc)	MATH 19A	MATH 19B
	CMPE 8	CMPE 12/L	CMPE 13/L
	core course	gen ed	CMPE 80E
2nd (soph)	PHYS 5A/L	CMPE 100/L	PHYS 5C/N
	CMPS 12B/M	CMPE 9	MATH 23A
	AMS 10	AMS 20	CMPE 16

Requirements of the Robotics Engineering Major

All students in the robotics engineering major must take the courses listed below. Although not required, it is strongly recommended that students interested in the robotics engineering major take Computer Engineering 8, Introduction to Robot Automation in their first quarter. The senior comprehensive requirement for robotics engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement. The robotics engineering major requires two more courses than the computer engineering major, including one graduate course. Students not making sufficient progress in the major may be required to change to another major.

Lower-Division Core Requirements

Students who may have originally pursued another major should discuss with the Baskin School of Engineering undergraduate advising office whether or not already completed coursework may be substituted for one or more lower-division requirements.

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or
Mathematics 21 Linear Algebra

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A, Multivariable Calculus

Physics 5A/L, Introduction Physics /Laboratory I

Physics 5C/N, Introduction Physics III/Laboratory

Computer Engineering 9, Statics, Dynamics, and Biomechanics

Computer Engineering 80E, Engineering Ethics; or another approved ethics course. This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L, Logic Design/Laboratory

Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic

Computer Engineering 115, Solid Mechanics

Computer Engineering 118/L, Introduction to Mechatronics/Laboratory

Computer Engineering 121/L, Microprocessor System Design/Laboratory

Computer Engineering 141, Feedback Control Systems

Computer Engineering 167/L, Sensing and Sensor Technologies/Laboratory

Computer Engineering 185, Technical Writing for Computer Engineers

Computer Science 101, Abstract Data Types

Electrical Engineering 101/L, Introduction to Electronics/Laboratory

Electrical Engineering 103/L, Signals and Systems/Laboratory

Elective: Upper-division or graduate elective from approved list.

Advanced Robotics Elective (One of the following courses):

Computer Engineering 215, Models of Robotic Manipulation

Computer Engineering 216, Bio-Inspired Locomotion

Computer Engineering 240, Introduction to Linear Dynamical Systems

Computer Engineering 242, Applied Feedback Control

Computer Engineering 244, Digital Control

Computer Engineering 264, Image Analysis and Computer Vision.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in robotics engineering is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

Capstone Requirement

All robotics engineering students complete either the two-quarter capstone project sequence Computer Engineering 123A/B, or the three-quarter capstone project sequence Computer Engineering 129A/B/C or a senior thesis along with the first capstone course:

One of the following sequences:

Computer Engineering 123A, Computer Engineering Design Project I and Computer Engineering 123B, Computer Engineering Design Project II;

Computer Engineering 123A, Computer Engineering Design Project I and Computer Engineering 195, Senior Thesis Research

Computer Engineering 129A, Capstone Project I; and Computer Engineering 129B, Capstone Project II; and Computer Engineering 129C, Capstone Project III

Computer Engineering 129A, Capstone Project I and Computer Engineering 195, Senior Thesis Research

Exit Requirement

Students are required to submit a portfolio, complete the exit survey and attend an exit interview. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include three project reports of the student's selection and any additional information related to these projects requested. The online portfolio form can be found on the [computer engineering web pages](#). If a project report is associated with a course, it must be an upper-division (other than Computer Engineering 100/L) or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Robotics Engineering Major Planner

Year	Fall	Winter	Spring

Network and Digital Technology Major Requirements

All students in the network and digital technology major must take the following courses. The senior comprehensive requirement is satisfied by completion of the capstone course and the portfolio exit requirement.

Lower-Division Requirements

Students who may have originally pursued another major should discuss with the Baskin School of Engineering undergraduate advising office whether or not already completed coursework may be substituted for one or more lower division-requirements.

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or Mathematics 21, Linear Algebra

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II; or Mathematics 24, Ordinary Differential Equations

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Mathematics 19A–B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A, Multivariable Calculus

Physics 5A/L, Introduction Physics /Laboratory I; or Physics 6A/L, Introductory Physics I/Laboratory

Physics 5C/N, Introduction Physics III/Laboratory; or Physics 6C/N, Introductory Physics III/Laboratory

Upper-Division Requirements

Computer Engineering 100/L, Logic Design/Laboratory

Computer Engineering 150/L, Computer Networks/Laboratory

Computer Engineering 185, Technical Writing for Computer Engineers

Computer Science 101, Abstract Data Types; or Electrical Engineering 101/L, Introduction to Electronics/Laboratory

Three additional 5-credit upper-division electives, and associated laboratories, from the approved list of electives, and one capstone requirement course.

Capstone Requirement

Each capstone course features a 3-month supervised design experience in digital or network technology culminating in a substantial written report. Computer Engineering 185, Technical Writing for Computer Engineers, must be completed prior to or concurrently with the capstone project course. Students must notify the instructor at the start of the quarter that they are working to complete their B.A. in Digital Technology Capstone Requirement. Students select one of the following:

Computer Engineering 118/L, Introduction to Mechatronics/Laboratory

Computer Engineering 121/L, Microprocessor System Design/Laboratory

Computer Engineering 125/L, Logic Design with Verilog/Laboratory

Computer Engineering 151/L, Advanced Computer Networks/Laboratory

Computer Engineering 156/L, Network Programming/Laboratory

Computer Science 115, Software Methodology

Elective Choice

Students wishing to focus on digital technology should consider including among their courses: Electrical Engineering 101/L, Computer Engineering 110, Computer Engineering 118/L, Computer Engineering 121/L, and Computer Engineering 125/L.

Students wishing to focus on network technology should consider including among their courses: Computer Science 101, Computer Engineering 151/L, Computer Engineering 156/L, and Computer Science 111.

In all cases, students should discuss their interests and elective choices with their faculty adviser.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in network and digital technology is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

Network and Digital Technology Major Planner

The first year is similar to option 2 for the computer engineering major. Students choosing between the B.S. and the B.A. program should follow the B.S. curriculum until major declaration. General education courses needed outside major requirements are not shown.

Year	Fall	Winter	Spring
1st (frsh)	MATH 3 (pre-calc)	MATH 19A	MATH 19B
	CMPE 8 (opt)	CMPE 12/L	CMPE 13/L
2nd (soph)	CMPE 16	CMPE 100/L	CMPS 12B/M
	PHYS 5A/L	MATH 23A	PHYS 5C/N
3rd (jr)	CMPE 150/L	Elective	Elective

	AMS 10	AMS 20	
4th	EE 101 /L	Elective	Capstone
(sr)	CMPE 185		

Computer Engineering Minor

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Computer Engineering 118/L, Introduction to Mechatronics/Introduction to Mechatronics Laboratory or Computer Engineering 121/L, Microprocessor System Design/Microprocessor System Design Laboratory provides a capstone engineering design experience for students pursuing the computer engineering minor.

Computer Engineering Minor Requirements

Requirements for the minor in computer engineering are the following:

Applied Mathematics and Statistics 20A or 20, (Basic) Mathematical Methods for Engineers II (requires prerequisite); or Mathematics 24, Ordinary Differential Equations

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Computer Engineering 100/L, Logic Design/Laboratory

Computer Engineering 110, Computer Architecture

Computer Engineering 118/L Introduction to Mechatronics/Laboratory or 121/L, Microprocessor System Design/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming (recommended); or Computer Science 12A/L, Introduction to Programming (Accelerated)/Laboratory; or Computer Science 5J, Introduction to Programming in Java, and Computer Science 11, Intermediate Programming

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Science 101, Abstract Data Types

Electrical Engineering 101/L, Introduction to Electronics/Laboratory

Mathematics 19A–B, Calculus for Science, Engineering, and Mathematics

Physics 5A/L, Introduction to Physics I/Laboratory; or Physics 6A/L, Introductory Physics I/Laboratory

Physics 5C/N, Introduction to Physics III/Laboratory; or Physics 6C/N, Introductory Physics III/Laboratory

B.S./M.S. Undergraduate Program

The Department of Computer Engineering offers a combined bachelor and master of science degree program. Undergraduate students in computer engineering or robotics engineering can apply to the program in order to earn a B.S. degree in their own major together with an M.S. degree in computer engineering. Depending on the student's progress, the B.S./M.S. program can be completed in five years.

The B.S./M.S. program offers a competitive edge to students who are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The program assists qualified enrolled students with a simplified graduate application process that does not require students to take the graduate record examination (GRE), and makes it possible to complete

an M.S. degree with just seven courses beyond the B.S. program in either of the allowed majors.

The program prepares students for leadership positions in industry, and is also attractive for undergraduate students planning to pursue a Ph.D. degree targetting research careers in industry or academia. The School of Engineering has many opportunities for undergraduate research, and B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for financial support as graduate research assistants and teaching assistants.

Particularly motivated B.S./M.S. students can complete the entire program in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career—no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate coursework in advance of graduate standing.

Admission to the B.S./M.S. Program

The undergraduate degree requirements are the same as those for other computer engineering or robotics engineering majors; however, the B.S./M.S. program capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may use (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. Furthermore, B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. program is by formal application, but is very simple.

Undergraduate applicants seeking admission to the program can apply at any time starting in the first quarter of junior standing, and no graduate record examination (GRE) is required to apply. To qualify, applicants must have a 3.0 GPA when they apply to the B.S./M.S. program, and must maintain a 3.0 GPA or higher until the completion of their undergraduate requirements.

Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the program are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year.

Additional information about this program can be found on the [department's web pages](#).

Graduate Programs

M.S. and Ph.D. Degree Programs

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UCSC are computer networks; embedded and autonomous systems; computer systems design; robotics and control, mobile and pervasive computing; and computer-aided design; and sensing and interaction.

The computer engineering program benefits from a close relationship with other graduate programs in the School of Engineering and UCSC as a whole. It maintains strong ties to local industry in the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in academia and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's

web pages at <http://ce.soe.ucsc.edu/academics/graduate/requirements>.

Base Requirement (for both M.S. and Ph.D)

In their first year, graduate students (both M.S. and Ph.D.) must show proficiency in three fundamental subjects: 1) computer algorithms and data structures; 2) computer architecture; and 3) one of the following three subjects—logic design, circuits, or software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final examination (or project when deemed appropriate by the responsible faculty) of an associated course. Students should obtain a computer engineering base requirement worksheet for the list of associated courses and instructions on fulfilling this requirement.

All graduate students (both M.S. and Ph.D.) must meet the base requirement by the end of the spring quarter of their first year in the program.

Requirements for the Master's Degree Thesis Track

Course Requirements

Each M.S. student is required to complete a total of at least 48 credits. The coursework must include:

1. Completion of base requirement as described above.
2. Core requirements:
 - Computer Engineering 200, Research and Teaching in Computer Science and Engineering (to be taken in fall quarter of the first year)
 - Computer Science 201, Analysis of Algorithms
 - Computer Engineering 202, Computer Architecture
3. Research credits: Up to 10 credits of Computer Engineering 297, Independent Study or Research; or Computer Engineering 299, Thesis Research
4. Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate director approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval).
5. All remaining courses must be regular 5-credit graduate courses from within the School of Engineering (with adviser and grad director approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

Thesis

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. It is recommended that the student give an expository talk on the thesis research. The approved reading committee must accept the final thesis before the master of science degree can be awarded.

Requirements for the Master's Degree Project Track

Course Requirements

Each student is required to complete a total of at least 48 credits. The coursework must include:

1. Completion of base requirement as describe above.

2. Core requirements:

- Computer Engineering 200, Research and Teaching in Computer Science and Engineering (to be taken in Fall quarter of first year)
- Computer Science 201, Analysis of Algorithms
- Computer Engineering 202, Computer Architecture
- Computer Engineering 296, Master's Project, 2 credits;

3. Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate director approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval).

4. All remaining courses must be regular, 5-credit graduate courses from within the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

Project

Completion of a master's project is required to satisfy the master's degree capstone requirement. The master's project is the culmination of the student's academic experience and builds upon the knowledge acquired during the program. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of:

1. Completion of base requirement as describe above

2. Core requirements:

- Computer Engineering 200, Research and Teaching in Computer Science and Engineering (to be taken in fall quarter of the first year)
- Computer Science 201, Analysis of Algorithms
- Computer Engineering 202, Computer Architecture

3. Research credits: Up to 10 credits of Computer Engineering 297, Independent Study or Research; or Computer Engineering 299, Thesis Research

4. Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate director approval).

5. All remaining credits must be regular, 5-credit graduate courses from within the School of Engineering (with adviser and computer engineering graduate director approval); credits that do not count include all courses numbered 200, 280, 296, 297, and 299. At least 20 credits of these remaining courses must be Computer Engineering courses.

Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Internships

Where appropriate, research internships with companies, research organizations, or

government labs are recognized as an integral part of the research leading to the Ph.D. dissertation. At the adviser's discretion, internships in an appropriate company, research organization, or government lab may be required for individual students.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter.

Examination committees consist of four faculty members, two chosen by the student and two by the computer engineering graduate director. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate director. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying examination committee, approved by the computer engineering graduate director and the graduate council. The student must submit his or her written dissertation proposal to all members of the qualifying examination committee and the graduate adviser at least one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

M.S. students who have previously successfully completed graduate-level classes in a related field at another institution may substitute courses from their previous institution with the approval of the graduate director. The number of courses that can be substituted is limited so that, in all cases, students must complete a minimum of four graduate-level classes during their matriculation at UCSC. These classes must be School of Engineering graduate-level courses and must be approved by the student's advisor and the computer engineering graduate director.

Petitions for course substitutions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Ph.D. students who have previously earned a master's degree or have successfully completed graduate-level classes as regular students in a graduate program in a related field at another institution may apply for a modified program of course requirements taking into account their previous coursework. Such a modified program should specify the coursework that will be completed at UCSC, which must include no fewer than four graduate-level courses and must be approved by the student's adviser and the computer engineering graduate director. These four courses must be taken while in the graduate program at UCSC.

Application for a modified program of course requirements must be made within the first year of graduate study at UCSC, and will be reviewed by the graduate director and a committee of three faculty members approved by the graduate director. Copies of the syllabi, exams, other relevant coursework, and the relevant transcript from the other institution, must accompany the application. Interviews with the committee members may be required to properly assess the coursework.

Acceptance of prior work for course transfer and modified programs of study is at the discretion of the department.

Robotics and Control Designated Emphasis

The graduate designated emphasis (DE) leading to the degree notation "with an emphasis in Robotics and Control" is a collaboration of faculty from several Baskin School of Engineering programs and is administered by the Department of Computer Engineering. Students wishing to complete a master's thesis or doctoral dissertation in this area must satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in Applied Mathematics and Statistics, Computer Engineering and Electrical Engineering, but students from any area may work in this interdisciplinary field so long as they meet all requirements, including progress, within the primary degree program. A current list of the robotics and control faculty and electives is available at the Computer Engineering web site, ce.soe.ucsc.edu.

Requirements for the Designated Emphasis Notation

Committee composition. The student's Ph.D. or M.S. committee must include one member of the robotics and control faculty.

Writing. The student's dissertation or thesis must include a significant section (chapter) related to robotics and control, with content suitable for a conference or journal article.

Course requirements. The student must complete four five-credit graduate courses and several two-credit seminar courses. All students must complete CMPE 241 / EE 241, Introduction to Feedback Control Systems, and three 5-credit robotics and control graduate electives.

Master's students must complete two offerings of CMPE 280C, Seminar in Control (2 credits).

Doctoral students must complete four offerings of CMPE 280C.

Review of Progress

Each year, computer engineering faculty reviews the progress of every student in the graduate program. Students not making adequate progress towards completion of degree requirements (see the UCSC Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete Computer Science 201 and Computer Engineering 202 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U (Unsatisfactory) or below B in School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a

leave of absence does not count as enrollment. Part-time enrollment is counted as a half of a quarter of enrollment.

Should any computer engineering graduate student fail a School of Engineering course while on probation, the Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If, after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Program Description

Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science (CMPS) Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, a bachelor of science in computer science: computer game design, as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

The bachelor of arts (B.A.) program at UCSC is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering, or even for a double major in another discipline. The bachelor of science (B.S.) program is appropriate for students desiring a somewhat stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry; this program also allows for electives outside of science and engineering.

The bachelor of science (B.S.) in computer game design builds on a rigorous core program of study in computer science, adding interdisciplinary study on the artistic, dramatic, and narrative elements of computer game design; a year-long game design project acts as a capstone learning experience. Because many courses in all three programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they begin some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art and music to business and science. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Courses for Nonmajors

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include CMPS 10, Introduction to Computer Science; CMPS 17, Social Networks; CMPS 25, Introduction to Computer Graphics: 3D Modeling; CMPS 26, Introduction to Computer Graphics: 3D Animation, CMPS 80J, Technology Targeted at

Social Issues; CMPS 80S, From Software Innovation to Social Entrepreneurship; and CMPS 80K, Foundations of Interactive Game Design. CMPS 10, Introduction to Computer Science, may be beneficial to students who are considering the major but have a limited background in computer science. There are also introductory programming classes intended for nonmajors: CMPS 5C, 5J, 5P, Introduction to Programming (in the C, Java, and Python languages).

Computer Science Policies

Declaration of the Computer Science Majors

Admission to the computer science majors is selective. First-year applications may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Admission to the major after a student has entered UCSC is based on the grades received in all foundation courses (see below) attempted at UCSC and will be considered no sooner than the student's second quarter. A cumulative GPA of at least 2.80 in these courses is required for declaration of computer science majors (Computer Science B.S., Computer Science B.A., and Computer Science: Computer Game Design B.S.). At most one unsuccessful attempt (grade D, F, or NP) for a foundation course is permitted. In addition to this GPA requirement, after the first three quarters, students must have completed the foundation courses (listed below) and be able to complete the major within campus limits in order to be eligible to declare a computer science major. Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Office, addressed to the Computer Science Undergraduate Director, describing why the prior performance is not an accurate reflection of the student's potential. Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Foundation Courses

The foundation courses for all computer science majors are as follows:

CMPS 12A/L (or Computer Engineering 13, or both CMPS 5J and CMPS 11) and 12B/M; Computer Engineering 16; and Mathematics 19A and 19B, or 20A and 20B, or 11A and 11B. CMPS 13H/L may be used instead of both CMPS 12A/L and 12B/M.

UCSC students that have completed three or more quarters at UCSC must complete the foundation courses before they can declare a computer science major.

Honors in the Majors

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the Major." The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Refer to major program statements for details.

Letter Grade Policy

Please refer to the School of Engineering section of the catalog (subheading: *Letter Grade Policy*).

Transfer Students

Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Transfer students must have completed all of the foundation courses listed above, or their articulated equivalents. A student lacking one foundation course may be admitted if they have completed at least one of CMPE 12/L or Physics 5A/L. It is highly recommended that all transfer students in computer science complete these two courses prior to admission.

Additional information on SOE policies can be found on the web at: <http://ua.soe.ucsc.edu/policies-forms/>.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog (subheading: *Admission to School of Engineering Majors*) for additional policies that apply to all School of Engineering programs. These policies include admission to the major and the need for computer science students to obtain preapproval before taking courses elsewhere.

Preparation for the Major

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. Major Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 15 courses, 7 lower-division and 8 upper-division. Out of these, the 7 lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing 7 additional upper-division elective courses.

Lower-Division Requirements

Each student must successfully complete the following seven required preparatory courses:

Computer Science

CMPS 12A/L, Introduction to Programming(Accelerated)/Laboratory (or CMPS 5J, Introduction to Programming in Java and CMPS 11, Intermediate Programming. Computer Engineering 13 may be taken as an alternative to CMPS 12A/L. CMPS 13H/L may be taken as an alternative to CMPS 12A/L and CMPS 12B/M)

CMPS 12B/M, Introduction to Data Structures/Laboratory (CMPS 13H/L may be taken as an alternative to CMPS 12A/L and CMPS 12B/M)

Computer Engineering

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Mathematics

Mathematics 19A and 19B, Calculus for Science, Engineering, and Mathematics (credit for one or both may be granted with adequate performance on the College Entrance Examination Board (CEEB) calculus AB or BC Advanced Placement examination), or Mathematics 11A and 11B (Calculus with Applications), or Mathematics 20A and 20B, Honors Calculus

Applied Mathematics and Statistics

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I or Mathematics 21, Linear Algebra

Upper-Division Requirements

All students in the major must complete the following course:

CMPS 101, Algorithms and Abstract Data Types

In addition to the above course (and the lower-division requirements, listed above), students must complete upper-division electives chosen as follows:

Complete three courses from the breadth list below;

Complete two additional computer science electives chosen from any 5-credit upper-division computer science course except those numbered 191-194 and 196-199;

Complete two additional 5-credit technical electives selected from the technical elective list below;

Complete the Disciplinary Communication requirement given below. At least 50 percent of these upper-division courses must be completed at UCSC.

Breadth List (complete at least three):

CMPS 102, Introduction to Analysis of Algorithms

CMPS 104A, Compiler Design

CMPS 111, Operating Systems

CMPS 112, Comparative Programming Languages

CMPS 115, Software Methodology

CMPS 122, Computer Security

CMPS 140, Artificial Intelligence

CMPS 160/L, Computer Graphics / Laboratory

CMPS 180/CMPS 180W, Database Systems I

CMPS 185, Technical Writing and Communication in Computer Science

Computer Engineering 110, Computer Architecture

Technical Elective List (complete at least two):

Any 5-credit upper-division course offered by the Baskin School of Engineering except those numbered 191 through 194 and 196 through 199.

Any 5-credit upper-division course from the Division of Physical and Biological Sciences except those numbered 190 and above.

Art 118, Computer Art: Theories, Methods, and Practices

Art 120/121, Advanced Projects in Computer Art I/II

Economics 100M, Intermediate Microeconomics, Math Intensive

Economics 100N, Intermediate Macroeconomics, Math Intensive

Economics 101, Managerial Economics

Environmental Studies 115A/L, Geographic Information Systems

Film and Digital Media 170A, Fundamentals of Introduction to Digital Media Production

Film and Digital Media 177, Digital Media Workshop: Computer as Medium

Linguistics 112/113/114, Syntax I/II/III

Linguistics 116/118, Semantics II/III

Linguistics 125, Foundations of Linguistic Theory

Music 123, Electronic Sound Synthesis

Music 124, Intermediate Electronic Sound Synthesis

Music 125, Advanced Electronic Sound Synthesis

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science (B.A.) is satisfied by completing CMPS 115, CMPS195, Computer Engineering 185, CMPS 132 and 132W, CMPS 185, or CMPS180 and 180W. Some of these courses may also fulfill one of the upper-division electives listed above.

B.S. Major Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 21 courses must be completed for the B.S. in computer science, whereas a minimum of 15 courses must be completed for the B.A. in computer science. Out of the 21 courses, 10 are lower-division courses (including two science courses), and 11 are upper-division courses. The B.S. is more structured than the B.A.; 17 specific courses are required, and the remaining four are elective upper-division computer science or computer engineering courses.

Lower- and Upper-Division Requirements

Students are required to take the following 18 courses:

Computer Science

CMPS12A/L Introduction to Programming(Accelerated)/Laboratory (or CMPS5J, Introduction to Programming in Java and CMPS11, Intermediate Programming. Computer Engineering 13/L may be taken as an alternative to CMPS 12A/L. CMPS 13H/L may be taken as an alternative to CMPS 12A/L and CMPS 12B/M)

CMPS 12B/M Introduction to Data Structures/Laboratory (CMPS13H/L may be taken as an alternative to CMPS12A/L and CMPS12B/M)

CMPS101 Algorithms and Abstract Data Types

CMPS102 Introduction to Analysis of Algorithms

CMPS104A Fundamentals of Compiler Design I

CMPS111 Introduction to Operating Systems

CMPS112 Comparative Programming Languages

CMPS130 Computational Models

Computer Engineering

Computer Engineering 12/L Computer Systems and Assembly Language/Laboratory

Computer Engineering 16 Applied Discrete Mathematics

Computer Engineering 110 Computer Architecture, or Computer Engineering 112, Computer and Game Console Architecture

Mathematics

Mathematics 19A and 19B, Calculus for Science, Engineering, and Mathematics, or Mathematics 20A and 20B, Honors Calculus

Mathematics 23A, Multivariable Calculus

Applied Mathematics and Statistics

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or
Mathematics 21, Linear Algebra

Applied Mathematics and Statistics 131, Introduction to Probability Theory, or Computer
Engineering 107, Mathematical Methods of Systems Analysis: Stochastic

Physics or Chemistry

Either two physics or two chemistry courses, with their associated laboratories, from the
following:

Physics 5A/L, Introduction to Physics I/Laboratory (or 6A/L);

and either Physics 5B/M, Introduction to Physics II/Laboratory (or 6B/M);

or Physics 5C/N, Introduction to Physics III/Laboratory (or 6C/N)

Chemistry 1A and 1B/M, General Chemistry/Laboratory; or

Chemistry 1A and 1C/N, General Chemistry/Laboratory

Additional Upper-Division Electives

Four upper-division computer science or computer engineering courses with course number
190 or below, or CMPS 195. One of these courses may be replaced by one of the following
upper-division mathematics courses:

Applied Mathematics and Statistics 114, Introduction to Dynamical Systems

Applied Mathematics and Statistics 131, Introduction to Probability Theory

Applied Mathematics and Statistics 147, Computational Methods and Applications

Mathematics 115, Graph Theory

Mathematics 117, Advanced Linear Algebra

Mathematics 126, Mathematical Control Theory

Mathematics 148, Numerical Analysis

Disciplinary Communication (DC) Requirement

The DC Requirement in computer science (B.S.) is satisfied by completing CMPS 115, CMPS
195, Computer Engineering 185, CMPS 132 and 132W, CMPS 185, or CMPS 180 and 180W.
These courses may also fulfill one of the upper-division electives listed above.

Comprehensive Requirement for the Computer Science B.A. and B.S.

In addition to the above B.A. or B.S. requirements, students in the computer science majors
must satisfy one of the following two exit requirements: pass one of the capstone courses
(see Capstone Courses below); or successfully complete a senior thesis.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit
requirement:

CMPS 104B Fundamentals of Compiler Design II

CMPS 117 Software Design Project II

CMPS 161 Introduction to Data Visualization

CMPS 181 Database Systems II

CMPS 183 Hypermedia and the Web

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. Withdrawals count as an attempted class for this purpose. If a student fails to receive a passing score during these two attempts, he or she may still take the GRE Advanced Computer Science Subject Test and achieve a scaled score of 600 or above to satisfy the exit requirement.

Senior Thesis

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in CMPS 195, Senior Thesis Research. The supervision of a senior thesis student is always at the discretion of the faculty member. The student first submits a written thesis proposal and obtains approval of a faculty sponsor. Then the student submits a written draft and makes an oral presentation to a faculty examining committee. After receiving feedback from the examining committee, the student submits one or more additional drafts, until the final draft is approved by the examining committee. The total amount of writing shall be consistent with the campus disciplinary communication requirement. A passing grade in CMPS 195 is earned when the final thesis is approved.

Computer Science Major Planners

The following are four sample academic plans for first-year students as preparation for the computer science major. Plans One A and Two A are suggested guidelines for students who have some prior experience with programming. Plans One B and Two B are for students who are considering the major and have no prior programming experience. Students who plan carefully can still have several openings free to take other breadth courses they find interesting.

Plan One A, B.A. Degree

Year	Fall	Winter	Spring
1st (frsh)	CMPS 10 MATH 19A	MATH 19B CMPS 12A/L	CMPS 12B/M AMS 10
2nd (soph)	CMPE 12/L	CMPE 16	CMPS 101

Plan One B, B.A. Degree

Year	Fall	Winter	Spring

Plan Two B, B.S. Degree

Year	Fall	Winter	Spring
1st	CMPS 10	CMPS 5J	CMPS 11
(frsh)	MATH 3	MATH 19A	MATH 19B
2nd	CMPS 12B/M	MATH 23A	CMPS 101
(soph)	CMPE 12B/M	CMPE 12/L	AMS 10

Minor Requirements

Twelve courses are required for the computer science minor. These courses are:

Mathematics 11A and 11B or 19A and 19B or 20A and 20B

Applied Mathematics and Statistics 10 or Mathematics 21

CMPS 12A/L (or Computer Engineering 13/L, or both CMPS 5J and CMPS 11)

CMPS 12B/M

Computer Engineering 16

CMPS 101

Four additional upper-division computer science courses from a list of approved electives (see the department's curriculum chart for the computer science minor at <http://ua.soe.ucsc.edu/curriculum-charts/>).

Upper-division computer engineering and mathematics courses that generally apply toward the computer science major may not be applied toward the computer science minor. In addition, some upper-division computer science courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

B.S. Computer Science: Computer Game Design Major Requirements

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering, and a broad background in the artistic, narrative, and dramatic elements of game design. The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in math and physics. Classes in ethics, as well as courses in art, film, music, theater arts, and economics provide breadth in topics of special relevance to computer game design. In their upper division courses, students gain depth by taking upper division electives in computer science and computer engineering. Two advanced courses in digital media give students the ability to view computer software from an artistic framework. A year-long capstone game design studio class allows students to develop substantial computer games, and integrate materials from the rest of the program.

The curriculum has 26 courses. 12 of the courses are upper division. Students interested in the major should pay special attention to the overlap between general education requirements and major requirements, as the major covers up to six general education requirements.

Lower- and Upper-Division Requirements

Course requirements are divided into six conceptual areas:

Mathematics and Physics

Complete all of the following courses:

Mathematics 19A–B, Calculus for Science, Engineering, and Mathematics (students can alternately take, Mathematics 20A–B, Honors Calculus. Credit for one or both Mathematics 19A–B may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement exams).

Mathematics 21, Linear Algebra, or Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I

Computer Engineering 16, Applied Discrete Mathematics

Physics 5A/L, Introduction to Physics I/Laboratory (or 6A/L)

Computational Foundations

Complete all of the following courses:

CMPS 12A/L, Introduction to Programming (Accelerated)/Laboratory (or 5J Introduction to Programming in Java, and 11 Intermediate Programming. Computer Engineering 13 may be taken as an alternative to CMPS 12A/L.)

CMPS 12B/M, Introduction to Data Structures/Laboratory

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

CMPS 109, Advanced Programming

CMPS 101, Algorithms and Abstract Data Types

Game Design

Complete all of the following courses.

CMPS 80K, Foundations of Interactive Game Design

CMPS 20, Game Design Experience

CMPS 170, Game Design Studio I

CMPS 171, Game Design Studio II

CMPS 172, Game Design Studio III

Computer Game Engineering

Complete five courses from the following list:

Applied Mathematics and Statistics 131, Introduction to Probability Theory

Applied Mathematics and Statistics 147, Computational Methods and Applications

CMPS 102, Introduction to Analysis of Algorithms

CMPS 104A, Fundamentals of Compiler Design I

CMPS 104B, Fundamentals of Compiler Design II

CMPS 105, Systems Programming

CMPS 111, Introduction to Operating Systems

CMPS 112, Comparative Programming Languages

CMPS 115, Software Methodology

CMPS 116, Software Design Project

CMPS 117, Software Design Project II

CMPS 119, Software for Society

CMPS 121, Mobile Applications

CMPS 122, Computer Security

CMPS 128, Distributed Systems, File Sharing, Online Gaming, and More

CMPS 129, Data Storage Systems

CMPS 130, Computational Models

CMPS 132, Computability and Computational Complexity

CMPS 142, Machine Learning and Data Mining

CMPS 160/L, Introduction to Computer Graphics/Laboratory

CMPS 161, Introduction to Data Visualization

CMPS 162, Advanced Computer Graphics and Animation

CMPS 164/L, Game Engines/Laboratory

CMPS 140, Artificial Intelligence

CMPS 146, Game Artificial Intelligence

CMPS 148, Interactive Storytelling

CMPS 166A, Game Theory and Applications I

CMPS 179, Game Design Practicum (may be repeated for credit; only the first offering counts toward the Computer Game Engineering requirement)

CMPS 180, Database Systems I

CMPS 181, Database Systems II

CMPS 183, Hypermedia and the Web

Computer Engineering 110, Computer Architecture

Computer Engineering 112, Computer and Game Console Architecture

Computer Engineering 113, Parallel and Concurrent Programming

Computer Engineering 117/L, Embedded Software/Laboratory

Computer Engineering 118/L, Introduction to Mechatronics/Laboratory

Computer Engineering 131, Human-Computer Interaction

Computer Engineering 150/L, Introduction to Computer Networks/Laboratory

Digital Media

Complete two courses from the following list:

Film and Digital Media 130, Silent Cinema

Film and Digital Media 136C, Visual Culture and Technology: History of New Media

Film and Digital Media 150, Screenwriting

Film and Digital Media 170A, Introduction to Digital Media Production

Film and Digital Media 171D, Social Information Spaces

Film and Digital Media 173, Narrative Workshop: Reconfiguring Narrative within the Digital Realm

Film and Digital Media 177, Digital Media Workshop, Computer as Medium

Film and Digital Media 189, Advanced Topics in Digital and Electronic Media Spaces

Art 103, Physical Computing – Installation and Sculpture

Theatre 105, Introduction to Digital Media Design

Theatre 114, Design Studio: Sound

Theater Arts 157, Playwriting

Music 123, Electronic Sound Synthesis

Music 124, Intermediate Electronic Sound Synthesis

Music 125, Advanced Electronic Sound Synthesis

Any 5-credit, upper-division course offered in the digital arts new media (DANM) curriculum (may require approval of instructor)

Art and Social Foundations

Complete the ethics requirement and three of the following electives.

Ethics Requirement

One of:

Computer Engineering 80E, Engineering Ethics

Philosophy 22, Introduction to Ethical Theory

Philosophy 24, Introduction to Ethics, Contemporary Moral Issues

Philosophy 28, Environmental Ethics

Biomolecular Engineering 80G, Bioethics in the 21st Century: Science, Business, and Society (crosslisted as Philosophy 80G)

Art Elective

One of:

Art 10D, 2D Foundation

Art 10E, 3D Foundation

Art 10F, 4D Foundation

Art 20A, Concepts and Practice in Drawing

Art 20B, Concepts and Practice in Digital/New Media

Art 20J, Introduction to Drawing and Painting

Art 80F, Introduction to Issues in Digital Media

CMPS 25, Introduction to Computer Graphics: 3D Modeling

CMPS 26, Introduction to Computer Graphics: 3D Animation

Film Elective

One of:

Film and Digital Media 20A, The Film Experience

Film and Digital Media 20C, Introduction to Digital Media

Film and Digital Media 20P, Introduction to Production Technique

Any 80-series course in Film and Digital Media.

Theater Elective

One of:

Theater Arts 10, Introduction to Theater Design and Technology

Theater Arts 18, Drafting for Theatrical Production

Theater Arts 19, Design Studio, Lighting Studio

Theater Arts 20, Introductory Studies in Acting

Theater Arts 30, Introduction to Modern Dance Theory and Technique

Theater Arts 40, Introduction to Directing

Theater Arts 80E, Stand-Up Comedy

Theater Arts 80L, Muppet Magic: Jim Henson's Art

Music Elective

One of:

Music 11A, Introduction to Western Art Music

Music 11B, Introduction to Jazz

Music 11C, Introduction to American Popular Music

Music 11D, Introduction to World Music

Music 80C, History, Literature, and Technology of Electronic Music

Music 80L, Artificial Intelligence and Music

Music 80M, Film Music

Music 80R, Music and the World Wide Web

Economics Elective

One of:

Economics 1, Introductory Microeconomics, Resource Allocation and Market Structure

Economics 2, Introductory Macroeconomics, Aggregate Economic Activity

Economics 80H, Wall Street and the Money Game

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in computer science: game design is satisfied by completing the game design studio sequence CMPS 170, 171, and 172.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by either receiving a passing grade in all three courses of the game design studio sequence or performing a senior thesis.

Computer Science: Computer Game Design Major Planners

The following are two sample academic plans that students can use to plan their sequence of courses in the major. These plans are suggested guidelines for students who begin their studies in their freshman year. Such students, if they plan carefully will have several openings free to take other breadth courses they find interesting. Plan one is for a student entering UCSC in their freshman year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A/L. Plan two is for a student entering UCSC their freshman year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A/L to ensure a successful outcome in those courses.

Plan One—Enter UCSC Freshman Year

Year	Fall	Winter	Spring
1st (frsh)	Core MATH 19A or 20A	Art/Social Elective I MATH 19B or 20B	CMPS 80K (Foundations of Interactive Game Design) CMPE 16

	CMPS 12A/L	CMPS 12B/M	Composition (C or gen ed)
	PHYS 5A/L or 6A/L	Art/Social elective II	Art/Social elective III
2nd (soph)	gen ed	CMPS 101	Ethics requirement
	MATH 21 or AMS 10	CMPS 20 (Game Design Experience)	Game engineering elective I
	CMPE 12/L	CMPS 109	gen ed
3rd (jr)	Game engineering elective II	Game engineering elective III	Game engineering elective IV
	gen ed	gen ed	
	Digital Media elective I	gen ed	gen ed
4th (sr)	CMPS 170 (Game Design Studio I)	Game engineering elective V	CMPS 172 (Game Design Studio III)
	gen ed	CMPS 171 (Game Design Studio II)	Digital Media elective II

Plan Two—Enter UCSC Freshman Year, Need Math and Computer Science Preparation Classes (Mathematics 3, Computer Science 5J)

Year	Fall	Winter	Spring
	Core	Writing (C, or gen ed)	Art/Social Elective I
1st (frsh)	MATH 3	MATH 19A	MATH 19B
	CMPS 5J	CMPS 11	CMPS 80K (Foundations of Interactive Game Design)
	Art/Social elective II	CMPS 25 (Game Design Experience)	MATH 21 or AMS 10
2nd (soph)	CMPS 12B/M	Ethics requirement	CMPE 16
	PHYS 6A/L	CMPE 12/L	Art/Social elective III
	CMPS 101	Game engineering elective I	gen ed
3rd (jr)	Digital Media elective I	CMPS 109	Game engineering elective II
	gen ed	gen ed	Game engineering elective III
	gen ed	gen ed	gen ed
4th (sr)	CMPS 170 (Game Design Studio I)	CMPS 171 (Game Design Studio II)	CMPS 172 (Game Design Studio III)
	Game engineering elective IV	Game engineering elective V	Digital Media elective II

Graduate Programs

Program Description

The Computer Science Department at UCSC offers both a master's program and a doctoral program in computer science, as well as a master's in games and playable media.

The goal of the computer science programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The master of science (M.S.) degree may be used as a terminal degree or as the first step toward the doctor of philosophy degree (Ph.D.). The student-faculty ratio is five to one, making it possible for students to receive individual attention and to pursue programs that fit their individual needs. The intellectual atmosphere is enriched by regular colloquia and seminars presented by eminent contributors to the field, many of whom are associated with other major universities and industrial research centers in Silicon Valley and the wider San Francisco Bay Area.

The goal of the M.S. in games and playable media is to prepare students to make professional contributions to the creation of games and other forms of media that invite and structure play. The degree is offered through the UC Santa Cruz location in Silicon Valley, making possible deep connection and collaboration with local industry and economic development groups. The curriculum includes deep engagement with game creation as well as a focus on professional development. Students can also take advantage of the strong course offerings in games and related technologies on the Santa Cruz campus, as well as make connections with the department's field-leading research groups. The M.S. in games and playable media is a four-quarter program that begins in fall quarter and ends in the following summer. Students are expected to complete coursework in one academic year, without leaves of absence.

The Computer Science Department enjoys a close relationship with the Computer Engineering and Electrical Engineering Departments, the Biomolecular Engineering Department, the Applied Mathematics and Statistics Department, and the new Technology Management Department.

Most computer science Ph.D. students are hired as teaching assistants helping with undergraduate courses, hired as research assistants working for computer science and other School of Engineering faculty, or awarded fellowships to pursue their research.

Additional information on the computer science graduate programs can be found on the department's web pages at www.soe.ucsc.edu.

Requirements for the Computer Science Master's Degree: Project Track

Course Requirements

Each student is required to take 50 credits as follows:

Computer Science 200, Research and Teaching in Computer Science and Engineering, 3 credits

Computer Science 201, Analysis of Algorithms, 5 credits

Computer Science 203, Programming Languages, 5 credits

Computer Science 296, Master's Project, 2 credits

A base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required). Computer Engineering 110 can be taken to meet the architecture requirement, however, the credits will not be counted toward graduation requirements

One course each from three different breadth categories for a total of three courses (15 credits)—see www.cs.ucsc.edu/graduates/breadth/

All remaining courses must be regular, 5-credit graduate courses from: computer

science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299

At least 30 credits must be in computer science

Two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Each student must complete CMPS200 in their first year.

Each student must complete CMPS 201 or a course to prepare the student for CMPS 201 in their first year, after which CMPS 201 should be completed by the end of the second year.

Each student must complete CMPS 203 or a course to prepare the student for CMPS 203 in their first year, after which CMPS 203 should be completed by the end of the second year.

Each student must complete Computer Engineering 110 or Computer Engineering 202 in their first year.

Project

Completion of a master's project is required for the master's degree. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Computer Science Master's Degree: Thesis Track

Course Requirements

Each student is required to take 48 credits as follows:

Computer Science 200, Research and Teaching in Computer Science and Engineering, 3 credits

Computer Science 201, Analysis of Algorithms, 5 credits

Computer Science 203, Programming Languages, 5 credits

A base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required). Computer Engineering 110 can be taken to meet the architecture requirement, however, the credits will not be counted toward graduation requirements

One course each from three different breadth categories for a total of three courses (15 credits) —see www.cs.ucsc.edu/graduates/breadth/

Up to 10 credits of course 297, Independent Study or Research; or course 299, Thesis Research

All remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299

At least 28 credits must be in computer science

Two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Each student must complete CMPS200 in their first year.

Each student must complete CMPS 201 or a course to prepare the student for CMPS 201 in their first year, after which CMPS 201 should be completed by the end of the second year.

Each student must complete CMPS 203 or a course to prepare the student for CMPS 203 in their first year, after which CMPS 203 should be completed by the end of the second year.

Each student must complete Computer Engineering 110 or Computer Engineering 202 in their first year.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

Each student is required to take 58 credits as follows:

CMPS 200, Research and Teaching in Computer Science and Engineering, 3 credits

CMPS 201, Analysis of Algorithms, 5 credits

CMPS 203, Programming Languages, 5 credits

A base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required); Computer Engineering 110 can be taken to meet the architecture requirement, however, the credits will not be counted toward degree requirements

One course each from three different breadth categories for a total of three courses (15 credits)—see www.cs.ucsc.edu/graduates/breadth/

Up to 10 credits of course 297, Independent Study or Research; or course 299, Thesis Research

All remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299

At least 33 credits must be in computer science

Graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements

Each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a masters degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer science graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two chosen by the student and two by the computer science graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student writes a Ph.D. dissertation. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government labs, or elsewhere are recognized (and may be required) as an integral part of the research

leading to the dissertation. As the first step, a student submits a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the dissertation supervisor. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying examination committee, approved by the graduate committee and the Graduate Council. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all Incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Requirements for the Games and Playable Media Master's Degree

Course Requirements

Each student is required to take 46 credits, though the game art, game writing, and game sound requirements will likely lead to more. Required courses are as follows:

Games and Playable Media 221, 222, and 223; Professional Development for Game Makers 1, 2, and 3; 6 credits (2 credits each)

CMPS 265, Generative Methods, 5 credits

Games and Playable Media 270, 271, and 272; Games and Playable Media Studio 1, 2, and 3; 15 credits (5 credits each)

Games and Playable Media 273, Game Development Intensive, 10 credits

Two courses from the Game Engineering Electives list below, 10 credits, (5 credits each); can be upper-division undergraduate if appearing on approved list for Games and Playable Media M.S. degree; often satisfied by taking CMPS 265, Generative Methods and CMPS 248, Interactive Storytelling.

Before entering the Game Development Intensive (GAME 273), students must satisfy the game art, game writing, and game sound requirements, as described below:

- The game art requirement is satisfied by (a) having completed two or more courses in a relevant area of art, at any institution, at either the undergraduate or graduate level (such as courses CMPS 25, and CMPS 26); or (b) by completing course Games and Playable Media 210, Game Art Intensive; or (c) by submitting a portfolio of prior work in one or more areas and undergoing a qualifying examination.
- The game writing requirement is satisfied by (a) having completed two or more courses in a relevant area of writing or interactive narrative (such as CMPS 148, Interactive Storytelling), at any institution, at either the undergraduate or graduate level; or (b) by completing course CMPS 248, Interactive Storytelling (pending approval); or (c) by submitting a portfolio of prior work in one or more areas and undergoing a qualifying examination.
- The game sound requirement is satisfied by (a) having completed two or more courses in a relevant area of music, sound effects, or game audio, at any institution, at either the undergraduate or graduate level; or (b) by completing course Games and Playable Media 215, Audio Direction; or (c) by submitting a portfolio of prior work in one or more areas and undergoing a qualifying examination.

Project

Completion of a master's project is required for the master's degree. These are generally collaborative projects, created together with other students in the Games and Playable Media M.S. program. Projects are typically performed by students during Games and Playable Media 273, Game Development Intensive. Students are evaluated based both on their individual contributions to the project and on the overall success of the project as a whole. Each project will be demonstrated via a public presentation.

Game Engineering Electives

The following courses may be used to satisfy game engineering electives for the Games and Playable Media M.S. degree:

Graduate courses:

CMPS 221: Advanced Operating Systems

CMPS 223: Advanced Computer Security

CMPS 229: Storage Systems

CMPS 232: Distributed Systems

CMPS 240: Artificial Intelligence

CMPS 241: Knowledge Engineering

CMPS 242: Machine Learning

CMPS 244: Artificial Intelligence in Games

CMPS 245: Computational Models of Discourse and Dialogue

CMPS 248: Interactive Storytelling

CMPS 253: Advanced Programming Languages

CMPS 260: Computer Graphics

CMPS 261: Advanced Visualization

CMPS 262: Computer Animation

CMPS 265: Generative Methods

CMPS 272: Evolutionary Game Theory

CMPS 277: Principles of Database Systems

CMPS 278: Design and Implementation of Database Systems

Computer Engineering 202: Computer Architecture

Computer Engineering 215: Models of Robotic Manipulation

Computer Engineering 216: Bio-inspired Locomotion

Computer Engineering 218: Mechatronics

Computer Engineering 231: Human-Computer Interaction

Computer Engineering 233: Human Factors

Computer Engineering 235: User Evaluation of Technology

Computer Engineering 248: Games in Design and Control

Computer Engineering 250: Multimedia Systems

Computer Engineering 253: Network Security

Computer Engineering 263: Data Compression

Computer Engineering 264: Image Analysis and Computer Vision.

Upper-division undergraduate courses:

CMPS 115: Software Methodology

CMPS 119: Software for Society

CMPS 122: Computer Security

CMPS 128: Distributed Systems: File Sharing, Online Gaming, and More

CMPS 130: Computational Models

CMPS 140: Artificial Intelligence

CMPS 142: Machine Learning and Data Mining

CMPS 146: Game AI

CMPS 148: Interactive Storytelling

CMPS 160: Introduction to Computer Graphics

CMPS 161: Introduction to Data Visualization

CMPS 162: Advanced Computer Graphics and Animation

CMPS 164: Game Engines

CMPS 166A: Game Theory and Applications I

CMPS 166B: Game Theory and Applications II

CMPS 179: Game Design Practicum

CMPS 180: Database Systems I

CMPS 181: Database Systems II

CMPS 183: Hypermedia and the Web

Computer Engineering 110: Computer Architecture

Computer Engineering 112: Computer and Game Console Architecture

Computer Engineering 118: Introduction to Mechatronics

Computer Engineering 131: Human-Computer Interaction.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee.

With the exception of the game art, game writing, and game sound requirements of the Games and Playable Media M.S. program, courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time computer science students must complete course 201, Computer Engineering 202, and course 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Ph.D. students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Students receiving two or more grades of below B or U (fail) in the School of Engineering (SoE) courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail a School of Engineering course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Program Description

Mission Statement

The mission of the Electrical Engineering (EE) Department is to build and sustain a teaching and research program to provide undergraduate and graduate students with inspiring and quality education in the theory and practice of hardware- and information-processing-oriented electrical engineering; serving industry, science, and government; and bringing faculty and staff a rewarding career in teaching, research, and service. The electrical engineering program is accredited by the Engineering Accreditation Committee of the Accreditation Board for Engineering and Technology (ABET).

Summary of Objectives

The educational objectives that the Electrical Engineering Department strives to provide for students are focused in five areas: fundamental prerequisites in theory, design, and basic science for a career based on electrical engineering; a scope of application that provides theory and practical knowledge as well as specialized training in hardware- and information-oriented electrical engineering; a professional approach to engineering in terms of high quality work skills in communication, teamwork, responsibility, high ethical standards, and participation in lifelong learning and the professional engineering community; encouragement and motivation based on a milieu of readily available opportunities, mentoring, and advising; and the basis for a successful transition to an engineering career, including an ability to apply research to engineering and opportunities for experience in an industry setting.

Engineering is a profession that emphasizes analysis and design, and electrical engineers apply their knowledge to an expanding array of technical, scientific, and mathematical questions. A good engineering education has three parts: a sound foundation in mathematics and science, substantial design experience to develop skills and engineering aesthetics, and a focus in the humanities and social sciences to learn how and where to apply the skills developed. Electrical engineering is a very broad discipline; the program at UCSC complements existing campus programs, emphasizing three general areas: electronics/optics (including digital and analog circuits and devices); communications (including signal and image processing and control); and VLSI design, micro-technology, nanotechnology, and biomedical devices.

The undergraduate curriculum provides a balance of engineering science and design. For the first two years, all electrical engineering students are expected to take a basic set of lower-division mathematics, physical science, and engineering courses. After the first two years, electrical engineering students focus on topics within the discipline and specialize in one of two options: electronics/optics, including digital and analog circuits and devices, VLSI design, optoelectronics, electromagnetics, power engineering, and biomedical device engineering; or communications, signals, systems, and control, including optical, wireless communication, signal and image processing, networks signal processing, instrumentation, and control. Students interested in admission to the electrical engineering major should contact the Baskin School of Engineering Undergraduate Advising office, (831) 459-5840 or advising@soe.ucsc.edu.

Electrical Engineering Policies

Admissions Policy

Admission to the electrical engineering major is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Students not directly admitted can apply to declare an electrical engineering major upon successful completion of all the following foundation courses with a GPA of 2.8 or better: Mathematics 19A–B, Applied Mathematics and Statistics 10 and 20, Physics 5A/L, 5B/M, and 5C/N.

Students who have not met this GPA requirement are required to meet with the Electrical Engineering Undergraduate Director. Please refer to the School of Engineering section of the catalog for the full admissions policy.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Course Substitution

Please refer to the School of Engineering section of the catalog for the policy regarding course substitution.

Letter Grade Policy

The Electrical Engineering Department requires letter grading for all courses applied toward the bachelor of science (B.S.) degree.

Honors in the Major

Electrical engineering majors are considered for “Honors in the Major” and “Highest Honors in the Major” based on the GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with a GPA of 3.7 receive highest honors. Students with a GPA of 3.3, receive honors. A student meeting the GPA requirement for highest honors or honors may not receive honors if a student has been found guilty of academic misconduct. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower GPA. Electrical engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Transfer Students

Acceptance into the major is based on the student’s academic college record and preparation for the major. Applicants are encouraged to take and excel in as many courses that are equivalent to the department’s foundation courses as possible. For electrical engineering majors, the following courses, or their equivalents, should be completed prior to transfer: first year calculus (Mathematics 19A–B), linear algebra (Applied Mathematics and Statistics 10 or Mathematics 21), differential equations (Applied Mathematics and Statistics 20 or Mathematics 24), a year of calculus-based physics courses (accepted as equivalent to Physics 5A/L, 5B/M, 5C/N). To ensure timely graduation, it is strongly recommended (but not required) that two programming courses (accepted as equivalent to

Search the Catalog

Computer Engineering 12/L or Computer Engineering 13/L) and Multivariable Calculus (accepted as equivalent to Mathematics 23A and 23B) be taken prior to transfer. An applicant will be approved, conditionally approved, or declined. Only students who have completed most or all of the foundation courses will be approved for acceptance into the major.

Students who are approved for acceptance and who have course credit for all the foundation courses for the major must declare the major in their first term of enrollment at UCSC. The status of students who are approved for acceptance but who, upon review of their transcripts, are found not to have course credit for all the foundation courses for their major will be required to complete those courses before they can declare the major.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Requirements of the Major

In addition to completing UCSC's general education requirements, students must complete 15 lower-division science and engineering courses, plus associated laboratories; nine upper-division engineering courses, plus associated laboratories; four engineering electives; and a two-quarter comprehensive senior design project course. To plan for completion of these requirements within the normative time, students should consult with an adviser at the Baskin School of Engineering Undergraduate Advising office as early as possible.

Lower-Division Requirements

Students gain a solid foundation in calculus, engineering mathematics, physics, computer science, and computer engineering during their first two years. Majors must complete the following 15 lower-division courses (including corresponding laboratories). These courses form part of the prerequisite sequence and should be completed during the first two years at UCSC. The requirements are rigorous; students must be prepared to begin these courses early in their studies.

ELECTRICAL ENGINEERING

80T, Modern Electronic Technology and How It Works

COMPUTER ENGINEERING/COMPUTER SCIENCE

Computer Engineering 12/L, Computer Systems and Assembly Language/ Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory or
Computer Science 12A/L, Introduction to Programming (Accelerated)/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Computer Engineering 80E, Engineering Ethics

MATHEMATICS

19A-B, Calculus for Science, Engineering, and Mathematics

23A-B, Multivariable Calculus

APPLIED MATHEMATICS AND STATISTICS

10, Mathematical Methods for Engineers I

20, Mathematical Methods for Engineers II

PHYSICS

5A/L, 5B/M, 5C/N, Introduction to Physics/Laboratories

5D, Heat, Thermodynamics, and Kinetics

ETHICS

Students must take one of the following courses (required even for transfer students who have had their general education requirements waived):

Computer Engineering 80E, Engineering Ethics

Philosophy 22, Introduction to Ethical Theory

Philosophy 24, Introduction to Ethics: Contemporary Moral Issues

Philosophy 28, Environmental Ethics

Biomolecular Engineering 80G/Philosophy 80G, Bioethics in the 21st Century: Science, Business, and Society

Upper-Division Requirements

Fifteen upper-division courses along with associated 1- or 2-credit laboratories are required for the major. The course requirements include both depth and breadth, technical writing, and a comprehensive capstone design project.

All students are required to take the following nine upper-division courses, with associated laboratories:

ELECTRICAL ENGINEERING

101/L, Introduction to Electronic Circuits/Laboratory

103/L, Signals and Systems/Laboratory

135/L, Electromagnetic Fields and Waves/Laboratory

145/L, Properties of Materials/Laboratory

151, Communications Systems

171/L, Analog Electronics/Laboratory

COMPUTER ENGINEERING

100/L, Logic Design/Laboratory

107, Mathematical Methods of Systems Analysis: Stochastic

185, Technical Writing for Computer Engineers

Required Electives. In addition to completing the above required courses, electrical engineering majors must complete four elective courses chosen from the list below. At least three must be from one of the depth-sequence concentrations listed. Certain graduate-level courses as well as those courses taught in conjunction with graduate courses may also be used to fulfill an elective requirement as listed below. No course may be counted twice. See the electrical engineering web site for course descriptions: www.ee.ucsc.edu/.

Electronics/Optics Concentration

ELECTRICAL ENGINEERING

104, Bio-electronics and Bio-instrumentation

115, Introduction to Micro-Electro-Mechanical-Systems Design

130/L/ 230, Introduction to Optoelectronics and Photonics and Laboratory/Optical Fiber Communication

136, Engineering Electromagnetics (strongly recommended)

154/241, Feedback Control Systems, and Introduction to Feedback Control Systems

157/L, RF Hardware Design/Laboratory

172/221, Advanced Analog Circuits/Advanced Analog Integrated Circuits

173/L, High-Speed Digital Design/Laboratory

175/L, Energy Generation and Control/Laboratory

176/L, Energy Conversion and Control/Laboratory

177/L, Power Electronics/Laboratory

178, Device Electronics

180J, Renewable Energy Sources in Practice

211, Introduction to Nanotechnology

213, Micro/Nano-characterization of Materials

231, Optical Electronics

COMPUTER ENGINEERING

118/L, Introduction to Mechatronics/Laboratory

121/L, Microprocessor System Design/Laboratory (strongly recommended)

Communications, Signals, Systems, and Controls Concentration

ELECTRICAL ENGINEERING

130/L/230, Introduction to Optoelectronics, and Photonics and Laboratory/Optical Fiber Communication

136, Engineering Electromagnetics (strongly recommended)

152/252, Introduction to Wireless Communications and Wireless Communications

153/250, Digital Signal Processing/Digital Signal Processing

154/241, Feedback Control Systems and Introduction to Feedback Control Systems

251, Principles of Digital Communications

253, Introduction to Information Theory

261, Error Control Coding

262, Statistical Signal Processing I

264, Image Processing and Reconstruction

COMPUTER ENGINEERING

118/L, Introduction to Mechatronics/Laboratory

150/L, Introduction to Computer Networks/Laboratory

251, Error Control Coding (taught in conjunction with EE 261)

The senior-year curriculum enables students to pursue independent study with a faculty member. Electrical engineering students are encouraged to take advantage of the opportunity to work within a faculty member's research group as part of their educational experience. Internship programs with local industry are also available.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in electrical engineering is satisfied by completing Computer Engineering 185.

Comprehensive Requirement

The senior comprehensive requirement for electrical engineering majors is in two parts: a project course and assessment options.

Project Course

Students must complete one capstone design course that spans three quarters, Electrical Engineering 129A/B/C, or complete a senior thesis. These senior-level courses encompass an in-depth project, including analysis, design, testing, and documentation, requiring students to call upon knowledge acquired throughout their undergraduate studies. Current course choices include the following:

Electrical Engineering

129A/B/C, Engineering Design Project I, II, and III (12 credits total)

195, Senior Thesis Project (12 credits total)

Outcomes Assessment Options

The Electrical Engineering Department requires an outcomes assessment. All students are required to complete an exit survey and meet with a faculty member for an exit interview. The specifics of the outcomes assessment may change from year to year; for this catalog year, students must complete one of the following options:

1. maintenance of a 2.5 grade point average in all required and elective courses for the major; or
2. senior thesis submission; or
3. portfolio review.

Portfolios must include the following:

- project report(s);
- a one- or two-page overview of the student's contribution to the project(s);
- a two-page essay concerning the relationship of engineering to society (specific topics will be provided by the Electrical Engineering Department).

The portfolios must be submitted electronically at least seven days before the end of the instruction in the quarter of graduation. Portfolios will not be returned.

Electrical Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the electrical engineering major.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A	MATH 19B	AMS 10
	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N
	college core	EE 80T	gen ed (C2)
2nd (soph)	PHYS 5D	EE 101/L	EE 171/L
	MATH 23A	AMS 20	CMPE 13/L
	CMPE 12/L	MATH 23B	gen ed

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	MATH 3	MATH 19A	MATH 19B
	CMPE 8	CMPE 12/L	CMPE 13/L
	college core	EE 80T	gen ed (C2)
2nd (soph)	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N
	AMS 10	AMS 20	MATH 23A

Additional information about this program can be found on the department's web site at www.ee.ucsc.edu.

Electrical Engineering Minor

The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in Applied Physics or any School of Engineering major.

Electrical Engineering Minor Requirements

Requirements for the minor in electrical engineering are the following:

Mathematics

Mathematics 19A–B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A, Multivariable Calculus

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I, and 20, Mathematical Methods for Engineers II; or Mathematics 21, Linear Algebra and Mathematics 24, Ordinary Differential Equations

Science

Physics 5A/L or 6A/L, Mechanics and 5C/N or 6C/N, Electricity and Magnetism

Core Requirements

Electrical Engineering

Electrical Engineering 101/L, Introduction to Electronic Circuits/Laboratory; and

Electrical Engineering 103, Signals and Systems; and

Electrical Engineering 171/L, Analog Electronics/Laboratory

Upper-Division Electives

At least 15 credits of upper-division or graduate electrical engineering courses, all chosen from one of the existing electrical engineering major tracks. All of the upper-division electives must come from the same track.

Graduate Programs

The Department of Electrical Engineering (EE) at the University of California, Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in:

- Photonics and electronics focusing on VLSI, electronic and optoelectronic materials; devices, circuits and systems for information transmission; storage, processing, and display, especially for optical-fiber communications and lower-power, high-performance systems; biomedical device instrumentation and MEMS; and optofluidics;
- Signal processing and communications, including wireless communications, network information theory, digital signal processing, image and video processing;
- Remote sensing including wave propagation and scattering radar oceanography, and microwave remote sensing.
- Nanotechnology including applications to bio-medicine, integrated optics for biomedical imaging, opto-thermo-electric energy conversion, near-field scanning optical microscopy, nano-magneto-optics, micro-mechanics and micro-fluidics.

Electrical Engineering enjoys a close relationship with the Departments of Applied Mathematics and Statistics, Computer Science, Computer Engineering, Biomolecular Engineering, Chemistry, Physics, Astronomy, and Molecular, Cell and Developmental Biology faculty. The Electrical Engineering faculty are affiliated with: 1) several federally funded and nationally recognized centers such as the Center for Adaptive Optics, and the Center for Biomolecular Science and Engineering; 2) state-funded centers such as the Institute for Quantitative Biology (QB3), the Center for Information Technology Research in the Interest of Society (CITRIS), and the Institute for Regenerative Medicine (CIRM); 3) privately funded centers such as the W.M. Keck Center for Nanoscale Optofluidics (CfNO), the W.M. Keck Center for Adaptive Optical Microscopy (CfAOM), and the Center for Sustainable Energy and Power Systems (CenSEPS). Many EE faculty participate in the University Affiliated Research Center (UARC) at NASA-Ames Research Center, which is managed by UCSC and in the Advanced Studies Laboratory, a partnership between UCSC and NASA-Ames Research Center. The department also has ties to nearby industry, employing electrical engineering professionals as visiting and adjunct faculty and arranging for students to gain practical research experience through work in industrial labs. Indeed, the department strongly encourages students of all nationalities to seek practical training as part of their graduate education.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. The M.S. degree can be completed in two years. M.S. students must complete a master's thesis. A Ph.D. degree is usually completed in four to six years. Ph.D. students are required to take a preliminary exam within their first two years of study. After completing the course requirements, students must pass an oral qualifying exam and write a dissertation. Part-time study is possible for students working in industry while attending school.

Requirements for the Master's Degree

Course Requirements

Each student is required to take 45 credits which must consist of:

- At least 15 credits in one of the four core areas of emphasis defined above.
- At least 25 of the total 45 credits must be satisfied through EE graduate courses.
- At most 10 credits of independent study (EE 297, EE 299) are counted toward the EE course requirements.

Total credits required for the M.S. degree = 45.

Note that each graduate course satisfying the above requirements typically covers 5 credits.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. Upon completion of the thesis work, the student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

M.S. students admitted to continue to the Ph.D. program must pass a preliminary exam covering fundamental undergraduate course work (see below).

Requirements for the Ph.D. Degree

Course Requirements*

Each student is required to take 50 credits which must consist of:

- At least 20 credits in one of the four core areas of emphasis defined above.
- At least 30 of the total 50 credits must be satisfied through EE graduate courses.
- At most 10 credits of independent study (EE297, EE299) will be counted toward EE course requirements.

Total credits required for the Ph.D. degree = 50

* For students already holding a master of science in electrical engineering (M.S.E.E.) or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent coursework performed at the students' M.S. granting institution. Credit transfer is subject to approval by the adviser and the electrical engineering graduate director.

Preliminary Examination

At the end of the first year, i.e., no later than the fall quarter in the following year after their entry, students admitted to the Ph.D. program must take a written examination covering basic knowledge in electrical engineering. This examination will cover material from the following technical areas:

- Circuits at the level of Electrical Engineering 101
- Electromagnetics at the level of Electrical Engineering 135
- Systems and signals at the level of Electrical Engineering 103
- Materials at the level of Electrical Engineering 145
- Applied Mathematics and Statistics at the level of Computer Engineering 107, and Applied Mathematics and Statistics 10 and 20.

The student will choose three areas from the above list in which to be examined. If the student does not pass the preliminary examination, the electrical engineering graduate committee may allow the student to repeat the preliminary examination once. If the student is to leave the Ph.D. program, and the student wishes to obtain a master's degree prior to departure, all requirements for the master's degree must still be satisfied.

After the student passes the preliminary examination, the student begins work on a thesis prospectus in preparation for the qualifying examination. During this period the student finds an adviser willing to supervise the student's thesis research, works with the adviser to prepare for the qualifying examination, and assembles a dissertation reading committee, consisting of the student's research supervisor (chair of the committee) and three or four appropriate faculty members in electrical engineering and other relevant departments. The committee must consist of at least two ladder-rank, electrical-engineering, faculty members in addition to the student's supervisor.

Qualifying Examination

This oral examination is a defense of the student's thesis prospectus and a test of the student's knowledge in advanced technical areas of relevance to the dissertation topic. This oral examination consists of a seminar-style talk before the examining committee, where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk and the areas of presumed expertise of the student. The examination, taken typically in the third year of Ph.D. study, is administered by a Ph.D. qualifying examination committee, consisting of at least four examiners. The composition of the committee must be approved by the graduate director and the dean of graduate studies whereupon the student and the committee are notified.

If the student does not pass the qualifying examination, the student may be asked to complete additional coursework, or other research-related work, before retaking the examination. The student may be allowed to retake the qualifying examination once, and the composition of the examining committee will remain the same for the second try. Students who fail the qualifying examination twice may be dismissed from the Ph.D. program.

Ph.D. students who have not advanced to candidacy by the end of the fourth year may be recommended for academic probation.

Dissertation and Advancement to Ph.D. Degree Candidacy

Advancement to candidacy requires that the student:

- pass the preliminary examination;
- complete all course requirements prior to taking the qualifying examination;
- clear all Incompletes from the student's record;
- pass the qualifying examination; and

- have an appointed Ph.D. dissertation reading committee.

After advancement to candidacy, work on the thesis research progresses until the dissertation is completed. The Ph.D. dissertation must show the results of in-depth research, be an original contribution of significant knowledge to the student's field of study, and include material worthy of publication. The student is strongly advised to submit research work for publication in advance of completing the thesis so that the latter requirement is clearly satisfied. The Ph.D. thesis results are presented in both oral and written forms, the oral form being a dissertation defense (see below) and the written form being the Ph.D. dissertation. The student must submit his or her written Ph.D. dissertation to the dissertation reading committee at least one month before the defense.

Dissertation Defense

Each Ph.D. candidate submits the completed dissertation to a Ph.D. thesis reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee (only), who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

For students already holding an M.S.E.E. or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent course work performed at the student's M.S. granting institution. Credit transfer is subject to approval by the electrical engineering graduate director.

Students not already holding an M.S.E.E. degree, who are studying for the Ph.D. degree, may apply to be granted a M.S. degree when they have fulfilled all the M.S. degree requirements (including an M.S. thesis).

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the Graduate Student Handbook for the policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree course requirements at the rate of at least two courses each quarter. Full-time students must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of U (unsatisfactory) or below B in the School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical engineering graduate student fails a School of Engineering course while on probation, the Electrical Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Materials Fee

Please see the section on fees under School of Engineering.

Technology and Information Management

2014–15 General Catalog

Baskin School of Engineering

(831) 459–2158

<http://www.soe.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

Technology and Information Management (TIM) is a multi-disciplinary program that focuses on the integration of engineering, computer science, information technology, and business management for two purposes: the technology of management, which includes the design of information technology to solve business problems, and the management of technology, which includes the management of new-product development and entrepreneurship.

The program offers a bachelor of science (B.S.) degree as well as a minor. At the graduate level, it offers a professional masters of science in TIM and a Ph.D. in TIM.

TIM is a rigorous, challenging major for those students wanting to pursue careers in the management of information and technology. TIM students will receive a thorough grounding in the fundamental principles and practices of technology (in particular, computer science and computer engineering) and management, and the scientific, mathematics, and economics principles upon which they are built. In particular, they will become proficient in the following areas: strategy, planning, innovation, entrepreneurship, information technology, software design, product development, and supply-chain management.

The essence of the technology and information management major at UCSC is the integration of fundamental intellectual content from the disciplines of computer science, computer engineering, business management economics, and finance. TIM students learn how to apply the fundamentals of these diverse disciplines to solving problems that require the integration of management and technology, e.g., developing information technology systems to manage all activities and operations in a firm, e-commerce, managing and commercializing a new technology, and starting a new high-technology company.

To graduate with a B.S. in technology and information management, students normally complete 23–24 required courses (with four laboratories, totaling 120–123 quarter credits) plus four elective courses (20 quarter credits) for the technology and information management major program. To plan for completion of these course requirements within the normative time, students should consult with an adviser as early as possible. Honors students are likely to find the rigorous management and leadership elements of the new program of significant interest. Industrial interactions and projects are key features of this major.

Technology and Information Management Policies

Admissions Policy

Admission to the technology and information management major is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores.

To be admitted to the major after a student has entered UCSC, students need to complete a total of six courses chosen from the following:

At least one course chosen from the following list of mathematics courses:

- MATH 19A or MATH 20A
- MATH 19B or MATH 20B
- MATH 22 or 23A
- CMPE 16

At least one course chosen from the following list of engineering courses:

- CMPS 12A/L, or CMPS 5J and CMPS 11, or CMPE 13/L
- CMPS 12B/M
- CMPE 12/L

At least one course chosen from the following list of economics and technology and information management courses:

- ECON 1
- ECON 2
- ECON 10A
- TIM 50

At least three additional courses must be chosen from the following:

- CMPS 12A/L (or CMPS 5J and CMPS 11) or CMPE 13/L
- CMPS 12B/M
- CMPE 12/L
- CMPE 16
- ECON 1
- ECON 2
- ECON 10A
- MATH 19A or 20A
- MATH 19B or 20B
- MATH 22 or 23A
- TIM 50

In addition, students who have passed six qualifying courses and who have received more than one grade of NP, D, or F in the qualifying courses are not eligible to declare the major.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Archive of General Catalogs

Nondiscrimination Statement

Search the Catalog

Letter Grade Policy

Please refer to the letter grade policy in the School of Engineering section.

Transfer Students

Transfer students must have completed all of the foundation courses listed above. A student lacking one foundation course may be admitted if they have completed at least one of AMS 5 or Math 22 (or 23A) or Econ 10A.

Admission of transfer students will be based on performance in all foundation and other courses transferable to the Technology and Information Management major.

Students should consult assist.org to determine which courses at other institutions in California are transferable to UCSC.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major and the need for UCSC students to obtain pre-approval before taking courses elsewhere.

Preparation for the Major

The technology and information management major is intended for students with an interest in both technology and business. It is recommended that students intending to declare this major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Completion of business-oriented computer literacy and basic programming courses is of benefit to students entering this major. Completion of any economics and/or business-related courses in high school is also beneficial, but the faculty realizes that these courses may not be available at many high schools. Completion of comparable college courses at other institutions serves to strengthen the preparation of a student for the technology and information management major.

Requirements of the Technology and Information Management Major

In addition to completing UCSC general education requirements, students must complete 23 required courses (with four laboratories, totaling 120–123 quarter credits) plus four elective courses (20 quarter credits) for the technology and information management major program. To plan for completion of these course requirements within the normative time, students should consult with a School of Engineering adviser as early as possible. These 27–28 courses include the following:

Required Courses (23–24 courses plus four laboratories)

Applied Mathematics and Statistics (one 5–credit course)

Applied Mathematics and Statistics 5, Statistics

Mathematics (five 5–credit courses)

19A–B, Calculus for Science, Engineering, and Mathematics; and

22, Introduction to Calculus of Several Variables; or 23A, Multivariable Calculus, and

Applied Mathematics and Statistics 10 and 20, Mathematical Methods for Engineers I and II;

or Applied Mathematics and Statistics 10A and 20A, Basic Mathematical Methods for Engineers I and II (3 credits each); or Mathematics 21, Linear Algebra and Mathematics 24, Ordinary Differential Equations

Economics (five 5–credit courses)

1 Introductory Microeconomics: Resource Allocation and Market Structure

2 Introductory Macroeconomics: Aggregate Economic Activity

10A, Economics of Accounting

100A, Intermediate Microeconomics; or

100M, Intermediate Microeconomics Math Intensive

113, Introduction to Econometrics

Computer Engineering (three 5-credit courses and two 2-credit laboratories)

12/L, Computer Systems and Assembly Language/Laboratory

16, Applied Discrete Mathematics

150/L, Introduction to Computer Networks/Laboratory

Computer Science (three or four 5-credit courses and two 2-credit laboratories)

12A/L, Introduction to Programming(Accelerated)/Laboratory; or 5J, Introduction to Programming in Java and 11, Intermediate Programming

12B/M, Introduction to Data Structures/Laboratory

182, Introduction to Database Management Systems

Technology and Information Management (five 5-credit courses and one 2-credit seminar)

50, Business Information Systems

58, Systems Analysis and Design

101, Management of Technology Seminar

105, Management of Technology I

125, Management of Technology II

158, Business Strategy and Information Systems

Elective Courses (four courses)

Two 5-credit School of Engineering courses

- Students select two upper-division School of Engineering electives on the basis of their particular interests. These electives may be any 5-credit upper-division or graduate School of Engineering courses, with the following limitations:
 1. either Computer Engineering 153 or Electrical Engineering 153, but not both;
 2. either Applied Mathematics and Statistics 131 or Computer Engineering 107, but not both;
 3. at most one independent or field-study course (193, 195, 198, 199) with prior approval from the department to be used as an elective.
- One 5-credit upper-division economics course
- One 5-credit, upper-division School of Engineering or economics course (the limitations on School of Engineering electives given above apply)

Technology and Information Management Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the technology and information management major. Plan One is recommended for students who are more proficient in mathematics and programming and Plan Two is recommended for students who need more time to develop proficiency in mathematics and programming.

Plan One

Year	Fall	Winter	Spring
	ECON 1	ECON 2	TIM 50
1st (frsh)	MATH 19A	MATH 19B	MATH 22 or 23A
	college core		
2nd (soph)	CMPS 5J	CMPS 11	ECON 100A
	ECON 10A	CMPE 16	AMS 10

Plan Two

Year	Fall	Winter	Spring
	CMPS 10	CMPS 5J	CMPS 11
1st (frsh)	MATH 3	MATH 19A	MATH 19B
	college core		
2nd (soph)	TIM 50	CMPE 16	ECON 10A
	ECON 1	ECON 2	MATH 22 or 23A

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in technology and information management is satisfied by completing course 158.

Comprehensive Requirement

Students complete two project-intensive courses, Technology and Information Management 158 and Technology and Information Management 105, which constitute the comprehensive requirement for the technology and information management major, based on the dual aspects (technology of management and management of technology) of the program. Course 158 deals with the technology of management, and course 105 deals with the management of technology. Both courses involve a substantial amount of critical thinking and writing within the context of comprehensive projects.

Technology and Information Management 158, Business Strategy and Information Systems, requires that students understand and use a structured methodology to evaluate the competitive use of information systems within an enterprise. This is accomplished by a team project as well as by an individual project that involves researching and writing a comprehensive analytical term paper using a methodology taught as part of this course.

Technology and Information Management 105, Management of Technology I, requires that students understand and apply structured methodologies for the development, management, and commercialization of technologies and products. Students will work in teams on a comprehensive term project in the development, commercialization, and management of technologies such as computers, networks, semiconductors, mechatronics, and biotechnology.

Honors

The TIM program awards honors to students whose academic performance is excellent. Students with a GPA between 3.5 and 3.7 will be awarded honors. Students with a GPA of 3.7 receive highest honors. Students who have been found guilty of academic misconduct

are not eligible for either honors or highest honors.

Minor in Technology and Information Management (TIM)

Purpose

There is a growing need in today's increasingly complex socio-technological world for the fusion of information systems, technology, and business management for two important purposes: the use of information systems to solve business problems, and the management of technology, which includes new product development and enterprise management. The technology and information management (TIM) program therefore offers a minor in technology and information management (TIM) to provide undergraduates in the School of Engineering as well in other programs and divisions in the university, such as economics and business management economics, the physical and biological sciences, and arts, the opportunity to expand the breadth of their knowledge and training to include the management of information systems and the management of technology.

Rationale for the Courses

Courses for the technology and information management minor will include a combination of courses from the TIM program, computer engineering, computer science, and economics as well as the chains of prerequisites behind these courses. The TIM program courses for the technology and information management minor will include a mix of information systems and management of technology courses, providing students with a strong foundation in both the management of information systems and the management of technology.

Course Requirements

Requirements for the minor in technology and information management are the following:

Lower-Division Requirements

MATHEMATICS (2 COURSES)

Mathematics 19A, Calculus (or Applied Mathematics and Statistics 11A/Economics 11A, Mathematical Methods for Economists, or Mathematics 11A, Calculus, or Mathematics 20A, Honors Calculus)

Mathematics 19B, Calculus (or Applied Mathematics and Statistics 11B/Economics 11B, Mathematical Methods for Economists, or Mathematics 11B, Calculus, or Mathematics 20B, Honors Calculus)

COMPUTER SCIENCE (1 COURSE)

Computer Science 5J, Introduction to Programming in Java; or Computer Science 5C, Introduction to Programming in C/C++

TECHNOLOGY AND INFORMATION MANAGEMENT (2 COURSES)

Technology and Information Management 50, Business Information Systems; and

One of the following courses:

- Technology and Information Management 58, Systems Analysis and Design; or
- Technology and Information Management 80C, Starting a New Technology Company

Upper-Division Requirements

MATHEMATICS (1 COURSE)

One of the following courses:

- Economics 113, Introduction to Econometrics; or
- Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic; or
- Applied Mathematics and Statistics 131, Introduction to Probability Theory

Upper-Division Electives (4 courses)

Four upper -division courses selected from the following:

Technology and Information Management 105, Management of Technology I

Technology and Information Management 125, Management of Technology II

Technology and Information Management 158, Business Strategy and Information Systems

Computer Engineering 150/L, Introduction to Computer Networks/Laboratory

Computer Science 180, Database Systems I or Computer Science 182, Introduction to Database Management Systems

Economics 100A, Intermediate Microeconomics or 100M, Intermediate Microeconomics, Mathematics Intensive

Economics 100B, Intermediate Macroeconomics or 100N, Intermediate Macroeconomics, Mathematics Intensive

With pre-approval from the technology and information management undergraduate director, up to two graduate technology and information management courses may be used to satisfy upper-division elective requirements.

Graduate Programs

Technology and Information Management Ph.D. and Master's Degrees

Technology and information management (TIM) is a new and distinct discipline within engineering, combining technology management, systems engineering, and information technology. TIM's research and academic programs, combining information technology with both knowledge management and systems management, address problems facing firms today as they deal with more complex decisions in a global environment, facing new business models (e.g., "services") and business practices. TIM places special emphasis on research arising from challenges faced in creation and management of knowledge-based services and enterprises. TIM themes include:

Management and optimization of enterprise systems, which is the integration of business, technology, and management perspectives to enable an entity to achieve enhanced growth and profitability through use of analytical methods including stochastic models, optimization, game theory and knowledge management.

New product, technology, and services management, which is the design and development of products and services, the design and risk management of product portfolios, and pricing.

Financial engineering, which addresses the management of risk, reward, and allocation of resources in technology development and deployment.

Information retrieval and knowledge management, which includes semantic mining and machine learning, linking business to knowledge management.

TIM offers a master of science (M.S.) degree as a terminal degree for engineers who wish to prepare for careers in management in high-tech enterprises, providing the appropriate breadth and depth of courses for preparation of these engineering managers.

The TIM doctor of philosophy (Ph.D.) degree focuses on research, with emphasis on analytic methods for managing high-tech enterprises, including product, services, and business-process innovation and development; financial engineering for technology and enterprise management; entrepreneurship; operations and supply-chain management; costing and strategy; marketing engineering; data mining; and the applications of information technology to knowledge-management.

Base Requirement

Most entering students are expected to come from undergraduate engineering programs. Students with quantitative undergraduate preparation in the sciences, economics, or mathematics would also be prepared if they had significant industry experience in a technology field or if they are prepared to take extra courses and/or an internship in industry to obtain this background. The TIM M.S. attracts students now employed in

industry and also recent B.S. graduates who have not yet entered the workforce. For this latter group, industrial experience will be encouraged though internships with local companies. TIM M.S. students may take up to two upper-division, undergraduate, prerequisite courses and, with adviser approval, may count these as credit toward the M.S. degree. (These courses will not count as credit toward the Ph.D. degree.)

Mathematics

Probability and statistics (AMS 131)—Focus on probability models, random variables, maximum likelihood and Bayesian estimation

Linear algebra (AMS 10 or MATH 21)

Differential equations (AMS 10 or MATH 24)

Computer Science

Abstract Data Types (CMPS 101)—Focus on abstract data types and common algorithms

Programming project (e.g., CMPS 104A, CMPS 115, CMPS 111)—Any upper-division, computer science course that involves a large programming project

Database systems (CMPS 180, 181)

Computer Engineering

Probability and Statistics for Engineers (CMPE 107)

Computer networks (CMPE 150, 151)

Computer Architecture (CMPE 110)

Applied Graph Theory and Algorithms (CMPE 177)

Economics

Microeconomics (ECON 100A)

Macroeconomics (ECON 100 B)

Managerial Economics (ECON 101)—Includes pricing schemes, non-price competition, and game theory

Field examinations and/or other pre-qualifying examinations

The graduate record examination (GRE) General Test is required for admission and a GRE subject advanced test—preferably in computer science, engineering, physics, or mathematics—is highly recommended. Chemistry and biology students with adequate training in mathematics and physics may also be considered. Student GPA of 3.5 or higher is recommended for admission into the program.

Relationship of Master's and Doctor's programs

The M.S. and Ph.D. programs have the same admission requirements. As in other SOE graduate programs, students admitted to the M.S. program may be subsequently admitted to the Ph.D. program by departmental approval. Ph.D. students may receive the M.S. degree upon fulfillment of the M.S. degree requirements.

Master's Requirements

Masters students must complete a minimum of 45 credits, comprised of the following:

Core Courses (4 required)

- TIM 204, Introduction to Optimization in Business (5 credits)
- TIM 205, Management of Technology I (5 credits)
- TIM 215, Organizations and Leadership (5 credits)
- TIM 245, Data Mining (5 credits)

With appropriate preparation and/or student interest, proposals will be accepted to allow substitution of another graduate course for one of the core courses. This proposal will require approval of the faculty adviser and the TIM graduate director.

Seminars (2 required)

- Two TIM graduate seminars (5 credits total)

Other Courses (15 credits minimum)

- A minimum of fifteen credits (three courses) must be from graduate elective courses approved by the adviser and the TIM graduate director. The program offers a wide variety of electives.
- One upper-division undergraduate course can be substituted for one of the three required graduate courses with the approval of the adviser and TIM graduate director.
- When necessary to strengthen students' preparation for graduate study, up to two additional upper-division undergraduate courses may be required by agreement of the adviser and TIM graduate director.
- Students serving as teaching assistants or who plan to pursue a Ph.D. must take Applied Mathematics and Statistics 200, Research and Teaching in AMS (3 credits), or Computer Science 200, Research and Teaching in Computer Science and Engineering (3 credits) before or during their first teaching-assistant (TA) assignment.

TIM Master's Project

TIM 297. This is a substantial applied research project carried out independently by the student under the guidance of a faculty member. The topic and completed project must be approved by the faculty adviser (5 credits).

Ph.D. Requirements

The research areas in TIM are varied, and each will require a different sequence of classes to develop appropriate depth in analytical methods and technology. The selection of graduate courses will be in consultation with the dissertation supervisor.

Although there is no teaching requirement, students will be encouraged to gain teaching experience by becoming teaching assistants (TAs).

Where appropriate, research internships with companies, government laboratories, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation.

Ph.D. students must complete a minimum of 62 credits, comprised of the following:

Four TIM core courses (same as TIM-MS Core). Up to two of these courses may be substituted with other 5-unit courses with approval of the faculty advisor and reported to the graduate director (20 credits);

Two TIM seminars (4 credits minimum);

Two elective graduate courses (10 credits) offered by TIM;

Three additional graduate electives (15 credits) chosen with approval of the adviser and TIM graduate director. Students may substitute other appropriate courses for the TIM core courses or electives with the approval of their adviser and TIM graduate director;

A minimum of 10 credits of dissertation research or independent study;

Applied Mathematics and Statistics 200, Research and Teaching in AMS (3 credits); or
Computer Science 200, Research and Teaching in Computer Science and Engineering (3 credits)

Ph.D. Qualifying Examination and Dissertation

Each student writes a Ph.D. dissertation. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student submits a written dissertation proposal to a TIM faculty member. By accepting the proposal, the faculty member becomes the dissertation

supervisor. The dissertation proposal is formally presented in an oral qualifying examination given by a qualifying exam committee approved by the graduate committee.* The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination.
**Sentence revised on 12/5/14 to remove reference to "graduate council."*

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all incompletes from their records, have an appointed dissertation reading committee and have paid the advancement fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

405 Interdisciplinary Sciences Building

(831) 459–2634

<http://envs.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

The environmental studies major prepares students for meaningful lifetime engagement with the environmental challenges that are facing society. UCSC environmental studies graduates hold leadership positions as legislative and policy analysts, environmental lawyers, environmental managers, city and state planners, educators, restoration ecologists, organic farmers and agroecological specialists, conservation biologists, environmental engineers, museum curators, business consultants, and political advocates. In addition, many graduates go on to obtain professional, master's, or doctoral degrees at the nation's finest institutions.

Students pursue an interdisciplinary curriculum that combines coursework in the natural and social sciences. Introductory courses cover the ecological, political, and economic aspects of historic, current and future environmental issues. The core course, Environmental Studies 100/L, Ecology and Society builds on the skills acquired in the lower-division classes, and encourages students to apply ecological, economical and political skills toward environmental and ecosystem management. The remaining upper-division elective courses further emphasize the integration of ecological knowledge with an understanding of social institutions and policies. The program emphasizes active, interdisciplinary learning with the overall objective of instilling the necessary skills to conserve biodiversity and integrate the principles of sustainability with respect to management of complex environmental systems. Faculty work on these issues at local, regional, and global levels providing a unique, proactive, and progressive academic environment for students wishing to pursue a degree program within the Environmental Studies Department.

In addition to the single environmental studies major, students may choose to pursue one of three combined majors with biology, Earth sciences, or economics. The combined major curricula offer the unique integration of the underlying concepts of environmental studies with a focus on the application of these concepts in a closely related field (or vice versa).

As a complement to classroom instruction and research, many courses have field components. The Environmental Studies Internship Program helps qualified students find placements with government and educational agencies, community organizations, and private firms. Furthermore, faculty-directed, independent, or field-oriented research courses allow environmental studies students the opportunity to learn more about their specific academic career or personal interests, often while earning academic credit

Declaration of the Major

Students wishing to declare within the Environmental Studies Department should visit the [environmental studies web site](#) and follow the steps listed there. Study plans may be downloaded from the [environmental studies web site](#).

Major Qualification Policy

A. Environmental Studies Major

Students may petition to declare the Environmental Studies major once they have completed the following required courses: Environmental Studies 23; Environmental Studies 24 (or Biology: Ecology and Evolutionary Biology 20C); Environmental Studies 25; Applied Mathematics and Statistics 7/L. Students receiving an NP, D, or F in one of the courses required for admission to the major may only declare once they have passed the same or equivalent course with a grade of C or better. Students who receive two grades of NP, D, or F in the required courses are not eligible to declare the major.

B. Environmental Studies/Biology Combined Major

Students may petition to declare the Environmental Studies/Biology combined major once they have completed the following courses: Environmental Studies 25; Ecology and Evolutionary Biology 20C; Molecular, Cell, and Developmental Biology 20A Chemistry 1A; Applied Mathematics and Statistics 7/L. Students receiving an NP, D, or F in one of the courses required for admission to the major may only declare once they have passed the same or equivalent course with a grade of C or better. Students who receive two grades of NP, D, or F in the required courses are not eligible to declare the major.

C. Environmental Studies/Earth Sciences Combined Major

Students may petition to declare the Environmental Studies/Earth Sciences combined major once they have completed the following courses: Environmental Studies 24 (or Biology: Ecology and Evolutionary Biology 20C); Environmental Studies 25; Chemistry 1A; Applied Mathematics and Statistics 7/L. Students receiving an NP, D, or F in one of the courses required for admission to the major may only declare once they have passed the same or equivalent course with a grade of C or better. Students who receive two grades of NP, D, or F in the required courses are not eligible to declare the major.

D. Environmental Studies/Economics Combined Major

Students may petition to declare the environmental studies/economics combined major once they have completed the following courses: Environmental Studies 23; Environmental Studies 24 (or Biology: Ecology and Evolutionary Biology 20C); Environmental Studies 25; Economics 1; Economics 11A; and either Applied Mathematics and Statistics 5 or 7/L. Students receiving an NP, D, or F in one of the courses required for admission to the major may only declare once they have passed the same or equivalent course with a grade of C or better. Students who receive two grades of NP, D, or F in the required courses are not eligible to declare the major.

Appeal Procedure

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Continuing UCSC students are required to complete all six prerequisite courses before taking Environmental Studies 100/L. Five of the prerequisite courses are preset and are listed below. See the course descriptions for more specific information.

Environmental Studies 23, The Physical and Chemical Environment (offered in spring and summer quarters)

Environmental Studies 24, General Ecology (offered in fall and summer quarters). *

Environmental Studies 25, Environmental Policy and Economics. Offered in winter and summer quarters.

Applied Mathematics and Statistics 2, Prestatistics, or Applied Mathematics and 6, Precalculus for Statistics; or Applied Mathematics and Statistics 3, Precalculus for Science and Engineering; or Mathematics 3, Precalculus; or a score of 3 or higher on the College Board AP calculus examination, or equivalent. Check the catalog for the quarters offered.

Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological and Environmental Studies. Check the catalog for the quarters offered. *

*Prerequisite for Environmental Studies 24 and Applied Mathematics and Statistics 7/L is Applied Mathematics and Statistics 2 or 3 or 6, or Mathematics 3.

In addition, students choose one introductory course in sociology, cultural anthropology, or ethics. The acceptable courses are as follows:

Anthropology 2, Introduction to Cultural Anthropology

Sociology 1, Introduction to Sociology

Sociology 10, Issues and Problems in American Society

Sociology 15, World Society

Philosophy 22, Introduction to Ethical Theory

Philosophy 24, Introduction to Ethics: Contemporary Moral Issues

Philosophy 28, Environmental Ethics

Philosophy 80G, Bioethics in the 21st Century: Science, Business, and Society

The following are two recommend academic plans for pursuing the environmental studies single major. Plan One is for students who place into Mathematics 3, Precalculus, and Plan Two is for students who place out of Mathematics3, Precalculus.

Plan One for students placing into Mathematics 3

Year	Fall	Winter	Spring
1st (frsh)	MATH 3 or AMS 2 or 6 or 3	AMS 7/L or SOC/ANTH/Ethics ENVS 25	ENVS 23
2nd (soph)*	ENVS 24 AMS 7/L or SOC/ANTH/Ethics	ENVS 100/L or spring	ENVS 100/L
3rd (jr)			

Plan Two for students placing out of Mathematics 3

Year	Fall	Winter	Spring
1st		ENVS 25	ENVS 23

(frsh)	AMS 7/L or SOC/ANTH/Ethics	AMS 7/L or SOC/ANTH/Ethics
2nd (soph)	ENVS 24	ENVS 100/L or spring ENVS 100/L

Transfer Students

Transfer students pursuing environmental studies majors are encouraged to transfer in the fall quarter. Students transferring to UCSC should complete as much of the lower-division curriculum as possible, with a grade of C or better, at another recognized institution before transferring to UCSC. Below is an outline of acceptable substitute courses for the lower-division environmental studies single major prerequisites. Please note that all students wishing to pursue a single environmental studies major must complete Applied Mathematics and Statistics 7/L (or Economics 113 for combined majors with economics) at UCSC to fulfill the statistics requirement needed to begin upper-level environmental studies coursework. It is recommended that transfer students plan to enroll in Applied Mathematics and Statistics 7/L or Economics 113, and any other missing prerequisite during the summer or fall quarter in order to take Environmental Studies 100/L in winter or spring quarter. Transfers can formally declare their major once qualifying courses are successfully completed (see [Major Qualification Policy](#)).

Completion of an introductory college chemistry course will substitute for Environmental Studies 23.

Completion of a general ecology course will substitute for Environmental Studies 24.

Two courses, one in politics, one in economics, will substitute for Environmental Studies 25.

A college-level precalculus course will substitute for Mathematics 3 or Applied Mathematics and Statistics 3 at UCSC.

Environmental Studies 23, 24, and 25 are offered during Summer Session at UCSC, and transfer students are encouraged to take them. If you are transferring, compare catalog descriptions, consult your current institution's adviser, and refer to the [ASSIST web site](#) to determine equivalency.

Upper-Division Requirements

In addition to lower-division coursework, students are required to complete nine upper-division courses:

Environmental Studies 100/L, Ecology and Society (environmental studies core course, offered twice yearly during the winter and spring quarters).

Seven upper-division electives (environmental studies courses numbered 101-179). One must be based in the social sciences and one course must be based in the natural sciences. List of these courses is available from the Environmental Studies Department.

See the [senior comprehensive requirement](#) below.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing. The DC Requirement in environmental studies is satisfied by completing Environmental Studies 100/L and one of the following courses: 183B, 190, 195A, 195B, or 196.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. Before enrolling in the senior thesis or senior internship option, students must formally

apply to work with a particular faculty mentor very early in their thesis or project preparation. These courses require careful planning, additional independent research, and at least a two-quarter commitment.

Environmental Studies 183A and 183B, Senior Internship

Environmental Studies 190, Capstone Course: Environmental Problem Solving (offered spring quarter only)

Environmental Studies 195A or 195B, Senior Thesis

Environmental Studies 196 (one course from the series), Senior Seminar

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

Requirements for the Combined Majors

Environmental Studies/Biology

This course of study provides students with the basic tools of biological science and sufficient understanding of resource conservation, conservation biology, and concerns about environmental sustainability to apply these tools to environmental problems.

Lower-Division Requirements

All courses must be taken for a letter grade.

Biology and mathematics courses may require placement examinations. See course descriptions for prerequisite information.

Ecology and Evolutionary Biology 20A, 20B, and 20C

Environmental Studies 25

Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, 10 or 15

Applied Mathematics and Statistics 3, Precalculus, or Applied Mathematics and Statistics 2, Prestatistics, or Applied Mathematics and Statistics 6, Precalculus for Statistics; Mathematics 3; or a score on the math placement examination or the College Board AP calculus examination sufficient to be placed into calculus)

Applied Mathematics and Statistics 7 and 7L

Chemistry 1A, 1B, and 1C/N

Two courses in physics, Physics 1 and 2, or Physics 6A/L and 6B or 6C.

Upper-Division Requirements

Students are required to complete nine upper-division courses and the comprehensive requirement listed below.

Environmental Studies 100/L (prerequisites are: Chemistry 1A; Ecology and Evolutionary Biology 20C; Environmental Studies 25; Applied Mathematics and Statistics 2 or 3 or 6, or Mathematics 3; Applied Mathematics and Statistics 7/L; and the cultural anthropology/sociology/philosophy option).

Biology 105, Genetics

Biology 109, Evolution

Six upper-division courses, three in biology and three in environmental studies. One of the six must be a laboratory course, and one of the three environmental studies courses must be based in the social sciences. Students wishing to pursue an advanced degree in the pure or applied sciences are strongly encouraged to complete the organic chemistry series as well. Chemistry 108A/L and 108B/M may be substituted to fulfill one of the upper-division biology elective requirements.

These upper-division elective courses should be selected in pursuit of a coherent plan of study, chosen in consultation with faculty sponsors from both the Biological Sciences and

Environmental Studies Departments. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study, or substitution course.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement for the environmental studies/biology combined major is satisfied by completing Environmental Studies 100/L and one of the following courses:

Environmental Studies 183B, 190, 195A, 195B, or 196, or Biology: Ecology and Evolutionary Biology 109.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by completing either:

one of the options for environmental studies majors (see Comprehensive Requirement above); or

one of the approved internships, independent research or field course or a thesis

Environmental Studies/Earth Sciences

This course of study provides students with the basic tools of Earth sciences and environmental studies needed to address environmental problems.

Lower-Division Requirements

Applied Mathematics and Statistics 7 and 7L

Mathematics 11A-B (or 19A-B)

Chemistry 1A, 1B/M, and 1C/N

Physics 6A/L and 6B/M (or 5A/L and 5B/M)

Earth Sciences 20/L (or 5/L or 10/L)

Environmental Studies 24 and 25

Anthropology 2 or Philosophy 21, 22, 24, 28, or 80G or Sociology 1, 10, or 15.

Upper-Division Requirements

Earth Sciences 110A/L, 110B/M, or 110C/N

Environmental Studies 100/L (Prerequisites are: Chemistry 1A, Ecology and Evolutionary Biology 20C, Environmental Studies 25, Applied Mathematics and Statistics 2 or 3 or 6, or Mathematics 3, Applied Mathematics and Statistics 7/L, and the cultural anthropology/sociology/philosophy option)

Three additional upper-division environmental studies courses, including at least one course based in the social sciences

Three additional upper-division Earth sciences courses

The upper-division courses should be selected in pursuit of a coherent plan of study, such as water policy-hydrology, restoration ecology-geochemistry, agroecology-soil physical processes, or environmental policy-climate change, among others, in consultation with faculty from both the Environmental Studies and Earth Sciences Departments. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement for the environmental studies/Earth and planetary sciences combined major is satisfied by completing Environmental Studies 100/L and one of the following courses: Environmental Studies

183B, 190, 195A, 195B, or 196, or Earth Sciences 195 or 188A–B.

Comprehensive Requirement

Students satisfy their senior comprehensive requirement in environmental studies or Earth sciences by completing either:

- One of the senior comprehensive options for single environmental studies majors (see [Comprehensive Requirement](#) above) or
- one of the senior comprehensive options for Earth sciences majors (see [Comprehensive Requirement](#) under Earth Sciences).

Environmental Studies/Economics

This major provides students with the basic tools of economic analysis and an understanding of the mechanics of resource production, conservation, and use, in both ecological and economic terms.

Lower-Division Requirements

Economics 1, 2, 11A, 11B, AMS 5 or AMS 7/L

Environmental Studies 23, 24, 25

Anthropology 2; or Philosophy 21, 22, 24, 28, or 80G; or Sociology 1, 10 or 15.

Upper-Division Requirements

Economics 100A(100M), Intermediate Microeconomics

Economics 113, Econometrics

Environmental Studies 100/L

Six upper division elective courses, three in economics and three in environmental studies.

Economics electives must be chosen from the following list: 100B(100N), 101, 114, 115, 120, 128, 130, 131, 133, 135, 136, 138, 139A, 139B, 140, 141, 142, 150, 156, 160A, 160B, 161A, 162, 165, 169, 180, 183.

Environmental Studies electives must be chosen from those numbered 101–179, with at least one course based in the natural sciences. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement in environmental studies/economics combined major is satisfied by completing Environmental Studies 100/L and one of the following courses: Environmental Studies 183B, 190, 195A, 195B, or 196.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by completing the following: one of the options for environmental studies majors (see [Comprehensive Requirement](#) above); and pass those portions of the economics comprehensive examination administered in Economics 100A(100M) and 113.

Honors

Senior Comprehensive Honors. Only applicable is senior thesis, internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's advisor) must confer.

Departmental Honors. To be considered for departmental honors, students must have a grade point average (GPA) of 3.5 in upper-division environmental studies courses.

Highest Departmental Honors. To be considered for highest departmental honors, students must have a GPA of 3.75 in the major in upper-division environmental studies courses, and received honors on the senior comprehensive.

For combined majors, students must fulfill all requirements for honors from both departments.

Graduate Program

The doctor of philosophy (Ph.D.) program in Environmental Studies at UCSC is an interdisciplinary program that draws equally from ecology and social sciences. Our interests in ecology engage most strongly with conservation biology, agroecology, and global change. Our interests in the social sciences bridge political ecology, geography, environmental policy, and politics, law, and environmental economics. We aim to train doctoral students to work effectively in disciplinary and interdisciplinary environments within the academy, in government agencies, and in public interest organizations and businesses.

Graduates of the program are expected to engage as scholars across natural and social sciences, to have deep intellectual strength in their area of specialty, and to have made substantial contributions toward the understanding of an environmental problem. We expect our doctoral students to be as skilled and intellectually rigorous within their research emphases as are students emerging from more traditional disciplinary programs but also to possess the knowledge needed to understand, analyze, and communicate in different but relevant fields of study. This expectation of intellectual breadth as well as disciplinary depth is a central goal of our doctoral program.

Given the strong interdisciplinary focus of the environmental studies Ph.D. program, study in other fields is encouraged. Most environmental studies faculty have secondary affiliations with other departments on campus. Students have the option of pursuing a "designated emphasis," the equivalent of a graduate minor in another graduate program on campus. These provide a framework for in-depth study in specialized disciplinary fields and recognition of particular scholarly expertise. Designated Emphasis programs are available in numerous fields including ecology and evolutionary biology, anthropology, education, sociology, visual studies, statistics, politics, and Latin American and Latino studies.

General Requirements for the Doctorate

The typical duration of the doctoral program is five to six years.

A dissertation in environmental studies is expected to present an original contribution to the understanding of a significant environmental problem or issue. It should demonstrate a clear understanding of the relevant literature, careful and rigorous research design, and effective communication of the results within the context of the student's area of emphasis. The dissertation is guided by a committee that includes both natural and social scientists.

In addition to the dissertation, students are expected to complete required coursework and to serve as teaching assistants in undergraduate courses for two quarters.

The Environmental Studies Department does not offer a terminal master's degree, except for students who have been advanced to candidacy but who do not complete the Ph.D. dissertation.

Program Prerequisites

The interdisciplinary nature of the core curriculum requires rigorous preparation at the undergraduate level. All entering students are expected to have completed at least one upper-division course in the following areas: economics, ecology/genetics, statistics, and either anthropology, sociology, politics or political economy.

Committees and Examinations

A three-person interdisciplinary guidance committee works to ensure that each student's preparation is individually designed to meet particular needs and interests, to help ensure their success as scholars, and to help students fully engage interdisciplinary dimensions of their training and research. One committee member is the major professor and at least one

member needs to be from a complementary meta-discipline from the student's general research area. For instance, a student whose interests are in conservation biology may have two committee members who are ecologists and one who is a political scientist.

The committee helps guide the student in preparation for prequalifying examinations in three general areas of scholarly interest, and depending on the student's background, interests, and intentions, may require additional coursework, including courses from other departments. The prequalifying examination must be taken no later than winter quarter of the third year.

The qualifying examination committee includes an additional member from outside the environmental studies department, and helps guide the student to define and plan their dissertation research. This committee is responsible for certifying that the student is qualified to advance to candidacy for the Ph.D. degree. The qualifying examination must be completed by the end of the third year.

If the venue of a student's research is in a non-English-speaking country, certification of competence in the language of that country may be required before advancement to candidacy.

Required Courses

Environmental Studies 201A, Keywords and Concepts: Geography and Ecology

Environmental Studies 201B, Keywords and Concepts: Biogeochemistry and Environmental Policy

Environmental Studies 201M, Interdisciplinary Research Methods

Environmental Studies 201N, Interdisciplinary Research Design

An approved graduate course in quantitative methods that provides a basis in research design and analysis

Two of the following, one each from the social and natural sciences:

Social Sciences:

- Environmental Studies 210, Political Ecological Thought and the Environment or
- Environmental Studies 240, Public Policy and Conservation

Natural Sciences:

- Environmental Studies 220, Conservation Biology, or
- Environmental Studies 230, Agroecology and Sustainable Agriculture

These courses are designed to ensure that students acquire disciplinary depth in their chosen research fields; gain experience of their research communities; and refine the research skills necessary to perform successfully in their professional arena.

In addition, every quarter before advancement to candidacy, all students are required to participate in:

Environmental Studies 290, Interdisciplinary Research Seminar (2 credits)

Environmental Studies 290L, Graduate Research Seminar (2 credits)

Environmental Studies 292, Topics in Research in Environmental Studies (2 credits)

Graduate students are encouraged to participate in course Environmental Studies 291, Advanced Readings in Environmental Studies, in areas of interest.

Requirements for the Designated Emphasis in Environmental Studies

Doctoral students from other departments at UCSC may complete a designated emphasis in environmental studies by completing ENV5 201A, ENV5 201B, two advanced graduate courses in ENV5 (from an approved list), and two quarters of ENV5 292. In addition,

students must have an environmental studies faculty member on their qualifying examination and thesis reading committees, complete a significant scholarly written component on an environmental topic, and complete the requirements for Ph.D. in their own department.

Application and Admission

For admission to the doctoral program, students must have completed a bachelor's degree or the equivalent in an area related to environmental studies. Most students entering the program either hold a master's degree or have several years work experience beyond the bachelor's.

Superior scholarship, capacity to carry out independent research, and commitment to scholarly work in an interdisciplinary context must be demonstrated in the statement of purpose, coursework, Graduate Record Examination (GRE) General Test, and letters of recommendation. Prospective students must contact faculty directly to inquire about sponsorship for admission to the program. Students are rarely accepted into the program without significant, early communications with potential faculty sponsors. See the [faculty list](#) for contact information.

Other considerations for admission include grades, evaluations, publications, professional or extramural experience, and more than one degree (second bachelor's or master's). Students are required to have completed coursework, or equivalent practical experience, in ecology, statistics, sociology/political science, and economics. Limited deficiencies in these areas can be remedied during the first year of graduate study. In addition to the application materials, students are strongly encouraged to submit a substantial written project (undergraduate or master's research project).

Admissions information and the online graduate application are at the [UCSC Division of Graduate Studies](#).

Admission is only considered for the fall quarter. Completed applications are due by December 15th of the previous academic year.

Program Description

Feminist studies is an interdisciplinary field of analysis that investigates how relations of gender are embedded in social, political, and cultural formations. The undergraduate program in feminist studies provides students with a unique interdisciplinary and transnational perspective. The department emphasizes theories and practices derived from multiracial and multicultural contexts.

Feminist studies prepares undergraduates for a variety of careers. The bachelor of arts (B.A.) degree in feminist studies provides excellent grounding for undergraduates who have career aspirations in, for example, law, health, public administration, community organizations, and social services. Students wishing to pursue doctoral work will also find that interdisciplinary training in feminist studies equips them with theoretical and methodological strengths in most disciplines and applied research fields. Specialists in feminist studies are employed as consultants in industry, higher education, and human resources. State and federal government agencies employ people who have special training in understanding gender relations. Educational institutions need specialists to develop and administer feminist studies programs, women's centers, and other institutional structures designed specifically to study and assist women.

Requirements of the Major

Feminist studies majors must complete 11 courses including a senior comprehensive exit requirement in the feminist studies program. Students must choose one of the following concentrations within the major: Culture, Power, and Representation; Law, Politics, and Social Change; Science, Technology, and Medicine; or Sexuality Studies. Courses appropriate for each concentration are listed at <http://feministstudies.ucsc.edu/courses/index.php>.

A proposal for an independent concentration will be approved only when a student presents a clear, coherent, and rigorous plan of study that does not fit the existing concentrations. Both the student's adviser and the Feminist Studies Department chair must approve a proposal for an independent concentration.

Required courses include Feminist Studies 1, Feminist Studies: An Introduction; one Feminist Studies 10-, 20-, 30-, or 40-level course; Feminist Studies 100, Feminist Theories (these three core courses must be taken at UCSC); five upper-division, 5-credit courses in

the concentration; two upper-division, 5-credit electives; and an upper-division exit (comprehensive) requirement course. One independent study (course 199) may count toward the concentration or toward the elective requirements. Course 193 or 198 (internship) may be used to count toward the elective requirements.

Feminist studies is an interdisciplinary major and lists courses taught by affiliated faculty in other departments. However, feminist studies majors must take a minimum of five courses at UCSC taught directly in the Feminist Studies Department, i.e., courses designated FMST, not including course 193, 198, or 199. Two Education Abroad Program (EAP) courses may count towards the major; three transfer courses may count towards the major; and the total combined number of EAP and transfer courses that may count towards the major is a maximum of three.

Exit requirement options include a senior seminar (course 194) taught by core faculty, a senior thesis, or a senior project (course 195). Course 1, a lower-division 10-49 course, 100, and the composition (general education code C) requirement are prerequisites to course 194 and 195.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in feminist studies is satisfied by completing one course: 194A, 194D, 194E, 194F, 194G, 194H, 194I, 194J, 194K, 194M, 194N, 194O, 194P, 194Q, 194T, or 195.

Honors

Feminist studies awards honors and highest honors in the major. At the end of each quarter, a faculty committee meets to review graduating students' files. Students are considered for honors and highest honors based on their cumulative GPA, calculated from grades earned in coursework and senior exit requirement undertaken for completion of the major. For honors, students must earn a minimum GPA of 3.70 in the relevant courses, while for highest honors, the GPA must be 3.90 or higher. Writing a thesis is not a requirement for receiving honors or highest honors.

Letter Grade Requirement

Letter grades are required for 10 of the 11 courses applied toward the feminist studies major, including course 100 and the senior comprehensive course (194 or 195).

Transfer Students

Transfer students are encouraged to declare the major as soon as possible to be assured entrance into the required core courses. Feminist studies advisers or the chair determine which UC-transferrable courses from other institutions are acceptable. Course 1, one 10-49 lower-division course, and 100 must be completed in the junior year so that the exit requirement may be completed in the senior year.

Graduate Studies

Feminist Studies Ph.D.

The Department of Feminist Studies at the University of California, Santa Cruz welcomed its inaugural class of students who began studies toward a Ph.D. in Feminist Studies in fall 2013. The Ph.D. in Feminist Studies at UC Santa Cruz is an interdisciplinary program that investigates how relations of gender are embedded in social, political, racial, and cultural formations. The program emphasizes feminist modes of inquiry and provides students with advanced training in feminist methods. It fosters a rethinking of the relationships between knowledge, power, and expertise. Conceived as a collaborative, cross-divisional enterprise, this graduate program draws upon the strengths of a range of feminist scholars and their departments and programs across the University.

Ph.D. students will complete most of their coursework during their first two years, including the three required courses on Feminist Theories, Feminist Methodologies, and Disciplining Knowledge (FMST 200, 201, 202). Students focus on preparing their problem-based areas

of research and their dissertation prospectus during their third year. Students normally take the Ph.D. qualifying examination in their third year or early in their fourth year, when they also must demonstrate proficiency in a second language. Students write a dissertation that is approved by the Dissertation Committee to finish the program. Six years is the normative time toward completion of the Ph.D. degree.

Requirements for Ph. D. students

Ph.D. students must complete the three required courses and at least nine elective courses and three 2-credit classes. They will satisfy their language requirement by the end of the third year, and take their qualifying examination no later than their fourth year.

For Ph.D. Students by the end of the fourth year, or sooner:

- Twelve courses (of 5 credits each) and three 2-credit courses
- Language requirement satisfied
- Qualifying examination passed and dissertation prospectus approved
- After completion of qualifying examination, student takes courses in the 290 sequence until the dissertation is submitted.
- Students must teach three courses in feminist studies, or equivalent as instructor or research assistant

[See the [Feminist Studies web site](#) to learn more about the graduate program.]

Feminist Studies Designated Emphasis

Graduate students may work toward a doctor of philosophy (Ph.D.) degree that notes a designated emphasis in feminist studies on the graduation documents. Students wishing to pursue this option should consult with the chair of their respective Ph.D. program and are encouraged to apply in the first or second year of graduate study. The application and an annually updated list of regularly offered, approved graduate courses are available at <http://feministstudies.ucsc.edu>.

The following are required for the designated emphasis:

Committee composition. The student must have a designated graduate adviser from the feminist studies core or associate faculty who serves on the qualifying examination committee or in some other appropriate capacity.

Writing. The student must prepare a significant piece of writing in the area of feminist studies. This writing must be a master's essay or a chapter of the doctoral dissertation.

Course requirements. The student must take four graduate courses in feminist studies, two of which must be taught directly in the department. Two courses can be selected from among the graduate offerings of any UCSC department, as long as they are taught by core or affiliated feminist studies faculty.

[2014–15 General Catalog](#)

101 Communications Building

(831) 459–3204

film@ucsc.edu<http://film.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

The film and digital media major at UCSC offers an integrated curriculum involving theory, criticism, and cultural analysis, as well as a production program in the aesthetics and techniques of film and digital media. This bachelor of arts degree program provides students with the critical skills, theoretical concepts, and historical knowledge necessary to conduct informed analysis of cinema, television, video art, and new media, along with the up-to-date technical knowledge, practical skills, and artistic contexts needed for the production of film, video, and digital media. The major provides a course of study that develops an understanding of moving image and digital media as essential tools of communication and artistic practice.

Students in the general film and digital media major develop an understanding of major movements in world cinema and different aesthetic approaches to the medium, while studying the cultural impact of television and the rise of video and digital art in recent decades. The critical studies concentration is designed for film and digital media majors who have a special aptitude for and interest in the history and theory of film, television, video, and digital media. This rigorous program can help prepare undergraduates for graduate work in critical studies. Students in the highly selective production concentration are encouraged to demonstrate technical proficiency and creative vision in film and digital media production while also studying the histories and theories of these media. The integrated critical practice concentration will serve students currently enrolled in the major who have a special aptitude for and interest in combining work in critical studies and production. The concentration provides them with a more rigorous pathway through the major and, in their senior year, allows them to work on a senior project that integrates creative and intellectual work.

Students in all facets of the major acquire skills in media analysis while maintaining a broadly based, liberal arts perspective. The UCSC program is interdisciplinary, combining theory and practice in film, video, and digital media with study in other areas of the arts, humanities, and social sciences that help students understand the role these media play in society.

As the technologies of film and video have merged with digital computer-based moving images and interactive media, and as digital media continues to expand into everyday experience, students in the major are uniquely positioned to excel in these fields. Graduates of the UCSC film and digital media program have enjoyed considerable success both in the professional world and in gaining admission into top graduate schools in the

field.

Students enrolled in film and digital media production classes have access to audio, video, and digital production and postproduction equipment. Facilities include a digital media lab; audio recording studio; sound stage with green screen; digital nonlinear editing rooms; video format conversion rooms; a computerized sound effects library; and student equipment checkout. Additionally, computer laboratories equipped for digital image manipulation, web authoring, and interactive interface design and viewing rooms are available. The critical studies facilities include classrooms equipped for high-end film, video, and data projection. The library holdings in film and video history, theory, and literature are complemented by a large collection of films, videos, laser disks, and DVDs, including a diverse range of international feature films, experimental film and video work, animation, silent films, and documentaries.

Some courses offered by the Film and Digital Media Department are restricted in enrollment; admission is based on completion of prerequisites and other specific written application requirements. Admission to advanced production courses is generally restricted to third- and fourth-year students and is based on the submission of a portfolio of work produced in the introductory production class (FILM 170B for film production pathway, FILM 170A for digital media pathway) and other production workshops.

Upper-division digital media and production studio courses require coursework to be completed on computers. Instruction in and software for production courses utilizes the "Apple OX platform and primarily consists of Apple and Adobe video production software packages. Many UCSC students purchase laptop computers. Film and digital media students who are considering purchasing a laptop computer for production work are encouraged to consult with the department's operations staff. A list of recommended computer configurations and information regarding education pricing on software packages is available at slugfilm.ucsc.edu.

Declaration of the Film and Digital Media Pre-Major

Students who have completed one lower-division course (20A, 20B or 20C) with a grade of C or better may declare the film and digital media pre-major. Pre-majors are expected to complete the requirements to declare the major by the end of their second year. Transfer students must declare the pre-major no later than their second quarter in residence.

Declaration of the Film and Digital Media Major

Prior to declaring the film and digital media major, students must pass FILM 20A, and either 20B or 20C with a grade of C or better. Students may choose to take FILM 20P to fulfill the third lower-division requirement but this course does not count toward declaring the major.

Students need to complete the lower-division courses early in their studies so that the petition to major status is accomplished before the first quarter of the junior year. Acceptance into the film and digital media major does not constitute acceptance into any of the concentrations (production, critical studies, or integrated critical practice). Transfer students should consult the Transfer Student section for instructions about declaring the major.

Requirements of the Major

The general film and digital media major requires three lower-division and nine upper-division courses in residence and satisfaction of the senior comprehensive requirement. Students must include among these 13 courses at least one upper-division, 5-credit course that focuses on diversity (i.e., non-Western; underrepresented ethnicity, gender, or sexual orientation). A list of courses satisfying the department's diversity requirement is available at the department office. Students in the general film and digital media major may apply for admission to the critical studies concentration (see Critical Studies Concentration below), to the highly selective and competitive production concentration (see Production Concentration below), or the more rigorous integrated critical practice concentration (see Integrated Critical Practice Concentration below) within the major.

20A Introduction to Film Studies

Two additional 20-level courses:

20B Introduction to Television Studies

20C Introduction to Digital Media

20P Introduction to Production Technique (cannot be used toward declaring the major)

General Film and Digital Media Major

Students in the general major complete the following required upper-division core curriculum:

120 Introduction to Film Theory and Criticism

One course from each of the following four groups:

130 Silent Cinema

132A International Cinema to 1960

132B International Cinema, 1960 to Present

132C Gender and Global Cinema

134A American Film, 1930-60

134B American Film, 1960-Present

136A Experimental Film and Video

136B History of Television

136C Visual Culture and Technology: History of New Media

136D Documentary Film and Video

194A Film Theory Seminar

194B Electronic Media Theory Seminar

194C New Media Theory Seminar

194D Film History Seminar

194E International Cinemas

194F Film and the Other Arts: Music and Dance

194G New(s) Media

194S Senior Seminar: Special Topics

And five upper-division elective courses are to be chosen from the following:

- up to five additional upper-division history/critical studies courses in film and digital media
- up to two upper-division courses in film and digital media production (150, 151, 170A, 170B, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- up to two upper-division courses offered by other departments or another institution; course substitutions must be pre-approved by the Film and Digital Media Department

Film and Digital Media Major Planners

The following are two recommended academic plans for students to complete during their first two years as preparation for the film and digital media major. Plan One is a guideline for students who are committed to the major early in their academic career; Plan Two is for students who are considering the major.

Students who are interested in the production concentration, the critical studies concentration, or the integrated critical practice concentration should consider Plan One to be better prepared for application to production studio classes or either the critical studies concentration or the integrated critical practice concentration in their junior year. However, four-year students following Plan Two should be able to pursue a concentration and still meet their expected graduation term. FILM 20A is not guaranteed to any incoming frosh and most four-year students will use Plan Two as a guideline.

Plan One

Year	Fall	Winter	Spring
------	------	--------	--------

	FILM 20A	low-div FILM req	low-div FILM req
1st (frsh)	college core	gen ed	gen ed
	gen ed	(declare pre-major)	(declare major)
2nd (soph)	FILM critical studies core	FILM 120	FILM critical studies core
	FILM elective	FILM elective	FILM elective
	gen ed	gen ed	gen ed

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	FILM 80A or 80M	low-div FILM req	low-div FILM req
	college core	gen ed	gen ed
	gen ed		(declare pre-major)
2nd (soph)	FILM 20A	FILM 120	FILM critical studies core
	gen ed	FILM elective	FILM elective
	(declare major)	gen ed	gen ed

Critical Studies Concentration

The critical studies concentration provides a more rigorous pathway through the film and digital media major and offers classes specifically reserved for seniors who have exceptional abilities. Students are eligible to apply for the critical studies concentration in spring quarter of their junior year, provided they have completed FILM 120 and at least three other upper-division critical studies classes. Applicants must already be declared film and digital media majors in good standing.

Students will be asked to submit the following application materials:

- a completed application form
- a one-page statement of purpose
- a sample essay
- a FDM faculty statement of support (submitted directly to the department)
- copies of all narrative evaluations provided by instructors of film and digital media courses

Application materials and instructions are available at the Film and Digital Media Department office. Applications are reviewed by a committee of film and digital media critical studies faculty. Admission to the critical studies concentration will be granted to students who have excellent grades in film and digital media courses, an outstanding writing sample, a clear statement of purpose, and a strong FDM faculty endorsement. Students may reapply a second time if not accepted, but not later than the first quarter of their senior year.

Requirements for the Critical Studies Concentration

The critical studies concentration curriculum adds the following requirements to those

already established for the film and digital media major. Students are required to take two upper-division electives, rather than the five electives currently required for the film and digital media major. Students complete their senior comprehensive requirement by taking FILM 194A, Film Theory Seminar; FILM 199, Tutorial; and either FILM 192, Student-Directed Seminar or FILM 195, Senior Thesis.

Students in the critical studies concentration complete the following required upper-division core curriculum:

120 Introduction to Film Theory and Criticism

One course from each of the following five groups:

130 Silent Cinema

132A International Cinema to 1960

132B International Cinema, 1960 to Present

132C Gender and Global Cinema

134A American Film, 1930-60

134B American Film, 1960-Present

136A Experimental Film and Video

136B History of Television

136C Visual Culture and Technology: History of New Media

136D Documentary Film and Video

165A Film, Video and Gender

165B Race on Screen

165C Lesbian, Gay and Queer Film and Video

165D Asian Americans in Media

187 Advanced Topics in Television Studies

189 Advanced Topics in Electronic and Digital Media Studies

Three courses to satisfy the senior comprehensive requirement:

194A Film Theory Seminar

199 Tutorial (supervised independent study for thesis or student-directed seminar preparation)

192 Student-Directed Seminar or

195 Senior Thesis

And two upper-division elective courses are to be chosen from the following:

- up to two additional upper-division history/critical studies courses in film and digital media
- one upper-division course in film and digital media production (150, 151, 170A, 170B, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- one upper-division course offered by other departments; course substitutions must be pre-approved by the Film and Digital Media Department

Production Concentration

Admission to the production concentration is highly selective, based on promise and accomplishment shown in the student's work. After completing FILM 170B (prerequisite for most film/video production courses) students may apply to the production concentration. Students who complete FILM 170A (prerequisite for most digital media production courses) with a B or better are also eligible to pursue the production concentration though they will aim to fulfill the requirements with digital media production courses and other production courses that do not require the FILM 170B prerequisite.

FILM 170B students apply by submitting works created in 170B to a portfolio review conducted at the end of each quarter. These student works are reviewed by a committee of film and digital media production faculty. Instructions for the portfolio review are available at the Film and Digital Media Department office. Students should note that production courses are in high demand and that faculty/student ratios and equipment resources limit

the number of applicants accepted into the production concentration. Students may reapply a second time if not accepted.

FILM 170A students who complete the course with a B or better apply by submitting a statement of intent to pursue the digital media pathway in production. Students are required to meet with the undergraduate adviser to discuss their digital media plan prior to submitting their statement of intent.

A student accepted into the production concentration who is unable to meet all the requirements for the concentration may instead be able to satisfy the graduation requirements of the general major. Application materials and instructions for all production courses are available each quarter online at https://slugfilm.ucsc.edu/secure/production_applications.

Requirements for the Production Concentration

Students in the production concentration complete the following required upper-division core curriculum:

120 Introduction to Film Theory and Criticism

170A Fundamentals of Digital Media Production (prerequisite for most digital media production courses) or

170B Fundamentals of Film and Video Production (prerequisite for most film/video production courses)

Two upper-division production courses from the following:

150 Screenwriting

151 Film Directing

170A Fundamentals of Digital Media Production

170B Fundamentals of Film and Video Production

171A Special Topics Workshop: Sound

171C Special Topics Workshop: Found Footage

171D Special Topics Workshop: Social Information Spaces

171F Special Topics Workshop: Autobiographical Film

171G Special Topics Workshop: Documentary Animation Workshop

172 Narrative Video Workshop

173 Narrative Digital Media Workshop

175 Documentary Video Workshop

176 Experimental Video Workshop

177 Digital Media Workshop: Computer as Medium

178A Personal Computers in Film and Video

178B Advanced Personal Computers in Film and Video

Two critical studies courses taken from two of the three following groups:

130 Silent Cinema

132A International Cinema to 1960

132B International Cinema, 1960 to Present

132C Gender and Global Cinema

134A American Film, 1930-60

134B American Film, 1960-Present

136A Experimental Film and Video

136B History of Television

136C Visual Culture and Technology: History of New Media

136D Documentary Film and Video

One course from the following:

194A Film Theory Seminar

194B Electronic Media Theory Seminar

194C New Media Seminar

194D Film History Seminar

194E International Cinemas

194F Film and the Other Arts: Music and Dance
 194G New(s) Media
 194S Senior Seminar: Special Topics
 196A Senior Project in Film and Video Production
 196B Senior Project in Screenwriting
 196C Senior Documentary Workshop
 197 Senior Digital Media Workshop

and four upper-division elective courses are to be chosen from the following:

- up to two upper-division courses in film and digital media production (150, 151, one from the 171 series, 172, 173, 175, 176, 177, or one from the 178 series)
- at least two upper-division film and digital media history/critical studies courses
- up to two upper-division critical studies elective courses from another department or another institution; course substitutions must be pre-approved by the Film and Digital Media Department.

Integrated Critical Practice Concentration

The integrated critical practice concentration provides a more rigorous pathway through the film and digital media major and offers classes specifically reserved for seniors with exceptional abilities in both critical studies and production who seek to combine creative and scholarly work. Students are eligible to apply for the integrated critical practice concentration in the last quarter of their junior year, provided they have completed FILM 120 and at least three other upper-division critical studies classes. Students not already admitted to the production concentration should apply simultaneously to the production concentration. Acceptance into the production concentration is a necessary pre-condition for acceptance into the integrated critical practice concentration. Applicants must already be declared film and digital media majors in good standing.

Students will be asked to submit the following application materials:

- a completed application form
- a one-page statement of purpose
- a sample essay
- a FDM faculty statement of support (submitted directly to the department)
- copies of all narrative evaluations provided by instructors of film and digital media courses

Application materials and instructions are available at the Film and Digital Media Department Office. Student application materials are reviewed by a committee of film and digital media faculty. Admission to the integrated critical practice concentration will be granted to students who have excellent grades in film and digital media courses, an outstanding writing sample, a clear statement of purpose outlining a senior project that integrates critical studies and production work, and a strong FDM faculty endorsement. Students may reapply a second time if not accepted, but not later than the first quarter of their senior year.

Requirements for the Integrated Critical Practice Concentration

The integrated critical practice concentration curriculum adds the following requirements to those already established for the film and digital media major. Students are required to take both 20A and 20P for their required lower-division courses, in addition to selecting a third lower-division class from either 20B or 20C. The minimum grade requirement for lower-division courses will apply (see Lower-Division Requirements). Students are required to take 170B as part of their core curriculum, and to complete six elective classes, rather than five. For the senior exit requirement students are required to complete one course (192, 195, 196A, 196B, 196C, or 197) which, combined with an independent study (FILM 199, Tutorial) taken either consecutively or simultaneously, will integrate critical studies and production work.

Students in the integrated critical practice concentration complete the following required

upper-division core curriculum:

120 Introduction to Film Theory and Criticism

One course from each of the following four groups:

130 Silent Cinema

132A International Cinema to 1960

132B International Cinema, 1960 to Present

132C Gender and Global Cinema

134A American Film, 1930-60

134B American Film, 1960-Present

136A Experimental Film and Video

136B History of Television

136C Visual Culture and Technology: History of New Media

136D Documentary Film and Video

170A Fundamentals of Digital Media Production

170B Fundamentals of Film/Video Production

Two courses to satisfy the senior comprehensive requirement:

199 Tutorial, and one of the following:

192 Student-Directed Seminar

195 Senior Thesis

196A Senior Project in Film and Video Production

196B Senior Project in Screenwriting

196C Senior Documentary Workshop

197 Senior Project in Digital Media

And six upper-division elective courses are to be chosen from the following:

- two upper-division history/critical studies course in film and digital media
- three upper-division courses in film and digital media production (150, 151, 170A, or 170B, one of the 171 series, 172, 173, 175, 176, 177, one of the 178 series)
- one senior seminar chosen from the 194 series
- graduate seminars, taken with permission of the faculty adviser, may substitute for one of the electives
- a maximum of two electives may be taken in another department or another institution if pre-approved by the Film and Digital Media Department

Courses from the above upper-division core curriculum in excess of requirements may NOT count as electives.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will be met by completion of FILM 120, Introduction to Film Theory and Criticism. For detailed information on this major's DC requirement, consult your major adviser.

Comprehensive Requirement

All seniors in the general film and digital media major or in the production concentration may select one of three options to satisfy the campus exit requirement.

- Senior seminar: The senior seminars (courses in the 194 series) are restricted to majors in their senior year and are writing intensive. Students in the general major are required to complete one senior seminar. Students in the production concentration may complete the senior seminar to satisfy the senior exit requirement or as an elective.
- Senior thesis: (This option is restricted to students pursuing the Critical Studies or Integrated Critical Practice Concentration.) With prior faculty approval, a student may

elect to do a senior thesis (FILM 195). The student must contact a faculty member at least one quarter in advance to submit a proposal and to obtain faculty approval for a senior thesis. The proposal may involve writing a screenplay; expanding on a paper from a previously completed upper-division critical studies course in film and digital media; or writing an original paper in a particular area resulting in a work of substantial research.

- Senior project: A limited number of students in the production concentration may participate in the senior project (FILM 196A, 196B, 196C, or 197) class. Admission is by application, with review of previous works and evaluation of the proposed final project by film and digital media production faculty.

Seniors in the critical studies concentration must complete the following to satisfy the campus exit requirement: FILM 194A, FILM 199, and either FILM 192 or 195.

Seniors in the integrated critical practice concentration must complete one course (192, 195, 196A, 196B, 196C, or 197) combined with an independent study course (199).

Transfer Students

All transfer students must enroll in at least one lower-division course (20A, 20B, or 20C) during their first quarter in residence. Transfer students are strongly encouraged to enroll in 20A during the Summer Session preceding their first quarter in residence. After completing one lower-division course (20A, 20B, or 20C) with a grade of C or better, transfer students may declare the film and digital media pre-major.

All transfer students must earn a C or higher in two 20-level courses, FILM 20A and either 20B or 20C (at least one must be taken at UCSC) to declare the major. Three lower-division and ten upper-division courses are required for completion of the general major. With some lower-division preparation, transfer students should be able to complete the upper-division coursework and the major within two years. As preparation, prospective transfer students are encouraged to complete FILM 20A through UCSC Summer Session prior to their transfer. Transfer students must petition the department to have equivalent lower-division courses taken at their current institution count toward their UCSC major requirements provided they have earned a C or higher in each course.

Students who have not completed a lower-division major requirement prior to transfer to UCSC, students who are interested in graduating with a double major, and students who must finish general education requirements may need additional time to complete their studies.

Transfer students are strongly advised to attend a UCSC Summer Orientation session for transfer students. Transfer students must consult with a film and digital media academic adviser prior to enrolling in classes to determine their status and to begin the declaration of major process as soon as possible.

Honors

Honors in film and digital media are awarded to graduating seniors whose academic performance in their major coursework is judged by a faculty committee to be consistently excellent to outstanding. Students must have at least a cumulative GPA of 3.5 in the major to be considered for Honors.

Minor

The minor in film and digital media offers a foundation in visual culture and contributes important scholarly techniques of value to other disciplines. Students earn a minor in film and digital media by completing eight courses: FILM 20A and 20B or 20C, and six upper-division courses including four from the core curriculum of the general major and two electives. There is no production component in the minor, nor is there a comprehensive requirement.

Declaring the Film and Digital Media Minor

Students who pass FILM 20A, 20B or 20C are eligible to declare the film and digital media minor.

Lower-Division Requirements

20A Introduction to Film Studies

and one of the following two courses:

20B Introduction to Television Studies

20C Introduction to Digital Media

Upper-Division Requirements

Students in the minor must complete the following upper-division core curriculum:

120 Introduction to Film Theory and Criticism

One course from each of the following three groups:

130 Silent Cinema

132A International Cinema to 1960

132B International Cinema, 1960 to Present

132C Gender and Global Cinema

134A American Film, 1930-60

134B American Film, 1960-Present

136A Experimental Film and Video

136B History of Television

136C Visual Culture and Technology: History of New Media

136D Documentary Film and Video

And two upper-division elective courses to be chosen from the following: any two additional upper-division film and digital media history/critical studies courses other than production studio courses (150, 151, 170A through 178B) that have not been used to satisfy the above upper-division core curriculum. One of the electives may be substituted from another department or institution. Course substitutions must be approved by the Film and Digital Media Department.

Film and Digital Media Ph.D.

The Doctor of Philosophy (Ph.D.) program in film and digital media challenges the traditionally conceived borders between creative and critical practice. The program enables dialogue between creative practice and theoretical knowledge as related forms of intellectual work and provides the conditions for students to realize a wide range of possible projects, including those that exist across the traditional divides of critical studies and production. Focusing on a diverse range of cultural production that includes cinema, television, video art, and Internet-based media, Ph.D. students interrogate the historical, aesthetic, political, ideological, and technological aspects of these media forms across a range of international contexts, investigating their points of connection and convergence as well as their relationship to broader cultural and historical change. The program thus prepares students for intellectually informed creative practice as well as theoretical and critical production in a range of environments, not limited to traditional academic contexts.

Requirements

Coursework

- A minimum of 108 units of study in coursework at UCSC. Residence for a minimum of six quarters.
 - Applicants who already hold an M.A. or M.F.A. degree may petition to waive up to 30 credits of coursework; such a waiver is subject to the approval of the director of Graduate Studies.
- Residence for a minimum of six quarters.
- When in residence, students will take a minimum of 36 credits per year until advancement to candidacy.
- First year students will be required to take the three foundational courses (200A-B-C),

plus at least two film and digital media graduate elective courses.

- Second year students must then take at least four film and digital media graduate elective courses.
- Students are not permitted to enroll in 295 (Directed Reading) classes during their first year and are limited to one during their second year, unless they enter the program with an M.A. or M.F.A.
- Third year students arrange three Directed Readings (FILM 295) to prepare for the three topic areas of their qualifying examination.
- Prior to advancing to candidacy, students will continue to meet the minimum number of credits with other 2–5 credit elective courses as appropriate.
- A student will thus take at least nine film and digital media graduate courses over the degree, not including 295, 297 and 299 classes.
 - The remaining course units may be selected from film and digital media graduate courses or graduate courses other departments, subject to approval from the student's faculty adviser.
- Students must obtain permission from the Director of Graduate Studies, their faculty adviser to take advanced undergraduate courses.
- Students are expected to complete at least one year of supervised teaching as part of the degree requirements.

Foreign Language Requirement

Students must demonstrate proficiency in a language other than English. This may include a computer programming language instead of a natural language when such a language is integral to the student's field of study. The language requirement may be satisfied in one of two ways:

- by passing an upper-division course in a language related to the student's research
- by passing a reading proficiency test administered by a qualified person approved by the director of Graduate Studies.

A student must pass the language requirement before taking Ph.D. qualifying examinations. There are three exceptions. (Documentation for the exception must be received and approved by the director of Graduate Studies at least two months before the qualifying examination.)

- The "foreign" language requirement may be waived for a non-English native speaker who has passed the proficiency test in English required for admission.
- The requirement may be waived for a student who is a native speaker of another language in addition to English. The student must submit a statement to the director of Graduate Studies attesting to their proficiency in the additional native language.
- The requirement may be waived if a student has proof of proficiency in a language other than English in the form of a language major or minor from recent undergraduate or master's level education or equivalent. This must have been completed within the past five years at an accredited institution.

Timeline: Course Sequence, Examinations, and Dissertation

During the first year of study in FILM 200A–B–C classes, students will be introduced to the methodologies of developing a critical practice approach. This will occur while students simultaneously strengthen, with the appropriate elective classes, areas of theory or practice that pertain to their focus.

During the second year, the student will focus on selecting classes from the film and digital media elective series numbered 210–289. Students will also be encouraged to take electives from other graduate programs on campus.

At the end of the second year, undergo a second year review which functions as the master's examination. Students will submit four to five coursework projects for the exam. One of these must be the final project from 200C. Students will also submit a statement about that work and its contexts, which will form the basis for oral examination questions by faculty members.

Students may nominate faculty members to the committee. The student's faculty adviser and the Director of Graduate Studies will assemble the committee, taking into account the student's nominations. The committee will have a minimum of three faculty members, at least two of whom must be from the film and digital media faculty. One of those two must be the faculty adviser, who will chair the meeting. The committee must also include the Director of Graduate Studies. (The Director of Graduate Studies will not necessarily sit on the student's committee for future exams/reviews.) The exam is closed; only the student and the faculty committee will be present.

For students entering without a master's degree, the committee will recommend one of three grades for the M.A. examination: fail, pass, or pass with permission to proceed. Students who fail may retake the oral component of the examination one time. A student with a pass only may leave the program with the degree of master of arts. Students who pass with permission to proceed may enter the third year of coursework toward the Ph.D. For students entering with a master's degree, the committee will discuss the result of the review and its recommendations for further progress in the program, including the timeline to the Ph.D. qualifying exam (QE).

The third year will be spent developing three qualifying exam topics that will lead to the dissertation in close consultation with the student's faculty adviser. (This may occur earlier for students who enter with a master's degree.) Students work with three faculty members to develop three distinct topic areas with a corresponding bibliography/mediagraphy in 295 (Directed Reading). Topic areas must be pre-approved by the director of Graduate Studies who will ensure that the breadth requirement is met.

Students will also begin assembling a qualifying exam committee. The QE committee will be comprised of four faculty members, at least one of whom must be from another discipline at UCSC or from another campus. Students will also nominate a faculty member to chair the examination committee. The chair should be a tenured faculty member from the Film and Digital Media Department, holding a Ph.D., but should not be the student's primary faculty adviser or the person who will chair the dissertation. The composition of the QE committee must be approved by the Graduate Division and must be submitted to the director of Graduate Studies at least five weeks prior to the written examination.

The qualifying exam will typically be scheduled for the fall of the fourth year and no later than the end of the fourth year. (Students who enter with a master's degree may be eligible to take the qualifying exam before their fourth year.) The QE will consist of a written examination and an oral examination. A student who fails the Ph.D. Qualifying Exam will be permitted to re-take it one time. During the qualifying exam quarter, students may enroll in up to two 299 (Thesis Research) classes with members of their committee.

No later than two academic quarters after successfully passing the qualifying examination, students submit a Dissertation Prospectus. The candidate's qualifying exam committee must approve this prospectus. After the dissertation prospectus has been approved, the student will participate in a dissertation colloquium open to all film and digital media faculty and graduate students.

Students will advance to candidacy once they have successfully:

- Completed all required coursework with satisfactory grade
- Satisfied the language requirement
- Passed the Ph.D. qualifying exam
- Submitted a dissertation prospectus approved by their dissertation committee
- Participated in a dissertation colloquium.
- Organize an approved dissertation committee, through the dissertation nomination form.

Completion of the Degree

Upon successful advancement to candidacy, students must then complete the following requirements for the Ph.D.

Dissertation: The dissertation, or Ph.D. thesis, is to be an original contribution of high quality to the field of film and digital media. If a student's thesis contains a substantial creative component, the thesis project must also include a written component of no less than 75 pages. The dissertation must be approved by a committee consisting of a minimum of three faculty members, at least two must be from the film and digital media faculty. If the dissertation director does not hold a Ph.D. degree, then the majority of the remaining committee members must hold Ph.D.s. When the student has submitted the dissertation and the committee has approved it, the student is ready for the oral defense.

Oral Defense: Once the dissertation is approved, the student will present an oral summary before their dissertation committee and invited members of the academic community. The student will then answer questions posed by the faculty.

Sample Student Program for Each Year (Years 1–4)

Year 1: three core film and digital media courses; three electives, at least two of which are film and digital media courses

Fall

FILM 200A, Introduction to Graduate Study
Elective (from Film and Digital Media or another department)
Foreign language/other elective (at least 2 credits)

Winter

FILM 200B, Theory and Praxis of Film and Digital Media, Part 1
Elective (from Film and Digital Media or another department)
Foreign language/other elective (at least 2 credits)

Spring

FILM 200C, Theory and Praxis of Film and Digital Media, Part 2
Elective (from Film and Digital Media or another department)
Foreign language/other elective (at least 2 credits)

Year 2: at least four film and digital media electives; two other electives from Film and Digital Media or another department

Fall

Film and digital media elective
Film and Digital media elective
Foreign language/other elective (at least 2 credits)

Winter

Film and digital media elective
Elective (from Film and Digital Media or another department)
Foreign language/other elective (at least 2 credits)
Student suggests M.A. examination committee; prepares for examination.

Spring

Film and digital media elective
Elective (from Film and Digital Media or another department)
Foreign language/other elective (at least 2 credits)
Student takes M.A. examination. If successful, advances to third year.

Year 3: three required film and digital media courses, three electives from Film and Digital Media or another department

Fall

FILM 295, Directed Reading
Elective (from Film and Digital Media or another department)
Foreign language/other elective (at least 2 credits)

Winter

FILM 295, Directed Reading
Elective (from Film and Digital Media or another department)
Foreign language/colloquium study/other elective (at least 2 credits)
Student develops three topic areas for Ph.D. qualifying exam

Spring

FILM 295, Directed Reading
Elective (from Film and Digital Media or another department)
Foreign language/other elective (at least 2 credits)
Student assembles Ph.D. dissertation committee, nominates Ph.D. qualifying examination committee.

Year 4

Student takes Ph.D. qualifying examination, registering for FILM 299, Thesis Research. If successful, advances to candidacy and continues research and writing of dissertation.

Designated Emphasis

UC Santa Cruz graduate students enrolled in doctoral programs may obtain a designated emphasis in film and digital media as part of their Ph.D. degree. Students must meet the following requirements in order to obtain the designated emphasis:

- Secure approval from a member of the film and digital media core faculty to serve as the adviser for the designated emphasis.
- Submit a significant piece of writing, or a project that includes both writing and creative practice, that demonstrates competence in the field of film and digital media. A writing submission could take the form of
 - a seminar paper or dissertation chapter. A writing/creative project may be constituted from a range of possible media such as film, video, web-based or other digital media. The submitted project must meet the approval of the student's film and digital media adviser.
- Successfully complete four graduate courses (not independent studies) taught by either core or affiliated faculty of the film and digital media Ph.D. program. The courses must be pre-approved by the student's designated emphasis adviser.

Program Description

Students interested in acquiring proficiency in French can enroll in language courses from beginning to advanced levels. In addition, students may select from among the following programs: a major in language studies, a major in literature with an emphasis in French literature, or a major in global economics.

Lower-division courses 1–6 are taught entirely in French and prepare students for advanced study either on campus or abroad. They are designed to help students develop proficiency in aural comprehension, speaking, reading, and writing skills, and to introduce student to French and Francophone cultures.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Department of Languages and Applied Linguistics](#).

Study Abroad

The Office of International Education (OIE) offers both semester and one-year programs in many regions of France, including Bordeaux, Lyon, Grenoble, Toulouse, and Paris. With the approval of an adviser, some French courses taken abroad may be applied to major requirements. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>.

Program Description

Students interested in acquiring proficiency in German can enroll in language courses from beginning to advanced levels. In addition, students may select from among the following programs: a major or minor in language studies, a major in German studies, a major in literature with an emphasis in German literature, or a major in global economics.

The sequence of lower-division courses 1–6 is aimed at helping students to develop listening and reading comprehension, as well as speaking, reading, and writing skills. Another sequence of lower-division courses, equivalent to levels 1, 2, and 3, consists of courses 1A and 1B, which offer accelerated German language instruction. Courses 1A and 1B are taught sequentially, winter and spring quarters. Instruction takes place almost exclusively in German.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Department of Languages and Applied Linguistics](#).

Study Abroad

The Office of International (OIE) offers study abroad opportunities in Berlin, Potsdam, and Göttingen. Students may spend fall or spring semesters or a full academic year in Berlin (Berlin European Studies (BEST) or regular course of study), a spring semester in Potsdam (beginning German language program or intermediate German language and culture program), or a semester or year in Göttingen (graduate study). Language requirements for admission to these programs range from little or no German required (BEST program in Berlin and beginning German program in Potsdam) to one year of college-level German required (intermediate German language and culture program in Potsdam) to two years of college-level German required (regular course of study in Berlin). The Potsdam program courses may also be used to fulfill the language requirement for the year-long program in Berlin. Selected students may continue directly from the spring semester in Potsdam to the one-year program in Berlin. Academic and professional internship opportunities are also available to all students on study abroad in Germany.

Students may apply to any of these programs at any point in their student career. For the

Faculty

Program Description

German studies is a transnational and transdisciplinary major that deals with the various German-speaking regions of central Europe. Whether one thinks of philosophy, music, art, education, religion, or political and social history, German culture has exercised a profound and often decisive influence on Europe. Some of the most important ideological debates in Western culture have arisen in the German-speaking area, and changes in German culture and society have sometimes had devastating effects on world history. Events and political developments of recent years—such as the unification of East and West Germany and the emergence of the German-speaking region of Europe as a major player in world affairs have had important impacts.

A German studies major provides students with an intellectually diverse program covering history, history of art and visual culture, literature, and philosophy—in which students and faculty come together in exciting and demanding pursuits.

The German studies major is administered by the Department of History. For additional information on curriculum and advising, go to <http://germanstudies.ucsc.edu>.

Requirements for the Major

German language level 5 or the equivalent is a prerequisite for the German studies major and all upper-division courses taught in German. Students are encouraged to take German 1 through German 5 as early as possible in their academic program. The major requires a total of 11 courses, including the comprehensive requirement. No more than two of the 11 required courses may be lower-division. A minimum of 40 upper-division units must be completed within the German studies course requirements. In consultation with a faculty adviser, students will plan a program of study to fulfill the following distribution of courses:

I. Five courses in German literature and history:

- two core courses in German literature
- one core course in German history
- one core course in either German literature or German history depending upon the student's chosen area of emphasis
- one comprehensive exit requirement (see below).

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology
- Economics

- Physical and Biological Sciences
Division
- Physical Education
- Physics
- Politics
- Portuguese
- Porter College
- Psychology

II. Three additional core courses, including EAP courses

III. Three additional core courses or courses from the Germany in a European or World Context list.

Distribution requirements. A minimum of five of the 11 required courses must be taught in German or principally through German-language texts. No more than three courses may come from the Germany in a European or World Context list.

Comprehensive requirement. All German studies majors must satisfy the comprehensive exit requirement by completing an approved exit seminar in either German literature or German history: History 196G, History 196P, History 196X, or Modern Literary Studies (LTMO) 190Z. The senior seminar is one of the 11 courses required for the major. Please consult the German studies web site for a more detailed description of these courses at <http://germanstudies.ucsc.edu>.

UC Education Abroad Program. It is strongly recommended that students spend time in residence in Germany through the University of California Education Abroad Program (EAP) or one of its affiliate programs to further enrich their program of study and ensure a command of the language. Students are allowed to transfer up to five courses taken at German universities toward the requirements for the major. However, the four required core courses in German literature and history and the comprehensive requirement must be taken at UCSC.

Disciplinary Communication (DC) requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in German studies is fulfilled by completing History 196G, History 196P, History 196X, or Modern Literary Studies (LTMO) 190Z. Please refer to updated information at [Disciplinary Communication Chart](#).

Honors in the German Studies major. All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The German studies faculty advisers determine honors based upon courses applied towards the German studies major. Performance in courses taken elsewhere and being transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most courses for honors, and excellence in all courses for highest honors. Summer, fall, and winter graduates will be reviewed at the end of each of their respective quarters. Spring graduates will be reviewed as of the spring announcement of candidacy deadline.

Program Description

Students interested in acquiring proficiency in modern Hebrew can enroll in language courses from beginning to intermediate levels. In addition, credits from these courses may be counted toward the major or minor in Jewish studies. Lower-division courses are aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing. Attention is also given to developing an understanding of the culture, history, and religion that have been expressed through the Hebrew language from antiquity until today. Some instruction takes place in Hebrew from the beginning level. Students interested in learning the basic lexicon and grammatical structures of biblical Hebrew can enroll in Hebrew 80. Hebrew 1, Hebrew 2, and Hebrew 3 (or equivalency) are required for the major in Jewish studies, and other Hebrew courses are encouraged. In addition, credits from modern or biblical Hebrew courses may be counted toward the minor in Jewish studies.

History

[2014–15 General Catalog](#)201 Humanities
(831) 459–2982<http://history.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

History is the attempt to understand the meanings of the human life experience, not generally and abstractly, but in terms of specific individuals, events, and circumstances. Consequently, of all academic pursuits, it is the one best equipped to help us locate phenomena in their specific contexts, whether we are concerned with political events, social changes, the production of art, the development of technologies, scientific discoveries, or life stories. In this sense, the study of history can also be an invaluable complement to any other major.

The history program at UCSC is designed to bring about an understanding of the ideas, experiences, and events that have shaped this country and the world at large. The program's main emphases are in social and cultural history, with additional strengths in intellectual and political history.

A degree in history opens up a wide range of career possibilities. Some careers fall within the historical profession, including teaching at the university, college, and high school levels and working in various areas of public and applied history, such as historic preservation, archives, libraries, and museums. For careers in fields as diverse as law, business, government, foreign service, publishing, journalism, and communications, a degree in history lays the foundation in research, analytic, and writing skills upon which later professional training can be built.

Requirements for the Major

A minimum of 12 courses is required for the major. No more than four of the minimum 12 courses may be lower division. A minimum of 40 upper-division units must be completed within the history major course requirements. The history major does not require an examination for entrance and does not limit the number of students accepted into the program. It is strongly advised that students complete at least one introductory history course before declaring the major.

At UCSC, the history curriculum offers three broad, geographically defined regions of concentration:

- the Americas and Africa
- Asia and the Islamic World

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Electrical Engineering
- School of Engineering
- Environmental Studies
- Feminist Studies
- Film and Digital Media
- French
- German
- German Studies
- Greek
- Hebrew
- History >

- Music
- Oakes College
- Ocean Sciences
- Philosophy
- Physical and Biological Sciences Division
- Physical Education
- Physics
- Politics
- Portuguese
- Porter College
- Psychology

Europe

Each history major selects one of the three regions of concentration listed above as their area of emphasis. In consultation with the history undergraduate program coordinator, the student plans a program of study that will also fulfill the following distribution of courses:

Course Requirements

Region of Concentration (5 courses, plus 1 comprehensive requirement)

I. At least one lower-division survey course within their chosen region of concentration.

- Americas/Africa: History 10A, 10B, 11A, 11B, or 30
- Asia/Islamic World: History 40A, 40B, 41, or 44
- Europe: History 65A, 70A, or 70B

Transfer coursework may or may not apply toward the survey course requirement; consult the history undergraduate program coordinator.

II. Four additional courses in the region of concentration, three of which must be upper-division

III. One comprehensive (exit) requirement: All students must complete either a research/readings seminar (HIS 190, 194, or 196), or a senior thesis (HIS 195A and 195B) in their area of concentration. Detailed information on the comprehensive exit requirement can be found below.

Breadth Requirements (4 courses)

IV. Two courses from each of the remaining two regions of concentration.

Electives (2 courses)

V. Two upper-division history electives from any of the three regions of concentration.

Students often choose to satisfy the history major course requirements listed above according to some general theme of special interest to them. Faculty and staff advisers will assist the students who choose this option with their course selection.

Distribution requirements. Among the 12 courses required for the major, at least three must meet chronological distribution requirements. One must be set before 600 A.D., and two must be set in periods prior to the year 1800 A.D.

Interdisciplinary coursework. The History Department encourages its majors to take upper-division courses in disciplines related to history, including sociology, literature, community studies, American studies, politics, Latin American and Latino studies, and others. Students who wish to substitute one or two such appropriate upper-division courses for history electives must obtain approval from the History Department. These courses are subject to the limitations described below under the "Transfer credits and substitutions" section.

Comprehensive requirement. A comprehensive exit requirement in the student's chosen region of concentration can be fulfilled by completing an exit seminar (one quarter: 190-series, 194-series, or 196-series) or a thesis (two quarters: courses 195A and 195B). Please consult the department web site for a more detailed description of these courses.

Disciplinary Communication (DC) requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. History students fulfill the upper-division Disciplinary Communication (DC) requirement by completing a comprehensive exit requirement in their chosen region of concentration. Students may complete an exit seminar (one quarter: 190 series, 194 series, or 196 series) or a thesis (two quarters: courses 195A and 195B). Please consult the department web site for a more detailed description of these courses and refer to updated DC information at [Disciplinary Communication Chart](#).

In addition to all coursework, history majors must complete a senior check and exit survey in the first quarter of their senior year. Students who do not submit their senior check for review may have their graduation date delayed. Please consult the department web site for a more detailed description.

[Nondiscrimination Statement](#)

[Search the Catalog](#)

Honors in the history major. Honors are awarded to the top 10–15 percent of graduating students per quarter; highest honors may be granted to approximately the top five percent. Honors are determined by the Undergraduate Education Committee in consultation with the History Department faculty. The department considers each student's GPA in the history major, supplemented when appropriate by an assessment of work in the senior capstone course or honors thesis preparation. The history major GPA is calculated based upon all history courses attempted at UCSC; grades from courses taken outside of the department will not be calculated into a student's history major GPA, even in cases when the student is allowed to use said courses toward their history major degree requirements. Summer, fall, and winter graduates will be reviewed at the end of each of their respective quarters. Spring graduates will be reviewed using their earned history major GPAs as of the spring announcement of candidacy deadline.

Language recommendation. Proficiency in a foreign language is strongly recommended for all history students and is essential for those who plan to pursue graduate studies in history. Many Ph.D. programs in history require applicants to read one or two languages besides English. The University of California Education Abroad Program (EAP) is appropriate for history majors as a means to both enhance language skills and take history courses elsewhere.

UC Education Abroad Program. All history students are encouraged to consider studying abroad. UCEAP offers students an opportunity to study abroad in 40 countries with more than 300 program options. A variety of academic programs are available: language and culture programs facilitate language acquisition; "focus" programs allow students to concentrate on a plan of study applicable to their major. More than half of all EAP programs are in English, and there are traditional semester and year-long program options. Subject to the limitations described below under "Transfer credits and substitutions," up to three courses in history completed through EAP may be applied toward major requirements. Consult the History Department web site, and speak with the undergraduate program coordinator for further details.

Transfer credits and substitutions. A minimum of five regularly scheduled history courses plus the comprehensive requirement must be taken from members of the UCSC history faculty. Subject to the limits indicated in parentheses, courses from the following categories may also be applied to the history major:

- Transfer courses taken at another institution (limit of 3)
- Education Abroad Program (limit of 3)
- UCDC (limit of 2)
- UC in Sacramento (limit of 2)
- Related upper-division courses taken in another UCSC department (limit of 2)
- Independent and field studies (limit of 2)

Requirements for the Minor

Students whose major area of interest is not history may nonetheless find that a minor in history makes an invaluable contribution to their studies. For the minor in history, eight history courses, five of which must be upper division, are required. There is no senior comprehensive requirement for the minor.

Graduate Program

The Ph.D. program in history at UCSC emphasizes an interdisciplinary and cross-cultural approach to historical studies. The History Department offers a rigorous program of instruction and independent work that trains students in the techniques of original historical research and equips them to teach university-level courses in history. The department only admits those highly motivated students who are most qualified to pursue advanced studies in history. The department also only admits those applicants who can best benefit from the specific strengths of our faculty. Just as the work of most professional historians centers around research and teaching, training in these areas

constitutes the two essential poles of the graduate program in history.

Research and Teaching

In preparing graduate students for research and teaching at the university level, the department offers training in four geographically and chronologically defined fields: U.S. history, European history since 1500, East Asian history since 1600, and world history since 1500. U.S., European, and East Asian history are defined as primary teaching fields; each graduate student is required to choose one. Students of U.S. history may incorporate Latin American history in their coursework. Every year the faculty in each field offer introductory readings seminars and classes on more specific topics (see below for information about course offerings). Each graduate student also prepares a second teaching field different from the primary field and can choose from among U.S., European, East Asian, or world history. Ph.D. students may also petition the graduate committee to prepare a secondary teaching field in African or Latin American history.

Research Centers and Clusters

The History Department has created a series of thematic research clusters to coordinate the training of graduate students in historical research. Each research cluster is composed of History Department faculty and graduate students as well as faculty outside the department who share broad scholarly interests. The clusters serve as a way to coordinate the research of faculty and graduate students whose work encompasses different geographic regions and chronological periods. Although the nature and number of the research clusters may change over time, the department currently offers two basic groupings: 1) colonialism; 2) gender and history.

These clusters are complemented by scholarly activities sponsored by various UCSC Centers. Centers that are currently directed by UCSC History faculty are: the Center for Jewish Studies, , the Center for the Study of Pacific War Memories, and the Working Group on the Study of Children. For information on current research clusters, please visit the Institute for Humanities Research web site, ihr.ucsc.edu.

The faculty of each cluster provide at least one research seminar every other year in addition to readings courses. All the affiliated graduate students must take at least one research seminar during their first two years; they are encouraged to take more than one. Faculty and graduate students also participate in interdisciplinary forums outside the department.

These include programs sponsored by the Chicano/Latino Research Center, the Center for Cultural Studies, and the UCSC Institute for Humanities Research. Advanced graduate students may also have the opportunity to work in programs sponsored by the University of California Humanities Research Institute at UC Irvine. Finally, multi-campus groups in which students and faculty are involved include the Bay Area Seminar in Early American Studies, the Bay Area Pre- and Early Modern Studies Group at UC Berkeley, and the French Studies Group at Stanford.

Courses

Until they pass the qualifying examination and are formally advanced to candidacy for the Ph.D. degree, students must be in residence at UCSC and are expected to complete a minimum of 12 credits each quarter to maintain normal academic progress. Completion of a minimum of 12 courses of 5 credits each (in addition to History 280A, 280B, and 280C) is required for advancement to candidacy. Courses taken are graduate seminars, independent study courses, and most upper-division undergraduate courses.

Students are required to take the following before advancing to candidacy:

- History 200 (year 1, fall quarter); History 201 (year 2, winter quarter); History 202 (year 1 or 2); History 280A (year 1, fall quarter) 280B (year 1 or 2), 280C (year 1 or 2);
- one research seminar during the first four quarters: History 204A, or 204C, or 204E;
- second teaching field: two courses in American, European, East Asian, or world history;
- outside courses: two quarters of graduate coursework outside the History Department;
- readings courses in the appropriate field: East Asia—History 230A, 230B, 230C (China) or

History 242, 243, 244 (Japan); Europe—History 251A, 251B; U.S.—History 210A, 210B.

Graduate students in East Asian history specialize in either modern Chinese or modern Japanese history, but all students in the East Asian program will be prepared to teach both. The core curriculum for East Asian history consists of three China reading seminars (courses 230A, 230B, 230C) and three Japan reading seminars (courses 242, 243, 244) taught in sequence over three years, covering such topics as foundational historiographies, gender, social movements, and transnational circulation of people, commodities, and ideas. Over the course of the three years to the qualifying examination, China students will be expected to take all three China seminars and at least two of the three Japan seminars. Japan students will be expected to take all three Japan seminars and at least two of the three China seminars. Additional coursework in research methods as well as occasional independent studies will also be available, and students are encouraged to take classes that have a wide range of faculty in other departments across the campus.

Foreign Language Requirement

No prior foreign language preparation is required for admission with a primary teaching field in U.S. history. Two to three years of college work, or its equivalent, in at least one foreign language is required for admission to the European program. Students who choose East Asian history as their primary teaching field will be required to have completed at least three years of college-level Chinese or Japanese prior to admission; more years are recommended. Depending upon the student's intended field of research, Japanese language study may also be required of China specialists as part of the graduate program of study.

Students with a primary teaching field in U.S. history are expected to demonstrate a reading competency in at least one foreign language prior to taking the Ph.D. qualifying examination. Students in all other teaching fields must demonstrate a reading competency in at least two foreign languages prior to taking the Ph.D. qualifying examination; competency in one of the languages must be demonstrated by the end of the sixth quarter of enrollment. Usually, competency will be demonstrated by passing a reading examination administered by a member of the history faculty. Students who believe that they have already demonstrated competency through previous coursework or through their performance on a standardized test should petition the graduate director.

M.A. Degree

The master of arts (M.A.) degree is awarded to all Ph.D. students after two years in residence, successful completion of 12 courses of 5 credits each and 6 courses of 2 credits each, demonstrated competency in one foreign language (for those in primary teaching fields other than U.S. history), removal of all Incomplete notations (I) on record, and approval of a M.A. essay of 25–30 pages.

The M.A. Essay

Students are required to produce a substantial research essay grounded in original research in primary historical documents. A successful essay will reflect a general understanding of the field of inquiry along with a critical grasp of the scholarship that currently defines the field; deep knowledge of the specific subject under investigation; the application of appropriate analytical models; and a well-supported interpretation of the materials explored. This essay could (but need not) be a segment of a larger project; but it must be a complete, self-contained essay in and of itself.

Students enroll in course 201, Directed Research Colloquium, the winter quarter of their second year. While taking course 201, students work intensively with a faculty reader in the preparation, crafting, and revising of the essay. The final draft, approved by the reader, must be submitted to the graduate committee by the spring quarter deadline (usually mid-April). The deadline will be noted in the department's call for M.A. essays.

Qualifying Examination

The qualifying examination (QE) emphasizes field mastery, integration of material from different fields, and focused preparation for dissertation research. The QE is a three-hour meeting during which a student presents and discusses a dossier that has been submitted to the student's committee at least three weeks in advance. The examination is normally taken by the spring quarter of the third year, but no later than the end of the 11th quarter

of residency. Prior to taking the QE, all incomplete notations (I) must be cleared from the student's record. Additionally, the student must be registered the quarter the examination is taken.

The four examination fields are designed in consultation with the student's QE committee members. Students prepare for the examination through regularly offered courses and independent readings courses sponsored by the examiners. Students are required to take at least two courses in each of the four fields. The fields are as follows:

- Primary Field of Concentration. One of three fields: American history; European history 1500 to the present; East Asian history 1600 to the present.
- Research Field. Normally a subfield of the primary field with a focus on the student's specific area of research interests. This field is most closely connected to the student's work in a specific research cluster.
- Second Teaching Field. Chosen from the above list of primary fields, with the addition of world history, or, where appropriate, a comparative, thematic field such as gender, colonialism, Latin American, or African.
- Outside Field. One field outside history, such as anthropology, feminist studies, history of art and visual culture, Latin American and Latino studies, literature, philosophy, politics, sociology, or history of consciousness. Students select a field of topical, thematic, or methodological relevance to their dissertation. The student's faculty adviser must approve the outside field.

The four examination fields must be defined and preliminary reading lists (see below) filed with the department no later than the student's eighth quarter of residency.

A pass or fail will be given after the examination based on the student's knowledge and research preparation as demonstrated by his or her dossier. All areas must receive passing marks from all members of the committee. Immediately following the exam, the QE committee will complete and submit to the History Department the Report on Qualifying Examination form. If a student does not pass the QE the first time, they may retake only those sections not passed. No one will be permitted to take the QE more than twice.

Qualifying Examination Dossier Requirements

The QE dossier includes four parts, each of which should be prepared in consultation with the student's primary academic adviser and with the advice of the examiners. The examination will focus upon the dossier. All examiners, including the examiner from outside the department, will participate in all segments of the examination.

The dossier includes:

1. An essay (15–20–pages) reviewing the state of the scholarship in the student's primary field of concentration. This essay should reflect the student's general, broad competence in his or her field as well as a mastery of the theoretical issues and historiographic debates in four to five areas that represent their primary area of expertise. The essay may reflect the thematic focus of a research cluster as well as work completed in an outside field (literature, anthropology, etc.).
2. One syllabus or, at most, two syllabi (the number to be decided in discussion with the student's primary adviser) that demonstrates the student's preparation to teach across the breadth of their primary field at the introductory level. The syllabus should be annotated to show how each class session would be prepared: principal sources for lectures, principal questions for discussion, reasons for assigning particular readings, etc.
3. A syllabus (annotated in the same fashion as described in section number 2 above) in the student's second teaching field, accompanied by a brief (three– to five–page) statement of principal issues. The exact content of these items will be decided in consultation with the examiner in the secondary teaching field.
4. A 10–15 page dissertation prospectus that includes an evaluative survey of the literature relevant to the student's proposed research topic, a detailed discussion of the archival resources, and a consideration of the theoretical issues to be engaged. The prospectus lays out, in reasonable detail, the direction of research the student intends to pursue for the

dissertation. The prospectus includes the following information:

- three- to four-page description of the overall argument of the project, including a discussion of the research base and the appropriate methodological/theoretic models;
- a detailed discussion of the archival resources;
- two- to three-page outline, tracking the research and analysis chapter by chapter;
- substantive bibliography with complete citations.

Note:

- Although no specific segment of the dossier focuses upon the coursework completed outside the History Department, it is expected that this work will be incorporated into different sections of the portfolio, particularly the research prospectus.
- Complete bibliographies must be appended to each piece of the QE dossier.

Dissertation

The dissertation represents an extensive, book-length project grounded in research in original historical documents. A successful dissertation will reflect a broad and deep understanding of the field of inquiry, a mastery of the scholarship that currently defines the field, detailed knowledge of the subject of study growing out of dedicated research, and the incorporation (and explicit rejection of) appropriate interpretive models.

M.A. in History (Terminal)

The Department of History offers an M.A. degree in history for those individuals who are interested in postgraduate work, but who are not planning to complete a Ph.D. It is a degree program that can fulfill in-service education requirements for current teachers as well as for future teachers earning a single-subject credential in social studies. Part-time enrollment is allowed.

Each student will be required to choose one of four areas of specialization (U.S., Europe, East Asia, world). To complete the degree, each student must pass a total of 12 courses of 5 credits each and six courses of 2 credits each including courses 280A, 280B, and 280C. Students must also write an M.A. paper of 25–30 pages. For students specializing in Europe, U.S., and East Asia, the curriculum will be nearly identical to that taken by Ph.D. students in their first two years, except that there will be no language requirement. Those specializing in world history will take History 202 and two other courses from the world history list instead of the corresponding courses in other fields. Otherwise their curriculum will be the same as that of a typical incoming Ph.D. student.

Course Requirements

- History 200 (year 1, fall quarter); History 201 (year 2, winter quarter)
- one research seminar during the first four quarters: History 204A, 204C, or 204E.
- six courses of 2 credits each including History 280 (year 1), 280B (year 1 or 2), 280C (year 1 or 2)
- seven electives of 5 credits each, two of which can be taken outside the History Department. Courses taken are graduate seminars, most upper-division undergraduate courses, and independent study courses.
- two reading seminars in the area of specialization:
 - U.S.: History 210A, 210B
 - Europe: History 251A, 251B
 - World: History 202 and two other courses from the world history list
 - East Asia: History 230A, 230B; 230C, 242

Further details about the graduate program are available from the Department of History web site: <http://history.ucsc.edu>.

Program Description

In the History of Art and Visual Culture (HAVC) Department, students study the production, use, form, and reception of visual artifacts past and present. Objects of study include paintings, sculptures, and architecture, which are within the traditional purview of art history, as well as low art and non-art objects, which sit beyond its boundaries. The HAVC Department offers courses covering a wide variety of representations from the cultures of Africa, the Americas, Asia, Europe, and the Pacific Islands, including media as diverse as ritual, performative expression, bodily adornment, oil painting, installation art, textiles, architecture, and photography.

HAVC students at UC Santa Cruz (UCSC) investigate complex questions concerning the social, political, economic, religious, and psychological impact of images from the perspective of their producers, users, and viewers. Visual objects play a central role in the formation of values and beliefs, including the perception of gender, sexuality, ethnicity, race, and class. Through attentive historical study and close analysis, students are taught to recognize and assess these systems of value, and are introduced to theoretical and methodological frameworks for future research. Students also have the opportunity to take independent study courses and write senior theses.

The HAVC curriculum guides students in acquiring skill in critical thinking about art and visual culture, leading to a bachelor of arts (B.A.) degree. Each student who chooses to major or minor in HAVC devises an individual study plan with a faculty adviser. The lower-division courses, numbered 1-99, intended for general education students and prospective majors, provide an introduction to the field of visual culture according to geographic areas and visual traditions within those areas. Upper-division courses numbered 100-189 cover a broad range of issues in various aspects of world culture from earliest times to the present. Advanced upper-division courses focus on selected fields, topics, and methods. The most advanced courses, numbered 190 and 191, are taught in seminar format.

Declaration of the Major

To declare the major, students must complete two of the required four lower-division HAVC courses chosen from two different geographical regions:

10s Africa and its Diaspora;

- [Computer Engineering](#)
- [Computer Science](#)
- [Cowell College](#)
- [Critical Race and Ethnic Studies](#)

20s Asia and its Diaspora;

30s–40s Europe and the Americas;

50s Mediterranean;

60s Native Americas;

70s Oceania and its Diaspora

Students considering this major are encouraged to complete these courses early in their studies and consult with the HAVC undergraduate adviser to develop a plan of study.

Transfer students should consult the Transfer Student/Transfer Credit section.

Requirements of the Major

The HAVC major requires four lower-division and nine upper-division courses including the satisfactory completion of the senior comprehensive requirement. Students must take courses in each of the different cultural settings to ensure methodological and disciplinary breadth.

Lower-Division Requirements

Four courses from three different geographical regions listed above.

HAVC 80 may be used to fulfill the lower-division regional breadth requirement for regions 10 (Africa), 60 (Native Americas), or 70 (Oceania).

Upper-Division Requirements

Nine courses, as follows:

- 100A recommended during sophomore year. Because 100A is a prerequisite for other courses, if it is not completed by the end of the junior year, students may have difficulty enrolling in required courses and graduation may be delayed.
- 101–191: eight courses required, including a seminar (190s and 191s) to satisfy the senior comprehensive (see [Comprehensive Requirement](#) below).

In completing upper-division course work, students must complete three upper-division courses (courses 101–191) from three different regions. Two of those regions must be a geographical area not studied at the lower-division level.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Students in HAVC meet the DC requirement by completing course 100A.

Senior Comprehensive Requirement

All seniors must complete one seminar, 190–191, as their “senior exit” course to satisfy the senior comprehensive requirement. Seminars can be taken for senior exit credit only by permission of the instructor. Within the context of this advanced seminar, students will work under the close supervision of their professor to produce a written project that demonstrates a high level of achievement in research, writing, and critical thinking. Students whose performance is outstanding are eligible for honors in the senior comprehensive requirement.

Concentration in Religion and Visual Culture

This program is for students who wish to pursue the study of religion in conjunction with studies of visual culture. A student enters the concentration by proposing, in consultation with their faculty adviser, a sequence of upper-division courses to fulfill the religion and visual culture requirements. The declaration of major requirements for the religion and visual culture concentration are the same as those listed in the Declaration of Major section. The faculty adviser for the religion and visual culture concentration is Raoul Birnbaum.

Requirements for the Religion and Visual Culture Concentration

Fifteen courses, as follows:

- Four lower-division courses (each from a different geographical area)
- 100A recommended during sophomore year. Because 100A is a prerequisite for other courses, if it is not completed by the end of the junior year, students may have difficulty enrolling in required courses and graduation may be delayed.
- 101–191: five courses that focus on the study of religion
- 190–191: one seminar (190s and 191s) to satisfy the senior comprehensive (see [Comprehensive Requirement](#) above).
- Four relevant upper-division courses in the study of religion from programs on campus such as anthropology, history, literature, and philosophy. (For a complete list of approved courses, please see the departmental web site <http://havic.ucsc.edu/program/religion>.)

Minor Requirements

Nine courses, as follows:

- lower-division: three courses from three different geographical regions;
- upper-division: six courses planned in consultation with a faculty adviser.

Department Advising

Undergraduate Adviser

The undergraduate adviser offers specific information about navigating through the program and the curriculum and assists students with requirements, prerequisites, policies and procedures, learning support, scholarships, and special opportunities for undergraduate research.

Faculty Advisers

Faculty are the best resource for learning about the philosophies and foundations of history of art and visual culture. Faculty advisers work individually with students to develop a specific course of study, recommend additional courses of interest, and discuss long-term career goals including education beyond the baccalaureate. A faculty adviser is assigned to each student by the undergraduate adviser during the declaration of major meeting.

Languages

All majors are encouraged to study at least one foreign language. Graduate programs in visual culture, art history, and other related disciplines generally require competence in one or more languages beyond English. Students are encouraged to consult with their faculty adviser to discuss an appropriate course of language study.

Transfer Preparation and Transfer Credit

Transfer students are encouraged to fulfill history of art and visual culture requirements prior to transfer. Refer to the ASSIST articulation agreements at www.assist.org for approved lower-division courses offered at community colleges. Transfer credit for lower- or upper-division courses from four-year institutions or community colleges not included in the ASSIST system is evaluated on a case-by-case basis; students must submit a Course Transfer/Substitution Petition and course syllabus to the HAVC Department for review. A student may transfer up to five art history courses toward the major, only two of which may be upper-division. For the minor, a student may transfer up to three lower-division courses. HAVC majors must take a minimum of eight regularly scheduled HAVC courses from members of the HAVC faculty and HAVC minors must take a minimum of six regularly scheduled HAVC courses from members of the HAVC faculty. Transfer students are strongly encouraged to contact the HAVC Department for advisement before enrolling at UCSC.

Education Abroad Program (EAP) Courses

The University of California's Education Abroad Program provides an excellent opportunity to take courses related to the history of art and visual culture in a range of locations. The department strongly encourages HAVC majors and minors to take advantage of this educational opportunity. Successfully completed EAP courses count as in-residence UC credit.

Upon return, you must submit a Course Substitution Petition to seek the approval of your adviser and department chair to substitute EAP courses for HAVC major and minor requirements (EAP courses do not automatically satisfy major and minor requirements). Petitions are evaluated on a case-by-case basis. We look for evidence that the course(s) provided critical analysis of the class material in its social and cultural context, as well as significant reading and writing requirements. We recommend you retain all relevant documentation (syllabi, reading lists, papers written, etc.) to support your case. We also suggest you consult with your HAVC adviser to plan your EAP courses in advance.

For additional information, see: <http://ieo.ucsc.edu/programs-abroad/academic-planning/major-minor-credit.html> and <http://ieo.ucsc.edu/programs-abroad/academic-planning/uc-vs-transfer-credit.html>. (Also refer below to the "Residency Requirement for the Major and Minor.")

Careers

The preparation students receive from the baccalaureate of arts degree in HAVC provides skills that can lead to successful careers in education, law, business, and social services, in addition to more disciplinary-specific careers in museum curating, art restoration, studies in architecture, and studies in art history leading to a graduate degree.

Graduate Study

There are many graduate programs that lead to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees in fields such as art history, visual studies, cultural studies, history of religions, theory and criticism of art, etc. Most graduate programs require a reading knowledge of one or two languages other than English (see [Languages](#) above). Students who contemplate graduate study should consult with their faculty advisers as early as possible in their undergraduate careers.

Graduate Program

The History of Art and Visual Culture Department offers a course of study leading to the Ph.D. in visual studies. The Ph.D. is designed to steep our graduates in the most theoretically relevant methodologies for understanding the significance of visual artifacts and the social and cultural qualities of human vision (termed *visuality*); provide students with exposure to a range of cultural perspectives and visual artifacts drawn from around the world; and cultivate in our graduates the necessary skills and knowledge to secure and excel in academic and curatorial positions. The program is both interdisciplinary and flexible. Students work closely with their advisers and the director of graduate studies to craft personalized courses of study that advance their intellectual and professional goals.

The program employs a wide range of visual evidence for examination, without being constrained by traditional hierarchies of art. Fine arts, architecture, photography, film, performances, utilitarian objects, and popular entertainments all are primary source material for scholars in the field. The program at UCSC is particularly adept at illustrating significant differences in how disparate cultural groups interpret their visual worlds, given the breadth of cultural perspectives taught by our faculty. With scholars focusing on cultures in Africa, the Americas, Asia, Europe, and the Pacific Islands, visual studies at UCSC offers students an unparalleled opportunity to consider the role of social and cultural forces in guiding how and what their members see.

Graduate Program Requirements

Students take a minimum of twelve 5-credit graduate courses during their first two years of study, comprised of four core courses and eight electives.

The four core courses must be taken within the first two years: HAVC 201, Introduction to Visual Studies (fall); HAVC 202, Critical Theory (winter); and HAVC 203, Theories and Histories of Seeing (spring, taken twice).

Those entering with an M.A. are eligible to petition to exempt courses. In general, a student entering with a non-visual studies M.A. may petition to waive up to four electives, and a student entering with an M.A. in visual studies may also petition to waive the fourth core course (the second Theories and Histories of Seeing). The petition to exempt courses may be submitted any time after a student is accepted into the program, but first should be discussed with the assigned faculty adviser and the director of graduate studies. To receive exemption, the petition must be approved by the visual studies graduate committee.

Of the eight elective courses, at least four must have a visual studies designation (i.e., taught by core or affiliated faculty), and at least three must be drawn from departments outside of visual studies. For students entering with an M.A. who have successfully petitioned to have four elective courses waived, the distribution between visual studies courses and courses outside the department will be decided in consultation with the academic adviser and the director of graduate studies as part of the petition for course waiver.

Field Clusters/Field Specialties

Appreciating that most of our graduates will be required to fit themselves back into traditional disciplinary structures once they enter the academic job market, the program is designed to provide students with both new means of interpreting visual evidence and suitable depth of understanding in older disciplinary traditions. While all graduates will acquire a shared foundation in theories of visibility (attained through our core course requirements), individual student programs vary considerably depending on the type of department in which the student hopes to secure employment after graduation. In addition to completion of the core courses required of all students, each student will develop a cluster of individualized field courses in consultation with their adviser based on her/his particular professional goals.

To provide our students with the disciplinary background to facilitate employment within curatorial departments in museums and non-visual studies departments at colleges and universities, each student is required to take a minimum of four 5-credit courses in a disciplinary cluster (beyond the core course requirements). This requirement pertains both to students entering with a B.A. and an M.A. Acceptable field cluster courses might center around a medium (i.e., painting or architecture), a temporal/stylistic category (i.e., Early Modern or Postmodernism), a cultural, national, or social group (i.e., Pacific Islanders or China), or a disciplinary approach (i.e., cultural anthropology or gender studies). Field clusters are developed in consultation with the student's adviser based on the student's intellectual and professional goals. To count toward the degree, field clusters must receive prior approval from the visual studies graduate committee.

Language Requirement

Students must demonstrate reading knowledge of one foreign language prior to the start of their second year (either through attainment of a score of 550 or higher on the Educational Testing Service Graduate Student Foreign Language Test or through passage of a reading examination administered by the department).

Students are encouraged to master a second foreign language. Based on a student's area of interest, and the joint assessment of the student's adviser and the director of graduate studies, proof of proficiency in an additional language or languages may be required prior to the student being admitted to candidacy for the Ph.D. Should proficiency in additional languages be required, it must be demonstrated prior to the close of the student's third year of study.

Qualifying Examination

After completing all course work and passing one language examination, students are required to pass a qualifying examination prior to the close of the winter quarter of their third year, unless a petition for an extension, demonstrating reasonable cause, is approved by the visual studies graduate program committee. The qualifying examination is divided into three topic areas, with each one including a written and an oral component. Each topic area should display historical breadth and variety of media. Two of the topic areas should ideally relate to the future dissertation topic, while one of the remaining must constitute an outside area, examining a topic that is chronologically, geographically, and/or

methodologically distinct from the other two.

Prior to the end of his/her second year, a student should consult with his/her adviser to assemble a group of four faculty members who will serve as examiners and aid the student in assembling the necessary topic areas, compiling the needed reading lists, and preparing for the written and oral components of the examination in each area. The examination will have two parts. In part one, each student will respond in writing to three general questions, posed by three of their examiners in the pre-arranged topic areas. In part two, each student will gather together with his/her examiners to field questions probing and clarifying the previously submitted written component of the qualifying examination. In order to pass the qualifying examinations, the student must receive the unanimous endorsement of the committee members.

Dissertation Prospectus and Colloquium

After passing the qualifying examination, a student must complete an approved dissertation prospectus and a colloquium. The written dissertation prospectus is due no later than the end of the second quarter following the student's completion of the qualifying examination. The prospectus is a brief, concise essay of approximately 25 pages (with bibliography) that defines the scope, methodology, and rationale for the proposed dissertation. It is prepared in consultation with the student's dissertation director, who must approve of the document prior to sending it to the colloquium committee. The prospectus must be sent to the colloquium committee at least one month before the colloquium.

The dissertation director, in consultation with the student and director of graduate studies, will invite four to five faculty members, in appropriate fields, to be on the colloquium committee, attend the colloquium, provide input on the prospectus, and assess the student's preparedness to begin researching and writing the dissertation. Faculty participating in the colloquium may or may not have been members of the QE committee, and should represent faculty whose expertise has bearing on the student's project. A student will pass the colloquium after having demonstrated to the satisfaction of all colloquium committee members adequate preparation to begin researching and writing the dissertation.

Advancing to Candidacy

Advancement to candidacy follows and is contingent upon passing the qualifying examination, all needed language examinations, completing an approved dissertation prospectus, passing the colloquium, and the subsequent appointment of a dissertation reading committee of at least three members. The requirements for advancement to candidacy must be completed no later than the end of the winter quarter of the fourth year.

Dissertation and Final Examination

The dissertation must make a significant and original contribution to the field of visual studies, as judged by each dissertation committee member.

An oral defense of the dissertation is the only final examination requirement, unless a petition to waive the oral defense, demonstrating reasonable cause, is approved by the student's primary adviser and the visual studies graduate program committee. The student's dissertation committee, under the supervision of the director of graduate studies, will conduct the examination. In the event that the director of graduate studies serves on the dissertation committee, the chair of History of Art and Visual Culture will oversee the defense. Interested faculty and students in the visual studies program will have the opportunity to observe the defense.

Normative Time from Matriculation to Degree

The visual studies Ph.D. program at UCSC is designed to require six years for students matriculating with a B.A. and five to six years (depending on advanced standing granted) for those entering with an M.A. During the pre-candidacy period students will devote themselves to coursework, completion of the language examination, some teaching, preparation for and completion of qualifying examinations, completion of an approved version of their prospectus, passing their colloquium and selecting their dissertation committee. Requirements for advancing to candidacy must be completed by the end of winter quarter of the fourth year. Students will finish their dissertation and successfully

defend it before the end of their sixth year.

Designated Emphasis

Graduate students enrolled in doctoral programs at Santa Cruz may obtain a Designated Emphasis in visual studies on their Ph.D. degree by meeting the following requirements:

- Secure approval from a core member of the visual studies faculty to serve as an adviser for their Designated Emphasis.
- Have at least one core member of the visual studies faculty serve on either their qualifying examination or dissertation committee.
- Submit a significant piece of writing that demonstrates competency in the field. The writing could take the form of a seminar paper or dissertation chapter. The essay must meet the approval of the student's visual studies adviser.
- Successfully complete four graduate courses taught by either core or affiliated members of the visual studies program. The courses must form a coherent cluster in visual studies and be pre-approved by the student's Designated Emphasis adviser.

History of Consciousness

[2014–15 General Catalog](#)415 Humanities 1
(831) 459–2757<http://histcon.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

History of consciousness is an interdisciplinary graduate program (including a small selection of undergraduate courses) centered in the humanities, with links to the social sciences and the arts. It is concerned with forms of expression and social action as they are manifested in specific historical, cultural, and political contexts. The program stresses flexibility and originality. Interest is focused on problems rather than disciplines. Although students are prepared to teach in particular fields, the emphasis is on questions that span a number of different approaches.

Over more than 30 years of existence, the history of consciousness graduate program has become widely recognized as a leader of interdisciplinary scholarship. Program graduates are influential scholars at prominent universities, and their dissertations have been published by important trade and academic presses. Graduates currently find academic employment in a wide range of disciplines, including literature, feminist studies, science studies, anthropology, sociology, American studies, cultural studies, ethnic studies, communications, the study of religion, and philosophy. In addition, history of consciousness graduates work as filmmakers, museum researchers, free-lance writers, postdoctoral researchers, and academic administrators.

Since the curriculum concentrates on theoretical and methodological issues and is concerned with the integration of disciplines, candidates for admission are expected to have a relatively clear idea of the project they wish to pursue. Experience of advanced work in one or more fields is preferred, but not required.

History of consciousness emphasizes a variety of topics in its seminars and research pursuits. These areas of research include studies at the intersection of race, sexuality, and gender; global capitalism and cultural processes; psychoanalytic and semiotic theories of the image; science and technology studies; theories and histories of religion; social movements; and literary studies and poetics. Seminars are regularly offered in these and other areas of ongoing faculty research.

History of consciousness has strong cooperative relations with associated faculty from other campus programs, scholars who offer seminars and participate in advising, qualifying exams, and dissertation committees. The formal list of associated faculty is a non-exhaustive indication of advising possibilities beyond the program's core faculty. Campus research organizations, such as the UCSC Center for Cultural Studies, the Institute for Humanities Research, Critical Race and Ethnic Studies, the Science and Justice Working

Group, and the Chicano/Latino Research Center, also provide venues for collaborative work.

History of consciousness has developed a new vision for its graduate program involving the creation of projects (called concentrations) as part of a two-year admissions cycle.

The department admits outstanding students regardless, and students may change the foci of their study as their intellectual interests develop. Students already enrolled in other UCSC departments and all students in history of consciousness are eligible to take the graduate courses offered within a specific concentration. A given concentration topic will be in effect for two admissions cycles; after that, the focus of the concentration changes. Students may choose to participate in the concentration at any time during their first two years of coursework; colloquia and other research projects may continue to be offered in a given concentration for up to two years beyond the concentration admissions cycle.

This approach seeks to foster the problem-driven research vital to new forms of knowledge and intelligibility and to meet the challenges of imagining new modes of scholarship for the arts, social sciences, and humanities. The project concentration approach to graduate education formalizes that goal through an expanded inclusion of faculty and students from other UCSC departments engaged as a consortium in related endeavors. Each sequential concentration invites the participation of faculty from other departments.

The first concentration, beginning in 2013, is called "Crisis in the Cultures of Capitalism," a two-year, interdisciplinary selection of courses, colloquia and study groups. "Crisis in the Cultures of Capitalism" seeks to provide a forum for the consideration of the economic, political and cultural dimensions of this global crisis. The objectives are: 1) to promote graduate student scholarship, and 2) to encourage faculty collaboration and intellectual community within this emerging area of critical inquiry. The requirements for students concentrating in the project do not differ from the regular program requirements, except in course content. Guidelines may be obtained at the department office or on the web site.

Requirements

Students are required to enroll in a minimum of two courses per quarter until advancement to candidacy. Students are expected to take the Qualifying Examination during the third year, but no later than the beginning of the fourth year.

Incoming students are required to take a minimum of five history of consciousness graduate seminars during the first two years. In the first year, students are required to take the introductory seminar, course 203A, Approaches to History of Consciousness, writing intensive "B" seminar, either 203B, Approaches, or a "B" seminar following another seminar the student has taken. By the end of the first year, students are expected to complete a full seminar paper. "B" courses do not count toward the five seminars selected to fulfill the basic department requirement (under special circumstances exceptions may be approved). The remainder of the courses taken to fulfill university enrollment requirements may include not only history of consciousness seminars but also independent study with specific faculty or graduate seminars offered in other departments.

Advancement to candidacy depends on the general quality of a student's work; demonstration of proficiency in a foreign language relevant to the student's area of work, either by passing a written examination administered by the department or successfully completing a language course approved by the department; success in the qualifying examination; and proposal of an acceptable dissertation topic. The qualifying examination is centered on a qualifying essay that demonstrates the candidate's ability to do extended, dissertation-level research and analysis relevant to the proposed thesis topic and dissertation plan. The examination focuses on the student's research project and on the fields of scholarship it presupposes.

After advancement to candidacy, required by the end of the fourth year, students concentrate on dissertation writing. The current normative time to degree limit of seven years means that a student usually has at least three years after advancement to candidacy for completion of the dissertation.

Students also have the option of doing advanced work in a traditional discipline and receiving a designated emphasis of this specialization. In such cases, students must satisfy

[Search the Catalog](#)

the appropriate department's criteria (see departmental web sites for information). Students are expected to complete at least one year of supervised teaching as part of the degree requirements.

Applications

The deadline for applications to the History of Consciousness program is December 10 of each year. Admissions information and application materials are available online at graddiv.ucsc.edu. Applications are invited from students with backgrounds and interests in the humanities, arts, and social sciences and are especially encouraged from individuals with a clear idea of the project they wish to undertake. Strong preference is given to applicants working in areas for which the faculty resources in history of consciousness are appropriate and available. Graduate Record Examination (GRE) scores are required as is a writing sample of no more than 10 pages. Admission is for the fall quarter only.

It is important to note that in light of California's elimination of affirmative action as an admissions criterion, the History of Consciousness Department reaffirms its commitment to the principles of affirmative action. These principles mean a commitment to diversity, equal opportunity, and outreach to underrepresented communities. Further, this commitment underlines our understanding that the very fabric and quality of our scholarship depends on the representation and interplay of diverse experience and perspectives. So defined, affirmative action is reflected in every aspect of the history of consciousness program, including scholarship, teaching, admissions, hiring, and the process of departmental governance.

Designated Emphasis

To receive a designated emphasis in history of consciousness, graduate students from other departments must complete the following requirements in addition to degree requirements for the doctorate in their home department.

Guidelines and application forms are available in the History of Consciousness Department office.

The following are required for the emphasis:

1. The student must have a faculty graduate adviser from core or affiliate faculty in history of consciousness, who serves both on the qualifying exam committee and the dissertation reading committee.
2. The student must take four graduate courses in history of consciousness. With the approval of the history of consciousness adviser, one of the four required graduate courses may be an independent study.

To obtain the designated emphasis in History of Consciousness:

1. The request for a designated emphasis must originate in the degree-granting department.
2. Student should complete an application, obtain the history of consciousness adviser's signature and submit with supporting documentation (copies of the QE and Dissertation Committee Nomination forms) to the History of Consciousness Department office.
3. The History of Consciousness Department will notify the student and the home department of approval for the designated emphasis.

(831) 459-2696<http://humanities.ucsc.edu/>[Faculty](#)

Program Description

The Humanities Division at UCSC includes the traditional humanistic disciplines of history, literature, and philosophy as well as an interdisciplinary program in feminist studies. The Humanities Division is also the home for linguistics, languages, and writing. The Humanities Division offers a range of courses in support of the campus' general education requirements.

At the undergraduate level, the following majors are offered: classical studies, critical race and ethnic studies, feminist studies, German studies, history, Italian studies, Jewish studies, language studies, linguistics, literature, philosophy, and Spanish studies. Several undergraduate minors are offered including the following: classical studies, East Asian studies, history, Italian studies, Jewish studies, language studies, linguistics, literature, and philosophy. Undergraduate students may also pursue individual majors. At the graduate level, the Ph.D. and M.A. are offered by programs in feminist studies, history, history of consciousness, linguistics, literature, and philosophy. Instruction and assessment to satisfy the campus' writing requirements is offered through the Writing Program.

Italian Studies

[2014–15 General Catalog](#)

Department of Literature

303 Humanities 1

(831) 459-4778

[Faculty](#)

Program Description

Students interested in an interdisciplinary approach to Italian culture through the combined study of language, literature, history, art history, and other subjects may pursue a major or minor in Italian studies. The guidelines for the completion of the major may be obtained from Professor Deanna Shemek of the Literature Department or Professor Cynthia Polecristi of the History Department. There are several options for study in Italy through the UC Education Abroad Program (EAP), either for a year (Bologna, Milan, Padova), for an intensive semester (Bologna, Florence, Milan, Padova, Rome), or for the summer (Florence). Students may also divide their time between Italy and Spain for one semester or one quarter. The Italian studies program is administered by the Literature Department.

Requirements of the Major

Each student must complete the lower-division language sequence (Italian 1–6, or equivalent). In addition, students are required to take 10 five-credit courses (one of which may be lower division), including a core unit of five courses which must be taken at UCSC: two Italian literature courses, Italian 106 (Italian Culture Through Film), one course in Italian history, and one course in Italian art history. A course featuring the work of Dante is recommended. A minimum of five courses must be taught substantially in Italian. Five may be approved elective courses, which may feature Italy in a European or global context. Up to five elective courses may be approved from UC EAP's yearlong study abroad in Italy. All students in the major must satisfy the Italian Studies senior exit requirement by writing a senior essay focused on Italian literature, history, or visual culture. This essay may be produced within an approved seminar, or (with faculty permission) by enrolling in a one-credit Italian Literature 191 course in conjunction with another upper-division course in Italian literature, history, or history of art and visual culture. This combination must be approved by a faculty adviser in Italian Studies.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. Italian Studies majors satisfy the DC Requirement through satisfactory completion of the senior essay, as described above. Please refer to updated information at

<http://registrar.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Minor Requirements

Each student must complete the lower-division language sequence (Italian 1–6, or equivalent). Students must also complete five upper-division courses in Italian studies: two Italian literature courses, Italian 106 (Italian Culture Through Film), one course in Italian history, and one course in Italian art history. A course featuring the work of Dante is recommended. Three of the five upper-division courses must be completed at UCSC; three must be taught substantially in Italian. A maximum of two courses may be transferred from EAP.

Honors

Honors in the Italian studies major are awarded to graduating seniors who have earned a 3.70 to 3.89 grade point average in their upper-division Italian studies courses. Highest honors in the Italian studies major are awarded to graduating seniors who have earned a 3.90 or higher grade point average in their upper-division Italian Studies courses. Honors are not awarded in the minor.

2014–15 Tentative Italian Studies Curriculum

Fall 2014

[Faculty](#) | [Course Descriptions](#)

Program Description

Students interested in acquiring proficiency in Japanese can enroll in language courses from beginning to advanced levels. Instruction takes place mostly in Japanese from the second half of the first quarter. The curriculum aims to build a solid foundation in all four aspects of linguistic skills (speaking, listening, reading, and writing) as well as sociolinguistic competence and cultural knowledge.

Students may use Japanese courses for the following majors and minors: a major in language studies; a major in linguistics; an East Asian minor or (individual major); a major in global economics; or a major in literature.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Department of Languages and Applied Linguistics](#).

Study Abroad

The Office of International Education (OIE) has information on study in Japan. There are study abroad centers in Yokohama, Tsuru, Kyoto, Tokyo, Sendai, Tsukuba, and Tohoku. Courses taken abroad can, with approval of an adviser, be applied to major requirements. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>. For information on credit applied to a major, contact the appropriate department.

Jewish Studies

2014–15 General Catalog

Department of History

201 Humanities

(831) 459–2982

<http://jewishstudies.ucsc.edu>Faculty | [Course Descriptions](#)

Program Description

The interdisciplinary program in Jewish studies introduces students to the study of classical, medieval, and modern Jewish cultures and to the range of disciplines that bear upon the field.

The Jewish studies major and minor offer students the chance to gain knowledge and skills in a variety of contexts in various aspects of Jewish culture, with special reference (though not limited) to modern issues. The major and minor will help them prepare to move successfully into graduate programs in a variety of disciplines, especially in humanities, social sciences, and pre-professional programs, and will provide students with a grounding in materials fundamental to western culture and liberal education. This program connects with a range of disciplines and programs on the UCSC campus that explore the meanings of modernity; at the same time, this program will help students develop analytical tools, methodological versatility, and critical literacy.

Note that modernity here is not defined as Europe or North America; the Jewish studies program intends to speak to modernity as a global phenomenon, dealing with sites where Jews lived. In the 19th and 20th centuries Jews were widely spread across the globe and often played active and influential roles in their communities. These include such places as Shanghai, Tianjin, Harbin, India, Latin America, Egypt, Iran, and of course throughout Europe, Great Britain, and North America.

Students, especially those who plan to continue their studies in graduate school, may wish to gain proficiency in Yiddish, German, or Spanish, depending on their area of interest. The upper-division course Hebrew Bible (Pre- and Early-Modern Literature (LTPR) 144B) is strongly recommended, as is developing language proficiency in Yiddish and/or Hebrew.

Jewish studies is administered by the Department of History. For additional information on curriculum and advising, go to <http://jewishstudies.ucsc.edu>.

Requirements for the Major

In consultation with a faculty adviser, students will plan a program of study to fulfill the following distribution of courses:

Language

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Electrical Engineering
- School of Engineering
- Environmental Studies
- Feminist Studies
- Film and Digital Media
- French
- German
- German Studies
- Greek
- Hebrew
- History
- History of Art and Visual Culture
- History of Consciousness
- Humanities
- Italian
- Italian Studies
- Japanese
- Jewish Studies >
- Kresge College
- Language Studies
- Latin
- Latin American and Latino Studies
- Legal Studies
- Linguistics
- Literature
- Mathematics
- Molecular, Cell, and Developmental Biology
- Merrill College
- Microbiology and Environmental Toxicology
- Music
- Oakes College
- Ocean Sciences
- Philosophy
- Physical and Biological Sciences Division
- Physical Education
- Physics
- Politics
- Portuguese
- Porter College
- Psychology

Three quarters of lower-division instruction in a Jewish language in any combination of the student's choosing: elementary Hebrew (Hebrew 1, Hebrew 2, Hebrew 3); Hebrew 80, Introduction to Biblical Hebrew; elementary Yiddish (Yiddish 1, Yiddish 2); or equivalent. Students with prior knowledge of Hebrew or Yiddish are advised to complete a language placement exam to determine if they have satisfied any of the elementary language course requirements. Instructions for the placement exam can be found on the Languages and Applied Linguistics web site: <http://language.ucsc.edu>.

Course Requirements

The major requires a minimum of 11 courses, including the comprehensive requirement. A minimum of 40 upper-division credits must be completed within the Jewish studies major course requirements.

History 74, An Introduction to Jewish History and Culture, or Literature 61J, An Introduction to Jewish Literature and Culture

Literature 80L, The Holocaust: The Destruction of European Jewry, or History 75, Film and the Holocaust

two upper-division history core courses

two upper-division literature core courses

four additional core or elective courses, three of which must be upper-division

one comprehensive exit requirement (see below)

among the 11 courses required for the major, one course must satisfy the Disciplinary Communications (DC) Requirement (see below)

Distribution Requirements. Among the 11 courses required for the major, at least three must meet the following chronological distribution requirements:

one course must satisfy the classical chronological distribution requirement

one course must satisfy the modern chronological distribution requirement

one course must satisfy the Holocaust chronological distribution requirement, which is accomplished by completing Literature 80L, The Holocaust: The Destruction of European Jewry or History 75, Film and the Holocaust.

Please consult the Jewish studies web site for a more detailed description of these courses.

Comprehensive Requirement. Students may satisfy the Jewish studies comprehensive exit requirement by completing an approved exit seminar (one quarter: History 196G, 196M, 196N, 196P, 196R, History of Consciousness 190A/Jewish Studies 190A, Modern Literary Studies 190Y or Pre- and Early Modern Literature 190Y) or a senior thesis (Jewish Studies 195A and 195B). Please consult the Jewish studies web site for a more detailed description of these courses.

Disciplinary Communication (DC) Requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Jewish studies is satisfied by completing an exit seminar (one quarter: History 196G, 196M, 196N, 196P, 196R, History of Consciousness 190A/Jewish Studies 190A, Modern Literary Studies 190Y, or Pre- and Early Modern Literature 190Y) or a thesis (two quarters: Jewish Studies 195A and 195B.)

Honors in the Jewish Studies Major. All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The Jewish studies faculty advisers determine honors based upon courses applied toward the Jewish studies major. Performance in courses taken elsewhere and being transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most courses for honors, and excellence in all courses for highest honors. Summer, fall, and winter graduates will be reviewed at the end of each of their respective quarters. Spring graduates will be reviewed as of the spring announcement of candidacy deadline.

UC Education Abroad Program. Jewish studies encourages students to take advantage of the

UC Education Abroad Program (EAP). The University of California has developed educational opportunities abroad in conjunction with the Jerusalem Study Center at The Hebrew University of Jerusalem. Subject to the limitations described below under "Transfer credits and substitutions," up to three courses from EAP may be applied toward the Jewish studies major requirements.

Transfer Credits and Substitutions. Jewish studies majors must take a minimum of five regularly scheduled Jewish studies courses plus the comprehensive/DC requirement from members of the UCSC Jewish studies faculty. Subject to the limits indicated, courses from the following categories may be applied to the Jewish studies major:

- Courses taken at another institution (limit of 3)
- Education Abroad Program (limit of 3)
- Related courses not currently on the pre-approved Jewish studies course list (limit of 2)
- Independent and field studies (limit of 1)

Requirements for the Minor

Students whose major area of interest is not Jewish studies may nonetheless find that a minor in Jewish studies makes an invaluable contribution to their studies. This introduction to Jewish studies is helpful for students who plan to do graduate work in Jewish studies, whether through regular disciplines or in Jewish studies programs, and also for students who plan to attend rabbinical schools or to find work with Jewish communities. For others with an interest in Jewish topics, but without such plans, a minor in Jewish studies offers intellectual enrichment and a focus within the student's chosen field.

The minor requires a minimum of eight courses. A minimum of 25 upper-division credits must be completed within the Jewish studies minor course requirements. In consultation with a faculty adviser, students will plan a program of study to fulfill the following distribution of courses:

one of the following courses:

History 74, An Introduction to Jewish History and Culture; Literature 61J, An Introduction to Jewish Literature and Culture; Literature 80L, The Holocaust: The Destruction of European Jewry; or History 75, Film and the Holocaust;

three upper-division core courses from the Jewish studies curriculum;

four additional core or elective courses from the Jewish studies curriculum, two of which must be upper-division.

[Faculty](#) | [Languages Course Descriptions](#) | [Academic English Course Descriptions](#) | [Applied Linguistics Course Descriptions](#)

Program Description

Understanding how language works is a crucial part of comprehending human interaction. Language is an intellectual tool basic to all disciplines. In today's communities, multicultural and global, learning a second language is not a refinement but a necessity—the key to understanding and communicating with others near and far. The goal of the Language Program at UCSC is to allow students to achieve a substantial level of proficiency in languages other than English. Since such proficiency always includes cultural as well as linguistic comprehension, the program includes investigating the complex relationship between language and culture.

The Department of Languages and Applied Linguistics offers rigorous training by professional instructors. Most courses are taught in the target language from the very beginning. Currently, we offer courses in Chinese, French, German, Hebrew, Italian, Japanese, Portuguese, Russian, Spanish, Spanish for Heritage speakers, and Yiddish.

Students with previous language preparation who wish to continue in that language take a placement examination to determine the course level appropriate for them. Each language's placement examination format is described in the quarterly Schedule of Classes, along with the time, date, and location of the examination.

McHenry Library houses an abundance of print and audiovisual material in the languages taught at UCSC, including music recordings and videos. Television programs are received from countries around the world. Faculty in the Language Program are incorporating new technologies into their teaching on an ongoing basis, including web-based resources.

Our upper-division courses further expand students' understanding of language in its social contexts, focusing on linguistic, historical, literary, sociological and cultural issues, among others.

Currently the Department of the Languages and Applied Linguistics also offers courses in applied linguistics that fulfill requirements toward the language studies and linguistics majors: language and gender, language teaching, and intercultural communication.

The Department of the Languages and Applied Linguistics houses the Spanish Studies major, which enables students to learn in depth about the languages, histories and cultures of the Spanish speaking world.

Students of language interested in theater have the opportunity to participate in the annual International Playhouse, which presents highly successful programs every spring. To date, pieces have been performed in Chinese, French, German, Italian, Japanese, Latin, Portuguese, Russian, and Spanish.

Everyone taking a language course is also encouraged to participate in foreign film series (e.g., Chinese, French, Italian, Japanese, Portuguese, Russian, Spanish), international music and dance festivals, and conferences on intercultural or international topics.

If a student wishes to study a specific language in depth, language studies is an ideal major that combines courses in language proficiency and culture with general and applied linguistics. Students may also use language courses for the following majors and minors that have a language requirement: classical studies, East Asian studies, German studies, global economics, health sciences, human biology, Italian studies, Jewish studies, Latin American and Latino studies, linguistics, and literature. The History Department encourages students of Asian, Latin American, European, and classical history to study a second language and provides a variety of opportunities to make use of language skills in their studies.

Study abroad is an important component of language study at UCSC. Language students have various opportunities to study abroad, for a summer, quarter, semester, or year. Students may choose to study abroad through the Office of International Education (OIE), through the UCSC Summer Abroad Program, or through affiliate programs around the globe. OIE offers programs in Argentina, Australia, Barbados, Botswana, Brazil, Canada, Chile, China, Costa Rica, Denmark, Egypt, France, Germany, Ghana, Hong Kong, India, Ireland, Israel, Italy, Japan, Korea, Mexico, Netherlands, New Zealand, Russia, Singapore, South Africa, Spain, Sweden, Taiwan, Tanzania, Thailand, Turkey, United Kingdom, and Vietnam. There are programs available for students of all levels of language ability, including Language and Culture programs for beginner or intermediate speakers, to full immersion programs for students with advanced language skills. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>.

2014–15 General Catalog

Linguistics Department
241 and 243 Stevenson College
(831) 459-4988
<http://linguistics.ucsc.edu>

Program Description

Language studies is an interdisciplinary major offered by the Linguistics Department. It is designed to equip students with competence in a foreign language and, at the same time, provide them with an understanding of the general nature of human language—its structure and use. It requires (1) acquisition of demonstrable competence in a language other than English, (2) grounding in linguistics, and (3) completion of a series of linguistics or cultural context courses related to the language. Currently, majors may choose a concentration in Chinese, French, German, Italian, Japanese, or Spanish. Interested students should contact the Linguistics Department office early in their college career to obtain essential information about requirements.

Students interested in spending a portion of a year or a full year in study abroad should review the UCSC Programs Abroad web site at <http://ieo.ucsc.edu/programs-abroad/index.html>. A senior year abroad is approved only when all of the language proficiency requirements have been satisfied and when it is clear that any remaining courses can be satisfactorily completed abroad. Courses taken abroad may be used to satisfy major requirements only if approved by the undergraduate program director or a designated advisor.

Requirements of the Language Studies Major

Early Declaration

It is important that prospective students declare the major as early as possible so that they can complete the language, linguistics, and context requirements within the allowed period of enrollment.

Students who wish to include a study abroad experience in their course of study will have to coordinate their choice of time abroad with the scheduling of UCSC courses. Transfer students who have not made significant progress with the language requirements before entering UCSC may find it difficult to include a time abroad before completion of graduation requirements.

Qualification Policy for the Language Studies Major

The Linguistics Department has adopted a major qualification policy for linguistics and language studies majors that is intended to encourage students to take their performance in the gateway courses seriously and to help them lay a solid foundation for further course

work in the major.

In order to declare the linguistics or language studies major, a student must pass each of the gateway courses, Linguistics 50, Introduction to Linguistics, and Linguistics 53, Semantics 1, with a grade of C+ or better.

Students who are informed that they are not eligible to declare the major may appeal the decision within 15 days from the date the notification was mailed. They should do this by submitting a formal letter, addressed to the department undergraduate program director, to the Linguistics Department office (Stevenson 241 and 243). This letter should explain any extenuating circumstances that influenced their performance in the gateway courses. Within 15 days of receipt of the appeal, the department will notify the student, the college, and the Office of the Registrar of the decision.

Course Requirements

Language studies majors must satisfy course requirements in languages, linguistics, and cultural context.

Language component: Language studies majors (in French, German, Italian, and Spanish) must achieve a level equivalent to six quarters in the language of concentration. One advanced language course after level 6 is also required. Majors in Chinese and Japanese must achieve a level equivalent to eight quarters of language study.

Linguistics component: The major requires six foundation courses in linguistics:

- 50, Introduction to Linguistics
- 53, Semantics 1
- 101, Phonology 1
- 112, Syntax 1; or 111, Syntactic Structures
- Two upper-division linguistics courses

Cultural context or linguistics component: The major also requires five upper-division elective courses in linguistics or the cultural context of the language of concentration. Linguistics courses include any upper-division course offered by the Linguistics Department. Cultural context courses are to be selected from disciplines such as literature, history, and politics, subject to departmental approval.

Senior exit requirement: In their senior year, language studies majors must satisfy the senior exit requirement in one of two ways:

Option 1. Successful completion of a capstone course— an appropriate upper-division linguistics course. Students must have senior standing and must have completed Linguistics 53, Semantics I; 101, Phonology I; and 111, Syntactic Structures or 112, Syntax I. This course can be one of the two linguistics electives required for the major.

Option 2. Senior thesis supervised by a faculty member. The proposal for a senior thesis must be submitted for approval by the department faculty at least three quarters prior to the quarter of graduation.

Students enroll in Linguistics 195, Senior Thesis, with the approval of the faculty adviser. The senior thesis is an original investigation of the major language in some relevant way, such as the linguistic structure or history of the language or its historical, literary, cultural, sociological, ethnographic, or political context.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in language studies is satisfied by completing courses 101 and either 111 or 112.

Requirements of the Minor

The minor requires completion of two years (six quarters) of language study (or

demonstration of an equivalent level of ability) and eight additional linguistics and cultural context courses as follows:

- 50, Introduction to Linguistics
- 101, Phonology I
- 112, Syntax I; or 111, Syntactic Structures
- Two upper-division linguistics courses
- Three electives in linguistics or in the cultural context of the language of concentration to be selected from disciplines such as literature, history, and politics, subject to departmental approval. One of the courses taken must have a prerequisite of Level 6 in the student's designated language.

There is no senior exit requirement for the minor.

Honors

Students who wish to be considered for honors should meet the deadline posted by the Office of the Registrar for declaring the intent to graduate. Determination of honors is based on the student's grades and narrative evaluations for all courses relevant to the major and other factors relevant to an assessment of academic excellence, such as research papers of professional quality. Generally, honors in the major are awarded only to the top 10 percent of those graduating in the major. Only those students whose performance in coursework is excellent will qualify. Highest honors are rarely awarded, and then only to students whose performance in coursework is outstanding and who have completed an outstanding senior thesis.

Latin American and Latino Studies

2014–15 General Catalog

32 Merrill College
(831) 459-4284
<http://lals.ucsc.edu>

[Faculty](#) | [Course Descriptions](#)

Program Description

The Latin American and Latino Studies (LALS) Department prepares students for bilingual and multicultural participation in a rapidly changing and globalized world. LALS integrates the study of Chicano/a and Latino/a communities in the U.S. with analysis of the histories, politics, cultures, and societies of Latin America and the Caribbean. The field is inherently interdisciplinary, drawing on sociology, history, anthropology, political science, media studies, communications, cultural studies, economics, environmental studies, and literature.

LALS courses deal with changing political, social, economic, and cultural realities among Latin American and U.S. Latino and Latina communities in ways that recognize cross-cultural and transnational processes. Key concepts and processes studied include: immigration and transnational migration; gender, racial, sexual, and ethnic identities; social movements; diverse forms of cultural expression and cultural politics; ongoing political and economic restructuring in Latin America; and the challenges of political and economic empowerment for Latino/a communities in the U.S. Students learn to formulate thoughtful, critical and clear arguments and to communicate effectively in more than one language.

In addition to academic knowledge, LALS also provides opportunities for students to acquire practical, real-world skills. Through program-related internship and field-study experiences, students can acquire useful, pre-professional skills in key areas including: community development/advocacy, public policy, education, journalism, media, legal services, performance, and research/writing.

Latin American and Latino studies courses span a number of disciplines and are augmented by courses taught by participating faculty in other departments. The Latin American and Latino Studies Department compiles a quarterly list of the courses offered by other departments that are pre-approved and count toward the major; this list appears on the department's web site under "courses" and is frequently updated.

Graduates of the LALS major have made careers in a wide variety of fields, including teaching, community organizing, community and government service, journalism and the media, environmental science, global economics, health care, legal services, library science, music, publishing, and research. Many have gone on to pursue advanced degrees in the U.S. or abroad in fields such as anthropology, bilingual education, media, communications, cultural studies, ecology, economics, geography, history, law, literature, educational

counseling, public health, and sociology.

Declaration of the Major

Students need to complete LALS 1, Introduction to Latin American and Latino Studies, and one additional lower-division Latin American and Latino Studies course prior to declaring the major. A junior transfer student may petition the department to satisfy the lower-division requirements with equivalent courses from a qualified institution. These courses must appear on the UCSC Transfer Credit Summary. See the LALS department for more information.

Requirements of the Major

Two lower-division courses are required for the major: LALS 1, Introduction to Latin American and Latino Studies, and one additional lower-division Latin American and Latino Studies course. (See the LALS web site for a listing of lower-division courses).

Other departments' courses numbered 1-80 on Latin American and/or Latino/a subjects may be substituted with approval in advance from the Latin American and Latino Studies Department.

Courses with similar content taken at other institutions may be substituted with approval from the Latin American and Latino Studies Department.

In addition, all majors must complete 10 upper-division courses, including three required core courses, (no substitutions):

Latin American and Latino Studies Core Courses

100 Concepts and Theories in Latin American and Latina/o Studies

100A Social Science Analytics

100B Cultural Theory in the Americas

The remaining seven electives must meet the following criteria:

- A student-defined cluster of three LALS-related courses must be taken in a variety of areas of concentration.
- These may be LALS courses or courses from affiliated/participating departments.
- At least one course must concentrate on pre-WWII topics
- At least one course must concentrate on Chicano/a-Latino/a issues
- At least two upper-division courses with a methods training emphasis
- At least two LALS upper-division courses must be taken in Spanish or Portuguese***

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

See the LALS department website (<http://lals.ucsc.edu>) for an updated list of additional lower-division and upper-division courses that meet LALS requirements

Language Requirements

All Latin American and Latino studies majors are expected to learn to speak, read, and write Spanish or Portuguese and to make use of these skills on a regular basis in their upper-division academic work.

Majors must take at least two upper-division courses taught in Spanish or Portuguese. Before taking upper-division course work taught in the language, students must demonstrate proficiency in Spanish equivalent to the completion of Spanish 6 or Spanish for Heritage Speakers 6. Students who wish to pursue Portuguese may take the Portuguese 1A/1B or 60A/60B series.

Students who have achieved fluency in Spanish or Portuguese through life experience may be exempt from this recommended preparatory course work after demonstration of their

proficiency. In addition to Latin American and Latino studies and affiliated department course offerings, the required two upper-division courses taught in Spanish or Portuguese*** may be fulfilled through study abroad with approval by the LALS Department. Students may also pursue internship or field study opportunities to satisfy one of the two required upper-division courses taught in Spanish or Portuguese; however, at least one of the two courses must be fulfilled in a classroom setting.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Latin American and Latino studies and the combined majors with global economics, literature, politics, and sociology are met by completing courses 100A and 100B.

Senior Comprehensive Requirement

Every major must complete a senior exit requirement in order to graduate. The preparation and completion of this requirement is structured into the senior year. There are four options to choose from:

1. Passing a Latin American and Latino Studies senior seminar (194 series). In these courses, students must write at least 30 pages cumulatively during the quarter. The final paper is based on independent scholarly research, demonstrates advanced skills in critical analysis, and which has undergone revisions. Senior standing and completion of LALS 100A and 100B are required before taking a LALS 194 course for fulfillment of the senior exit requirement.
2. An expanded research paper, a minimum of 20 pages in length. This paper often builds on related course work and requires approval from the relevant faculty adviser before the end of the winter quarter of the senior year. Students must be enrolled in an independent study tutorial to complete this paper.
3. A senior thesis, generally between 40-60 pages, based on two or more quarters of sustained independent research under the supervision of the faculty adviser while enrolled in an independent study (done by petition to LALS, and with the approval of the faculty adviser). If the thesis option is selected by a combined major, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member is affiliated with both departments.
4. A senior project, which can be either a creative project or a community-action project. Creative projects include web site design, video, performance, slide show, photo exhibit, or other media work. A short written analysis of the student's experience in conducting the project is required. Community-action projects often involve sustained research and/or activity conducted in a community organization or public interest group, usually stemming from an internship. The required short written analysis has to be 10 pages minimum.

Note: some combined majors have fewer options for exit requirements (see below)

Field-Study and Internship Opportunities

All majors are encouraged to undertake either a field study in Latin America, the Caribbean, a Latino/a community in the U.S., or formal academic study abroad through the Education Abroad Program (EAP). These paths are the best ways to improve language skills, to explore the nature and direction of specific academic and career interests in relation to Latin American and Latino studies, and to deepen cross-cultural understanding and relationships.

Field studies are independent, community-based study projects for academic credit, done under faculty sponsorship and arranged on an individual basis. Local opportunities for internships and field study in Latino/a communities on California's Central Coast are numerous. Credit for up to three upper-division courses may be applied toward the major from field study; however, course credit from field study and study abroad combined may not exceed three upper-division courses. Students should check the Latin American and

Latino Studies Department web site for further information regarding the field–study process and course credit. A listing of local field–study programs and petition forms are available at the Latin American and Latino Studies Department office, 32 Merrill.

Study Abroad

Students may study abroad through the Education Abroad Program (EAP), through UC Summer & Quarter Abroad Programs, or through independent programs. EAP offers opportunities for students to study in Buenos Aires, Argentina; Mexico City, Mexico; Santiago, Chile; Rio de Janeiro, Brazil; and Madrid, Córdoba, Granada, and Barcelona in Spain. In addition to language and culture and university immersion programs, EAP also offers a Field Research Program in Mexico, which is an experiential program geared toward juniors and seniors who want to explore the “real” Mexico outside the classroom and at the same time receive undergraduate research training. The program has research sites in states such as Jalisco, Yucatán, Oaxaca, and Michoacán (final site choice depends on the research topic). Application deadlines are generally about one year in advance of the program, so students should visit the UCSC International Education Office early to plan for study abroad and to begin the application process. The department will consider by petition the approval of courses taken abroad, whether through EAP or through independent programs, that cover topics appropriate to the LALS curriculum for upper–division credit toward the major. All credit for EAP classes is fully incorporated into students’ UCSC transcripts; students receive transfer credit for independent study abroad programs. Financial aid applies to all EAP programs and takes into account airfare and living costs in addition to tuition and fees; financial aid is not available for students who study abroad independently. Before departure, student should present an academic plan for courses abroad to the department advisor for review. Credit for up to three EAP courses can be applied toward the major. (A maximum of three courses of field study and EAP combined can be applied toward the major requirements.)

Latin American and Latino Studies Major Planners

The following are two recommended academic plans for undertaking basic preparation for the Latin American and Latino studies major. Plan One is a guideline for students who commit to the major early in their academic career. Plan Two is for transfer students.

Plan One—Frosh

Year	Fall	Winter	Spring
1st (frsh)	SPAN 1	SPAN 2	SPAN 3
	LALS 1	LALS lower–division	LALS lower–division
2nd (soph)	SPAN 4 or SPHS 4	SPAN 5 or SPHS 5	SPAN 6 or SPHS 6
	LALS 100	LALS 100A	LALS 100B
3rd (jr)	LALS upper–division course	LALS upper–division course	LALS upper–division course
	LALS upper–division course	LALS upper–division course	LALS 194 (Senior–Exit Requirement)
4th (sr)	LALS upper–division course	LALS upper–division course	LALS upper–division course
	LALS upper–division course	LALS upper–division course	LALS upper–division course

Plan Two—Junior Transfers

Year	Fall	Winter	Spring
	SPAN 4 or SPHS 4	SPAN 5 or SPHS 5	SPAN 6 or SPHS 6

3rd (jr)	LALS 100	LALS 100A	LALS 100B
	LALS 1	LALS lower-division	LALS upper-division course
4th (sr)	LALS upper-division course	LALS upper-division course	LALS upper-division course
	LALS upper-division course	LALS upper-division course	LALS 194 (Senior-Exit Requirement)

Combined Majors

The combined major options, requiring fewer courses than a double major, are established with the global economics, literature, politics, and sociology programs.

Latin American and Latino Studies/Global Economics

Students are required to take a total of 18 courses and to satisfy the senior comprehensive requirement. For the combined major in Latin American and Latino studies/global economics, students complete a total of seven lower-division course requirements for both the Latin American and Latino studies and global economics majors. Students work with a faculty adviser from each department. Lower-division requirements include Economics 1, 2, 11A, 11B, Applied Mathematics and Statistics 5, LALS 1 and one additional LALS lower-division course. Upper-division course requirements include Economics 100A/ (100M), 100B/ (100N), and 113; LALS 100, 100A, and 100B; and five additional elective courses, two from economics (114, 120, 125, 126, 128, 130, 137, 140, 141, 142, 148, 149, 150, 156, 160A, 160B, 165, 169, 170, 171, 175, 183, 184, 189, 195 or 199) and three from Latin American and Latino studies. Two of the upper-division courses must be taught in Spanish or Portuguese*** and two to four (at least one quarter) must be courses of academic study abroad, internship, or field study in a Spanish- or Portuguese-speaking country. The comprehensive requirement is met by the completion of a senior thesis on a topic suitable to both global economics and Latin American and Latino studies, supervised by a faculty member from either department and read and approved by the student's advisers from both departments.

Latin American and Latino Studies/Literature

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. Students complete a total of two lower-division course requirements, LALS 1 and either Spanish Literature 60 or a Literature 80 series course in a relevant area of study. For transfer students, a petition can be submitted to replace the LALS 1 and/or Spanish Literature 60 or a Literature 80 series course with an appropriate course in a relevant area of study from another institution.

Upper-division requirements include five core courses, LALS 100, 100A, 100B, Spanish Literature 102A, and Spanish Literature 102B; and six additional elective courses, three from Spanish Literature and three from LALS. At least four of the upper-division courses must be taught in Spanish or Portuguese*** (with at least one taught by LALS core or participating faculty), and at least one of the Literature courses must address theoretical concerns. Up to three relevant courses taken through study abroad programs from which credits are transferable to UCSC may be credited toward the major when the content is deemed appropriate by both departments. To complete the comprehensive requirement, students can write a senior thesis (by petition), enroll in an appropriate LALS Seminar (194 series), or enroll in an appropriate Literature Senior Seminar in the area of concentration. If the thesis option is selected, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member belongs to both departments. Both departments must approve a study plan before the major can be declared.

Latin American and Latino Studies/Politics

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. For the combined major in Latin American and Latino studies/politics, students complete two lower-division course requirements, LALS 1 and one course from Politics 1–79. Transfer students may petition to substitute LALS 1 or one course from Politics 1–79 with appropriate course work from another institution. The 11 upper-division courses include three core course from LALS (LALS 100, 100A and 100B), one from Politics (140C) and seven upper-division electives, five from politics (three politics core courses from the 105, 120, 140, and 160 series) and two from LALS (one must be taught in Spanish or Portuguese*** and the other must be on Chicano/a–Latino/a issues).

To complete the senior comprehensive requirement, students may take either a Politics (190) or LALS (194) senior seminar.

Latin American and Latino Studies/Sociology

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. There are three lower-division course requirements, two from the Sociology Department and one from Latin American and Latino Studies Department. The lower-division LALS course must be LALS 1; transfer students may petition to replace the LALS 1 with an appropriate course from another institution. Upper-division requirements include six core courses: LALS 100, 100A, 100B; Sociology 103B, 105A, and 105B; and four additional elective courses, two from sociology and two from Latin American and Latino studies. At least one of the Latin American and Latino studies upper-division courses must be taught in Spanish or Portuguese***, and at least one course in the sociology/Latin American and Latino studies combined major must be on Chicano/a–Latino/a issues. Up to three relevant courses taken through study abroad programs from which credits are transferable to UCSC may be credited toward the major, when the content is deemed appropriate by the faculty advisers of both Sociology and Latin American and Latino studies. Students can satisfy the comprehensive requirement in one of three ways: (1) writing a senior thesis, (2) passing an appropriate LALS Senior Seminar (194 series), or (3) completing two additional sociology upper-division courses in the area of Inequality and Social Change (refer to the sociology undergraduate adviser for the specific list of courses). If the thesis option is selected, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers. See Sociology program statement on admission to the LALS/Sociology major.

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

Honors in the Major

The LALS faculty considers awarding honors in the major based on overall student academic performance in courses that count towards the major. To receive the strongest consideration for honors in the major the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7. Students with a 3.5–3.7 GPA in the major will also be considered, and a decision is made based on their grades in core courses and improvement over time. For combined majors, student work must be considered to be honors-level in both departments; the LALS faculty cannot award honors in the major unless the other department also confers honors.

LALS also awards honors for the thesis, creative or community action projects, or student taught seminars, by the recommendation of the faculty adviser. Note that a thesis, a creative/community project, or a student-taught seminar are the only senior exit requirement options that qualify for this distinct honors designation. Expanded papers and senior seminars do not qualify for a separate honors designation, but students who choose these options may still qualify for honors in the major.

Program Learning Objectives

We expect that all graduating LALS seniors will have gained proficiency or competency in the following five areas: Critical Thinking, Research Methods, Communication, Language, and Lifelong Learning Skills.

1. Critical Thinking: Ability to analyze from a transnational/transborder/translocal

perspective – to see the interconnections between Latin American and Latino issues, people, ideas, problems and solutions. This includes key skills such as understanding sources, comparing arguments, analysis and historical perspective.

2. Research Methods: Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes key skills such as: quantitative skills, conduct statistical analysis, gather/obtain research data, finding/using primary sources, qualitative research, other research methods.
3. Communication: Key communication skills, including: written, oral presentation, digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis.
4. Language: Fluency in English, Spanish, and/or Portuguese.
5. Lifelong Learning Skills: Acquisition of practical hands-on skills in community engagement, cross-cultural fluency, familiarity with Latin America, familiarity with Latino experience, acquired through experiential learning working with community and civic organizations.

Minor Requirements

The minor in Latin American and Latino studies consists of seven courses, including two lower-division courses (LALS or pre-approved courses from other departments) and five upper-division courses (including LALS 100 or LALS 100A or 100B and any other four upper-division courses that count towards the major). Knowledge of Spanish and/or Portuguese is highly recommended, but not required for the minor.

Graduate Studies

The Ph.D. program in Latin American and Latino Studies at UCSC offers an innovative transnational and interdisciplinary approach to the study of the peoples, cultures, societies and institutions of the Americas. The program is designed to educate students in this new field of study and train them to develop the conceptual and analytical skills necessary for understanding the dynamics of hemispheric change. This is the first doctoral program in Latin American and Latino Studies.

In preparing students for research and teaching at the university level, the department offers four thematic clusters in the emerging field of Latin American and Latino Studies: 1) transnational migrations within the Americas; 2) social inequalities; 3) cultural politics and cultural flows; and 4) collective action and social movements. Doctoral students specialize in one of these four substantive themes, as well as a focus area of their own design.

1. Transnational Migrations. While transnational migrations are the subject of research in multiple disciplines, this program analyzes these transformative processes through an interdisciplinary lens. A transnational approach examines links between regions in the Americas, analyzing the social and historical foundations of economic dynamics such as remittances from the United States or the dollarization of Latin American countries. A transnational approach to the study of migratory processes explores the dynamics of bi-national communities, bilingualism and multilingualism, immigrant integration into host societies, and North-South exchanges of ideas and cultures.
2. Social Inequalities. This program's research in the Americas foregrounds the study of transnational social inequalities formed by power relations based on race, ethnicity, nationality, citizenship, class, territory, gender and/or sexuality. These social hierarchies are analyzed as institutions, historical processes, discourses, or symbols with multiple meanings, and are examined in terms of how they have been mobilized to build, transform, or challenge identities, communities, and social movements in local, national, and global contexts over time.
3. Cultural Politics and Cultural Flows. Another distinctive area of inquiry in the Americas is the study of cultural politics and cultural flows that shape everyday life, institutions, social identities, discourses, meanings, and cultural forms and practices, in global, regional, and local contexts in an increasingly interconnected and integrated world. The transnational analysis of culture focuses on the ways in which cultural forces and cross-cultural communication and media are contributing to the formation of new

transnational imaginaries, as well as how these cultural processes are transforming and redefining national and local cultures.

4. **Collective Action and Social Movements.** This area of research addresses collective action and social movements at local, national and international levels viewed through transnational lenses. As migrants engage in public life, both in their communities of residence and in their communities of origin, they construct diverse practices of political participation, including "civic binationality." These processes are crucial for understanding the largest wave of immigration in a century, including how migrants relate to US society.

The doctoral program provides rigorous training in both disciplinary and interdisciplinary approaches to the study of transnational processes that link the Americas. The program educates doctoral students in the theories and research methods based in disciplines of the social sciences and the humanities.

The deadline for applications to the doctoral program is December 15 in the preceding year. The program only accepts students for admission in fall quarter.

Coursework requirements

The program requires a total of 13 courses with LALS Graduate Program Affiliated Faculty, including the definition of two areas of concentration. Of the required courses, up to three may be independent studies with LALS faculty. Of the 13 required courses, students may take up to four regular graduate courses offered in other departments and the Graduate Advisor will determine whether these courses count for the LALS program requirements. Before advancement to candidacy, a full-time course load is two or three courses at the graduate seminar level. The following are the course requirements:

LALS 200 Bridging Latin American and Latino Studies

LALS 200A Politics and Society (pending approval)

LALS 200B Culture and Society (pending approval)

Two methodology courses (taught in LALS or in a disciplinary department)

Seven additional 5-unit courses leading to the definition of two areas of concentration, taken in consultation with the advisor

LALS 201 two-unit pedagogy course with the Graduate Director (pending approval)

In addition, students may enroll in LALS 291 (a two-unit advising course; pending approval) each quarter until advanced to candidacy as per their advisor's instructions. Students are encouraged to enroll in a grant-writing course, which may be taken outside the department. If students take the Graduate Summer Language course(s), they will not count as part of the seven additional courses. If a student enters with a Master's Degree from another university, s/he may petition to the Graduate Director to request that some of the graduate courses fulfill LALS course requirements.

Language Requirement

The program requires significant reading, writing and speaking abilities in both English and Spanish, unless the student plans to work in Brazil or with Brazilian migrants, in which case they must demonstrate proficiency in English and Portuguese. Students are required to demonstrate their proficiency in a language other than English before the completion of the Qualifying Examination. Some students' research projects may require command of a third language, such as an indigenous language. These students will have to demonstrate proficiency in a third language by completing language instruction at another institution or by an examination with an LALS principal faculty member.

The Qualifying Examination Process

Doctoral students will be required to submit two Qualifying Essays, and a Qualifying Examination, as described below. A Qualifying Exam Committee, composed of four faculty members, will approve both the scope of the field statements constituting the Qualifying Essays and the final written products, and conduct the oral examination. This committee must include at least two principal faculty members--one LALS Core faculty member and

one LALS Graduate Program Affiliate faculty member, one of whom chairs the committee-- and one tenured faculty from outside the LALS department. The Qualifying Exam Committee must be approved in advance by the Graduate Division. Students should take their exams by spring of the third year.

1. **Qualifying Essays.** Students are required to complete two Qualifying Essays. The Qualifying Essay topics should address broad non-overlapping fields and review the literatures related to the proposed dissertation questions. Students should consult with their qualifying exam committee early in the process, regarding the appropriate scope and content of their essays.

One of the Qualifying Essays must focus on one of the department's four themes: transnational migrations, social inequalities, cultural flows and cultural politics, or collective action and social movements. The qualifying essay should demonstrate command of the methodology relevant to the student's specialized research interests (e.g. ethnographic field methods, textual analysis, archival research methods, statistics, media analysis, and/or comparative methods) and include relevant texts in the second language. The committee chair must approve these essays at least one month prior to the oral examination.

In addition, the essays must be accompanied by two proposed course syllabi for potential undergraduate courses.

2. **Qualifying Examination.** An oral examination will follow the approval of the Qualifying Essays.

After successfully completing the Qualifying Examination, students are expected to assemble a Dissertation Committee chaired by a LALS principal faculty member chosen from the LALS core or LALS graduate program affiliate faculty lists.

Course-work and the Qualifying process should be completed by the end of the third year. Students may petition for a non-terminal Master's Degree after advancing to candidacy.

Dissertation

Students will be expected to complete the dissertation prospectus and secure approval from the Dissertation Committee by the last day of the quarter after the Qualifying Examination. In the prospectus, students should clearly articulate the logic of an interdisciplinary, transnational approach, as well as the methodologies to be used for addressing the research questions.

The dissertation must demonstrate in-depth research, make a significant and original scholarly contribution, and include material worthy of publication.

Designated Emphasis in Latin American and Latino studies

Graduate students may work toward a doctor of philosophy (Ph.D.) degree that notes a designated emphasis in Latin American and Latino studies on the graduation documents. Students wishing to pursue this option should consult with the chairs of their respective Ph.D. programs and are encouraged to apply in the first or second year of graduate study. The application and an annually updated list of regularly offered, approved graduate courses are available at : <http://lals.ucsc.edu>.

The following are required for the designated emphasis:

Committee Composition. The student must have a designated graduate adviser from among the Latin American and Latino studies core, participating, or affiliated faculty. This adviser will be in addition to the graduate adviser from the student's home department. The Latin American and Latino studies adviser must serve on the student's qualifying examination committee and/or on the student's dissertation committee.

Course requirements. The student must take five graduate courses in Latin American and Latino studies, including the required LALS 200 and LALS 297. The remainder can be selected from appropriate graduate offerings of any UCSC department, as long as they are taught by core, participating, or affiliated Latin American and Latino studies faculty.

Courses. Graduate course work in Latin American and Latino studies is available both in the

Latin American and Latino Studies Department and in other UCSC departments.

Legal Studies

2014–15 General Catalog

27 Merrill College

(831) 459–2056

legalstudies@ucsc.edu[Department web site](#)[Faculty](#) | [Course Descriptions](#)

Program Description

Legal studies is an interdisciplinary major offered under the auspices of the Politics Department. It is designed for students who wish to use the methods and perspectives of various academic disciplines to study legal issues and to use the conceptual framework of the law to illuminate empirical and theoretical concerns in the various disciplines. For example, a student might use approaches from psychology and philosophy to study the legal problem of punishment; or draw on doctrinal categories from public and private law to study the changing historical role of market and nonmarket relations within ongoing institutions; or use approaches from critical race theory and feminist studies to better understand matters of civil rights and privacy.

To complete the major, students are required to take courses in legal institutions, constitutional law, and international law, as well as take courses in each of three broad themes: legal theory and philosophy, the role of law in society, and legal institutions. Each of these themes is intentionally broadly defined. Within legal theory, students may take courses in legal jurisprudence, logic, and theories of crime and punishment; within law and society, courses range from feminism and race to psychology and economics; within public law and institutions, courses range from environmental law to human rights law to an introduction to litigation. Students are also expected to take an introductory course in philosophy. To fulfill the senior exit requirement, students have the option to write a senior thesis or take a senior capstone seminar. The seminar topic changes quarterly.

Legal studies is intended to appeal to students who wish to take a concentration of courses on the law from a variety of disciplinary and methodological perspectives. The major is not intended as a substitute or preparation for any part of a law school curriculum but rather as a full field of study within the liberal arts curriculum. As such, it is a good preparation for a variety of future activities. Students graduating in legal studies are particularly well qualified to pursue graduate work on legal topics in humanities and social science disciplines or to attend professional school in fields such as public policy, business administration, social work, and law. Students are also encouraged to participate in field work and law-related internships in the community, and to develop their own extensive independent research projects.

Declaring the major in legal studies is a two-step process: 1) complete and pass course 10 with a grade of C or better; 2) attend a declaration orientation workshop.

The legal studies program offers a minor degree as well as the major degree.

Requirements of the Major

Lower-Division Course Requirements—2 courses

Legal Studies 10, *Introduction to Legal Process*. All students are required to complete and pass legal studies 10 as a prerequisite to upper-division courses in legal studies and prior to declaring the major.

A student who has not been able to satisfy the pre-declaration requirement (a passing grade in Legal Studies 10) may petition the department for an exception. The letter of petition must explain and document the circumstances that might justify an exception. The department will consider the request and notify the student of its decision within two weeks of receiving the petition or within 10 days of the start of the following quarter, whichever is later.

Philosophy 9, 22, or 24. All legal studies majors are required to take one of the three listed

Philosophy courses. (See the Philosophy section in this catalog for course descriptions.)

Upper-Division Course Requirements—2 courses

111A Constitutional Law or

111B Civil Liberties

160B International Law

Core Course Requirements—6 courses

Students are required to take six core courses, two in each of three concentrations: theory, public law and institutions, and law and society.

THEORY

103 Feminist Interventions (Politics course)

105A Ancient Political Thought

105B Early Modern Political Thought

105C Modern Political Thought

106 Marxism as a Method

107 Political Morality of Survivorship and Recovery

109 Legal Theory

109 Orientalism (Politics course)

115 Law and the Holocaust

128J The World Jury on Trial

144 Social and Political Philosophy

146 Philosophy of Law

155 Topics in American Legal History

157 Political Jurisprudence

PUBLIC LAW AND INSTITUTIONS

111A Constitutional Law

111C Issues in Constitutional Law

115 Law and the Holocaust

116 Comparative Law

120A Congress, President, and the Court in American Politics

120C State and Capitalism in American Political Development

180 Power, Politics, and Protest

183 Women in the Economy

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in legal studies is satisfied by completing one of the following three paths:

1. Completion of Legal Studies 111A and Legal Studies 160B or
2. Completion of Legal Studies 196 or
3. Completion of a senior thesis, Legal Studies 195A, B, C.

Comprehensive Requirement—1 course

Students can satisfy the comprehensive requirement in the legal studies major by successfully completing one of the following:

195ABC, *Senior Thesis*. Completion of a senior thesis project of a minimum of 50 pages with a substantial research content, supervised by a legal studies faculty member.

196, *Senior Capstone*. The capstone course is designed to provide an interdisciplinary integration of themes related to the study of law and includes a substantial writing requirement.

Honors

Honors in the legal studies major are awarded to graduating seniors, based primarily on a review of grades and to a lesser extent narrative evaluations, whose academic performance is judged to be consistently excellent by a faculty committee. Highest honors in the major are reserved for students with consistently outstanding academic performance.

Transfer Students

A student transferring to UCSC must meet with the legal studies undergraduate adviser as early as possible to discuss declaring the major and course enrollment. This ensures a smooth transition. Students should bring a copy of their UCSC Transfer Credit Summary, which may be printed from the student portal.

Requirements for the Minor

To complete a minor in legal studies, a student must take Legal Studies 10 and any five upper-division legal studies core courses numbered 101–190.

Program Description

Linguistics is an exact and structured discipline that examines human language. It has connections to many other fields in the humanities (philosophy, literature), the social sciences (anthropology, psychology, sociology), the natural sciences (biology, neuroscience, acoustics), computer science, computer engineering, and artificial intelligence.

The central areas of linguistics investigate the knowledge that speakers of a language acquire about its structure. Syntax is concerned with the rules that combine words into larger units of phrases and sentences. Semantics is the study of the meanings of linguistic units and how they are combined to form the meanings of sentences. Phonetics deals with the physical properties of language sounds. Phonology investigates the sound systems of particular languages. Morphology investigates the ways in which words are formed from prefixes, roots, and suffixes. Pragmatics is the study of language use. Psycholinguistics is concerned with the cognitive mechanisms by which language is put to use in producing and perceiving speech.

The faculty in the Linguistics Department have primary research and teaching interests in one or more of these areas. Other perspectives on language study represented include sociolinguistics, the study of poetic language, and the study of language change.

The programs offered by the Linguistics Department are designed to acquaint students with the central aspects of linguistic structure and the methodologies and perspectives of the field. The department offers two undergraduate majors, linguistics and language studies, and a graduate program in theoretical linguistics. The linguistics major leads to a bachelor of arts (B.A.) degree in linguistics; the language studies major leads to a B.A. degree in language studies (see Language Studies). The graduate program leads to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees in linguistics.

The department also offers a combined B.A./M.A. program which makes it possible for certain well-qualified, highly motivated students to complete the requirements for both degrees in five years rather than the usual six.

Qualification Policy for the Linguistics Major

The Linguistics Department has adopted a major qualification policy for linguistics and

language studies majors that is intended to encourage students to take their performance in the gateway courses seriously and to help them lay a solid foundation for further course work in the major.

In order to declare the linguistics or language studies major, a student must pass each of the gateway courses, Linguistics 50, Introduction to Linguistics, and Linguistics 53, Semantics I, with a grade of C+ or better.

Students who are informed that they are not eligible to declare the major may appeal the decision within 15 days from the date the notification was mailed. They should do this by submitting a formal letter, addressed to the department undergraduate program director, to the Linguistics Department office (Stevenson 241 and 243). This letter should explain any extenuating circumstances that influenced their performance in the gateway courses. Within 15 days of receipt of the appeal, the department will notify the student, a college, and the Office of the Registrar of the decision.

Requirements of the Linguistics Major

Students in the linguistics major are required to complete 12 courses in linguistics and related disciplines. Seven of these are named courses in linguistics:

- 50, Introduction to Linguistics
- 53, Semantics I
- 101, Phonology I
- 102, Phonology II
- 112, Syntax I
- 113, Syntax II
- 116, Semantics II

Five upper-division elective courses in linguistics.

Students may petition the department to have elective courses offered through other institutions or other UC programs applied toward the major requirements. At most three such courses can be applied toward the major. These courses must be upper-division and clearly fit into a coherent program of study in linguistics.

Foreign language/mathematics competency requirement: Linguistics majors are required to demonstrate either foreign-language or mathematics competency as follows:

- Foreign-language competency: students must successfully complete five quarters of language study at UCSC or demonstrate an equivalent level of competence through a recognized language test or evidence of credit from another institution. In cases where five quarters of instruction for a language are not being offered at UCSC, students may opt to complete (or demonstrate equivalent level of competence for) three quarters of one language and three quarters of a second language. For Latin and Greek, two quarters will be considered equivalent to three quarters.
- Mathematics competency: alternatively, students with a strong formal background can choose to satisfy the mathematics competency requirement by demonstrating sufficient preparation in mathematics for advanced formal work in linguistics. This requirement is satisfied by passing two courses chosen from the following list: Applied Mathematics and Statistics 7 or 131; Computer Engineering 16; Computer Science 5C, 5J, 5P, 10, 11, 12A, 12B, 140, or 148; Mathematics 30, 100, 115, 160, or 161; Philosophy 9; or any course which has one of these courses as a prerequisite.

Senior exit requirement: In their senior year, linguistics majors must satisfy the senior exit requirement in one of two ways:

- Option 1: Successful completion of a capstone course (an appropriate upper-division linguistics course). Students must have senior standing and must have completed Linguistics 53, Semantics I; 101, Phonology I; and 112, Syntax I.

Option 2: Successful completion of a senior thesis supervised by a linguistics faculty member.

The proposal for a senior thesis must be submitted for approval by the department faculty at least three quarters prior to the quarter of graduation. Students enroll in Linguistics 195, Senior Thesis.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in linguistics is satisfied by completing courses 101 and 112.

Requirements of the Minor

To graduate with a minor in linguistics, students must complete eight linguistics courses:

- 50, Introduction to Linguistics
- 53, Semantics I
- 101, Phonology I
- 112, Syntax I
- Four upper-division elective courses in linguistics

There is no senior exit requirement and no foreign language/mathematics competency requirement for the minor.

Courses

The 80-level courses have no prerequisites. They are intended to introduce the concepts of linguistics through their relation to other areas of general interest.

Course 50, Introduction to Linguistics, introduces the subfields of the discipline. Courses 53, Semantics I; 101, Phonology I; and 112, Syntax I, serve as entry courses to the specialized upper-division sequences. Upper-division courses generally have at least one of these courses as a prerequisite.

Several upper-division elective courses are offered each quarter. For a list of these courses, visit the department's web site at linguistics.ucsc.edu.

To enroll in the graduate (200-level) courses, undergraduates need special permission from the instructor. Permission is usually granted only to especially motivated undergraduates who have completed all the named requirements for the major with excellent performance.

Honors

Students who wish to be considered for honors should meet the deadline posted by the Office of the Registrar for declaring the intent to graduate. Determination of honors is based on the student's grades and narrative evaluations for all courses relevant to the major and other factors relevant to an assessment of academic excellence, such as research papers of professional quality. Generally, honors in the major are awarded only to the top 10 percent of those graduating in the major. Only those students whose performance in coursework is excellent will qualify. Highest honors are rarely awarded, and then only to students whose performance in coursework is outstanding and who have completed an outstanding senior thesis.

Preparation for the UCSC Master's Degree

Every year, UCSC students who have the B.A. in linguistics or language studies can apply to be admitted into the graduate program to pursue the M.A. in theoretical linguistics. Interested students should discuss the possibility with one or more faculty members and formally apply online to the graduate program during the fall quarter of the senior year. For up-to-date information about the application process, consult our web site (<http://linguistics.ucsc.edu>); and see the Linguistics Department manager. The combined B.A./M.A. program (see below) provides another pathway to the M.A. program.

The B.A./M.A. Program

The B.A./M.A. program in linguistics is a demanding, selective option that allows students who are well prepared and well motivated to complete the requirements for both degrees in five years rather than the usual six.

Admission to the program has two stages. In the first stage, interested students first consult with the undergraduate program director and one or more faculty members, and then apply to be admitted to the program by the sixth week of the first quarter of their junior year. Transfer students should consult with the undergraduate program director if they are contemplating this program. In order to be accepted at this first stage, students must have demonstrated excellence in the undergraduate major in at least three courses that are named requirements for the linguistics major.

Students accepted at this initial stage are assigned a faculty mentor who monitors their progress closely.

At the second stage of the admission procedure, students apply in their senior year to be admitted to the M.A. program through UCSC's normal graduate admissions process. If accepted, ideally they complete the course requirements for the M.A. and complete and defend the M.A. thesis by the end of the fifth year.

Students in the B.A./M.A. program take a number of graduate courses in their senior year, which are selected in close consultation with the faculty mentor. Performance in these courses forms a central part of the ongoing evaluation process. If a student's performance does not meet the standards set for the program, he or she completes the B.A. at the end of the senior year in the normal way and does not proceed to the M.A.

Graduate courses required for the M.A. are taken partly in the senior year and partly in the fifth year. The M.A. thesis is written in the fifth year. Thus, by the end of their fifth year, the students in the program will have fulfilled the requirements for both the B.A. and the M.A. degrees. Students who need additional time may remain in the program until the M.A. thesis is completed and defended.

Graduate Program

The graduate program in linguistics at UCSC is a small, focused program in linguistic theory leading to doctor of philosophy (Ph.D.) or master of arts (M.A.) degrees. The research interests of faculty and students draw mostly on the framework of generative grammar, with a primary focus on theoretical and experimental approaches to phonetics, phonology, psycholinguistics, semantics, and syntax. Research strengths also include the study of various languages, theoretical and computational morphology, mathematical foundations, and the philosophy of linguistics.

Each year the department admits approximately five new students to the doctoral program and a smaller number of new students to the M.A. program. The master's degree can be completed in one or two years, depending on the student's previous background in linguistics.

While committed to training in theoretical depth, the program makes possible an unusual breadth of theoretical and experimental understanding. Research in syntax focuses on ways in which generative theory and language-particular analysis inform one another. Faculty expertise covers principles and parameters theory, minimalism, and experimental syntax. Research in phonetics and phonology is pursued in various current frameworks, including optimality theory and dispersion theory. The issues covered range from phonetics and the phonetics-phonology interface to prosodic theory, prosodic morphology and the syntax-phonology interface. Research in semantics applies formal, model-theoretic techniques to illuminate the interface between syntactic structure and interpretation and the role of semantic competence in the pragmatics of utterance interpretation. Experimental research in these areas reaches out to a broad range of issues in psycholinguistics and cognitive science.

The faculty have expertise in a diverse range of languages, including Chamorro, German, Hindi, Hungarian, Irish, Japanese, Latin, Nez Perce, Northern Paiute, Persian, Romanian, Russian, Spanish, and Turkish.

From the beginning of their studies, students are engaged in original research and critical evaluation since the aim of the program is to provide sophisticated training as a foundation for a career in academic research and teaching. The program begins with a sequence of foundation courses in phonetics, phonology, syntax, semantics, and psycholinguistics, addressing both formal and experimental approaches. Subsequent coursework emphasizes depth; it is increasingly centered around the doctoral student's independent research, culminating in the completion of a dissertation.

Undergraduate Preparation

Applications are invited from students who have completed an undergraduate linguistics major or who have demonstrated excellence in some related discipline (psychology, mathematics, computer science, anthropology) and have the equivalent of a minor in linguistics. A student applying for admission to this program should, at a minimum, have a good foundation in at least one of the following: phonetics, phonology, psycholinguistics, morphology, semantics, or syntax. Students entering the program with a deficiency in one or more areas may need to take appropriate undergraduate courses at UCSC during the first year of graduate study.

Requirements for the M.A.

Courses. A minimum of 45 credits of graduate-level work. This must include foundation courses in phonetics, phonology, psycholinguistics, semantics, and syntax. Electives are typically chosen from upper-division or graduate courses offered by linguistics and related disciplines, and independent study with linguistics faculty.

Languages. Reading competence in one foreign language, to be demonstrated by examination.

Master's thesis. Submission of a master's thesis in a core area of theoretical linguistics approved by a committee of three faculty members.

Requirements for the Ph.D.

Courses. A minimum of 65 credits of graduate-level work. This includes foundation sequences in phonetics, phonology, psycholinguistics, semantics, syntax, and experimental or field methods.

Languages. Reading competence in one foreign language, to be demonstrated by examination.

Qualifying papers and examination. By the end of the third year, two research papers, each in a distinct area, are to be presented as part of the requirements for admission to candidacy. At this time, the prospective candidate is examined by the faculty on topics related to the student's major area of research, as part of the qualifying examination. The student is expected to defend a dissertation prospectus in the fourth year.

Dissertation. The final requirement for the Ph.D. degree is the completion of a dissertation representing a significant contribution in some central area of linguistic research.

Application and Admission

To apply, please consult the Department of Linguistics web site (<http://linguistics.ucsc.edu>).

Literature

[2014–15 General Catalog](#)303 Humanities 1
(831) 459–4778<http://literature.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

The study of literature at UCSC is organized as an interdisciplinary field coordinated through a single Department of Literature, rather than through separate departments of English, modern languages, and classics. This structure fosters innovative and comparative approaches to literature among both faculty and students. Courses in the major encompass traditional literary history and interpretation as well as cross-cultural inquiry and current theoretical debates.

The literature major permits focused work in national literary traditions. Students may concentrate in English-language literatures; in French, German, or Italian; in Latin and/or Greek; or in Spanish/Latin American/Latino literatures. Alternatively, students may organize their studies by historical period. Students who choose pre- and early modern studies focus on early literary traditions from antiquity through the Middle Ages, the Renaissance, and the neo-classical period, while those engaged in modern literary studies concentrate on literature of the 18th, 19th, 20th, and 21st centuries. In addition, the world literature and cultural studies concentration emphasizes non-Western literatures, literature in a global context, as well as non-literary forms of cultural production. Finally, the Literature Department also offers a concentration in creative writing in which, in addition to studying literature, students work with faculty in upper-division workshops to improve their own creative writing skills.

Literature majors at UCSC are trained in critical reading, writing, and thinking, as well as in literary interpretation. These skills have wide applicability: they may lead to careers in other media such as film, theater, video, the visual arts, and electronic media; and they offer avenues into related disciplines such as history, philosophy, psychology, sociology, anthropology, politics, and history of art and visual culture. Literature majors traditionally enter a wide variety of careers ranging from law and journalism to management, government, international studies, publishing, technical writing, and teaching at all levels.

The Literature Department faculty requires that all literature majors have proficiency in a second language. Proficiency in more than one language enhances understanding of any literature and culture. Graduate programs in literature and other humanities disciplines generally require competence in a language other than English.

Letter Grade Requirement

Letter grades are required for 75 percent of courses applied toward the literature major,

including the senior seminar or thesis, which must be taken for a letter grade.

Declaration of the Major or Minor

Students must complete Literature 1 or its equivalent prior to declaring the major or minor. Students declare a major or minor in literature by completing and submitting a Proposed Study Plan and Declaration of Major/Minor petition. All students considering a literature major or minor should consult with staff and/or faculty advisers as early as possible and declare the major or minor before the end of their sophomore year. Transfer students are urged to declare their major or minor in their first quarter at UCSC.

Requirements of the Major

Literature Major Options

Students wishing to major in literature may choose either the standard literature major or the intensive literature major. The intensive literature major is recommended particularly for students who plan to continue their studies in graduate school. The requirements for the intensive major include the study of literature in two languages; proficiency in a second language is therefore required.

The Standard Literature Major

The literature major requires: (1) basic proficiency in a second language; and (2) 12 courses in literature.

- Basic language proficiency: One year (three quarters or equivalent) of college level study of a non-English language or demonstrated reading ability at this level.
- The 12 required courses must include two lower-division and 10 upper-division courses.

Lower-Division Courses

Lower-division courses are introductions to critical reading and writing. Students should complete their lower-division coursework before beginning upper-division work.

Two lower-division courses are required:

- Literature 1, Literary Interpretation: close reading and analysis of literary texts
- One Literature 61-series course: categories, methodologies, and problems of literary study, or one Literature 80-series course: topical, thematic, and comparative studies of literary texts

Upper-Division Courses

Upper-division courses provide more detailed treatment of literary and theoretical problems, themes, and periods. Students are strongly encouraged to take courses across chronological periods and national boundaries. Students must successfully complete the language proficiency requirement before enrolling in Literature 102.

Ten upper-division courses are required:

- Literature 101, Theory and Interpretation: approaches to literary and cultural theories
- Literature 102, Translation Theory: approaches to literary and cultural translation, or one upper-division non-English literature course studied in the original language. Students must successfully complete the language proficiency requirement before enrolling in Literature 102
- Six upper-division courses in an area of concentration (described below)
- Two upper-division electives in literature

Distribution requirements. Among the 10 upper-division courses, at least two must focus on literature written prior to the year 1750; one course must focus on non-Western literature or literature in a global perspective; and one course must focus on poetry. One of the upper-division courses may be a senior seminar, which can be used to satisfy the campus comprehensive (exit) requirement. Some courses fulfill more than one distribution

- [Queer and Sexuality Studies](#)

[Search the Catalog](#)

requirement. A list of annual course offerings indicating distribution codes for each course is available in the department office and on the Literature Department web page at <http://literature.ucsc.edu/>.

With prior permission from the literature undergraduate program director, one upper-division literature elective may be replaced by an upper-division course related to the student's area of concentration and chosen from another program in the humanities, arts, or social sciences.

The Intensive Literature Major

The Intensive Literature major requires (1) advanced proficiency in a second language, and (2) 14 courses in literature.

- **Advanced language proficiency:** in addition to the Standard Literature major requirement of one-year (three quarters or equivalent) of college-level study of a non-English language, or demonstrated reading ability at this level, students must complete at least two upper-division courses in a second-language literature studied in the original language. In many languages, two years of college-level study (or comparable ability) are needed before a student is prepared to enter an upper-division course. In a few languages (Greek, Latin, Middle Egyptian Hieroglyphs), less time is needed for this purpose.
- The 14 required courses must include two lower-division and 12 upper-division courses.

Lower-Division Courses

The same requirements apply as for the standard literature major. Students who choose the intensive literature major are required to achieve competence in a second-language literature. Upper-division literature coursework requires completion of a lower-division language sequence or the equivalent.

Upper-Division Courses

The intensive major requires 12 upper-division courses. Distribution requirements for the intensive major are the same as those for the standard literature major. In addition, students must complete at least two courses in a second-language literature studied in the original language. As in the standard major, with prior permission from the literature undergraduate program director, one upper-division literature elective may be replaced by an upper-division course related to the student's area of concentration and chosen from another program in the humanities, arts, or social sciences.

The Concentrations

The purpose of the upper-division area of concentration is to help students shape a coherent program of study. The department provides several defined concentrations, described below. For all concentrations except national/transnational literatures, texts may be read in the original or in translation.

National/Transnational Literatures

These concentrations examine literature within the frameworks of particular languages or national and regional traditions. National/transnational concentrations require that texts be read in the original language.

- **English-language literatures**
The study of American and British literature, as well as literatures of other English-speaking peoples around the world.
- **French literature**
The study of French and Francophone literatures, languages, and cultural practices of France, Africa, and the Caribbean.
- **German literature**
The study of the literature, language, and cultural practices of the German-speaking areas of central Europe including Germany, Austria, and Switzerland.
- **Greek and Latin literature**

The study of the literature, languages, and cultural practices of ancient Greece and Rome. Students may choose to concentrate in Greek or Latin or both.

- Italian literature
The study of Italian literature, language, and cultural practices from the Middle Ages to the present.
- Spanish/Latin American/Latino literatures
The study of literatures, language, and cultural practices of Spain, Latin America, and Latino populations in the United States.

Creative Writing

The Department of Literature offers a sequence of workshops from introductory through advanced levels in both poetry and fiction. Other activities available to interested students include participation in the production of literary journals on campus, attendance at readings by visiting writers, and use of a creative writing reading room.

Admission to this concentration is selective. Interested students are required to take one lower-division creative writing workshop at UCSC before applying to the creative writing concentration; however, students are strongly encouraged to complete two lower-division workshops (at least one at UCSC) before applying.

Students accepted into the concentration must complete three advanced writing workshops and a senior project (e.g., a group of stories, a significant portion of a novel, a collection of poems). To apply for admission to the creative writing concentration, students should submit a completed application form (available at the Literature Department office and at <http://creativewriting.ucsc.edu/for-students/apply.html>) and a thoughtful selection from their work (8–10 pages of poetry or fiction). Once accepted into the concentration, students are required to declare (or redeclare) the major in literature. At that time, students should meet with their adviser to discuss plans for a senior project.

Pre- and Early Modern Studies

The interdisciplinary study of literatures and cultures from antiquity through the early eighteenth century, especially in Europe. This concentration includes the study of popular culture and everyday life as well as readings in masterpieces of classical, medieval, early modern (Renaissance), and neo-classical literature.

Modern Literary Studies

The study of literature of the eighteenth, nineteenth, twentieth, and twenty-first centuries. This concentration examines ways in which modernity in general and literary modernism and postmodernism in particular emerge and develop in different countries and cultures.

World Literature and Cultural Studies

The study of literature and cultural production both within a global context and within specific histories and economies. Courses move beyond the literary text to include nonverbal forms of representation such as social movements and everyday life practices.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Literature majors must satisfy the Disciplinary Communication requirement by passing Literature 101.

Comprehensive Requirement

Students must successfully complete Literature 101 before taking any comprehensive requirement.

Seniors must select one of the following options to satisfy the campus exit requirement:

- Senior seminar. The senior seminar may be counted as one of the required upper-division courses. The senior seminar need not be in the student's area of concentration.

Several senior seminars are offered each quarter; extensive writing is required in all seminars.

- Senior thesis. A student who wishes to propose a senior thesis (30–40 pages) must apply to a Literature Department faculty sponsor at least two quarters before the projected date of graduation. The application must include a proposed subject, a brief outline, a bibliography, and a sample of previous written work. Only those students who have received written permission from a faculty supervisor may complete a thesis to satisfy the senior exit requirement. A student whose application has been approved may receive course credit toward the major for one independent study (course 195) in a literature concentration.

For students in the creative writing concentration, a creative writing project under the supervision of a faculty member (Literature/Creative Writing 194 or 195) is required.

The Literature Minor

The minor in literature requires seven courses.

Two lower-division courses are required:

- Literature 1, Literary Interpretation: close reading and analysis of literary texts
- One Literature 61-series course: categories, methodologies, and problems of literary study, or one Literature 80-series course: topical, thematic, and comparative studies of literary texts

Five upper-division courses are required:

- Literature 101, Theory and Interpretation
- Four other upper-division literature courses (except Creative Writing)

The Literature minor does not require second-language proficiency or a senior seminar.

General Information

Transfer Credit

A student may petition to receive credit toward the lower-division requirements of the major or minor for up to two courses taken at other institutions. An introduction to literature course may be used to satisfy the Literature 1 course requirement. Any other literature course may be applied toward the Literature 61 or the Literature 80 course requirement.

Transfer students planning to major in literature are urged to complete the equivalent of one year of college-level study of a language other than English before entering UCSC.

Creative Writing Courses

Any qualified student may take creative writing courses for credit toward graduation. Only students accepted into the creative writing concentration, however, may use Literature/Creative Writing 180, 183, 194, and 195 to satisfy major requirements.

Credit For Repeated Courses

Courses that vary significantly in material or methodology from one presentation to the next may be repeated for credit and are so designated in the course description in the UCSC General Catalog.

Advising

Faculty advisers are available in the Literature Department office throughout each academic term; students may make appointments in advance to meet with them. Staff advisers are available by appointment and on a drop-in basis. Students are encouraged to consult with a faculty adviser once per quarter.

Senior Checklist

Three quarters before anticipated graduation, all literature majors must complete a checklist in collaboration with a department adviser. The purpose of the checklist is to

confirm progress toward graduation and the satisfaction of all major requirements. Completion and approval of a senior checklist are required for graduation.

Honors

Honors in the literature major are awarded to graduating seniors who have earned a 3.70 to 3.89 grade–point average in their upper–division literature courses. Highest honors in the literature major are awarded to graduating seniors who have earned a 3.90 or higher grade–point average in their upper–division literature courses. Honors are not awarded in the minor.

Opportunities for Study Abroad

The University of California’s Education Abroad Program (EAP) operates study centers in countries throughout the world, all associated with host institutions of high academic standing. EAP serves over 1500 upper–division students from the nine UC campuses every year. Students who participate in a UC Education Abroad Program may petition to apply up to three upper–division courses from EAP toward the literature major, or two upper–division courses toward the literature minor.

Latin American and Latino Studies and Literature Combined Major

The departments of Latin American and Latino Studies and Literature offer a combined major. See Latin American and Latino Studies for additional information.

The Graduate Programs

The Doctoral Program

The UCSC doctoral program in Literature offers an innovative multilingual and multidisciplinary approach to literary studies. The program is relatively small and students work closely with faculty throughout their graduate careers. They are encouraged to take advantage of the rich array of intellectual and cultural events, research clusters, and lectures offered on campus.

The doctoral program combines critical and independent thought with multilingual and global perspectives. Students work within and across five areas, each of which cuts across linguistic, national, and period boundaries: technologies of narrative; trans/post/emergent nationalisms; poetics, poetry, and experimental writing; materialism and material culture; and critical theory. In combination they allow students to blend critical approaches, literary traditions, and/or cultural archives in comparative, multilingual, and interdisciplinary projects. Starting in fall 2014 students may apply for the new Creative/Critical concentration in the PhD program. Students may elect to participate in cooperative programs between literature and feminist studies, Latin American and Latino studies, or American studies and receive a designated emphasis on their doctoral degree. Applications and requirements are available at the respective department offices.

The program requires significant literary work in two languages. All students are required to complete a minimum of two courses in a second–language literature in which 50 percent or more of the reading is done in the original language. The second literature must serve as a component of the qualifying examination.

The common requirements are:

- Literature 200, Proseminar, to be taken in fall quarter of the first year;
- Literature 201, Pedagogy of Teaching/Teaching Assistant Training, to be taken prior to or in conjunction with the first teaching assistant appointment;
- Twelve courses leading to the definition of an area of concentration. At least two of these must be in a second–language literature; at least one must focus on pre–1750 literature and culture. Up to four courses may be taken in other departments; up to three may be independent studies;
- Literature 291F, a two–credit advising course, each quarter;
- Three quarters of supervised teaching experience;
- The Literature Department’s intensive three–week Graduate Summer Language Program

or equivalent;

- A qualifying examination (with written, oral, and translation components);
- A prospectus outlining and defining the dissertation project;
- A dissertation (written in conjunction with Literature 299, Thesis Research).

For the creative/critical concentration, applicants submit additional creative writing samples of poetry, prose fiction, creative non-fiction or hybrid/cross genre. Entering students complete all the requirements for the literature Ph.D. with the addition of a creative/critical enhancement to their degree in the form of coursework, original creative work with critical introduction and, if desired, work in poetics, translation, form and/or critical writing from the perspective of writerly practices.

A master of arts (M.A.) degree is conferred upon request to doctor of philosophy (Ph.D.) candidates who have successfully completed the literature Ph.D. qualifying examination or who have completed the coursework required for the doctorate (teaching assistant training and supervised teaching experience exempted) and elect to write a master's thesis under the supervision of a faculty adviser.

More detailed information for prospective graduate students, including procedures for application and admission to graduate studies, examinations, and requirements for the doctor of philosophy degree, is available from the Division of Graduate Studies (<http://graddiv.ucsc.edu>) and on the department web site: <http://literature.ucsc.edu/>.

The Master's Program

A separate master of arts degree program is intended for students whose aim is to deepen and expand their literary/critical training and to prepare for entry into a Ph.D. program at another institution. Priority for admission is given to students interested in underrepresented areas of study within the Literature Department's offerings, such as the non-English language literatures and, more broadly, critical theory.

The M.A. program requirements may not be completed in less than one year; the maximum time to obtain a degree is two years.

The common requirements are as follows:

- Literature 200, Proseminar, to be taken in fall quarter of the first year;
- Seven courses leading to the definition of an area of concentration. Up to two of these may be taken in other departments. One may be an independent study course;
- Literature 291F, a two-credit advising course, each quarter;
- A thesis (written in conjunction with Literature 299, Thesis Research). Typically, a thesis will range in length from 35-50 pages, plus a bibliography.

The Literature Department does not provide financial support to students pursuing the M.A. degree. Admission to the M.A. program does not constitute admission to the Ph.D. program. Students may not automatically transfer from the M.A. program into the Ph.D. program, but must reapply. Further information and application materials are available from the Division of Graduate Studies (<http://graddiv.ucsc.edu>) and on the department web site (<http://literature.ucsc.edu/>).

Literature Designated Emphasis

Graduate students may obtain a designated emphasis in literature on the Ph.D. degree by completing the following requirements:

1. The student must have a faculty graduate adviser from Literature, who serves both on the qualifying examination committee and the dissertation reading committee.
2. The student must prepare a significant piece of writing in the area of literature, such as a substantial seminar paper or a chapter of the doctoral dissertation. The adviser from Literature, in consultation with the student, determines whether a particular piece of writing meets this requirement.

3. The student must take four graduate courses in literature. With the approval of the Literature adviser, one of the four required graduate courses may be an independent study.

To obtain the Designated Emphasis in Literature:

1. The request for a designated emphasis must originate in the degree-granting department.
2. The student should complete the attached application, obtain the Literature adviser's signature and submit the application with supporting documentation (copies of the Qualifying Examination and Dissertation Committee Nomination forms) to the Literature Department office.
3. The Literature Department will notify the student and the home department of approval for the designated emphasis.

[Faculty](#) | [Course Descriptions](#)

Program Description

Mathematics is both a fundamental discipline and an essential tool for students of biology, chemistry, computer engineering, computer science, Earth sciences, economics, electrical engineering, information systems management, physics, and psychology. Researchers in all these areas are constantly developing new and cutting-edge ways of applying mathematics to their fields. A strong mathematics background is vital to the advanced study of the physical and biological sciences and plays an integral role in studying the social sciences.

The UCSC mathematics program offers a wide variety of undergraduate mathematics courses:

- Courses 2 and 3 do not require thorough preparation in mathematics at the high school level. However, students interested in studying mathematics are strongly encouraged to take algebra, geometry, and trigonometry before entering the university. Students requiring mathematics courses are encouraged to take the mathematics placement examination (MPE) as early as possible. Students concerned about their ability to place into courses above Mathematics 2 or Mathematics 3 should consider taking these courses before they enter UCSC. Failure to begin the calculus series in the fall could delay progress in some majors.
- Lower-division courses with numbers in the range 11A–B through 30 (calculus, linear algebra, multivariable calculus, differential equations, and problem solving) prepare students for further study in mathematics, the physical and biological sciences, or quantitative areas of the social sciences. Science majors take a combination of these courses as part of their undergraduate studies.
- Upper-division courses, with numbers in the range 100–199, are intended for majors in mathematics and closely related disciplines. Some of these courses provide students with a solid foundation in key areas of mathematics such as algebra, analysis, geometry, and number theory, whereas others introduce students to more specialized areas of mathematics. Calculus, linear algebra, multivariable calculus, and proof and problem solving are prerequisite to most of these advanced courses.

Within the major, there are three concentrations leading to the bachelor of arts (B.A.) degree: pure mathematics, computational mathematics, and mathematics education. These programs are designed to give students a strong background for graduate study, for work in industry or government, or for teaching. Each concentration requires nine or ten courses,

- [Computer Engineering](#)
- [Computer Science](#)
- [Cowell College](#)
- [Critical Race and Ethnic Studies](#)
- [Crown College](#)
- [Digital Arts and New Media](#)
- [Earth and Planetary Sciences](#)
- [East Asian Studies](#)
- [Ecology and Evolutionary Biology](#)
- [Economics](#)
- [Education](#)
- [Electrical Engineering](#)
- [School of Engineering](#)

- [Politics](#)
- [Portuguese](#)
- [Porter College](#)
- [Psychology](#)

one of which must be a senior thesis or senior seminar. Please read the pure mathematics, computational mathematics, and mathematics education program descriptions below for specific information about course requirements. A minor in mathematics is also offered.

The mathematics program also provides an excellent liberal arts background from which to pursue a variety of career opportunities. UCSC graduates with degrees in mathematics hold teaching posts at all levels, as well as positions in law, government, civil service, insurance, software development, business, banking, actuarial science, forensics, and other professions where skills in logic, numerical analysis, and computing are required. In particular, students of mathematics are trained in the art of problem-solving, a skill absolutely essential to all professions.

Academic Advising

Academic advising is available at [the Undergraduate Affairs Office](#). The undergraduate adviser provides information about requirements, prerequisites, policies and procedures, learning support, scholarships, and special opportunities for undergraduate research. In addition, the adviser assists with the drafting of study plans, as well as certifying degrees and minors. Students are urged to stay informed and involved with their major, as well as to seek advice should problems arise.

[The Undergraduate Affairs web site](#) is a critical resource for students. Here you will find a link to the undergraduate program; the materials at that link constitute the undergraduate handbook. Students should visit this first to seek answers to their questions, because it hosts a wealth of information. Each student in the major is encouraged to regularly review the materials posted to stay current about requirements, course curriculum, and departmental policy.

Requirements

Students who plan to take a mathematics course at UCSC must demonstrate sufficient preparation by their score on either the mathematics placement examination (MPE), the College Entrance Examination Board Advanced Placement (AP) calculus examination, the International Baccalaureate Higher Level Mathematics Examination, or by passing the appropriate prerequisite course.

Students who have passed course 2 may enroll in course 3. Students who have passed course 3 may enroll in course 11A or 19A. Students who have passed a precalculus course at a college or university may enroll in course 11A or 19A, but they must first verify eligibility of the course and course completion with the mathematics adviser (mathadvising@ucsc.edu).

Transfer students interested in a mathematics or science major should take courses equivalent to course 19A, 19B, and 21 before enrolling at UCSC. Courses equivalent to 23A, 23B, and 24 are also recommended before transferring to UCSC.

UCSC Mathematics Placement Examination

The Mathematics Placement Examination (MPE) is a mathematics test designed to assess student readiness for UCSC mathematics classes. The MPE is available during several, short windows each year. Each student may take the exam twice during their academic career. Only the highest MPE score is used for placement. MPE scores are valid for one year after the window closes.

Additionally, if a student receives a D, F, or NP in a course, the placement examination may not be used to place them out of that course. Students whose areas of study require precalculus or calculus courses are strongly advised to take the placement examination and the required courses early in their academic careers. Information on registering and taking the [MPE can be found at this web site](#).

If your MPE score is	You may enroll in this course (or lower-numbered course)
----------------------	-------------------------------------------------------------

100 = Not precalculus ready	MATH 2
-----------------------------	--------

- [Queer and Sexuality Studies](#)
- [Religious Studies](#)

- [Search the Catalog](#)

200 = Precalculus ready	MATH3
300 = Applied Calculus ready	MATH11A*
400 = Calculus ready	MATH19A
500 = Honors Calculus ready	MATH 20A

* Some majors in science and engineering require Math 19A-B. Students planning to concentrate in those majors who receive 300, an Applied Calculus ready score on the MPE, should take courses 3 and 19A-B rather than courses 11A-B. All students are advised to consult with the Department sponsoring their major before deciding which mathematics pathway to take.

College Board Advanced Placement Calculus Examinations

Students who have received 4 credits for the College Entrance Examination Board Advanced Placement (AP) calculus examination should normally enroll in course 19B, and those with 8 credits should normally enroll in course 23A. However, students who received a score of 3 on the calculus AB or BC AP examination, should enroll in course 19A or 19B, respectively, to improve their knowledge of calculus before continuing their studies. Students who wish to challenge themselves, and who received a score of 4 or 5 on the AB or a score of 3, 4, or 5 on the BC examination may choose course 20A, Honors Calculus. Non-mathematics majors should consult their major departments before enrolling in a mathematics course.

If your AP AB score is	May enroll in this course
3	Mathematics 11A or 19A
4 or 5	Mathematics 20A or 11B or 19B

If your AP BC score is	May enroll in this course
3	Mathematics 11B or 19B or 20A
4 or 5	Mathematics 20A or 22 or 23A

International Baccalaureate Higher Level Examination in Mathematics

Students who have received a score of 5, 6, or 7 on the International Baccalaureate (IB) Higher Level Examination in Mathematics may enroll in course 20A, Honors Calculus; 22, Calculus of Several Variables; or 23A, Multivariable Calculus. Non-mathematics majors should consult their major departments before enrolling in a mathematics course.

Declaration of the Mathematics Major

Admission to the mathematics major (all concentrations) is contingent on students successfully passing the following introductory courses or their equivalents:

- Mathematics 19A, Calculus for Science, Engineering, and Mathematics
- Mathematics 19B, Calculus for Science, Engineering, and Mathematics
- Mathematics 21, Linear Algebra
- Mathematics 23A, Multivariable Calculus
- Mathematics 23B, Multivariable Calculus

- Mathematics 100, Introduction to Proof and Problem Solving

Students may only declare once they have passed all introductory courses or their equivalent courses with a grade of C or better. Students who receive two grades of NP, D, or F in the introductory courses are not eligible to declare in the major. Students who are not eligible to declare may submit an appeal to the department's undergraduate vice chair. The advising office will subsequently notify the student, and the college of the decision, no later than 15 business days after the submission of the appeal.

It should be emphasized that the nature of mathematics changes dramatically between lower-division and upper-division courses. Students often find that the material becomes far more abstract and theoretical. In addition, the role of computation in assignments diminishes and a greater weight is placed on deductive reasoning and the integral role of mathematical proofs. The Mathematics Department recommends that students interested in a mathematics major enroll in Mathematics 100 as early as prerequisites allow in order to decide whether they are interested in upper-division mathematics courses. It is strongly recommended that only students who earn grades of B- or better in Mathematics 100 consider applying to the major in mathematics. Students with a grade less than B in Mathematics 100 are urged to take Mathematics 101.

Major Requirements

Pure Mathematics

This concentration is intended for students who desire a comprehensive understanding of mathematics, including those considering graduate studies in the natural sciences. Students are required to complete at least 11 courses (with laboratories, if appropriate).

Eight of these courses must be:

- Mathematics 24, Ordinary Differential Equations;
- Mathematics 100, Introduction to Proof and Problem Solving;
- Mathematics 103A, Complex Analysis;
- Mathematics 105A, Real Analysis;
- Mathematics 111A, Algebra;
- Mathematics 117, Advanced Linear Algebra;
- one of Mathematics 121A, Differential Geometry, Mathematics 124, Introduction to Topology, or Mathematics 128A, Classical Geometry: Euclidean and Non-Euclidean, or Mathematics 129, Algebraic Geometry;
- and either Mathematics 194, Senior Seminar, or Mathematics 195, Senior Thesis.

The remaining three courses are selected by the student from among any mathematics course numbered above 100 (excluding Mathematics 188 and Mathematics 189) and Applied Mathematics and Statistics (AMS) 100 or above. Only one of the three courses can be from the AMS series.

A typical program for a pure mathematics major might include the following:

1st year Mathematics 20A–B or 19A–B, 21, 23A

2nd year Mathematics 23B, 24, 100, 103A, 110 or 128A

3rd year Mathematics 105A–B, 111A–B, 106

4th year Mathematics 107, 117, 121A, 194

The first two years of a typical program for a pure mathematics major who begins mathematics studies with precalculus might include the following:

1st year Mathematics 3, 19A–B

2nd year Mathematics 21, 23A-B, 24, 100

Computational Mathematics

This concentration is intended to prepare students for technical careers in industry or government while providing a solid mathematical background. Students are required to complete a minimum of eight mathematics courses (with laboratories, if appropriate) as follows:

- Mathematics 24, Ordinary Differential Equations;
- Mathematics 100, Introduction to Proof and Problem Solving;
- Mathematics 103A, Complex Analysis, or Mathematics 105A, Real Analysis;
- Mathematics 106, Systems of Ordinary Differential Equations, or Mathematics 107, Partial Differential Equations;
- Mathematics 110, Introduction to Number Theory;
- Mathematics 111A, Algebra;
- or Mathematics 117, Advanced Linear Algebra;
- Mathematics 106, Systems of Ordinary Differential Equations, or Mathematics 145, Introductory Chaos Theory, or Applied Mathematics and Statistics 114, Introduction to Dynamical Systems;
- and either Mathematics 194, Senior Seminar, or Mathematics 195, Senior Thesis.

In addition, students must complete two courses selected from the following:

- Applied Mathematics and Statistics, 100 or above
- Biomolecular Engineering 110
- Computer Engineering 107, 108, 153, 177
- Computer Science 101, 102, 104A, 109, 112, 122, 130, 132, 142
- Earth and Planetary Sciences 172
- Economics 113
- Electrical Engineering 103, 130, 135, 151, 154
- Physics 115

Some of these courses have prerequisites within their departments. Students are encouraged to plan their computational electives early, so that all prerequisites can be satisfied in a timely manner. Other upper-division courses with heavy emphasis on computational mathematics may occasionally be accepted with permission of the Mathematics Department.

Mathematics majors who wish to enroll in Computer Science 101 or Computer Science 122 should contact the instructor to request a permission code.

A typical program for a computational mathematics major might include the following:

1st year 19A-B, 23A, CMPS 12A/L and 12B/M

2nd year 21, 23B, 24, 100, 110, CMPE 16

3rd year 103A; 105A; 145/L or AMS 147; CMPS 101

4th year 106, 111A, CMPS 109, 194

Mathematics Education

This concentration is intended to prepare students for teaching kindergarten through high

school (K–12) mathematics. Students are required to complete the following 10 courses:

- Applied Mathematics and Statistics 5, Statistics
- Mathematics 100, Introduction to Proof and Problem Solving;
- either Mathematics 103A, Complex Analysis, or 105A, Real Analysis;
- Mathematics 110, Introduction to Number Theory;
- Mathematics 111A, Algebra;
- Mathematics 128A, Classical Geometry: Euclidean and Non-Euclidean;
- Applied Mathematics and Statistics 131, Introduction to Probability Theory;
- Mathematics 181, History of Math;
- Mathematics 188, Supervised Teaching Experience;
- and either Mathematics 194, Senior Seminar, or Mathematics 195, Senior Thesis.

UCSC students can pursue a degree in mathematics while preparing to teach at the secondary level. In California, students seeking a single-subject credential (for secondary teaching) in mathematics are required to take the CSET, a series of examinations that must be passed in order to enter a teaching-credential program (formerly The National Teachers Examination). Students who complete the mathematics education track, plus three additional specified courses, qualify for the California Single Subject Program, exempting themselves from the CSET. Both the Mathematics Department undergraduate adviser and the Education Department advising office have more information about the additional required courses.

A typical program for a mathematics education major might include the following:

1st year Mathematics 19A–B, 23A

2nd year Mathematics 21, 23B, 100; Applied Mathematics and Statistics 5

3rd year Mathematics 101, 103A, 110, 181; Applied Mathematics and Statistics 131

4th year Mathematics 111A, 128A, 188, 194

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in mathematics is satisfied by Mathematics 100, Introduction to Proof and Problem Solving, and either Mathematics 194, Senior Seminar, or Mathematics 195, Senior Thesis.

Honors

Honors in the Mathematics Department are awarded to graduating students whose academic performance in the major demonstrates excellence at a GPA of 3.5 or above. Highest Honors are determined by a cumulative review of student performance in mathematics courses. They are awarded to students who excel in challenging courses and in their capstone projects.

Minor Requirements

The minor is intended for students who are interested in mathematics and want a strong mathematical foundation for studying in areas that rely heavily on analytical skills. Students are required to complete at least eight courses as follows:

- Mathematics 21, Linear Algebra;
- Mathematics 23A, Vector Calculus; and
-

Mathematics 23B, Vector Calculus;

- Mathematics 100
- and any four courses numbered above 100.

No senior seminar or thesis is required.

A typical mathematics minor program for a physics major might be:

1st year Mathematics 19A–B, 23A

2nd year Mathematics 21, 23B, 24, 100

3rd year Mathematics 103A, 105A, 106, 121A or 124

4th year Mathematics 107, 145 or Applied Mathematics and Statistics 114

Combined Majors

Economics and Mathematics

The combined major in economics and mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both economics and mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for a modern economics Ph.D. program, or for technically demanding professional careers. A full description can be found in the economics section of this catalog. The combined major, requiring fewer courses than a double major, is administered through the Economics Department.

Graduate Program

The Mathematics Department offers programs leading to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees. Contact the Division of Graduate Studies for further information on the M.A. and Ph.D. programs, as well as on university application procedures.

M.A. Degree Requirements

Students are required to complete two of Mathematics 200, 201, 202, 203; two of Mathematics 204, 205, 206; one of Mathematics 208, 209, 210; and complete five additional courses in mathematics or a related subject by approval. In addition, students must do one of the following:

- pass an M.A.–level preliminary examination;
- write a master’s thesis.

Ph.D. Degree Requirements

All of the following are required:

- obtain a first–level pass on at least one of the three written preliminary examinations and a second–level pass on at least one other. Students must complete the full course sequence in the track associated with the preliminary examination in which they did not achieve a first–level pass;
- satisfy the foreign–language requirement;
- pass the oral qualifying examination;
- complete three quarters as a teaching assistant;
- complete six graduate courses in mathematics other than Mathematics 200, 201, 202,

204, 205, 206, 208, 209, and 210. No more than three courses may be independent study or thesis research courses;

- write a Ph.D. thesis.

Students admitted to the Ph.D. program may receive an M.A. degree en route to the Ph.D.

Course Information

Mathematics 2, College Algebra for Calculus, is designed for students who do not meet the requirements for admission to Mathematics 3, Precalculus, and who need comprehensive and careful preparation for calculus. Mathematics 2 emphasizes algebra, graphs, and functions.

Mathematics 3, Precalculus, is recommended for students who need some preparation in algebra and trigonometry prior to taking calculus. This course covers functions and their inverse, exponentials, logarithms, and trigonometry.

Mathematics 11A and 11B, Calculus with Applications, are intended for biology and Earth sciences majors. However, students in these majors who score 400 or more points on the mathematics placement examination are strongly encouraged to take the 19A–B sequence, which is required for most upper-division mathematics courses. Laboratory sections are strongly advised.

Mathematics 19A and 19B, Calculus for Science, Engineering, and Mathematics, are intended for chemistry, computer engineering, computer science, electrical engineering, information systems management, mathematics, and physics majors. Laboratory sections are strongly advised.

Mathematics 20A and 20B, Honors Calculus, are intended for students who would enjoy delving particularly deeply into the foundational and theoretical issues of calculus. Laboratory sections are strongly advised.

Mathematics 21, Linear Algebra, covers vector spaces, matrices, determinants, systems of linear equations, and eigenvalues. It is intended for students in the physical and biological and social sciences and is prerequisite to Mathematics 111A.

Mathematics 22, Introduction to Calculus of Several Variables, is intended for science students whose schedules do not permit a full and comprehensive two quarters of multivariable calculus. Students who intend to pursue further studies in mathematics must take Mathematics 23A–B and not 22. Laboratory sections are strongly advised.

Mathematics 23A and 23B, Vector Calculus, are intended for mathematics majors and minors and students in computer engineering, computer science, electrical engineering, information systems management, and physics majors which require more rigorous mathematical training. Laboratory sections are strongly advised.

Mathematics 100, Introduction to Proof and Problem Solving, is an introduction to the methodology of advanced mathematics, emphasizing proof techniques. Basic areas such as set theory and logic are introduced, together with extensive applications within mathematics. This course serves as a prerequisite for nearly all upper-division courses and partially fulfills the Disciplinary Communication (DC) requirement.

Mathematics 200+, Graduate-level courses. All graduate courses are open to undergraduates who have taken the recommended prerequisites; students should consult with the course instructor. Advanced undergraduates are strongly advised to take or audit graduate courses that interest them.

Program Description

The Microbiology and Environmental Toxicology Department (METX) sponsors undergraduate and graduate courses in microbiology and environmental toxicology, both within the department and through affiliated departments. The curriculum offers a strong foundation in fundamental and applied toxicology and microbiology to provide the breadth and depth of perspective required for this interdisciplinary science. Research interests of students and faculty in METX span the fields of biology, microbiology, chemistry, Earth sciences, ocean sciences, environmental studies, and human health.

Undergraduate Programs

While the METX Department only awards graduate degrees, it does offer a select number of undergraduate courses to prepare and attract promising undergraduates for advanced studies in microbiology and environmental toxicology or related disciplines. Students interested in microbiology and environmental toxicology should major in a field such as biology; marine biology; molecular, cell, and developmental biology; biochemistry; chemistry; Earth sciences; engineering; or environmental studies while taking microbiology and environmental toxicology electives.

In addition, the program provides unique opportunities for exceptional undergraduates to conduct research in microbiology and environmental toxicology. These opportunities are limited to students who have demonstrated their potential in undergraduate courses in the basic sciences and environmental toxicology. With department approval, these undergraduates may also take graduate courses in microbiology and environmental toxicology. That coursework will be applied toward a graduate degree in microbiology and environmental toxicology if they are accepted into the program.

Graduate Programs

Graduate training in the METX Department prepares students to solve important problems in the field of environmental health by providing stimulating coursework, extensive scientific presentation training, and in-depth research that culminates in a thesis. There is no other program in the world that educates students to appreciate the interplay between microbes, chemical toxins, and health and provides the training students require to work

effectively in a complex world. Graduate training in the METX department prepares students to become leaders in the field, following career paths in academia, teaching, industry, and government. Master of science (M.S.) students typically finish in two years and doctor of philosophy (Ph.D.) students in four to six years.

Key components of our graduate training include:

- Interdisciplinary core course that teaches critical thinking and how to approach problems: METX 200, Interdisciplinary Approaches to Problems at the Interface of Microbiology and Environmental Toxicology.
- Core course devoted to grant-writing skills: METX 205, Scientific Skills, Ethics, and Writing.
- Personalized class plan for the remaining three courses to fit the student's background and research goals. Possible courses include METX 201, Sources and Fates of Pollutants, METX 202, Cell and Molecular Toxicology, METX 206A, Advanced Microbiology, METX 210, Molecular and Cellular Basis of Bacterial Pathogenesis, METX 238, Pathogenesis: Molecular Mechanisms of Disease, and METX 250, Environmental Microbiology, as well as courses in other departments such as Ocean Sciences 220, Chemical Oceanography, and Molecular Cell and Developmental Biology 200B, Advanced Molecular Genetics. Speaking presentation skills training through coursework and yearly departmental presentations. Scientific writing and literature mastery through the writing of a literature review in the first year. Weekly seminars expose students to the breadth of our fields and provide students with opportunities to interact closely with speakers to form connections and collaborations.
- Qualifying examinations designed to perfect the student's ability to craft research plans.
- Extensive laboratory research training that starts immediately upon entering the program and culminates in the student's master's thesis or Ph.D. dissertation.

Sample Pathways

Pathways within the microbiology and environmental toxicology graduate program focus on interdisciplinary approaches to addressing problems in environmental and public health. We offer several defined training pathways, and also encourage students to create their own.

Metals in the Environment

Research includes how organisms are exposed to metals, how these metals cause toxicity, and investigating the concentration, speciation, and isotopic composition of contaminant metals and metalloids.

Microbiology

Microbiology provides research training on molecular genetic analysis of both non-pathogenic and pathogenic microbes. Students study host-pathogen interactions, ecology and evolution of pathogenic microorganisms, adaptation of pathogenic and non-pathogenic microorganisms to environmental stresses, and mechanisms of microbial biotransformation of pollutants and toxic metals.

Cellular and Organismal Toxicology

This pathway provides training in the biochemical, molecular, cellular, and physiological processes that are impacted by exposures to such contaminants as toxic metals. Research includes exposure pathways and toxicity of contaminants and pathogens within humans, with emphasis on the molecular and cellular mechanisms underlying toxicity.

Program Requirements

The METX student's curriculum is tailored to the individual, creating a graduate experience that combines essential background material with coursework at the frontiers of science. The student, in conjunction with a faculty committee, chooses classes to complement the Ph.D. or master's thesis work that each student is performing. Students are encouraged to explore new areas and bring this expertise back to their thesis research.

Requirements for both Master's and Ph.D. Students in Microbiology and Environmental Toxicology

1. Core coursework. METX 200 Interdisciplinary Approaches to Problems at the Interface of Microbiology and Environmental Toxicology, and METX 205, Scientific Skills, Ethics, and Writing, must be taken and passed with at least a B.
2. Three additional courses. Two courses from the following: METX 201, 202, 206A, 210, 238, 250, and at least one additional approved graduate-level course within Microbiology and Environmental Toxicology or another department. Students must enroll in METX 281, 292, and 297 or 299 each quarter. Additional courses as recommended by your first-year advising committee. Must be passed with at least a B.
3. Literature review. Under direction of the student's adviser, write a literature review of the current state of the field of the proposed dissertation research. The written review will be handed in to the student's adviser at the end of the summer of the first year.
4. Department seminar. Give a 20-minute departmental seminar each academic year, and one 50-minute departmental seminar during the fall quarter of the third year if a doctoral student, or in spring of the second year if a master's student.

Requirements specific to the Ph.D. degree

1. Teaching assistant. Doctoral students are required to work as teaching assistants (TA) for at least one quarter. Priority for TA positions is given to first-year doctoral students, then to current doctoral students who have not yet worked as a teaching assistant.
2. Ph.D. qualifying examination (QE1—microbiology and environmental toxicology internal). Part I of the qualifying examination consists of two portions: preparation and defense of an independent research proposal, and knowledge of material presented in the microbiology and environmental toxicology core courses taken by the student. The student must complete QE1 no later than spring quarter of the second year.
3. Third-year seminar and thesis proposal. The student will present a 50-minute seminar on his/her dissertation research proposal no later than the end of fall quarter in the third year.
4. Ph.D. qualifying examination (QE2). Present and defend a dissertation research proposal to the student's Ph.D. qualifying examination (QE) committee. The student must complete QE2 no later than fall quarter of the third year.
5. Advancement to candidacy. The student advances to candidacy after completing all coursework, completing the literature review, giving the third-year seminar and passing the Ph. D. qualifying examination parts I and II.
6. Dissertation defense. The student must submit their doctoral dissertation to the dissertation committee for tentative approval at least one month before presenting a formal, public doctoral research seminar.

Requirements specific to the Master's degree

1. Master's comprehensive examination. The master's comprehensive exam is a presentation and defense of the student's master's research proposal, including relevant background knowledge. The examination will not be specifically course-based, but will draw on knowledge from courses. This examination is taken in the fall quarter of the second year.
2. Second-year seminar. The student will present a 50-minute seminar on his/her thesis work in spring quarter of the second year.
3. Thesis. Students are required to submit a thesis for fulfillment of the degree requirements. The thesis should be submitted to the student's master's reading committee one month before the due date.

Music

[2014–15 General Catalog](#)

244 Music Center
 (831) 459–2292
music@ucsc.edu
<http://music.ucsc.edu>

[Faculty](#) | [Course Descriptions](#)

Program Description

The UCSC music curriculum is distinctive in developing musicians who integrate scholarship with performance. Although this rigorous program primarily addresses Western art music, it also incorporates the study of world music cultures in both their art and vernacular traditions. A major in music establishes a substantial foundation for further academic or performance studies. Two undergraduate majors are offered: the bachelor of music (B.M.), which especially develops the student's attainment in performance, and the bachelor of arts (B.A.), which cultivates greater breadth in the student's academic achievement. Two minors in music are also offered: one in electronic music, and one in jazz. The electronic music and jazz minors are open to music majors, as well as to students pursuing other majors.

There are three graduate programs in music: the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees in music and the doctor of musical arts (D.M.A.) degree in music composition. The master of arts (M.A.) degree in music has emphases in composition, musicology/ethnomusicology, or performance practice, and integrates studies in performance, composition/analysis, and research. The doctor of philosophy (Ph.D.) degree in music has an emphasis in cross-cultural studies, and aims to provide doctoral students with an integrative framework for music scholarship, emphasizing the ways in which musicology and ethnomusicology interact and complement one another. The doctor of musical arts (D.M.A.) degree in music composition has tracks in computer-assisted composition and world music composition and seeks to develop accomplished, active, and articulate composers who have a broad awareness of the diverse styles, cultural influences, media, venues, and technical means available to them in the 21st century.

The Music Center includes a 400-seat recital hall that has recording facilities, specially equipped classrooms, individual practice and teaching studios, a student computer laboratory, rehearsal space for ensembles, a gamelan studio, and studios for electronic and computer music. McHenry Library has a separate music section and listening rooms that have individual audio and video facilities. Recording and media equipment is available from the Learning Technologies center.

Undergraduate Programs

The bachelor of arts (B.A.) degree integrates performance, theory, composition, history, and

literature. The bachelor of music (B.M.) degree is designed for exceptionally talented students who intend to pursue a career in performance. Acceptance to the B.M. program is by audition during fall quarter; students must audition prior to their senior year.

The core degree requirements are the same for both bachelor of arts (B.A.) and bachelor of music (B.M.) students and are as follows:

- Music 30A, 30B, and 30C, Theory, Literature, and Musicianship
- Music 60, Group Instruction in Piano, taken concurrently with the Music 30 sequence (may be waived if the student is taking piano lessons from a UCSC instructor)
- Music 130, Harmony and Form in 19th-Century and Early 20th-Century Music
- Music 101A, 101B, and 101C, History of Western Art Music
- One course from the Music 105 series, Special Topics in History
- One course from the Music 150 series, Special Topics in Theory
- One course from the Music 180 series, Studies in World Musics

Additional Course Requirements for the Bachelor of Arts (B.A.)

- One of the following: Music 121, Orchestration; Music 124, Intermediate Electronic Sound Synthesis; or an additional Music 150 series or Music 180 series course
- Senior Capstone: Music 120, Seminar in Music Composition; or an additional Music 105 series course by permission of instructor
- A minimum of six quarters of Music Department instrumental or choral ensembles
- A minimum of six quarters of applied instruction (private individual instrumental or vocal lessons)

Additional Course Requirements for the Bachelor of Music (B.M.)

- A minimum of 12 quarters of Music Department instrumental or choral ensembles
- A minimum of 11 quarters of applied instruction (private individual instrumental or vocal lessons)
- Demonstration of an advanced level at Continuing B.M. juries each fall and spring quarter
- Music 196B, Senior Recital

The B.M. degree is for students who aspire to academic excellence and an advanced performance level. Once accepted to the B.M. program, students must take two juries per academic year: at the end of both fall and spring quarter, for continuing review and criticism of proficiency at their primary instrument.

If a student fails to participate in continuing B.M. juries, or does not attain, or maintain, an advanced level, and fails to maintain academic excellence, the Bachelor of Music Committee will re-examine the student's continued participation in the B.M. degree in consultation with the applied instructor. In cases in which the B.M. Committee finds the student did not meet these requirements the students will be dismissed from the B.M. program with an option to switch to the B.A. degree.

Time to degree: The determination of a dismissal can be made by the committee as long as a student has three remaining quarters before their expected graduation date. This will ensure enough time to make course changes from a B.M. to B.A. degree. A change to the B.A. degree is 10 to 25 fewer credits to be completed than the B.M. degree.

Students may appeal a dismissal of the B.M. degree by petition to the chair of the Music Department. A letter to the department chair must be submitted within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Note: B.M. students wishing to concentrate in jazz are required to take Music 111B, Seminar in Jazz Analysis, instead of one of the Music 180 courses and Music 174, Intermediate Jazz Improvisation; and Music 175, Jazz Theory II.

[Nondiscrimination Statement](#)

[Search the Catalog](#)

It is essential that students in either program begin the Music 30 sequence, ensembles, and applied instruction in fall of their freshman year or as early as possible to make satisfactory progress toward their degree objectives.

Sample academic plans for the B.A. and B.M. degree programs are found in the Music Student Handbook, available online at the Music Department web site: <http://music.ucsc.edu>.

Qualification Policy

- Successful completion of Music 30A with a grade of "C" or above;
- Signature approval by the applied instrument instructor on the primary instrument authorization form.

Foreign Language Requirement

French 1, German 1, and Italian 1 are required for B.M. students who wish to concentrate in voice. There are no foreign language requirements for other students in the B.A. or B.M. programs; however, students who are planning to apply for graduate school are strongly advised to study a language pertinent to their research area up to a comparable level 3 at UCSC or be able to pass the level 4 entrance examination.

Letter Grade Requirement

All upper-division courses applied toward the music majors must be taken for a letter grade, except ensemble courses, which may be taken Pass/No Pass.

Required Examinations and Auditions

Core Curriculum Placement Examination. This examination is for the placement of students, including transfer students and re-entry students, into the appropriate music lower-division core course. It includes written sections in the areas of theory and musicianship that emphasize aural recognition and identification of musical structures and brief definitions of terms relating to music history. The date of the examination is normally the Tuesday before the first day of instruction for fall quarter. For more information on the examination including a sample test, please visit our web site: <http://music.ucsc.edu>.

Advisory Audition. All students in Music 30A, including music minors, will be scheduled for a juried audition at the end of the first fall quarter (on their major instrument or voice). The purpose of this audition is to give students feedback so that they can work toward meeting the requirements for the proficiency audition at the end of the next fall quarter. The advisory audition is waived for students who have been admitted to the B.M. program.

Proficiency Audition. It is a requirement of the major that all students in Music 130 must audition at the end of the second fall quarter and exhibit an upper-intermediate or higher level (on their major instrument or voice). The audition committee may allow for an extension (up to two quarters maximum) for a student who fails the proficiency audition.

Bachelor of Music Auditions. Auditions for admissions to the B.M. program are held at the end of each fall quarter. Students must have approval from applied music instructor in order to audition. After students have been accepted, they are required to audition twice a year, at the end of fall and spring quarters, for continuing review and critique.

Transfer Students

The Music Department requires transfer students to take the core curriculum placement examination and seek academic counseling before transfer. Transfer students are strongly encouraged to audition in advance because auditions help determine eligibility for the major. Detailed information on auditions and a sample core curriculum placement examination is available at: <http://music.ucsc.edu/programs/important-information-incoming-and-prospective-students>.

Transfer students who have some background in music theory normally test into Music 30A (which is only offered in the fall quarter). Students who require Music 15 for music theory preparation should take Music 15 in their first year or during summer session prior to their

incoming fall quarter to prepare for Music 30A. Transfer students who have completed all of their general education requirements and who test into Music 30A upon transfer may be able to complete the music major in two years.

B.A. transfer students should note that upon completion of Music 130, it is a requirement of the major to perform on a musical instrument or voice at an upper–intermediate level. Prospective students wishing to have their performance skill level assessed by faculty in preparation for entry to the program are encouraged to send a CD or tape for faculty review.

B.M. transfer students should prepare to audition in the fall quarter after enrollment. (For audition requirements, see the Requirements for the Bachelor of Music section above.) In certain cases, some or all of the applied music requirement may be waived based on prior coursework.

Because Italian 1, German 1, and French 1 are required for voice students, transfer students are encouraged to complete these language requirements before coming to UCSC.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper–division Disciplinary Communication (DC) requirement. The DC requirement in music is satisfied by completing Music 101A and 101C (already a part of the core curriculum and required for the B.A. and B.M.).

Honors

Honors in the major are conferred by vote of the music faculty. B.A. or B.M. students can be awarded honors for excellent work in individual areas, including coursework, senior project (thesis or recital), or a capstone course. Excellent work in any two of these areas normally results in honors in the major.

To be considered for highest honors in the major, B.A. students must complete a senior project (not required for the B.A. degree) and B.M. students must complete a capstone course (not required for the B.M. degree). Honors in all three areas—coursework, senior project, and capstone course—normally results in highest honors in the major.

Applied Music (Individual Instruction)

Private lessons in various instruments are required as a part of the B.A., B.M. or minor in music. These lessons carry an additional fee and require an audition with the instructor. Concurrent enrollment in an appropriate ensemble is required for a stipulated number of quarters. Consult the Music Student Handbook for more details.

Minors

Electronic Music

The electronic music minor focuses on the study of creating music using the tools of modern technology. It is designed to complement the music major or programs in other media by providing instruction in advanced skills of audio production, sound synthesis, and computer–assisted composition. A student may obtain a minor in electronic music by application and acceptance to the minor program and completing the following:

- One course from the following: Music 11A, Classical Music from the Middle Ages to the Present; Music 11B, Introduction to Jazz; Music 11C, Introduction to American Popular Music; or Music 11D, Introduction to World Music
- Music 15, Preparatory Musicianship
- Music 80C, History, Literature, and Technology of Electronic Music
- Music 123, Electronic Sound Synthesis
- Music 124, Intermediate Electronic Sound Synthesis
- Music 125, Advanced Electronic Sound Synthesis

- Two quarters of Music 167, Workshop in Electronic Music
- One of the following: Music 80L, 80M, or 80R (or a similar music course that has a technical focus as approved by the department), or Film 171A or Theater Arts 114
- One of the following: Physics 160; or Computer Science 5C, 5J, 5P, or 12A; or Electrical Engineering 70, 153, or 171

Jazz

The jazz minor focuses on the study of the history, theory, and performance of jazz. In addition, students may be introduced to musical styles that have had profound influences on this uniquely American art form: folk and popular musics of Africa, Europe, and the United States and Western classical music. The jazz minor is limited to students who have sufficient performance proficiency to pass auditions for entry into the jazz ensembles. The required courses for the minor in jazz are the following:

- Music 11A, Classical Music from the Middle Ages to the Present
- Music 15, Preparatory Musicianship
- Music 75, Beginning Improvisational Theory and 175, Jazz Theory II
- Music 111B, Seminar in Jazz Analysis
- One of the following: Music 11C, 11D, 80J, or 80Q;
- Six quarters of ensembles, including at least three quarters of the jazz ensembles (Music 3, Large Jazz Ensemble and/or 164, Jazz Ensemble)
- Music 174, Intermediate Jazz Improvisation

Detailed information about the music majors and minors may be obtained from the Music Department web site and undergraduate adviser.

Graduate Programs

Master of Arts

The master of arts (M.A.) degree program in music has emphases in composition, musicology/ethnomusicology, or performance practice, and integrates studies in performance, composition/analysis, and research. In consultation with a faculty adviser, the student pursues a two-year course of studies culminating in a final project that combines an original composition, written thesis, or essay with a related public performance or lecture recital.

Requirements

A minimum of 60 course credits completed at UCSC is required for the degree. All M.A. students are required to complete:

- Music 200, Introduction to Research Methods
- Music 201, History of Music Theory from the Greeks through Rameau
- Music 202, Tonal and Post-tonal Analysis
- Music 252, Current Issues Colloquium during each quarter in residence (for students entering the program fall 2007 and thereafter).

Students with an emphasis in composition also complete:

- Music 219, Techniques in Composition
- Music 220, Graduate Seminar in Music Composition
- One course in the Music 203 Performance Practice series.

Students with an emphasis in musicology/ethnomusicology or performance practice also complete:

- Three courses from the Music 203 Performance Practice series (Music 206D, Music Perception and Cognition meets the requirement for one 203 course). It is possible in some cases to substitute a course from the Music 253 or 254 series for one 203 course.

The final project for the degree includes both performing and scholarly components, which vary according to the degree emphasis.

Students with a composition emphasis submit a thesis composition together with an essay that addresses historical, technical, and/or interpretive issues of the music (Music 299); and they complete a full-length recital (Music 298) of their compositional work.

Students with a musicology/ethnomusicology emphasis complete a thesis (Music 299) and a short performance or lecture-recital related to the thesis (Music 298).

Students with a performance practice emphasis complete a full-length recital (Music 298) and an accompanying short essay that addresses historical, technical, and/or interpretive aspects of the music performed in the recital. Students in this emphasis whose main area is conducting complete a full-length recital (Music 298) and one of the following: a shorter lecture-recital, a short analytical or contextual essay on a different topic, or a collaboration with a graduate student composer or faculty composer on a premiere public performance. Students are encouraged to create a program involving corollary studies such as computer studies, area cultural studies, linguistics, anthropology, theater arts, and visual arts.

Graduate students must take all courses for a letter grade with the exception of independent study courses (Music 261, 265, 295, 297, 298, and 299) and the colloquium course (Music 252), which may be taken with the Satisfactory/Unsatisfactory grade option.

Prior to the start of classes each fall quarter, each incoming M.A. student is required to complete a three-hour diagnostic examination which is intended to identify areas in which supplementary coursework may be needed, in addition to the courses listed above.

Doctor of Musical Arts

The doctor of musical arts (D.M.A.) degree program in music composition has tracks in computer-assisted composition and world music composition. The track in computer-assisted composition includes algorithmic techniques for the generation of musical materials and structures to be realized in the creation of instrumental, vocal, and digitally synthesized music. The track in world music composition addresses a variety of compositional approaches influenced by indigenous world musics, with a focus upon those musics taught by faculty composers, ethnomusicologists, and applied instructors. The D.M.A. program seeks to develop accomplished, active, and articulate composers who have a broad awareness of the diverse styles, cultural influences, media, venues, and technical means available to them in the 21st century.

Requirements

For students entering with the bachelor's degree, a minimum of 102 credits in coursework at UCSC will be required. All students must be in residence for a minimum of nine quarters. Students must enroll in a minimum of 10 credits each quarter until they advance to candidacy. After advancing to candidacy, students remaining in residence must take a minimum of one 5-credit course each quarter.

For students entering with a master's degree from another institution, a minimum of 72 credits in coursework at UCSC will be required. All students must be in residence for a minimum of six quarters. Students must enroll in a minimum of 10 credits each quarter until they advance to candidacy. After advancing to candidacy, students remaining in residence must take a minimum of one 5-credit course each quarter. D.M.A. students are expected to complete the degree within a maximum of six calendar years from entrance to the program (leaves of absence are not excluded from this count).

Required courses include:

- Music 200, Introduction to Research Methods
- Music 201, History of Music Theory from the Greeks through Rameau
- Music 202, Tonal and Post-tonal Analysis

- Music 219, Techniques in Composition
- Music 220, Graduate Seminar in Music Composition
- Music 252, Current Issues Colloquium (each quarter in residence)
- Five quarters of independent study—Music 297, 298, and 299.

Note: Students entering with a master's degree from another institution may petition to waive one or more of these courses by submitting documentation for equivalent courses completed elsewhere.

Students in the computer-assisted composition track complete:

- Music 206B, Computer-Assisted Composition
- One course in the Music 203 Performance Practice series
- Two quarters of Music 267, Workshop in Computer Music and Visualization, or another Music 206 course.

Students in the world music composition track complete:

- Music 206A, World Music Composition
- Music 203H, Area Studies in Performance Practice
- Music 203G, Concepts, Issues, and the Practice of Ethnomusicology; or another Music 206 course.

Graduate students must take all courses for a letter grade with the exception of independent study courses (Music 261, 265, 295, 297, 298, and 299) and the colloquium course (Music 252), which may be taken with the Pass/No Pass grade option.

Prior to the start of classes in fall quarter, each incoming D.M.A. student is required to complete a three-hour diagnostic examination which is intended to identify areas in which supplementary coursework may be needed, in addition to the courses listed above.

A D.M.A. student who entered the D.M.A. program with a bachelor's degree may apply for an M.A. degree, whether he/she is leaving the D.M.A. program or continuing toward completion of the D.M.A. degree, by fulfilling the following requirements:

- Completion of a minimum of five quarters at UCSC.
- Completion of a minimum of 35 graduate or upper-division course credits (including all courses required for the M.A. degree with an emphasis in composition).
- Successful completion of the qualifying recital (Music 298).

Pre-qualifying Reviews

Before the end of the first year of study, all D.M.A. students must present a half recital of their compositions from that year, and submit the scores and recital recording as a portfolio, which faculty will use to assess the student's progress in the program. Faculty may also consider the student's performance in Music 200, 201, and/or 202. In unusual cases, when progress has been minimal, faculty reserve the right to terminate a student's enrollment in the program. Typically, the half recital is satisfied by a combination of 1) participation in a concert of graduate-student compositions sponsored each April by Porter College and the Music Department, and 2) participation in a public reading of graduate-student final projects from Music 219 and 220.

The Qualifying Recital

At the end of their second year of study, all students admitted to the D.M.A. program must present a half-recital (35-40 minutes of music) representing their best work since entering the program. The D.M.A. qualifying recital will be evaluated by the student's primary adviser and by a second faculty member (generally a second composer) selected by the student in consultation with the primary adviser.

Dissertation Prospectus

The dissertation prospectus must be submitted 12 months before the scheduled qualifying examination. The prospectus must include a proposal describing the scope and nature of the dissertation composition and the accompanying essay. In addition to defining the parameters of the dissertation itself, the dissertation prospectus will suggest to the student's qualifying examination committee those areas of study that should be emphasized in the student's qualifying examination.

Qualifying Examination

Advancement to candidacy is contingent upon the passing of a written examination and an oral examination normally administered at the end of year three for students entering with a bachelor's degree, and the end of year two or the beginning of year three for students entering with a master's degree from another institution. For the written portion of the examination, the qualifying examination committee provides questions on the three topics assigned as areas of emphasis. The oral examination is administered by the student's qualifying examination committee and may concern any aspect of the assigned topics with an emphasis on those issues addressed in the written portion of the examination.

Advancement to candidacy will be granted after successful completion of the written and oral examinations, acceptance of the dissertation reading committee form, satisfactory completion of coursework and the foreign language requirement, and the payment of the necessary fees.

Dissertation

D.M.A. students must complete a dissertation consisting of a substantial musical composition accompanied by an essay. One to two years of work beyond the qualifying examinations should be sufficient for the completion of the dissertation, except in cases where extended fieldwork is required.

Final Examination

The final examination will be a public oral defense of the dissertation. After an oral presentation by the candidate, the candidate will be questioned by the dissertation committee.

Doctor of Philosophy in Music

The doctor of philosophy (Ph.D.) degree in music has an emphasis in cross-cultural studies, and aims to provide doctoral students with an integrative framework for music scholarship, emphasizing the ways in which musicology and ethnomusicology interact and complement one another.

In addition to cultural approaches to musical style, the program also encourages the integration of scholarly research with musical performance, emphasizing the manner in which performance serves both rhetorical and symbolic ends within various cultural settings. To this end the concept of "performance practice" plays a significant role in this program, given that the concept of historically or culturally informed performance is applicable to music from the earliest times to the present day in all geographical and cultural regions, and can encompass research activities as diverse as fieldwork, historical editing, and recording, as well as publishing of books and articles on the traditions of composition and performance.

Requirements

Students entering the Ph.D. program with a bachelor's degree are required to complete the following courses:

- Music 200, Introduction to Research Methods
- Music 201, History of Music Theory from the Greeks through Rameau
- Music 202, Tonal and Post-tonal Analysis
- Three courses from the Music 203 Performance Practice series (Music 206D, Music

Perception and Cognition, or a Music 254 course may each substitute for one 203 course)

- Three courses from the Music 253 series
- Three courses from the Music 254 series
- Music 252, Current Issues Colloquium (during each quarter of residence)
- Music 299, Thesis Research

Students entering the Ph.D. program with a master's degree are required to complete following courses:

- Three courses from the Music 253 series
- Three courses from the Music 254 series
- Music 252, Current Issues Colloquium (during each quarter of residence)
- Music 299, Thesis Research

All students in the Ph.D. program, whether or not they are entering the program with a master's degree, should plan to take at least two, and preferably three of the following courses in addition to the regular requirements: Music 201, Music 202, Music 203H, or Anthropology 208A. The decision about which of these courses to take should be made in consultation with the student's adviser and the chair of the graduate committee.

Graduate students must take all courses for a letter grade with the exception of independent study courses (Music 261, 265, 295, 297, 298, and 299) and the colloquium course (Music 252), which may be taken with the Satisfactory/Unsatisfactory grade option.

Prior to the start of classes in fall quarter, each incoming Ph.D. student is required to complete a three-hour diagnostic examination that is intended to identify areas in which supplementary course work may be needed.

Ph.D. students entering the program with a bachelor's degree are required to submit a research paper by the beginning of the fourth quarter in residence, which will be revised that quarter under the supervision of the student's faculty adviser, and will be evaluated at the end of the quarter by the adviser and an additional faculty member. Students whose paper is assessed as unsatisfactory will not be allowed to continue in the Ph.D. program.

Students may devise a program of study that includes additional music courses, and courses from other disciplines suited to their special areas of concentration, in addition to the required courses.

Students who entered the Ph.D. program with a bachelor's degree may apply for the M.A. degree after completion of a minimum of five quarters in residence, evidence of the completion of the equivalent of one year of a foreign language at UCSC, the fourth-quarter research paper, and the following courses: Music 200, 201, 202, one course from the Music 203 series, Music 252 each quarter in residence, one course each from the Music 253 and 254 seminar series, and Music 297.

Pre-qualifying Reviews

At the end of the first year of study, all students accepted into the Ph.D. program will submit a brief report on work completed during that year. This report will inform a consideration by the music faculty of the student's status in the graduate program. Faculty will offer comments and suggestions to be communicated to the student either directly or through the student's adviser. If progress is minimal, faculty reserve the right to terminate a student's enrollment in the program.

Qualifying Examinations

Advancement to candidacy is contingent upon passing both written and oral examinations. The written qualifying examination will test knowledge absorbed through the two years of coursework as well as material in the student's field of concentration. The oral examination will focus on the previously completed written examinations well as the student's

developed expertise in her/his chosen specialization. Students must be registered in the quarter in which they take their qualifying examination.

The examinations will normally be administered at the end of year 3 for students entering with a bachelor's degree, and at the end of year 2 for students entering with a master's degree.

Advancement to candidacy will be granted after successful completion of the written and oral examinations, acceptance of the dissertation reading committee form, satisfactory completion of coursework and the foreign-language requirement, and the payment of the necessary fees.

Dissertation

To satisfy requirements for the degree, a student must complete a dissertation and present a related formal lecture or lecture-recital. The student will develop a dissertation prospectus, which will be due six months after advancement to candidacy. Guidelines for the format and content of the prospectus can be found on the Music Department web site. The dissertation must embody substantial and original scholarly work based on a clearly distinguishable contemporary or historical music-cultural tradition, in any music-culture(s) of the world in which the UCSC program offers expertise. The public lecture or performance must demonstrate the student's grasp of the pertinent music-cultural performance tradition or music-cultural and/or music-historical concepts.

Final Examination

The final examination will be an oral defense of the dissertation open to the university faculty.

Successful completion of this examination will be determined by a majority vote of the dissertation reading committee.

Additional information about the program, including application and admission, is available from the Division of Graduate Studies and on the department web site:
<http://music.ucsc.edu/>.

Foreign Language Requirement (for all graduate programs)

For M.A. and D.M.A. students, current skill in reading and comprehension of a relevant foreign language must be demonstrated by:

1. Satisfactory completion of level 3 of a foreign language at UCSC, preferably in the first year of the program; or
2. Submission of an official transcript documenting successful completion of one year of university-level foreign language at another institution (equivalent to level 3 at UCSC); or
3. Passing a foreign language proficiency examination administered by the Music Department in French, Spanish, German, Italian, or Russian. (This test requires translation of a passage of at least 600 words with no resources other than a dictionary to be completed in 1.5 hours.)
4. For languages other than French, Spanish, German, Italian, or Russian, the department may accept completion of an online course as fulfilling the requirement if the student can prove equivalency to a level 3 course at UCSC. The graduate committee will determine whether or not to accept any such course.

With approval of the primary adviser, students whose emphasis is algorithmic composition may complete three quarters or one year of university-level instruction in computer programming in lieu of the foreign language requirement.

Ph.D. students are required to demonstrate proficiency in a foreign language according to the same procedures as the M.A. or D.M.A. In addition, Ph.D. students are required during their first year of enrollment to demonstrate proficiency in a second foreign language

relevant to their area of interest.

Knowledge of languages not offered at UCSC must be demonstrated as determined by the Music Department's graduate committee. Graduate Division policy states that the language requirement must be completed prior to taking the qualifying examination.

Ocean Sciences

[2014–15 General Catalog](#)A312 Earth and Marine Sciences Building
(831) 459-4730<http://oceansci.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

The Ocean Sciences Department includes faculty, students, and staff involved in oceanography and other marine sciences and offers undergraduate and graduate courses in these disciplines. Through faculty sponsors, students have access to a wide variety of research facilities and equipment, including on-campus analytical chemistry, geology, and molecular biology laboratories for marine research; computing and imaging facilities; an onshore marine laboratory two miles from campus (Long Marine Laboratory), with aquariums and holding tanks that are supplied with running sea water; and a unique field station on Año Nuevo Island (19 miles north of Santa Cruz), especially suited for studies on pinnipeds and marine birds. The department supports collaborative studies utilizing the innovative technologies of the nearby Monterey Bay Aquarium Research Institute (MBARI), the Naval Postgraduate School, Stanford University's Hopkins Marine Station, California State University (CSU) Moss Landing Laboratory, and other facilities. Students may also work at other University of California facilities, including the Bodega Marine Laboratories and Scripps Institute of Oceanography.

In addition to research and instructional activities along the California coast, interests of the core faculty and their students include biological, chemical, and physical oceanography; sediment, marine, organic, and trace metal biogeochemistry; marine plankton, phytoplankton ecology, paleoceanography, aquatic microbial ecology, ecological modeling, and remote sensing (satellite oceanography); numeric modeling of coastal and basin-scale dynamics; and midwater ecology, climatology, among others.

Ocean Sciences Department affiliated faculty in other departments represent a deep resource of research interests and methodologies including those pertaining to coral reef and kelp forest ecology, plate tectonics and continental margins, marine mammal behavior and physiology, and natural products from marine organisms. Student research projects have included participation in major scientific expeditions to various marine environments ranging from Polar Regions to the tropics.

Undergraduate Programs

While offering a range of undergraduate courses, the Ocean Sciences Department presently only confers graduate degrees (master of science, M.S.; and doctor of philosophy, Ph.D). The undergraduate major in marine biology, sponsored by the Biological Sciences departments, includes required and elective courses in ocean sciences; and includes an ocean sciences concentration in Earth sciences for undergraduates. ocean sciences should major in a discipline such as biology, marine biology, chemistry, Earth sciences, physics, or mathematics and take ocean sciences–related electives. Students with a bachelor's degree in one of these disciplines or equivalent coursework may apply directly for admission to the graduate program through the Division of Graduate Studies.

Graduate Programs

The graduate programs in ocean sciences are designed to prepare students for careers in research, teaching, and other environmentally related endeavors. The fundamental requirement for admission to the program is substantial evidence of superior scholarship and aptitude for original research. Preparation for admission to the graduate program in Ocean Sciences should comprise an undergraduate degree in the discipline of one of the program specialty areas (e.g., biology or marine biology, geology or earth sciences, chemistry, or physical science) or an equivalent background. If a student does not have a degree in one of these areas, the student must demonstrate to their sponsor that they have taken the classes necessary to do their research.

The prerequisites for entering the Ph.D. program are a minimum of two quarters or two semesters in each of the following: a calculus series; chemistry, and physics with labs. In addition, one course in each of the following is required: earth sciences or geological principles; biology; and statistics or biostatistics.

Ocean Sciences Ph.D. Degree Program

The program leading to a doctorate in ocean sciences is designed around a core training in oceanography for all students, supplemented and focused by advanced training in oceanography and in the traditional disciplines—biology, chemistry, Earth sciences, and physics—as chosen by the student and his or her advisers. The core training is provided through courses in ocean sciences; a subset of which is taken by all students in the first two years and reinforced by the student's seminars throughout the program. Preparation also includes upper–division/graduate courses in ocean sciences and in the specialty discipline, graduate seminars, independent study research credits, participation in a departmental student seminar series, and a minimum requirement of two quarters as a teaching assistant. There is no formal language requirement.

A scheduling meeting in the first quarter of enrollment is used to map out the course program in the first year. The course program is determined by a faculty advisory committee in consultation with the student and courses are drawn from ocean sciences and other science departments (e.g., biology, chemistry, Earth sciences, physics). No later than the fall quarter of their second year, students must take a departmental oral examination that demonstrates their knowledge of ocean sciences and general expertise in their parent discipline. A written and oral qualifying examination are required, generally in the second or third year of graduate study. A dissertation based on original research is required, and the final examination is a public oral defense of the dissertation. Students are encouraged to prepare their dissertation, or certain chapters of it, in a form suitable for publication.

Sample Pathways

The pathways within the ocean sciences Ph.D. program are differentiated from related degrees in the traditional disciplines by their focus on global–scale problems and interactions, a focus on the ocean, and their inherently interdisciplinary approach. Interdisciplinary projects across and between pathways are encouraged, as are interactions with faculty in related departments.

Biological Oceanography

This area of study involves the interactions of organisms with their chemical and physical environments. It includes research on the physiology and ecology of organisms, but differs from marine biology in its focus on the oceanographic setting of the organism in relationship to, for example, biogeochemical cycling and the effects of ocean currents on distributions of organisms. The focus is mainly on small oceanic life–forms (plankton and bacteria, molecular ecology) and their roles in the biogeochemical cycles of marine systems.

Chemical interactions of trace metals and radionuclides in the sea are the focus of this area of study. Research includes development of analytical techniques, measurement of trace species in seawater, and investigation of the effects and interactions of trace elements on biological processes using analytical and isotopic approaches.

Geological Oceanography

Paleoceanography, paleoclimatology, and sediment geochemistry are the focus in this pathway. Research areas include the history of global geochemical cycles and composition of the ocean on various timescales, the fate and diagenesis of materials in sediments and their contribution to the paleoceanographic record, understanding ocean and climate history by the use of records of stable isotopes and trace elements, and paleoclimate modeling.

Physical Oceanography

The physics and dynamics of the ocean and atmosphere are the main aspects of this program. Research includes observational, computational, theoretical, and experimental physical oceanography, geophysical fluid dynamics, ocean acoustics, dynamical meteorology, climate, and global change.

Requirements for Ph.D. Students in the Ocean Sciences Department

To introduce students to the breadth and depth of the field of ocean sciences, students will be required to complete the following.

1. Four core courses. These courses are expected to be completed in the first year of the program (and precede the departmental examination) in the in the following sequence: fall–OCEA 200 Physical Oceanography, and OCEA 280 Marine Geology; winter–OCEA 220 Chemical Oceanography; and spring–OCEA 230 Biological Oceanography.
2. A minimum of three graduate–level or upper–division elective courses is required to provide depth in the chosen area of emphasis or supporting disciplines. These courses are selected in consultation with the student's adviser and the department's graduate advising committee (a maximum of one course may be a graduate–level seminar (OCEA 290), and at least two courses must be graduate or upper–division undergraduate lecture courses).
3. OCEA 296, Teaching in Ocean Sciences, to be taken prior to or concurrent with being a teaching assistant.
4. Teaching experience satisfied by two quarters as a teaching assistant for an Ocean Sciences or supporting department's course.
5. OCEA 293, a 2–credit Graduate Research Seminar yearly requirement for all Ph.D. students.
6. OCEA 292, Ocean Sciences Seminar series. Attendance required each quarter of enrollment.
7. A minimum of three courses in Thesis Research (OCEA 299) under direction of a sponsor. Each quarter in residence a student should take 15 credits of classes. Students beyond their first year will usually take 10 or 15 credits of Thesis Research each quarter.
8. A comprehensive departmental examination. This oral examination, covering material from the core courses, is usually taken at the beginning of a student's second year in the program. This examination must be completed successfully within two years of entering the program.
9. Pass the qualifying examination to advance to candidacy. This examination requires a written research proposal to be defended orally in front of the student's dissertation committee and is normally taken at the beginning of the third year of the program. Successful completion of this examination is expected within three years of entering the program.

10. Ph.D. dissertation. The Ph.D. dissertation, demonstrating original thought and research, must be written, presented in an open seminar, and defended to the student's thesis committee. Chapters of the dissertation may be written in publication format, but must conform to university publication guidelines for submission.

Ocean Sciences Master's Degree Program

The Ocean Sciences Department offers a master of science (M.S.) degree in ocean sciences. The degree combines core courses and electives to provide depth and breadth in the ocean sciences, with a focused thesis to provide experience in original research. Graduates from the program are exceptionally prepared to take research or management positions in organizations concerned with the marine environment, to become educators, or to enter doctoral programs in ocean sciences or related fields.

Whereas the doctoral program has an oceanographic orientation, the ocean sciences master's program is even broader and has traditionally attracted many students in marine biology and ecology. As with the doctoral program, students are encouraged to select a course of study and a research program that draws on the expertise of the core ocean sciences faculty and any of the affiliated faculty in other departments. Customized programs of study that combine related disciplines are supported in the master's program.

Course Requirements for the Ocean Sciences Master's Degree

To introduce students to the breadth and depth of the field of ocean sciences, students will be required to complete the following:

1. Complete three of the four core courses (one of which must be OCEA 200, Physical Oceanography). Students are expected to complete all three of these courses in the first year of the program, and they should be taken in the order listed below. All four core courses are recommended, however, and if taken, the fourth course counts as an elective. The courses must be taken in the following sequence: fall–OCEA 200 Physical Oceanography, and OCEA 280 Marine Geology; winter–OCEA 220 Chemical Oceanography; and spring–OCEA 230 Biological Oceanography.
2. A minimum of three graduate-level or upper-division elective courses is required to provide depth in the chosen area of emphasis. These courses are selected in consultation with the student's adviser and the department's graduate advising committee (a maximum of one course may be a graduate-level seminar (OCEA 290), and at least two courses must be graduate or upper-division undergraduate lecture courses).
3. A minimum of three courses in Thesis Research (OCEA 299) under the direction of a sponsor. Each quarter a student should take 15 credits of classes. Students beyond their first year will usually take 10 or 15 credits of Thesis Research each quarter.
4. OCEA 296, Teaching in Ocean Sciences, to be taken prior to or concurrent with being a teaching assistant
5. Teaching experience satisfied by one quarter as a teaching assistant for an Ocean Sciences or supporting department's courses.
6. Attendance at the Ocean Sciences Seminar series (OCEA 292) each quarter of enrollment
7. Successful completion of a master's thesis presented at an open seminar.

Details regarding admission, graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies (http://graddiv.ucsc.edu/student_affairs/).

Philosophy

[2014–15 General Catalog](#)220 Cowell College
(831) 459–2070<http://philosophy.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

Philosophy investigates fundamental questions about the most basic facets of human thought, e.g., concerning knowledge and belief (epistemology), the nature of reality (metaphysics), and morality and aesthetics (value theory). Such questions can be studied by looking at answers that contemporary philosophers propose, by investigating the principles that other disciplines use to legitimate claims, or by learning how, historically, philosophers approached these issues. In this respect, “philosophy” names not only a historically defined subject matter, but also inquiry into any of the fundamental determinants of rational thought. Thus, students of philosophy can pursue a broad range of topics of the greatest historical, intellectual, and personal interest.

The department offers courses that relate these traditional philosophical questions to contemporary work in literature and the social and natural sciences. In addition, the department offers several courses that make a careful study of the classic texts in philosophy, ancient and modern. Moreover, the curriculum covers all the dominant contemporary schools of philosophy in the Anglo–American and European traditions.

The study of philosophy enables students to expand their abilities in critical thinking and reasoning as well as to improve their skills in verbal and written communication. Students may major or minor in philosophy.

Philosophy prepares students for many careers as well as for most professional schools, including law. Students who wish to go to graduate school in philosophy are encouraged to study logic at both the introductory and intermediate levels and any languages that are necessary for advanced scholarship in the different historical eras of philosophy.

Major Requirements

Courses

Eleven courses are required: two at the introductory level, two in the history of philosophy sequence (100A, 100B, 100C), and seven additional upper–division courses (including one advanced seminar). For some of the lower–division required courses, students may petition to substitute courses taken at other institutions (please note that logic classes offered at community colleges will NOT fulfill the department’s logic requirement). These 11 courses must meet the following distribution requirements:

Introductory. Course 9 and at least one of courses 11, 22, or 24.

- Computer Engineering
- Computer Science
- Cowell College
- Critical Race and Ethnic Studies
- Crown College
- Digital Arts and New Media
- Earth and Planetary Sciences
- East Asian Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Electrical Engineering
- School of Engineering
- Environmental Studies

- Physical Education
- Physics
- Politics
- Portuguese
- Porter College
- Psychology

History of philosophy. Two of 100A, 100B, or 100C (all three strongly recommended for students who anticipate graduate work in philosophy). Taking any two from the sequence Philosophy 100A, 100B, and 100C will satisfy the Disciplinary Communication (DC) requirement.

Upper Level. Six courses numbered 100A or above, at least one in value theory and two in metaphysics and/or epistemology. Note that the two courses counted toward fulfilling the history of philosophy requirement cannot be counted among these six additional courses.

Courses satisfying the value theory requirement: 137, 140, 142, 143, 144, 147, 148, 152, and 153.

Courses satisfying the metaphysics and epistemology requirement: 114, 115, 121, 122, 125, 126, 127, 133, 135, and 171.

Courses 195A, 195B, and 199 also cannot be counted among these six courses. All upper-division courses must be completed at UCSC unless a petition for an exception is approved by the undergraduate program director.

Senior Seminar. One advanced seminar numbered 190.

Courses must be satisfied in the following sequence. Before being eligible to enroll in any course in the history sequence (Philosophy 100A–100C), a student must have completed all required introductory courses, i.e., Philosophy 9 and at least one from Philosophy 11, 22, or 24. Before being eligible to enroll in any philosophy course above Philosophy 100C, prospective majors must have taken at least one of the required history of philosophy courses (i.e., either Philosophy 100A, 100B, or 100C). Transfer students wishing to major in philosophy should consult with the Philosophy Department undergraduate adviser as soon as possible.

Declaring the Major or Minor

Students must have taken or currently be enrolled in at least one philosophy course in order to declare the major or minor. Students declare by visiting the undergraduate adviser, who will develop an individual academic plan and complete a Petition for Major/Minor Declaration form.

Disciplinary Communication Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC Requirement in philosophy is met by completing any two from the sequence Philosophy 100A, 100B, and 100C.

Comprehensive Requirement

In the fourth year, students satisfy the comprehensive (exit) requirement by taking one course numbered 190. This advanced seminar meets the standards of the senior-year level of achievement in philosophy. Students who do superior work in an advanced seminar can be awarded a notation of Honors in the evaluation for that course. In addition to Honors in an advanced seminar, graduating seniors with a distinguished record of achievement in their philosophy courses may be awarded Honors or Highest Honors in the philosophy major.

Graduation with Honors in Philosophy requires at least a 3.7 average in all philosophy courses taken at UCSC. Graduation with Highest Honors in Philosophy requires at least a 3.9 average in all philosophy courses taken at UCSC. Students with an average between 3.8 and 3.9 may be awarded Highest Honors by vote of the Philosophy Department.

Minor Requirements

A minor in philosophy consists of any nine of the 11 courses required for the major. At least five of these must be upper-division. There is no senior exit requirement for the minor.

Program Planning Notes

When a faculty member thinks that a student has done exceptional work that could be

[Search the Catalog](#)

carried to a more advanced level, the student may be given the option of writing a senior essay (course 195A). Normally, the senior essay is completed in one quarter; in unusual circumstances, it can be continued for a second quarter (course 195B), but only if the writing requirements for course 195A are completed successfully and on time. The senior essay, like individual studies more generally, does not count toward the 11 courses required for the major.

After undergraduates have taken the requisite introductory courses, they have a wide range of upper-division courses from which to choose. Those who are considering advanced study are encouraged to consult regularly with any member of the philosophy faculty about the courses that would best prepare them for graduate work. Preparation for graduate work ought to begin before senior year. The Philosophy Department sponsors workshops in the fall quarter for students contemplating graduate school in philosophy.

Graduate Program

The department's graduate program profile emerges from its distinctive approach to the study of philosophy, including an interest in the history of philosophy as an indispensable background to the main areas of contemporary concern in the discipline. More specifically, the department's characteristic and compelling strength lies in its attitude towards the two current traditions in philosophy—the so-called analytic and continental traditions. While analytically trained, the majority of the faculty has research or teaching interests in some major 19th and 20th century European figures, including, among others, Hegel, Nietzsche, Husserl, Heidegger, and Foucault.

Among the faculty's main contemporary interests are those topics commonly pursued in any high-ranking research and teaching program, including for example research and teaching interests in philosophy of science, philosophy of biology, metaphysics, philosophy of mind, logic, epistemology, philosophy of language, philosophy of religion, moral psychology, and ethics, including environmental ethics. The faculty's research and teaching in these areas is informed by leading historical figures, including especially Kant, Aristotle, Hume, Wittgenstein and—again, uniquely for such a small department—leading figures from the Middle Ages and late antiquity (including medieval Islamic figures).

Graduate students are therefore able to take advantage of a wide range of courses in the history of philosophy, including ancient, early modern, Kant, 19th-century, and the history of 20th-century philosophy (analytic, continental, and combined).

Both the master of arts (M.A.) and the doctor of philosophy (Ph.D.) programs encourage interaction with other fields.

Graduate Program Requirements

Breadth Requirements in the First Year

During their first year, all graduate students are expected to fulfill a set of breadth requirements. These requirements are designed to provide both a common experience on which students can build their individual projects and a shared framework within which they can exchange ideas. Six courses, to be completed in the first year, are required of every graduate student in philosophy. These six core courses will constitute the bare minimum required for the M.A. or Ph.D.

This minimal core set of courses will consist of (i) three graduate seminars, designated by the department each year as mandatory for every first year student, and (ii) three electives (any three graduate seminars in philosophy). Of the three required seminars, one will be in metaphysics/epistemology, one in the history of philosophy, and one in moral philosophy.

No courses labeled Philosophy 294 or higher will satisfy any of these minimum core requirements. This restriction is redundant for 299 (since that course is open only to students who have advanced to candidacy). The point of this restriction is to limit the use of independent studies, reading groups or student seminars for graduate seminar credit.

During their first year of study all students must pass a logic competency examination with a grade of B or better. This examination will cover material typically taught in a first course in formal logic.

Before the end of the third year, all Ph.D. students must complete Philosophy 270, a research seminar. A substantial paper is required prior to enrollment. The course may be taken earlier than the third year and is optional for M.A. students. Philosophy 270 is only offered in winter quarter.

For further details, see the graduate program statement on the department's web page or consult with the department's graduate adviser.

Ph.D. Program

The Ph.D. program provides students with closely monitored training in philosophy. The program is designed to be completed in six years or less. Graduate work in philosophy can lead to careers both inside and outside academia. Because most doctoral students will be preparing for a career that involves teaching philosophy, they are encouraged to be teaching assistants for at least three quarters.

Courses. A minimum of 12 graduate courses. Up to two courses may be taken from the offerings of other departments, and up to two courses may be independent studies.

Language requirement. The foreign language will be individually determined based on the relevance of such linguistic skills to the research interests of the student. Proficiency can be demonstrated either by passing a written examination administered by the department or by successfully completing a language course approved by the graduate committee.

Qualifying examination and Research Seminar. The qualifying examination, normally taken during the third year of enrollment, is centered on a qualifying essay that demonstrates the candidate's ability to do extended, dissertation-level research and analysis relevant to the proposed thesis topic and dissertation plan. The examination focuses on the student's research project and on the fields of scholarship it presupposes.

Near the end of the required coursework, doctoral students will develop a research project resulting in a substantial paper. The paper is required to enroll in the research seminar, Philosophy 270, which must be completed during or before winter quarter of the third year. The seminar will allow students to make substantial progress on a qualifying essay and cultivate their ability to assess and provide critical feedback on another author's philosophical work.

Dissertation. The final requirement for the Ph.D. degree is a dissertation representing a contribution to philosophical research.

M.A. Program

Applications to the M.A. program are welcomed from talented students with diverse academic backgrounds. The program is open not only to applicants who majored in philosophy as undergraduates, but also to applicants from other disciplines, who have a significant background in philosophy and who now want to study philosophy more intensively. The program is designed to be completed in one or two years.

Courses. A minimum of nine graduate courses. Up to two courses may be taken from the offerings of other departments, and up to two courses may be independent studies.

Languages. There is no foreign language requirement for M.A. students.

Master's paper. By the end of the second year of study and the completion of 45 credits, M.A. students will submit a master's paper, which will normally be defended orally before a committee of two faculty members.

Relationship of the M.A. and Ph.D. Programs

Students in the M.A. and Ph.D. programs will be in the same classes and work on the same course distribution requirements. Enrollment in the M.A. program confers no advantage for admission to the Ph.D. program.

Applications and Admissions

Application materials are available online at <http://graddiv.ucsc.edu>. Further information regarding the program may be requested from the Department of Philosophy at (831) 459-4578, fax: (831) 459-2650. Visit the web site at <http://philosophy.ucsc.edu>.

Designated Emphasis

To receive a designated emphasis in philosophy, graduate students from other departments must complete the following requirements in addition to degree requirements for the doctorate in their home department.

The following are required for the emphasis:

1. Department approval: The primary faculty adviser is to be consulted about the intention to pursue a Philosophy Designated Emphasis.
2. Philosophy adviser: A core philosophy faculty member is required to act as an adviser and serve on both the qualifying examination committee and the dissertation reading committee.
3. Coursework: Students must complete four graduate courses in philosophy selected in consultation with the philosophy faculty adviser. One of the four may be an independent study approved by the philosophy faculty adviser.
4. Writing: Students must submit a significant piece of writing that demonstrates competency in the field. The writing could take the form of a seminar paper or dissertation chapter. The essay must meet the approval of the philosophy adviser.

Guidelines and application forms are available in the Philosophy Department office.

204 Natural Sciences 2 Annex
(831) 459–2931<http://pbsci.ucsc.edu>

Program Description

A broad range of majors is offered through the physical and biological sciences. The intellectual rigor of these majors ensures that our graduates are well prepared for further studies in graduate and professional schools, as well as careers in scientific research, environmental research, medicine, law, engineering, technology, and business.

The Division of Physical and Biological Sciences' interdisciplinary framework provides students with the opportunity to attend classes and pursue research that ranges from the study of atoms to the examination of distant galaxies. From abstract number theory to the development of new chemical compounds, from evolution to plate tectonics, we provide students not only with the skills to explore and discover the world but also to define and improve it.

Departments and programs affiliated with the Division of Physical and Biological Sciences include the Departments of Astronomy and Astrophysics; Chemistry and Biochemistry; Earth and Planetary Sciences; Ecology and Evolutionary Biology; Microbiology and Environmental Toxicology; Mathematics; Molecular, Cell, and Developmental Biology; Ocean Sciences; Physics; and the Science Communication Program. Our undergraduate affairs office helps students understand and manage the breadth and diversity of academic programs and resources that are available to students in the physical and biological sciences. More information can be found at <http://undergrad.pbsci.ucsc.edu/>.

Program Description

Physical education offers students an opportunity to learn and improve skills in a variety of areas while gaining knowledge about the relationship between fitness and wellness. With this information, participants will be better prepared to make important choices leading to healthy lifestyles.

Physical education courses at UCSC, which are elective and without academic credit, are offered in a wide variety of activities. The courses consist of instruction, practice, and full participation consistent with each student's ability. While many of the courses are for students at a beginning level, some are designed with more advanced students in mind. Most courses involve class meetings one hour in length, twice a week; but some consist of two weekly one-and-a-half-hour meetings or a single two-hour meeting per week. Students may enroll in as many courses as they desire and are permitted to repeat any course.

History of Art and Visual Culture

[2014–15 General Catalog](#)

D–201 Porter College
(831) 459–4564
havc@ucsc.edu
<http://havc.ucsc.edu>

[Faculty](#) | [Course Descriptions](#)

Program Description

In the History of Art and Visual Culture (HAVC) Department, students study the production, use, form, and reception of visual artifacts past and present. Objects of study include paintings, sculptures, and architecture, which are within the traditional purview of art history, as well as low art and non-art objects, which sit beyond its boundaries. The HAVC Department offers courses covering a wide variety of representations from the cultures of Africa, the Americas, Asia, Europe, and the Pacific Islands, including media as diverse as ritual, performative expression, bodily adornment, oil painting, installation art, textiles, architecture, and photography.

HAVC students at UC Santa Cruz (UCSC) investigate complex questions concerning the social, political, economic, religious, and psychological impact of images from the perspective of their producers, users, and viewers. Visual objects play a central role in the formation of values and beliefs, including the perception of gender, sexuality, ethnicity, race, and class. Through attentive historical study and close analysis, students are taught to recognize and assess these systems of value, and are introduced to theoretical and methodological frameworks for future research. Students also have the opportunity to take independent study courses and write senior theses.

The HAVC curriculum guides students in acquiring skill in critical thinking about art and visual culture, leading to a bachelor of arts (B.A.) degree. Each student who chooses to major or minor in HAVC devises an individual study plan with a faculty adviser. The lower-division courses, numbered 1–99, intended for general education students and prospective majors, provide an introduction to the field of visual culture according to geographic areas and visual traditions within those areas. Upper-division courses numbered 100–189 cover a broad range of issues in various aspects of world culture from earliest times to the present. Advanced upper-division courses focus on selected fields, topics, and methods. The most advanced courses, numbered 190 and 191, are taught in seminar format.

Declaration of the Major

To declare the major, students must complete two of the required four lower-division HAVC courses chosen from two different geographical regions:

10s Africa and its Diaspora;

20s Asia and its Diaspora;

30s–40s Europe and the Americas;

50s Mediterranean;

60s Native Americas;

70s Oceania and its Diaspora

Students considering this major are encouraged to complete these courses early in their studies and consult with the HAVC undergraduate adviser to develop a plan of study.

Transfer students should consult the Transfer Student/Transfer Credit section.

Requirements of the Major

The HAVC major requires four lower-division and nine upper-division courses including the satisfactory completion of the senior comprehensive requirement. Students must take courses in each of the different cultural settings to ensure methodological and disciplinary breadth.

Lower-Division Requirements

Four courses from three different geographical regions listed above.

HAVC 80 may be used to fulfill the lower-division regional breadth requirement for regions 10 (Africa), 60 (Native Americas), or 70 (Oceania).

Upper-Division Requirements

Nine courses, as follows:

- 100A recommended during sophomore year. Because 100A is a prerequisite for other courses, if it is not completed by the end of the junior year, students may have difficulty enrolling in required courses and graduation may be delayed.
- 101–191: eight courses required, including a seminar (190s and 191s) to satisfy the senior comprehensive (see [Comprehensive Requirement](#) below).

In completing upper-division course work, students must complete three upper-division courses (courses 101–191) from three different regions. Two of those regions must be a geographical area not studied at the lower-division level.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Students in HAVC meet the DC requirement by completing course 100A.

Senior Comprehensive Requirement

All seniors must complete one seminar, 190–191, as their “senior exit” course to satisfy the senior comprehensive requirement. Seminars can be taken for senior exit credit only by permission of the instructor. Within the context of this advanced seminar, students will work under the close supervision of their professor to produce a written project that demonstrates a high level of achievement in research, writing, and critical thinking. Students whose performance is outstanding are eligible for honors in the senior comprehensive requirement.

Concentration in Religion and Visual Culture

This program is for students who wish to pursue the study of religion in conjunction with studies of visual culture. A student enters the concentration by proposing, in consultation with their faculty adviser, a sequence of upper-division courses to fulfill the religion and visual culture requirements. The declaration of major requirements for the religion and visual culture concentration are the same as those listed in the Declaration of Major section. The faculty adviser for the religion and visual culture concentration is Raoul Birnbaum.

[Search the Catalog](#)

Requirements for the Religion and Visual Culture Concentration

Fifteen courses, as follows:

- Four lower-division courses (each from a different geographical area)
- 100A recommended during sophomore year. Because 100A is a prerequisite for other courses, if it is not completed by the end of the junior year, students may have difficulty enrolling in required courses and graduation may be delayed.
- 101–191: five courses that focus on the study of religion
- 190–191: one seminar (190s and 191s) to satisfy the senior comprehensive (see [Comprehensive Requirement](#) above).
- Four relevant upper-division courses in the study of religion from programs on campus such as anthropology, history, literature, and philosophy. (For a complete list of approved courses, please see the departmental web site <http://havic.ucsc.edu/program/religion>.)

Minor Requirements

Nine courses, as follows:

- lower-division: three courses from three different geographical regions;
- upper-division: six courses planned in consultation with a faculty adviser.

Department Advising

Undergraduate Adviser

The undergraduate adviser offers specific information about navigating through the program and the curriculum and assists students with requirements, prerequisites, policies and procedures, learning support, scholarships, and special opportunities for undergraduate research.

Faculty Advisers

Faculty are the best resource for learning about the philosophies and foundations of history of art and visual culture. Faculty advisers work individually with students to develop a specific course of study, recommend additional courses of interest, and discuss long-term career goals including education beyond the baccalaureate. A faculty adviser is assigned to each student by the undergraduate adviser during the declaration of major meeting.

Languages

All majors are encouraged to study at least one foreign language. Graduate programs in visual culture, art history, and other related disciplines generally require competence in one or more languages beyond English. Students are encouraged to consult with their faculty adviser to discuss an appropriate course of language study.

Transfer Preparation and Transfer Credit

Transfer students are encouraged to fulfill history of art and visual culture requirements prior to transfer. Refer to the ASSIST articulation agreements at www.assist.org for approved lower-division courses offered at community colleges. Transfer credit for lower- or upper-division courses from four-year institutions or community colleges not included in the ASSIST system is evaluated on a case-by-case basis; students must submit a Course Transfer/Substitution Petition and course syllabus to the HAVC Department for review. A student may transfer up to five art history courses toward the major, only two of which may be upper-division. For the minor, a student may transfer up to three lower-division courses. HAVC majors must take a minimum of eight regularly scheduled HAVC courses from members of the HAVC faculty and HAVC minors must take a minimum of six regularly scheduled HAVC courses from members of the HAVC faculty. Transfer students are strongly encouraged to contact the HAVC Department for advisement before enrolling at UCSC.

Education Abroad Program (EAP) Courses

The University of California's Education Abroad Program provides an excellent opportunity to take courses related to the history of art and visual culture in a range of locations. The department strongly encourages HAVC majors and minors to take advantage of this educational opportunity. Successfully completed EAP courses count as in-residence UC credit.

Upon return, you must submit a Course Substitution Petition to seek the approval of your adviser and department chair to substitute EAP courses for HAVC major and minor requirements (EAP courses do not automatically satisfy major and minor requirements). Petitions are evaluated on a case-by-case basis. We look for evidence that the course(s) provided critical analysis of the class material in its social and cultural context, as well as significant reading and writing requirements. We recommend you retain all relevant documentation (syllabi, reading lists, papers written, etc.) to support your case. We also suggest you consult with your HAVC adviser to plan your EAP courses in advance.

For additional information, see: <http://ieo.ucsc.edu/programs-abroad/academic-planning/major-minor-credit.html> and <http://ieo.ucsc.edu/programs-abroad/academic-planning/uc-vs-transfer-credit.html>. (Also refer below to the "Residency Requirement for the Major and Minor.")

Careers

The preparation students receive from the baccalaureate of arts degree in HAVC provides skills that can lead to successful careers in education, law, business, and social services, in addition to more disciplinary-specific careers in museum curating, art restoration, studies in architecture, and studies in art history leading to a graduate degree.

Graduate Study

There are many graduate programs that lead to the master of arts (M.A.) and doctor of philosophy (Ph.D.) degrees in fields such as art history, visual studies, cultural studies, history of religions, theory and criticism of art, etc. Most graduate programs require a reading knowledge of one or two languages other than English (see [Languages](#) above). Students who contemplate graduate study should consult with their faculty advisers as early as possible in their undergraduate careers.

Graduate Program

The History of Art and Visual Culture Department offers a course of study leading to the Ph.D. in visual studies. The Ph.D. is designed to steep our graduates in the most theoretically relevant methodologies for understanding the significance of visual artifacts and the social and cultural qualities of human vision (termed *visuality*); provide students with exposure to a range of cultural perspectives and visual artifacts drawn from around the world; and cultivate in our graduates the necessary skills and knowledge to secure and excel in academic and curatorial positions. The program is both interdisciplinary and flexible. Students work closely with their advisers and the director of graduate studies to craft personalized courses of study that advance their intellectual and professional goals.

The program employs a wide range of visual evidence for examination, without being constrained by traditional hierarchies of art. Fine arts, architecture, photography, film, performances, utilitarian objects, and popular entertainments all are primary source material for scholars in the field. The program at UCSC is particularly adept at illustrating significant differences in how disparate cultural groups interpret their visual worlds, given the breadth of cultural perspectives taught by our faculty. With scholars focusing on cultures in Africa, the Americas, Asia, Europe, and the Pacific Islands, visual studies at UCSC offers students an unparalleled opportunity to consider the role of social and cultural forces in guiding how and what their members see.

Graduate Program Requirements

Students take a minimum of twelve 5-credit graduate courses during their first two years of study, comprised of four core courses and eight electives.

The four core courses must be taken within the first two years: HAVC 201, Introduction to Visual Studies (fall); HAVC 202, Critical Theory (winter); and HAVC 203, Theories and Histories of Seeing (spring, taken twice).

Those entering with an M.A. are eligible to petition to exempt courses. In general, a student entering with a non-visual studies M.A. may petition to waive up to four electives, and a student entering with an M.A. in visual studies may also petition to waive the fourth core course (the second Theories and Histories of Seeing). The petition to exempt courses may be submitted any time after a student is accepted into the program, but first should be discussed with the assigned faculty adviser and the director of graduate studies. To receive exemption, the petition must be approved by the visual studies graduate committee.

Of the eight elective courses, at least four must have a visual studies designation (i.e., taught by core or affiliated faculty), and at least three must be drawn from departments outside of visual studies. For students entering with an M.A. who have successfully petitioned to have four elective courses waived, the distribution between visual studies courses and courses outside the department will be decided in consultation with the academic adviser and the director of graduate studies as part of the petition for course waiver.

Field Clusters/Field Specialties

Appreciating that most of our graduates will be required to fit themselves back into traditional disciplinary structures once they enter the academic job market, the program is designed to provide students with both new means of interpreting visual evidence and suitable depth of understanding in older disciplinary traditions. While all graduates will acquire a shared foundation in theories of visibility (attained through our core course requirements), individual student programs vary considerably depending on the type of department in which the student hopes to secure employment after graduation. In addition to completion of the core courses required of all students, each student will develop a cluster of individualized field courses in consultation with their adviser based on her/his particular professional goals.

To provide our students with the disciplinary background to facilitate employment within curatorial departments in museums and non-visual studies departments at colleges and universities, each student is required to take a minimum of four 5-credit courses in a disciplinary cluster (beyond the core course requirements). This requirement pertains both to students entering with a B.A. and an M.A. Acceptable field cluster courses might center around a medium (i.e., painting or architecture), a temporal/stylistic category (i.e., Early Modern or Postmodernism), a cultural, national, or social group (i.e., Pacific Islanders or China), or a disciplinary approach (i.e., cultural anthropology or gender studies). Field clusters are developed in consultation with the student's adviser based on the student's intellectual and professional goals. To count toward the degree, field clusters must receive prior approval from the visual studies graduate committee.

Language Requirement

Students must demonstrate reading knowledge of one foreign language prior to the start of their second year (either through attainment of a score of 550 or higher on the Educational Testing Service Graduate Student Foreign Language Test or through passage of a reading examination administered by the department).

Students are encouraged to master a second foreign language. Based on a student's area of interest, and the joint assessment of the student's adviser and the director of graduate studies, proof of proficiency in an additional language or languages may be required prior to the student being admitted to candidacy for the Ph.D. Should proficiency in additional languages be required, it must be demonstrated prior to the close of the student's third year of study.

Qualifying Examination

After completing all course work and passing one language examination, students are required to pass a qualifying examination prior to the close of the winter quarter of their third year, unless a petition for an extension, demonstrating reasonable cause, is approved by the visual studies graduate program committee. The qualifying examination is divided into three topic areas, with each one including a written and an oral component. Each topic area should display historical breadth and variety of media. Two of the topic areas should ideally relate to the future dissertation topic, while one of the remaining must constitute an outside area, examining a topic that is chronologically, geographically, and/or

methodologically distinct from the other two.

Prior to the end of his/her second year, a student should consult with his/her adviser to assemble a group of four faculty members who will serve as examiners and aid the student in assembling the necessary topic areas, compiling the needed reading lists, and preparing for the written and oral components of the examination in each area. The examination will have two parts. In part one, each student will respond in writing to three general questions, posed by three of their examiners in the pre-arranged topic areas. In part two, each student will gather together with his/her examiners to field questions probing and clarifying the previously submitted written component of the qualifying examination. In order to pass the qualifying examinations, the student must receive the unanimous endorsement of the committee members.

Dissertation Prospectus and Colloquium

After passing the qualifying examination, a student must complete an approved dissertation prospectus and a colloquium. The written dissertation prospectus is due no later than the end of the second quarter following the student's completion of the qualifying examination. The prospectus is a brief, concise essay of approximately 25 pages (with bibliography) that defines the scope, methodology, and rationale for the proposed dissertation. It is prepared in consultation with the student's dissertation director, who must approve of the document prior to sending it to the colloquium committee. The prospectus must be sent to the colloquium committee at least one month before the colloquium.

The dissertation director, in consultation with the student and director of graduate studies, will invite four to five faculty members, in appropriate fields, to be on the colloquium committee, attend the colloquium, provide input on the prospectus, and assess the student's preparedness to begin researching and writing the dissertation. Faculty participating in the colloquium may or may not have been members of the QE committee, and should represent faculty whose expertise has bearing on the student's project. A student will pass the colloquium after having demonstrated to the satisfaction of all colloquium committee members adequate preparation to begin researching and writing the dissertation.

Advancing to Candidacy

Advancement to candidacy follows and is contingent upon passing the qualifying examination, all needed language examinations, completing an approved dissertation prospectus, passing the colloquium, and the subsequent appointment of a dissertation reading committee of at least three members. The requirements for advancement to candidacy must be completed no later than the end of the winter quarter of the fourth year.

Dissertation and Final Examination

The dissertation must make a significant and original contribution to the field of visual studies, as judged by each dissertation committee member.

An oral defense of the dissertation is the only final examination requirement, unless a petition to waive the oral defense, demonstrating reasonable cause, is approved by the student's primary adviser and the visual studies graduate program committee. The student's dissertation committee, under the supervision of the director of graduate studies, will conduct the examination. In the event that the director of graduate studies serves on the dissertation committee, the chair of History of Art and Visual Culture will oversee the defense. Interested faculty and students in the visual studies program will have the opportunity to observe the defense.

Normative Time from Matriculation to Degree

The visual studies Ph.D. program at UCSC is designed to require six years for students matriculating with a B.A. and five to six years (depending on advanced standing granted) for those entering with an M.A. During the pre-candidacy period students will devote themselves to coursework, completion of the language examination, some teaching, preparation for and completion of qualifying examinations, completion of an approved version of their prospectus, passing their colloquium and selecting their dissertation committee. Requirements for advancing to candidacy must be completed by the end of winter quarter of the fourth year. Students will finish their dissertation and successfully

defend it before the end of their sixth year.

Designated Emphasis

Graduate students enrolled in doctoral programs at Santa Cruz may obtain a Designated Emphasis in visual studies on their Ph.D. degree by meeting the following requirements:

- Secure approval from a core member of the visual studies faculty to serve as an adviser for their Designated Emphasis.
- Have at least one core member of the visual studies faculty serve on either their qualifying examination or dissertation committee.
- Submit a significant piece of writing that demonstrates competency in the field. The writing could take the form of a seminar paper or dissertation chapter. The essay must meet the approval of the student's visual studies adviser.
- Successfully complete four graduate courses taught by either core or affiliated members of the visual studies program. The courses must form a coherent cluster in visual studies and be pre-approved by the student's Designated Emphasis adviser.

Program Description

Physics seeks to discover the fundamental regularities or “laws” that govern our universe and to apply these laws to explain the behavior of fundamental and complex systems. The same underlying principles describe the behavior of atoms, lasers, living cells, and galaxies. Physics is, therefore, at the base of all modern science and technology, and, even at an elementary level, this fundamental nature can be appreciated.

The Physics Department offers majors in physics, physics (astrophysics), applied physics, and physics education. These programs prepare students for graduate work in physics, astrophysics, and astronomy, for engineering and other technical positions in industry, and for careers in education. With appropriate courses in other disciplines, these majors provide excellent preparation for advanced study in technical subjects such as biology, chemistry, engineering, geophysics, and the philosophy of science. The applied physics major is excellent preparation for positions in industry directly upon graduation.

Faculty are approachable to work with students in both formal and informal settings. All undergraduate physics majors have the opportunity to work individually with a faculty member in completing the senior thesis requirement.

The main areas of physics research at UCSC are the study of fundamental particles and interactions (high-energy physics), the study of condensed matter physics, astrophysics/cosmology, and biophysics.

Efforts in high-energy physics are aided by the presence of an organized research unit, the Santa Cruz Institute for Particle Physics (SCIPP). The SCIPP experimentalists play significant roles in experiments at some of the major accelerator laboratories in the world, including the Stanford Linear Accelerator Center (SLAC) at Stanford University and the European centers Organization for Nuclear Research (CERN). SCIPP experimentalists have also played an important role in creating the major satellite for gamma-ray astronomy, the Fermi Gamma-ray Space Telescope, are involved in the Dark Energy Survey, and conduct a thriving particle astrophysics program detecting TeV gamma rays as part of the UC VERITAS collaboration. SCIPP theorists are active in the phenomenology of high-energy particle interactions, including dark matter models, the theory of strong and electroweak interactions, electroweak symmetry breaking and Higgs bosons, theories of supersymmetry, superstrings, and gravity. SCIPP also maintains a vigorous program in particle astrophysics including research in high-energy astrophysics, dark matter, formation of galaxies and large-scale structure in the universe, and theories of cosmology

and the very early universe. SCIPP is also home to a research program in experimental biophysics, exploiting instrumentation technologies developed in other areas of physics for the study of functional organization and development of neural systems in a variety of living organisms. In addition, there is closely related research in biomedical applications such as retinal prosthesis.

The presence of the strong astrophysics group from the Astronomy and Astrophysics Department in the same building provides a healthy symbiosis in this area. Note that the Astronomy and Astrophysics Department does not offer an undergraduate major. UCSC is the headquarters for the University of California Observatories, which include Lick Observatory near San Jose and the Keck Observatory in Hawaii; these provide additional opportunities for collaboration between researchers in physics and astronomy.

Condensed matter physics research at UCSC covers a range of topics including the behavior of exotic many-electron systems (for example, superconductors); the study of magnetic phase transitions; the organization of complex systems (proteins, DNA, and polymers); and the development of new electronic devices using novel materials and research in biophysics.

The experimental program uses X-ray and synchrotron radiation techniques at facilities such as the Stanford Synchrotron Radiation Laboratory (SSRL); neutron scattering techniques at various national laboratories; and optical, X-ray, and specific heat techniques at UCSC. Undergraduate students are actively involved in several condensed matter physics laboratories.

Courses

An undergraduate physics education is broad, yet fundamental. Undergraduate students, even in introductory classes, are exposed to new ideas associated with explorations at the boundaries of human knowledge.

The lower-division introductory courses in the major programs (Physics 5A, 5B, 5C, and 5D sequence) are well suited to students in the physical sciences and engineering. The 6A, 6B, 6C sequence, which also provides a calculus-based introduction to the basic concepts in physics, is better suited to students in the life sciences. Students who take Physics 6A instead of Physics 5A, and do very well in it, may contact the department chair for permission to enter the major. The laboratory courses, 5L-5M-5N and 6L must be taken concurrently with the corresponding lecture courses.

Major Program

The physics, astrophysics, and applied physics major programs provide a comprehensive coverage of the field and the background necessary for graduate school or industrial careers. The physics education major provides the necessary background to enter a rigorous credential program and, ultimately, a career in high-school science education. Students earn a bachelor of science (B.S.) degree. The UCSC physics, astrophysics, applied physics, and physics education programs begin with a four-quarter presentation of the introductory concepts of the subject, Introduction to Physics. (Note: the applied physics program also requires completion of a general chemistry course.) In order for a student to finish the UCSC physics program in four years, it is essential to start Introduction to Physics at the beginning of the first year.

This is followed by courses which provide an introduction to relativity and quantum physics. The programs continue with a three-quarter sequence in mathematical methods of physics designed to provide the mathematics preparation necessary for most of the upper-division physics courses required for the majors. Included in the upper-division programs are two intensive laboratory courses designed to illustrate both historical experiments in the development of physics, astrophysics, and applied physics, and modern experimental methods. Advanced and especially motivated students may enroll in some graduate courses with the approval of the instructor and department chair

The senior thesis, required of all physics, astrophysics, applied physics, and physics education majors at UCSC, provides the opportunity for students to apply their skills to problems of interest to them, either theoretical or experimental, usually with technical advice from a faculty member. The senior thesis may be based on research with a faculty

member. The senior thesis is a distinctive part of the UCSC physics major program and entails a substantial investment of both student and faculty time. The learning experience involved in the thesis, as well as the thesis itself, has proven extremely valuable to students in enhancing employment opportunities upon graduation or in gaining admission to graduate school.

The physics education major is designed to provide future K–12 physics and mathematics teachers with the necessary coursework aligned with the K–12 physics and mathematics standards necessary to pass the California Subject Matter Examinations for Teachers (CSET) in Physics and Mathematics. It also includes a thorough introduction to educational theory and practice including a sequence of three classroom-based internships. Students will be well prepared to enter a rigorous teaching credential program and ultimately a career in high school education. The senior comprehensive requirement involves a curriculum development project overseen by the Physics/Astronomy faculty, with co-supervision from CalTeach/Education faculty as needed.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy the upper-division Disciplinary Communication (DC) requirement. Students in physics, applied physics, physics (astrophysics), and physics education satisfy the DC requirement by completing Physics 182, and the senior thesis.

Declaration of the Major

In order to be admitted to the physics, astrophysics, applied physics, or physics education majors students must pass Physics 5A, 5B and 5C with letter grades, and with an average grade point average (GPA) in these three courses of 2.70 or higher. At least two of these three courses must be passed in the first attempt. (Physics 5A has corequisites of Mathematics 19A or 20A and Physics 5L; Physics 5B has prerequisites of Physics 5A and 5L and Mathematics 19A or 20A, and corequisites of Mathematics 19B or 20B and Physics 5M; Physics 5C has prerequisites of Physics 5A and 5L and Mathematics 19B or 20B, and corequisites of Mathematics 23A or 22 and Physics 5N.) Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the Physics Department office within 15 days from the date the notification was mailed, and meeting with a faculty adviser. Within 15 days of receipt of the appeal, after consulting with the faculty adviser, the department chair will either finalize the denial of admission or specify further conditions for admission, and notify the student, the college, and the Office of the Registrar of the decision.

Letter Grade Policy

For all students entering UCSC in fall 2009 and later, all courses used to satisfy any of the physics major requirements must be taken for a letter grade.

Requirements of the Majors

Physics

The requirements for the major include Physics 5A/L, 5B/M, 5C/N, and 5D; Mathematics 19A or 20A, 19B or 20B, 23A, and either 23B or Physics 14; plus the following upper-division courses: 102, 105, 110A–B, 112, 116A–B–C, 133, 134, 139A, and 182 and the senior thesis.

In addition, students must pass at least two upper-division electives chosen from physics or the following astronomy and astrophysics courses: 111 through 118. In some cases, one of the elective requirements may be satisfied by an approved upper-division science or engineering course.

Students have to satisfy a computer programming requirement by taking one of the following courses, Computer Science 5C, 5J, or 5P, Earth Sciences 119, or Physics 115. Computer Science 5C teaches programming in C/C++, 5J in Java, and 5P in Python for students with no prior experience. Astronomy 119 teaches programming in IDL (commonly used by astronomers) and simple applications. Physics 115 does not teach programming; it assumes basic programming ability in C, C++ or Fortran and discusses numerical techniques relevant to physics. Students may also satisfy the computer programming

requirement by demonstrating their knowledge of programming to a faculty member designated by the Physics Department.

Physics (Astrophysics)

The requirements for the major include Physics 5A/L, 5B/M, 5C/N, and 5D; Mathematics 19A or 20A, 19B or 20B, 23A, and either 23B or Physics 14; plus the following upper-division courses: 102, 105, 110A–B, 112, 116A–B–C, 133, 135 or 136 139A and 182 and the senior thesis.

In addition, students must pass at least three upper-division electives selected from the following upper-division courses: Astronomy and Astrophysics 111 through 118, or 171 (cross-listed with Physics 171), or Astronomy and Astrophysics 257, Physics 129.

Students have to satisfy a computer programming requirement by taking one of the following courses Computer Science 5C, 5J, or 5P, Earth Sciences 119, or Physics 115. Computer Science 5C teaches programming in C/C++, 5J in Java, 5P in Python for students with no prior experience. Astronomy 119 teaches programming in IDL (commonly used by astronomers) and simple applications. Physics 115 does not teach programming; it assumes basic programming ability in C, C++ or Fortran and discusses numerical techniques relevant to physics. Students may also satisfy the computer programming requirement by demonstrating their knowledge of programming to a faculty member designated by the Physics Department.

Applied Physics

The requirements for the major include Physics 5A/L, 5B/M, 5C/N, and 5D; Mathematics 19A or 20A, 19B or 20B, 23A, and either 23B or Physics 14; Chemistry 1A or 1B; plus the following upper-division physics courses: 102, 105, 110A–B, 112, 116A–B–C, 133, 134, and 182 and the senior thesis.

In addition, students must pass at least three upper-division applied physics electives selected from the following approved list of courses: Physics 107, 115, 120, 129, 139A, 139B, 152, 155, 156, and 160, 171, 180, Electrical Engineering 101, 103, 115, 130, 145, 154, 171, 172, 178; other courses with approval from a faculty adviser.

Students have to satisfy a computer programming requirement by taking one of the following courses Computer Science 5C, 5J, or 5P, Astronomy 119, or Physics 115. Computer Science 5C teaches programming in C/C++, 5J in Java, 5P in Python for students with no prior experience. Astronomy 119 teaches programming in IDL (commonly used by astronomers) and simple applications. Physics 115 does not teach programming; it assumes basic programming ability in C, C++ or Fortran and discusses numerical techniques relevant to physics. Students may also satisfy the computer programming requirement by demonstrating their knowledge of programming to a faculty member designated by the Physics Department.

Physics Education

The requirements for the major include Physics 5A/L, 5B/M, 5C/N, 5D, 102, 133, 134 or 135 and 182 and the senior thesis; Mathematics 19A or 20A, 19B or 20B, 23A, 23B or Physics 14; Mathematics 100, 128A, 181; Education 50B or 50C, 100B or 100C, 185L, 185B or 185C and one upper-division course dealing with issues of diversity in education; Applied Mathematics and Statistics 5 or 7; and Astronomy 12 or 13. One elective course must be taken from physics, astronomy, mathematics or education courses, or other courses with approval of the department.

Sample Physics Major Planner

The following is a recommended academic plan for students to complete during their four years to fulfill requirements for the physics major.

Year	Fall	Winter	Spring
1st	MATH 19A or 20A	MATH 19B or 20B	MATH 23A
(frsh)	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N

2nd (soph)	PHYS 5D	PHYS 102	PHYS 116B

** Students should look into taking electives earlier where possible, as some courses are only offered every alternate year.

***Physics 182 will be offered twice yearly, fall and winter quarters.

Sample Physics Education Major Planner

The following is a recommended academic plan for students to complete during their four years to fulfill requirements for the physics (astrophysics) major.

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A or 20A	MATH 19B or 20B	MATH 23A
	PHYS 5A/L	PHYS 5B/M	PHYS 5C/N
2nd (soph)	PHYS 5D	MATH 100	EDUC 100B or 100C (2 credits)
	EDUC 50B or 50C (2 credits)	PHYS 133*	
		PHYS 102	
3rd (jr)	MATH 23B	PHYS 134*^	MATH 181
	AMS 5 or 7	MATH 128A	
	PHYS 135*^	EDUC 185B/C	
4th (sr)	ASTR 12/13		
	EDUC diversity course	Elective	Senior Thesis

4th		
(sr)	PHYS 182**	EDUC 185/L (2 credits)
	Senior Thesis	Senior Thesis

*Physics 133 is offered fall and winter quarters. Physics 134 is offered in winter and spring quarters and may be taken in the junior or senior year after completing Physics 133.

Physics 135 is offered some academic years as a multiple-term course: 135A in fall and 135B in winter or spring, depending on astronomical conditions.

**Physics 182 will be offered twice yearly, fall and winter quarters.

^Either Physics 134 or 135 must be taken

Depending on the student's interests, further preparation for graduate school in physics, astrophysics, applied physics, or for other careers is obtained by electing more specialized or applied courses (see the descriptions of courses below). In addition, again depending on the student's academic focus, elective courses may be selected in mathematics, astronomy and astrophysics, and/or other areas of physical science.

Comprehensive Requirement

The comprehensive exit requirement is normally satisfied by the submission and approval of a thesis. To satisfy the comprehensive requirement via a thesis Physics 182 is required. Note that successful completion of Physics 182 and the senior thesis satisfies the Disciplinary Communication requirement.

In special cases, minor modifications of these requirements may be granted to suit the specific program of a particular student. Before embarking on a program needing such waivers, students should discuss their plans with a physics adviser and seek approval by petition from the Physics Department office.

Honors

The department awards "honors" (3.5 grade point average or better) and "highest honors" (3.8 GPA or better) to top graduating students each year. Recommendations for these awards are made by the department chair and are based upon excellence of academic performance, particularly in upper-division physics courses, as reflected in grades and the narrative evaluations. The department also awards "honors" for outstanding work on the senior thesis, made upon the recommendation of the senior thesis supervisor and the thesis technical adviser.

Minor Requirements

Requirements for the minor in physics include Physics 5A/L, 5B/M, 5C/N, 5D (or Physics 6A/L, 6B/M, 6C/N with minimum GPA of 3.5); Mathematics 19A or 20A, 19B or 20B, 23A, 23B or Physics 14; Physics 102, 133, and 134 and three courses chosen from physics upper-division elective (some of which have prerequisites), or from a list of courses from other departments approved by the Physics Undergraduate Committee. See the Physics Department for the listing.

Advising and Preparation for the Major

Because the courses for the physics major are sequential, it is strongly advised that students declare their major in physics, astrophysics, or applied physics as early as possible (either at initial registration or by the end of the first year, if possible). Students who do not begin the lower-division requirements during their first year will have difficulty completing the program within four years. Transfer students may also have problems completing the program within the usual time, depending upon whether they took equivalent courses at their previous institutions. The department adviser works closely with students interested in pursuing the major to ensure that they begin the program immediately and follow the appropriate steps toward its completion.

High school students coming directly to UCSC should emphasize their mathematics preparation with the expectation that they will take calculus in their first quarter at UCSC in order to concurrently take the Physics 5 series, calculus-based physics for physics majors.

Students transferring to UCSC as junior physics, astrophysics, or applied physics majors should have completed three quarters of introductory calculus-based physics with laboratory and three quarters of calculus. It is also desirable to have an introductory course in modern physics as well as mathematics courses in linear algebra, vector calculus, and differential equations. The Physics Department advises each junior transfer student individually upon their arrival.

Graduate Programs

The Physics Department offers graduate programs leading to the master of science (M.S.) and/or the doctor of philosophy (Ph.D.) degrees. In the first year of study, Ph.D. students are expected to take two core graduate-level courses per quarter, including the courses required for the Ph.D. degree (210, 212, 214, 215, 216, 219) and other courses specific to the student's field of interest. All first-year students also take 205, Introduction to Research. All graduate students also attend a weekly colloquium, 292. Each student has a faculty adviser who helps to determine which courses are most appropriate, taking into account the student's background and interests. The student-faculty ratio is low so that M.S. and Ph.D. students can work closely with faculty and pursue programs that fit their individual needs. Research is currently conducted in theoretical and experimental particle physics, theoretical and experimental condensed matter physics (including materials physics and biophysics), and in theoretical and experimental high-energy astrophysics (including cosmology). After passing a written qualifying examination, Ph.D. students pursue independent research leading to an oral examination and completion of a doctoral dissertation.

Students may obtain a master's degree through course work (eight physics graduate courses) and submission of an approved thesis. The thesis may be waived by passing four sections of the written Ph.D. qualifying examination. Master's candidates are encouraged to write a research thesis and may do so in any of the research fields in the program, thereby developing laboratory and computational skills in areas such as electronics design, computer simulation and visualization, cryogenics, X-ray scattering, complex novel materials and devices, or materials science. Each M.S. student is assigned a faculty adviser who helps to design a course work plan suited to the interests of the student.

Physics students and faculty use a number of UCSC research facilities (described at the beginning of this section and elsewhere in this catalog): the Santa Cruz Institute for Particle Physics (SCIPP) and Lick Observatory (headquartered at UCSC). There is strong interaction with other disciplines, especially astronomy and astrophysics, biology, chemistry, Earth sciences, electrical engineering, and mathematics. Proximity to the Stanford Linear Accelerator Center and the Stanford Synchrotron Radiation Laboratory provides additional local research opportunities. UCSC faculty and graduate students also participate in research programs at CERN in Geneva, Los Alamos, Oak Ridge National Laboratory, NASA Ames, NREL, Lucent, Xerox, IBM, Bell Labs, and other national and international laboratories.

Application materials and brochures describing the physics M.S. and Ph.D. graduate programs in more detail may be obtained by visiting our web site at <http://physics.ucsc.edu/> or by contacting the Division of Graduate Studies at <http://graddiv.ucsc.edu>.

Five-year B.S./M.S. program

The new five year combined B.S./M.S. in physics program provides highly motivated undergraduate majors the opportunity to earn a M.S. degree in five years. The program provides the additional level of preparation and experience that students need to pursue careers in industry and government. Students in the B.S./M.S. physics program can pursue concentrations in materials and device physics, energy and the environment, computational physics, finance and economics, and medical biophysics. Students apply to be admitted to the B.S./M.S. program, in consultation with their faculty or undergraduate advisor, no later than the end of the second quarter of the junior year. To be accepted to the program, students will need to have demonstrated solid performance in general and in the major, as demonstrated by: 1) a G.P.A. in physics courses of at least 3.0; 2) an overall G.P.A. of at least 3.0; and 3) a recommendation from a faculty member attesting to the student's

promise for the M.S. degree in physics.

Applied Physics majors are strongly advised to take Physics 139A as one of their electives. The Five-year B.S./M.S. program is not suitable for Physics Education Majors.

Course Requirements

All students in the 5-year BS/MS program will be expected to take a core set of four physics courses, including:

PHYS 212. Electromagnetism I;

PHYS 215. Introduction to Non-Relativistic Quantum Mechanics;

PHYS 216. Advanced Topics in Non-Relativistic Quantum Mechanics

PHYS 219. Statistical Physics;

plus four electives in the concentration areas described below. Typically, at least one of these electives will be another physics graduate course. One of the elective courses can be an upper-division undergraduate course upon approval of the faculty coordinator and Graduate Committee.

Two of these elective courses can also serve to fulfill the elective requirement for the B.S. degree.

Materials and Device Physics

This concentration prepares students who are interested in pursuing industrial jobs in the areas of materials science, semiconductors, and optoelectronic devices.

Elective courses include AMS 205A, CHEM 261, CHEM 269, CE 218, CE 218L, EE 211, EE 223, EE 224 EE 225, EE 231, PHYS 231, PHYS 232, PHYS 233, PHYS 242.

Energy and the Environment

This concentration prepares students who are interested in pursuing industrial or government jobs in the areas of sustainable-energy technologies, environmental and climate change and scientific policy related to these areas.

Elective courses include CHEM 268, CHEM 269, EPS 220, EPS 254, EPS 272, EPS 280D, ECON 250, ECON 259B, ENV5 271, PHYS 233, PHYS 242.

Finance and Economics

This concentration prepares students who are interested in pursuing industrial or government jobs in the areas of finance, monetary policy, and economics.

Elective courses include AMS 205A, ECON 200 ECON 202, ECON 209A, ECON 209B, ECON 210A, ECON 210B, ECON 216, ECON 217, ECON 212, ECON 221A, ECON 221B, ECON 223, ECON 234, ECON 235, ECON 236, ISM 205, ISM 230, ISM 245, PHYS 242.

Computational Physics

This concentration prepares students who are interested in pursuing industrial or government jobs in the areas related to using computational methods to solve applied problems as well as computer-based visualization methods for data presentation. Students interested in computational methods in biology could also consider the concentration in medical biophysics.

Elective courses include AMS 215, BMSE 205, BMSE 211, BMSE 230, BMSE 203L, CHEM 265, CE 215, CS 203, CS 210, CS 211, CS 240, CS 261, PHYS 242.

Medical BioPhysics

This concentration prepares students who are interested in pursuing industrial and hospital jobs in the areas of medical technology, biomolecular engineering, and biophysics.

Elective courses include AMS 215, BMSE/CHEM 255, BMSE 205, BMSE 215, BMSE 220, BMSE 220L, BMSE 222, BMSE 230, BMSE 203L, BMSE 250, BMSE 250L, CHEM 200A, EE 212, MCDB 200B, PHYS 180.

Course Schedule

Year	Fall	Winter	Spring
4th (sr)	Elective*	Elective*	PHYS 219
			Elective*
5th	PHYS 212	PHYS 215	PHYS 216
	Elective*	Elective*	Elective*
	Thesis	Thesis	Thesis

Students may find it helpful to start their master's thesis during the summer at the end of their fourth year.

*Alternate quarters for completing the four electives

[Faculty](#) | [Course Descriptions](#)

Program Description

In describing the department and major at UCSC, the term politics (rather than political science or government) is used because the study of political life requires a far more inclusive approach than that which is associated with conventional political science methods, and because politics happens in places other than governments. More specifically, the study of politics is the study of the way human communities shape and share a common life through their institutional practices, ideas, interests, and expectations. It looks at the way collective decisions are made and at the obstacles citizens meet as they try to forge a shared and just life. Courses address issues central to public life, such as democracy, power, freedom, political economy, social movements, international law and conflict, institutional reforms, and how public life, as distinct from private life, is constituted.

A major in politics is appropriate for students interested in careers in law, journalism, or teaching; in political and governmental work from local to international settings; and in corporations dealing with global issues. Many UCSC politics graduates have also gone on to do advanced work in distinguished graduate and professional schools. Others have found active and challenging careers in business and community organizing. Still others have turned to scholarship and writing. But regardless of career direction, the most significant purpose of the politics major is to help educate a reflective and activist citizenry capable of sharing power and responsibility in a contemporary democracy.

The study of politics is a critical part of a liberal arts education. Since political issues and practices are embedded in and reflective of the whole experience of a community, the study of politics can constitute the center of a broad-based course of study drawing on history, sociology, anthropology, philosophy, economics, literature, and law.

The programs offered by the UCSC Politics Department are designed to acquaint students with a broad range of issues studied by those in the field. The department offers an undergraduate major, a minor, a combined Latin American and Latino studies/politics major, and a doctoral degree. The Politics Department also houses a program in legal studies; see the Legal Studies Department, for details.

UCSC politics students have many opportunities for field work and for internship placements. Students are encouraged to develop their own extensive independent research projects.

Politics faculty members give students individual attention to help them in their studies. Faculty members are firmly committed to the value of a liberal arts education, but they are also actively engaged in programs of research and writing. The research interests of the faculty range from the theory of justice to the problem of war, from campaign strategy to relations between the rich and the poor countries of the world.

No specific courses at the high school level are required for admission to the major in politics at UCSC. Courses in history, literature, philosophy, and the social sciences, whether taken at the high school or college level, are appropriate background and preparation for the politics major.

Requirements of the Major

Two lower-division politics courses. All students are required to complete and pass two courses from those numbered 1 through 79, as a prerequisite to upper-division courses in politics and prior to declaring the major. These courses are normally taken during the first year.

A student who has not been able to satisfy the pre-declaration requirement (a passing grade in two politics lower-division classes) may petition the department for an exception. The letter of petition must explain and document the circumstances that might justify an exception. The department will consider the request and notify the student of its decision within two weeks of receiving the petition or within 10 days of the start of the following quarter, whichever is later.

Four upper-division politics core courses. The following four groups of courses constitute the core of the politics major. Four courses are required: two courses from one group, one course from a second group, and one course from a third group. In general, upper-division courses are not recommended for freshmen.

Theory

105A Ancient Political Thought

105B Early Modern Political Thought

105C Modern Political Thought

U.S. Politics

120A Congress, President, and the Court in American Politics

120B Society and Democracy in American Political Development

120C State and Capitalism in American Political Development

Comparative

140A Politics of Advanced Industrialized Societies

140C Latin American Politics

140D Politics of East Asia

International

160A International Politics

160B International Law

160C Security, Conflict, Violence, War

160D International Political Economy

Five upper-division politics electives. Five additional upper-division politics courses, one of which may satisfy the comprehensive requirement described below.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for politics majors is satisfied by

- [Queer and Sexuality Studies](#)
- [Religious Studies](#)
- [Russian](#)
- [Science Communication](#)
- [Social Documentation](#)

[Archive of General Catalogs](#)

[Nondiscrimination Statement](#)

[Search the Catalog](#)

completing any three of the four required core courses. The politics core course list is detailed above in the major requirements.

Comprehensive Requirements

The comprehensive requirement in the Politics Department can be satisfied in any of the following methods:

- **Senior Seminar:** Successful completion of a politics senior seminar (190-series) that includes the writing of an extensive paper (no less than 15 pages) with a substantial research content. To enroll in a specific 190 seminar, students must have successfully completed the prerequisite courses listed in the seminar's catalog course description.
- **Additional Elective:** Successful completion of one additional politics upper-division elective that includes a substantial writing component comparable to a paper for a senior seminar, either as part of the existing course requirements or added with the approval of the instructor. The student must receive prior approval from the instructor and enroll in a two-credit independent study, Politics 199F as part of this option.
- **Graduate Seminar:** Successful completion of a politics graduate seminar (enrollment in which is contingent on the written recommendation of two politics faculty) that includes the writing of an extensive paper (no less than 15 pages) with a substantial research content.
- **Thesis (2-3 quarters):** Successful completion of a senior thesis (Politics 195A-B-C) of a minimum of 50 pages. This option is for students interested in working on original research and writing under the supervision of a politics faculty member.

Independent and Field Studies

Students may petition the department to substitute only one upper-division independent study or field study toward the elective requirement in the Politics major. UCDC and UCSAC internships are exempt from this limit.

Honors

Honors in the politics major are awarded to graduating seniors, based primarily on a review of grades and narrative evaluations, whose academic performance is judged to be consistently excellent by a committee of politics faculty. Highest honors in the major are reserved for students with consistently outstanding academic performance.

Requirements of the Minor

All students are required to complete and pass one lower-division politics course from those numbered 1 through 79, as a prerequisite to upper-division courses in politics and prior to declaring the minor. Additionally, five upper-division politics courses are required. Of these, four are to be selected from the core courses: two from one subfield and two from another subfield; these courses are listed above. The fifth course is to be selected from courses numbered 101-199.

General Undergraduate Information

Combined major. The Politics Department offers a combined major with the Latin American and Latino Studies Department. Requirements may be reviewed in the Latin American and Latino Studies section of the catalog.

Double majors. The department accepts proposals for double majors. A student pursuing a double major meets the full requirements of the politics major as well as the full requirements of the other major subject.

Advising. Declaring the major in politics is a four-step process: 1) complete and pass two lower-division politics courses (numbered 1-79) with a grade of C or better; 2) attend a declaration orientation workshop, 3) meet with your faculty adviser, and 4) meet with the politics undergraduate adviser. Each student meets with an assigned faculty adviser to discuss an intended program of study, including its breadth and purpose. The faculty adviser may suggest additional courses so that the student can achieve greater breadth or

concentration. Students are encouraged to select related courses from other departments which complement their interests in politics.

Course credit from other institutions. Courses from another institution may be considered only if they appear on the student's Transfer Credit Summary. Students who wish to substitute courses taken elsewhere for the Politics Department's requirements should discuss the procedure with the department adviser.

Transfer students. A student transferring to UCSC must meet with the politics undergraduate adviser as early as possible to discuss declaring the major and course enrollment. This will ensure a smoother transition. Students should bring a copy of their UCSC Transfer Credit Summary which may be printed from the student portal.

A junior transfer student may satisfy the requirement for one of the two lower-division courses by completing an equivalent course in a political science or equivalent department with a grade of C or better. Courses from another institution may be considered only if they appear on the UCSC Transfer Credit Summary.

Program Learning Objectives. Upon completion of the major, students will have met the following objectives. 1. Understand the origins, development and nature of political institutions, practices, and ideas; 2. Place particular political phenomena in broader historical, cross-national, cross-cultural and theoretical context; 3. Demonstrate familiarity with various theoretical approaches to the study of politics, and their application in different geographic and substantive areas; 4. Critically evaluate arguments about political institutions, practices and ideas based on logic and evidence; 5. Develop and sustain coherent written and oral arguments regarding political phenomena, theories, and values based on appropriate empirical and/or textual evidence and logic.

Graduate Program

The Faculty

The UCSC Politics Department's faculty provides a distinctive mix of senior scholars whose work has led the field toward interdisciplinary and engaged research, and junior scholars whose work represents the diverse cutting edge of U.S. and international political research. A group of affiliated graduate faculty extends the program's intellectual breadth and the range of the course offerings.

The department enjoys several areas of special strength, including American political development and a focus on the social foundations of democratic politics and democratization; the study of varieties of capitalism and post-communist politics and economy; the politics of Southeast Asia and Latin America; the study of race and politics; the politics of language; post-colonial theory and nationalist discourse; early modern political thought; and informal and translocal political organization.

The Curriculum

The Politics Department is impressed by the fact that many of the best studies of politics today disregard the conventional boundaries of the political science's disciplinary subfields. Therefore, the core graduate curriculum and qualifying examination process are structured around four interrelated themes central to political inquiry. Each of these areas of emphasis focuses, in a different way, on the relations among material life, institutional authority, collective mobilization, and political vision at all levels of politics.

Political and Social Thought. Brings together the history of political thought; contemporary social and critical theory; and the contributions of legal and institutional analysis of various kinds. This area of inquiry emphasizes the critical study of political practices that are experienced or understood as in some way limiting, oppressive, or wrong. The work of political and social theory as we see it is to transform our understanding of these practices; to see their contingent conditions; and to articulate the possibilities of governing ourselves differently.

States and Political Institutions. Emphasizes the comparative and international study of political institutions as instruments of collective decision-making and action. This area of inquiry focuses on the state and on transnational, subnational, and regional political institutions. In this area, we emphasize historical patterns of institutional development in

relation to domestic political conflict and the changing contours of international political economy and patterns of conflict and cooperation among states.

Political Economy. Focuses on the relationship between states, markets, and societies. This area of inquiry explores the various understandings of political economy that have emerged within a number of different theoretical perspectives, including Marxism, realism, and liberalism. At subnational, national, and supranational levels, this area seeks to understand political economy outcomes as the result of the mutual interactions between political institutions, societal interests, and ideas and norms.

Political and Social Forces. Concerns the interaction of social forces and political forces, drawing upon the work of scholars focused on social mobilizations and histories. Accordingly, this area of inquiry focuses on the articulation and organization of political interest and identities. This area studies the mutual interaction of these interests and identities with structure (states, discourses, public policy, and the law) uniting substantive and theoretical concerns across regional, national, and global politics.

The politics graduate curriculum works critically upon and within conventional social science research and also ranges beyond its methods, drawing upon cultural studies, historical sociology, and history as they inform the study of politics. Students in the politics graduate program also work with faculty in other distinguished departments at UCSC, including literature, history of consciousness, history, Latin American and Latino studies, environmental studies, philosophy, international economics, and feminist studies.

Scholars and students in the program emphasize the articulation of important questions prior to the development of methods for grappling with them, while recognizing the importance of appropriate methodological tools for doing meaningful political research.

Teaching

Throughout its history, the department has been strongly committed to undergraduate teaching. The graduate program offers graduate students the opportunity to work closely with faculty and undergraduates as teaching assistants. The Politics Department's faculty is committed to "the teaching of teaching": its training of college educators emphasizes the importance of civic education in undergraduate instruction.

See our web site, <http://politics.ucsc.edu>, for details about the policies for admission to graduate standing as well as the application, and information about financial-support opportunities. For more information, refer to the Graduate Division web site.

Ph.D. Program Requirements

The graduate curriculum in politics includes seven stages: 1) three core seminars plus Politics 201, *Logics of Inquiry*; 2) five other graduate-level Politics Department courses; 3) three additional graduate-level courses that may be from politics or other departments, along with further training as appropriate in language and methodology; 4) teaching assistant seminar and graduate colloquia; 5) a qualifying examination consisting of written and oral parts; 6) the research and writing of the dissertation; and 7) its oral defense.

Note: Please check with the department office for updated listings of course offerings and the appropriate year in which to undertake specific electives.

Designated Emphasis

We also offer a Designated Emphasis in Politics for graduate students of other UCSC programs. This notation recognizes the scholarly expertise obtained after completion of the designated emphasis requirements.

M.A. Degree

Our program is intended to lead to a Ph.D. in politics; there is no separate master of arts (M.A.) program. All curricular requirements are aimed at preparing students for timely and successful completion of a doctoral dissertation. However, all students will be eligible to receive an M.A. upon successfully passing the coursework requirements and completing an acceptable 30-page, journal-quality paper, either within the context of a course or independently, although not the written qualifying exam.

Department of Languages and Applied Linguistics

218 Cowell College

(831) 459-2054

<http://language.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

Students interested in acquiring proficiency in Portuguese may choose to enroll in either of two accelerated introductory tracks: courses 1A–B are designed as a two-quarter sequence for students who have no previous experience with the Romance languages; courses 60A–B comprise a two-quarter sequence designed for students who have a strong background in the Romance languages (typically Spanish) or some previous rudimentary knowledge of Portuguese. Both tracks are accelerated. A second-year Portuguese sequence, also accelerated (courses 65A–B), follows the first-year sequence, and is offered over two quarters. The completion of this sequence fulfills the two-year language requirement for study abroad programs.

The program is aimed at enabling students to gain proficiency in listening comprehension, speaking, reading, and writing. Instruction takes place in Portuguese from the beginning and draws heavily on Brazilian culture through popular music and cinema.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Department of Languages and Applied Linguistics](#).

Study Abroad

Students may apply to spend time either in Rio de Janeiro, Brazil or in Salvador (Bahia) through the Office of International Education (OIE). Courses taken abroad can, with approval of an adviser, be applied to major requirements. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>. For information on credit applied to a major, contact the appropriate department.

Psychology

2014–15 General Catalog

273 Social Sciences 2 Building

(831) 459–2002

<http://psychology.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

Psychology majors at UCSC are introduced to theory and scientific research in the field. Students begin with lower-division courses that include introductory psychology, precalculus, statistics, and introduction to developmental psychology. Majors take a total of eight upper-division courses. These include Psychology 100, Research Methods in Psychology; six courses in the four areas of psychology—developmental, cognitive, social, and personality psychology; and one upper-division course outside the major from an approved list.

Cognitive psychology focuses on topics such as perception; brain and behavior; motor control; learning and memory; thinking, feeling, and emotions; psycholinguistics; and computational modeling. Our cognitive psychologists extend traditional boundaries in the study of cognition to encompass bodies, physical environments, sociocultural contexts, and information technologies. Social psychology addresses topics such as persuasion and influence, motivation, group processes, intergroup relations, psychology and law, and social justice. Developmental psychology is concerned with processes of cognitive, language, social, emotional, and personality development across the life span. Additionally, both developmental and social psychology are concerned with issues of diversity including ethnicity, culture, gender, income, and family structure. Personality psychology focuses on person-centered processes including attachment, life stories, and adjustment.

In addition to the general psychology major, an intensive major (described below) is also available. The department also administers a major in cognitive science (see separate listing in this catalog under cognitive science). Students primarily interested in clinical and counseling psychology should realize that training in these areas does not occur at the undergraduate level but requires professional training through an advanced degree. UCSC does not offer advanced degrees in clinical or counseling psychology.

Students are encouraged to carry out research projects. Interested psychology majors will find research opportunities in courses, as research assistants in faculty members' research programs, or through faculty-sponsored independent study. This research may be carried out in specialized research laboratories or in the field. Students usually join an ongoing project in which a faculty member is engaged. Students who are especially interested in a career involving empirical research should become involved in a professor's ongoing research by their junior year. Some recent research topics include "Learning in Infancy," "Parent-Child Conversations," "Reading Aloud," "Learning About Psychology Through

Conversation,” “Complexities of Privilege,” and “Program Evaluation of Biophysics Course.”

Preparation for the Major

Students interested in pursuing the psychology major should complete Psychology 1, 2, and the precalculus mathematics requirement. Psychology 1 and 2 should be taken for a letter grade. After completing these three lower-division required courses, students may petition to declare the psychology major subject to the grade requirement described in the Qualification to the Major section below.

High school students considering psychology as their university major find that the best preparation is a solid general education in English writing, mathematics at least through precalculus, biological and physical sciences, and social sciences.

Transfer Students

Junior transfer students should express an interest in psychology on their UCSC application for admission.

It is expected that prospective transfer students will have completed most, if not all, of the lower-division requirements. The lower-division requirements include Psychology 1, 2, 10, and AMS 2 or 6 (or equivalent). The psychology faculty recommends that all lower-division requirements be completed by the end of the sophomore year. In order to declare the major, transfer students must meet the grade requirement described in the Qualification to the Major section below.

Students who want to fulfill requirements with courses taken at other colleges must petition for the substitution of their transfer courses at an orientation session or at an appointment with the department adviser. Psychology 100, Research Methods in Psychology, must be taken at UCSC. Students planning to transfer to UCSC should check with the advising office of their present college, or refer to www.assist.org.

Transfer students are strongly encouraged to speak with an academic adviser at the Psychology Department office prior to enrolling in classes in order to determine their status and begin the actual declaration of major process.

General Psychology Major

Twelve courses are required for the general major: four lower-division courses in preparation for the major and eight upper-division courses. The lower-division courses are prerequisites for virtually all of the upper-division courses and should be completed as early as possible, or by the end of the sophomore year. Some upper-division courses have additional prerequisites.

Lower-Division Requirements

Psychology

- 1 Introduction to Psychology (or equivalent)
- 2 Introduction to Psychological Statistics (or equivalent, including Applied Mathematics and Statistics 5 or 7/L)
- 10 Introduction to Developmental Psychology

Applied Mathematics and Statistics 2 or 6, Precalculus for Statistics (or equivalent, including Applied Mathematics and Statistics 2 or 3 or 6 or Mathematics 3 or 4 or 11A)

Psychology 20, 40, and 60 are strongly recommended.

Upper-Division Requirements

Students must complete at least eight upper-division courses (a minimum of 42 credits), including appropriate substitutions noted below. The courses include Psychology 100, Research Methods in Psychology; two courses from each of any two of the following subfields; one course from the remaining two subfields; and one course from outside the major.

Psychology 100, Research Methods in Psychology

[Faculty](#)

[Course Descriptions](#)

[Teaching and Administrative Staff](#)

[Appendixes](#)

[Archive of General Catalogs](#)

[Nondiscrimination Statement](#)

[Search the Catalog](#)

Developmental (courses numbered 101–119)

Cognitive (courses numbered 120–139)

Social (courses numbered 140–159)

Personality (courses numbered 160–179)

Upper-division courses and their catalog descriptions are grouped within each of the subfields. At least one upper-division seminar course must be completed; these courses are identified within their catalog description by the phrase “satisfies seminar requirement.” No more than two psychology courses numbered 183, 191A, 193, 194, and 195 may be used toward the upper-division requirements; however, these courses cannot be substituted for 101–179 courses in the same subfield as each other, or in a subfield in which the student has not taken a course in the 101–179 series. The eighth upper-division requirement must be a five-unit UCSC course outside of psychology chosen from a list of courses approved by the department. These lists of approved non-psychology courses are posted on the Psychology Department web site. At least six of the eight courses (including Psychology 100, Research Methods in Psychology, must be taken through the psychology program at UCSC, not transferred from elsewhere. After all substitutions have been made, students must satisfy the fundamental requirement that they take at least one upper-division UCSC psychology course from each of the four subfields.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in psychology is satisfied by completing Psychology 100, Research Methods in Psychology, and a seminar. Seminar courses are designated in the campus catalog with the text “satisfies seminar requirement.”

Program Planning Notes

Because some upper-division courses have additional prerequisites, students should read the descriptions of the upper-division courses carefully, noting the prerequisites for courses of interest to them.

Psychology Major Planners

Following are two recommended academic plans for students to complete during their first two years as preparation for the psychology major. Plan One is a suggested guideline for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major or who need more preparation. Students should note that Applied Mathematics and Statistics 2 or 6 is a requirement for the major and is a prerequisite for Psychology 2 and Psychology 100. Courses 20, 40, and 60 are recommended electives and are prerequisites for some upper-division psychology courses.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	AMS 2 or 6	PSYC 2	PSYC 10
	PSYC 1	PSYC 40 (recommended)	PSYC 60 (recommended)
2nd (soph)	PSYC 100	(Begin upper-division coursework)	
	PSYC 20 (recommended)		

Plan Two

Year	Fall	Winter	Spring
1st (frsh)	MATH 2		PSYC 1
2nd (soph)	PSYC 40	PSYC 2	PSYC 10
	AMS 2 or 6		PSYC 60
3rd (jr)	PSYC 100	(Begin upper-division coursework)	

The Intensive Psychology Major

The intensive major is an option that any psychology major may choose to undertake. The intensive major would be advantageous for a student intending to go on to a graduate program in any area of psychology. Students intending to take the intensive major should declare this on their proposed study plan during the junior year, outlining their plan for completing the requirements. The intensive major requires 18 courses.

Requirements for the Intensive Major

Lower-Division Requirements

Psychology 1 Introduction to Psychology (or equivalent)

Psychology 2 Introduction to Psychological Statistics (or equivalent, including Applied Mathematics and Statistics 5 or 7/L)

Psychology 10 Introduction to Developmental Psychology

Applied Mathematics and Statistics 2 or 6 Precalculus for Statistics (or equivalent, including Applied Mathematics and Statistics 3, or Mathematics 3 or 4 or 11/A)

Upper-Division Requirements

Fourteen upper-division courses are required for the intensive major. These courses must include Psychology 100 and two courses from each of the following four subfields, one of which must be a seminar:

Developmental (courses numbered 102-119)

Cognitive (courses numbered 120-139)

Social (courses numbered 140-159)

Personality (courses numbered 160-179)

No more than two psychology courses numbered 183, 191A or 193, may be used toward the upper-division requirements; however, these courses cannot be substituted for 101-179 courses in the same subfield as each other, or in a subfield in which the student has not taken a course in the 101-179 series.

Psychology 181, Psychological Data Analysis, Psychology 182, Advanced Research Methods, or an equivalent course approved by the department

Two quarters of Psychology 194, Advanced Research or 195, Senior Thesis

Two upper-division courses from one or more related areas outside of psychology from lists of courses pre-approved by the Psychology Department and posted on the department's web site, <http://psychology.ucsc.edu>. These two courses will not count toward the nine upper-division requirements listed above. (These courses may not include psychology courses cross-listed with other programs or taught by psychology faculty.) These courses also cannot be counted twice in cases of double majors or minors.

Cognitive Science Major

The Psychology Department is the administrative home for the cognitive science major. Requirements for the cognitive science major may be reviewed under its separate entry in this catalog.

Qualification to the Major

Students may petition to declare the psychology major once they have completed three lower-division courses: the mathematics requirement, Psychology 1, and Psychology 2 (or Applied Mathematics and Statistics 5 or 7/L). To be admitted to the major, students must demonstrate the attainment of foundational skills by receiving a grade of at least B- in (a) Psychology 1 and (b) Psychology 2 (or Applied Mathematics and Statistics 5 or 7/L). Students who pass these courses but do not achieve the required level of proficiency (i.e., who receive a grade of C, C+, or P) have alternative means of demonstrating foundational skills by: (a) completing Psychology 10 with a grade of B- or higher if the student did not receive a B- or higher in Psychology 1; (b) completing Applied Mathematics and Statistics 5 or 7/L with a grade of B- or higher if the student did not receive a B- or higher in Psychology 2; or (c) completing Psychology 2 with a grade of B- or higher if the student did not receive a grade of B- or higher in Applied Mathematics and Statistics 5 or 7/L.

Every student who satisfies qualification to the major and who petitions to declare the major by the declaration deadline will be admitted to the major. Students who satisfy the qualification to the major but who petition to declare the major after the deadline will be considered on a case-by-case basis for admission to the major; admission is not guaranteed. Students who did not satisfy the major admission requirements but believe that there are extenuating circumstances concerning their performance in the foundational courses may file a written appeal describing these circumstances; however, such appeals are rarely granted.

Comprehensive Requirement

UCSC requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Psychology students will satisfy this requirement by receiving a passing grade in one of our seminars. Passing a seminar course is also required for the major. Courses that meet this requirement are designated as seminars in the campus catalog as "satisfies seminar requirement."

Academic Advising

Students are encouraged to approach faculty in their area of interest for further advising no later than the first quarter of their junior year to discuss an upper-division program of study and to plan for graduate training in psychology. As a supplement to academic advising offered by faculty members, the Psychology Department has an advising office located at 273 Social Sciences 2 Building, (831) 459-2002. The adviser assists students in obtaining information regarding major requirements and petitions, course planning, substitution of transfer courses for advance enrollment, careers, and graduate schools. Students are encouraged to take advantage of the advising office throughout their college career.

Senior Thesis

Students with adequate substantive and methodological preparation and a consistent record of strong academic performance may be eligible to apply to write a senior thesis. Students should initiate plans for a thesis no later than the first quarter of their senior year. Most faculty prefer to sponsor senior theses that are integrated with faculty research, so students are encouraged to talk with faculty before choosing a senior thesis topic. Information and applications are available in the department office, 273 Social Sciences 2.

Honors

Honors in the psychology major are awarded to graduating seniors whose academic performance is consistently excellent (i.e., GPA in psychology courses is 3.6 or higher) by a committee of psychology faculty. Highest honors in the major are reserved for students with consistently excellent academic performance and an honors-level senior thesis.

Psychology Field–Study Program

The Psychology Field–Study Program provides qualified students an opportunity to apply classroom learning to direct experience in a community agency. Each year about 200 students develop new skills and clarify personal and professional goals by working as interns in schools, corporations, law enforcement agencies, research organizations, mental health services, and other social service agencies where they are supervised by professionals. Psychology faculty members sponsor the students' field study helping them to integrate their field experience with course work and guiding them in related academic projects.

The two–quarter program is open to junior and senior psychology majors who must apply at least one quarter in advance. There are information meetings and individual meetings to help students develop a learning plan, select a placement, and choose an academic project. Application information is included in the information meetings.

Graduate Program

The psychology program offers three areas of specialization leading to the doctoral degree: cognitive, developmental, and social psychology. The program does not offer courses, training, or supervision in clinical psychology. The program prepares students for research, teaching, and administrative positions in colleges and universities as well as for positions in schools, government, and other public and private institutions. Each student is primarily associated with one of the three research areas and participates in the courses and research forums sponsored by the faculty in that area. The program requires full–time enrollment as a graduate student. Although applicants for a master's degree are not accepted, students in the doctor of philosophy (Ph.D.) program may obtain a master of science (M.S.) degree by fulfilling specific requirements.

The cognitive graduate program focuses on "Minds, Brains, and Beyond," offering a blend of traditional topics and new directions in cognitive science. With core strengths in language, memory, and perception, we are exploring topics such as: faces, speech, body movements, and embodied cognition; how forgetting helps memory; metaphors and analogies; cognitive aesthetics; natural language use in conversation; cognition and technology; human performance and information processing. Our graduates find careers in academia, tech industries, and more.

Graduate work in developmental psychology addresses the integration of individual, interpersonal, and cultural processes of development. Our faculty study these developmental processes in diverse communities and institutions, including families, peer groups, schools, museums, and close relationships. We use a mixture of quantitative and qualitative methods. Some research interests of the faculty include: learning by observing, overhearing, and participating; infants' and children's cognitive and language development; conversation, narrative, and memory sharing; academic achievement and career aspirations; family/peer/school links; gender development and discrimination; development of personal and social identities; intergroup relations; ethnicity, culture, and development; social policy and educational practice.

The social psychology graduate program at UCSC has a unique mission and focus. We use Kurt Lewin's model of "full–cycle" social psychology (theory–application–action) to study a broad range of topics related to social justice. In this way, knowledge gained in action–oriented research leads, in turn, to the development of new theory. Accordingly, our students learn to apply psychological theories and data to the analysis and solution of a wide range of social problems. We use a variety of research methods to examine justice–related issues in different cultural, political, and policy contexts. Our students are trained in laboratory, field, and survey methods; they are encouraged to attend to issues of race, class, sexuality, ethnicity, gender, and physical ableness; and, in addition to traditional social psychological approaches, are steeped in critical theoretical perspectives such as feminist theory. Our graduates go on to successful careers in academia as well as in community, government, and non–profit settings. Our approach to research and training, combined with the quality and competencies of our faculty, make our program among the nation's best for the psychological study of social justice issues. Current faculty research interests include aggression and trauma; educational access; feminisms; institutional analysis; intersectionality; narrative and identity; political conflict, violence, and peace–

building; political psychology; poverty and economic justice; power and oppression; psychology and law; sexual identity and society; sexuality; social identity; social policy analysis; and structural inequality.

Graduate students in psychology may obtain a designated emphasis on the psychology Ph.D. diploma indicating that they have specialized in feminist studies and/or Latino American and Latino Studies (LALS) if they meet requirements spelled out by a committee composed of psychology and feminist studies faculty, or psychology and LALS faculty.

Details on the policies for admission to graduate standing and requirements for the Ph.D. degree, as well as the online application can be found on the Division of Graduate Studies web site. The department's graduate program brochure, and faculty research are available on the department web site.

Students enrolled in the psychology graduate program will complete a first-year and second-year research project. All graduate students must enroll and participate in the colloquium series each quarter (Psychology 230 for cognitive, Psychology 242 for developmental, and Psychology 231 for social). First-year students must take two courses in statistics (Psychology 204 and Psychology 214A) and a two-quarter proseminar sequence during fall and winter quarters. (Psychology 224A and 224B for cognitive, Psychology 244A and 244B for developmental, and Psychology 211A and 211B for social.) Students are also required to serve as a teaching assistant for at least two courses during their graduate career (one of which must be Psychology 10 for developmental and Psychology 40 for social).

Additional requirements for the cognitive area include: three advanced cognitive graduate courses, a graduate course in developmental psychology, a graduate course in social psychology, and a substantive advanced course in a discipline other than psychology.

Additional requirements for the developmental area include: Psychology 225A, Psychology 225B, Psychology 246, one other advanced developmental graduate seminar course, a graduate course in cognitive psychology, a graduate course in social psychology, and a substantive advanced course in a discipline other than psychology. Developmental graduate students are also required to complete a professional practicum between the end of their second year and end of their third year.

Additional requirements for the social area include: Psychology 210, Psychology 248, Psychology 249 or Psychology 261, one other advanced social graduate seminar, a graduate course in cognitive psychology, a graduate course in developmental psychology, and a substantive advanced course in a discipline other than psychology.

Students are required to take their graduate courses as Satisfactory/Unsatisfactory.

After satisfying the formal course and research requirements, psychology graduate students must take an oral examination to qualify as a candidate for the Ph.D., ideally by the end of their third year. The qualifying examination is intended to assess a student's knowledge of psychology and competence to conduct the dissertation research. For the qualifying examination, students write a major paper that reflects a conceptual analysis of their main research area, prepare a list of readings representative of their expertise in three areas of psychology, and satisfactorily complete an oral qualifying examination.

Within a year of advancing to candidacy, students will prepare a written dissertation proposal that should demonstrate the student's in-depth knowledge of some research topic, along with a detailed outline of the empirical research to be conducted for the dissertation. The student's dissertation committee reviews the proposal, and the student will orally defend the proposal for approval by the committee. After the final draft of the dissertation has been completed and submitted to the faculty committee members, students must defend their thesis in an oral exam.

The Ph.D. degree is awarded upon successful completion and submission of the dissertation.

416 Humanities 1
 (831) 459–2461 or 459–2757
fmst@ucsc.edu
<http://qss.ucsc.edu/>

Program Description

Scholarship pertaining to the critical study of gender and sexuality can be found across a broad range of departments at UCSC. This presence is manifested in a diverse faculty, in course offerings, and in research programs. Courses with queer content can be found across a broad range of departments, programs, and colleges at UCSC.

For more specialization, departments such as Feminist Studies and Literature have sufficient flexibility to allow students to design a course of study within those majors to explore these interests. For students who prefer to take a more self-directed approach, there is the option of designing an individual major.

Research activities are sponsored by the Queer Theory research cluster (a part of the Center for Cultural Studies), the Queer and Sexuality Studies Working Group, and many campus departments and student organizations.

The Lionel Cantú GLBTI Resource Center serves as a clearinghouse for queer activities on the UCSC campus. Each quarter, the center prepares a list of all course offerings with queer content. Information is available at <http://queer.ucsc.edu> or via e-mail at queer@ucsc.edu.

More information may be obtained from members of the faculty working group: Anjali Arondekar (Feminist Studies), Carla Freccero (Literature, Feminist Studies, History of Consciousness), Irene Gustafson (Film and Digital Media), Marcia Ochoa (Feminist Studies), B. Ruby Rich (Film and Digital Media). Additional faculty contacts: Julie Bettie (Sociology), Benjamin Carson (Music), Sheila Crane (History of Art and Visual Culture), Jody Greene (Literature, Feminist Studies), Herbert Lee (Applied Mathematics and Statistics), Peter Limbrick (Film and Digital Media), Catherine S. Ramírez (Latin American and Latino Studies), Jenny Reardon (Sociology), Lisa Rofel (Anthropology), Danny Scheie (Theater Arts), Daniel Selden (Literature), Elizabeth Stephens (Art).

Please contact Anjali Arondekar in the department of Feminist Studies in the Humanities Division (arondek@ucsc.edu) for information about course offerings and resources.

Religious Studies

2014–15 General Catalog

Program Statement

Religious studies is not a separate program at UCSC, but students interested in the study of religion can select a degree plan from several majors and complement the requirements from a broad array of courses that focus on religion. Majors particularly appropriate for the study of religion at UCSC include the following: anthropology, history, history of art and visual culture, literature, and philosophy. The Department of History of Art and Visual Culture offers a [concentration in religion and visual culture](#).

Students interested in the study of religion may build an independent program of study by fulfilling the requirements of one of the majors listed above and, under the guidance of a member of the faculty, use elective courses to develop a concentration of study appropriate to their interests and needs. One of the following faculty should be contacted to discuss a course of study in religion at UCSC: [Murray Baumgarten](#) (literature), [Raoul Birnbaum](#) (history of art and visual culture), [Susan Harding](#) (anthropology), [Ralph Quinn](#) (psychology), [Triloki N. Pandey](#) (anthropology), [Cynthia Polecristi](#) (history), and [Marilyn Westerkamp](#) (history).

Students seeking information on an individual major in religious studies should contact their college academic preceptor.

Science Communication

2014–15 General Catalog

Kresge Annex A

(831) 459–4475

<http://scicom.ucsc.edu>Faculty | [Course Descriptions](#)

Program Description

The Science Communication (SCIC) Program is a graduate certificate program composed of one track: science writing. Students combine a background in scientific research with a desire to communicate science to the general public. The program focuses on the practice of conceiving, reporting, writing, and editing articles on scientific, medical, environmental, and technological subjects for newspapers and magazines, online news outlets, universities and federal agencies, and special publications directed at general readers. The program in science writing offers intensive training in news, features, multimedia storytelling, profiles and essays, and investigative reporting. Graduates receive a certificate in science writing.

Graduate Certificate in Science Writing

The program accepts 10 students per year. Enrollment in science writing classes is strictly limited to students enrolled in the program. The program consists of one academic year of full-time study, beginning in fall quarter, followed by a full-time summer internship lasting a minimum of 10 weeks. *Science Notes*, the UCSC online science magazine, is produced annually by the graduate students. Please see the current issue and an archive of past issues on our web site, <http://scicom.ucsc.edu/>.

The program consists of a required sequence of six courses covering the main skills of professional journalism: SCIC 201A, Reporting and Writing Science News; SCIC 201B: The Science Feature; SCI 201C: Profile and Essay Writing; SCIC 201D: Policy and Investigative Reporting; SCIC 201E: Multimedia Science News; and SCIC 202: Writing and Editing Workshop. Assignments in each course are overseen by practicing journalists and editors, and many course projects are published regionally and nationally. In addition, students must complete at least two part-time writing and reporting internships during the academic year at media organizations and news offices, through formal arrangements overseen by the Science Communication Program. The six required courses, plus two course-equivalent internships, constitute the eight courses (40 units) required for the graduate certificate. The final requirement is a full-time professional internship in science journalism or public outreach at a venue approved by the program director, for a minimum of 10 weeks.

Admission to the Science Writing Graduate Program

Students who have an intimate acquaintance with the theory and practice of science, an

aptitude for writing, and a strong desire to communicate science to the general public are ideal candidates for the program. All applicants must have a prior degree in science or engineering (B.S./B.A., M.S., or Ph.D.) to be eligible. Other admission requirements are: full-time research experience of at least six months duration; official Graduate Record Exam (GRE) General Test scores; and at least three references from faculty or supervisors familiar with the applicant's research and communications skills. Applications and instructions can be found online through the UCSC Graduate Division web site at <http://graddiv.ucsc.edu>.

Further Information

Details about the science writing graduate certificate program may be obtained from the Science Communication Program office, the web site, or by sending e-mail to scicom@ucsc.edu.

Program Description

This is a crucial time for the documentary, as traditional sources of journalistic investigation and reporting are dwindling, untested opinions dominate the Internet, veracity is under constant attack, and audiences increasingly must search hard to find reliable perspectives on the world. It is at this moment that the Social Documentation (SocDoc) program has come into being to train the next generation of documentarians in creative and scholarly approaches to experience, representation, and argument. Founded in 2005, the SocDoc program at UCSC taps faculty across the campus to provide students with access to expertise and crosses traditional disciplinary lines in an effort to ground master of arts (M.A.) students in the deepest understanding of subject as well as medium. SocDoc has emerged as an exciting new center of gravity for an innovative new discipline. Our students have earned grants and awards for their thesis documentaries, produced around the globe, in film/video, photography, other digital media, and a range of documentary styles. We don't just tell a story; our students go beyond the story to place individuals in context and struggles in history, deepening the public's understanding of the societies in which we live and with which we connect.

The UCSC Social Documentation (housed in the Film and Digital Media Department) program is a two-year, full-time, graduate-level program leading to an M.A. degree. The program offers students a chance to develop expertise in the understanding and production of social documentaries in film/video, multimedia, photography, new digital media. Students may also work in other documentary mediums related to faculty expertise. Students learn how to translate various scholarly interpretations of social life into effective, accessible, and professional quality media projects.

Upon completion of the program, master of arts degree holders will be qualified to enter documentary-related professions such as documentary directing, producing, or editing. Degree holders may work within industries such as public broadcasting, or in the documentary field, as independent producers and artists, or for archival centers or museums or within organizations committed to issues for which documentaries can advance understanding and change. Degree holders may also choose to pursue a doctor of philosophy (Ph.D.) degree in related fields in the arts, humanities, or social sciences.

The program is designed to provide opportunities for the graduate student who is actively committed to social justice to work on a full-time basis beyond the boundaries of the university. Master of arts candidates build a curriculum around a required set of core

courses that offer a foundation in the theory and practice of social documentary, elective courses in their substantive area of interest, and the creation of a two-year documentary project that is the final requirement for the degree. Courses and faculty expertise are related to social justice in terms of broad structural and social changes and community-based organizing. Documentaries in the program have called attention to a range of under-recognized communities, problems, and structural inadequacies.

Objectives

The Social Documentation program aims to train its graduates in critical thinking and the use of visual, audio, electronic, and print media, as well as historic presentations and ethnographies, dedicated to the documentation of underrepresented areas of community life. The curriculum concentrates on the analysis of social problems, the creation of a critical approach to the collection and presentation of documentary material, and on the role of effective documentary in social change. For the master's degree, students produce projects of their own: documentaries in film or video; photographic essays (in book, gallery, or cross-platform presentations); multimedia and audio productions; and Internet or other web-platform projects.

Special features of the program include its focus on the study of "ordinary life" and its emphasis on training students to produce original social analysis in broadly representational forms. The course of study includes training in the techniques of appropriate media and systems of representation. The unique emphasis of the Social Documentation program, however, is the acquisition of a level of academic rigor in the chosen subject of focus, an insistence on humanities and social scientific methodologies, a reliance on an ethical process of production that takes its subjects into full account, and a commitment to research in the development of material for extra-academic uses and audiences. Broadcast and theatrical media have increasingly recognized the importance of ancillary distribution through partnerships with pertinent communities of interest, just as the Internet is increasingly utilized for added depth and community interaction on issues. The Social Documentation program aims to prepare documentarians for newly evolving social media landscapes. At the same time, students receive training in the basic theories of social documentation with the aim of applying these theories to the analysis, prioritization, and solution of social problems.

Graduates are expected to generate work that will have an impact on the world outside the academy and to develop an understanding of documentary practices as well as social codes that can form a foundation for future work in their targeted subject area and arena of practice. The master's project, which constitutes the culmination of the two years of study, is to be given a public exhibition or reading, and becomes the springboard for continuing work after graduation.

Requirements

The Social Documentation program has a required core curriculum around which students develop a plan of study. Each student has two advisers, one for creative guidance and the other for topical expertise, who will be involved in designing each student's study and project plans. Full-time enrollment is required.

A total of 72 credits is required to complete the master's degree in social documentation, comprising a combination of seminars on social documentary and social science research designed specifically for the SocDoc students, other courses on campus selected by students individually on the basis of relevance to the proposed project, and cohort courses focused on conceptualizing, executing, and completing the students' social documentary master's projects. There are eight required core courses.

Required courses for the first year are as follows:

- 200 Approaches to Social Documentary
- 202 Practice of Social Documentary
- 208 Social Science Research and Social Representation
- 270 Project Planning

- Queer and Sexuality Studies
- Religious Studies
- Russian
- Science Communication
- Social Documentation >
- Social Sciences
- Sociology
- Spanish and Spanish for Heritage Speakers
- Spanish Studies
- Stevenson College
- Sustainability Studies
- Technology and Information Management
- Theater Arts
- UCDC Program
- Writing Program
- Yiddish

Required courses for the second year:

- 204 Ways of Seeing and Hearing
- 294A Production, Analysis, Editing
- 294B Production, Analysis, Editing
- 294C Production, Analysis, Editing

In addition to these mandatory courses, an additional 32 credits must be secured through electives as identified on an individual basis, offered by other departments, or through independent study classes with or approved by faculty advisers.

To satisfy requirements for the master of arts degree, a student must complete the first year of required courses and electives. By the end of the first year, before summer quarter begins, students will have completed a proposal for their documentary project, which will be the basis for a required oral qualifying examination conducted by the graduate director and faculty advisers. This proposal will include a description of the subject to be documented, a treatment or narrative outline, a work plan including budget and timeline, and a preliminary annotated bibliography and filmography/videography of related works. Approval of the written proposal and satisfactory completion of the qualifying examination is a prerequisite for advancement to further coursework or fieldwork on the master's project. The successful qualifying examination proposal should address the following questions:

- What is the story to be told?
- What is the stylistic approach?
- What is the social analysis that will guide, inform, and underwrite the story?
- How will that analysis be represented in the documentary?
- What kinds of evidence will be generated to persuade the audience that the analysis is accurate?
- How will the documentary use social analysis to make the personal political: how will it move from analysis to critique?

The second year is focused on the final documentary project required for completion of the master's degree. This project must reflect original research and creative activity while demonstrating a command of related previous work by others. With an understanding of budgetary, equipment, and time limitations, students' electronic, digital, and photographic or other projects should reflect a level of quality appropriate for publication, exhibition, or broadcast (including digital/web-cast).

Typically, the expectation in each medium is as follows:

Documentary Film/Video. One 20- to 30-minute documentary suitable for professional distribution and public exhibition.

Documentary Photography. One major exhibition on or off campus with a minimum of 10-20 images with text, and/or a 10-minute multimedia presentation and/or a publication-ready book of photographs and essay(s).

Online/Digital Platform Projects. To be clarified with program chair and advisers, given the evolving nature of this field.

Audio Documentary/Sound Recording. One 20-30-minute documentary suitable for radio broadcast or museum/public installation.

The final examination consists of the public presentation of the project.

In addition, every project must be accompanied by a written essay describing its relationship to its field and must document its research via field notes, bibliographies, archival searches, filmographies, videographies, and photography searches.

All materials will be filed in digital form and archived for future reference and access. All final projects, in every medium, must be submitted in the formats specified by the program

chair.

Goals for Social Documentation Graduates

The Social Documentation program prepares graduates with critical skills and professional tools well suited to careers in the evolving fields of documentary media in the private and public sectors, for collaboration on community-based projects, for a range of activities geared to the analysis and documentation of sociopolitical issues, and for work with private and public organizations in need of media expertise and analysis. It is expected that students will make careers in the nonprofit fields evolving to link social justice organizations with media outlets, as well as in a range of public campaigns and initiatives. They will also be well equipped to function as independent documentarians working on behalf of social change within the expanding sectors of media production and representational intervention.

Also, given the emphasis on the histories of the social documentary and on developing methods suitable for contemporary challenges, many graduates are likely to enter the field of education on a part- or full-time basis. The Social Documentation program's teaching assistant (TA) training program, in conjunction with the Film and Digital Media Department, provides graduates with the preparation necessary to exercise pedagogical options.

Designated Emphasis

UC Santa Cruz graduate students enrolled in doctoral programs may obtain a designated emphasis in social documentation as part of their Ph.D. degree. Students must meet the following requirements in order to obtain the designated emphasis:

- Secure approval from a member of the Social Documentation Program core faculty to serve as the adviser for the Designated Emphasis.
- Have one core faculty member from the Social Documentation core faculty serve on the student's qualifying examination committee or dissertation committee.
- Submit a significant piece of documentary work that demonstrates competence in the field of social documentation. This project could consist of a digital video or photography project, or possibly an audio or web-based piece, focused on the student's area of study and thus constituting a parallel investigation into the subject of the Ph.D. dissertation. In certain circumstances, a documentary project on a subject other than the dissertation could be approved, but generally that would not be the case. The submitted project must meet the approval of the student's social documentation advisor.
- Successfully complete four graduate courses within the Social Documentation Program curriculum. The courses must be pre-approved by the student's designated emphasis advisor. In most cases, these courses would include 200, 202, and two others, but may be adapted to fit the needs of particular students.

Program Description

The Division of Social Sciences focuses on the study of human relationships and society. As global economic and political changes transform the world around us, social scientists help us meet the challenges and opportunities of the 21st century.

Our eight departments offer more than 30 undergraduate and graduate degree programs, including many that are interdisciplinary collaborations. Our faculty members conduct leading-edge research in their fields, frequently working with students in research clusters linking departments to our research centers. We also offer extensive opportunities for experiential learning through field studies.

Our research, teaching, and state-of-the-art facilities provide students with a comprehensive and rigorous education that prepares them for productive careers and further academic pursuits. For more information on the division, see our web site at:

Sociology

[2014–15 General Catalog](#)

226 College Eight

(831) 459–4306

<http://sociology.ucsc.edu>[Faculty](#) | [Course Descriptions](#)

Program Description

Sociology is the study of social interactions among individuals and social groups. More specifically, sociologists examine the cultural, ideological, economic and political contexts of human action including the processes whereby social institutions are created, maintained, and transformed.

Sociology was born as an intellectual response to the democratic and industrial revolutions that ushered in the modern era. As such, it considers how society is organized in relationship to a vision of a just, free, and equal society—a vision that may require fundamental social change. Developing an understanding of both social change and social justice as part of the sociological tradition is one of the teaching goals of sociologists at UCSC. In the process, we expect to develop in students an appreciation for the craft of social science: disciplined inquiry, observation, and research as part of informed global citizenship.

Sociology faculty members are engaged in research on a wide range of topics, such as medicine and technology; labor studies; the intersection of class, race, gender and sexualities; environmental sociology; sociology of emotion and affect; queer studies; the cultural politics of sex work; globalization and international development; black cultural politics; Latino and Chicano studies; the politicization of religion; drugs in society; global inequality, crime, and deviance; international law; legal institutions; sustainability; popular culture and cultural studies; media studies; urban studies; political economy; critical ethnography; discourse and conversational analysis; identities and identity changes; and social movements. Sociology faculty use a number of approaches and methods, including ethnography, comparative and historical analysis, conversational and discourse analysis, qualitative interviews, and survey research.

Because of the interdisciplinary emphasis among sociology faculty, undergraduates find the department amenable for double majors and minors, and non-majors find many sociology courses of interest. In recent years, students have conducted independent studies and written senior theses on a variety of subjects including the social construction of gender, emerging professions in health care, utopian communities, human development in Costa Rica, mass communication, the social effects of war, family violence, sustainable development in Bolivia, sanitation in Kenya and Haiti, street children in India, African soccer players in Europe, gay and lesbian families, Latino educational success, and cross-cultural family welfare policies.

The sociology major at UCSC is a rigorous program of study that retains enough flexibility to accommodate students with diverse career goals and plans. It ensures that all students are trained in the main theoretical and methodological traditions of sociology, yet permits considerable variation in students' own areas of specialization. The major provides the necessary intellectual foundation for students who are considering graduate studies in sociology and related social sciences. It also can be used as preparation for careers in fields as diverse as law, social work, management, environmental planning, public service, education, health services, journalism, and counseling. Finally, the sociology major can provide a general liberal education for undergraduates interested in the study of contemporary society and social problems.

Global Information and Social Enterprise Studies (GISES) is an innovative service learning program developed in collaboration with the Global Information Internship Program (GIIP). It aspires to create a new generation of well-trained advocates for social justice and sustainable development who use the tools of information technology and social enterprise to solve global problems. Practically, student projects engage with local and global organizations to democratize globalization, deepen social justice, reduce poverty, support digital education, and advance the transition to a sustainable world. By combining the spirit of social entrepreneurship with innovative information technologies, GISES students reduce the digital divide by strengthening the informational, communication and organizational capacity of schools, community organizations, and non-governmental organizations (NGOs). The GISES program provides an excellent foundation for students pursuing careers in non-profit management, social advocacy, and education. Depending on a student's major, there are two ways to enter the GISES program. If a student is a sociology major and wishes to participate in GISES, she or he should declare the intensive sociology major. A student who majors in any field other than sociology should declare GISES as a minor.

Declaration of the General Sociology Major, Intensive Sociology Major, Combined LALS Major, Sociology Minor, or GISES Minor

The Sociology Department offers three undergraduate majors: 1) a general sociology major; 2) an intensive sociology major; and 3) a combined major with Latin American and Latino studies. Additionally, there are two minors, one in sociology and one in Global Information and Social Enterprise Studies (GISES).

Students must take two of the following courses prior to petitioning for entry to the general sociology major: Sociology 1, Introduction to Sociology, Sociology 10, Issues and Problems in American Society, or Sociology 15, World Society. Students who pass two of these courses with a grade of C+ or better will be allowed to declare the sociology major.

Students must take five courses prior to petitioning for entry to the intensive sociology major: Sociology 1, Introduction to Sociology; Sociology 15, World Society; Sociology 30A, Introduction to Global Information and Social Enterprise Studies; Sociology 30B, Designing ICT Projects for Social Enterprises; and Sociology 30C, Project Implementation and Grant Writing for Social Entrepreneurs. To be considered for admission to the intensive major, students are required to obtain a GPA of 2.8 or above in these courses and submit a list of six upper-division courses they propose to complete the upper-division elective requirement, including a brief statement of justification for how each elective contributes to the specific project they will complete for Sociology 196G, Project Practicum.

Students must take two of the following courses, Sociology 1, 10, or 15, prior to petitioning for entry to the sociology/Latin American and Latino studies major. Students who pass two of these courses with a grade of C+ or better and who have completed LALS 1 will be allowed to declare the combined major.

Students must take one of the following courses, Sociology 1, 10, or 15 prior to petitioning for entry to the sociology minor.

Students must take four courses prior to petitioning for entry to the GISES minor: Sociology 15, World Society; Sociology 30A, Introduction to Global Information and Social Enterprise Studies; Sociology 30B, Designing ICT Projects for Social Enterprises; and Sociology 30C, Project Implementation and Grant Writing for Social Entrepreneurs. To be considered for

admission to the GISES minor, students must take the four courses listed and submit a list of four upper-division courses they propose to complete the upper-division elective requirement, including a brief statement of justification for how each elective contributes to the specific project they will complete for Sociology 196G, Project Practicum.

Equivalent courses may be taken at other universities or at community colleges.

Students who intend to declare one of the department's majors listed above must take the lower-division courses for letter grades. In addition, students who intend to declare the intensive sociology major must take 30A, 30B, and 30C for letter grades.

Courses for which the grade of W is given are not counted in the computation of the GPA. The department will evaluate grades for repeated courses following the university's grading policy for repeated courses.

Students may petition for admission to the major by filling out the campus's Declaration of Major form, and by supplying evidence of their performance in the required lower-division courses. For specific details, refer to the Sociology Department web site, sociology.ucsc.edu, or the department's undergraduate adviser.

Transfer students who cannot complete two lower-division courses (Sociology 1, 10, or 15 at UCSC, or equivalents at another university, or at a community college with a grade of C+ or better before university policy requires them to declare a major should contact the sociology undergraduate adviser.

Appeal of Negative Decisions

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the Sociology Department within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision. Letters of appeal should describe any extenuating circumstances that might have affected the student's record.

Requirements of the General Sociology Major

For more details, students may consult the sociology handbook, available online at <http://sociology.ucsc.edu>, or at the department office, 226 College Eight.

Sociology majors are required to take a total of 11 courses (2 lower-division courses in preparation for the major, 4 prescribed upper-division core courses, and 5 upper-division electives). In addition, they must successfully complete the comprehensive requirement prior to graduation.

Lower-division preparation. All sociology majors are required to take two of the following courses or their equivalents.

1, Introduction to Sociology

10, Issues and Problems in American Society

15, World Society

Upper-division core courses. The following four sociology courses are required as the foundation of theoretical and methodological training in the discipline. Students are encouraged to take these courses early in their academic career.

103A, Statistical Methods

103B, The Logic and Methods of Social Inquiry

105A, Classical Social Theory

105B, Contemporary Social Theory

Upper-division advanced coursework. Five additional upper-division sociology courses are required. The Sociology Department offers upper-division electives that reflect a wide range of ideas within the discipline and the diversified research interests of the faculty. Refer to the [Sociology Department Undergraduate Handbook](#) or the Sociology

Undergraduate Adviser for a list of recommended courses within a specific specialization.

Comprehensive requirement. Prior to graduation, all sociology majors are required to complete one of the following comprehensive requirements.

- Senior thesis. The prerequisite for the senior thesis is course 103B. Students who would like to write a senior thesis must submit to their preferred faculty thesis sponsor a proposal that includes a one- to three-page description of the work to be undertaken, a brief bibliography, and materials from relevant courses, and key words describing the thesis topic. The proposal must be submitted by the second week of the quarter, one quarter prior to the commencement of the thesis work. Students unsuccessful in obtaining a thesis sponsor through these means may submit their proposals to the department's undergraduate education committee (UEC) by the second week of the quarter, one quarter prior to the commencement of the thesis work. UEC members will review the merits of these proposals and assign the ones they approve to faculty members who have not yet agreed to serve as thesis advisers for the following year. Students will be notified of the outcome of the UEC's deliberations within three weeks.
- Capstone course. Sociology 196A, Capstone: The Sociologist as Public Intellectual. Upper-division lecture course that explores public sociology and integrates current research with theoretical strands in sociology.

In exceptional cases, students unable to take the senior capstone course may be allowed to substitute a portfolio of work. This substitution must be approved in advance, by the department chair. The portfolio option consists of: 1) portfolio of materials from (at least) three upper-division sociology courses; 2) a synthetic essay; 3) a paper consisting of new research by the student on some contemporary social or political issue, analyzed using the theoretical and empirical materials from those three courses. See the department for additional information.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The goals of the Sociology Department's disciplinary communication are to teach students to think critically by designing, evaluating, and analyzing existing or proposed research studies to create knowledge through synthesizing and integrating information from a variety of sources pertaining to a complex social problem, and to develop and apply evidence-based writing skills. Course 103B, The Logic and Methods of Social Inquiry, satisfies the Disciplinary Communication Requirement for students in programs administered by the Sociology Department. Combined majors with Latin American and Latino Studies should refer to the Latin American and Latino Studies Department for their Disciplinary Communication requirement.

Sociology Major Planner One

The following is a recommended academic plan for students to begin the sociology major.

Plan One

Year	Fall	Winter	Spring
1st (frsh)	SOCY 1*	SOCY 10*	SOCY 1*
2nd (soph)	SOCY 15*	SOCY 103A	SOCY 103B
3rd (jr)	SOCY 105A	SOCY 105B	

*Two of courses 1, 10, or 15 required for the major

Sociology Major Planner Two

The following is a recommended academic plan for transfer students entering the sociology

major as juniors. It is assumed that course 1 and/or course 10 equivalencies were completed at the previous college.

Students Beginning in Fall Quarter

Plan Two—Option 1

Year	Fall	Winter	Spring
3rd (jr)	SOCY 15	SOCY 103A	SOCY 103B
	SOCY 105A	SOCY 105B	

Students Beginning in Winter Quarter

Plan Two—Option 2

Year	Fall	Winter	Spring
3rd (jr)		SOCY 10	SOCY 103B
		SOCY 103A	
4th (sr)	SOCY 105A	SOCY 105B	

All majors must complete the remaining five upper-division courses in their junior and senior years.

Requirements of the Intensive Sociology Major

The intensive major is an option for students wishing to major in sociology and focus in the area of Global Information and Social Enterprise Studies (GISES). The global information and enterprise studies intensive sociology major is sponsored and administered by the Department of Sociology. This major is designed for highly motivated, self-directed and enterprising students who have demonstrated the capacity to design and complete an honors-quality project for a civil society group. Students are required to take a total of 16 courses (five prescribed lower-division courses in preparation for the major, four prescribed upper-division core courses, six upper-division electives, and a project practicum course). In addition, they must successfully complete the comprehensive requirement prior to graduation.

Lower-division preparation. Students must take the following five courses or their equivalents.

1, Introduction to Sociology

15, World Society

30A, Introduction to Global Information and Social Enterprise Studies

30B, Designing ICT Projects for Social Enterprises

30C, Project Implementation and Grant Writing for Social Entrepreneurs

Upper-division core courses. The following four sociology courses are required as the foundation of theoretical and methodological training in the discipline. Students are encouraged to take these courses early in their academic career.

103A, Statistical Methods

103B, The Logic and Methods of Social Inquiry

105A, Classical Social Theory

105B, Contemporary Social Theory

Upper-division advanced coursework. Six additional upper-division courses are required. The student's choice of electives must be approved either by the student's project adviser or by the director of GISES at the time of submitting the major declaration.

Project practicum. Students must enroll in Sociology 196G Project Practicum and complete their GISES capstone project. Contact the Sociology Department undergraduate adviser for more detailed guidelines regarding the GISES capstone project. At least one quarter before expected graduation, students are required to submit electronically a polished, focused, and concise GISES project proposal (five-page maximum), to the director of GISES and the sociology undergraduate adviser. The project proposal constitutes a prerequisite for enrolling in SOCY 196G.

The final GISES capstone project must make an unambiguous contribution to advancing a solution to a problem associated with global social justice and/or sustainable development. The project must be associated with a real, viable civil society organization, community organization, school or non-governmental organization (NGO). To complete the final requirements for GISES major or minor, the integrated project—narrative and digital deliverable—must be mounted on the appropriate web-enabled database managed by the Global Information Internship Program (GIIP).

Disciplinary Communication (DC) requirement. All students are required to satisfy the Disciplinary Communications Requirement in their major. The goals of the Sociology Department's disciplinary communication are to teach students to think critically by designing, evaluating, and analyzing existing or proposed research studies; to create knowledge through synthesizing and integrating information from a variety of sources pertaining to a complex social problem; and to develop and apply evidence-based writing skills. Course 103B, The Logic and Methods of Social Inquiry, satisfies the Disciplinary Communication Requirement for students in sociology programs.

Comprehensive requirement. Prior to graduation, students are required to complete one of the following comprehensive requirements.

- Senior thesis. The prerequisite for the senior thesis is course 103B. Students who would like to write a senior thesis must submit to their preferred faculty thesis sponsor a proposal that includes a one- to three-page description of the work to be undertaken, a brief bibliography, materials from relevant courses, and key words describing the thesis topic. The proposal must be submitted by the second week of the quarter, one quarter prior to the commencement of the thesis work. Students unsuccessful in obtaining a thesis sponsor through these means may submit their proposals to the department's undergraduate education committee (UEC) by the second week of the quarter, one quarter prior to the commencement of the thesis work. UEC members will review the merits of these proposals and assign the ones they approve to faculty members who have not yet agreed to serve as thesis advisers for the following year. Students will be notified of the outcome of the UEC's deliberations within three weeks.
- Capstone course. Sociology 196A, Capstone: The Sociologist as Public Intellectual. Upper-division lecture course that explores public sociology and integrates current research with theoretical strands in sociology.

In exceptional cases, students unable to take the senior capstone course may be allowed to substitute a portfolio of work. This substitution must be approved in advance by the department chair. The portfolio option consists of: 1) portfolio of materials from (at least) three upper-division sociology courses; 2) a synthetic essay; 3) a paper consisting of new research by the student on some contemporary social or political issue, analyzed using the theoretical and empirical materials from those three courses. See the department for additional information.

Requirements of the Combined Major in Sociology and Latin American and Latino Studies

Students may choose to declare a combined major in sociology and Latin American and Latino studies. The requirements (listed below) should be examined carefully before choosing the combined major option. Students must complete the lower-division sociology

courses with a grade of C+ or better and LALS 1, and both departments must approve a study plan before the major can be declared. Each department determines major and thesis honors separately.

Language Study

Students must demonstrate proficiency in Spanish or Portuguese equivalent to the completion of Spanish 6 or 56 or Spanish for Spanish Speakers 63 or Portuguese 65A–B.

Sociology/Latin American and Latino Studies

Students are required to take a total of 13 courses and to satisfy a senior comprehensive requirement. There are three lower-division course requirements, two from the Sociology Department and one from the Latin American and Latino Studies Department. The lower-division LALS course must be LALS 1; transfer students may petition to replace LALS 1 with an appropriate course from another institution. Upper-division requirements include six core courses: LALS 100, 100A, 100B; Sociology 103B, 105A, and 105B; and four additional elective courses, two from sociology and two from Latin American and Latino studies. At least one of the Latin American and Latino studies upper-division courses must be taught in Spanish or Portuguese***, and at least one course in the sociology/Latin American and Latino studies combined major must be on Chicano/a–Latino/a issues. Up to three relevant courses taken through study abroad programs from which credits are transferable to UCSC may be credited toward the major when the content is deemed appropriate by the faculty advisers of both sociology and Latin American and Latino studies. Students can satisfy the comprehensive requirement in one of three ways: 1) writing a senior thesis; 2) passing an appropriate LALS Senior Seminar (194 series); or 3) completing two additional sociology upper-division courses in the area of Inequality and Social Change (refer to the sociology undergraduate adviser for the specific list of courses). If the thesis option is selected, it should be planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member belongs to both departments.

***Upper-division courses in Portuguese are currently not taught at UCSC and must be taken elsewhere.

Honors in the Major

The Sociology Department awards honors in the major based on the student's cumulative GPA for all courses taken to satisfy the program's major requirements. Students with a GPA of 3.75 or above will be considered for honors in the major. Students with a GPA of 3.9 or above will be considered for highest honors in the major. No more than approximately 15 percent of the graduating class will be considered for honors or highest honors in the major.

Requirements of the Sociology Minor

Students minoring in sociology are required to take six courses: one of courses 1, 10, or 15; at least two of courses 103B, 105A, and 105B; and at least three other upper-division sociology courses.

Requirements of the GISES Minor

Students minoring in GISES are required to take nine courses (four prescribed lower-division courses in preparation for the minor, four upper-division electives, and a project practicum course). The four lower-division requirements are courses 15, 30A, 30B and 30C. The student's choice of four upper-division electives must be approved either by the student's project adviser or by the director of GISES at the time the minor is declared. Students must take Sociology 196G, Project Practicum, and complete their GISES capstone project. See description for the project practicum under Requirements for the Intensive Major.

UC Education Abroad Program Students

Academic year programs. Students must declare the major and pass the two lower-division preparatory course requirements (1, 10, or 15) and three of the upper-division core courses (103B, 105A, 105B) prior to study abroad.

Semester programs. Fall semester: students must declare the major and pass the two lower-division preparatory course requirements (courses 1, 10, or 15) and one upper-division core course (105A) prior to fall semester study abroad. Spring semester: students must declare the major and pass the two lower-division course requirements (courses 1, 10, or 15) and two upper-division core courses (103B and 105B) prior to spring semester study abroad.

It is recommended that the students have the courses intended to be taken abroad reviewed and approved by the Sociology Department prior to departure. Up to two relevant courses taken through study abroad programs from which credits are transferable to UCSC may be used toward satisfaction of the major requirements when the content is deemed appropriate and approved by the Sociology Department.

Transfer Students

Junior transfer students expressing an interest in sociology on their UCSC application for admission are admitted as proposed sociology majors. This status is considered undeclared. Transfer students must meet with the sociology undergraduate adviser when they arrive on campus to determine their status and begin the actual declaration of major process, which must be completed by the end of the second quarter of the junior year for transfer students.

Graduate Program

The graduate program in sociology at UCSC leads to both academic and non-academic careers. It distinguishes itself by its interdisciplinary nature. The program is designed to educate students in sociological theory and methods and in the disciplines major substantive areas while simultaneously exposing students to other arenas of intellectual inquiry that will aid them as they pursue their research questions and interests. After completing a group of required courses, students work closely with individual faculty members in designing their own course of study. The program leads to a doctor of philosophy (Ph.D.) degree in sociology. A master of arts (M.A.) degree may be taken en route to the doctorate, but a master's program per se is not available.

The core curriculum is divided into two parts, 1) basic grounding in sociological theory and methods, and 2) exposure to research in three areas of concentration: a) globalization, political economy, and environment; b) inequality and identity; and c) culture, knowledge, and power. To prepare students to conduct their own research projects, the department trains student in multiple methods—comparative, cultural analysis, ethnography, field research, historical, interpretive, and quantitative techniques.

Faculty specialties include black cultural politics, comparative; construction of deviance; criminology; discourse and conversation analysis; emotion/affect; environmental sociology; ethnography; globalization; identity and identity changes; inequality; international development; international law; intersection of class, race, gender, and sexuality; labor studies; language and social interaction; law and society; legal institutions; media; medicine and technology; political economy; popular culture and cultural studies; qualitative methodology; queer studies; science and technology studies; sex work/erotic labor; social movements; sociology of drugs; sociology of knowledge; urban; and visual sociology.

Graduate students are supported through teaching assistantships, teaching fellowships, research fellowships and other grant/fellowship opportunities. A number of faculty receive research grants that support graduate student research assistantships, most recently, for example, the National Science Foundation Science and Justice Fellowships.

When asked what they most appreciate about the sociology graduate program, most students cite the students' and faculty's activism and commitment to social change in combination with their dedication to teaching, scholarly research, and understanding of the social forces of our society. The Sociology Department's colloquium series enhances scholarship, practice, and collegial networks. The diversity in age, ethnicity, and work experience of the student body creates a vibrant atmosphere for learning

Many of the faculty in the Sociology Department have affiliations with other departments and programs on campus, and the graduate program consequently encourages

interdisciplinary work. Seminars in the anthropology, environmental studies, history, history of consciousness, politics, psychology, and feminist studies programs are open to sociology students. Graduate students in sociology may obtain a designated emphasis on the sociology Ph.D. diploma indicating that they have specialized in a specific field in addition to sociology, such as feminist studies, Latin American and Latino studies, environmental studies, philosophy, or education. Students must meet requirements for the designated emphasis as spelled out by the relevant department. For a complete list of programs that offer a designated emphasis, refer to the fields of study in the General Catalog. Students also participate in research projects under the auspices of a number of interdisciplinary social science research centers: the Science and Justice Research Center; the Center for Agroecology and Sustainable Food Systems; the Center for Global, International, and Regional Studies; the Center for Labor Studies; the Chicano/Latino Research Center; the Center for Collaborative Research for an Equitable California; the Affect Studies Working Group; the Urban Studies Research Cluster; and the Santa Cruz Center for International Economics. Research opportunities also are available in the areas of environmental studies, feminist studies, and lesbian/gay/queer studies.

Many of our graduate students present papers at professional conferences and publish articles during the course of their graduate studies. The sociology master's paper is designed to prepare students to write for professional journals. Ongoing faculty seminars focusing on concrete research topics are available for advanced graduate students working on papers and dissertations in related areas.

The sociology program provides graduate students with many teaching opportunities so they can practice the skills required for good teaching—the ability to articulate ideas, to organize and present materials in logical sequence, and to listen attentively and discern someone else's comprehension. Graduate students serve as teaching assistants for at least three quarters in the department's core classes of the undergraduate curriculum.

The Sociology Department at UCSC is intellectually innovative, both in its interdisciplinary approach and in its commitment to inquiry that is engaged with the world beyond the university.

Required Courses

Students are required to take at least 12 courses as follows.

A THREE-COURSE CORE GROUP:

201 The Making of Classical Theory

202 Contemporary Sociological Theory

203 Sociological Methods

TWO METHODS COURSES:

204 Methods of Quantitative Analysis

and one of the following eight courses:

205 Field Research Methods

206 Comparative Historical Methods

209 Analysis of Cultural Forms

241 Cross-National and Cross-Cultural Research

242 Feminist Research Seminar

268A Science and Justice: Experiments in Collaboration

Sociology 282 Social Policy Research

Psychology 248 Survey Methods

THREE AREA FOUNDATION COURSES:

220 Global Transformation: Macrosociological Perspectives

240 Inequality and Identity

260 Culture, Knowledge, Power

At least one writing course (208 or 250)

A minimum of three elective graduate seminars, at least one from Sociology (excluding Sociology 250 and Sociology 293).

Students with no background in statistics are strongly advised to take an undergraduate course in statistical methods before enrolling in Methods of Quantitative Analysis, but can be admitted with permission of the instructor.

Progress Toward the Ph.D.

- Beginning at least by the end of the first year, students initiate work on their master's paper.
- Completion of the master's paper and required coursework is expected by the end of the second year.
- Graduate students prepare field statements in two distinct areas of sociology as a written pre-qualifying stage to the oral qualifying examination.
- The qualifying examination is an oral defense of the student's dissertation proposal and occurs one quarter after the pre-qualifying field statement stage has been passed.
- Students are expected to take their oral qualifying examination by the end of the third year, but no later than the end of the fourth year.
- After passing the qualifying examination, a student advances to candidacy and begins work on the dissertation with the aid of a three-person dissertation committee.
- After the complete dissertation has been submitted to and accepted by the dissertation committee, students must pass an oral dissertation defense.

Details of the policies for admission to the graduate program, the requirements for the Ph.D. degree, and information on financial support opportunities are available from the Department of Sociology. For more information, refer to the Graduate Studies section of the catalog.

Designated Emphasis in Sociology

To receive the Designated Emphasis (DE) in Sociology, a graduate student from another department must complete the following requirements in addition to the degree requirements for the doctorate in their degree-granting department. Students must initiate the request for the DE through their home departments. Then the student must meet with the Sociology graduate director who will: a) decide whether to approve the application; b) help find a Sociology faculty adviser; and c) oversee progress in the Designated Emphasis.

Adviser: In addition to the student's adviser(s) in their home department, the student must have a faculty adviser from among the core faculty of the Sociology Department who commits to serve on the qualifying examination (QE) committee. Outside members of a QE committee must be tenured.

Courses: The student must take five (5) Sociology graduate seminar courses:

Two (2) core courses:

SOCY 201 The Making of Classical Theory
SOCY 202 Contemporary Sociological Theory

One (1) methods course from the following:

SOCY 203 Sociological Methods
SOCY 204 Methods of Quantitative Analysis
SOCY 205 Field Research Methods
SOCY 206 Comparative Historical Methods
SOCY 209 The Analysis of Cultural Forms
SOCY 241 Cross-National and Cross Cultural Research
SOCY 242 Feminist Research Seminar

SOCY 282 Social Policy Research

Two (2) other graduate seminar electives* offered by the Sociology Department

*SOCY 208, SOCY 250, SOCY 293, SOCY 297, SOCY 299 cannot be counted toward the requirements for the Designated Emphasis.

All courses must be offered by the Sociology Department. Courses offered by other departments do not count towards the requirements for the Designated Emphasis in Sociology.

Writing: The student must prepare a significant piece of scholarly writing in the area of sociology. This may take the form of a substantial seminar paper, a master's essay, a paper submitted for publication, or a chapter of the doctoral dissertation. The student's Sociology faculty adviser will determine whether a particular piece of writing meets the requirement.

Graduate students interested in pursuing the Designated Emphasis in Sociology should contact the Sociology graduate program coordinator.

Department of Languages and Applied Linguistics

218 Cowell College

(831) 459–2054

<http://language.ucsc.edu>[Faculty](#) | [Spanish for Heritage Speakers Course Descriptions](#) | [Spanish Course Descriptions](#)

Program Description

Students interested in acquiring proficiency in Spanish can enroll in a wide range of Spanish language or Spanish for Heritage speakers (SPHS) courses, from beginning to advanced levels. The language and culture sequences of lower-division courses, Spanish 1–6 as well as Spanish for Heritage Speakers 4–6, and upper-division series Spanish 156 and Spanish 150–153 courses are aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing as well as meta-linguistic and cultural competence. Students are strongly encouraged to finish year-long sequences without interruption and, if possible, to study in Spanish-speaking countries. Students can pursue a major in Spanish Studies or select from among several programs that require some coursework in Spanish, including: a major or minor in language studies, a major in literature with an emphasis in Spanish/Latin American/Latino literatures, a major in Latin American and Latino studies, or a major in global economics.

Spanish

Students interested in taking Spanish classes are required to take the placement examination (<http://ic.ucsc.edu/test/>) to enroll in the appropriate level. Students finishing a first year of instruction in Spanish (1–2–3) are encouraged to continue on to second-year (intermediate-level) by taking Spanish 4, 5, and 6. First-year students also have the option of enrolling in the accelerated sequence (1A and 1B), which is equivalent to three quarters of language study.

Health science and human biology majors have priority enrollment in Spanish 5M, Medical Spanish, but others may enroll if there is space availability. Students are also encouraged to continue with the third-year Spanish 114 and the Spanish 156 and Spanish 150–153 series in which a wide variety of topics are covered. For more information on the courses offered in Spanish, please see the course descriptions.

Spanish for Heritage Speakers

SPHS has been developed for heritage speakers who, although raised in Spanish-speaking

communities or households, are not yet fully proficient in Spanish. SPHS courses take into account the experiences and influences of bilingual and bicultural upbringing.

SPHS students are required to attend a group tutoring session once a week in addition to the regular class meetings. Some lower-division and all upper-division courses can fulfill requirements for several majors or departments, such as American studies, education, global economics, language studies, and Latin American and Latino studies.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Department of Languages and Applied Linguistics](#).

Study Abroad

The Office of International Education (OIE) offers programs ranging from four weeks (Summer Session) in Cuernavaca, Mexico to one quarter or one academic year in Buenos Aires; Argentina, Santiago, Chile; San Jose and Monteverde, Costa Rica; Morelia and Monterrey, Mexico, and Cordoba, Madrid, Alcala, Barcelona, and Granada, Spain. Generally, students must have completed Spanish 6 or SPHS 6 by the end of the sophomore year to qualify for a junior year abroad. Courses taken abroad can, with approval of an adviser, be applied to major requirements. For more information, see the OIE web site, (<http://oie.ucsc.edu>). For information on credit applied to a particular major, contact the appropriate department.

Languages and Applied Linguistics

218 Cowell College

(831) 459–2054

<http://language.ucsc.edu>[Faculty](#)

Program Description

The interdisciplinary major in Spanish Studies is designed to offer students advanced linguistic proficiency in Spanish as well as a broad understanding of the historical and cultural developments of the Spanish-speaking world.

The Spanish Studies major at UCSC combines the strengths of language and applied linguistics with those of literary and cultural studies. The sequence of courses first exposes students to the academic registers of Spanish, a critical component for both heritage speakers and second language learners. Students will then develop academic literacy in the language while gaining familiarity with the methods of analysis in different fields. The configuration of the major affords students flexibility in following their particular interests by choosing one of two tracks: (1) literature and culture or (2) language and linguistics.

These pathways within the major prepare students for a range of career possibilities that involve working with the Spanish-speaking public in a variety of professions (e.g., law, business, public service). Students may also pursue further training in teaching Spanish as a second language at the high school or university level.

Study Abroad

Spanish studies encourages students to take advantage of the UC Education Abroad Program (EAP). EAP language and culture programs are focused primarily on language acquisition. Some programs do not require prior language study while others have language prerequisites. Many of these programs provide students with the language skills needed to participate in regular university courses taught in the language of the host country. EAP opportunities in Spanish include Argentina, Chile, Mexico, Spain, and Costa Rica.

Students who participate in the EAP may petition to apply up to 5 courses (up to 25 upper-division credits) from EAP toward the major. Petition forms are available in the Language Program Department office.

Requirements for the Major

There are a total of 52 credits (including the 2-credit senior exit course) required for the Spanish studies major. See Program Major Requirements below for a breakdown of the

credit requirements.

Major Prerequisite Foreign Language Requirement

Six courses in the regular track Spanish 1, 2, 3, 4, 5, 6; or three courses in the Spanish for Heritage Speakers (SPHS) track, SPHS 4, 5, 6; or equivalent proficiency and Linguistics 50, Introduction to Linguistics.

Five required Spanish studies core courses (25 credits total):

- Literature: Spanish Literature (LTSP) 102A, From the Conquest to Sor Juana; or LTSP 102B, Romanticism to Modernism (5 credits)
- Spanish Studies: Spanish Literature 105*, Introduction to Spanish Studies (New cross-listed course) (5 credits)
- Linguistics: Spanish 150*, Topics in Hispanic Linguistics: Introduction to Hispanic Linguistics (5 credits)
- Spanish Language: Spanish 114, Advanced Conversation and Composition (5 credits)
- History: One history upper-division course in a related field (i.e., History 131, 132, 133, 134A, 134B) (5 credits)

*Spanish Literature 105/Spanish 105 and Spanish 150 must be taken prior to enrollment in or in conjunction with concentration courses.

Choice of Concentrations (choose one concentration—3 courses, 15 credits total)

Languages and Linguistics Track (three courses): Five-credit Spanish-language courses numbered 100–189, Spanish 199 and Languages 199 (except Spanish 150, Spanish 114 and Spanish Literature 105/Spanish 105) are accepted with the permission of the Spanish studies director (or faculty adviser).

- Spanish 151, Topics In Hispanic Linguistics: Varieties of Spanish
- Languages 152, Topics In Hispanic Linguistics: Spanish in the U.S.
- Languages 153, Topics In Hispanic Linguistics: Spanish as a Second Language
- Spanish 156A, The Language of Latin American Cinema
- Spanish 156B, The New Latin American Song SPAN 156C, Latin American Women's Voices SPAN 156E, Spanish Culture
- Spanish 156F, Humor in the Spanish Speaking World
- Spanish 156I, Hispanic Culture through Dance
- Spanish 156M, Mexico and the Southwest

Literature and Culture Track (three courses): Any 5-credit Spanish literature course numbered 100–189, Spanish Literature 195, Spanish Literature 199 (except Spanish Literature 102A, 102B, 105); see below for examples:

- 100A, Spanish Literature: Origins to 18th Century
- 100B, Spanish Literature: Nineteenth and Twentieth Centuries
- 100C, Medieval Spanish Literature
- 117, Spanish Speaking Caribbean
- 130A, Spanish American Prose
- 130D, Latin American testimonio
- 130E, Latin American Poetry
- 130F, U.S. Latino/a Writing in Spanish, English, and Spanglish
- 131A, Mexico

- [153, Picaresque Novel](#)

Electives (one upper–division course, 5 credits total): Choose from related 5–credit courses in Anthropology, Education, Feminist Studies, History, History of Art and Visual Culture, Latin American and Latino Studies, Linguistics, Sociology (see Elective Courses for Spanish Studies), or any upper–division Spanish Literature, Spanish, or languages concentration courses not taken for concentration credit or capstone requirement.

Capstone Requirement

Spanish 195F, Senior Essay: With faculty permission, students will enroll in Spanish 195F, a 2–credit senior exit course taken in conjunction with an upper–division Spanish, Languages or Spanish Literature concentration course not used for core or concentration credit. Students will work with a faculty adviser to complete a senior capstone essay in addition to course requirements for the upper–division course. This combination must be approved by a faculty adviser in Spanish studies.

Disciplinary Communication (DC) Requirement

The Disciplinary Communication general education requirement (DC requirement) is satisfied by successfully completing Spanish 114.

Declaring the Major in Spanish Studies

To qualify for the major in Spanish studies, students must have completed Spanish 4 or equivalent with a grade of C or better, or receive a Spanish placement examination score of 50.

Transfer Students

In addition to the required courses to satisfy the campus general education requirements, transfer junior students are strongly advised to complete two years of Spanish language study in accredited two– and four–year institutions. Transfer students who arrive at UCSC with two years of Spanish language preparation should be able to complete the Spanish

studies major in normative time. While it is not a condition of admission, students from California community colleges may complete the Intersegmental General Education Transfer Curriculum (IGETC) in preparation for transfer to UC Santa Cruz.

Sustainability Studies

2014–15 General Catalog

College Eight Office

(831) 459-2361

<http://eight.ucsc.edu/>[Faculty](#)

Program Statement

Among the most critical societal challenges of the next 50 years are the rapidly-growing and linked ecological and social crises arising from stresses on supplies of energy, water and food. These crises are not simply about the adequacy of supply relative to demand, however; they are also the result of the complex social relations within and among societies, in the past, present and future. Dealing with such socio-ecological problems therefore requires robust interdisciplinary collaborations among engineers, social scientists and natural scientists. Moreover, in today's rapidly-changing economy, college graduates will need to be flexible and adaptable, able to learn new knowledge and skills rapidly, and cognizant of the complex organization of society and technology. The minor in Sustainability studies is administered by College Eight and is designed to foster both analytical ability and provide necessary learning.

The pedagogical underpinnings of this minor are premised on relationships between classroom learning, service learning, and research and application. Broad interdisciplinarity and individual facility in both STEM and social sciences are critical, elements at the center of the minor's core courses. The curriculum is therefore structured to (I) facilitate interdisciplinary academic and research collaborations among faculty and students across multiple UCSC divisions (drawing on but outside of the divisional structure); (II) teach and train students in the ecology and sustainability of design and application in the built environment, and the use of STEM skills and social science knowledge to these ends; and (III) meet undergraduate demand for a sustainability curriculum with focuses distinct from those offered in existing UCSC departments.

Program learning objectives are as follows:

- a) Students will understand the causes, features, data, complexities, policies and practices giving rise to and needed to address the contemporary global socioecological crisis; the role of production, consumption, politics, policies, markets and behavior in this crisis; and options and alternatives for moving toward and achieving sustainability.
- b) Students will learn basic applied STEM skills needed for dealing with real-world applications including assessments, measurements, technologies, behavior and other factors related to objective a.
- c) Students will become cognizant of appropriate social science knowledge and methods needed to design and implement social enterprise and service learning projects in sustainability and ecological design and practice.

d) Students will design and conduct interdisciplinary research projects in issues and topics that are related to sustainability, including energy, food, water, the built environment, life-cycle analysis, waste disposal and recycling.

e) Students will design and participate in service-learning projects in collaboration with on- and off-campus units, agencies and organizations, and apply the knowledge and skills acquired through the minor

No specific prior preparation or prerequisites are required for entry to the minor.

Requirements of the minor

Two lower-division courses:

Electrical Engineering 80S, Sustainability Engineering and Design

and one of the following:

College Eight 81B/Earth and Planetary Sciences 81B, Fundamentals of Environmental Science

- College Eight 81C/EE 81C, Designing a Sustainable Future
- Physics 2, Elementary Physics of Energy
- Electrical Engineering 80J, Renewable Energy Sources

Environmental Studies majors may substitute one of the following for the second lower-division course requirement: Environmental Studies 23, 24 or 25.

Service learning sustainability internship (three 2-credit courses required), one quarter of CLEI 55, Introduction to Service Learning for Sustainability, and two quarters of College Eight 155, College Eight Sustainability Internship.

Sustainability research and green enterprise practicum (three 2-credit courses required), one quarter each of

College Eight 150A, Sustainability Praxis in the Built Environment

College Eight 150B, Tools of the Trade

College Eight 150C, Green Enterprise & Social Entrepreneurship

Education for Sustainable Living Program, one quarter of College Eight 161, Education for Sustainable Living (5-credit section)

Upper-division courses, either

Electrical Engineering 122A, B, C, Impact Designs: Engineering and Sustainability through Student Service (all three quarters)

or

Two breadth electives from the list below

Anthropology 146, Anthropology and the Environment.

Anthropology 160, Reproductive and Population Politics.

Anthropology 173, Origins of Farming

Anthropology 194, Consumption and Consumerism

Biomolecular Engineering 122, Environmental Virus Bioinformatics

College Ten 105, The Making and Influencing of Environmental Policy

Community Studies 149, Political Economy of Food and Agriculture

Ecology and Evolutionary Biology 107, Ecology

Ecology and Evolutionary Biology 108, Marine Ecology

Theater Arts

[2014–15 General Catalog](#)J106 Theater Arts Center
(831) 459–2974theater@ucsc.edu<http://theater.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

The Theater Arts Department is a diverse group of scholars/artists united by a passionate belief in the value of the performing arts. Based on respect for the classical theater of all cultures, combined with a determination to challenge tradition and fashion with equal courage, we educate our students in the history, theory, and practice of theater to address fundamental issues by using the tools of body, voice, mind, and imagination. Seeking to attain the highest levels of intellectual and artistic integrity with a commitment to cultural diversity, we serve the research mission of UCSC, our audiences, and the students who will shape the theater of the future.

The Theater Arts Department combines drama, dance, critical studies, and theater design/technology to offer students an intensive program of theater as a unified field. The program stresses the inter–relation of all concentrations as essential to the successful practice of the theater arts in the 21st century. Graduates of the UCSC program typically pursue careers in professional theater and dance companies, in film and television, and in teaching at all levels—from university to high school to grade school. Many students go on to higher degrees at prestigious national programs. Others engage in careers in arts, administration, dramatic writing, and related fields.

The lower–division curriculum requires a range of practical work in the various concentrations and an interdisciplinary exposure to critical and historical studies. At the upper–division level, students are given the opportunity to focus on one or more areas of interest in limited–enrollment studios. At the same time, they are asked to expand their theoretical perspectives through confrontation with performance theory and focused coursework in critical studies. The impact of digital and new media on theater is integrated into the curriculum, especially with respect to dance and design.

A wealth of production opportunities is available to students. This includes major productions directed by faculty or distinguished visiting artists each quarter, productions directed or choreographed by students, and faculty–directed workshops. Undergraduate students are also given the opportunity to see their own writing, choreography, or developing concepts put into production in annual festivals of student work. Although majors are given preference in studio courses, most courses and productions welcome nonmajors as well. Opportunities to study and perform non–Western as well as Euro–American traditions are also a significant part of the program.

The stage and studio spaces available to students of theater arts allow for this breadth of training and performance opportunities. The Theater Arts Center contains a 500-seat thrust stage; a state-of-the-art experimental theater; a 200-seat proscenium theater; acting, directing, and dance studios; costume, scene, and properties shops; a sound recording room; and a computer lab.

Elsewhere on campus are the open-air Quarry Theater seating 3,000, the Sinsheimer-Stanley Festival Glen, and the 150-seat Barn Theater. Library holdings in theater literature and history are extensive, including a large slide collection and dance video holdings; journals in current theater, design/technology, and dance; and recordings, films, videotapes, and CD-ROMs.

Requirements to Declare the Major

Prior to petitioning for the major, students must have successfully completed three lower division courses: one course from Theater Arts 61A, B, or C, and two courses chosen from Theater Arts 10, 20, or 30. Students are encouraged to complete these courses as early in their studies as possible so that the petition to major status can be accomplished no later than the end of sophomore year.

Transfer Students

Transfer students who have not satisfied the requirements to declare the major are advised to take as many of the six lower-division requirements listed above as possible in their first two quarters. Transfer students may petition to have equivalent lower-division courses taken at other schools count toward the lower-division major requirements. Petition forms and information on courses and major requirements can be obtained at the department office, J106 Theater Arts Center.

Major Requirements

The Theater Arts major requires seven lower-division courses, six credits of course 50, and eight upper-division courses (inclusive of a senior seminar project). Majors may organize their studies around a concentration in an area of interest in accordance with the requirements outlined below. The following six lower-division courses must be taken by all majors:

10, Introduction to Theater Design and Technology

20, Introductory Studies in Acting

30, Introduction to Dance Theory and Technique

61A, Ancient and Medieval Drama

61B, Drama from the Renaissance to the Modern Age

61C, Birth of the Modern: After the Renaissance

One additional lower-division 5-credit elective.

Plus: 50, Fundamentals of Theater Production (two-credit course; must take a total of six credits)

The following upper-division courses must be taken to complete the major:

Eight, 5-credit upper-division theater arts courses:

- 160, Dramatic Theories

- Two studio courses

- One elective

- One faculty-directed theater arts production course

- Two 161, 163, 164, or 165 series of critical studies courses in dance or drama, or 113, 116A (design) courses

[Search the Catalog](#)

One senior seminar requirement, (course 185)

Exceptions to the major requirements, through the UC Education Abroad Program (EAP) or transfer credits, are considered on a case-by-case basis by the department chair.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in theater arts is met by completion of the required courses 160 and 185.

Theater Arts Major Planners

The following are two recommended academic plans for students to complete during their first two years as preparation for the theater arts major. Plan One is a guideline for students who are committed to the major early in their academic career; Plan Two is for students who are considering the major.

Plan One

Year	Fall	Winter	Spring
	THEA 61A	THEA 20	THEA 10
1st (frsh)	gen ed	THEA 61B	gen ed
	college core	gen ed	gen ed
	THEA 30	elective	THEA 61C
2nd (soph)	gen ed	THEA 50	gen ed
	college core	gen ed	gen ed
	(declare major)		

Plan Two

Year	Fall	Winter	Spring
	gen ed	THEA 20	THEA 10
1st (frsh)	gen ed	low-div studio	THEA 61C
	college core	gen ed	gen ed
	THEA 30	THEA 50	THEA 50
2nd (soph)	THEA 61A	THEA 61B	gen ed
	gen ed	gen ed	gen ed
	(declare major)		

Comprehensive Requirement

Theater arts majors are responsible for successfully completing course 185, Senior Seminar.

Minor Requirements

Students earn a minor in theater arts by completing eight courses (seven, 5-credit courses and one, 2-credit course) comprising a background in the theory and practice of the theater arts as well as a focus on either drama, theater design/technology, or dance. The

course requirements are listed below. There is no comprehensive requirement for the minor.

- Theater Arts 61A or B or C
- One quarter of the 2-credit course 50
- One course in the student's area of focus chosen from: 10, 20, 30, or 40
- Three upper-division courses chosen from the following: 113, 116A, 161, 163, 164, 165
- Two upper-division studio courses, one of which may be a faculty-directed production (151)

Independent Studies (199) and Field Studies (198) will not satisfy minor requirements unless approved in advance by an adviser and the chairperson.

Transfer students are advised to check with the department office to determine which courses can be articulated from a community college.

The Dance Minor

Students earn a minor in dance by completing eight courses (three lower division, five upper division) comprising a background in the theory and practice of dance. The course requirements are listed below. There is no comprehensive requirement for the minor.

Lower division courses:

- one 5-credit course in dance foundations (30 or 36); one course (varying units) in cultural forms (including but not restricted to 22, 37, 80Z)
- one quarter of the 2-credit course 50

Upper division courses:

- one 5-credit course in dance foundations (130); one course in critical studies (164, 165)
- three 5-credit elective courses planned in consultation with a faculty adviser (including but not restricted to 122, 131, 135, 137, 138, 139)
- Independent Studies (199) and Field Studies (198) will not satisfy minor requirements unless approved in advance by an adviser and the chairperson.
- Transfer students are advised to check with the department office to determine which courses can be articulated from a community college.

The Theater Arts Master of Arts Program

The Theater Arts Department offers a master's of arts (M.A.) degree that follows a one summer/one academic year structure and combines intellectually rigorous coursework with challenging artistic practicum. Like our undergraduate curriculum, our graduate program integrates the study of ancient and modern theater texts and practices, and it examines hemispheric and global approaches to performance. This M.A. program culminates in a capstone thesis project (creative and scholarly) following coursework in both academic and professional theater.

Students are required to complete 40 credits for the Theater Arts M.A. This includes three graduate seminars, Theater Arts 290A, 290B, and 290C, for a total of 15 credits. These courses are required of all M.A. candidates, whatever their area of emphasis. Students must also complete Theater Arts 293, a 10-credit performance research project that includes a professional internship project. Students may take this course in any quarter in the academic year. This work will have a significant academic component, supervised and assessed by a theater arts faculty member.

Students must also complete the 5-credit Theater Arts 295, Group Critique; 5 units of an Independent Study (Theater Arts 297); and the 5-credit Theater Arts 299, Capstone Thesis.

M.A. students may also take an undergraduate or graduate course in another department as an elective. These courses must be approved by the graduate committee and graduate director each academic year.

There are no teaching requirements for graduate students in the theater arts M.A. program; however, students are encouraged to act as teaching assistants while they are at UC Santa Cruz.

For additional information, contact the Theater Arts Department.

UCDC Program at the University of California Washington Center

The UCDC Program at the UC Washington Center in Washington, D.C., supervises and supports students who pursue academic study and internships in the nation's capital. The program is open through a competitive application process to students in all majors who will have upper-division status by the quarter in which they participate. (Physical and Biological Sciences and Engineering majors are eligible to participate in their sophomore year with department approval.) Students enroll for fall, winter, or spring quarter, earn 12 to 17 course credits, and continue to be registered as full-time students. Applicant selection is based on academic record, a written statement, letters of recommendation, and in some cases a personal interview. Financial aid eligibility is maintained.

Students live in the UC Washington Center with students from all UC campuses. This provides an intellectual and social community throughout the quarter.

Interested students with strong academic records are encouraged to apply. For more information, e-mail ucdc@ucsc.edu, contact the UCDC coordinator in 10 Merrill College, or visit the program's [web site](#).

Writing Program

[2014–15 General Catalog](#)209 Humanities 1
(831) 459–2431<http://writing.ucsc.edu/>[Faculty](#) | [Course Descriptions](#)

Program Description

The campuswide Writing Program offers courses designed to help students become more competent and confident writers of prose. The courses offered through this program teach skills of grammar and organization and strategies of invention, composition, revision, and editing. These courses approach writing as one of the most important ways we have of making discoveries about ourselves and the world and of communicating these insights to others.

Together with the colleges, the Writing Program administers the writing components (C1, C2) of the campus general education requirements; administers the Entry Level Writing Requirement (ELWR), and advises students about ways to fulfill these requirements.

Writing Program instructors in each college participate in the college's core course and counsel students about their writing. The Writing Program offers Writing 2 (a lower-division course that satisfies the C2 requirement); the Writing 20, 21, 22, 23 series to help meet the needs of students who have not passed ELWR, including students with complex linguistics backgrounds; instruction for undergraduates in the theory and practice of peer tutoring (Writing 169 and 159); and instruction for graduate students from all disciplines in the theory and practice of teaching first-year composition courses (Writing 203).

Each year, the Writing Program also offers specialized lower-division courses (such as Writing 22A and 22B) for multilingual and international students to provide additional grammar support for essays written in fall core courses and in spring Writing 2 classes.

The Writing Program houses the Humanities Don Rothman Endowed Award in First-Year Writing. Now in its fifth year of honoring outstanding first-year writers and of recognizing the pedagogical inspirations of their teachers, the endowment celebrates students' academic achievements during a fall ceremony attended by friends, family, faculty, and administrators.

Courses in creative writing are offered through the Literature Department.

Department of Languages and Applied Linguistics

218 Cowell College

(831) 459–2054

<http://language.ucsc.edu>[Course Descriptions](#)

Program Description

Students interested in acquiring proficiency in Yiddish can enroll in beginning language courses. In addition, some credit from these courses may be counted toward the major or minor in Jewish studies; consult with the Jewish studies program. Lower-division courses are aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing. Attention is also given to developing an understanding of the culture that has been expressed through the Yiddish language. Some instruction takes place in Yiddish from the beginning level.

Campus Language Laboratories and Placement Exams

361 Social Sciences 1 Building

(831) 459– 3320

<http://anthro.ucsc.edu/>[Program Description](#) | [Course Descriptions](#)

Faculty and Professional Interests

Professor

Donald Brenneis

Linguistic anthropology, folklore, legal anthropology, ethnomusicology, overseas Indians, South Asia, disputing and dispute management, legal language, bureaucratic institutions, knowledge production, improvisation

Melissa L. Caldwell

Poverty and public health; welfare, charity, and assistance; food and consumption; gardens, nature, and landscapes; religion; socialism and postsocialism; Russia, the former Soviet Union, and Eastern Europe

Nancy N. Chen

Medical anthropology, visual anthropology, urban anthropology, Asian American identity, mental health, food, China

May N. Diaz, Emerita**Shelly Errington**

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

Alison Galloway

Skeletal biology, forensic anthropology, human variation, history and ethics of physical anthropology, reproductive energetics and aging

Diane Gifford-Gonzalez

Neolithic Africa and Eurasia, colonial New Mexico, origins of food production, pastoralists, zooarchaeology, history of archaeology, interpretive theory, visual anthropology

Judith A. Habicht-Mauche

Precontact and early contact North America; Southwest and Southern Plains; social networks and cross-cultural interaction; migration; community and identity formation; ceramic production and exchange; technology as cultural practice; archaeometry and materials analysis

Susan Harding, Emerita**Diane K. Lewis, Emerita**

- Education
- Electrical Engineering
- Environmental Studies
- Biological Sciences
- Feminist Studies
- Film and Digital Media
- French
- German
- German Studies
- Greek
- Hebrew
- History
- History of Art and Visual Culture
- History of Consciousness
- Humanities
- Italian
- Italian Studies
- Japanese
- Jewish Studies
- Languages and Applied Linguistics
- Latin
- Latin American and Latino Studies

- Mathematics
- Microbiology and Environmental Toxicology
- Biological Sciences
- Music
- Ocean Sciences
- Philosophy
- Physical Education
- Physics
- Politics
- Portuguese
- Psychology
- Science Communication
- Social Documentation
- Social Sciences Division
- Spanish and Spanish for Heritage Speakers
- Sociology
- Spanish Studies
- Sustainability Studies
- Technology and Information Management
- Theater Arts
- Writing Program

Daniel T. Linger, Emeritus

General human theory, psychological anthropology, self, consciousness, identity, memory, politics, conflict, Brazil.

Carolyn Martin Shaw, Emerita

Olga Nájera-Ramírez

Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

Triloki Nath Pandey

Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons; native North America; tribal India; Nepal

Richard R. Randolph, Emeritus

Lisa Rofel

Critical theory, anthropology of modernity, popular/public culture, gender and sexuality, queer theory, transnational capitalism, postcolonial and transnational feminism, China

Danilyn Rutherford

Borders and frontiers, colonialism, nationalism, ethnicity, kinship, performance, Christianity, secularism, sovereignty, publics, affect, technology, governancy, theory and method in anthropology, West Papua, Indonesia, the U.S.

Stuart A. Schlegel, Emeritus

Anna Tsing

Culture and politics; feminist theory; globalization; multi-species anthropology; social landscapes and forest ethnographies; multi-sited ethnography; Indonesia, Southeast Asia, and the U.S.

Adrienne L. Zihlman, Emerita

Primate and human evolution, comparative functional anatomy of monkeys and apes, sex and gender, growth and development, life history and evolutionary theory, history of physical anthropology

Associate Professor

Mark Anderson

Racial formation, diaspora, nationalism, transnationalism, culture and power; Latin America, African diaspora

Mayanthi Fernando

Religion and secularism; anthropology of Islam; gender and sexuality; multiculturalism/pluralism; modernity and its "Others"; ethnography and ethics; colonial and post-colonial France/Europe; theory and methods in the study of religion

Andrew Salvador Mathews

Environmental anthropology, science and technology studies, conservation and development, climate change, environmental history, Mexico, Latin America, Italy

J. Cameron Monroe

Historical archaeology, complex societies, political economy, architecture and landscape, Africa and the African diaspora

Renya Ramirez

Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

Matthew Wolf-Meyer

Anthropology and history of medicine and public health, science studies, American studies, popular culture, the United States and the United Kingdom

Assistant Professor

Chelsea Blackmore

- Course Descriptions
- Teaching and Administrative Staff
- Appendixes
- Archive of General Catalogs

[Nondiscrimination Statement](#)

[Search the Catalog](#)

Pre-Columbian archaeology (Mesoamerican focus), identity formation, complex societies, class and state formation, gender, feminist/queer theory

Jon Daehnke

Archaeology of the North American Pacific Coast, cultural heritage politics and law, contemporary Native American politics, human-environment interaction, landscape and place, collaborative methodologies, NAGPRA implementation and compliance, public representations of heritage and memory

Lars Fehren-Schmitz

Palaeogenetics / anthropological genetics, human evolutionary ecology, evolutionary demography, gene-culture coevolution, migration theories, population history of the Americas, archaeology of South America

Megan Moodie

Feminist theory, reproductive politics, development, legal identities, affirmative action, ethnographic methods, narrative, literature, utopias and other postsocialist/postcolonial imaginaries, connected histories and the *longue durée*, South Asia, Eastern Europe

Lecturer

Guillermo Delgado-P., Emeritus

Latin American cultures; comparative indigeneity; indigenous property rights; cultures of the sacred; ecologies and peasantries; Quechua/Andean linguistics, mining, labor history; alternative/electronic journalism; anthropology in the developing world; interethnicity; urbanization; social movements; culture theory

Annapurna Pandey

Women's issues; women's political and religious lives and their representation in film; media and literature dealing with India and Indian Diaspora; film-making on the experiences of the diasporic Odias in the greater bay area

Jude Todd, Emerita

Indigenous American world views; permaculture; culturally prescribed attitudes toward water and soil; chemical-industry influences on government, university research, and popular belief systems; transgenerational epigenetic inheritance

Professor

Raoul Birnbaum (History of Art and Visual Culture)

Buddhist studies, especially Chinese practices from medieval times to the present; religion and visual culture in China

John Brown Childs, Emeritus (Sociology)

Ethnic conflict and transcommunal cooperation; sociology of knowledge; African American, Native American, Latino interactions

James T. Clifford, Emeritus (History of Consciousness)

History of anthropology, travel, and exoticism; transnational cultural studies, museum studies, indigenous studies

Carolyn Dean (History of Art and Visual Culture)

Cultural histories of the native Americas and colonial Latin America

A. Russell Flegal (Microbiology and Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Stephen R. Gliessman, Emeritus (Environmental Studies)

Agroecology, sustainable agriculture, tropical land use and development, alternative trade networks, sustainable livelihoods and conservation, community and agroecology

Donna Haraway, Emerita

Paul Koch (Earth Sciences)

Isotope biogeochemistry, vertebrate paleontology

Patricia Zavella, (Latin American and Latino Studies)

Transnational migration of Mexicans, women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and Chicana/Latino studies

Associate Professor

Jeffrey Bury (Environmental Studies)

Political ecology; sustainable development; Latin American studies; international relations; institutional dimensions of natural resource conservation in the global south ; extractive industries; climate change; new models of conservation

Flora Lu (Environmental Studies)

Ecological anthropology, human behavioral ecology, Amazon rainforest, indigenous peoples, conservation, Ecuador, culture change, market integration, indigenous resource management, political ecology, environmental justice

Marcia Ochoa (Feminist Studies)

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

S. Ravi Rajan (Environmental Studies)

Environmental history and political ecology, risk and disaster studies, science and technology studies, North-South environmental conflicts, environmental social theory, environmental ethics

Assistant Professor

Cecilia Rivas (Latin American and Latino Studies)

Transnationalism; media and communication (Internet, newspapers); migration; globalization; race, ethnicity, and gender; bilingualism; consumption; El Salvador, Central America, Southern Mexico

Baskin School of Engineering

(831) 459–2158

<http://www.soe.ucsc.edu>[Program Statement](#) | [Course Descriptions](#)

Faculty and Professional Interests

Professor

Nicholas Brummell

Fluid dynamics; magnetohydrodynamics; numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics; supercomputing

David Draper

Bayesian statistics, hierarchical modeling, Bayesian nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

Pascale Garaud

Astrophysical and geophysical fluid dynamics, magnetohydrodynamics; analytical and numerical solutions of partial differential equations related to these phenomena

Athanasios Kottas

Bayesian nonparametrics, mixture models, modeling and inference for point processes, nonparametric regression, survival analysis, applications in biometrics, ecology, and the environmental sciences

Herbert Lee

Bayesian statistics, computer simulation experiments, spatial statistics, inverse problems, model selection and model averaging, nonparametric regression, neural networks, classification and clustering

Marc Mangel, Distinguished Professor Emeritus and Research Professor of Applied Mathematics and Statistics

Raquel Prado

Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

Bruno Sansó

Bayesian spatio-temporal modeling, environmental and geostatistical applications, modeling of extreme values, statistical assessment of climate variability

Hongyun Wang

Single molecule studies and biophysics, statistical physics, stochastic processes and stochastic differential equations, classical analysis; numerical analysis

Associate Professor

Qi Gong

Computational methods for real-time control systems, trajectory optimization and motion planning, nonlinear filtering and observer design, robust and adaptive control of nonlinear systems, industry applications of control theory

Abel Rodríguez

Bayesian nonparametrics, Bayesian time series and spatial models, machine learning, document modeling, public health, financial econometrics, structural proteomics, genomics

Assistant Professor

Lee Dongwook

Computational magnetohydrodynamics and gas dynamics; computational mathematics for large-scale scientific computing on high-performance parallel architectures; numerical algorithms for finite-volume, high-order shock capturing methods; Newton-Krylov-type iterative implicit solvers for stiff nonlinear system; nonlinear numerical methods for astrophysics and high-energy-density physics applications

Ju Hee Lee

Bayesian statistics, bayesian nonparametrics, modeling in biosciences and clinical trials

Associate Adjunct Professor

Robin Morris

Bayesian analysis of scientific data, with applications in Earth remote sensing, particle and astroparticle physics, signal processing and engineering

Visiting Assistant Professor

Tatiani Xifara

Bayesian and computational statistics, hidden Markov models, adaptive MCMC and MALA algorithms, statistical ecology

Lecturer

Yonatan Katznelson

Number theory

Bruno Mendes

Parameter and model uncertainty in geophysics and groundwater contamination modeling, Bayesian statistics, parallel computation

Valerie Poyner

Bayesian nonparametric modeling and inference, survival regression analysis, population dynamics, applications in neuroscience and fisheries ecology

Douglas Bonett (Psychology)

Psychometrics and statistics

William Dunbar (Computer Engineering)

Theory and application of feedback control, single-molecule biophysics, nanopore sensors, dynamics and control of biomolecules

Gabriel Elkaim (Computer Engineering)

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

Andrew T. Fisher (Earth Sciences)

Hydrogeology, crustal studies, coupled flows, modeling

Lise Getoor (Computer Science)

Machine learning, reasoning under uncertainty, analysis of graphs and networks, artificial intelligence, databases, data integration, visual analytics, data science

[Course Descriptions](#)

[Teaching and Administrative Staff](#)

[Appendixes](#)

[Archive of General Catalogs](#)

[Nondiscrimination Statement](#)

[Search the Catalog](#)

Gary A. Glatzmaier (Earth Sciences)

Computer simulation of geodynamics and planetary dynamics

David Haussler (Biomolecular Engineering; Investigator, Howard Hughes Medical Institute; Director, Center for Biomolecular Science and Engineering; Distinguished Professor, Biomolecular Engineering; Director, Cancer Genomics Hub; Scientific Co-Director, California Institute for Quantitative Biosciences [QB3]; Consulting Professor, Biopharmaceutical Sciences, Stanford Medical School; Consulting Professor, Biopharmaceutical Sciences, UC San Francisco)

Bioinformatics, genomics, computational genomic data analysis, molecular evolution and comparative genomics, genomic and clinical data sharing and standards, cancer genomics, neurodevelopment, stem cell research, immunogenomics, information theory, pattern recognition, machine learning, artificial intelligence, information theory, theoretical computer science

David P. Helmbold (Computer Science)

Machine learning, computational learning theory, analysis of algorithms

Roberto Manduchi (Computer Engineering)

Computer vision and sensor processing, with application to assistive technology for the visually impaired, mobile and pervasive computing

Richard Montgomery (Mathematics)

Celestial mechanics, differential geometry, gauge theory, mechanics (quantum and classical), and control theory

Katia Obraczka (Computer Engineering)

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Hamid Sadjadpour (Computer Engineering)

Wireless communication systems, network information theory and scaling laws, performance analysis of wireless ad hoc and sensor networks, routing and MAC protocol design for wireless networks

Manfred Warmuth (Computer Science)

Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

Peter Young (Physics)

Condensed matter theory, statistical mechanics

Yi Zhang (Technology and Information Management)

Large-scale information retrieval, recommendation systems, Internet advertising, data mining, natural language processing, and applied machine learning

Revised: 09/01/14

Faculty and Professional Interests

Professor/Astronomer

Peter H. Bodenheimer, Emeritus

Michael J. Bolte

Dynamics of star clusters, ages of star clusters, chemical enrichment history of the galaxy, observations of interacting galaxies

Jean P. Brodie

Extragalactic globular clusters, galaxy formation, near-field cosmology

Harland W. Epps, Emeritus

Sandra M. Faber, Emeritus

Galaxies, stellar populations, cosmology, instrumentation

Puragra (Raja) GuhaThakurta

Galaxy formation and evolution: resolved stellar populations in the Local Group and distant galaxies. Globular clusters. Interstellar dust.

Garth D. Illingworth

High redshift galaxies, galaxy formation/evolution, science policy

Burton F. Jones, Emeritus

David C. Koo, Emeritus

Robert P. Kraft, Emeritus

Claire Max

Adaptive optics and high spatial resolution imaging, colliding galaxies, active galactic nuclei and their supermassive black holes

Joseph S. Miller, Emeritus

Jerry E. Nelson, Emeritus

Jason Prochaska

Damped Ly α systems in quasars, Lyman limit systems, stellar abundances, thick disk imaging of our galaxy

David M. Rank, Emeritus

Constance Rockosi
Galactic structure, stellar populations, CCD detectors, astronomical instrumentation

Graeme H. Smith
Stellar populations, chromospheric activity among late-type stars

Steven S. Vogt
Extrasolar planets, stellar, spectroscopy, instrumentation

Merle F. Walker, Emeritus

Astronomer

Lloyd B. Robinson, Emeritus

Professor

George R. Blumenthal
Cosmology, galaxy formation, high-energy astrophysics

Frank D. Drake, Emeritus

John Faulkner, Emeritus

Gregory Laughlin
Extra-solar planets, numerical astrophysics

Douglas N. C. Lin
Fluid dynamics, star formation, galactic structure, planetary systems, accretion disks, extra-solar planets

Piero Madau
Cosmology, high-energy astrophysics

Bruce H. Margon
High-energy astrophysics, space astronomy

William G. Mathews, Emeritus Research Professor

Enrico Ramirez-Ruiz
Stellar explosions, gamma-ray bursts accretion physics, near compact stars

Stanford E. Woosley
Supernovae, stellar evolution, nucleosynthesis

Associate Professor

Jonathan Fortney
Planetary atmospheres and interiors, extrasolar planets

Mark Krumholz
Star formation, interstellar medium, numerical methods

Lecturer

Adriane Steinacker
Planet formation, MHD simulations

Professor

Anthony N. Aguirre (Physics)
Cosmology of the early and late universe: inflation and the global structure of cosmological models; the intergalactic medium and its enrichment with heavy elements; galaxy formation, evolution, and feedback processes; dark matter; theories of modified gravity

Nic Brummel (Applied Mathematics and Statistics)
Fluid dynamics; magnetohydrodynamics; numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics; supercomputing

[Course Descriptions](#)

[Teaching and Administrative Staff](#)

[Appendixes](#)

[Archive of General Catalogs](#)

[Nondiscrimination Statement](#)

[Search the Catalog](#)

Pascale Garaud (Applied Mathematics and Statistics)

Astrophysics, geophysics, fluid dynamics, numerical resolutions of differential equations, and mathematical modeling of natural flows

Gary Glatzmaier, Emeritus (Earth and Planetary Sciences)

Francis Nimmo (Earth and Planetary Sciences)

Icy satellites, accretion, Mars, planetary geophysics

Joel R. Primack (Physics)

Cosmology, galaxy, formation and evolution, particle astrophysics, nature of dark matter, gamma ray astronomy

Steven Ritz (Physics)

Particle physics and astrophysics

David M. Smith (Physics)

High-energy astrophysics; X-ray and gamma-ray detectors and instrumentation; solar, terrestrial, and planetary sources of gamma radiation

Associate Professor

Stefano Profumo (Physics)

Theory of particle physics and particle astrophysics

Assistant Professor

Ian Garrick-Bethell, (Earth and Planetary Sciences)

Planetary interiors, paleomagnetism

Tesla Jeltema

High-energy astrophysics and cosmology

Research Astronomer

Donald Gavel

Development of next generation adaptive optics for large telescopes, Director of Laboratory for Adaptive Optics

Brad Holden

Design, development, and oversight of UC Astronomy Data Center (all data obtained by UC astronomers at the Lick and Keck Observatories), early evolution of elliptical galaxies

Robert Kibrick

Development of computer software and wide-area networks in support of remote control and data-acquisition systems for telescopes and complex astronomical instrumentation systems

Terry Mast

Development of large telescopes and their instrumentation

Drew Phillips

Extragalactic star-formation, gas-phase abundances, galaxy kinematics, and galaxy formation and evolutions; development of astronomical optics and instrumentation

Richard Stover

Development and construction of state-of-the-art detector systems for instruments at Lick Observatory and the Keck Observatory

Revised: 09/01/14

<http://www.soe.ucsc.edu>

[Program Description](#)

Participating Faculty and Professional Interests

Mark Akeson (Biomolecular Engineering)

Development of nanopore sensors for single molecule identification, epigenetics, bioethics

Manuel Ares Jr. (Molecular, Cell, and Developmental Biology)

RNA processing, structure and function of RNA

Phillip Berman (Biomolecular Engineering)

Drug development, vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)

David Deamer (Biomolecular Engineering and Chemistry and Biochemistry; Emeritus, UC Davis)

Membrane biophysics, nanopore analysis, DNA sequencing, biomolecular self-assembly

David Draper (Applied Mathematics and Statistics)

Bayesian statistics, hierarchical modeling, Bayesian nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

William Dunbar (Computer Engineering)

Theory and application of feedback control, single-molecule biophysics, nanopore sensors, dynamics and control of biomolecules

Camilla Forsberg (Biomolecular Engineering)

Hematopoietic stem cells, transcriptional regulation, chromatin, blood cell development, cell surface receptors, genomics

Alexander A. Grillo (SCIPP)

Neurophysiology, neural systems, high-energy particle physics

Grant Hartzog (Molecular, Cell, and Developmental Biology)

Biochemistry, genetics, chromatin and transcriptional regulation

David Haussler (Biomolecular Engineering; Investigator, Howard Hughes Medical Institute;

Director, Center for Biomolecular Science and Engineering; Distinguished Professor, Biomolecular Engineering; Director, Cancer Genomics Hub; Scientific Co-Director, California Institute for Quantitative Biosciences [QB3]; Consulting Professor, Biopharmaceutical Sciences, Stanford Medical School; Consulting Professor, Biopharmaceutical Sciences, UC
